'The peculiarity which distinguishes this rude mythology is the "worship" of the bear, the Yezo bear being one of the finest of his species. But it is impossible to understand the feelings by which it is prompted, for they worship it after their fashion, and set up its head in their villages, yet they trap it, kill it, eat it, and sell its skin. There is no doubt that this wild beast inspires more of the feeling which prompts worship than the inanimate forces of nature, and the Ainus may be distinguished as bear-worshippers, and their greatest religious festival, or Saturnalia, as the Festival of the Bear. Gentle and peaceable as they are, they have a great admiration for fierceness and courage; and the bear, which is the strongest, fiercest, and most courageous animal known to them, has probably in all

ages inspired them with veneration. Some of their rude chants are in praise of the bear, and their highest eulogy on a man is to compare him to a bear' (*Unbeaten Tracks in Japan*[4], 1885, ii. 73). For further details and a possible explanation of this strange cult, see the art. AINUS in vol. i. p. 249[a], and art. ANIMALS, *ib.* p. 502[b].

In Mongolia the never-dying superstitions associated with nature-worship, animism, demonolatry, and witchcraft still survive beneath the outward show of official lamaism. Indeed, the whole system of Buddhism is everywhere coloured and modified, as in most other Buddhist lands, by the old local beliefs. The magicians are still appealed to when the flocks are smitten by disease; when 'fine weather,' which there means rain, is needed; when sickness troubles the household; or when some healthy but unfriendly neighbour is to be stricken by a mortal illness or fatal accident. The very inmates of the huge lamaseries bear the name of 'Samaneans,' perhaps a corrupt form of the Tungus word *shaman*, as if the Buddhist monks were merely the spiritual successors of the old medicine-men. Every possible transition is thus observed between the former nature- and spirit-worship and the peculiar form of lamaism introduced from Tibet after the death of Jenghiz Khan.

In Tibet itself much the same relations prevail between the 'State Church' and the pre-Buddhist *Bonbo* or *Boa-ho* religion, which persists, especially in the central and eastern provinces, side by side with the national creed. From the colour of the robes usually worn by its priests, it is known as the sect of the 'Blacks,' in contradistinction to the orthodox 'Yellow' and dissenting 'Red' lamaists; and, as now constituted, its origin is attributed to Shen-rab (Gsen-rabs), who flourished about the 5th cent. before the new era, and is venerated as the equal of Buddha himself. His followers, who were powerful enough to drive Buddhism from Tibet in the 10th cent., worship eighteen chief deities, the most popular being the red and black demons, the snake devil, and especially the fiery tiger-god, father of all the subordinate members of this truly diabolical pantheon. The sacred symbol of the Bonbo sect is the ubiquitous *swastika* with the hooks of the cross reversed, 卐 instead of 卍, a change said to be due to the practice of turning the prayer-wheel from right to left as the Red lamas do, instead of from left to right as is the orthodox way. The common Buddhist formula of six syllables—*om-ma-ni-pad-me-hum*—is also replaced by one of seven syllables—*ma-tri-mon-tre-sa-la-dzun* (Sarat Chandra Das, in *JRASBe*, 1881–1882).

In the upland regions skirting the Brahmaputra, between Tibet and Upper Burma, there are a multitude of primitive Mongoloid peoples—Abors, Mishmis, Garos, Khāsis, Kocchis, Bodos, Kacharis, Lushais, Nagas, Kukis, Chins, Kahyens, Karens, and many others—who have been little or not at all affected either by Buddhist or Hindu influences, and whose religions or mythologies consequently present features often of exceptional interest. Thus the gods of the *Garos* are mostly vague mythical entities, dwelling in the hills or in the sky, but possessing no definite attributes or powers, and associated with many wonderful cosmical myths. Salgong, the chief deity, marries Apongma, a divine princess who descends on earth and gives birth to Kengra Barsa, father of fire and of all the heavenly bodies, and also to a daughter, Mining Mija, who marries the son of Donjogma, mother of mankind. From a granddaughter of Salgong spring the mothers of the Tibetan Bhotiyas, of the Garos, and of the Feringies (English), and so on. But beneath these fanciful legends, many of them obviously later inventions, there persists the old nature-worship, as seen in the personification of the sun, moon, and stars, of the hills, streams, and forests, with their indwelling genii, to whom are attributed divine powers as rulers of the universe, and controllers of human destinies and of all natural phenomena.

'According to the *Kuki* creation myth, the face of the earth was originally covered with one vast sheet of water inhabited by a huge worm. One day the Creator, passing over this worm, dropped a small piece of clay, saying, "Of this I mean to make a land and people it." "Nonsense," said the worm; "look here, I can swallow it." But the lump passing out of his body grew and grew until it became the world we now see. Then man sprang out of the ground by the will of the three gods, Lambra the Creator, without whose consent nothing can be done, Golarai, god of death, and the beneficent Dudukal, who operates through his wife Fapité' (C. A. Soppitt, *Kuki-Lushai Tribes*, 1887).

The *Tawyans*, a branch of the numerous Chin family, have a tradition that they were formerly very powerful, but were ruined by their insane efforts to capture the sun. With a sort of Jacob's ladder they mounted higher and higher, but, growing tired, began to quarrel among themselves, until one day, while half of them were clambering up the pole, the other half below cut it down just as they were about to seize the sun.

Although often described as devil-worshippers, the *Chins* appear to worship neither god nor devil. The northern groups believe there is no *Ens Supremum*; and although the southerners have a Kozin, or head god, they pay him no homage, and never look to him for any favours, except perhaps exemption from such troubles as he might be disposed to inflict on those who offend him in this world. There are also the countless *nats*, or spirits of the air, the streams, the jungle, the hills, and there are those that swarm in the house and in the fields. None of these can do any good, though all may do harm unless soothed by gifts. *Mithikwa*, the 'Village of the Dead,' is divided into two wards, the *Pwethikwa*, abode of the happy, and the *Sathikwa*, reserved for the wretches who die *unavenged*, and must there bide till their murder is wiped out in blood. Thus the vendetta receives divine sanction, strengthened by the belief that the slain becomes the slave of the slayer in Pwethikwa.

'Should the slayer himself be slain, then the first slain is the slave of the second slain, who in turn is the slave of the man who killed him. Whether a man has been honest or dishonest in this world is of no consequence in the next existence; but if he has killed many people in this world, he has many slaves to serve him in his future existence; if he has killed many wild animals, then he will start well supplied with food, for all that he kills on earth are his in the future existence. In the next existence hunting and drinking will certainly be practised, but whether fighting and raiding will be indulged in is unknown' (Carey and Tuck, *The Chin Hills*, 1896, i. 196).

Before the advent of the Vedic Aryans, the chthonic gods were probably supreme throughout India, and, despite the wide diffusion of Hinduism, they are still supreme amongst most of the Dravidian, Kolarian, and mixed Aryo-Dravidian aborigines. But these gods themselves are nearly all hostile to man, and consequently not easily distinguishable from devils. Hence it is that we have now official assurance that the Pahāriās and other low castes, and even some of the high castes, are for the most part demon-worshippers; and this is specially true of the aborigines of Southern India. In the Cochin *Census Report for 1901*, M. Sankara Menon writes:

'Nowhere perhaps has the belief in demons a stronger hold on the popular mind than in this part of India. The existence of numerous exorcists amongst the various sections of the Hindu population, from the highest Nambudri to the lowest Paraiyan, bears ample testimony to this fact. There is a separate caste, the *Panans*, amongst whom exorcisms, sorcery, and witchcraft are hereditary occupations. The Panan is quite as indispensable a factor in the social organism of the village as the barber and the washerman. There are again certain families who have special control over particular classes of demons.' The priests attached to many families have their special family deities 'by whose aid they profess to control the action of demons and spirits. It may sound strange, but it is none the less true, that there are exorcists amongst native Christians and Musalmāns

as well. One interesting fact is that high-class Hindus exercise their magical influence by propitiating only the more refined and sublime manifestations of the gods of the pantheon, whereas the low-caste Hindus do the same by propitiating Kālī in her more terrible and bloodthirsty aspects.' Some of the more evil-minded demons are 'supposed to be wandering about in mid-air, or haunting houses, trees, wells, or tanks, ever bent upon doing evil to those that come in their way. They are supposed to live upon the offerings made to them by their votaries, who are continually tormented for the purpose. Illness, accidents, and other misfortunes are often attributed to the evil influence of demons or spirits. At the sick-bed of a person, the astrologer, the exorcist, and the physician are all in attendance. The astrologer divines the causes, and prescribes propitiatory remedies. The exorcist then comes in, and goes through a more or less elaborate ceremony to drive out the demons or spirits. The physician steps in last to treat the patient, for the common belief is that so long as the patient is possessed, medicine can have no effect. The demons of smallpox and cholera, and myriads of others, have all to be coaxed into good humour to desist from doing evil. Ghosts or demons often appear in terrible form before they enter into human bodies, and with the sudden disappearance of the phantoms or apparitions a person believes himself to be possessed, and falls ill' (*ib.*).

In some places snake-worship ranks next to demonology even amongst the high castes. In Malabar nearly all the compounds have their serpent-groves, with effigies of the reptiles carved on blocks of stone; and here no orthodox Hindu will ever kill a snake, even if bitten, since an injury done to any of them would be sure to bring on leprosy, ophthalmia, or other ailments. Serpents are treated as members of the family, and served with milk, fruits, and all kinds of dainties. None but a Brāhman would dare to pluck even a flower or a twig from the trees growing in the snake-grove, where songs are chanted and religious rites observed in honour of these reptiles, which are, in fact, worshipped as gods or demons.

In the direction of the north the native superstitions seem to touch even a lower level, and among the *Kolarians* of the Vindhya uplands they were till recently associated with human sacrifices of a peculiarly barbarous character. In order to secure good harvests, the victim, often a child captured or bought from a neighbouring tribe, was put to a lingering death, by being slowly hacked to pieces with an axe, the supposition being that the greater the suffering the better pleased would be the god, and the heavier the crops of cereals. Of the *Mundas*, one of the largest Kolarian tribes, the chief social feature is their highly developed totemic system. The number of totems almost passes belief, and includes such remarkable objects as rice-weevils, cocoons, mice, leeches, mushrooms, ants, frogs, eels, worms, or even moonlight, red earth, umbrellas, ghī (clarified butter), or walking-sticks. These are all animated by indwelling spirits, so that we have here the lowest conceivable form of the animism that lies at the foundation of all natural religions.

Still more debased than the full-blood Kolarian and Dravidian aborigines are the *Aryo-Dravidian* half-breeds, who are interspersed over the northern provinces, and to their own crude religious dawnings often superadd the revolting ideas and practices of the later corrupt Hinduism. Here the blending of the higher and lower races, of the 'twice-born' Aryas ('Nobles'), and the scarcely human Nāgas, 'kindred of the dragon,' dates back to the earliest recorded times, and is typified in the mythical marriage of Arjuna, one of the high-born Pāndavas, with Ulūpi, daughter of the Nāga king Vāsuki. The union took place in the still sacred city of Hardwār on the upper Ganges, which is described as inhabited by 2000 crores (a crore = ten millions) of snake-people, whose wives were of peerless beauty; and here was also a lake which contained the waters of life, wherein all those snake-people were wont to bathe. During their later migrations the already mixed Aryas encountered the vile Dasyus, proto-Kolarians of the south Gangetic woodlands, for whom no terms of abuse are too strong, yet with multitudes of whom a fusion was eventually effected. Thus it was that 'from the union of the white, the yellow, and the black men arose the modern people of northern India' (W. Crooke). That the union was not merely ethnical, but also social and religious, is seen in the *baigā*, or devil-hunting priest of the jungle tribes, who in the Hindu system became a Brāhman *Ojha*, or exorcizer of evil spirits; and we know that in later times whole sections of the lower races were raised to priestly rank. But this tendency towards complete fusion of all the racial elements was arrested by the institution of caste, which, though at present occupational, had originally an ethnical basis (see art. CASTE).

A clear insight into these obscure relations is necessary to a right understanding of the strange intermingling of primitive and Hindu social and religious notions prevalent amongst these mixed northern groups. But even so, great difficulties remain, and Mr. W. Crooke, himself a most diligent and shrewd observer, finds it

'all but impossible to frame a working definition of a Hindu; Musalmāns of the lower class cling to many of the beliefs of the faith from which they were originally drawn; everywhere in the lower strata the forms of faith known as Brāhmanical or Animistic constantly overlap. . . . The natural cleavage line is between Brāhmanism and Animism, and it has been found possible on this basis to define the religious beliefs of eastern and southern India, but in northern India this distinction is unworkable. Most of the menial and hill tribes profess theoretically a belief in the Brāhmanical pantheon; at the same time even the higher classes are more or less influenced by the Animistic beliefs of the lower races' (*The N.W. Provs. of India*, 1897, ch. v.). And elsewhere: 'It is little use defining a man as a Vaishnava if we know that on occasion he will worship other gods as well—will reverence the cow or the pipal tree, Mother Ganges, or the goddess of smallpox' (p. 242).

As pointed out by Mr. E. A. Gait (*General Report of the Census of India*, 1901, p. 358), the animism here in question—a belief in and dread of impersonal powers to be coerced by magic—appears to have passed into the Hindu system from two different sources. Some of its elements 'are derived from the Vedic Aryans themselves, others from the Dravidian [and Kolarian] races who have been absorbed into Hinduism.' But 'it would be fruitless to attempt to distinguish the two streams of magical usage—the Vedic and the Animistic. They are of mixed parentage, like the people who observe them, partly Indo-Aryan and partly Dravidian.' It now becomes possible to understand the picture of chaotic religious notions—some utterly revolting and immoral, others betraying some glimmering of a moral sense, but the great majority degrading—by which these mixed populations are animated. Thus some of the widespread *Doms*, most probably the parent-stock of the European Gipsies (Dom = Rom, *r* and *d* interchangeable), hold that raiding and robbery have divine sanction. Before starting on a nocturnal expedition they sacrifice to Sansāri Māi, the chthonic goddess patroness of thieves, and pray in a low voice that a dark night may cloak their designs and the gang escape detection, just as the *furum dea*, Laverna, was silently invoked by the Roman *latro*:

> 'Labra movet metuens audiri, Pulchra Laverna,
> Da mihi fallere; da justo sanctoque videri;
> Noctem peccatis, et fraudibus objice nubem.'
> (Hor. *Epist.* I. xvi. 60–63).

Yet these Doms, scavengers in the towns, vagrants or wandering tinkers in the country, are not quite irreclaimable, and the recent efforts to civilize them have met with a measure of success in some districts. They have even a family priest, always the sister's son, which points to matriarchal times when kinship was reckoned through the female line.

The *Agariās* of Mirzapur, all smelters and forgers, call themselves Hindus, yet worship the tribal deity Lohāsur Devi, goddess of iron (*lohā* =

iron'), and also employ the *baigā* (see above) to worship the old local godlings. The black goat offered to Lohāsur Devi is worshipped before being sacrificed, and goats and fowls are also offered to the ghosts of the dead who appear to them in dreams. At the end of the difficult road to the heaven of Parameshvar (Vishnu) is a great gate guarded by terrible demons, who allow no woman to pass unless tatued. There are twenty-four forms of tatus, and the women who can show no mark of some god on their bodies are tormented by the gate-keepers, who brand them with a hot iron, roll them in thorns, and fling them down from the top of the gate. Tatuing has thus become a religious obligation, and although perhaps totemistic in origin, the forms—Ganeśa, Śiva, Krishna as flute-player, the moon, the peacock, and many others—are now merely charms to ward off evils and gain access to the abode of Vishnu. The whole religious world of the Agariās is an inextricably interwoven system of primitive and Hindu notions.

Similarly the *Agarwālas* of the Upper Ganges, although reckoned as Vaishnavas, call themselves, and are, *Nāga Upāsaki*, 'Snake-worshippers,' doing homage to *Āstika Muni*, who sprang from the sister of the great serpent Vāsuki. But there is also a deity Ohur, who saves women from widowhood, besides the tribal deity *Lakshmi* and several trees—pipal, kadam, sami, babul—which are held in special honour. Socially the Agarwālas are landowners, bankers, and money-lenders, but for them animal food, as well as onions, garlic, carrots, and turnips, is tabu, and a good illustration of the countless hair-splitting caste distinctions is the refusal of the women to eat the food prepared by their daughters-in-law.

One might almost suppose that the Hindu snake-cult had passed into Irania, so general is the respect in which these reptiles are held even by the Persian Shī'ites. No Persian will willingly kill a house-snake, partly because he thinks it harmless, but chiefly because he supposes it to be tenanted by the spirit of the late owner of the house. When one was shot by Dr. C. J. Wills, the whole household 'sulked and looked black for a week,' although the landlord, being an educated man, was glad, 'the clock-winding snake' having plagued him for years. Equally prevalent are the superstitions associated with omens, the evil eye, and astrology. Nothing serious is done in Persia without the taking of an omen, the casting of lots, or the consulting of an astrologer. A favourite place for taking omens is the tomb of the Shirazi poet and mystic, Hafiz, to whom are paid almost divine honours. Recourse is had to the *munajjim*, 'astrologer,' on all occasions; every village has its professional diviner, every town several, whose chief business it is to predict lucky hours or days, to read the future, and to discover stolen property, and in this they are often successful by laying pitfalls into which the thieves unwittingly stumble.

Apart from the fanatical Bābīs (*q.v.*), and the periodical outbursts of religious frenzy connected with the anniversary of the martyrs Husain and Hasan, the Persian Shī'ites are not particularly zealous Muhammadans. Many, indeed, of the educated classes prefer the writings of Hafiz and Sadi to the Qur'ān, are theists and even advanced freethinkers, while scepticism is wide-spread amongst the higher military and official classes. 'These say no prayers, keep no fasts, have no belief, and are utterly dead to everything but what they believe to be their own interests. Many openly boast their disbelief in anything, and this is done with impunity' (Wills, *The Land of the Lion and the Sun*, 1883, p. 339). One thing is clear. There is no danger that the monotheism which has supplanted the old Zoroastrian dualism in Persia will ever sink, like the Vedic system, to the low level of the primitive chthonic beliefs. It will rather be dissipated, like the Western creeds, in the atmosphere of philosophic unbelief.

On the other hand, these primitive beliefs are still rife in Arabia, the very cradle of Muhammadan monotheism. Muhammad enthroned Allāh, but failed to abolish the *jinns*, the *afrīts*, and *shaitans* that still haunt the sandy wastes, and swarm in every wady, cave, well, and hillside of the peninsula. But it has to be remembered that the Persians are Iranians, that is, one of the noblest branches of the Aryan family, while the Arabs are Semites whose primeval 'monotheism' is probably a delusion, and whose early beliefs were 'of the earth earthy,' originally associated with the Asherahs, the Astarte and Tammuz myths, the abominations of the Baals and Molechs, and all that is implied in the primitive phallus-worship.

For the higher religions, all of which took their rise in Asia, see special articles CHRISTIANITY, JUDAISM, MUHAMMADANISM, ZOROASTRIANISM, BRAHMANISM, BUDDHISM, SHINTOISM.

A. H. KEANE.

AŚOKA.—Aśoka, emperor of India (B.C. 273-231), was the grandson of Chandragupta Maurya (*q.v.*), and son of Bindusāra, whom he succeeded on the throne in B.C. 273 or 272, although his formal coronation did not take place until B.C. 269, having perhaps been delayed by a disputed succession. According to tradition, Aśoka in his youth represented his father as viceroy at Taxila in the Panjāb, and also at Ujjain in Mālwā. Silly legends represent him as having attained power by the massacre of ninety-nine brothers, and as having been a monster of cruelty in the early years of his reign; but these are mere fables. In B.C. 261 he rounded off his vast inherited dominions by the annexation of the kingdom of Kalingā on the coast of the Bay of Bengal, corresponding with the 'Northern Circars' and part of Orissa. This was the only aggressive war of the reign. The suffering inflicted upon the conquered people made a profound impression on the conscience of Aśoka, who at about this time came under the influence of Buddhist teachers, to whom war was abhorrent. Four years later, the emperor solemnly recorded in inscriptions engraved upon the rocks his 'profound sorrow and regret' for the misery caused by his ambition, and declared that 'the loss of even the hundredth or thousandth part of the persons who were then slain, carried away captive, or done to death in Kalingā, would now be a matter of deep regret to His Majesty. Although a man should do him an injury, His Majesty holds that it must be patiently borne, so far as it can possibly be borne.'

Aśoka acted on the principle thus publicly professed and indelibly recorded, and henceforward was a man of peace, devoted to the inculcation and propagation of the Law of Piety (*dharma*), as conceived by him in accordance with the teaching of the Buddha. At a date not exactly known he

qualified himself for the highest rewards of a Buddhist saint, by accepting ordination as a monk, and donning the yellow robe of the Order, but did not then abdicate his royal power, although it is possible that in the last year of his life he withdrew from all worldly affairs. He passed away in B.C. 232 or 231 after a reign of fully forty years. The scene of his death may have been a monastery on the Golden Hill (Suvarṇagiri) at Rājāgrihā, the capital of the early kings of Magadha (S. Bihār).

The empire which Aśoka ruled comprised, in modern terminology, Afghanistan south of the Hindū Kush, Balūchistān, Sind, the valley of Kashmīr, Nepāl, the lower Himālaya, and the whole of India proper, except the southern extremity below the latitude of Madras. The central regions seem to have been governed directly from Pāṭaliputra, the modern Pātna, then on the north bank of the Sōn, the great city which continued for centuries to be the capital of India. The outlying provinces were controlled by at least four viceroys, who were often members of the Imperial family; and the orders of these high officers were executed by a regularly organized departmental service of officials. The capital was administered by a municipal commission divided into six boards, and similar arrangements probably existed in the other principal cities. A standing army of all arms —cavalry, infantry, chariots, and war elephants —was maintained in great force, and public order was well preserved.

When Aśoka became a devoted disciple of Buddha, the whole machinery of government was utilized by him for the teaching and dissemination of his Master's doctrine, and produced commensurate effects.

Gautama the Buddha, the founder of the Buddhist system as known to history, had confined his ministry to a region of moderate extent in the Gangetic valley, which may be roughly defined as lying between Gayā, Prayāg or Allāhābād, and the Himālayas. When he died in B.C. 487 or 486, his followers formed but one of many rival sects in that region, and the society of ordained monks organized by him had only limited and local influence. There is no reason to believe that the vogue of the Buddhist sect had increased very greatly during the two centuries and a quarter which intervened between its founder's death and the conversion of Aśoka. The latter event made the fortune of Buddhism, and transformed an obscure local sect in the basin of the Ganges into a dominant world-religion—perhaps the greatest of all, if measured by the number of its adherents.

Aśoka's progress in the faith was gradual. According to tradition, he was in early life an orthodox Hindu, of the Śaiva sect (see ŚAIVISM); and it is certain that he then approved of sacrifices, and sanctioned the slaughter of animals on a large scale for the purposes of food, sacrifice, and sport. Regard for the sanctity of animal life being the cardinal principle of Buddhist ethics, he began the reformation of his habits by reducing the butcher's bill for the Imperial table to the modest amount of two peacocks and one antelope daily. The institution of the royal hunt was abolished in B.C. 259, and two years later destruction of life for the service of the royal kitchens was absolutely forbidden. In B.C. 243 detailed regulations concerning the slaughter or mutilation of animals applicable to the whole empire were published, which prohibited unconditionally the killing of many large classes of living creatures, and imposed stringent restrictions on the entire population in respect of their dealings with animals.

In the next year the emperor placed on record a solemn review of all the measures which he had taken for the propagation of the *dharma*, or Law of Piety, and reminded his subjects how he had striven to lead them in the right way by his personal example, by exhortations, expressed in oral sermons as well as in inscriptions on rocks and pillars, by suitable official arrangements for the supervision of morals and the royal alms, by detailed pious regulations, and by benevolent provision for the cure and comfort of man and beast. But Aśoka, while utilizing to the full all this machinery for the moral regeneration of his people, recognized frankly that permanent improvement must be based on a change of heart, and could not be secured by merely administrative measures; because 'pious acts and the practice of piety depend on the growth among men of compassion, liberality, truth, purity, gentleness, and saintliness.' The growth of piety, he goes on to observe, 'has been effected by two-fold means, to wit, pious regulations and meditation. Of these two means pious regulations are of small account, whereas meditation is superior. Nevertheless, I have issued pious regulations forbidding the slaughter of such and such animals, and other regulations of the sort. But the superior effect of meditation is seen in the growth of piety among men, and the more complete abstention from injury to animate beings and from slaughter of living creatures.'

The substance of Aśoka's practical ethical teaching is tersely summed up in a short edict, perhaps one of the latest:

'Thus saith His Majesty: "Father and mother must be hearkened to; similarly, respect for living creatures must be firmly established; truth must be spoken. These are the virtues of the Law of Piety which must be practised. Similarly, the teacher must be reverenced by the pupil, and proper courtesy must be shown to relations." This is the ancient nature of piety —this leads to length of days, and according to this men must act.'

The three primary duties prescribed by the Aśokan code were (1) respect for the absolute, unconditional right of the meanest animal to retain the breath of life until the latest moment permitted by nature; (2) reverence to parents, elders, and preceptors—the superiors so honoured being required, in their turn, to treat their inferiors, including servants, slaves, and all living creatures, with kindness and consideration; and (3) truthfulness. Among secondary duties, a high place was given to that of showing toleration for, and sympathy with, the beliefs and practices of others, and all extravagance or violence of language was earnestly deprecated.

The ethical teaching outlined in the above propositions, which is in agreement with the doctrine of the *Dhammapada* and other scriptures of primitive Buddhism, was developed by Aśoka in a series of edicts, probably drafted by himself. The 'Fourteen Rock Edicts,' published in B.C. 256, were incised upon rocks at seven localities in the remoter provinces, namely: (1) Shāhbāzgarhī, in the Yūsufzai country, forty miles N.E. of Peshāwar; (2) Mānsāhra, in the Hazāra District, Panjāb; (3) Kālsī, in the lower Himālayas, fifteen miles west from Mussoorie; (4) Sopāra, in the Thānā District, near Bombay; (5) the Girnār hill, near Jūnāgaṛh, the ancient capital of Kāṭhiāwār; (6) near Dhauli, to the south of Bhuvanēsvar, in the Purī District, Orissa; and (7) at Jaugada, in the Ganjām District, Madras.

Some of these versions, which vary in script, in dialect, and to some extent in substance, are preserved practically complete, while others are mere fragments.

The second great series is that of the 'Seven Pillar Inscriptions,' six of which exist in six copies, engraved on monolithic sandstone pillars erected at various localities in the home provinces. The seventh and most important edict is found on one

pillar only. The remaining records, particulars of which will be found in the works cited at the end of this article, are the two 'Kalinga Edicts' in two recensions, three 'Cave Inscriptions,' two 'Tarāi Pillar Inscriptions,' four 'Minor Pillar Edicts,' two 'Minor Rock Edicts' in several recensions, and the 'Bhābra Edict.' The number of distinct documents known may be reckoned as thirty-five, forming a group of inscriptions which may be regarded with justice as among the most interesting and remarkable in the world.

A large body of tradition affirms that a Buddhist church council was held at the capital by the command and under the patronage of Aśoka, in order to settle the canon of scripture and reform abuses in monastic discipline. Although the traditional details of the constitution and proceedings of the council are clearly unhistorical, the fact of its assembly may be accepted without hesitation. If it had met before the thirty-second year of the reign, in which the emperor published the 'Seven Pillar Edicts,' recording his retrospect of the measures taken for the promotion of piety, the council assuredly would have been mentioned in those documents. But they are silent on the subject, and the fair inference is that the council was held at a date subsequent to their publication, that is to say, between B.C. 242 and 231.

The Imperial arrangements for diffusing the knowledge of Buddhist doctrine, and for enforcing the moral practices recommended by the teachers of the church, were designed on a grand scale, so as to cover not only the whole Indian empire, but also distant countries in Asia, Africa, and Europe. The officials of the Government in their various grades were required, in addition to their ordinary duties, to give instruction in morals to the lieges. From the year B.C. 256 the efforts of the official lay preachers were supplemented by the more systematic labours of special functionaries, designated as Censors of the Law of Piety (*dharma-mahāmātrāḥ*), who were enjoined to occupy themselves in promoting the establishment and progress of piety among the people of all sects, Buddhist or others, and were further charged with the delicate duty of superintending the female establishments of the members of the royal family. These officers were vested with special powers for the prevention of wrongful imprisonment or corporal punishment, and were directed to investigate cases in which peculiar circumstances caused the ordinary law to press hard upon individuals. The general superintendence of female morals was entrusted to another set of officers called the 'Censors of Women.' The regulations for guarding the sanctity of animal life presumably were enforced with strictness by the Censors; and if we may judge by what is known of the procedure adopted in later ages by pious Indian kings, the penalties of disobedience must have been extremely severe, extending even to the death of the offender.

The activity of the Censors was not confined to the provinces directly controlled by the Imperial officers, but embraced all the bordering tribes and nations in the Indian hills and forests, who lived under the rule of their own chiefs, subject to the suzerainty of the paramount power.

Aśoka's zeal carried his propaganda far beyond the limits of his empire, and induced him to organize a system of foreign missions, which permanently determined the direction of the religious history of a large portion of the world. A band of enthusiastic missionaries, headed by Mahendra (Mahiṁda), younger brother of the emperor (or, according to another account, his son), evangelized Ceylon with such success that the island has been essentially a Buddhist country ever since, and the religion of the Sinhalese monks to-day is practically the same as that of Aśoka. The Sinhalese chronicles aver that a mission was dispatched at the same time across the Bay of Bengal to Pegu, but strong reasons exist for believing that Buddhism was not introduced into the Burmese countries until several centuries later. The existing form of Buddhism in Burma, which undoubtedly was derived from Ceylon, and thus is indirectly a result of Aśoka's labours, dates only from the reformation effected by king Dhammachēti in the 15th cent., the history of which is related in the Kalyāṇī inscriptions (*Ind. Ant.* vol. xxii., 1893). The Siamese church also is a daughter of that founded in Ceylon by Mahendra.

From the time of Megasthenes, who was sent as ambassador by Seleukos Nikator to the court of Chandragupta Maurya in the year B.C. 303, regular intercourse, both commercial and diplomatic, had been maintained between the Indian empire and the Hellenistic kingdoms founded by the generals of Alexander. Aśoka made use of the channels of communication thus opened, in order to convey the treasures of Buddhist wisdom to the nations of the West. His missionaries traversed the wide realms of Antiochos Theos, king of Syria and Western Asia, and penetrated the dominions of Ptolemy Philadelphos, king of Egypt, those of his neighbour king Magas of Cyrene, and even those of the European monarchs Alexander of Epirus and Antigonos Gonatas of Macedonia.

Although missionary effort did not succeed in planting branches of the Buddhist church in the foreign countries named, except perhaps in some portions of the territory of Antiochos, its effects may be traced obscurely both in the history of the Gnostic and Manichæan sects of Christianity (Kennedy, 'Buddhist Gnosticism,' in *JRAS*, 1902, pp. 377–415) and in the reflex action on India which helped to develop the Mahāyāna form of Buddhism about the beginning of the Christian era. Ceylon, as already observed, was won permanently to Buddhism, which became the dominant religion in India and the bordering countries. Of course the other forms of Indian religion were not destroyed—they were merely overshadowed for a time, and in due course recovered their ancient vigour. In India, Buddhism is practically extinct at the present day, and is hardly traceable later than 1200 A.D. But for many centuries the impulse given by Aśoka's systematic missionary propaganda made Buddhist institutions a prominent feature of Indian life; and as late as the 7th cent. A.D., Buddhism, although then slowly decaying, was still a power in almost all parts of India. The extension of the Buddhist faith to Tibet, China, and Japan, through the agency of Indian missionaries at various dates, was an indirect consequence of the Aśokan propaganda.

Aśoka, while determined to enforce with all his authority Buddhist ethics as a practical system of morals, was avowedly tolerant of other creeds, and devoted a special edict to the subject of toleration:

'His Majesty does reverence to men of all sects, whether ascetics or householders, by gifts and various modes of reverence.

'His Majesty, however, cares not so much for gifts or external reverence as that there should be a growth of the essence of the matter in all sects. The growth of the essence of the matter assumes various forms, but the root of it is restraint of speech, to wit, a man must not do reverence to his own sect by disparaging that of another man without reason. Depreciation should be for specific reasons only, because the sects of other people deserve reverence for one reason or another. . . . Self-control, therefore, is meritorious, to wit, hearkening to the law of others, and hearkening willingly.

'For this is His Majesty's desire, that adherents of all sects should hear much teaching and hold sound doctrine.'

In another passage the royal preacher repeats his profession of reverence for all sects, and adds that 'nevertheless, personal adherence to one's own creed seems to me to be the chief thing.'

Extant dedicatory inscriptions prove that Aśoka gave practical effect to these liberal principles, by hewing cave-dwellings from the rock at enormous cost, and bestowing them on ascetics of a non-Buddhist sect; while, of course, hundreds of his benefactions must have passed unrecorded.

He realized the truth that his subjects could not be expected to take his preaching to heart unless he proved by acts of material beneficence that he was really, as he had claimed to be, the father of his people. Accordingly, he organized elaborate arrangements, both in his own dominions and in those of friendly powers, for the cure of man and beast, which doubtless involved the establishment and endowment of hospitals. We are expressly informed that healing herbs, medicinal for both human beings and animals, wherever they were lacking, were imported and distributed. In pursuance of the same policy, banyan-trees were planted to provide ample shade, groves of mango-trees were laid out to supply fruit, wells were dug at every mile on the highroads, and numerous rest-houses and watering-places were constructed, for the enjoyment of man and beast. But His Majesty is careful to explain his motive by the remark that 'such so-called enjoyment is a small matter. With various blessings have former kings blessed the world even as I have done, but in my case it has been done solely with the intent that men may conform to the Law of Piety.'

Aśoka's buildings were designed and constructed on a scale of such magnificence that they were regarded by the men of later ages as the work of demons obedient to his command. Although comparatively little of his architectural masterpieces has survived, the great *stūpas*, or brick cupolas, at Sānchi, and numerous monolithic pillars, inscribed and uninscribed, which are still standing, suffice to justify his fame as a builder. The monoliths, some of which are fifty feet high and weigh fifty tons, exhibit the stone-cutter's art in perfection, and have been polished and engraved with the utmost nicety.

It is clear that Aśoka was no merely fanatic devotee, but that he succeeded in combining the piety of a saint with the practical qualities of an able king. As a king he disputes with Akbar (*q.v.*) the right to the highest place of honour among the sovereigns of India; and, in the history of Buddhism, his importance is second only to that of the founder of the system.

Aśoka seems to have been followed on the throne by his grandson Daśaratha; but hardly anything is known about his successors, in whose feeble grasp the great empire founded by Chandragupta, and maintained for three generations, quickly crumbled to pieces. See BUDDHISM, CHANDRAGUPTA.

LITERATURE.—Edmund Hardy, *König Asoka* (Mainz, 1902); Vincent A. Smith, *Asoka, the Buddhist Emperor of India* (Oxford, 1901), containing complete translations of the inscriptions known up to 1901 (an inscription on a pillar at Sārnāth has been discovered since then; *Epigr. Ind.* viii. 166; *Comptes rendus Acad. des Inscr.*, 1907, p. 25; *JASB* iii., new ser., 1907), and *The Early History of India*[2] (Oxford, 1908). All the original authorities are cited fully in those works. *Buddhist India* (1903), by T. W. Rhys Davids, may also be consulted.

VINCENT A. SMITH.

ASPIRATION may be defined generally as ardent longing. The word is sometimes used to denote worldly ambition or desire, but its proper application, as the etymology may suggest, is to desire directed upon spiritual objects, and so it finds its distinctive exercise in the spheres of ethics and religion. In each of these spheres it is a power inciting to spiritual progress, an inward impulse by which men are urged to the development of their highest nature and true ends as spiritual beings.

1. In ethics, aspiration appears as a longing for the realization of ideals. Whatever theories may be held as to the origin of moral ideas and of the moral faculty, there is no ethical system worthy of the name that is not based on some moral ideal or conception of the highest good; and aspiration is the longing that impels to the pursuit of the ideal and of all the qualities that belong to it or tend to further it. Aspirations and ideals go together, and have a reactive influence upon each other. On the one hand, aspirations are kindled by ideals; on the other, ideals are shaped and fostered by aspiration. The moral feelings depend for their strength and purity upon the clearness and immediacy of the moral vision; while the moral vision owes much of its quick discernment to the cultivation of the moral feelings. Both vision and aspiration, again, are qualified by obedience. The gleaming vision must be pursued, the sighing of the human spirit after the attainment of its ideals must not be ignored or suppressed, else moral blindness and moral apathy will inevitably follow. But when men turn away from wrong and do what they know to be right, and keep hungering and thirsting after righteousness, moral progress is the assured result.

The particular function of aspiration in the moral sphere is to mediate between vision and obedience. It is a mighty motive power by which our spiritual knowledge is utilized for the purposes of our moral activity. Without the uplifting and impelling force of aspiration, ideals would never be transformed into realities; and so it is a necessity of the moral life that men should cherish their spiritual aspirations. The voice of duty is an imperative voice, but before its high behests can be carried out there must come some urging from the heart's desire. It is faith and hope, admiration and love—and these may all be summed up in aspiration—which enable us as moral beings to walk without fainting, to run without weariness, and even at times to mount up on eagles' wings. 'Let us learn to have noble desires,' said Schiller, 'and we shall have no need for sublime resolutions.' And what is moral aspiration but an impulse of noble desire which bears the soul irresistibly forward, as on the bosom of a swelling tide, towards the realization of the highest moral ends?

2. But it is in religion still more than in ethics that aspiration finds its especial home and sphere, for aspiration is the outgoing of the soul in search of complete spiritual satisfaction, and ethical ideals, even could they be perfectly realized, would not avail to satisfy it. 'Thou madest us for Thyself, and our heart is restless until it repose in Thee' (Augustine, *Conf.* i. 1). Nothing but personal communion with the Divine Spirit will meet the wants of the aspiring human spirit. It is to the experience of aspiration as a psychological fact that the origin of religion may be traced. In the visible world men saw around them on every side the tokens of change and decay, of transience and evanescence. But this sense of the perishableness and unreality of all earthly things brought to light their own possession of the idea of something or some one real and permanent; and instinctively their hearts went out in dumb longing to seek the Unknown God. And as self-consciousness grew clearer in the course of man's ascent, the contradiction between the inner life of feeling and desire, of hope and endeavour, and the hostile powers of nature by which he was encompassed and opposed, would fill his soul with a still deeper longing for communion with that higher Power akin to himself by whose help he might gain the victory over the world.

The aspirations of the religious soul naturally express themselves in forms of worship. And if at first the forms in which men embodied their religious desires were crude, material, grotesque, and even repulsive, they testified none the less to a sincere longing after God. The blood of the sacrifice was the blood of a covenant between man and his deity; the sacrificial smoke, as it rose into the air, was a symbol of the spirit's desire

to rise heavenward; the sacrificial meal was a sacrament of fellowship between the god and his people. Moreover, as men grew in the power of spiritual conception and apprehension, their aspirations became purer, and began to find expression in forms more spiritual and refined. And when the inspiring Spirit from above stoops down to raise and inform the aspiring spirit from below, there comes the utterance of the purest spiritual desire: 'As the hart panteth after the water brooks, so panteth my soul after thee, O God.'

There is a wide difference between the aspirations of morality and those of religion. Not only is the ethical ideal an abstraction, it is an elusive abstraction. As we pursue it, it recedes before us. The horizon moves onward as we advance, and the actual and the ideal never meet. Religious aspiration, on the other hand, being a longing of the human spirit for personal communion with the Divine Spirit, is able to enjoy an immediate fruition of its object. With the dawn of religion in the soul, the restless heart of man finds rest in God. Not that there is no room in the religious life for further progress and fuller aspiration; the room for progress is infinite, and the call to it is never hushed. But progress here 'is not *towards*, but *within* the sphere of the infinite. It is not the vain attempt, by endless finite additions or increments, to become possessed of infinite wealth, but it is the endeavour, by the constant exercise of spiritual activity, to appropriate that infinite inheritance of which we are already in possession' (J. Caird, *Phil. of Rel.* 284). Hence the life of Christian faith, in which the experience of communion with God is most fully realized, is a life of aspiration satisfied yet never sated, resting joyfully in its object and yet longing to apprehend it more fully.

J. C. LAMBERT.

ĀŚRAMA.—1. General survey.—*Āśrama*, from the root *śram*, 'to exert oneself,' means (1) a place where austerities are performed, a hermitage, and (2) the action of performing such austerities. It may be doubted which of the two meanings is the original. Without dwelling on this question, we limit ourselves to the second meaning, which in the development it has taken in India reveals a very striking feature of ancient Indian life. At the time when the Indians lived in the Panjāb there was no question either of a brāhmanical order of life or of castes and *āśramas*. The castes occur only in one hymn of later date (*Rigv.* 10. 90), and the word *āśrama* is not found at all in the *Rigveda*.

Very different from this oldest period of Indian antiquity is the time after the conquest of Hindustan by the Āryans. The danger of mixing with the indigenous tribes led to the establishment of a very sharp distinction between the victorious tribes of the Āryans and the remnants of the aborigines, who later on were included under the collective name of the *Śūdras*, and were excluded from all community of life, and especially of religion, with the Āryans. This principle of setting up boundary lines between the different classes of the population was carried out to a certain degree among the conquering Āryans themselves. The great mass of the Āryans were called *Vaiśyas*, 'colonists,' and devoted themselves to agriculture, handicraft, and trade. They were ruled and taxed by the *Kṣatriyas*, the kings, and those who with them had carried out the conquest of the country. But another class claimed and obtained a preponderance over both the Vaiśyas and the Kṣatriyas. These were the *Brāhmaṇas*, the descendants of the old Vedic *Ṛṣis*, who in their families kept as an inestimable treasure the ancient Vedic hymns, without which no religious ceremony could be performed, and no higher education was possible in an age wholly without secular literature. Indeed, the Brāhmaṇas succeeded in getting into their hands not only the religious cult, but also the education of the Āryan youth. It became a custom and more and more a law that every young Āryan, whether of the Brāhmaṇa, Kṣatriya, or Vaiśya caste, should spend a series of years as a *brahmachārin* in the house of a *guru*, or brāhmanical teacher.

In the early period the father himself acted as *guru*, and instructed his son as well as he could in the sacred science in so far as it was in the possession of his family. Very often, however, the father was not able to satisfy the curiosity of his son. Not only metaphysical questions embarrassed him; the understanding of the old texts became more and more difficult, the ritual more complicated, the field of study ever broader. Thus it became necessary to apply to celebrated authorities in order to learn some special theory (*vidyā*). Wandering students (*charaka*) travelled far and wide (*Brih. up.* 3. 3. 1); renowned teachers itinerated from place to place (*Kauṣ. up.* 4. 1); and there were masters to whom disciples streamed 'like waters to the deep' (*Taitt. up.* 1. 4. 3).

Later it became customary for every *Āryan* to spend a series of years (at least twelve, according to Āpastamba, *Dharmasūtra*, 1. 1. 2, 16) in the house of a brāhmanical teacher. It was the latter's duty to prepare his brāhmanical pupils for their future vocation, and to teach those of the Kṣatriya and Vaiśya castes in order to inculcate in their minds the necessary directions for all their future life. We must assume (cf. Manu, 2. 241; Śaṅk. on *Brih. up.* p. 345, 13) that it became in course of time an exclusive privilege of the brāhmanical caste to give this instruction, and only thus can we understand the incomparable influence which the Brāhmaṇas gained and maintained over the Indian people.

It would seem that not only the outward apparel, but also the method of instruction, was different for the three castes; thus in *Ait. Ār.* 3. 2. 6, 9 the rule is laid down to communicate a certain theory *na apravaktre*, 'not to any one who will not himself become a teacher.' In return for this instruction the pupils had to work for the teacher in house and field; they attended to the sacred fires (*Chhānd. up.* 4. 10. 1), they looked after the cattle of the teacher (*Chhānd. up.* 4. 4. 5), collected for him in the village the usual gifts of charity, and bestowed a present upon him at the conclusion of their studies in his home. In the leisure time left from the duties to be performed for the *guru*, the Veda was studied; the teacher recited it verse by verse, and the pupils had to repeat it until the whole was learned by heart. It was perhaps not so much a time of learning as a time of vigorous training, as the word *āśrama* implies. The principal rule was strict obedience to the orders of the teacher (of which we read extravagant examples in *Mahābh.* i. 684 f.). It was a period devoted to practice in self-denial and mortification. But the brāhmanical system of life had the tendency to extend this *āśrama*, or self-mortification, over the whole life of the Brāhmaṇas, and as far as possible of all the Āryans. Not all, after having finished this course of study, founded families as *grihasthas*, 'householders'; some preferred to stay in the house of their teacher as *naiṣṭhikas* to the end of their life. Others again, as *vānaprasthas*, retired to the jungle and gave themselves up to privations and austerities. Some scorned even this form of a regular existence, and roamed about as beggars. These last were known as *sannyāsins*, 'throwing away everything,' or *parivrājakas*, 'vagabonds,' or simply *bhikṣus*, 'beggars.' It was only later that these various kinds of *āśramas*, 'religious mortifications,' were developed into a system embracing the whole life, the aim of which was to obtain methodi

cally and by gradual progress that which appears as an abrupt demand in *Matth.* 19. 21.

According to this later system, the life of every Brāhmaṇa (and not only of these, for the rules given in Manu, vi., seem to extend also to Kṣatriyas and Vaiśyas) had to pass through four *āśramas*, or ascetic stages. Every Ārya had to be (1) a *brahmachārin* in the house of a teacher; (2) a *grihastha*, performing the duty of founding a family; (3) a *vānaprastha*, a hermit in the woods, devoting himself to gradually increasing austerities; and (4) towards the end of his life a *sannyāsin*, *bhikṣu*, *parivrājaka*, roving about without home or property, living merely on alms, free from all earthly ties, and awaiting his end, delivered even before it from all earthly attachments. How far the practice corresponded to this theory, given in Manu and other Law-books, we do not know; but we are free to confess that in our opinion the whole history of mankind has not much that equals the grandeur of this thought.

After this general survey let us proceed to consider the history of the *āśramas* in the Vedic and the post-Vedic age.

2. The Āśramas in the Veda.—In the older Upaniṣads the theory of the four *āśramas* is seen in course of formation. *Chhānd. up.* 8. 15 mentions only the Brahman-student and householder, and promises to these, in reward for study, the begetting of children, the practices of *yoga*, abstinence from doing injury, and sacrifice, a departure hence without return. *Chhānd. up.* 2. 23. 1 names the *tapas* (of the anchorite) side by side with these as a third 'branch of duty.' There is still no progressive series. Rather, according to this passage, the Brahman-students, in so far as they do not elect to remain permanently in the house of the teacher, appear to have devoted themselves partly to the householder's state, partly to the life in the forest. It is in harmony with this that in *Chhānd. up.* 5. 10 among the dying the anchorite in the forest and the sacrificer in the village appear side by side. *Chhānd. up.* 2. 23. 1 contrasts all three branches of duty with the position of the man who 'stands fast in Brahman.' So too, in *Brih. up.* 4. 4. 22, those who practise (1) the study of the Veda, (2) sacrifice and almsgiving, (3) penance and fasting, are contrasted with the man who has learned to know the *ātman*, and in consequence becomes a *muni* and *pravrājin* ('pilgrim'). Both have attained the knowledge of the *ātman*, and therefore the supreme goal. In the cognate passage *Brih. up.* 3. 5, on the contrary, the *brāhmaṇa* is still distinguished from the *muni* as a higher grade. In *Brih. up.* 3. 8. 10 also, the knowledge of the *ātman* as the highest aim is differentiated both from the sacrifices and benefactions (of the householder) and from the practices of *tapas* (of the anchorite).

All these passages assume only the three stages of Brahman-student, householder, and anchorite, and contrast with them the men who know the *ātman*. The last were originally 'exalted above the (three) *āśramas*' (*atyāśramin*, as it is said in *Śvet. up.* 6. 21, *Kaivalya up.* 24). This very position, however, of exaltation above the *āśramas* became in course of time a fourth and highest *āśrama*, which was naturally assigned to the end of life, so that studentship, and the positions of householder and anchorite (which stood side by side), preceded it as temporary grades in this successive order. Until the post-Vedic age, however, the separation between the third and fourth *āśramas*, between the *vānaprastha* practising *tapas* and the *sannyāsin* who has succeeded in attaining *nyāsa*, was not strictly carried out. An intimation of the fourfold number of the *āśramas* is perhaps already afforded by the words of *Muṇḍ. up.* 2. 1. 7: 'Mortification, truth, the life of a Brāhman, instruction.' Otherwise the oldest passage which names all four *āśramas* in the correct order would be *Jābāla up.* 4: 'When the period of Brahman-studentship is ended, a man becomes a householder; after he has been a householder, he becomes an anchorite; after he has been an anchorite, let him travel about on pilgrimage.'

(1) *The Brahmachārin.*—'Śvetaketu was the son of (Uddālaka) Āruṇi. To him said his father, "Śvetaketu, go forth to study the Brahman, for none of our family, my dear son, is wont to remain unlearned, and a (mere) hanger-on of the Brahman order"' (*Chhānd. up.* 6. 1. 1). From this remark it seems to follow that at that time entrance upon the life of a Brahman-student, while it was a commendable custom, was not yet universally enjoined upon Brāhmans. The entrance also of Satyakāma upon studentship appears to be his voluntary determination (*Chhānd. up.* 4. 4. 1). It was possible for a man to receive instruction from his father, as Śvetaketu (*Chhānd. up.* 5. 3. 1; *Brih. up.* 6. 2. 1; *Kauṣ. up.* 1. 1), or at the hands of other teachers, as the same Śvetaketu in *Chhānd. up.* 6. 1. 1 (contradictory to the passages just quoted). The request to be received must follow duly (*tīrthena*, cf. *vidhivat*, *Muṇḍ. up.* 1. 1. 3), *i.e.* according to *Brih. up.* 6. 2. 7, with the words *upaimi aham bhavantam*. The student takes the fuel in his hand as a token that he is willing to serve the teacher, and especially to maintain the sacred fires (*Kauṣ. up.* 4. 19; *Chhānd. up.* 4. 4. 5, 5. 13. 7, 8. 7. 2, 8. 10. 3, 8. 11. 2; *Muṇḍ. up.* 1. 2. 12; *Praśna up.* 1. 1). Before receiving him, the teacher makes inquiry into his birth and family (*Chhānd. up.* 4. 4. 4), but yet, as this example shows, in a very indulgent manner. Sometimes instruction is given even without formal reception (*Anupanīya*, *Chhānd. up.* 5. 11. 7). The duration of the period of instruction is twelve years (*Chhānd. up.* 4. 10. 1), or 'a series of years' (*Chhānd. up.* 4. 4. 5). Śvetaketu also begins to receive instruction at the age of twelve (*Chhānd. up.* 6. 1. 2), and continues his study for twelve years. During this time he has 'thoroughly studied all the Vedas' (*Chhānd. up.* 6. 1. 2), namely, the verses of the *Rigveda*, the formulas of the sacrifice, and the hymns of the *Sāmaveda* (*Chhānd. up.* 6. 7. 2), apparently therefore only the *saṁhitās*. In other instances there appears to have been at first no mention of study. In one example Upakosala has tended the sacred fires for twelve years, and yet the teacher can never make up his mind to impart to him 'the knowledge' (*Chhānd. up.* 4. 10. 1–2). Satyakāma is sent at first with the teacher's herds of cattle into a distant country, where he remains for a succession of years (*Chhānd. up.* 4. 4. 5). A further act of service on the part of the *brahmachārin* consists in his going to beg for the teacher (*Chhānd. up.* 4. 3. 5). On festival occasions also we find him in the train of the teacher and awaiting his commands (*Brih. up.* 3. 1. 2). Together with and after these acts of service, 'in the time remaining over from work for the teacher' (*guroḥ karma-atiśeṣeṇa*, *Chhānd. up.* 8. 15) the study of the Veda is prosecuted. The consequence was sometimes self-conceit rather than real enlightenment (*Chhānd. up.* 6. 1. 2). We further find the students wandering from place to place; they hastened, as stated above, from all sides to famous teachers 'like waters to the deep' (*Taitt. up.* 1. 4. 3); they roamed as far as the land of the Madras (on the Hyphasis) 'in order to learn the sacrifice' (*Brih. up.* 3. 7. 1, 3. 3. 1). As a rule, however, they lived as *antevāsins* in the house of the teacher, and not a few found this manner of life so congenial that they

'settled permanently in the teacher's house' (*Chhānd. up.* 2. 23. 1). The others were dismissed at the close of the period of studentship with advice (*Brih. up.* 6. 4) or admonitions. 'After he has studied the Veda with him, the teacher admonishes his pupil: "Speak the truth, do your duty, forsake not the study of the Veda; after you have presented the appropriate gifts to the teacher, take care that the thread of your race be not broken"' (*Taitt. up.* 1. 11). Further admonitions follow, not to neglect health and possessions, to honour father, mother, teacher, and guests, to be blameless in works and life, to honour superiors, to bestow alms in the appropriate manner, and in all doubtful cases to order one's conduct according to the judgment of approved authorities.

(2) *The Grihastha.*—'He who returns home from the family of the teacher, after the prescribed study of the Veda in the time remaining over from work for the teacher, and pursues the private study of the Veda in (his own) household in a pure neighbourhood (where Brāhmans are permitted to live), trains up pious (sons and pupils), subdues all his organs in the *ātman*, and, besides, injures no living thing except on sacred ground (at the sacrifice), he indeed, if he maintains this manner of life all his days, enters into the world of Brahman and does not return again' (*Chhānd. up.* 8. 15). According to this passage, the householder may remain in that state all his life long without doing injury to his soul. According to *Chhānd. up.* 5. 10, on the contrary, for those 'who in the village worship with the words "Sacrifice and pious works are our tribute,"' for those, in other words, who continue in the householder's state to the end of life, the transient reward in the moon and a return to a new earthly existence are appointed.

The most imperative duty of the householder is to establish a family and to beget a son to continue his father's works. To beget a son is considered a religious duty. In *Taitt. up.* 1. 9 it is enjoined side by side with studying and teaching the Veda. Frequently (*Chhānd. up.* 3. 17. 5, 5. 8–9; *Brih. up.* 6. 2. 13, 6. 4. 3) it is allegorically described as an act of sacrifice. In *Taitt. up.* 1. 11 the pupil, among other admonitions, is charged to take care 'that the thread of his race be not broken.' In *Mahān. up.* 63. 8 it is said: 'He who in his lifetime rightly continues to spin the thread of posterity, thereby pays the debt which he owes to the fathers; for it (begetting) is the payment of his debts.' His continued life in the world of men is assured by the son (*Brih. up.* 1. 5. 16), who stands in the place of the father in order to accomplish for him the religious works (*Ait.* 2. 4), 'and if anything whatever has been committed previously by him, his son will expiate it, therefore is his name "son" (*putra*, because he *pūraṇena trāyati pitaram*, Śaṅk.); for by the son he continues to exist in this world' (*Brih. up.* 1. 5. 17). Particular directions are given in *Brih. up.* 6. 4 how to proceed in order to beget a son or daughter of a certain quality. This chapter forms the conclusion of the Upaniṣad, and therefore probably the close of the religious instruction imparted to the student at the end of his student life. Several wives are permitted, as, in fact, Yājñavalkya himself had two (*Brih. up.* 2. 4, 4. 5). As further duties of the *grihastha* are named sacrifice, study of the Veda, and almsgiving (*Chhānd. up.* 2. 23. 1, 8. 5. 1–2; *Brih. up.* 4. 4. 22, 3. 8. 10).

(3) The *Vānaprastha* and (4) the *Sannyāsin.*—A distinction between these two periods of life was only gradually established. Originally the solitary life in the forest existed as a special branch of vocation (*dharmaskandha*) side by side with the position of householder (*Chhānd. up.* 2. 23. 1, 5. 10. 1–3). Later it may have become usual to retire into the solitude of the forest only on the approach of old age, after the obligations of the householder had been fulfilled. Yājñavalkya is an example, when he addresses his wife Maitreyī (*Brih. up.* 2. 4. 1 [4. 5. 1–2]): 'I will now abandon this state (of householder), and will therefore make a division between thee and Kātyāyanī.' In doing so, Yājñavalkya puts into practice what he teaches in *Brih. up.* 3. 5. 1: 'In truth, after that Brāhmans have gained the knowledge of this soul, they abstain from desire for children and desire for possessions and desire for the world, and wander about as beggars.' Here the third and fourth stages are not yet distinguished. The case is otherwise with the king Bṛihadratha, who (*Maitr. up.* 1. 2) surrenders his kingdom, retires to the forest, and gives himself up to the most painful mortifications, gazing fixedly at the sun, and standing with arms erect, and yet is obliged to confess: 'I am not acquainted with the *ātman.*' Here the anchorite, who devotes himself to ascetic practices with meditation (*Chānd up.* 2. 23. 1), has not yet attained the highest goal; he who without knowing the *ātman* 'practises austerities for many thousand years earns only a finite reward' (*Brih. up.* 3. 8. 10). Asceticism leads only to *pitṛyāna*, 'way of the fathers' (*Brih. up.* 6. 2. 16), and the case is different only with those who can say: 'Faith is our asceticism' (*Chānd. up.* 5. 10. 1). Penance and fasting are only the means by which Brāhmans 'seek to know' the *ātman* (*vividiṣanti*, *Brih. up.* 4. 4. 22). According to some, *tapas* is indispensable as a means to the knowledge of the *ātman* (*Maitr. up.* 4. 3, *na atapaskasya ātmajñāne 'dhigamaḥ*), according to others (*Jābāla up.* 4), it is superfluous; and this view is more in accordance with the whole system. For as long as the goal was a transcendental one, the hope might be cherished of approaching near to it by severing by means of asceticism the tie that binds to this life. If, however, emancipation is the discovery of one's self as the *ātman*, and therefore something that only needs to be recognized as already existing, not to be brought about as though it were future, the asceticism of the *vānaprastha* becomes as superfluous as the *grihastha's* sacrifice and study of the Veda (*Brih. up.* 3. 5, 4. 4. 21). He who knows the *ātman* is *atyāśramin*, 'exalted above the (three) *āśramas*' (*Śvet. up.* 6. 21). He has attained that which the ascetic only strives after, complete release from his individuality and from all that pertains to it, as family, possessions, and the world (*Brih. up.* 3. 5, 4. 4. 22). He is called *sannyāsin*, because he 'casts off everything from himself' (*sam-ni-as*), *parivrāj*, *parivrājaka*, because he 'wanders about' homeless; and *bhikṣu*, because without possessions he lives only as a 'beggar.'

(4) *The Sannyāsin* (*parivrājaka*, *bhikṣu*).—The *sannyāsa*, which is originally only the 'abandonment' of the entire brāhmanical mode of life in the three *āśramas*, assumed in course of time the position of a fourth and highest *āśrama*, which, as a rule, though not necessarily, would first be entered upon towards the close of life after passing through the stages of *brahmachārin*, *grihastha*, and *vānaprastha*. It thus, however, gained a further meaning. If it was originally a natural consequence of the knowledge of the *ātman*, it now became a final and most efficacious means by which it was hoped to attain that knowledge. The *sannyāsa*, accordingly, is represented as such a means to the knowledge of the *ātman* and to emancipation in a series of later *Upaniṣads*, of which the most important are *Brahma*, *Sannyāsa*, *Āruṇeya*, *Kaṇṭhaśruti*, *Paramahaṁsa*, *Jābāla*.

Āśrama. We find in them a full account, with numerous contradictions in details, of the preliminary conditions imposed upon the *sannyāsin*, of his departure from life, of his dress and equipment, of his food, place of abode, and occupations.*

3. The Āśramas in post-Vedic time.—Although the Upaniṣads teach that every man, Śūdra as well as Ārya, is an incarnation of the *ātman*, the knowledge of which, whether originating in an Ārya or a Śūdra, would lead to emancipation, yet the Brāhmans were too much under the influence of old traditions to put this doctrine into practice, and thus the Śūdras were, and remained, excluded from all religious community with the Āryas. So much the greater was their care for the spiritual welfare of the three superior castes, and the four *āśramas* became the *via salutis* through which every twice-born man (*dvija*) had to pass, *i.e.* every Brāhmaṇa, Kṣatriya, and Vaiśya, in order to reach the highest goal. As in Vedic times, so also in the later period of Indian life, it was the rule that every twice-born man had to become first a *brahmachārin*. In this stage he lived in the house of a teacher, persisted in the fulfilment of his duties of temperance and chastity, and received, through the study of the Veda, the intellectual stamp for all his future life. He then, as *grihastha*, had to marry, to beget offspring, and to fulfil the six duties of teaching and learning, sacrificing in person and through the agency of others, giving alms and receiving presents; besides this there were five daily observances incumbent upon him: to satisfy the gods by sacrificing, the Ṛṣis by studying the Veda, the fathers by offering funeral oblations, men by almsgiving, and animals by feeding birds, antelopes, and other denizens of the forest. Afterwards he passed to the state of *vānaprastha* as it is described in Manu, 6. 2, and *Mahābh.* xii. 245. 4: 'When the householder sees his skin wrinkled and his hair white and the sons of his sons, then he has to retire to the forest,' in order to extinguish in himself, by austerities gradually augmented, all the remnants of worldly attachments. 'In summer let him expose himself to the heat of five fires, during the rainy season live under the open sky, and in winter be dressed in wet clothes, thus gradually increasing the rigour of his austerities' (Manu, 6. 23). Further, 'after having purified himself in the three social stages from all stain of sin, let him wander towards the highest goal with undaunted perseverance' (*Mahābh.* xii. 246. 3).

In this stage of *sannyāsin*, 'one who has abandoned everything,' he roamed about without home (*parivrājaka*), and lived merely on alms (*bhikṣu*). At a period of life when, according to our thought, aid from others is more than ever needed, the aged man was left to himself without any care or attendance; 'let him flee from society as from a serpent, from comfort as from a hell, and from women as from a corpse' (*Mahābh.* xii. 246. 13); 'let him not look forward to death, let him not look forward to life, let him await his time as the servant awaits a command' (*nideśam*, which is the better reading both in *Mahābh.* xii. 246. 15, and in Manu, vi. 45).

We subjoin a few more verses on the state of the *sannyāsin* from the sixth book of Manu. 'Let him put down his foot purified by his sight, let him drink water purified by (straining with) a cloth, let him utter speech purified by truth, let him keep his heart pure' (46). 'Let him patiently bear hard words, let him not insult anybody, and let him not become anybody's enemy for the sake of this (perishable) body' (47). 'Against an angry man let him not in return show anger, let him bless when he is cursed, let him not utter speech, devoid of truth, scattered at the seven gates (of the neighbours)' (48). 'Neither by (explaining) prodigies and omens, nor by skill in astrology and palmistry, nor by giving advice and by the exposition (of the Śāstras), let him ever seek to obtain alms' (50). 'Let him not (in order to beg) approach a house thronged with hermits, Brāhmaṇas, birds, dogs, or other mendicants' (51). 'His hair, nails, and beard being clipped, carrying an alms-bowl, a staff, and a water-pot, let him continually wander about, controlling himself and not hurting any creature' (52). 'Let him go to beg once (a day), let him not be eager to obtain a large quantity (of alms); for an ascetic who eagerly seeks alms, attaches himself also to sensual enjoyments' (55). 'When no smoke ascends from (the kitchen), when the pestle lies motionless, when the embers have been extinguished, when the people have finished their meal, when the remnants in the dishes have been removed, let the ascetic always go to beg' (56). 'Let him not be sorry when he obtains nothing, nor rejoice when he obtains (something), let him (accept) so much only as will sustain life, free from attachment to material things' (57). 'By eating little, and by standing and sitting in solitude, let him restrain his senses, if they are attracted by sensual objects' (59). 'By the restraint of his senses, by the destruction of love and hatred, and by the abstention from injuring the creatures, he becomes fit for immortality' (60). 'In order to preserve living creatures, let him always by day and by night, even with pain to his body, walk, carefully scanning the ground' (68). 'When by the disposition (of his heart) he becomes indifferent to all objects, he obtains eternal happiness both in this world and after death' (80).*

For further information about the four *āśramas* we must refer the reader to the detailed treatment of them in Manu, bks. ii.–vi., and to the parallel passages in the *Mahābhārata*, chiefly bk. xii. 243–246. Of special interest also is the short description, *Mahābh.* xii. 191–192, which, being in prose, may have been inserted from an old *Dharmasūtra*.†

If it is true that the highest aim of mankind is not to be found in this worldly existence, but in the realm beyond, however closed to our knowledge this may be, it is none the less true that the attempt, as we have it in the four *āśramas*, to transform the whole earthly existence into a preparatory school for eternity, merits recognition and admiration even from those who have reached the highest degree of civilization. The Indian system does not demand what is impossible; it does not tear men away roughly and abruptly from that attachment to the world which is innate in them. It offers the opportunity in the stage of *grihastha* to enjoy life, and by enjoying it to convince oneself of its futility. It then, in an advanced age, in the stage of *vānaprastha*, tends to a systematic mortification of sensuality, and it describes in the *sannyāsin* a man who, approaching the end of his days, has become free from all worldly fetters, and is best prepared for departure. What we say of so many precepts of the Gospels we may say also of the four *āśramas*: although they are by no means suitable for literal and blind imitation, yet they may serve in a certain sense as a pattern, since the way of thinking manifested in them may in other forms and modifications be precious for every age.

LITERATURE.—The literature has been given throughout the article. See also ASCETICISM (Hindu), UPANIṢADS.

P. DEUSSEN.

ASSAM.—1. Religious history.—There is no part of India which is more interesting in some respects to the student of Hinduism than the Assam valley. As everyone knows, Hinduism professes to be a race religion, the religion of the inhabitants of Bhārat-varṣa, of the Hindu people. Yet, since the origin of the Hindu religion is Vedic, and the Vedas were the collected hymns of the so-called 'Aryan' immigrants, the two hundred millions of people now calling themselves Hindus must, in part at least, and probably in large part, be the descendants of races who were converted to, or more properly adopted into, Hinduism. Indeed, the later developments that have sprung from Vedic worship must have been due in great measure to the influence of aboriginal

* These will be found described in P. Deussen, *Allgemeine Geschichte der Philosophie*, ii. pp. 335–343; *Philosophy of the Upanishads*, pp. 374–382.

* *SBE* xxv. 207–213.
† See Deussen, *Allgemeine Gesch. d. Philosophie*, i. 3. pp. 90–95.

beliefs on the simple nature-worship of the Aryan invaders. That was essentially democratic in its nature, whereas the hierarchy of Brāhmanism and the intellectual aristocracy of priests, philosophers, and the highly cultivated warrior chiefs who played so important a part in the development of Hinduism, must have been due to conquest, at once physical and moral, of lower by higher races. Yet in most parts of India the transition and the struggle are so distant that all memory of them is lost. The Dravidian of the South and the Bengali of the East alike believe that they were always Hindu. The higher castes and classes, it is true, have dim traditions of a time when their ancestors, fairer and slighter in figure than the aborigines, migrated from North-Western India. But the lower castes have no such traditions, and no curiosity as to how their distant ancestors came to be accepted into the Hindu community. There are, of course, notable exceptions to this rule. On the whole, however, it is only the ethnologist who can conjecture from the physical aspect of the various races of India that they were once non-Hindus and spoke some non-Aryan language. But in the Assam valley, owing to geographical and historical causes, which will presently be stated as briefly as possible, the process by which aboriginal tribes are accepted into the Hindu fraternity is seen in actual operation at the present time, and, by analogy and in some cases by actual historical indications, the process can be traced back for some two thousand years. In the Assam valley we are on the border-land of the Hindu faith, and see the most tolerant and receptive of creeds in contact with the beliefs of Indo-Chinese races. It is singularly interesting to note how alien blood and alien civilizations are quietly assimilated by the slow, gentle, and irresistible force of Hindu ideas.

In the earliest times of which we have any knowledge, what we now call the Assam valley was the nucleus and centre of the great independent kingdom of *Kāmarūpa* (*q.v.*), a name which still survives as that of the modern District of Kāmrūp, whose capital, now Gauhāti (or Guāhāti), was then famous all over India as Prāgjyotishpur, the 'City of Eastern astrology.' This kingdom appears to have included, some 1500 years ago, not only the valley of the Brahmaputra river, but also the whole of Eastern Bengal down to the sea, and in addition (a thing even more difficult of belief for the modern traveller) the rugged and now almost inaccessible mountains of Bhutān. It was apparently in the Bhutanese hills that the kings of Kāmarūpa obtained their store of mineral wealth, and especially of copper. They were powerful monarchs, cultivated, warlike, and enterprising. Each dynasty, as it arose into power, attracted the attention of the Brāhmans, and, by one or other of the fictions common to early law and early religion in all countries, was adopted into Hinduism. It was, indeed, by common consent, at Prāgjyotishpur that there came into being the Tantrik form of Hinduism, that form which gives especial prominence to the female energy of the deity, his active nature being personified in his *śakti*, or 'wife.' Devī, as the *śakti* of Śiva, is the energy chiefly identified with the mystery of sex and magical powers, which are the leading topics of the *Tantras*, the scriptures (though, of course, not the sole scriptures) of this form of Hinduism. On the Nilāchal hill, a beautiful wooded eminence near the town of Gauhāti, still stands the temple of Kāmākṣā Devī, one of the forms of the *śakti* of Śiva. The legend that explains the ancient sanctity of Kāmarūpa and of Kāmagiri (the religious name of the Nilāchal hill) is as follows:

Satī, the first wife of the god Śiva, died of sorrow at the discourtesy shown to her husband by her father Dakṣa, who was incensed by the interruption of his famous sacrifice of burnt-offering. (It may be worth mentioning, as a picturesque circumstance, that when the woods on the southern slopes of the Bhutān and Ākā hills catch fire in the dry winter season, and can be seen glowing or blazing from great distances, the people to this day assert that the far-off glare against the sky is caused by the reviving ashes of Dakṣa's interrupted sacrifice.) Śiva, overcome by grief and remorse, wandered about the world, carrying, as a penance, his dead wife's body on his head. In order to arrest this penance and to prevent Śiva from obtaining excessive power, Viṣṇu pursued him, and, by successive blows of his discus, lopped the body piecemeal, so that it fell to earth in fifty-one pieces. Wherever any piece fell, the place became a *pīṭha-sthāna*, sacred and a fit resort for pilgrims. But the most sacred of all was the Kāmagiri hill, for this became identified with the generative powers of Satī, and, probably by some subsequent extension of the idea, with those of *Prithivī*, 'the Broad Earth,' regarded as the mother of living beings. But Śiva continued his penance, and Kāma-deva, the god of Love, was dispatched to beguile the mourner from his austerities. He succeeded. Śiva was so indignant that he burnt the Indian Cupid to ashes by a single glance from the eye in the midst of his forehead. But Love was not destined to die eternally, and the land where he recovered life to inveigle men from contemplation and austerity was the beautiful valley ever since known as Kāmarūpa, the 'Shape of Love.'

As the legend sufficiently indicates, the princes and upper classes of the kingdom of Kāmarūpa were Hindus, probably spoke some Indo-European dialect derived from Sanskrit, and were accepted as of Indian race. But the bulk of the people were not then, and many of them are not even now, Hindus. It is interesting, and not without more than ethnological interest, to indicate briefly what they were.

In the greater part of India, except in the extreme North-West, the people have a strong infusion of Dravidian blood. In the South they speak what are known as Dravidian languages, and the Southern races are of the dusky Negrito strain, and apparently akin to African peoples. In the North-East the Dravidian blood is mingled with other, and especially Indo-Chinese, infusions. In the Assam valley the Brāhmans (priests and astrologers) resemble their Bengali neighbours, and the Doms, a large fisherman caste, are plainly of Western origin. But the bulk of the people are evidently of partly Indo-Chinese blood, and their physical appearance is of the 'Mongolian' type, bearing, more or less, the characteristic aspect of the yellow races. They have themselves (with the exception of the Āhoms) no record, historical or traditional, of their advent into Assam. But the languages they speak are some clue to the successive invasions of Indo-Chinese folk from the north-east and the south-east of the valley. The oldest Indo-Chinese language spoken in Assam belongs to the Mon-Khmer sub-family, which has recently been named by Schmidt of Vienna the 'Austric' family of languages. Schmidt claims that it extends from Assam across Further India to Cambodia, and thence through Polynesia and Micronesia to Easter Island, on the coast of South America. It is worth noting, in passing, that Hindu dynasties seem once to have reigned over peoples of this race in the Far East as well as in Assam. E. A. Gait, in his *History of Assam*, quotes the case of an Indian king, Samuda, who was ruling in Upper Burma in A.D. 105, and also that of Hindus who led the Tchampas or Shans in their conquests of the mouths of the Mekong in A.D. 280. These Hindus, as Gait says, must have passed through Assam, as, probably, did the Hindus from Kām-bōd, in N.W. India, who founded and gave its name to the Cambodian kingdom in Indo-China. It is possible that Mon-Khmer peoples invaded and gave their language temporarily to much of North-Eastern India, as well as to parts of Burma. But the only Mon-Khmer tongue surviving in Assam is that of the Khāsis, now inhabiting and giving their name to the mountains between Kāmrūp and Sylhet. These interesting people remained independent until they came under British rule, and have not even now come under Hindu influences. They are a curious counterpart of the Basques in the Pyrenees. Elsewhere the Mon-Khmer element, whether in blood or speech, has become completely assimilated, and can no longer be distinguished.

The next wave of Indo-Chinese invasion is represented by the various peoples speaking the Tibeto-Burmese tongues. These have three main groups of dialects. The first of them is Nāgā, spoken in and to the east of the Nāgā hills. The second is Kuki-Chin, spoken in Manipur, Cāchār, the Lushai hills, and by the interesting race known as the Mikirs, who now inhabit an outlying bastion of the Khāsi hills jutting into the Assam plain. The people speaking these two groups of dialects have as yet hardly at all come into contact with Hinduism, and retain their own primitive animistic superstitions. The third and most important group is that now known (since Brian Hodgson's celebrated investigations into their language and ethnology) as 'Bodos.' They comprise the Meches of Northern Bengal; the Kacharis of Northern Assam; the Dimāsās, who live in the hills between Nowgong and Cāchār; the Gāros and Tipperas, inhabiting the mountains called after them; scattered plains-folk known as Lālungs and Rābhās; and (if they really

belong to the Bodo race) the Chutiyas of Lakhimpur and the great Māju1i island in the Brahmaputra. It is not to be supposed that the people who now speak Bodo languages were all of common origin. But the wide-spread survival of this group of tongues presupposes an invasion of sufficient force to impose them upon subject and assimilated races. Moreover, since the acquisition of the Bodo speech was not, as in the case of the incursion of Indo-European tongues, accompanied by the imposition of any caste restrictions, the assimilation of race was complete. It is impossible to find any ethnological difference between the various tribes now speaking the Bodo languages, except in so far as those who live in the plains among Hindus have acquired a tincture of Dravidian and, in a very slight degree, of 'Aryan' blood. The Koch race in Northern Bengal has become completely Hinduized, has adopted the Bengali language, and is practically a Hindu caste, to which modern converts from other Bodo races are still admitted. The Khyens, once a Bodo ruling race in Northern Bengal, are now wholly absorbed, and can no longer be identified. But the Meches and the Kacharis, though they live among Hindus, are still physically, linguistically, and in matters of belief, distinct races, as, to some extent, are the Chutiyas also. The Garos, Tipperas, and Dimāsās, being isolated highlanders, remain totally unaffected by Hindu influences, whether in language or religion. On the other hand, the race most properly described as Bodos (see art. Bodos) are rapidly losing their native speech, and are being adopted into Hinduism.

What the Hinduism of the great kingdom of Kāmarūpa was, it is impossible to say now with any certainty. But it was evidently the aristocratic religion of kings and nobles only, and from the fact that its centre was the hill shrine of Kāmākṣā Devī, it was no doubt of the Tantrik type identified with Western Assam and Eastern and Northern Bengal — a religion of propitiation of awful and uncomprehended natural forces by bloody sacrifices, often by the slaughter of human victims. Kāmarūpa, with its shrines, priests, kings, and heroes, figures largely in Sanskrit literature from the *Mahābhārata* downwards, and especially in certain *Purāṇas* which deal chiefly with the worship of Śiva and his *śakti*, such as the *Kālikā Purāṇa*. On the other hand, Kṛṣṇa makes a frequent appearance in the stories told in connexion with various places in the Assam valley. Many of these tales seem to imply ancient contests between the cult of Kṛṣṇa and that of Śiva.

For instance, in and round the little town of Tezpur, now the headquarters of the British District of Darrang, are the scattered remains of what seem to have been temples—stone pillars and slabs elaborately carved and ornamented. These are said to have been the palace of one Bāna Asura (the word Asura implies that the king was a non-Hindu by origin), who was the son of Bali Asura. Bāna had many sons and one lovely daughter named Ushā (perhaps after Ushas, the fair goddess of dawn). Ushā dreamt one night of a beautiful youth, and vowed that she would marry no other than the prince of her dream. Her attendant Chitra-lekhā (literally, the 'draughts-woman') had magic skill in drawing portraits, and she drew in turn the features of all the princes in India. Finally, trembling and with hesitation, she ventured to depict Aniruddha, the grandson of Kṛṣṇa himself, and this picture Ushā recognized as the vision that visited her sleep. Aniruddha was attracted by magic arts to Ushā's bower, and 'married her according to the Gandharva ceremony.' The young lovers were surprised by the princess's father, who, in high wrath, being a fervent follower of Śiva, cast the prince into prison, and confined him 'in serpent bonds.' Kṛṣṇa came to his grandson's rescue with a great fleet and army, and carried him and his bride away to distant Dwārika in Western India, but not until a great battle was fought, in which so much blood was shed that the town is called Sonitpur or Tezpur ('the city of blood') to this day, while the little river which runs near it is known as the Bharali, or 'river of fear.' The low range of hills which here skirts the Brahmaputra bank is said to be the extinct remains of a series of fiery volcanoes cast up by the god Śiva as a bulwark for his ally, the angry father Bāna.

There is one circumstance in connexion with this tale which has a certain ethnological interest. The ruins are visited in the dry season by the Daphlas, a wild tribe who live in the Northern hills. They declare that certain mysterious marks on the carved stones are 'Daphla writing,' and that the buildings were the work of their ancestors. It is possible that the Daphlas once lived in the plains of Assam, and were driven into forest fastnesses by some forgotten incursion of Indo-Chinese invaders. Their national costume, curiously enough, resembles the traditional dress of the god Śiva, and the lower caste Hindus believe them to be of the race of that god, who is described in the books as a Kirāti, 'dweller in the hills.' It was indeed somewhere in these north-eastern hills that the Epic hero Arjuna received lessons in archery and other arts of war from Śiva. In any case, the Daphlas have only to adopt Hindu rules of eating, marriage, etc., to be readily accepted into the Hindu fraternity. Again, it is said that Bhāluka, the grandson of Bāna, built a fort, ruins of which are still visible, not far from Bālipārā at the foot of the Ākā hills. The Ākās, whose chiefs now, on occasions of state, wear costumes evidently borrowed from Tibetan Buddhists, are said to claim descent from Bhāluka. It is possible that they too are descendants of a race that was driven into the hills, was once more or less Hinduized, and may yet be accepted into the Hindu fold.

But there are many such legends, all, or nearly all, relating to powerful Asura monarchs. One of the most famous of these was Naraka Asura, son of the Earth, who is said, in the *Mahābhārata* and *Viṣṇu Purāṇa*, to have carried off the ear-rings of Aditi (the mother and daughter of Dakṣa, above described) to his impregnable castle of Prāgjyotishpur, where Kṛṣṇa, at the request of the gods, went and killed him and recovered the jewels. In the *Harivaṁśa* the same story is told in a slightly different form. Narak's son and successor was Bhagadatta, who is frequently mentioned in the *Mahābhārata*. In the *Sabhā Parvan* of the Epic, the tale is told of how Arjuna attacked Bhagadatta and compelled him to pay tribute. Subsequently, it is related that Bhagadatta went with a great army to the assistance of Duryodhan in the final struggle between the Kauravas and Pāndavas in Western India.

Those who are interested in the legendary period of Assamese history will find a full account of it in Gait's *History of Assam*. In the first half of the 7th cent. we at last get a glimpse of authentic history from the famous Chinese traveller Hiuen Tsiang, who visited Kumār Bhāskara Varmana, then king of Kāmarūpa. Assam was not then, or apparently at any time, a Buddhist country. The king and the upper classes were Tantrik Hindus, the humbler folk were not yet recognized as Hindus at all. This, in the end, was perhaps an advantage, as we shall see when we come to more modern developments of Assamese Hinduism. From the 7th to the 12th cent. our sole knowledge of the country is derived from inscriptions on copper plates, most of them discovered by Gait, which were records of grants of land made to Āyurvedic Brāhmans by Hindu monarchs. These documents contain lists of kings, and enable the historian to settle a few dates at rare intervals. When the Āhoms entered the Brahmaputra valley in 1282, the old kingdom of Kāmarūpa had been shorn of much of its pristine glory, and the history of Assam proper may be said to begin. The Āhoms were Shāns who descended into the valley over the Pātkai pass from Upper Burma. M. Terrien de Lacouperie, the eminent authority on this subject, says that the Shāns are the outcome of an intermingling of Mons, Negritos, and Chinese. They were a manly and hardy race, and (an unusual thing in the East) possessed the historic instinct very strongly. Their *bu-ran-jis* (the word is one of the very few Shān words in the Assamese language) are chronicles comparable for accuracy of detail and picturesqueness of narration with those of any country, and from this time on we have a systematic account of the rise, decay, and fall of the Āhom rule, which resulted finally in British supremacy in Assam. The name Assam itself is probably derived from the word Āhom. The religious history of the Āhoms (*q.v.*) closely resembles that of previous rulers of the country. They, like their predecessors, finally established themselves at Prāgjyotishpur (which gradually came to be called Gauhāti) after having founded Sibsāgar and other towns and palaces in Upper Assam. The kings and their Āhom subjects intermarried with their predecessors in the country

and became, as zealous Hindus, defenders of the famous shrine of the Tantrik goddess Kāmākṣā. But the bulk of the quiet, innocent, and cheerful Hindus of Assam are not Tantriks at all. They are, like the followers of Chaitanya in Bengal, Vaiṣṇavas, and hold a creed which is manifestly tinged by Buddhistic influences. Their faith is that of the *Bhāgavatas*, enthusiastic worshippers of a monotheistic personal god, who is regarded as the Father of his creatures, as accessible to prayer, as having been incarnate in human form, and as one who loves humanity. The soul is regarded as eternal, and extinction or absorption is not considered as possible or desirable. Rather is it the object of the Vaiṣṇava worshipper to obtain by *bhakti*, or 'devotion,' and prayer, fellowship with and ultimate approach to the presence of the divinity (see BHAKTI-MĀRGA).

2. **Śāktism.**—(*a*) *Historical aspect.*—This new religion, to which the majority of the converts to Hinduism from the humbler races and classes now belong, came into being at a time when the Assam valley was divided between the Koch kings of the West and the Āhom kings who were establishing their dominion in the East. One of the greatest of the Koch rulers was Nara Nārāyaṇa, who died in 1584 after a rule of nearly fifty years. In his time the Koch power reached its zenith, chiefly owing to the warlike ability and energy of his brother, the celebrated commander Silārāi. Nara Nārāyaṇa himself is described as a man of mild and studious disposition, who greatly encouraged the spread of the Hindu religion. Like all the rulers of Assam, he was himself a Śākta (a worshipper of the *śākti* of Śiva), and he re-built the temple of Kāmākṣā Devī, which had been destroyed by Musalmān invaders. He imported Brāhmans from Bengal to conduct the religious ceremonies at the temple, and, to this day, the *parvatia guṣain* ('mountain priest') who is the chief priest at Kāmākṣā, is a Bengali from the great seat of Bengal religion and culture at Nuddea. The temple contains two stone figures which are said to represent Nara Nārāyaṇa himself and his warrior brother Silārai (or Śukladhvaj). What Śāktism then was (and what it still is in principle) may be judged from the ceremonies conducted at the opening of the restored temple. Here we cannot do better than quote from Gait's *History*.

'At this time Śāktism was the predominant form of Hinduism in this part of India. Its adherents base their observances on the Tantras, a series of religious works in which the various ceremonies, prayers, and incantations are prescribed in a dialogue between Śiva and his wife Pārvatī. The fundamental idea is the worship of the female principle, the procreative power of nature as manifested by personified desire. It is a religion of bloody sacrifices from which even human beings were not exempt. In the *Kālikā Purāṇa* it is stated that a man without blemish is the most acceptable sacrifice that can be offered, and the manner in which the victim is to be dealt with is laid down in great detail. When the new temple of Kāmākṣā was opened, the occasion was celebrated by the immolation of no less than a hundred and forty men, whose heads were offered to the goddess on salvers made of copper. According to the *Haft Iqlīm*, there was in Kāmarūpa a class of persons called *Bhogis*, who were voluntary victims. From the time when they announced that the goddess had called them, they were treated as privileged persons; they were allowed to do whatever they liked, and every woman was at their command; but when the annual festival came round, they were killed. Magic also held an important place in the estimation of this sect, and in the *Ain-i-Akbari* the people were accused, among other practices, of divination by the examination of a child cut out of the body of "a pregnant woman who has gone her full term of months." The religious ceremonies of the sect were equally abominable, and they were often associated with licentious orgies too disgusting to be even hinted at' (p. 56).

It may be noticed as a historical fact, that the Śāktism of Kāmākṣā was the religion in turn of dynasty after dynasty of decadent monarchs, each promoted from a state of semi-savagery by adoption into Hinduism. It may be, on the one hand, that something of savage brutality and lust were imported into the cult by association with primitive beliefs. Certain it is that all the royal families, whether of the Brahmaputra valley or of the adjacent Surmā valley, seem to have been addicted to human sacrifice and to all the excesses and abuses that go with panic-stricken cruelty. It is a fact, too, that life in the soft, enervating, and malarious climate of Assam invariably produced physical and moral decay in the fine and manly Indo-Chinese races that invaded the country. When the British took possession of Assam, the Burmese were in occupation of the valley, and were belying their Buddhist creed by cruelties probably unequalled in savagery in any part of the world. Had they established themselves on the ruins of the Āhom monarchy, there can be little doubt that they, too, would have come under the influence of environment, and that their race would have become emasculated by commixture with the degenerate plains-people. Certainly the Tantrik religion of Kāmākṣā was one of inconceivable cruelty and degradation. Before going on to describe how in the 16th cent. a reformation of the utmost importance and interest altered the whole aspect and application of Hinduism in Assam, it may be well to state briefly what the present state of Śākti-worship in the Brahmaputra valley is known to be.

(*b*) *Śāktism at the present time.*—The modern manifestations of the cult of the generative and reproductive forces of Nature are undoubtedly less sensual, less devilishly cruel, than in mediæval times, and this for a variety of tolerably obvious reasons: (1) the reaction from Burmese oppression helped the natural tendency of the Assamese temperament towards placid acquiescence and tolerance; (2) the example of the reformed and infinitely milder and purer religion of the Bhakats had a similar influence; (3) British rule, again, has made open cruelty and obscenity impossible, and even the secret performance of illegal rites dangerous; (4) above all, perhaps, the spread of education, the improvement of communication, and the fact that Assam has now probably a larger foreign population in proportion to its total numbers than any other Indian province, have effected a real change in the tenets, perhaps, and certainly in the manners of Śāktas. Śāktism remains, and must remain while the Tantras are the scriptures of the sect, a religion of blind terror, of uncomprehended forces, of the terrible mystery of birth and death. The root-idea seems to be that Nature creates only to destroy; that she creates only *because* she destroys; that life is begotten only because it is foredoomed to early destruction. The Śāktist can indeed say of his Kāmākṣā, or of some other form of the generative powers of boon nature, that, like the Lucretian Venus,

'per te quoniam genus omne animantum
Concipitur, visitque exortum lumina solis.'

He can, indeed, take pleasure in the recurring marvel of love. But behind seems to lurk a morbid sense that life and death go hand in hand, or rather that one is the shadow of the other. Since the Venus of the Nilāchal hill is Mistress of Life, and Love, and Death, it is inferred that weak mortals, her children, can do her service by loving, by begetting, by slaying. This sentiment is very widely, if obscurely, present in the minds of Hindus of even the highest intelligence and culture. In *Bhānumati* (Calcutta, 1900), a novel by the poet Navin Chandra Sen, the most eminent of living Bengali men of letters, the sense of the mingled horror and rapture of Śākti-worship is expressed in a way that no mere description by a foreigner could convey. The novel contains, incidentally, a graphic account of the appalling cyclone and tidal wave which swept over the district of Chittagong in

October 1897. The whole description is a vivid reminder of the fact that this remote corner of Eastern Bengal was once part of the vanished kingdom of Kāmarūpa, and still preserves its ancient attitude towards the inscrutable mysteries of our common existence.

The tale opens with a singularly beautiful and poetic description of the smiling aspect of the Chittagong coast in late autumn, of the blue sea flecked with foam as the water of a lake is studded with swaying lilies, of the pale azure of the sky overhead, of the yellow sands shining in the happy brightness of morning sunshine, and behind them the rich gold of ripening crops, varied by the dense green foliage, in which the brown-roofed cottages of the peasants nestle. To the north soars the sacred peak of Chandra-sekhar, crowned with the gleam of the white temple of the goddess, and to the south lies the rocky island shrine of the local Venus at Māskhāl, an Indian Cyprus on a small scale. It is the eve of the annual festival at which, in old time, human sacrifices were offered to the goddess of Life and Death. The people are happy in the expectation of a plentiful harvest. They are preparing the simple presents with which they rejoice the hearts of their relatives and children; their minds are filled with gratitude for safety, and prosperity, and sufficient food. But the goddess is bent on warning her creatures that death is her function as well as life, and love, and happiness. On the fated night of the cyclone, when the rough and simple peasant folk are quietly sleeping, the great wind blows suddenly without visible warning, and, catching up the rising tide, pours it in a torrent of impartial destruction over the sleeping coast, involving all—happy homes, men, women, and children, ripening crops, prowling beasts of prey, and harmless domestic animals, even the birds of the air—in one common hecatomb. The goddess has exacted her own sacrifice, since men no longer offer victims at her altar. The chapter is significantly headed '*Raṇa-Kṣettra*,' the 'Field of Battle.'

And this, be it noticed, is not a description written by a fanatic priest. Navin Chandra Sen is an English scholar, and an administrator who rose high in the British service. He has been an ardent student of English literature, and, as his poetical works show, is deeply interested in the study of religion. But the warp and woof of the devotional texture of his mind is made up of the ancient conceptions which gave the Brāhmans of Prāgjyotishpur their supremacy through Eastern India, and the kingdom of Kāmarūpa its old reputation for magic, sorcery, and divination. It is still a land of spells and charms; and mystic formulas, rightly used, still have power to bless and curse, to draw on fellow-mortals the smile or frown of the inscrutable goddess in whose hands are the gifts of birth, love, and death alike.

The temple at Nilāchal is open to the visits of foreigners; but its rites are not, even now, very accurately known to the uninitiated. During the Amābasyā week the shrine is closed to all, because, by a quaint fancy, that is the period during which Mother Earth, obscurely identified with the goddess, is unclean. Conversely, the great river Brahmaputra, which flows under the shrine, is, for reasons mythological and other, ceremonially impure throughout the year, except on the annual bathing-festival of the Aśokāṣṭamī, when ablution in his waters becomes as cleansing as bathing in Mother Ganges herself.

In the *Report on the Census of Assam*, taken in 1891, Gait writes as follows:

'Their religious ceremonies [*i.e.* those of the Śāktas of Eastern Bengal and Assam] have frequently been the subject of adverse criticism. Robinson says* that some of the formulas used at the festival in honour of Kāmākṣā relate to things that can never become the subject of description, and that "the most abominable rites are practised and licentious scenes exhibited, which it is scarcely possible to suppose the human mind could be capable of devising." I am not aware on what authority he framed this extremely strong denunciation, but his statements are supported by other writers, and have not, so far as I know, been contradicted. It is well known that dancing girls are maintained at all the principal temples, and it seems certain that a great deal of licentiousness is permitted under the guise of religion.' Here Gait refers his readers to the account of Śāktism given by Monier Williams in his *Religious Life and Thought in India*.

The five essentials for worship are the five *Makāras*, or 'five *M's*,' namely, *Madya*, 'wine'; *Māṁsa*, 'flesh'; *Matsya*, 'fish'; *Mudrā*, 'parched grain and mystic gesticulation'; and *Maithuna*, 'the indulgence of sex.' B. C. Allen has a similar account of modern Śāktism in the *Assam Census Report* for 1901.

Before quitting the subject of Tantrik worship in Assam, it is only right to warn the reader that descriptions based on the excesses of possibly a few enthusiasts must not be accepted as a fair account of either the religious beliefs or the ethics of the great bulk of Assamese Śāktas. Like most Eastern Indians, and especially those who have an infusion of Indo-Chinese blood, they are a mild, contented, and smiling race, little given to excesses of any kind, good sons, husbands, and fathers, and, so far as the long experience of those Europeans who have lived among them shows, not more addicted to grossly superstitious practices than the bulk of humanity. Religion with them, as with most races, is left in its more esoteric forms to priests, experts, devotees, and enthusiasts. There are a few dancing girls at the Kāmākṣā temple, it is true, and it is to be feared that these are devoted to the perversely logical extremes of a creed of panic terror, and morbid exaggeration of the facts of sense. But there is no part of India where womanly virtue and modesty are more valued and more consistently practised than in Assam, which in this respect compares very favourably with neighbouring Bengal, where prostitution is rife. In truth, the Śākti-worship of Kāmākṣā can hardly be considered as belonging to Assam in any proper sense. It is the creed, so far as it is Assamese at all, of the upper classes, all of whom claim to be of foreign origin; and there can be no doubt that, except at the temple itself, it has been purified by contact with the true national religion of the country, the reformed Vaiṣṇavism, to which it is a pleasure and a relief to turn.

3. The Vaiṣṇavism of Assam.—(*a*) *The historical aspect of Assamese Viṣṇu-worship.*—When the Koch king Nara Nārāyaṇa (1528–1584) ruled in Western Assam, and the Āhom king Chuhumung, whose Hindu name was Swarga Nārāyaṇa (1497–1593), ruled over the eastern part of the Brahmaputra valley, the great social and religious reform initiated in Bengal by Chaitanya spread to Assam, and became the foundation of what is still the popular and prevalent form of Hinduism in the country.

In still earlier times, when the Āhoms entered the Brahmaputra valley, there were twelve subordinate rulers or chiefs, who were known as the Bāra Bhuiyā, and these claimed to be descendants of Samudra, the minister of an ancient and still famous ruler called Arimatta. Samudra, it is said, seized the throne on the expulsion of Arimatta's son Ratna Singh. Samudra was succeeded by his son Manohar, and Manohar's daughter Lakṣmī became the bride of the sun-god, to whom she bore two sons, Santanu and Sāmanta. Santanu became a follower of Viṣṇu, and Sāmanta a Śākta and worshipper of the rival deity Śiva—another reminder of the never-ending contest between the two great Hindu schools of divinity. The brothers separated, Santanu and his sons going to Rāmpur in Nowgong, while Sāmanta remained in Eastern Assam, at Lakṣmīpur, the village from which the British District of Lakhimpur takes its name. He and his descendants seem to have exercised a gradually diminishing political power, and for a long time maintained their independence against the Kachāri or Bodo king who then ruled in Central Assam, and the powerful Chutiya monarch whose capital was at Sadiyā, near the north-eastern frontier. Ultimately, however, they fell victims to the usual law of decay to which all Assamese dynasties have been subject, and were subdued by the rising Āhom power. As in so many other cases, this semi-royal family became reconciled to the common lot of Assamese humanity, and, save for some lingering pride of race and some intellectual aspirations, were merged in the landholding class. One of Santanu's descendants, named Rājdhar, settled at Bardowa in Central Assam, and his son Kusambar was the father of the great religious reformer Śankara Deva.

This is one of two versions given by Gait of the origin of the first of the reformers of Assam. The other story does not differ in material points from that which has been summarized above. It

* *Descriptive Account of Assam*, ii. 258.

too, describes Śankara Deva as the descendant of famous chiefs, but speaks of these as the wardens of the northern marches.

It is said of Śankara that he early recognized the crude and cruel features of the cult of the goddess of Life and Death, and was puzzled by the anomalies of the Śākta religion, obvious enough to modern minds, if they presented few difficulties to simple races surrounded not only by human foes, but by the frequently hostile and always terrible and incomprehensible forces of a land of fierce sunshine, and one much subject to earthquake and storm. Śankara's fate was cast in a happier and more peaceful time, when there was an equilibrium of forces between the two great powers of the Koch and the Ahom, and when men had leisure to think of the possibility that human beings might conceivably live at peace together, and that Nature herself might not be so hostile after all. He spent twelve years in Bengal, chiefly, it is supposed, at Nuddea, where he learnt the religious ideas of a greater than himself, the famous reformer Chaitanya. Like his master, he made the *Bhāgavad Gītā* his scripture, and Kṛṣṇa, the heroic incarnation of Viṣṇu, the god of his worship. He was one of the most eminent of the many teachers, both before and after Chaitanya, of the *Bhāgavata* religion, which in some of its forms so closely resembles the teachings of Christianity that it has been supposed by some that the doctrine of *bhakti*, or personal adoration of a divine Father, was borrowed from the Thomasine Christians of Southern India (see BHAKTI-MĀRGA). Śankara, at all events, abjured priests, idols, and castes, and taught that all men are alike the sons of Viṣṇu, possessed of immortal souls, and capable of being freed from sin and sorrow by addressing their prayers to their loving Father. He at first strove to propagate his ideas—and his earnest desire to find converts affords another parallel with Christianity — in the Ahom dominions. But the Ahom kings were under the domination of Śākta priests, who denounced the innovator as a heretic. Śankara was compelled to take refuge at Barpetā, in the kingdom of the mild and enlightened Koch king Nara Nārāyaṇa. It is said that the king had many interviews with the reformer, and even proposed to become his disciple. But Śankara, with characteristic modesty, refused the honour.

This story may merely record in a concise and picturesque form the fact that the Vaiṣṇavas of Assam never tried, as their Brāhman predecessors had done, to win over the ruling classes. Their 'kingdom,' if the expression may be used without irreverence, 'was not of this world,' and they were content to make converts among the humblest races and classes, those which orthodox Hinduism had, with some vague memory of the old 'Aryan' exclusiveness, regarded as Mlecchas and barbarian. It is said by modern followers of Śankara that he had studied the *Bhāgavad Gītā*, before he proceeded to Bengal, with Hari Deva and Dāmodar Deva, subsequently to be themselves founders of minor Vaiṣṇava sects. It is possible that there was at this period a widely spread wave of religious inquiry and a silent revolution against the physical and spiritual tyranny of Śākta priests. It is at least a curious coincidence that, when Luther and other reformers were rebelling against the abuses of Roman doctrine and discipline, a precisely similar movement should have produced Hari Vyāsa in Nepāl, Rāmānanda in Orissa, Chaitanya in Bengal, and Śankara in Assam.

Śankara is said to have lived to great old age, and to have died in the year 1569. He was succeeded by his favourite disciple Mādhava, a Kāyastha like himself. Among those who still follow the teaching of Śankara, Mādhava is regarded with even greater reverence than Śankara himself, and the sect is commonly known as the Mahāpuruṣiyas, the followers of the 'Great Man' or Teacher, *i.e.* Mādhava. But there were some who, on the death of their original teacher, were still under the influence of old-time ideas, and resented the founding of a hierarchy of Kāyasthas as religious guides. Several Brāhman disciples seceded and founded sects of their own. The most important of these Brāhman dissidents were Dāmodar Deva, Hari Deva, and Gopāl Deva, who founded numerous *chattras*, or centres of religious instruction. The most important and interesting of these are the institutions, not wholly unlike Buddhist monasteries, at Auniāti, Dakṣinpāt, Garamur, and Kurubāhi — all in the remarkable Mājuli island, perhaps the longest river-island in the world, which lies in the Brahmaputra, between the modern Districts of Sibsagar and Lakhimpur. There is little Śāktism now except in Kāmrūp Laur; and that of the Vaiṣṇavas in Lower Assam is mainly Mahāpuruṣiya, while Upper Siam, including Nowgong, east of the Kalang, is inhabited mainly by followers of the Bāmumya *guṣains*.

But even in Upper Assam the Brāhmans did not in early times exercise an unquestioned sway. There was one Aniruddha, a Kolitā or writer by caste, who quarrelled with Śankara Deva and founded the Moāmāriā sect, which played an important part in subsequent political events, and is known to all students of Assamese history as the origin of the famous Moāmāriā rebellion. It is said that the word 'Moāmāriā' is a nickname, contemptuously given by the Brāhmans to the low-caste followers of Aniruddha, who lived by a fresh-water lagoon which abounded in the coarse fish known as *moā*. His disciples were known as 'killers of moā-fish.' They became 'fishers of men' to considerable purpose in later times, and furnished a hard nut for the Ahom rulers of Assam to crack.

For a time the Mahāpuruṣiyas and Bāmuniyas between them practically ousted Śāktism from Assam. Its restoration was due to the royal pride of the famous Ahom king Sukhrungphā, better known by his Hindu name of Rudra Singh (1696–1714). He wished to adopt Hinduism, and was too proud to accept the *saran*, the oath and formula of orthodoxy, from a subject. He imported one Kṛṣnarām Bhattāchariya from Nuddea, and made him *parvatia guṣain*, the high priest of the mountain-temple of Kāmākṣā. Kṛṣnarām was a Śākta, and the Court and its dependants adopted his form of Hinduism. The new guṣain's priestly arrogance was aptly shown when Rudra Singh died and was succeeded by his son, Sunyeophā or Lakśmī Singh. Kṛṣnarām refused to recognize the young king, on the ground of illegitimacy. Lakśmi Singh accordingly imported another Śākta priest from Bengal, who was the founder of the family of the Na Guṣain, the 'New Priests,' as the Parvatia Guṣains are the heads of the Nāti Guṣains, who together with them form the nucleus of Śāktism in Assam. There are, however, a few representatives still of the old indigenous Śāktism of the Assam valley, who, from their habit of going about un-turbaned, are known by the title of *Mykali Muṛa*, the 'Bare-heads.' Gait believes that Śāktism has more vital force than Vaiṣnavism. 'Many Vaiṣnavas,' he says, 'are attracted by the more realistic worship of the Śāktas, and offer sacrifices at Kāmākṣā despite the remonstrances of their spiritual guides.' In truth, Vaiṣnavism, as practised by its humbler converts, is but a stage removed from the animistic creed of the aboriginal races of Assam. It involves chiefly the giving up of good roast pork and rice-beer—luxuries to which the castes that have Indo-Chinese blood in their veins are much addicted. Śāktism, on the other hand, puts little check on sensual gratification, since it is always possible for enthusiasts of either sex to regard themselves as incarnations of the male or female form of the deity, and so to please divinity by pleasing themselves.

(*b*) *Vaiṣnavism at the present time.*—It remains to say a word as to the Vaiṣnavas as they now are. Laymen are under the supervision of the *guṣains* of one *chattra* or another, to whom they have taken the vow of obedience. They are visited from time to time by *bhakats*, or disciples of the *chattra*, who exact the doles or fines by which the community is maintained. They are mostly simple and innocent enough folk, not much given to religious or ethical speculation. Their

rustic existence is so uneventful and unchequered that a very plain and uncomplex theory of moral and material existence suffices them. The Mahāpuruṣiyas now regard Śankara and Mādhava as *avatārs*, or incarnations of Viṣṇu, though neither of them claimed this promotion in his lifetime, and would, indeed, have regarded such an assumption of divine honours with horror. The way to salvation lies through the performance of good deeds and the devout pronouncing of the name of Hari. Worship is carried out by the performances of *sankirtan*, the enthusiastic singing of hymns accompanied by much beating of drums (*dhol*) and clashing of cymbals (*kartāl*). The ten incarnations, or *Daś Avatār*, of Viṣṇu are believed in. Caste prejudices, though theoretically opposed to the tenets of the sect, were not wholly destroyed by Mādhava himself, and are slowly but surely reasserting themselves, perhaps under the influence of the adjacent Śāktism. The Mahāpuruṣiyas do not, however, recognize caste so fully as the sects that have Brāhman leaders. The *Kaulia Bhakats*, the monks or recluses who live in the precincts of the *chattras*, are celibates, ascetics, and wholly ignore caste, as being of the nature of worldly distinctions. In each *chattra* there is an image of Viṣṇu, but this is said by the Kaulias to be a mere concession to the idolatrous weaknesses of the common people. They themselves do not pay any reverence to the idol, and are pure monotheists after the teaching of the *Bhāgavad Gītā*, with, no doubt, in the case of the better read among them, a leaning towards pantheism.

The Mahāpuruṣiyas eat the flesh of wild animals, such as deer, and also all feathered game. They do not eat domesticated animals or fowls. (It may be worth mentioning that the Assamese word for 'deer' is *pahu*, the local pronunciation of the Sanskrit *paśu*. The deer is, in fact, '*the* animal.') The Mahāpuruṣiyas do not kill with the knife or poleaxe, as most Indians do, but cudgel animals to death. Their principal scriptures are a *Kirtan* and *Daśam* attributed to Śankar Deva, and a *Nāmghoṣa* and *Ratnāvali* said to have been composed by Mādhava. The *Kirtan* and *Nāmghoṣa* are anthologies from different *purāṇas*. The *Daśam* and the *Ratnāvali* are extracts from the *Bhāgavad Gītā*. The Mahāpuruṣiyas refuse to eat with the Dāmodariyas, but, curiously enough, intermarriage with them is not unknown.

The Dāmodariyas worship the idol of Kṛṣṇa, and they regard their founder Damodar Deva as an incarnation of that god. Refusing the spiritual leadership of Śūdras, they refuse, necessarily, to recognize the claims to homage of Śankar and Mādhava. In other respects there is little difference between their tenets and habits and those of the Mahāpuruṣiyas. Though they are careful for Brāhmanical supremacy, they are, strange to say, less strict in diet than the Mahāpuruṣiyas, and eat the flesh of goats, pigeons, ducks, etc., following in that respect the example of their Brāhman teachers. Nor are they so particular as the Śūdra caste in matters of personal cleanliness.

The followers of Hari Deva regard their leader as an emanation of Kṛṣṇa, but do not on that account deny that Śankar was also an incarnation of Viṣṇu. Among them prevails the practice of the *bhakat-seva*, which permits their Brāhman leaders to accept indiscriminately all offerings made to them by their *jajmānas*, or disciples. Hari Deva was himself an enthusiastic admirer of Śankara and Mādhava, but in modern times the tendency is for the followers of this reformer to identify themselves with the Dāmodariyas.

Finally, a few words must be said as to the followers of Gopāl Deva. Gopāl was a disciple of Śankara, who quarrelled with his leader, and started a *chattra* of his own. But it is said that the misunderstanding did not wholly destroy their liking and respect for one another, and it is difficult at the present day to see much difference between the beliefs and practices of the followers of Gopāl Deva and the Mahāpuruṣiyas. The former hold an annual festival in honour of their founder, but in other respects are much the same as members of the rival sect.

4. Methods of conversion.—The most important method of conversion to Hinduism in Assam, but one always reserved for ruling princes and powerful tribes, and now obsolete, was that described by Gait as 'conversion by fiction.' As he says (*Census of Assam*, 1891, p. 83):

'The Brāhmans ingratiate themselves with the head of the tribe, discover that he is a Hindu of unexceptionable antecedents, whose ancestors have for some reason thought fit to conceal their identity, and present him with a brand new genealogy, in which his descent is traced back to some god in the Hindu pantheon or some potentate in Hindu mythology. Thus the Koch kings are said to be descended from Śiva, who, assuming the form of Haria Mandal, had intercourse with his wife, who was no other than an incarnation of Pārvatī. While a divine origin for the king was thus furnished, the rest of the tribe were not forgotten. It was explained to them that they were Kṣatriyas who fled eastwards to escape the wrath of Paraśurāma, and had remained there ever since, disguised as Meches and Koches. The Kachāri kings of Hiramba were similarly converted, and, after their ancestry had been satisfactorily traced back to Bhīma, the two chiefs, Kṛṣṇa and Govinda Chandra, were placed (about 1790 A.D.) in the body of a large copper image of a cow, and were thence produced to an admiring people as newly born Hindus. The whole of the Kachāris of that part of the country were also admitted to be of Kṣatriya origin, and were allowed to assume the sacred thread on declaring their adherence to the orthodox faith. The conversion of the Manipuris (or Meithei, the Kuki-Chin race inhabiting the Imphāl valley) happened in precisely the same way. Arjuna was alleged to have been the founder of the royal family, while the masses of the people, like the Kachāris, were admitted to be "concealed Kṣatriyas." To this day a Nāga or Kuki on conversion is at liberty to describe himself accordingly and to assume the sacred thread. For the Āhoms, Indra was selected as the mythical progenitor of the kings, but no special origin seems to have been assigned to the common people, so that an Āhom on conversion takes as low a place in the Hindu caste system, in his own estimation, as he does in that of orthodox Hindus.'

Here Gait adds an interesting note to the effect that Indra also enters into the traditions of the Mon-Annam races of Burma and the Far East. Indra alone of the Vedic gods, Forbes tells us, has been admitted into Buddhist mythology (*Languages of Further India*, p. 41). It is just possible that the Āhom kings brought the tradition of their heavenly descent with them from Burma, and did not obtain it from their priestly attendants.

The fictional system of conversion had its advantages. It admitted whole races at a time into Hinduism. But it involved important concessions, which the Brāhmans were not likely to make unless they could receive some equivalent in return. Converts who belong to tribes for which a high ancestry has already been invented, continue to claim admittance to their reputed caste—generally, of course, a high one. But nowadays conversion is sporadic and confined to humble folk, and such people are kept on a much lower footing than the kings, warriors, and invading races of old time. Sometimes they change their tribal name and enter a caste specially reserved for them. Sometimes they even become Hindu without changing the title of their race.

In the Assam valley the Koch caste is usually allotted to converts—a circumstance not without interest when it is considered that Koch was originally the name of a race whose members, in Northern and Eastern Bengal, changed their name to Rājbaṁsi, or 'royal-born,' when they adopted Hinduism. The true Bodos of the Kachāri Dwars usually enter this caste, while their highland

cousins, the Di-mā-fisā, as already related, have been raised to Kṣatriya rank. But even the name of Koch cannot be assumed all at once. A Kachāri, for instance, begins by placing himself under the protection of a *guṣain* and taking the oath of obedience, or *saran*. He is then called a Saraniya. At this stage he still eats pigs and fowls, and continues to drink beer and, less frequently, distilled spirits. Next he (or rather his descendants) becomes a Modāhi, which implies the renunciation of alcohol. By slow degrees the ancestral yearning for unholy food and drink diminishes or disappears, and, having become a ceremonially pure Hindu, the aforetime Kachāri is accepted as a Kāmtāli or Baṛ Koch. Even then, however, he is subject to relapses, especially in the matter of pork, as the presence of pigs in Koch villages sufficiently testifies.

In the eastern part of the Brahmaputra valley, where caste feeling is even now weaker than on the confines of Bengal, a change of name is unnecessary, and a Kachāri or Āhom retains his tribal appellation. In the Surmā valley the only Indo-Chinese tribes who are now converted are Manipuris and Kachāris; and these, as explained above, are entitled to be received as Kṣatriyas though the Kṣatriya caste no longer exists among the Bengalis. There are a few Tipperas (Bodo folk from the Tippera hills) who are received into Hinduism. These obtain the as yet unexplained caste name of Rārh.

It may be mentioned in passing that instances have been known in which members of hill tribes have undergone a stage of Christianity on their way to Hinduism.

For instance, there is a well-authenticated case of a young Kachāri in Darrang who was brought up in a mission school, was baptized, and obtained a somewhat lucrative post. To a man of his race it seemed natural that he should invest his savings in a polygamous union, and he was at some pains to convince his missionary that he could find nothing in the New Testament to prevent a layman from being the husband of two wives. It was, of course, impossible for his pastor to accept his view of the case, but he married a Koch girl *en secondes noces*, and himself in due course became a Hindu Koch.

At the present time the ferment of political agitation which is stirring in Bengal has spread, to some extent, to the educated classes in the Assam valley. The movement is largely a Hindu movement, and implies the fervent adoration of a Mātā, or mother, to whom the *Bande Mātāram* hymn is addressed. This hymn is usually interpreted as an invocation of the mother-land; and, in one sense, it undoubtedly has this meaning. But no one who will take the trouble to read the context in the well-known novel of *Ānanda Maṭh*, from which the hymn is taken, will have any difficulty in convincing himself that the invocation has also an esoteric sense, and implies the adoration of a female divinity, who is, more or less disguised, the Śākti of the old cult of the vanished kingdom of Prāgjyotishpur. The neo-Śāktists who, in Bengal and Assam at least, head the new 'national' movement towards autonomy and independence of British rule, boldly claim, on the strength of their education and intellectual ability, an equality with European races, and, of late, have exhibited a marked desire to be admitted to the amenities of European society. They themselves confess that the social and political progress of Japan has given the hint for this new ambition. It will be a matter of much interest to see whether followers of the more esoteric and, according to European ideas, less pure and elevating form of Hindu belief will be able so to transmute their social system and ideals as to obtain admittance into even the comparatively tolerant society of modern Europe. Of the intellectual ability of the Aryo-Dravidian upper classes of Bengal and Assam, the heirs of the ancient civilization of Kāmarūpa, there can be no doubt. That most of them are good citizens and excellent in their dealings with one another is equally undoubted. It may be that Śāktism at its worst was no worse than the society depicted, for instance, in the tales of Apuleius—a society which nevertheless still retained something of the administrative instincts of Republican Rome. It would be unwise to dogmatize or prophesy in a matter whose solution must depend on many incalculable events. It would be unfair to remind the political reformers of Assam that the shrine of Venus Kāmākṣā still draws its throngs of worshippers and furnishes revenue to priests who are much as were the priests of old time, when the humble civil station of Gauhāti was the proud and famous capital of Prāgjyotishpur, an early English account of which may be read in the travels of Ralph Fitch, who visited the country of Couch, or Quichen, as he calls it, when Nara Nārāyaṇa still ruled over the diminished remains of the old kingdom of Kāmarūpa.

J. D. ANDERSON.

ASSASSINS.—1. Names.—'Assassins' was a name given, mainly by European writers, to a community properly called Ta'limites ('Instructionists') or Ḥasanites ('followers of Ḥasan Ṣabāḥ'), forming a branch of the Bāṭinites ('followers of the Inner Meaning'), Ismā'ilians ('adherents of Ismā'īl b. Ja'far aṣ-Ṣādiq'), or Sab'ites ('Heptadists'), and sometimes confused with the Bābakites or Ḫuramites and Qarmatians (*q.v.*). For the origin of the name Assassin (spelt in base-Latin documents *assasini*, *assessini*, *assisini*, *assassi*, *hassasuti*, *heissessin*, etc.) many improbable conjectures were offered till it was finally identified by de Sacy (*Mém. de l'Institut*, iv. 44) with the Arabic *ḥasshāshīn* or *ḥashīshiyya*, 'drinkers of *ḥashīsh*' (an extract of hemp possessing intoxicating properties, with which there is reason to believe that the members of the sect were at times drugged). The story, however, to that effect which is told by Marco Polo (3rd ed., Yule, i. 139), though parallel with some Eastern narratives (see von Hammer, *Mines de l'Orient*, iv. 355), can only be regarded as a romance. The name *ḥasshāshīn* with its synonym has as yet been found in very few Arabic authors,* applied to the Syrian branch of the sect; and seems to have been a term of abuse, given to it by its enemies, who associated deceit with the habit of drinking this liquor (*ZDMG* xx. 591).

2. Tenets.—The tenets of the community are very imperfectly known, partly owing to the rarity of MSS emanating from it, and partly because their doctrines were essentially esoteric, and communicated in their entirety to very few persons. It is, however, certain that the system of the Ismā'ilians was a conflation of philosophic pantheism, emanating from India, with the formulæ of Islām; and the doctrine whereby this process was facilitated, and which won them the name Bāṭinites, was that every text of the Qur'ān had a hidden meaning, which was to be followed

* To de Sacy's references we may add Mufīd al-'ulūm (Cairo, 1310, p. 50), where *ḥashīsh* is said to be the food of the *Mulḥids* (the name by which the sect is known to its enemies).

to the exclusion of the literal sense. The name Sab'ites is ordinarily interpreted as implying that they recognized only seven *imāms*, whereas most of the Shī'ites recognized twelve; the seventh being that Ismā'īl b. Ja'far, who was supposed to have died before his father (who therefore left the imāmate to another son Mūsā), but in the opinion of the Ismā'ilians either did not die but remained concealed, to re-appear at some time as Mahdī ('divinely-guided' leader), or retained his title to the imāmate and handed it on to his son Muḥammad, a real or pretended descendant of whom afterwards founded the Fāṭimid dynasty in Egypt. More probably the name Sab'ite refers to their belief in seven incarnations of the deity, called *nāṭiqs*, 'utterers,' whom they enumerate as Adam, Noah, Abraham, Moses, Jesus, Muḥammad, and Muḥammad b. Ismā'īl; for the last, as will be seen, the head of the community for the time being was apt to be substituted. Between every two of these *nāṭiqs* there came a series of seven *imāms*, or chiefs; and each imām was at the head of a heptad, of either followers or classes of followers, called respectively *ḥujja* ('argument'), *dhū maṣṣa* ('sucker,' *i.e.* imbiber of learning), *dā'ī akbar* ('greater missionary'), *dā'ī ma'dhūn* ('permitted missionary'), *mukallib* ('trainer') and *mu'min* ('believer'); the last class but one were not permitted to reveal the doctrines, but might shake the faith of ordinary Muslims. Similarly they had a system of seven operations required in the making of a convert, the first of which consisted in testing the capacity of a man for conversion, the second in winning confidence by flattering a man's particular taste (*e.g.* practising asceticism before an ascetic, debauchery before a loose liver), the third in suggesting doubts as to the truth of Islām; in the sixth a man had to abandon religious observances, and interpret 'washing' as obeying the imām, 'washing with sand' (permitted by the Islāmic code in the absence of water) as obeying the 'permitted missionary' when the imām was away, etc. Certain other examples of the 'inner meaning' assigned by them to Qur'ānic texts are given by Ch. Schefer (*Chrestomathie persane*, i. 178):

'When the Qur'ān says Jesus had no father, the meaning is that he received instruction from no trustworthy teacher: when it says that he raised the dead, it signifies that he brought knowledge to dead understandings.'

Rather more interesting is their gloss on the Qur'ānic passages in which Pharaoh and Haman are mentioned. These names they supposed to stand for the first two Khalīfs, Abū Bakr and 'Omar, who kept the first imām, 'Alī, out of his rights. With regard to the existence of God they maintained a sceptical attitude, so far at least as 'existence' might be regarded as an attribute; for their public symbol was at times 'we believe in the God of Muḥammad.' In their cosmogony the world of mind was said to have first come into existence; the world of soul followed, and then the rest of creation. A man's life is due to his being a receptacle of a partial soul which at death rejoins the universal soul.

3. History.—The tenets of this community seem to have attracted little attention till towards the end of the 5th cent. of Islām; for the work of Ibn Ḥazm on sects and creeds of the middle of that century contains but a casual allusion to them as one of many sects who vainly believed in a concealed imām. The importance of the branch known as Assassins began with Ḥasan b. 'Alī b. Ṣabāḥ the Ḥimyarite, ordinarily known as Ḥasan Ṣabāḥ, who in A.D. 1090 seized the fortress of Alamūt near Kazvīn; but it was greatly reduced when, in 1256, that fortress was taken by the Mongol Hūlāgū. On that occasion the conqueror gave his vizier 'Aṭā Malik Juwainī the right to inspect the library of the fortress before burning it, and the vizier thence extracted a brief history of the community, which he afterwards inserted in his chronicle called *Jahān-Kushāi*, tr. by Defrémery in *JA*, 1860.

This summary was afterwards embodied by the Persian chronicler Mirkhond (*ob.* 1498) in his *History*, together with some other matter bearing on the history of Ḥasan Ṣabāḥ and his successors (published with tr. by Jourdain in *Notices et Extraits*, ix. 143 ff.). An account in some respects more favourable to Ḥasan is given in the chronicle of Ḥamdallāh Mustaufī (*ob.* 1349 A.D.), translated by Defrémery in *JA*, 1848. Some of the matter given by Mirkhond is derived from a work by the celebrated Niẓām al-Mulk, vizier of the Seljūks, who was well acquainted with Ḥasan and finally perished by his machinations. The most elaborate account as yet discovered is that in the chronicle *Jāmi' at-tawārīḫ* (Brit. Mus. Or. 1684), which is told from the point of view of followers of the sect. The statements of this work, and others bearing on the same subject, have been submitted to searching criticism by E. G. Browne (*A Literary History of Persia*, ii. 190 ff.), who has disposed of certain familiar myths, which need not again be repeated. According to this, his father's home was Kūfah, but he had migrated to Qum, where Ḥasan was born; both originally belonged to the Shī'ite 'Sect of Twelve,' but the son was converted to the 'Sect of Seven' through the efforts of a missionary named Amīr Dārāb, and those of the famous poet and traveller Nāṣir-i-Khusrav. These missionaries, societies founded by whom had already honeycombed Persia, were agents of the so-called Fāṭimid Khalīfs of Egypt, at whose court ambition which had failed to find gratification at that of the Seljūks, now in control of Baghdad, naturally sought compensation. The myth to which reference has been made assigns Ḥasan a motive of this sort for joining the sect.

About the year 472 A.H. (A.D. 1079) Ḥasan went to the court of the Egyptian Khalīf Mustanṣir, and studied the doctrines of the community which he had joined. But he did not stay more than two years in Egypt, having espoused the cause of the Khalīf's eldest son Nizār, who had been appointed by his father to succeed him, but was later displaced in favour of another son. Ḥasan Ṣabāḥ maintained that the expressed resolve of an imām was unalterable. He obtained, however, some sort of certificate as Ismā'ilian missionary, and introductions to those persons who were already playing that part in Persia, whither he returned in 1081; and a writer on religions in 1085 at the court of Ghazni already mentions Ḥasan Ṣabāḥ as a successful preacher of Bāṭinism in Khurāsān and 'Irāq (Schefer, *op. cit.*, i. 161).

According to Ibn Athīr (ed. Tornberg, vol. x. p. 213), the Ismā'ilian revival with which Ḥasan proceeded to associate himself had about this time begun at Sāwa, where eighteen men met to perform worship in the style peculiar to the sect. There, too, their first assassination took place, the victim being a *mu'adhdhin* ('caller to prayer'), whom they had vainly endeavoured to convert to their doctrines, and had murdered when they feared he might betray them to the local authorities. The vizier Niẓām al-Mulk ordered a carpenter who was suspected of the murder to be executed with great brutality, and thereby exposed himself to the vengeance of the sect. Since Ḥasan Ṣabāḥ's conduct is said to have been dictated by dissatisfied ambition and the desire to be avenged on Niẓām al-Mulk, this may have been the occasion for his conversion; but the order of events is not quite certain. What is clear is that the sect was highly unpopular with the orthodox, though the skill of the missionaries caused it to spread in secret; and that the sectarians quickly felt the need for strongholds in which they could be safe from persecution. The first fortress seized was one near Qā'in between Iṣfahān and Nīshābūr (see C. E. Yates, *Khurasan and Seistan*, 1900, p. 62). That of Alamūt, which fell into the hands of Ḥasan, 'is 32 miles from Kazvīn; it is on a solitary rock, about 300 yards long from E. to W., very narrow, not 20 yards wide at the top; about 200 feet high everywhere save to the W., where it may be 100' (*JRGS* viii. 431; cf. iii. 15). Ḥasan

is said to have purchased it for 300 pieces of gold from an 'Alid who happened to be governor, and on whom Ḥasan imposed by professed asceticism and piety; and he probably obtained authority among the Ismā'īlians by professing to act as the deputy of the Egyptian Khalīf, whom they acknowledged as their chief. Ḥasan caused the land surrounding his fortress to be carefully cultivated, and this may have led to the legend which associated with it gardens of delight that could serve as a foretaste of the Islāmic Paradise.

Like other founders of dynasties in the East, Ḥasan was a preacher and controversialist. Works by him* or by his colleagues, embodying Bāṭinite doctrines, excited sufficient attention to evoke replies from the foremost theologian of the time, al-Ghazālī, who refuted their tenets in a work dedicated to the Khalīf Mustaẓhir (487–512 A.H.), whose reign coincided with Ḥasan's tenure of Alamūt. A second tract written by him in answer to the 'Instructionists,' called 'The Just Balance' (*al-Qusṭās al-Mustaqīm*), was published in Cairo, 1900. It is in the form of a dialogue between Ghazālī and a member of the sect. The latter maintains the doctrine of a hidden instructor, who can see all that is going on in the world, on the authority of his mother, 'and our master the lord of the fortress Alamūt,' as well as a comrade of Dāmghān Iṣfahānī, and the inhabitants of the fortresses. The treatise is occupied mainly with an account of the forms of the syllogism and the logical fallacies, and an attempt to show that there is no need for an infallible instructor. The book must have been written before 515 A.H., when its author died. The writings of Ḥasan were burned by one of his successors; but some of them were current in the time of Shahrastānī, who in his works on *Sects and Schools*, ed. Cureton, p. 150 (A.D. 1127 [521 A.H.]) gives excerpts from one of them, translated from Persian into Arabic. The purpose of this treatise appears to have been to decry the independent use of the reason, and prove that for knowledge of God (which with this sect was equivalent to salvation) recourse must be had to a divinely-authorized teacher, whence the sect are sometimes called *at-ta'līmiyya*, or 'Instructionists.' Undoubtedly his purpose was completely to enslave the mind of his disciples, who may even have been drugged for certain periods. Although assassination was from the commencement of Islām a common way of dealing with enemies, Ḥasan Ṣabāḥ appears to have systematized the process in a manner previously unknown. A doctrine which is ascribed to the Ismā'īlians by a late writer, but which may well have been taught also by Ḥasan Ṣabāḥ, was that the soul is imprisoned in the body for the purpose of executing in all points the orders of the *imām*. If the soul quits the body while fulfilling its duty of obedience, it is delivered and transported to the regions of the upper lights; whereas, if it disobeys, it falls into darkness (Quatremère, *Mines de l'Orient*, iv. 368).

One class of disciples, called *Fidā'īs*, were ready at all times to assassinate those whom the head of the order marked out for death; and in accordance with the doctrine described they would risk their own lives readily in making such attempts. Nevertheless these persons received a special training qualifying them for such missions; they were taught foreign languages and the ceremonies of foreign religions, and how to adopt and maintain a variety of disguises. Hence the assassins dispatched by the 'Old Man of the Mountain,' in order to win the confidence of their destined victims, would play a part for a series of months, or even years. The terrible certainty with which Ḥasan Ṣabāḥ could strike from his fortress soon enabled him to extend his possessions and make terms with various rulers. In the second year of his residence at Alamūt he struck down Niẓām al-Mulk, and, shortly after, the Sulṭān Malik Shāh. Emissaries of his made attempts on the lives of Malik Shāh's successor, Barqiyāruq, and the former's brother, Sinjār, installed by his nephew as governor of Khurāsān. During the war between Barqiyāruq and his brother Muḥammad, numerous fortresses were acquired by the chiefs of the sect, mainly in the region called Kuhistān. The knowledge of the existence of this society, and that many persons in high posts at the Seljūḳ courts were its secret adherents, caused terrible anxiety and disquietude. 'Whoever wished to ruin his adversary accused him of belonging to the Ismā'īlian sect; delations multiplied; suspicion hovered over every one' (D'Ohsson, *Histoire des Mongols*, iii. 159). The Sulṭān Barqiyāruq, son of Malik Shāh, was himself accused of favouring the Assassins, and was compelled to raid their country, without, however, achieving any important results.

Not long after the acquisition of Alamūt by Ḥasan Ṣabāḥ, the Assassins became strong in Syria also. Whether these Syrian Ismā'īlians at the first recognized the authority of the 'Old Man of the Mountain' is not certain; a detailed account of their history is given by Quatremère, to which something is added by Defrémery in *JA*, 1854, 1855. Ten years after the seizure of Alamūt, we hear of the Ismā'īlians establishing themselves at Aleppo; and for a time they enjoyed the almost unconcealed favour of the Seljūḳ prince of that place, Riḍwān, who is thought to have employed their services in getting rid of his enemy Janāḥ ad-Daula, prince of Emesa (A.D. 1100). The names of their leaders at Aleppo are given as al-Ḥakim al-Munajjim and after him Abū Ṭāhir al-Ṣā'igh (Abū Ya'lā Ḥamzah, p. 149). Through the machinations of the latter, in 1106 they obtained possession of Apamea, whence, however, they were ere long driven by the Franks. Riḍwān's successor, Alp Arslān, the Dumb, urged on by the Persian Seljūḳs, organized a massacre of the Ismā'īlians in 1113; yet their numbers and power kept increasing, and in 1126, through the efforts of their agent Bihrām and his influence with Ẓahīr ad-Dīn Atābek, they got possession of Bānias, whence, however, they were driven in 1129 owing to a massacre of their adherents in Damascus. In 1140 they acquired a highly important stronghold, Masyāt or Masyāf, and in the second half of the 12th cent. they were in possession of ten or eleven fortresses. Lists of the persons of eminence whom they killed have been made out by many writers. These were sometimes persecutors of the sect, but not infrequently the head of the community took pay from some foreign prince to strike down an enemy. In 1148 one of their number killed the Frankish count of Tripoli, in consequence of which the Templars invaded their territory and compelled them to pay tribute. On 29th April, 1192, an emissary of the 'Old Man of the Mountain' killed Conrad of Montferrat, signor of Tyre and titular king of Jerusalem; different accounts make the 'Old Man of the Mountain'—or rather Rāshid ad-Dīn, at this time independent head of the Syrian Assassins, resident in the fortress of Kahf—despatch the Assassins at the instigation of Saladin, and at that of our Richard I. The Assassins in this case were disguised as monks. The ability with which the Ismā'īlian chiefs could execute assassinations caused them to receive commissions for such acts from both Eastern and Western princes, including the Byzantine emperors. And many a crime of the sort was ascribed to them of which they were innocent.

* One of them is called by Muḥammad b. Malik Shāh 'the book filled with lies' (Abū Ya'lā Ḥamzah, ed. Amedroz, p. 153).

The throne founded by Ḥasan Ṣabāḥ was occupied by seven successors—Buzurg Umid (518–532 A.H.), his son Muḥammad (532–557), his son Ḥasan (557–561), his son Muḥammad (561–607), his son Ḥasan (607–618), his son 'Alā ad-Dīn (618–653), his son Rukn ad-Dīn (653–654), when Alamūt was taken by the Mongol leader Hūlāgū, and the fortresses of the Assassins in Persia were stormed one after another. This last date corresponds with A.D. 1256. In Syria the power of the Ismā'īlians continued somewhat longer, and as late as 1265 presents are said to have been sent them by various European monarchs; but the ruler of Egypt, which, after the fall of Baghdad, became the headquarters of Islām, gradually obtained possession of their fortresses, all of which were occupied by the Egyptian Sulṭān Baibars in 1273. Baibars, however, continued to favour the sect, and to make use of members of it when he required assassins; and a curious treaty is mentioned between his general Qalā'ūn and Margaret of Tyre, in which the Egyptian undertakes that no servants of his with the exception of Assassins shall molest her. At times they were able to regain possession of their fortresses, and in 1326 held as many as five. Many of the later Mamlūk Sulṭāns countenanced them, and occasionally employed their services against enemies; thus the long war between the Mamlūk Qā'itbai and the Turkomans was due to the employment by the Sulṭān's predecessor of an Assassin to remove a Turkoman prince.

Of the successors of Ḥasan Ṣabāḥ the third signalized himself by rejecting the claims of the contemporary Egyptian Khalīf to the imāmate on the ground that it had descended of right to Nizār, eldest son of Mustanṣir; and that he, Ḥasan, though supposed to be the son of the governor of Alamūt, was in reality the heir of this Nizār. In virtue of his divine right he formally absolved his subjects from many of the ordinances of Islām, including the Fast (*Ṣaum*), and made some changes in public worship. He is also charged with having given permission for various forms of immorality. The fifth successor, on the other hand, endeavoured to restore Muslim orthodoxy among his followers, and burned the books of the founder of the dynasty. He entered into friendly relations with the Sulṭāns of Baghdad, and was treated by them with distinction.

Of the members of the sect in Syria by far the most interesting is Rāshid ad-Dīn Sinān, of whose career a detailed account is given by S. Guyard in *JA*, 1877. About 555 A.H. (A.D. 1160) this person was sent by the ruler of Alamūt to take the place of Abū Muḥammad, governor of the fortress Kahf. He adopted the tactics with which Ḥasan Ṣabāḥ had previously succeeded, made himself interesting, and won respect in the neighbourhood of Kahf by religious exercises and philanthropic actions, and by an affectation of humility and asceticism. This secured him the notice of Abū Muḥammad, who received him into the fortress and treated him with honour, learning only on his deathbed that he had been sent to supplant himself. Rāshid appears to have shaken off allegiance to Alamūt, claiming to be not only *imām*, but an impersonation of the deity—a claim which won large acceptance among the Ismā'īlians, though his lameness constituted a difficulty to some minds. In the fragments relating to the doctrine of the sect published by Guyard in *Notices et Extraits*, vol. xxii., some treatises ascribed to him are to be found; in these the title *nāṭiq* (which is also given to Moses) is claimed for him. In anecdotes told about him (collected by one Abū Firās, *JA*, 1877), he figures as a magician, or rather conjuror. He claimed to be able to answer letters that he had not read, and, anticipating modern conjuring tricks, held conversation with a trunkless head.

At the beginning of the 19th cent., Ismā'īlian communities still existed both in Persia and Syria; J. B. Fraser (*Journey into Khorasan*, 1825), describes his meeting with Khalīl Allāh, the then head of the Ḥasanites (as he calls the sect) at Yezd. This chief was treated by the community with almost divine honours, and many of his adherents were visitors from India. The same personage is mentioned by J. B. Rousseau ('Mémoire sur les Ismaelis et les Nosairis,' *Annales des Voyages*, xlii., 1818), who, however, places the residence of the chief at Kehk in the district of Qum, S.S.W. of Teheran. Rousseau also gives details concerning a Syrian community of Ismā'īlians, with headquarters at Masyāf, twelve leagues west of Ḥamāth. They were distributed over eighteen villages, and their *shaikh*, or governor, was appointed by the governor of Ḥamāth. They were subdivided into two sects, Ḥadrāwīs and Suwaidānīs, of whom the former held seventeen villages and the latter one only; and they still possessed one of their ancient fortresses called Qadamūs. In 1809 they had sustained a treacherous attack by their neighbours the Nosairites, which, though afterwards avenged, left the community in a wretched condition.

Recent explorers of Persia and Syria seem either to ignore the existence of Ismā'īlian communities, or to speak of them as extinct (but see art. QARMATIANS). On the other hand, the Assassins are still represented in India by a community called Khōjās, who trace their origin to the mission of an Assassin named Ṣadr ad-Dīn, who some centuries ago made converts among the Hindu trading classes in Upper Sind. Col. Yule in his edition of *Marco Polo* (3rd ed., i. 146) states that the sect multiplied considerably in Sind, Kachch, and Gujarāt, whence they spread to Bombay and Zanzibar. Their numbers in Western India were then probably not less than 50,000–60,000. Sir W. Hunter (*Gazetteer of India*, 1885, iii. 52) adds that they are especially numerous in the Peninsula of Kāthiāwār. They have also established trading colonies along the East coast of Africa. The leader of the main body of the Khōjā community was then the Persian prince Aghā 'Alī Shāh, whose predecessor, the well-known Aghā Khān, was long a resident of Bombay after the troubles that drove him from Persia. About this person some further details are given by Yule in the passage quoted. Having raised a revolt in Kirmān, he fled from Persia to Sind in 1840. He had been installed as *imām* on the death of Khalīl Allāh (mentioned by Rousseau and Fraser) in a brawl at Yezd in 1818. In 1866 a schism in the Khōjā community, in which an attempt was made to exclude Aghā Khān from all rights over the sectarians and to transfer the property of the community to orthodox Muslims, led to a trial in the high court, which ended in favour of Aghā Khān. Further lawsuits have led to the appointment of a commission to inquire into the sect. According to Balfour (*Cyclopædia of India*, 1885), their sacred book is in ten chapters, of which the first nine treat of the incarnations of Viṣṇu, 'Alī being the subject of the tenth. This would imply that the conflation of Indian and Arabian ideas which characterized the sect from the first continues in its latest development.

ASSIMILATION (Psychological).—The term 'assimilation' in psychology represents a form of union or combination between presentations or presentational elements, but its precise application has been variously interpreted.

(1) In its general use it refers to a phase of the apperceptive process: a presentation is 'assimilated' when it is taken up into, and becomes an effective moment in, the total consciousness present at the time of its arrival. No new presentation is available either for memory or for knowledge or for practical application, until and unless it has been thus brought into connexion with other elements of consciousness, and with the general forms and tendencies of conscious movement which constitute for psychology the 'self.'

(2) Historically, the first usage of the term was the converse of the above: many of the Scholastics spoke of knowledge as taking place by the assimilation of the knower to the thing known, after the Greek principle (ἡ γνῶσις τοῦ ὁμοίου τῷ ὁμοίῳ): so Albertus Magnus, Thomas Aquinas, Suarez, and others. A wide-reaching corollary of this principle was that (*a*) ideas are 'copies' or images of reality, and (*b*) memory-images are 'copies' or shadowy forms of sensations; to this reference is made below.

(3) In modern psychology, 'assimilation' is applied to a form of association (*q.v.*), namely, simultaneous partial association, the features of which are (*a*) that it takes place between elements or parts of presentations, not between individual or independent presentations, as in ordinary association by contiguity; (*b*) that the two (or more) elements which enter into the association are simultaneously given in consciousness, although one is usually a 'sensation' (*i.e.* peripherally excited), the other necessarily a 'representation' (*i.e.* centrally excited); (*c*) that they cannot be separated or distinguished by *direct* analysis, thus corresponding to the 'inseparable association' of English psychology. Instances are the union of colour and form in visual perceptions, of tone-quality and distance in the perceptions of sound, of tactual quality and 'hardness' or 'softness,' 'smoothness' or 'roughness,' in the perceptions of touch.

(4) More definitely, 'assimilation' is applied to the synthesis of similar elements or elements of similar quality, and is contrasted with 'complication,' a synthesis of presentations of diverse quality, etc. It may be either *intensive*, as in the musical *clang*, or the chord, where tones of different pitch combine to give a resultant which is more than their mere sum (it is a unity in which their individuality is absorbed); or *extensive*, as when a number of discrete touch-impressions or visual impressions combine to give a continuous presentation of surface or depth. This form of assimilation is sometimes made to replace the older conception of association by similarity, as when a perception (*e.g.* that of an orange) 'reproduces' an idea (*e.g.* that of the moon), which has some element in common with the perception in question. It has been argued (*a*) that this process is possible only by the assimilation of the given element to the former experiences of itself, which must therefore be somehow 'revived'; and (*b*) that the process is not one of association, since the new and the old experience have never formed parts of one and the same consciousness, as the doctrine of association requires; (*c*) that, so far from being an association of elements which through frequent repetition have become 'inseparable,' assimilation is a process prior to and presupposed in every association.

(5) On this view, of which Höffding and Ward are the chief exponents, an assimilative process is of the essence of perception. In its simplest form, perception is *recognition* (or direct cognition), *i.e.* the awareness of an impression, or group of impressions, as familiar, as already experienced, without any explicit idea or image of the previous presentation arising in the mind. The impression is not merely repeated, but has an added quality or colouring, by which it is distinguishable from a wholly new impression. This added character or mark Höffding calls the *Bekanntheitsqualität*, 'the quality of known-ness.' It has been explained by Külpe through (*a*) the facility and power with which the known excites other ideas, and (*b*) the peculiar mood or feeling which the known arouses, as contrasted with the unknown or unfamiliar. Both of these features, however, are common to other forms of repeated consciousness; they illustrate the *law of practice*, according to which all function, and especially nervous function, 'is made easier by repetition and practice.' A more important feature in Höffding's theory is that recognition or perception involves an assimilation between two elements, namely, the new or incoming impression (A), and the reproduction or revival of the earlier impressions (a_1, a_2, etc.), the whole being symbolized by $\binom{a}{A}$; *a* is not, however, an explicit or free idea, but an '*implicate* (*gebundene*) *representation*'—a tied idea. But according to Ward there is no revival of earlier impressions: 'We have to do not with the retentiveness of a waxen tablet but with the plasticity of a growing structure. The inchoate beginning, so far from being reproduced, is obliterated and superseded by the supervening detail; and even when the acquisition is complete, the perfect identity of the new with the old forbids us to talk of memory of ideas.'*

Thus (i.) assimilation is the process underlying all *acquired* perception, as distinct from mere sensory impressions on the one hand, and the organized sensations, or perceptions, which seem to form the stimulus of instinctive behaviour on the other. (ii.) It is a product of mental activity (through interest, attention, action by way of trial and error, etc.) in which past experience is correlated with the present situation. But (iii.) this influence is not mediated by distinct images or free ideas, which are a later product. (iv.) It marks a distinct step in mental growth, and is correlated with a special development of the central nervous system (the cerebral hemispheres). (v.) Individual development, phylogeny (the evolution of the nervous system in animals, and *pari passu* of the forms of animal behaviour) and mental pathology (cortical or sensory, psychic or 'soul,' and verbal blindness, etc.), support the view that sensation, perception and assimilation, free ideas, and association are both distinct in their psychical nature and origin, and have as their 'basis' distinct physical functions and structures.

J. LEWIS M'INTYRE.

ASSIMILATION (Religious).—All development, that is growth, must proceed by means of assimilation. That is to say, religion, if it is to grow, must assimilate 'whatever is good and true in general culture' (Tiele, *Elements*, i. 242), or, if that is too wide a statement, then we may say it

* *Mind*, N.S. iii. 532.

must appropriate whatever conduces to its growth—'all that makes its creed clearer and deeper' (*ib.* 230); it must assimilate what it appropriates, and not merely 'imitate or adopt it' (*ib.* 237). What is thus appropriated will in the process be transformed to some extent, for it is 'assimilated' to religion or to the form of religion into which it is taken up. On the other hand, the form of religion which thus takes up from the environment something good and true, and assimilates it, will be affected by what it takes up; it will be brought into accord with the civilization from which it has appropriated the good or true idea; it will be different from what it was before; it will have developed or grown. But, in thus growing by means of assimilation, it must remain true to its type, it 'must form, maintain, and vindicate its *own* character' (*ib.* 242). It will also maintain and vindicate its own character by shedding dead leaves, throwing off waste tissue. And the matter thus thrown off is not matter which ought never to have been taken up, but matter which—useless and even dangerous as it now is, cumbering the ground on which it is found—was once, when first taken up, essential to the vitality and growth of religion. In now rejecting conceptions or formulæ which are dead, and being dead are injurious to continued growth and life, we are neither denying that they once were essential nor condemning the past generation with whom they originated. We are simply claiming the same right to grow which they enjoyed and exercised, the same right to grow in the same way as they—by shedding dead leaves and putting forth fresh ones.

Thus far we have illustrated the meaning of 'assimilation' by reference to ideas which religion appropriates from its cultural environment; and such ideas, though they may, at the time when they were taken up, have represented the highest scientific or philosophic knowledge of the day, may with the advance of knowledge cease to occupy that position; they may become dead leaves on the tree of knowledge, and if so, then religion, too, must shed them—or share decay with them. But a religion in the course of its history may—and if it is to grow, must—come into conflict with other religions and convert men from their old form of religion to the new. In such a case the converts cannot and do not empty their minds utterly of their old religious ideas. Some form of transaction or accommodation between the old and the new is inevitable; and no religion ever escapes from this consequence of contact. Some of the old ideas are taken up by the invading religion; but they are not simply adopted as they stand; they are assimilated. And, naturally and necessarily, they are assimilated to those elements in the new religion to which they are most akin; and they strengthen those elements. Thus, if the new religion recognizes the existence of evil spirits, whether as the cause of disease or of other ills, the gods of the old religion may appear as demons in the new. Or, if the new religion recognizes saints and angels, some of the old gods may persist by a corresponding metamorphosis. And in either case the metamorphosis immensely strengthens the element which it has reinforced. But though it strengthens the particular belief by this process of assimilation, it does not necessarily thereby make the religion which has absorbed it better as religion. On the contrary, the very belief which it strengthens may be one which religion, to live, must ultimately cast aside. 'Assimilation' is not necessarily and always beneficial to the organism. The healthiest organism may assimilate what is injurious to it.

On the other hand, what is assimilated from the old religion may be advantageous, in a greater or less degree, to the new. The habit of worshipping on stated occasions may exist in the old religion and be made usefully subservient to the purposes of the new. Yule and Easter testify by their names to the fact that they existed before Christianity, though they have been assimilated, and in the process of assimilation have been transformed, by the Church. What was thus taken up into Christianity and baptized into the name of Christ was not merely this or that outward form of worship: we have to recognize 'the selective assimilation and consequent consecration of many current customs and institutions and ideas' (Illingworth, *Doctrine of the Trinity*, p. 94). As an example of such ideas we may take the Logos doctrine. That idea was taken up—whether from Philo or from 'the general intellectual atmosphere of which he was a representative product' (*ib.* p. 88)—and baptized into Christianity by St. John. But it was not adopted just as it stood; 'the new faith fashioned a new thing' out of it (*ib.* p. 89), the new 'term was, so to speak, taken out of its old associations, to be employed thenceforward as a Christian symbol' (*ib.* p. 90).

At this point a divergence of opinion manifests itself as to what 'assimilation' means and implies. It may be maintained that assimilation never implies an addition to the original creed of Christianity—'never the imposition of a new article of faith' (Illingworth, p. 98), but simply the 'progressive formulation of doctrine' (*ib.*); the process is 'one of interpretation, and not of innovation'; it is 'the fuller explanation' of the meaning of the original teaching, 'an explanation of what was implicit, but never an addition to what was implicit in the teaching of Christ Himself' (*ib.* p. 101). This view may seem to imply that the formulation of doctrine is of necessity progressive; that the process is always one of interpretation, never of misinterpretation; that the result is always to bring out what was implicit in the teaching; and that those who hold this view have the means of knowing, and the power of declaring, infallibly, what was and what was not implicit in the teaching of Christ Himself. In the absence of such power, our confidence that the process in any given case is one of interpretation and not of innovation must vary with the particular circumstances of the case. Let us illustrate this by reference to the Logos doctrine. Every one will admit that out of the Philonian doctrine the new faith fashioned a new thing, viz. the Johannine doctrine. Was the new thing an innovation or was it not? It is evident that there was that in the new faith which was capable of being interpreted or explained by the terms and the conceptions of the Logos doctrine. But will it be maintained that, if the Philonian doctrine had been non-existent, the Logos doctrine would nevertheless have appeared, all the same, exactly as it actually does, in the Gospel according to St. John? No one can maintain that. Had the Johannine doctrine been non-existent, no one would or could maintain that it was implicit in the teaching of Christ Himself. And had the Philonian doctrine been unknown to St. John, the Logos doctrine would not have existed in the Fourth Gospel. But the Philonian doctrine did exist; it contained some truth; and that truth was recognized, appropriated, transformed—in a word, assimilated—by Christianity. To say, however, that Christian doctrine was not affected by what it assimilated, that it remained what it was, and that it is now exactly what it would have been had it never assimilated anything whatever from the spiritual and intellectual environment in which it developed, is a position which no one will undertake to maintain. Christian doctrine took over what was good and

true in the Philonian teaching; and it has grown consequently in a way in which it would not have grown otherwise. The Christian creed has grown clearer and deeper, because it had the power of appropriating and assimilating from its environment what there was good and true in that environment (*ib.* p. 144). But the power of assimilation, where it exists, is not always exercised; and, where exercised, is not always exercised wisely. We are not able to say either that Christianity left nothing good unassimilated or that everything it did assimilate was good. Neither, therefore, can we say that everything it did assimilate was implicit in the teaching of Christ Himself. We may believe—as members of the Church of Christ we must believe—that the growth and development of Christian doctrine, so far as it is the unfolding of what was implicit in Christ's teaching, is the work of the Holy Spirit, or of the Church following the guidance of the Holy Spirit. But it is simply not true that the Church has always, invariably, and in every respect, followed that guidance: 'our confidence that any given action is the result of that guidance . . . must vary with the particular circumstances of the case' (*ib.* p. 100). The fact that any given action is the action of the Church is a presumption, but no proof, that it was done under the guidance of the Holy Spirit. So far as the Church submitted to that guidance, 'it appropriated what was best and truest in the surrounding life and thought to its own purposes' (*ib.* p. 124). And that statement is as true of the present day as it is of the earliest days. But evil as well as good may be assimilated; has been, as a matter of history, assimilated; and, as a matter of fact, is being assimilated. The mere fact that a custom, institution, or idea has been assimilated constitutes no proof that it was implicit in Christ's teaching. The fact of assimilation is one to be 'constated' by scientific investigation. The value of the assimilation and of its consequences is a different question, and one which should be kept distinct.

If Christianity should come to be the dominant religion in Japan, it will inevitably, in becoming so, assimilate much from Buddhism; and it may be that the resulting form of Christianity will in some respects be higher than any hitherto taken by Christianity. That is a possibility which no one who believes in the infinite potentiality of Christianity will for one moment care to deny. But the higher form, in such case, will be a higher form of Christianity. The process will be one of assimilation; the result may be to reveal to the world that it is possible for men to make greater self-sacrifice, and to lead a more Christ-like life, than has hitherto been the case with any Christian people.

F. B. JEVONS.

ASSOCIATION.—Association, or, the more frequently used phrase, Association of Ideas, denotes a doctrine of both philosophical and psychological import. In philosophy it is the explanatory principle of that theory of knowledge which would derive all knowledge from items of sensation. Psychologically considered, association is primarily the doctrine which deals with the reproduction of past experience by a present object of consciousness. The so-called 'Laws of Association' express the conditions under which reproduction takes place. Three such laws have been formulated and are still discussed in current English text-books of Psychology. (*a*) *Law of Contiguity*: a present object will recall to mind any object with which it was contiguous in space or time, *e.g.* the sight of a visitor from one's native place revives memories of that place. (*b*) *Law of Similarity*: a present object will recall one similar to itself, *e.g.* the sight of one person revives the memory of another whom he in some respect resembles. (*c*) *Law of Contrast*: a present object recalls an object contrasting with itself, *e.g.* a childless hearth revives the memory of a neighbour's merry crew of boys and girls. It is this particular psychological doctrine which is the foundation both of association as a philosophical principle and of association as a comprehensive psychological theory.

It has been claimed by Sir W. Hamilton * that Aristotle was the first to formulate the Laws of Association. The passage upon which the claim is based is from *de Memoria et Reminiscentia*, a translation of the latter part of which Hamilton gives in full, together with his own emendations in, and commentary on, the text, in the note in question. After dealing with memory (*μνήμη*), or what modern Psychology would term retention, Aristotle contrasts with it recollection (*ἀνάμνησις*).

'The occurrence of an act of recollection is due to the natural tendency of one particular change to follow another. If the sequence is necessary, it is clear that, on the former change occurring, the second will be summoned into activity; when, however, the connexion is not necessary, but due to custom, the occurrence of the second process will take place only in most cases. It so happens that some people receive a greater bent from a single experience than others in whom the sequence has frequently taken place, and hence, in some instances, after seeing the things once we remember them better than others who have seen them frequently. Thus, when we recollect, one of our previous psychic changes is stimulated which leads to the stimulation of that one after which the experience to be recollected is wont to occur. Consequently we hunt for the next in the series, starting our train of thought from what is now present, or from something else, and from something similar or contrary or contiguous to it.' †

Plato had already noticed the same striking cases of relationship between recollected idea and present object of consciousness (*Phædo*, 73 D). At the sight of his lyre the lover will recollect the beloved. The picture of Simmias is apt to remind one of Simmias. 'Recollection may be derived from things either like or unlike.' ‡ There had, however, been no formulation of the principles involved or any attempt at a scientific theory of recollection as such. All knowledge was recollection.

The fact of association was recognized in the teaching of the Stoics and Epicureans, but no new contribution was made towards the theory either by them or later by the Schoolmen.

The first important formulation of a theory is that of Thomas Hobbes. In *Human Nature* (1650), Hobbes distinguishes between the casual and incoherent flow of ideas in dreams and the orderly flow—

'when the former thought introduceth the later. . . . The cause of the coherence or consequence of one conception to another is their first coherence or consequence at that time when they were produced by sense: as, for example, from St. Andrew the mind runneth to St. Peter, because their names are read together; from St. Peter to a stone, for the same cause, from stone to foundation, because we see them together; and for the same cause, from foundation to church, and from church to people, and from people to tumult: and, according to this example, the mind may run almost from anything to anything.' §

In addition to this form of the flow of ideas, which would be order in accordance with the Law of Contiguity, Hobbes notices another and different form which one might in general term 'appetitive,' on account of the cause assigned for it.

'The cause whereof is the appetite of them, who, having a conception of the end, have next unto it a conception of the next means to that end.' ‖

* *Works of Reid*, ed. Hamilton, note D**.

† *De Sensu* and *de Memoria*, ed. by R. T. Ross, Camb. Univ Press. This translation, from the point of view of scholarship seems preferable to that given by Sir W. Hamilton.

‡ Jowett's tr. of *Phædo*, 74 A.

§ *Human Nature*, ch. iv. §§ 1 and 2. ‖ *Ib.* ch. iv. § 2.

'To omit that kind of discursion by which we proceed from anything to anything, there are often other diverse sorts: as first in the senses there are certain coherences of conceptions which we may call ranging; examples whereof are: a man casteth his eye upon the ground, to look about for some small thing lost; the hounds casting about at a fault in hunting; and the ranging of spaniels: and herein we take a beginning arbitrary.

'Another sort of discursion is when the appetite giveth a man his beginning, . . . where honour to which a man hath appetite maketh him think upon the next means of obtaining it, and that again of the next, etc. And this the Latins call *sagacitas*, and we may call hunting or tracing. There is yet another kind of discursion beginning with the appetite to recovery of something lost, and proceeding from the present backward, from the thought of the place where we miss at, to the thought of the place whence we came last; and from the thought of that, to the thought of the place before, till we have in our mind some place wherein we had the thing we miss: and this is called Reminiscence.'*

The recognition of these appetitive associations might have led to new theories as to the origin of the association link, but Hobbes did not pursue the theme any further, and his successors do not appear to have noticed the group of associations which he here singles out.

For Hobbes the psychological doctrine of remembrance becomes also a philosophical one, the principle of his theory of knowledge, as it was thereafter the principle for the empirical school.

'All experience being . . . but remembrance, all knowledge is remembrance,'† for it is either sense knowledge and the remembrance of this, or is knowledge of the truth of propositions and how things are called, which latter again arises from experience—

'which is nothing else but the remembrance of what antecedents have been followed by what consequents.'‡ 'When a man hath so often observed like antecedents to be followed by like consequents that, whensoever he seeth the antecedent, he looketh again for the consequent, or when he seeth the consequent, maketh account that there hath been the like antecedent; then he calleth both the antecedent and the consequent signs one of another, as clouds are signs of rain to come, and rain, of clouds past. This taking of signs by experience is that wherein men do ordinarily think.'§

It is the power of arbitrarily devising signs and so increasing associations that differentiates man, the rational being, from the brute beasts. Without such signs the coherent flow of ideas would be at the mercy of chance—

'for one conception followeth not another according to our election and the need we have of them, but as it chanceth us to hear or see such things as shall bring them to our mind. The experience we have hereof is in such brute beasts, which, having the providence to hide the remains and superfluity of their meat, do nevertheless want the remembrance of the place where they hide it, and thereby make no benefit thereof in their hunger: but man, who in this point beginneth to rank himself somewhat above the nature of beasts, hath observed and remembered the cause of this defect, and to amend the same, hath imagined or devised to set up a visible or other sensible mark, the which when he seeth it again, may bring to his mind the thought he had when he set it up. . . . In the number of these marks, are those human voices which we call names or appellations of things sensible by the ear, by which we recall into our mind some conceptions of the things to which we gave those names or appellations.'‖

To John Locke belongs the authorship of the phrase 'Association of Ideas'; yet Locke does not even mention association in his psychological account of memory.¶ The phrase for him denotes the connexion of ideas 'that in themselves are not at all akin,' as opposed to those which 'have a natural correspondence and connexion one with another.' 'This strong combination of ideas, not allied by nature, the mind makes in itself either voluntarily or by chance, and hence it comes in different men to be very different according to their different inclinations, education, interests,' etc.** Association of Ideas is for Locke the explanation of error, prejudice, and intellectual habits, but it is not given any philosophical or general psychological significance.

¶ *Essay concerning Human Understanding*, bk. ii. ch. x.
** *Ib.* bk. ii. ch. 33.

In Hume's philosophy, on the other hand, Association of Ideas plays an all-important part. In the *Treatise on Human Nature* (1739–40), he brings forward association as the principle of connexion, *not* for ideas of memory, wherein the connexion is 'inseparable' and is 'the original form in which its objects were presented,' but for ideas of imagination. We are to regard it as 'a gentle force which commonly prevails.' 'The qualities from which it arises, and by which the mind is after this manner convey'd from one idea to another, are three, viz. Resemblance, Contiguity in time or place, and Cause and Effect.'*

From the *Inquiry concerning Human Understanding*, we learn that Hume regarded himself as being the first to enumerate or class the principles of association. In this later treatise he recognizes them as principles of connexion for memory and imagination alike.

After Locke, Hume analyzes knowledge into simple and complex ideas; but with Hume association becomes what it never was with Locke, the mechanism by which complex ideas—relations, modes, and substances—arise from simple ones. Cause and effect is classed as if it were a special form of association, yet, when analyzed, it is shown to be merely a case of contiguous association. The 'necessity' which characterizes this relationship is due to the inferential attitude of mind, which again is but the effect of custom. 'After the constant conjunction of two objects, heat and flame, for instance, . . . we are determined by custom alone to expect the one from the appearance of the other.'†

Although in his theory of knowledge Hume shows an advance upon Hobbes, both in the application of the principle of association to explain our conceptions and in his systematization of the whole doctrine, yet his psychology of association is inferior to that of the earlier writer. Beyond the classification of the principles there is little attempt at a theory of association. 'Its effects are everywhere conspicuous; but as to its causes, they are mostly unknown, and must be resolved into original qualities of human nature, which I pretend not to explain.'‡ Custom is the cause of the necessary associations of contiguity, and with 'this propensity' we must rest content 'as the ultimate principle, which we can assign, of all our conclusions from experience.'§

It is in Hartley's *Observations on Man* (1749) that we first meet with association as a comprehensive psychological theory. Here for the first time there is a methodical array of the phenomena of mental life and a thoroughgoing attempt to show how the more complex mental phenomena are derived from the simpler by means of association, memory being but one particular case of this.

Here the passions and the phenomena of conduct are shown as products built up by the association of ideas (traces of sensation) with the simple sensations of pleasure and pain, and with automatic movements; just as similarly imagination and reasoning are but cases of the association of ideas with one another, and with words.

Hartley's psychological theory is closely bound up with his physiological one as to the nature of the processes which take place in the nervous system. The main outline of the general theory is best given by his own propositions, and from the psychological point of view some of these are important enough to warrant quotation *in extenso*.

'The white medullary substance of the brain is also the immediate instrument by which Ideas are presented to the mind; or, in other words, whatever changes are made in this sub-

* *Treatise on Human Nature*, pt. i. § iv., ed. Green
† *Concerning Human Understanding*, pt. i. § v.
‡ *Treatise on Human Nature*, pt. i. § iv.
§ *Concerning Human Understanding*, pt. i. § v

stance, corresponding changes are made in our ideas; and *vice versa*.

'External objects occasion, first in the nerves on which they are impressed, and then in the brain, vibrations of the small, and, as one may say, infinitesimal medullary particles.

'Sensations, by being often repeated, leave certain vestiges, types, or images of themselves, which may be called simple ideas of sensation.

'Sensory vibrations, by being often repeated, beget, in the medullary substance of the brain, a disposition to diminutive vibrations, which may also be called vibratiuncles and miniatures, corresponding to themselves respectively.

'Any sensations, A, B, C, etc., by being associated with one another a sufficient number of times, get such a power over the corresponding ideas, *a*, *b*, *c*, etc., that any one of the sensations, A, when impressed alone, shall be able to excite in the mind *b*, *c*, etc., the ideas of the rest.

'Any vibrations, A, B, C, etc., by being associated together a sufficient number of times, get such a power over *a*, *b*, *c*, etc., the corresponding miniature vibrations, that any of the vibrations, A, when impressed alone, shall be able to excite *b*, *c*, etc., the miniatures of the rest.

'Simple ideas will run into complex ones, by means of association.'*

Sensations are associated when their impressions are made at the same instant or in successive instants. Strength and frequency of impression are the determining conditions for the association. The whole theory is full of suggestions for the later psychology wherein association becomes the great explanatory principle. Even Herbart's mathematical treatment of the relations between ideas seems foreshadowed.

'The power of miniature vibrations to raise other miniatures may, perhaps, be made clearer to mathematicians, by hinting that the efficacy of any vibration to raise any other is not in the simple ratio of its vividness, but as some power less than unity; for thus *b* may raise *c*, a weaker vibration than *b*, *c* may raise *d*, etc., with more facility than if the efficacy was in the simple ratio of the vividness, and yet so that the series shall break off at last.'†

It was because of the physiological doctrines upon which the psychological theories were made to depend that Hartley's work did not meet with the attention it merited at the hands of his immediate successors. In France, Locke had had many disciples; the analysis of all the complex ideas of knowledge into simple ideas derived from sensation had been pushed to extremes far removed from Locke's 'plain, historical method.' One might therefore expect to find in France a parallel for, if not an acceptance of, Hartley's psychological analysis of the phenomena of consciousness. But there is nothing which at all compares with it. We do find in Condillac an effort to derive all the so-called faculties of the mind from sensation. This faculty is said to comprehend all the others; analysis of it will reveal attention, imagination, judgment, etc. But an instance of such analysis will show how far removed such an effort after derivation was from the scientific method pursued by Hartley.

'To decompose the faculty of feeling, we need only observe in succession all the circumstances that happen in it, when we acquire any knowledge whatever. . . . My looking at an object is an action by which my eye tends towards the object to which it is directed: for this reason, I give it the name of attention. . . . The attention we pay to an object is therefore, as to the mind, nothing but the sensation which that object causes in us. . . . As we bestow our attention on one object, so we may on two at once, then instead of one exclusive sensation we experience two. . . . Comparison is therefore nothing else but a double attention—it consists in two sensations. . . . It is impossible for us to compare two objects and to experience side by side, as it were, the two sensations which they produce in us exclusively, without presently perceiving that they resemble each other or differ from each other. Now to perceive resemblances or differences is to judge. Judgment, therefore, is nothing still but sensation.'‡

In a similar manner Condillac proceeds to derive 'desire,' 'will,' and 'the passions' from our sensations 'if we consider them as agreeable or disagreeable.'

In Scotland, Thomas Brown, although expressly disapproving of Hartley's theory of association with its physiological basis, gave an exposition of mental phenomena in which association, or, as Brown prefers to style it, suggestion, was used as the explanatory basis. In place of the varieties of powers or mental faculties given by Reid and others, Brown grouped all intellectual phenomena (other than those of sensation) under two generic capacities—simple and relative suggestion.

'Simple suggestion is the capacity by which conception after conception arises in the mind—precisely in the same manner, and in the same state, as each might have formed part of other trains, and in which the particular state of mind that arises by suggestion does not necessarily involve any consideration of the state of mind which preceded it.'*

The primary laws of simple suggestion are resemblance and contrast, while contiguity is treated as a secondary law. To simple suggestion belong conception, memory, imagination, habit.

Relative suggestion is 'the capacity for feeling resemblance, difference, proportion or relation in general, where two or more external objects or two or more feelings of the mind itself are conceived by us.'† To this capacity belong the so-called faculties of judgment, reasoning, and abstraction.

The true psychological descendant of Hartley is James Mill, in whose *Analysis of the Human Mind* (1829) we have association, freed from the effete mythology of vibratiuncles, used as the great explanatory principle of psychology. The phenomena of the human mind are analyzed into two classes—intellectual and active—and the psychology of these is a doctrine of elements and compounds. Sensations, including pleasurable and painful feelings, are the elements, the whole of the remaining furniture of mind being set forth as products, compounded out of these elements in accordance with the Laws of Association. Ideas are traces of sensation, and 'spring up or exist in the order in which the sensations existed of which they are copies.'‡ This order is synchronous and successive order in time, and synchronous order in space. Contiguity is thus the fundamental Law of Association, resemblance and contrast being treated as special cases. 'Not only do simple ideas, by strong association, run together, and form complex ideas, but a complex idea, when the ideas which compose it have become consolidated so that it always appears as one, is capable of entering into combinations with other ideas, both simple and complex.'§

Conception, imagination, classification, abstraction, memory, belief, inference, are shown by analysis to involve nothing but our sensations and their ideas compounded by association. Similarly for the phenomena of conduct. Will is analyzed as a chain of associations. In all cases where a certain action is desired, it is associated as cause with pleasure as effect; the idea of the 'outward' appearance of the action excites by association the idea of the inward feelings which are the immediate antecedents of the action, and then the action takes place. There is no place here for a doctrine of Free Will. 'Whatever power we may possess over the action of our muscles, must be derived from our power over our associations; and this power over our associations, when fully analyzed, means nothing more than the power of certain interesting ideas, originating in interesting sensations, and formed into strength by association.'‖ This strength, we are told, depends upon the vividness of the associated sensations and the frequency with which the association occurs.

As compounds formed in conformity with an exact law, mental phenomena admit of scientific treatment. Psychology need no longer stand without the pale of science; its method resembles that of the mechanical and physical sciences. The

service which the principle of association thus rendered to psychology was clearly recognized later by John Stuart Mill.

'A science of human nature may be said to exist in proportion as the approximate truths which compose a practical knowledge of mankind can be exhibited as corollaries from the universal laws of human nature on which they rest.' *

Given the fundamental laws of mind, the Law of Retentiveness, and the Laws of Association—

'it is a fair subject of scientific inquiry how far these laws can be made to go in explaining the actual phenomena. It is obvious that complex laws of thought and feeling not only may but must be generated from these simple laws.' †

J. S. Mill emphasizes the distinction between complex ideas which can be treated as resultant sums of the simple ideas which form them, *i.e.* are what he would term 'homogeneous effects,' and complex ideas which are 'generated by' but do not 'consist of' the simple ideas, *i.e.* are heteropathic effects. In so far as we have the former, the complex phenomena are mechanical products, but in so far as we have the latter, they are products of a mental chemistry. Our inability to find the elements in the generated compound is no disproof that a complex idea is due to an association of simple elements. Such is the case with the associations treated by Hartley and James Mill as inseparable.

But although inability to resolve the product into the elements is no obstacle to its having been generated from such elements, Mill saw clearly the weakness of attempting to prove that a particular complex idea had been generated from such and such simple ideas merely on the ground that these ideas were always present whenever mind was in possession of the complex idea. It is necessary to show, further, that if the complex idea be lacking, it will arise when the simple ideas in question are associated. And it is in the direction of a closer investigation of the mental phenomena themselves, both simple and complex, that Mill would advance psychology. He hoped that the rapid progress being made in physiology would throw light on the influence of organic on mental phenomena. By advocating a more scientific study of the phenomena of consciousness as distinguished from scientific treatment of data obtained uncritically, Mill in reality was giving an impetus to a new psychology wherein association became untenable as a comprehensive explanatory principle.

In his theory of knowledge, Mill is a thoroughgoing empiricist. All knowledge, other than that given by the senses, is inductive inference, 'generalization from experience.' *A priori* or necessary truths there are none. The truths so called are inductions. The forcibility which characterizes mathematical axioms is due to the familiarity of the ideas involved. The very criterion emphasized by the champions of *a priori* truths—inconceivability of the opposite—does but testify to the law of inseparable association between ideas. 'If one exists, the other exists along with it, in spite of whatever effort we make to disjoin them' (J. S. Mill's ed. of *Analysis of Human Mind*, vol. i. ch. iii.).

Mill, however, never treats even inseparable association as a *ground* for the logical connexion of ideas. 'Assuredly an association, however close, between two ideas is not a sufficient ground of belief; it is not *evidence* that the corresponding facts are united in external nature.' ‡ Thus the relationship of cause and effect as a mere instinctive association could lay no claim to objective truth; it must be shown to be an inference, a generalization from experience.

Herein lies the difference between Mill's theory of knowledge and that of his predecessor Hume. The psychological statement of genesis, even if accurate, is no longer accepted as a logical criterion of the validity of relationships. Consequently Mill attempts to find an independent justification for our belief in the uniformity of nature, belief in the relationship of cause and effect in particular; and in this attempt his theory of knowledge breaks down. Psychologically he regards belief as being primordial. It makes the difference between memory and expectation on the one hand and imagination on the other. 'What, in short, is the difference to our minds between thinking of a reality and representing to ourselves an imaginary picture? I confess I can perceive no escape from the opinion that the distinction is ultimate and primordial.' * It is present when certain associations of ideas are entertained, absent in the case of others. It is present in every inductive inference, and its logical justification is 'experience'; the inferred connexion of ideas conforms to fact. Yet even in the simplest inference, since the judgment must embrace 'unobserved' as well as 'observed' cases (for otherwise it would be no inference), this guarantee, conformity to fact, already implies logically our belief in the uniformity of nature, in the uniformity of the unobserved with the observed; that is to say, the logical guarantee of the belief present in inference itself involves belief. Thus the attempt to establish as an induction the uniformity which every process of inference presupposes is foredoomed to failure; † and Mill ends by confessing that inference is not *from* uniformity, but *according to* it. What is important philosophically is not this failure to establish inductively the Law of Causation, but the recognition which this abortive effort involves, viz. the recognition of association as an inadequate doctrine in the theory of knowledge. This point might be further illustrated from Mill's own subsequent writings on Utilitarianism, where he uses association for the purpose of removing psychological difficulties in the way of his main logical thesis rather than for positively supporting it.

Alexander Bain in his *Senses and Intellect* (first published in 1855) shows adherence to the Laws of Association as the principles which should dominate the presentation of his psychology. Thus he writes in the preface to the first edition:

'In treating of the Intellect, the subdivision into faculties is abandoned. The exposition proceeds entirely on the Laws of Association, which are exemplified with minute detail and followed out into a variety of applications.'

Movements, sensations, appetites, and instincts are treated as the raw material, the data to be worked up into the various forms of intellect: memory, judgment, abstraction, reason, imagination. The fundamental properties of intelligence are consciousness of difference, consciousness of sameness, and retentiveness, of which last reproduction is a higher form. The general condition under which retentiveness is manifested is contiguity. This is the basis of memory, habit, and the acquired powers in general. Consciousness of sameness gives rise to the reproductive principle of similarity, which is dominant in invention, reason, and abstraction.

Bain then proceeds to trace out in detail the operation of these two principles upon our movements, sensations, and instincts, and the acquisitions and forms of knowledge to which they separately, and in conjunction, lead. In the *Emotions and Will* (the first edition of which appeared three years later than the *Senses and Intellect*), the same general plan of treatment prevails. Emotions and the will are secondary products. Emotions are derived from muscular feelings and sensations, while will is derived from spontaneous movement.

* *Logic*, bk. vi. ch. iii. § 2; cf. Preface to J. S. Mill's ed. of *Analysis of Human Mind*.
† *Ib.* bk. vi. ch. iv. § 3.
‡ J. S. Mill's ed. of *Analysis of Human Mind*, ch. xi. note.

* *Analysis of Human Mind*, ch. xi. note.
† Cf. *Logic*, bk iii. ch. xxi.

'The modes of derivation or composition of the emotions are various; but the leading circumstance is contiguous growth or the associating process. Association operates in uniting together a number of separate feelings into one aggregate or whole. . . . It also operates largely in the transfer of feelings from their original cause to some connected object.' *

But although in general method of exposition Bain follows the lines of the association school, treating the higher mental phenomena as products built up by the mechanism of association, yet the spirit of treatment is different; the new psychology has begun. This is the more evident if one compares the later with the earlier editions of Bain's works. The compounds are not conceived as mechanical or even as chemical products, but as growths; and psychology is no longer treated on the analogy of physics, but as having its place among the biological sciences, as the science of mental life. Mental development is brought under the influence of the new theory which was transforming the biological sciences—evolution. Mental phenomena are viewed generically not as mere contents, ideas, but as processes. The complex phenomena, instead of being compounded from simple, are higher processes developed out of the lower by means of association.

Among advances in detail is the recognition of movements and instincts as data for intellect. It is from the rudiments of all the forms of mental life that association builds up the higher intellectual processes, which again in their turn aid in building up the emotions and the will. And the new conception of psychology becomes especially evident in the attempt made to give a natural history of the emotions, to describe them, trace their origin, and classify them, and by the reference made where possible to physiological facts.

With regard to the laws and conditions of association, we may notice the following points. In the later editions, Bain places Contrast on the same plane as Similarity; it is the form of reproduction derived from consciousness of difference, just as similarity is derived from consciousness of sameness. Contiguity is the all-pervasive mode in which retentiveness shows itself, and, in so far, would appear to be directly derived from this fundamental property of mind; but Bain, nevertheless, treats of special 'conditions' of association by contiguity. These are: repetition, concentration of mind, and the specific aptitude of the individual. Concentration of mind is regarded as very important.

'Properly speaking, attention or concentration is the employment of will in the sphere of intellect. It is the stimulating adjunct that renders the intellectual processes effective for their purpose, and, being itself dependent upon the feelings, it illustrates the necessity for the united action of all the forces of the mind in the sphere of intellectual production.' †

Bain is here going behind the Law of Contiguity. A and B are associated not merely because they are successive or simultaneous, but because they are attended to. In his note to the chapter on 'Association of Ideas' in James Mill's *Analysis of the Human Mind* (ed. J. S. Mill), he again emphasizes the need for analyzing the conditions of association. James Mill named repetition and vividness; the latter Bain criticizes as failing to bring out the distinction between the influence of the feelings and the influence of the will, which his own condition, 'concentration of mind,' is designed to do.

Spencer's first edition of the *Principles of Psychology* appeared in the same year as Bain's *Senses and Intellect*. Here biological conceptions are the foundation of the whole structure. The phenomena of body and of mind are identical in being forms of life, and from the conception of the general characteristics of life, the special characteristics of mental life or intelligence can be inferred. Life is briefly defined as 'the continuous adjustment of internal relations to external relations.' * It is 'correspondence.' In the intelligence, then, it will likewise be adjustment of internal relations to external—correspondence.

'The relation between two states of consciousness corresponds with the relation between the two things producing them.' 'The strength of the tendency which the antecedent of any psychical change has to call up its consequent is proportionate to the persistence of the union between the external things they symbolize.' †

Such is the law of intelligence in the abstract and the basis for Spencer's theory of knowledge. Perfect knowledge will mean perfect correspondence between subjective and objective. This correspondence is the 'universal postulate' behind which thought cannot go. The ultimate test by which thought tries a subjective relation with respect to its objective validity is 'inconceivability of the opposite.'

'To assert the inconceivableness of its negation is at the same time to assert the psychological necessity we are under of thinking it, and to give our logical justification for holding it to be unquestionable.' ‡

Of such certainty are the 'necessary' truths and ultimate premises of our knowledge. Thus with Spencer, as with the earlier writers of the association school, the theory of knowledge is 'psychological.' This gains some additional plausibility because it is the task of psychology to trace out the processes by which the correspondence between subjective and objective relations is evolved, and in its task it must, through the doctrine of heredity, draw upon the experience of the race as well as on that of the individual. The various faculties—memory, imagination, reason—are different stages in the evolution of intelligence.

Mental life has two constituents—feelings and the relations between feelings. Our sensations are peripherally initiated feelings, ideas are secondary or faint sensations, while emotions are centrally initiated feelings.

'The requisite to the existence of a relation is the occurrence of a change, the passage from one apparently uniform state to another apparently uniform state implying the momentary shock produced by commencement of a new state.' §

Relations arise between feelings that are like or between feelings that are unlike, and again, between feelings that are simultaneous or successive. Such are the constituents. The law for their association is the Law of Similarity. Each primary or vivid feeling 'is joined to and identified with faint feelings (secondary), which have resulted from similar vivid feelings.' ‖

'Knowing a relation as well as knowing a feeling is the assimilation of it to its past kindred; and knowing it completely is the assimilation of it to past kindred exactly like it. But since within each great class the relations pass one into another insensibly, there is always, in consequence of the imperfection of our perceptions, a certain range within which the classing is doubtful—a certain cluster of relations nearly like the one perceived, which become nascent in consciousness in the act of assimilation. Along with the perceived position in space or time, the contiguous positions arise in consciousness.

Hence results the so-called law of association by contiguity. When we analyze it, contiguity resolves itself into likeness of relation in time or in space or in both. . . . Thus, the fundamental law of association of feelings is that each, at the moment of presentation, aggregates with its like in past experience. The act of recognition and the act of association are two aspects of the same act. And the implication is that, besides this law of association, there is no other; but all further phenomena of association are incidental.' ¶

This somewhat lengthy quotation will serve to make clear what association meant to Spencer. It is now a general name for the essential characteristic which Spencer finds in all processes of knowing—assimilation. Since consciousness is dependent upon change, there is also, in every process of knowing, 'differentiation'; consciousness is continuous differentiation and continuous assimilation. The finer the degree of differentiation and assimilation, the higher the process of knowing

This is the parallel of differentiation and integration in organic processes. In an organism increase in complexity of structure goes hand in hand with increase in function, and the establishment of closer connexion between part and part, with fuller organization of function.

'When we remember that the laws of structure and function must necessarily harmonize, and that the structure and function of the nervous system must conform to the laws of structure and function in general, we shall see that the parallelism here roughly indicated is such as might be expected. We shall see that the ultimate generalizations of psychology and physiology must be, as they here appear, different sides of the same primordial truth: both are expressions of the same fundamental process of life.'*

Viewed as a generic feature of knowing, association is not a mechanism for combining items of knowledge, but is the principle of growth whereby past progress is retained and further differentiation made possible. In the old doctrine the complex idea contained the elements out of which it was composed; here the higher process absorbs the lower, the new the old. So different is the doctrine, that one may be tempted to wonder why Spencer's psychology should be ranked with that of the association school. The reason is this: the conception of 'why' the higher is enabled to absorb the lower, the new the old, is taken unchanged from the theory of association.

Throughout the history of the school the advance in the theory of association as such is practically *nil*. There are efforts to distinguish some one form as more fundamental than the others, *e.g.* Mill selects Contiguity, Spencer Similarity, or to subsume them under some more comprehensive law, such as Hamilton's Law of Redintegration, but for all alike the theory of the process itself remains on the same level. Things are associated because they are alike, or because they are contiguous in space or time. A hint of an internal analysis of association is given, as we noticed, by Bain, and it is his study of the 'conditions' of association that marks the close of what is strictly to be called 'association psychology.'

Closer study of the 'how' and 'why' of mental development renders necessary broader conceptions than any which can be yielded by the three laws of association. Similarly, closer study of the memory processes brings a demand for a fuller statement of the conditions under which one fact of consciousness is able to suggest some fact of previous experience, and of the extent to which such a memory is 'a revival' (see MEMORY).

Although German psychologists stood outside the association school, it would be an omission not to refer to Herbart, in the general conception of whose psychology there is considerable likeness to that of Hartley and Mill. The first presentation of Herbart's psychological doctrine was the *Lehrbuch zur Psychologie* (1815). This was followed by the fuller and more reasoned exposition in *Psychologie als Wissenschaft neu gegründet auf Erfahrung, Metaphysik, und Mathematik* (1824–1825). Herbart rebelled against the dogmatism of 'faculty psychology.' He found Locke's treatment of mind as a storehouse of ideas at least truer to experience than the analysis of mind into faculties current in the school of Wolff. The faculties are set up as *genera* and treated as causes, when there has been, and can be, no study of the particulars from which alone such generic notions could be reached. Such psychology achieves nothing but hair-splitting distinctions between these faculties, and yet withal acknowledges an unknown unity in which these faculties are contained. The whole method of this psychology stands in need of reform. It is impossible to reach generic notions by study of particulars, *i.e.* it is impossible to use induction and analogy in psychology, because our knowledge of these particulars is unavoidably defective; consciousness is in perpetual change. The new method which Herbart introduces is elaboration (*Ergänzung*) or completion by means of constructive hypothesis. One is entitled to use such a method only if the existence of certain relationships can be demonstrated, viz. relationships wherein the positing of one member renders necessary the positing of the other.

The whole task of psychology will be to complete the known facts of inner experience, and to establish relationships by which these facts shall be connected, in accordance with general laws. Psychologists have failed to find conceptions appropriate for psychology, because they have not been mathematicians, and have thus not realized the special adaptability of mathematical notions to the ever-changing phenomena of consciousness. Further, it is, in Herbart's view, necessary for psychology to be based upon metaphysics. Psychology is brought face to face with the problem of the many in one, for behind all the varying mental conditions is the unity of mind. That is to say, psychology is brought face to face with the problem of 'substance.' And again, since consciousness is in perpetual change, psychology is brought face to face with the problem of change, transformation.

Herbart's psychology, therefore, is prefaced by speculative metaphysics. The first step is to arrive at a concept of the soul. This is defined as 'a simple substance, without parts, without any plurality whatever in its quality.' What this quality is we can never know. Like all other substances, the soul's activity consists in self-preservation. Each reality or substance conserves itself against other substances, and from these conservative activities arise relations, plurality. The efforts of the soul in opposition to other substances are its ideas. These ideas are not produced by any spontaneity of the soul, but arise only in its strife against other realities; they arise, then, from external conditions, and have their quality determined by these conditions. In so far as these ideas come into relation with one another they are forces, and in virtue of their opposition to one another have a quantitative character. Every idea is a tendency, and as such is never destroyed; it may be arrested, totally or partially, or pass from consciousness to subconsciousness, but it will ever strive to reinstate itself, and will do so should opposition be removed or reinforcement come through relations to some other idea. The subject-matter of psychology is not the soul, but these relations between ideas; hence the metaphysical speculations and the general consideration of mathematical relations are followed by a statics and mechanics of ideas.

It is in his reaction against 'faculty psychology,' and in his reduction of inner experience to simple events of a homogeneous character, from whose interplay arise all the diverse forms of consciousness — memory, imagination, feeling, will, etc.— that we see the resemblance between Herbart's conception of psychology and that of Hartley or James Mill. In the metaphysical bases of their thoughts and in their methods of exposition, the German and the English writers are poles apart.

In the more recent German psychology, and independently of Herbartianism, the influence of the association school can be seen, despite the fact that the errors of its doctrines are sometimes laid bare in a none too gracious manner. Wundt has treated psychology as a doctrine of elements and compounds; thus in his *Outlines of Psychology*, which represents his standpoint in general psychology better than the more specialized *Physiological Psychology* or the lectures on *Human*

* *Principles of Psychology*, pt. vi. ch. xxvii.

and Animal Psychology, we find the following division of topics: (1) psychical elements; (2) psychical compounds; (3) inter-connexion of compounds; (4) psychical developments; (5) principles and laws of psychical development. The elements, of course, are no longer the simple ideas of, say, Mill, since they are not simple items of knowledge, but abstractions, the ultimate factors into which the simplest experience can be analyzed by thought: elements of sensation, and elements of feeling. The compounds, too, do not correspond to complex ideas; they are the phases of experience which can be recognized as having a determinate character, *e.g.* an emotion, such as anger, or a simple perception; they are not, therefore, mere sums of the elements which enter into them. Moreover, such compounds are only components of experience; that is to say, in any given state of consciousness we have an inter-connexion of such compounds, *e.g.* the emotion in connexion with perception.

The connective processes, again, are not the old forms of association. Various processes are distinguished: for building up compounds, fusion and extensive union; for the inter-connexion of compounds, association (which, however, is not association of ideas, since no such phenomena as ideas in Mill's sense—copies of sensations—are recognized) and apperception. All save the last find their determining conditions in the nature of that which is connected; but the last, apperception, is a volitional process involving choice, the motives of which can be explained only from the whole previous development of the individual consciousness. As 'volitional' it is placed on a different level from the others.* This treatment of apperceptive connexion is peculiar to Wundt, and is connected with his ontological view that 'will' expresses the ultimate reality of the soul.

The same general ground-plan is followed by Külpe in his *Outlines of Psychology*. Psychology is defined as 'science of the facts of experience in their dependency upon experiencing individuals'† —a definition of the science which assigns a leading rôle to bodily processes, since 'individual' signifies corporeal individual. The connective processes, therefore, are viewed as dependent upon psychophysical conditions. The laws of reproduction are explained in relation to the conditions of centrally initiated sensations—the 'ideas' of English psychologists—and apperception is treated as being in principle capable of subsumption under the laws of reproduction.‡ For the essential conditions of the origin and maintenance of the feature which especially characterizes apperception, viz. attention, we are referred outside consciousness to the central nervous system.§

Widely different as the specific doctrines are from those held by the earlier English writers, yet, nevertheless, the scheme of classification adopted for the scientific exposition of psychological facts would seem to be derived from the writings of the association school.

As was stated above, current English psychology does not use association as an explanatory principle. Traces of the older method of exposition are, however, to be found in Prof. Sully's text-books, *Outlines of Psychology* and *The Human Mind*, although these embody the results of modern research and learning. The three aspects of mental life—intellection, the feelings, and conation or volition—are treated separately. Under each we have a serial order of phenomena; from elements of sensation, feeling, and conation, progressively higher products are built up by elaborative processes. These processes are: differentiation, assimilation, and association. The last is discussed in connexion with retentiveness and reproduction, and is conceived as the process 'which binds together presentative elements occurring together or in immediate succession,'* and as being a 'main factor in development, resulting in a progressive elaboration of what is relatively simple into more and more complex products.'† Attention is, however, treated as a determining condition for the elaborative processes, and this saves their operation from being purely mechanical.

The old method is entirely departed from in the psychology of Ward and Stout. Ward's conception of differentiation and integration, in the continuous advance of which processes mental development consists, shows an advance on that of Spencer.

'We shall find in the growth of a seed or an embryo far better illustrations of the unfolding of the contents of consciousness than in the building up of molecules: the process seems much more a segmentation of what is originally continuous than an aggregation of elements at first independent and distinct.'‡

Unity of consciousness is not something which psychological theory has to account for as a product or growth, but is that from which psychology takes its start.

'Working backward from this as we find it now, we are led alike by particular facts and general considerations to the conception of a *totum objectivum* or objective continuum which is gradually differentiated, thereby becoming what we call distinct presentations.'§

'The notion, which Kant has done much to encourage, that psychical life begins with a confused manifold of sensations not only without logical but without psychological unity, is one that becomes more inconceivable the more closely we consider it.'‖

Changes within the total field of consciousness, and persistence of the old alongside of the new (retentiveness), give the bases for differentiation, and subjective selection; that is to say, voluntary concentration of attention on 'this' or 'that' within the total field explains its further progress. The connexion of sensations with movements is the first phase of integration; the pleasure or pain which accompanies sensation causes change in the distribution of attention, and thus causes movement, the initiation of 'this,' the suppression of 'that.' First 'natural selection,' then 'subjective selection,' will bring about such syntheses, and thus 'presentations originally in no way connected tend to move in consciousness together.'¶ Association is a particular instance of this. Association by contiguity is as such inexplicable; for 'contiguity' Ward substitutes 'continuity.' A and X, which have no connexion one with another, occupy 'the focus of consciousness in immediate succession. This constitutes their integration.'** Through the movements of attention they are now parts of one whole, form what Ward terms a continuum, are continuous one with another. These movements of attention 'come in the end to depend mainly upon interest, but at first appear to be determined entirely by mere intensity.'†† The power of variously distributing attention is the one power which Ward desires to leave the subject of consciousness, and it is in virtue of this power that the subject plays the rôle of agent.

In Stout's psychology we have a similar view of the unity of consciousness and of the processes of differentiation and integration.

'The process of consciousness is a process of incessant change; the changes are partly due to the play of external impressions, and to other conditions extraneous to consciousness itself. But this is rarely, if ever, entirely so. The process is in part self-determining. The successive phases have by their very nature a tendency to pass into other phases.'‡‡

This tendency is conation, and it is conation which correlates and gives a special unity to 'other-

wise disparate and disconnected processes.' For such unity the 'general condition is that the successive phases of a conscious process shall constitute a movement towards an end-state or terminus.' * There must be continuity of interest, and for this, retentiveness is essential; later phases of a conative process owe their meaning to the earlier. So in general, it is the 'dispositions' or 'traces' left by previous experience which make development possible.

Continuity of interest lies at the bottom of all association and reproduction. In association by contiguity the re-occurrence of any one of the members of a 'conative unity' re-excites the whole disposition, because of the direct continuity of all the members of such disposition. There is direct continuity between the suggesting and the suggested idea. In what is called 'association by similarity,' the suggesting factor re-excites a disposition having a member similar to, or partially identical with, itself, and does so only through the medium of this similar or partially identical member; there is thus no direct connexion between the suggesting factor and the members of the re-excited disposition. The continuity of interest is indirect.

With both Ward and Stout, therefore, association takes its place as a process depending upon the fundamental laws of psychical development, as explanandum, not explanation.

ASSUMPTION and ASCENSION.—*Meaning and scope.*—The idea underlying these theological conceptions is the idea of communication between the natural and the spiritual order, and of a passage from the former to the latter. As the idea of 'Revelation' presupposes the possibility of movement from heaven earthward, so the idea of 'Ascension' presupposes the possibility of movement from earth heavenward. In some form or other both these conceptions have a place in every religious system; and in primitive religions they are set forth in terms of the geocentric philosophy of antiquity. The earth is the centre of the universe. Heaven, the abode of the gods, is above us in the distant sky; and the advent of heavenly messengers is represented as a physical descent, a 'coming down,' while their departure is a physical ascent, a 'going up.' So too the movement of human beings to the spiritual region is a 'going up,' an uplifting; and the language of devotion bears perpetual witness to this primitive conception. *Sursum corda* is the form which an exhortation to fix our thoughts on the realities of the spiritual world naturally takes. We speak of noble ideals as 'high' or 'lofty,' and of material ambitions as 'low'; and the abode of the Eternal is described as 'a high and holy place.' It was inevitable, while the Ptolemaic system of cosmography was accepted, that its fundamental conceptions should affect the language in which spiritual facts were described.

It is clear, however, that belief in the possibility of communication between man and God, between the natural and the spiritual, between earth and heaven, is not bound up with this geocentric philosophy which no one now accepts, although we are quite content to continue to use the language of devotion which it originally suggested, just as we are content still to speak of the 'rising' and 'setting' of the sun. Such language misleads no one in the sphere of science, and there is no reason why it should be a perplexity in the sphere of religion. That there is a region of 'spirit,' which encompasses us; that, although invisible, it is not inaccessible; that it is the dwelling-place—for we can get no better phrase—of the Divine; that it is the ultimate reality of the universe: these convictions are a sufficient background for the idea of 'Revelation,' and also for the idea of 'Ascension,' that is, the passage from the natural to the spiritual order.

This idea has appeared in several different forms, which it is necessary to distinguish. A characteristic feature of mysticism is the belief that in supreme moments the soul is translated to heavenly places, and granted a vision of the spiritual world. Thus in the Neo-Platonic philosophy of Plotinus, knowledge of Divine things is conveyed to the human spirit in a condition of exaltation, described as ἔκστασις, by which man comes into contact with God (*Enneads*, vi. 9–11). The 'occult' philosophy of the East presupposes a similar means of approach to the highest truths. And the phenomena of clairvoyance and telepathy, as yet imperfectly understood, point to the possibility of free exercise of the cognitive powers, unrestrained by the limitations of the bodily senses. Here, however, there is no thought of a translation of the *body* to the unseen world; it is the *spirit* alone, temporarily divorced from the body, that is thus favoured. And, accordingly, we do not describe such an experience as an 'ascension' or an 'assumption,' these terms being reserved for the translation of the whole man, soul and body, to the region of spirit. In special cases, the vision of the spiritual order may be so clear that the man may be unable to determine, as he looks back upon it, whether he was 'in the body or out of the body.' Such was the case of St. Paul, who recalls (2 Co 12^{2-4}) how he had been 'caught up into Paradise, and heard unspeakable words which it is not lawful for a man to utter.' But it is only if the translation be of body as well as of soul that it comes within the scope of this article, which does not embrace an inquiry into 'visions,' or 'dreams,' or 'intuitions' of the Divine (see those articles).

I. *ASSUMPTIONS OF SAINTS.*—1. **Bodily translations to heaven, for purpose of revelations.**—The apocryphal and apocalyptic literature of Judaism and of Christianity furnishes (see BIBLE) some illustrations of bodily 'assumptions' into heaven, granted to individuals in order that they might be informed of spiritual truth. 'Assumptions' of this kind are temporary only; and, the vision ended, the man returns to earth. The language of Ezk 8^{3} was, perhaps, not intended to be literal, and (see 11^{24}) need not convey more than an involuntary rapture of the spirit; but the story of the transportation to Babylon of Habakkuk, who was lifted up 'by the hair of his head' (Bel ^{36}), implies a translation of his body. Granted a belief in the possibility of such earthly experiences (which underlies much Eastern folklore, as in the *Arabian Nights*), the step is easy to the belief in a translation of the body from earth to heaven.

(1) The most remarkable legend of this kind is that of *Enoch*, discussed below (**2, 1**). But there are other instances.

(2) *Abraham.*—In the *Testament of Abraham* (ed. M. R. James, 1892), Michael takes Abraham up in a cloud with angelic chariots, to show him the world of men from the standpoint of heaven. Abraham then is brought back to his house, where after an interval he dies.

(3) *Isaiah.*—In the *Ascension of Isaiah* (chs. 7, 8), Isaiah is raised to the seventh heaven, where he has a vision of the Beloved, after which experience he returns to earth (ch. 11).

(4) *Rabbinical seers.*—Rabbinical literature tells in like manner of four rabbis who entered Paradise and were granted revelations.

* *A Manual of Psychology*, bk. i. ch. ii. § 3.

(5) *Moses.*—The story of Moses in later literature has affinities with 'assumption' or 'ascension' legends of various forms. The two starting-points are the Biblical accounts of his discourse with God on the holy mountain, when the Law was revealed to him (Ex $24^{15ff.}$), and of his secret burial (Dt 34^{6}). The first of these led to the idea of an 'Apocalypse of Moses,' such as that edited from the Greek by Tischendorf; the second to the stories of his 'assumption' (cf. Jude ^{9}). Thus Josephus (*Ant.* IV. viii. 48) tells that, as Moses was discoursing with Eleazar and Joshua, a cloud suddenly enveloped him and he disappeared in a certain valley, although he wrote in Deuteronomy that he died, 'fearing lest because of his exceeding virtue men might venture to say that he had withdrawn to the Divine' (*πρὸς τὸ θεῖον αὐτὸν ἀναχωρῆσαι*). The phrase *πρὸς τὸ θεῖον ἀναχωρεῖν* is used by Josephus (*Ant.* I. iii. 4) of Enoch; and he evidently means to suggest that Moses' departure from the world was abnormal, although he will not say positively that, like Enoch, he escaped the passage of death. The legend of the 'Assumption of Moses,' as it is restored by Charles (*Assumption of Moses*, p. 106), described the living man carried up to heaven, while his corpse was hidden in the recesses of the mountains.

(6) *Muhammad.*—The journey of Muhammad to heaven affords a later instance. It has been interpreted, indeed, by some Muhammadan expositors as non-corporeal, and his experience has been described as that of a dream or a vision only. But the more popular version is that the prophet was transported by night from Mecca to Jerusalem, thence through the seven heavens to the presence of God, and then back to Mecca. Ch. xviii. of the Qur'ān claims to contain the revelation then vouchsafed to him.

2. **Bodily translations to heaven, in lieu of death.**—We have next to examine the legends which represent saints as being transported, without dying, to the world beyond the grave.*

In the Babylonian mythology, the apotheosis of Xisuthros, the hero of the Deluge, was of this character. In recognition of his piety, he was not subjected to death, but was assumed to heaven.† In Jewish literature, two figures stand out as having been granted this high privilege, Enoch and Elijah.

(1) *Enoch.*—The source of all the later traditions is Gn 5^{24} (Heb.): 'Enoch walked with God: and he was not; for God took him.' That he 'walked with God' or that he 'pleased God' (*εὐηρέστησε τῷ θεῷ*, LXX) does not necessarily signify more than that he spent his life in converse with the spiritual world, and that death was to him a withdrawal to God. But this simple statement, which might be made of every saint, was developed in two directions:—

(*a*) Gn 5^{24} suggested that Enoch was the recipient of supernatural revelations; and the *Book of Enoch* and the Slavonic *Secrets of Enoch* (see also the *Book of Jubilees*) were the outcome of this idea. In these books he is represented as having been 'assumed' to heaven that he might be instructed in heavenly things, which he subsequently described (*En.* lxx. 1, lxxxvii. 3; *Sl. En.* Introd.; *Jub.* iv. 21). According to the *Slavonic Enoch* (lxvii.), he lived on earth thirty days after this vision, and then 'the angels hasted and took Enoch and carried him into the highest heaven, where the Lord received him.'

(*b*) In the last quoted passage we have the idea of a translation to Paradise in lieu of dying, which is the most familiar form of the Enoch story. Thus the LXX of Gn 5^{24} has *οὐχ ηὑρίσκετο, διότι μετέθηκεν αὐτὸν ὁ θεός* (cf. *En.* lx. 8); and Sir 44^{16} says of him *μετετέθη* (cf. Sir 49^{14} *ἀνελήμφθη ἀπὸ τῆς γῆς*). Following this tradition, He 11^{5} has *Ἐνὼχ μετετέθη τοῦ μὴ ἰδεῖν θάνατον*; and the conception of Enoch's 'ascension' without dying is frequent in Christian literature. The same idea appears in Josephus (*Ant.* I. iii. 4), who says of Enoch, *ἀνεχώρησε πρὸς τὸ θεῖον, ὅθεν οὐδὲ τελευτὴν αὐτοῦ ἀναγεγράφασι.*

(2) *Elijah.*—The Elijah traditions, like those of Enoch, seem to have developed in two different directions. The *Apocalypse of Elijah* (ed. from the Coptic by Steindorff) is a Christianized form of a Jewish apocalypse, and bears witness to the belief that Elijah received supernatural revelations (it was long supposed to be the source of 1 Co 2^{9}). But the best known form of the tradition is that which starts from 2 K 2^{11} 'Behold, a chariot of fire, and horses of fire, which parted them both asunder; and Elijah went up by a whirlwind into heaven' (*ἀνελήμφθη Ἠλειοὺ ἐν συστρεισμῷ ὡς εἰς τὸν οὐρανόν*). It re-appears in Sir 48^{9} (*ἀναληφθεὶς ἐν λαίλαπι πυρός*) and in 1 Mac 2^{58} ('Elias for being zealous and fervent for the law was taken up into heaven'). It will be observed that the instrument of his assumption, according to the original story, was a tempest, not a chariot, of fire, as artists have loved to represent it; and that 1 Mac 2^{58} explicitly points to the piety of Elijah as the cause of his 'assumption' without passing through the gates of death.†

(3) *Other Biblical personages.*—In Rabbinical legends, other persons are held to have escaped death by a privilege similar to that of Enoch and Elijah: *e.g.* Eliezer, Abraham's steward, for his faithful service; Ebed-melech (Jer $38^{7ff.}$); Hiram; Jabez (1 Ch 4^{10}); Serah, Asher's daughter (Gn (46^{17}); and Pharaoh's daughter. So Ezra was 'taken up' after his vision (2 Es 8^{19}), and Baruch had a like privilege (Apoc. Bar., *passim*).

3. **Assumptions after death.**—With such 'assumptions' as have just been described, we must not confound the 'assumptions' in which *after death* the body was removed from earth and caught up to heaven.

(1) *Hercules.*—A classical example is the legend of Hercules. Being poisoned by the arts of Dejanira, he erected a pyre on the summit of Mount Œta in Thessaly, and lay down to die. Zeus, applauding his career, surrounded the pyre with smoke, and after the mortal parts of Hercules had been consumed, he was carried up to heaven in a chariot drawn by four horses. Neither his bones nor his ashes could be found, the underlying idea of the legend being that earth was not a worthy resting-place for the remains of one so godlike.†

(2) *Virgin Mary.*—A Christian legend of the same kind is that of the 'Assumption of Mary,' according to which first the soul, and after that the dead body, of the Virgin were assumed to heaven (see the *Transitus Mariæ*, ed. Tischendorf). 'It was becoming'—so Newman expresses the conviction of the Roman Church—'that she should be taken up into heaven and not lie in the grave until Christ's Second Coming, who had passed

* The story of Ganymede, who was caught up to heaven by Zeus that he might be the cupbearer of the gods, is not strictly parallel, for there is no suggestion that this was due to the piety of Ganymede. Cf. also the Rape of Proserpine, transported to the infernal regions by Pluto in his chariot.

† Cf. Abydenus *apud* Euseb. *Præp. Ev.* IX. 12, of Xisuthros, *θεοὶ μὲν ἐξ ἀνθρώπων ἀφανίζουσιν*, and see Smith, *Chaldæan Genesis*^{2}, p. 88.

* According to early Christian belief, Enoch and Elijah were the 'two witnesses' of Rev 11^{3}, who were at last to be manifested in Jerusalem (11^{7}), and whose ascent into heaven (11^{12}) was to be followed by the Second Coming of Christ.

† The classical myth of the quest in Hades for his dead wife Eurydice by Orpheus, who afterwards returned to earth, is the prototype of many legends of visits to the under world, such as that in Virgil, *Æneid*, vi., or in Dante. But in these there is nothing strictly comparable with the idea of 'assumption' to heaven.

a life of sanctity and of miracle such as hers.'* And, accordingly, the Feast of the Assumption of the Blessed Virgin Mary has had a place in Church Calendars (Aug. 15) since the 7th century.

II. *ASCENSION OF CHRIST.*—The narrative of the Ascension of Christ (Ac 1^9) is not analogous to the Jewish legends of 'ascension' or 'assumption' in either of the forms which they have taken. Christ was not 'assumed' into the heavenly places in order to receive revelations of the spiritual order, as was reported of the seers of the Jewish apocalypses. Nor, again, was His Ascension an escape from the experience of death, as was believed by some to have been the privilege of Enoch and Elijah. It is represented consistently in the early Christian documents, canonical and extra-canonical, as a withdrawal into the spiritual world with the body which He had taken upon Himself and in which He had lived an earthly life, died, and risen victorious over death. After His Resurrection, His body is represented as spiritualized and as superior to earthly conditions, to a degree which is not asserted of it during the days of His ministry; but nevertheless, according to the Christian tradition, the body in which He ascended was the same body that had hung on the cross and had been buried in the sepulchre of Joseph. The 'assumption' of Moses was conceived of as consistent with the continuance of his corpse in a hidden grave (see above, p. 152[a]). But this is not parallel with the Ascension of Christ, which presupposed the empty tomb. Christ's Ascension was a 'resumption' of His pre-existent state, in His glorified humanity, rather than an 'assumption' to heaven, granted by the favour of the Most High. Its meaning will be considered more fully in a later section (§ 7); at this point, we note that, as described in the Christian tradition, it has no exact parallel in history or literature. This it is essential to keep in mind.

It is next to be observed that there was nothing in the Jewish beliefs about Messiah which would naturally suggest such a consummation of the visible ministry of the Christ. An Ascension, in lieu of death, might have been expected by those who accepted the current beliefs about Enoch and Elijah; but death, followed by a re-vivification and exaltation, was not within the purview of the first disciples. Looking back upon the Resurrection, they were able to find phrases in the OT which might be thought to point forward to it; and, in fact, that Christ rose again 'according to the scriptures' (1 Co 15^4) became a settled point of belief. But nothing of the kind was asserted consistently of the Ascension. Ps 110^1 was, indeed, quoted, according to Ac 2^{34}, by St. Peter, and Ps 68^{18} was quoted by St. Paul (Eph $4^{8.\ 9}$), as applicable to the exaltation of the Christ; but that He ascended *according to the Scriptures* was never an article of the Creed. The Ascension of the Messiah had not been part of the Jewish expectation. Nor, so far as can now be discovered, did the disciples understand the allusions which, in the Fourth Gospel, Christ is reported to have made beforehand to this consummation of His visible Ministry on earth (Jn 3^{13} 6^{62} 20^{17}), any more than they understood His predictions of His Resurrection (Mk 8^{31} 9^{10} 10^{34}; cf. the Synoptic parallels, and see art. RESURRECTION). That after His visible Ministry amongst them had come to an end there would be an interval of waiting and of discipline before the final appearance of the Christ in triumph, the Apostles seem vaguely to have realized, and it had many times been put before them (Mk 2^{20} with ‖‖, Lk 17^{22}, the parables of the Absent Master [Lk $12^{36ff.}$] and of the Pounds [Lk $19^{11ff.}$], Jn 13^{36} 14^{19} 16^7 etc.); but in their half-formulated expectations of a period of suspense followed by an Advent of Christ in victory and judgment, His Death, Resurrection, and Ascension had no place.

* *Discourses to Mixed Congregations*, No. xviii.

1. The Ascension in Christian literature.—In examining the belief of Christians as to the Ascension of Christ, it is important to distinguish between the *fact* of the Ascension and its *mode*, between the conviction of Christ's beneficent activities on behalf of mankind being continued after the withdrawal of His visible presence and the acceptance of the brief narrative which describes the manner of His departure. In every Christian age the former of these beliefs has been more conspicuous than the latter. In the language of theology, Christ's 'Session' at the right hand of the Father has always been more in the thoughts of those who call Him Master than His 'Ascension' to His Throne. For the belief that Christ is now in spiritual communication with His disciples, that He guards, forgives, and guides them, is essential to the Christian life. It is historically interesting, but it is not vital, to know how the beginning of this ministry was revealed to the early disciples by the Risen Master's final withdrawal from their sight. And, in fact, while the doctrine of the activities of the Ascended Christ has always been a principal part of Christian instruction, and a favourite topic of Christian contemplation, the Festival of the Ascension (see § 3 below) has throughout the Church's history been treated with comparative neglect.* It might have been anticipated *a priori* that this Feast would have rivalled Christmas, Easter, and Pentecost in its attraction for Christian believers; but it has never approached them in its popularity, not because there has been any doubt in the Church as to the event which it commemorates, but because it is the issues of that event, rather than the event itself, in which Christians have been mainly interested. A kindred phenomenon, which points the same way, is the poverty of the hymnology of the Ascension. The subject is one which might be expected to attract the imagination and inspire the poetry of the Church; but it has never done so to any considerable extent.†

In strict conformity with these tendencies of later Christian history, we find that, while the Pauline theology is full of the conception of an Exalted Christ in spiritual fellowship with those who are 'in Him,' references to the Ascension as an event are rare. It is always presupposed, as in the phrase 'The Lord himself shall descend from heaven' (1 Th 4^{16}), for *descent* implies a previous *ascent*. But this implication becomes explicit only in Eph 4^{10} 'He that descended (*sc.* into Hades) is the same also that ascended far above all the heavens,' where the reference to the *ἀνάβασις* of Christ is unmistakable. The only other allusion in the Pauline writings to the Ascension as an event is in the fragment of an early hymn quoted in 1 Ti 3^{16} (*ἀνελήμφθη ἐν δόξῃ*).

To these may be added, from the Epistles, He 4^{14}, (*ἀρχιερέα μέγαν διεληλυθότα τοὺς οὐρανούς*) and 1 P 3^{22} (*ὅς ἐστιν ἐν δεξιᾷ θεοῦ, πορευθεὶς εἰς οὐρανόν*), both of which carry a distinct reference to the act of Ascension. In like manner, the allusions in the Fourth Gospel are express: *οὐδεὶς ἀναβέβηκεν εἰς τὸν οὐρανὸν εἰ μὴ ὁ ἐκ τοῦ οὐρανοῦ καταβάς, κ.τ.λ.* (Jn 3^{13}), *ἐὰν οὖν θεωρῆτε τὸν υἱὸν τοῦ ἀνθρώπου ἀναβαίνοντα ὅπου ἦν τὸ πρότερον*; (Jn 6^{62}), *οὔπω γὰρ ἀναβέβηκα πρὸς τὸν πατέρα μου . . . ἀναβαίνω πρὸς τὸν πατέρα μου, κ.τ.λ.* (Jn 20^{17}).‡ Whatever view be taken as

* This was noticed as early as the 4th century. *οἱ πολλοὶ ἀγνοοῦντες τὸ τούτης μέγεθος ἧττον αὐτὴν νομίζουσι* are words at the beginning of a Homily on the Ascension printed among the works of Epiphanius (*PG* xliii. 477).

† Cf. Trench, *Sacred Latin Poetry*[3], 1874, p. 172.

‡ It is possible that the words ascribed to Christ in Jn 12^{32}, *ἐὰν ὑψωθῶ ἐκ τῆς γῆς πάντας ἑλκύσω πρὸς ἐμαυτόν*, involve

to the accuracy of the reports of Christ's words in John, it is certain from these passages that, at the date of the composition of the Fourth Gospel, the Ascension of Christ as an event in time was a definitely conceived part of the Christian tradition. It did not come within the purpose of the writer to give any direct account of it, just as it did not come within his purpose to describe the institution of the Eucharist; but his allusions indicate that his readers had knowledge of both.

(1) *The Gospels.*—The end of the Second Gospel is lost, and what it contained can only be matter of conjecture, more or less probable. It is likely that the writer of Mt 28 had it before him, and that he followed the main lines of the Marcan narrative here, as in other places. If this be so, Mark in its original form did not explicitly describe the Ascension. Mark, followed by Matthew, represents the Galilæan tradition of the Resurrection-appearances, and the Ascension narrative belongs more naturally to the Jerusalem tradition, as the scene of the Ascension was Olivet. That Matthew does not describe it is to be explained precisely as his omission to describe the Appearance of the Risen Christ to the Eleven in the upper room is to be explained. He is following the Galilæan narrative of Mark, the climax of which probably was the appearance of Christ *in Galilee* (cf. Mt 28^{16}), in accordance with His promise (Mk 14^{28}) and with the angelic announcement (Mk 16^{7}). The climax, on the other hand, of the Jerusalem narrative would be the Ascension, the last of the post-Resurrection manifestations in the neighbourhood of Jerusalem, and accordingly we find it explicitly mentioned by the writer, who follows the Jerusalem tradition of the Resurrection throughout, *i.e.* by St. Luke (cf. 9^{51} *τὰς ἡμέρας τῆς ἀναλήμψεως αὐτοῦ*).

The statement, in the Third Gospel, of the events which followed the Resurrection is condensed to the point of obscurity, and the variants of the texts of the closing verses are puzzling. But when all this has been admitted, it does not seem (to the present writer at least) to be possible to regard it as silent on the subject of the Ascension, although this has been maintained by some critics. The passage is as follows: *ἐξήγαγε δὲ αὐτοὺς* [*ἔξω*] *ἕως εἰς* [*al. πρὸς*] *Βηθανίαν· καὶ ἐπάρας τὰς χεῖρας αὐτοῦ εὐλόγησεν αὐτούς· καὶ ἐγένετο ἐν τῷ εὐλογεῖν αὐτὸν αὐτοὺς, διέστη ἀπ' αὐτῶν* [*καὶ ἀνεφέρετο εἰς τὸν οὐρανόν*]. *καὶ αὐτοὶ* [*προσκυνήσαντες αὐτὸν*] *ὑπέστρεψαν εἰς Ἰερουσαλὴμ μετὰ χαρᾶς μεγάλης· καὶ ἦσαν διὰ παντὸς ἐν τῷ ἱερῷ* [*αἰνοῦντες καὶ*] *εὐλογοῦντες τὸν θεόν* [*Ἀμήν*] (Lk $24^{50f.}$). The words in brackets are omitted in some (mainly Western) texts, and are marked as doubtful in WH. It is by no means certain that they did not form part of the original text; and if they did, *ἀνεφέρετο εἰς τὸν οὐρανόν* is an explicit description of the Ascension. But even if these words are left out of consideration, there remains the narrative of a solemn parting from the disciples in the act of benediction, subsequently to which they returned to Jerusalem with joy and continued in the Temple blessing God. Some special significance must have been attached to a departure of the Risen Master, so lately restored to them from death, which they would recall *with joy*, and for which they would fall to thanksgiving. Such a separation could hardly have been viewed as merely temporary; the language indicates that they regarded it as final, and the termination of the Gospel at this point shows that the evangelist conceived of it as the beginning of a new era for the followers of Christ. But a withdrawal of this nature into the spiritual region is the essence of the Ascension, to which, therefore, the conclusion of St. Luke's Gospel bears definite witness, even if it be supposed that *ἀνεφέρετο εἰς τὸν οὐρανόν* is a later gloss, explanatory, in the unscientific language of the age (see pp. 151, 156), of the manner of the disappearance of Christ into the spiritual world.

(2) *The Acts.*—In the later treatise by Luke, the Acts, this kind of descriptive language is used without hesitation when the story of the Ascension is being told: *βλεπόντων αὐτῶν ἐπήρθη, καὶ νεφέλη ὑπέλαβεν αὐτὸν ἀπὸ τῶν ὀφθαλμῶν αὐτῶν. καὶ ὡς ἀτενίζοντες ἦσαν εἰς τὸν οὐρανὸν πορευομένου αὐτοῦ, κ.τ.λ.* (Ac $1^{9f.}$). According to Acts, that is, the departing Christ was received in a cloud, His disciples following His passage 'upward' with straining eyes. Angelic messengers then informed them that, as was the manner of His Departure, so would be that of His Return, *i.e.* in a cloud, from the upper regions of the sky. There is no doubt as to the definiteness with which the Ascension of Christ is here narrated. The testimony of Acts is express. It remains, however, a legitimate problem, although one of no small difficulty, to determine how far the language in which it is described is to be regarded as literal, and how far it may be understood either as symbolical or as the natural, unstudied language employed in an unscientific age to describe a fact quite abnormal and unique in the experience of the narrators.

The Christian Church for many generations regarded the story as literally precise, *i.e.* it was believed that Christ went 'up' in a cloud into the higher regions of the atmosphere. It may have been so, just as the true interpretation of the words ascribed to Christ of His Second Coming 'in the clouds of heaven with power and great glory' (Mt 24^{30}; cf. Mk 14^{62} = Mt 26^{64}) may be the literal interpretation, which was adopted by St. Paul ('we shall be caught up *in the clouds* to meet the Lord in the air,' 1 Th 4^{17}). But it must not be forgotten that phraseology similar to the eschatological language used by Christ—or, at any rate, ascribed to Him by the Evangelists—is to be found in the Jewish apocalypses, which reflect the popular beliefs of the age. If the last things were to be spoken of intelligibly at all, they must be spoken of in the language of symbol and imagery familiar to His hearers. And no one doubts the verbal connexion of Mk 14^{62} and parallel passages with Dn $7^{13ff.}$: 'There came with the clouds of heaven one like unto a son of man, and he came even to the ancient of days, and they brought him near before him. And there was given him dominion, and glory, and a kingdom, that all the peoples . . . should serve him.' It is to be remembered, then, that the Ascension in Ac 1 is described as a 'going into heaven,' conceived of as a process similar to that 'coming from heaven' of which Jewish apocalyptic and Christ Himself had spoken. The cloud and the upward movement are, indeed, explicitly recorded as having been observed, and they present no special difficulty. But it is right to note that they are the natural and almost inevitable accessories of any Jewish narrative which sought to describe the solemn and unique departure of the Christ, or to enrich with detail the brief statement *διέστη ἀπ' αὐτῶν* (Lk 24^{51}).

(3) *Sub-Apostolic literature.*—The *Appendix to St. Mark*, a document of the earliest sub-Apostolic age, gives no information as to the post-Resurrection appearances of Christ which is not found in the Lucan and Johannine narratives. It may have been based upon these, but in any case, like them, it follows the Jerusalem tradition. It describes

another reference to the Ascension, despite the fact that the Evangelist confines them to the Elevation on the cross. In Jn 8^{28} the latter meaning must be the true interpretation of *ὑψόω*; but the context of Jn 3^{14}, *καθὼς Μωυσῆς ὕψωσε τὸν ὄφιν ἐν τῇ ἐρήμῳ, οὕτως ὑψωθῆναι δεῖ τὸν υἱὸν τοῦ ἀνθρώπου*, seems to show that the *ὕψωσις* is the Ascension rather than the Crucifixion. The verb *ὑψόω* is used twice in Acts (2^{33} 5^{31}) of Christ's exaltation to heaven (cf. Ph 2^{9} *ὑπερύψωσε*). For a discussion of its meaning in John see Abbott, *Johannine Gram.*, 1906, 2642 *b*.

the Ascension in OT language: ὁ μὲν οὖν κύριος μετὰ τὸ λαλῆσαι αὐτοῖς ἀνελήμφθη εἰς τὸν οὐρανὸν (the phrase used 2 K 2^{11} of the Assumption of Elijah) καὶ ἐκάθισεν ἐκ δεξιῶν τοῦ θεοῦ (cf. Ps 110^{1}).

Later writers, Barnabas (ἀνέστη ἐκ νεκρῶν καὶ φανερωθεὶς ἀνέβη εἰς οὐρανούς, c. 15), Aristides (εἰς οὐρανοὺς ἀνῆλθεν, § 15, ed. Robinson), Justin (ἀναβεβηκέναι εἰς τὸν οὐρανόν, *Dial.* 38), and Irenæus (τὴν ἔνσαρκον εἰς τοὺς οὐρανοὺς ἀνάληψιν, *Hær.* I. x. 1; cf. II. xxxii. 3, III. iv. 2), carry on explicit witness to the Christian tradition into the 2nd century. To these may be added the descriptions in the *Ascension of Isaiah*, *e.g.*: 'They will teach all the nations . . . of the Resurrection (ἀνάστασιν) of the Beloved, and those who believe in His Cross will be saved, and in His Ascension (ἀναβάσει) into the seventh heaven whence He came' (iii. 18, a passage which Charles treats as belonging to the earliest part of the treatise, and as probably of the 1st cent.); see also the description in xi. 22 ff. of the Ascension of the Beloved through the seven heavens (a passage which looks like an imaginative amplification of He 4^{14}).

2. **The Ascension and the Resurrection.**—Despite the definite language of passages such as those which have been cited, it has been suggested by some writers, *e.g.* by Harnack,* that in the earliest tradition the Resurrection and the Ascension were not clearly distinguished. But the considerations already adduced (p. 153ᵇ) sufficiently explain the omission on the part of some writers (*e.g.* Clement, Polycarp, and Ignatius [yet cf. *Magn.* 7]) to make explicit mention of the Ascension as an event in time. To the thought of the first Christians, the credentials of the Gospel were the appearances of Christ after His Resurrection; this historical fact was fundamental. But the *evidential* value of the Ascension was no greater than that of any other of the Epiphanies of the Risen Christ, and from this point of view it was not essential to make separate mention of it. So soon, however, as the Church began to formulate a Creed, the Ascension, as the event which terminated the visible ministry of Christ on earth and inaugurated His invisible ministry in heaven, was explicitly distinguished therein from the Resurrection, as it had already been distinguished in the Acts, in the Marcan Appendix, in Barnabas, and in the 2nd cent. writers. 'He ascended into heaven' is a separate article of the Creed in the earliest forms which we can trace.

Tradition, however, is not quite unanimous as to the interval between the first and last manifestations of the Risen Christ, between the 'Resurrection' and the 'Ascension.' Neither in the third Gospel nor in the Marcan Appendix is there any note of the time that elapsed; and as the story in both cases runs continuously, a hasty reader might conclude that these writers mean to place the Ascension on Easter Day. But it is evident that the Marcan Fragment is only a summary, and not a consecutive narrative. And, although not so evident in St. Luke's account, its summarized character is clear when ch. 24 is scrutinized closely. The Supper at Emmaus was in the evening (24^{29}); time must be found for the return to Jerusalem, seven miles away ($24^{13.\ 33}$); for the telling of the story to the Eleven (24^{35}); for the Meal in the upper room (24^{43}); for the Discourse there and the Commission (24^{44-49}); for the walk of 1½ miles to Olivet (24^{50}). No tradition represents the Ascension as taking place in the middle of the night; and yet this is what we must suppose St. Luke to state, if we take 24^{1-51} as describing the events of a single evening. The fact is that this narrative is not necessarily continuous, from 24^{43} to 24^{44} at any rate, and that therefore it does not contradict the statement of Ac 1^{3} (cf. Ac 13^{31}) that 'forty days' elapsed between the Resurrection and the Ascension.

3. **Ascension Day.**—'Forty' days is a round number; and although the Church since the 4th cent. has kept the Festival of the Ascension on the 40th day after Easter,* it is not certain that the author of Acts meant it to be taken quite literally. Barnabas speaks of the Resurrection and the Ascension as having both taken place on a Sunday† (διὸ καὶ ἄγομεν τὴν ἡμέραν τὴν ὀγδόην εἰς εὐφροσύνην, ἐν ᾗ καὶ ὁ Ἰησοῦς ἀνέστη ἐκ νεκρῶν καὶ φανερωθεὶς ἀνέβη εἰς οὐρανούς, c. 15); and it is possible that he preserves a true tradition about this.‡ It has been suggested by Dr. Swete (*op. cit.* p. 69) that Sunday the 43rd day after Easter would meet the statement of Barnabas, as well as the 'forty' days of Acts; and it may well be that this is the true interpretation of all the data.

4. **Origin of belief in the Ascension.**—The nature and details of the Church's tradition as to the Ascension of Christ have now been summarized. It is worthy of attention that, *a priori*, it would be difficult to account for the origin of such a belief were it not based on fact. Those who explain the belief in the post-Resurrection appearances of Christ as of *subjective* origin, and as due to the temper of strained expectancy which dominated the little company of the disciples of Jesus, may not unreasonably be asked to explain why these pious imaginings should suddenly have ceased. If the visions of the Risen Christ were evoked or created by the loving ardour of those who would fain realize the nearness of the presence of the Master whom they had lost from daily sight, why should they not have continued throughout the Apostolic Age? Granted a belief in the occasional appearances of Christ after His Resurrection, a belief in His subsequent Departure from sight and the complete withdrawal of His visible presence is a surprising phenomenon. Yet nothing is clearer in the records of the 1st and 2nd cents. than that the Church after Pentecost ceased to look for any manifestation of the Risen Lord other than His Second Coming in Judgment. Some event must have taken place which assured them that the period of the Resurrection visions was transitional, and that the consolations of the Church in the future were to be derived, not from such manifestations, but from the spiritual ministrations of a Master in heaven. There must have been, that is, some manifestation of the Risen Christ which they recognized with certainty as the last of the series, and which, therefore, in some respects was unlike those which preceded it. Such an experience was theirs, according to the Lucan narrative, in the vision of the Ascension; and those who do not admit that the narrative is based on a historical event are under the necessity of explaining how the disciples, whose only strength was in the conviction of the nearness of their Risen Master, should have been led to imagine that the gracious Epiphanies of His presence had suddenly come to an end.

5. **Manner of the Ascension.**—When it is sought more closely to determine the manner of the 'Ascension,' the data are found to be insufficient. For it is represented as an Ascension of the body, as well as of the spirit, of Christ; and yet of a body not subject to the ordinary physical conditions. Both in the Lucan (Lk $24^{31.\ 36-43}$) and in

* A careful and valuable examination of his argument will be found in Swete, *The Apostles' Creed*, p. 64 ff.

* Cf. *Const. Ap.* v. 19: ἀπὸ τῆς πρώτης κυριακῆς ἀριθμήσαντες τεσσαράκοντα ἡμέρας, ἀπὸ κυριακῆς ἄχρι πέμπτης ἑορτάζετε τὴν ἑορτὴν τῆς ἀναλήψεως.

† Swete (*op. cit.* p. 69) points out that the *Syriac Doctrine of the Apostles* identifies the Ascension with Pentecost, which, although quite inconsistent with Acts, again places the Ascension on a Sunday.

‡ A Gnostic fancy (Iren. I. iii. 2 and xxx. 14), which is also found in the *Ascension of Isaiah* (ix. 16), represented the interval between the Resurrection and the Ascension as 18 months.

the Johannine (Jn $20^{19.26}$) Resurrection narratives, the Risen Christ is represented as in a body over which His spirit has complete control. It is the same body which hung on the cross, but it has been spiritualized. To describe it we have to use St. Paul's phrase, and say that it is now a 'spiritual body' (*σῶμα πνευματικόν* [1 Co 15^{44}]), a body which is the fit organ and instrument of the spirit. We can understand that such a body would not be subject to the laws of space and time, although it is impossible for us to figure in the imagination its movements. And therefore a physical theory of the Ascension is out of our reach. We are subject to spatial and temporal conditions, and although we fully recognize that they are not binding in the spiritual order, they impose limitations upon the pictures of our imagination.

6. Philosophical rationale of the Ascension.—It is, however, possible to conceive the *fact*, although not to imagine the *manner*, of the Ascension, when we remember that it represents the passage from the physical to the spiritual order. Heaven is not a place up in the sky; it is the spiritual world which encompasses us, and which is nearer than can be indicated by physical proximity. It is like a fourth dimension of space, invisible, unimaginable, and yet quite as real and quite as near as the length, breadth, and depth of our bodily environment. To move into this fourth dimension from the earthly life may be the most natural of all movements for the spirit, or for the 'spiritual body' which is its envelope, while the process may be, must be, inscrutable for the spirit confined by the 'natural body.'

Of such a process the counterpart would be a movement from the spiritual order into the physical plane. 'Their eyes were opened, and they knew him; and he vanished out of their sight' (Lk 24^{31}): that is the heavenward movement—the passage *to* the spiritual order. 'Jesus cometh, the doors being shut, and stood in the midst' (Jn 20^{26}): that is the earthward movement—the passage *from* the spiritual order. In neither case is the movement perceptible; the result alone, in the one case *appearance*, in the other *disappearance*, is noted by the bodily senses. Once the reality of the spiritual order is recognized, such phenomena will not be declared impossible. The capacity thus to rise superior to the earthly conditions of space, and in the power of the spirit to move unseen to and from the world of spirit, has been claimed by masters of the spiritual life in many lands; notably it has been claimed by Buddhist mahātmas. We do not stay here to examine the justice of such claims, upon which the last word has probably not yet been said by psychological science. Nor is this the place to enter upon speculation as to the power of spirit over matter, and of mind over body, the limits of which cannot as yet be regarded as defined. But it is desirable to note that the incidents in the Resurrection narratives which have been subjected to the severest criticism as abnormal and incredible present no other difficulty than this, that they presuppose a passage from the physical to the spiritual order. And, in this aspect, the only distinction between the Ascension and the previous withdrawals from sight of the Risen Christ is that the Ascension was the last of a series, and that it was purposely so effected as to give the impression that it would be the last.

7. Implications of the Ascension from the Christian point of view.—This, however, would be a quite inadequate conception of the Ascension from the Christian point of view, for no account has been taken in the preceding section of the unique Personality of the Ascending Christ. We proceed, therefore, briefly to exhibit the significance of the Ascension—or, more strictly, of the Heavenly Session which is its sequel, and which it initiated—in its relation to the fact of the Incarnation, with which it is associated in the Creeds. In what follows, the Christian doctrine of the Incarnation (see INCARNATION) is assumed, and an attempt is made to indicate the doctrinal implications of the Ascension, as they have been recognized by the Church looking back upon the Revelation of God in Christ.

(1) *Exaltation of Christ's Manhood.*—The Christian gospel is that God became man, (*a*) to free man from the bonds of sin, and (*b*) to restore him to the dignity of fellowship with the Divine. (*a*) The beginning of the movement of Divine Love is *Christ Incarnate*, i.e. *Christ in the Humiliation of His Deity*. 'The Word became flesh.' And the Divine sacrifice of the Cross marks the consummation of the Redemption of humanity. But (*b*) the Divine purpose is not fulfilled until man is restored to his true estate. 'The Incarnation could only identify the Redeemer with the essential elements of humanity. It could not spiritualize that bodily organization which is no less a part of the true being of man than his intellectual and moral gifts. . . . The Resurrection and Ascension needed to follow, that the quickening Spirit of Jesus, thus set free, might enter into our spirits, and make us sharers of its victory.'* Thus the end of the movement of the Divine Love is *Christ Ascended*, i.e. *Christ in the Exaltation of His Manhood*. The Ascension was *ἔνσαρκος*, as Irenæus has it (see 1. 3); it was not a mere *ἀνάλημψις*, or Assumption, of Christ's spirit; it was a true *ἀνάβασις*, an exaltation, of Christ as the Representative Man to the glory of the heavenly life. The doctrine of the Incarnation does not teach that Christ assumed human nature, body and spirit, only for the years of His visible ministry, and then abandoned it like a discarded cloak. In the light of the Ascension it means that He is still Man, and that as Man He is in communion with Deity. This is the significance of the Ascension when Christ resumed His heavenly condition, the same yet not the same, for He had become man, who thenceforth may dwel in Him, as He in man.

(2) *Completion of His ministry for mankind.*—The Ascension, therefore, marks the completion of the ministry of Christ in His relation to humanity; henceforth His Messianic offices of King, Prophet, and Priest are fulfilled in perfect measure and without the restraints to which He submitted Himself in the flesh. The service of man is always a service of *leadership*, of *counsel*, of *reconciliation*. These three functions exhaust the service which man can offer to his fellows; he may rule, he may teach, or he may by sacrifice of himself bring them nearer to each other and to God. And in the Ascended Christ as the Perfect Man these ideals are perfectly fulfilled.

(i.) *The Ascended Christ as King.*—It was under this image that the Hebrews most vividly conceived of the Messianic Deliverer who was to come. Their natural leader in war was their king, who not only directed the campaign from afar, but himself descended to the battle-field. So, too, under the conditions of Eastern autocracy, the king was the judge, who assigned reward and punishment by his own authority. And thus, when Christ spoke in parables of His future relation to mankind, the images most frequently used were the images of kingship and a kingdom: 'Henceforth ye shall see the Son of man sitting at the right hand of power' (Mt 26^{64}); and it is 'the King' who is to dispense blessing and cursing at the Last Assize (Mt 25^{34}). The Apocalypse represents Him as a Warrior going forth to smite the nations, 'King of kings and Lord of lords' (Rev 19^{16}), whose victory at last shall be complete: 'the

* Milligan, *The Ascension of our Lord*, p. 30.

kingdom of the world is become the kingdom of our Lord, and of His Christ' (Rev 11[15]). In this there is an inner moral necessity, according to St. Paul: 'He *must* reign till he hath put all his enemies under his feet' (1 Co 15[25]). The rule of the Ascended Christ, seated in majesty at the right hand of power, is the rule of an absolute monarch; and the Ascension marks the Enthronement of the King. The Hebrew conception of a Messianic Prince merges in the larger conception of an invisible Master in heaven, who directs the history of the world, and holds the keys of the future.

(ii.) *The Ascended Christ as Prophet.*—That 'the Spirit was not yet given, because Jesus was not yet glorified' (Jn 7[39]), is a principle frequently laid down in the Fourth Gospel. The thought of Christ as 'the Servant of Jahweh,' the Prophet who was to be raised up, was prominent in the earliest Christology (Ac 3[13. 22. 26] 7[37]). That He came to reveal the Father's will was His own claim from the beginning (cf. esp. Mt 11[27] || Lk 10[22]). Nevertheless, this prophetical office, although fulfilled by the Incarnate Christ in such measure as no prophet or seer before Him had reached, was not to be fulfilled in its perfection until after the Ascension, when it was to be exercised through the ministry of the Spirit: 'It is expedient . . . that I go away: for if I go not away, the Paraclete will not come. . . . I have yet many things to say unto you, but ye cannot bear them now. Howbeit when he, the Spirit of truth, is come, he shall guide you into all the truth' (Jn 16[7. 12. 13]). *Accipe Spiritum Sanctum* is the final gift of Christ, who became a 'quickening spirit' after His Resurrection. The gift of the Spirit is the supreme grace and glory of the Church, and through this ministry the prophetical office of Christ is perpetuated and perfected for all time.

(iii.) *The Ascended Christ as Priest.*—Of the conception of Messiah as Priest there is but little in the OT literature. The idea emerges, in Ps 110[4], of His Eternal Priesthood, although not after the order of Aaron, but 'after the order of Melchizedek'; but the thought was not developed until the Epistle to the Hebrews expanded it. The consummation of the official service of the Jewish high priests was reached when, on the Day of Atonement, the sin-offering on behalf of the people having been sacrificed outside, the blood of the victim was brought within the Holy Place and sprinkled before the Mercy-seat (Lv 16[15]). So, it is argued (He 9[11. 12]), the consummation of the offering of the great High Priest is His Ascension to the heavenly Mercy-seat, where the efficacy of His sacrifice of blood is perpetually pleaded. It is the function of a priest *to offer sacrifice*, and this is perfectly fulfilled in the voluntary sacrifice of the Victim-Priest, which is efficacious to the cleansing from *sin* and not merely from ceremonial defilement (He 10[12]), and which, further, is unique and needs not to be repeated (He 7[27] 9[25. 26]). But the higher, and more spiritual, function of a priest is *to intercede*, and this is perfectly fulfilled in the perpetual intercession (He 7[25]) of the Priest who has 'passed into the heavens' (He 4[14]), 'made higher than the heavens' (He 7[26]), 'who sat down on the right hand of the throne of the Majesty in the heavens' (He 8[1]), whose priesthood is 'unchangeable' (He 7[24]). It has been debated by theologians when the Priesthood of Christ began. Is He to be regarded as a Priest during any period of His visible ministry, or did He enter upon His Priesthood only in heaven?* The answer seemingly implied in Hebrews is that, while He was always Priest throughout His Ministry and Passion, and while the supreme sacrifice of His priestly ministration was the sacrifice of Himself on the Cross, yet the consummation of His priestly service is to be found in His perpetual intercession in heaven. Just as the Jewish priest did not reach the highest moment of his service until he had brought the blood of the victim within the Holy Place, so Christ did not fulfil His priesthood in perfect measure until He had ascended. The Ascension marks the complete fulfilment and consummation of His work as Priest no less than as King and as Prophet. For the Ascension no less than for the Passion, there was an inner moral necessity in the Divine counsels: οὐχὶ ταῦτα ἔδει παθεῖν τὸν Χριστὸν καὶ εἰσελθεῖν εἰς τὴν δόξαν αὐτοῦ; (Lk 24[26]).

8. Practical issues of the dogma.—While the Ascension has thus always been viewed in Christian theology as the 'Glorification' of Christ and the entrance upon His reward, the practical issue of belief in it has always been the same as that which is recorded of its first witnesses: 'They continued in the Temple, blessing God' (Lk 24[53]). The vision of the Ascension is a call to worship: Let us draw near unto the throne (He 4[16]). That Christ 'ascended' is not only the pledge that His Ministry for mankind is perfect and final; it also conveys the assurance that heaven is near, and that the earthly order is encompassed by the spiritual. The practical theology of the Ascension is the idealism of the Christian life.

ASTROLOGY AND ASTRONOMY.—See STARS, also SUN, MOON.

ASURS.—The Asurs of the present day are a non-Aryan tribe of the Kolarians in Chota-Nagpur, Bengal. A people of the same name is mentioned in the religious books of the Hindus. According to the *Śatapatha Brāhmaṇa*, they are the descendants of Prajāpati ('the Lord of the Creation'). How they became evil spirits or *A-sura* (='not-God') is not clear; the fact alone is stated that they fought against the Devatās 'for the possession of the earth,' and that they were overcome and finally succumbed. The historical grain of truth in this poetical story is apparent: the Aryans, in their invasion of what is now called India, were obstructed by that fierce and savage-like people whom they called *Asura*, or demons, and whom they expelled and partly annihilated.

Whether the Asurs living in Chota-Nagpur are the offspring of these opponents of the Aryans or are connected with the Asura builders of those ancient embankments still found in the Mirzāpur district, is, of course, an open question; yet there seems to be nothing to exclude such suppositions. This much is certain, that Chota-Nagpur was partly inhabited by Asurs before the Kolarian and Dravidian tribes entered it from the North-West, when they likewise had been expelled from their former seats by the stronger and more intelligent Aryans.

There are still traces of copper mines in Chota-

* For opposing views, see Milligan, *op. cit.* 77 ff., and Westcott, *Hebrews*, *passim*.

Nagpur, which seem to have been worked in ancient times, and tradition attributes these to the Asurs. The conclusion may readily be drawn that the Asurs, before leaving their former settlements, lived for some time as subjects of the conquering race (the Aryans), by whom they became to some extent civilized. At the present time their occupation consists in digging iron ore, melting iron, and making agricultural implements for their neighbours.

When the Kolarians were compelled by the Aryans to seek refuge in the hills and the dense forests of Chota-Nagpur, they met there the Asurs, and a severe fight ensued for the possession of the arable land, in which the Asurs were overcome, and again almost annihilated. The remnant fled to the plateaux of the Chota-Nagpur and Palāmau hills, where we find them to-day. A few of them have emigrated to adjacent districts.

The spirits of the slain Asurs must ever have haunted the superstitious and demon-fearing Kols, and they, perhaps with the help of some Hindu hermit versed in the Purānas, invented the so-called *Asur legend*. In this legend may perhaps be found some traces of the tradition of the tower of Babel, and the supposition is allowable that such a legend was current among the Kolarians when the story of the destruction of the Asurs and the dispersion of their remnant was added and mixed up with it in later times. The legend as told at present by the aborigines in Chota-Nagpur amounts to the following story :—

There were twelve brethren (septs) of Asurs with their wives and children. They melted iron, they ate iron, and made such a big fire in the melting furnace that Singbongā, the sun-god, was annoyed. He first sent two birds with a message of warning, but the Asurs maltreated the divine messengers, sullied their colour, and plucked feathers from the tail of one of them until only two were left; these birds were the raven and the black starling. Seeing that the Asurs were bent on doing even more mischief, Singbongā at last sent his son in the form of a *Kasrā Korā*, or leprous youth. He sought and found shelter with an old Munḍā chief and his wife. The Asurs got hold of him and threw him into the furnace; but he came out of the ordeal cleansed of his leprosy, and bearing in his hands large lumps of gold. This roused the covetousness of the Asurs, and bidding their wives to tread the bellows well, they jumped into the fire, and perished one and all, leaving their wives and children widows and orphans. These surrounded the son of Singbongā, and did not let him return to heaven until he had assured them that they might occupy the high mountains, the forests, the rivers and desert places, where people would worship them, offering fowls and goats, and rice and liquor, to feed and satisfy them. Whereupon the old ladies dispersed and became the malicious spirits of the mountains, the Sāl-forest, the barren fields and the springs, where they receive the offerings of the people, and are content as long as they are appeased.

The Asurs in Chota-Nagpur number 4894, besides 4616 Brijiā and Agariā. They claim to be connected with the Brijiā or Binjhiā tribe, an agricultural and land-holding class in Chota-Nagpur, who within their own households speak Uriya. A subdivision of the Asurs are the Agariās, beggars wandering about with tamed monkeys, whose feats they exhibit. Another subtribe, following the vocation of blacksmith, call themselves 'Loharā-Asurs.' Others are called Pahārias or Hill-Asurs. Though few in number, the Asurs are divided into several totemistic septs, such as *Bāsriār* (=sprung from the bamboo), *Makrār* (=spider), *Ind* (=eel), *Hōrō* (=tortoise), etc. The totems of these septs do not appear to be tabu, though marrying within one of these sections is eschewed as far as practicable.

Customs.—Child marriages are unknown among the Asurs. A price for the bride is given, varying from 3 to 5 rupees. Polygamy is permitted, as well as re-marriage of widows. No priestly functions are required for the marriage ceremonies, which are very simple. Rice-beer is indulged in by both sexes, but smoking only by the men. The Asurs have no dancing places like the Kols, as they lead almost a nomadic life, leaving their own settlement when the iron ore or the land is exhausted; the latter they till only in the most primitive way, without manuring or ploughing. They have scarcely any musical instruments, and seldom sing or dance. The women, however, are notorious for their lax morality, and are easily enticed away into the towns and large villages of Chota-Nagpur, where they earn a living as dancing girls. As to food the Asurs are not very particular, eating almost anything, the flesh of the carcass of a cow not excluded.

Language.—The language of the Asurs, which they call *Dukma*, is a dialect of the Kolarian family of languages, and was most probably adopted from their conquerors, the Munḍās, with such alterations in the pronunciation as suited their nature. For example, almost all Munḍāri words found in *Dukma* that commence with *h* change this consonant into *v*; and wherever a vowel follows *n* in Munḍāri, the Asur inserts the semi-vowel *y* between the two. There are no traces of an original tongue in the Asur *Dukma* as spoken at the present day, for almost every word in its vocabulary can be traced to Kolarian or Dravidian sources. From the Dravidian languages the Asurs subsequently added to their vocabulary. Through contact with Aryans, they have adopted also a number of words derived from Sanskrit. What has been said about their language is not opposed to the assumption that the Asurs are essentially a Kolarian tribe. They may have separated from the rest of the Kolarian ancestors at a remote period, developing a language of their own, until they were conquered by the Kolarian tribe of the Munḍās, whose dialect they adopted to a great extent. The features and bodily appearance of the Asurs are distinctly and decidedly Kolarian.

Religion.—This is somewhat different from the animism of their Kolarian relatives. The Asurs are not demon-worshippers, and have no priestly institution. Where they are found sacrificing to the evil spirits of the forest, the mountain, or the field, this is due to their being members of a village community, consisting of Kolarian or Dravidian inhabitants, who worship those deities. Wherever they live by themselves, they do not worship any of the petty gods or demons of those tribes. The Asurs believe in a great benevolent spirit, the Creator and Preserver of the world. He does not require to be worshipped in any way. When they identify him with the sun, or rather believe him to be resident in the sun, they most likely follow therein the notions of the Munḍāri tribe. It is true that they also believe in evil spirits, and have to propitiate them by making bloody sacrifices, consisting of fowls. These evil spirits, however, with the Asurs, are exclusively the departed spirits of their forefathers, who must be provided with food, and propitiated whenever they become hungry and irritable. All the diseases and troubles of this life are ascribed to their anger; they must be appeased, therefore, with sacrifices of fowls, presented by the head of the family at the house-altar, the fire-hearth. In new-born children the Asurs see the re-born spirits of ancestors. Witches and the evil eye are therefore unknown within the tribe, but people from without may bewitch an Asur baby, or a foreigner may cast an evil eye upon him, and for this reason anklets of iron are required to protect the little Asur child.

The Asur has no moral code, all his obligations being confined to the one important matter of keeping the spirits of his ancestors at ease, or, when disturbed, of quieting them in the manner described above. Every departed parent becomes a spirit—a good one if he died a natural death, an

evil one if he died suddenly or by accident. In the former case it is essential to provide him with food for the journey beyond, and in the latter to present a sacrifice at the funeral. The Asurs burn their dead, and at the funeral some rice must be put on the funeral pile, and for eight days after cremation portions of the regular meals must be placed outside the door of the house in the name of the departed. After the time mentioned he will settle down in quiet. At the close of the eight days the nearest relatives and friends come for the funeral meal, when they partake freely of home-brewed rice-beer. After this, good spirits of the ancestors need no further attention, and may be trusted to help and protect their people on earth. It is only the unfortunate evil spirit which so frequently becomes irritable and ill-disposed. He is to be feared, and in time of sickness and calamity to be reconciled by offerings of rice and liquor, and by sacrifices. See art. AGARIĀ.

AŚVAGHOṢA.—Aśvaghoṣa is well known as the author of the Buddha-charita, a poetical description of Buddha's life.* To him is ascribed the Alaṅkāra, a collection of Buddhist stories with their respective moral teachings. The authenticity of these traditions is confirmed by the external evidence of I-Tsing's statement,† and the internal evidence does not contradict it.

We learn from the colophon to the Tibetan Buddha-charita,‡ and from a biography of Vasubandhu, that Aśvaghoṣa was a native of Sāketa. According to the latter authority, it was he who was summoned to Kābul by Kātyāyanīputra, the alleged composer of the 'Abhidharma in Eight Sections,' in order to help him in the compilation of the great commentary (Mahāvibhāṣā) on the text of that Abhidharma. As we learn from Yuan Chwang (Hiuen Tsiang), this compilation took place under the patronage of King Kaniṣka, who is now generally believed to have flourished in the 1st cent. A.D. That Aśvaghoṣa was contemporary with Kaniṣka is confirmed from another source,§ which describes Aśvaghoṣa's life in detail, and from which are derived the later legends concerning him.

We are told that Aśvaghoṣa was a learned but haughty man, who was at last converted to the Buddhist faith in the nonentity of the phenomenal world. The agent in his conversion was Pūrṇayaśas, a disciple of Pārśva,‖ who is said to have presided over the compilation of the above-mentioned great commentary. After his conversion Aśvaghoṣa worked eagerly for the propagation of Buddha's teaching in Kusumapura (the modern Patna), not only as a preacher, but also as a poet and musician. When that town was taken by the army of Chandana Kaniṣṭha, the king of the Yuehchis, Aśvaghoṣa was carried away to their country in the north as a portion of the tribute paid to the conqueror by the Magadhans.

Another biography of Aśvaghoṣa tells essentially the same story. The indebtedness of Aśvaghoṣa to Pārśva and Pūrṇayaśas is confirmed by the expression of homage at the beginning of the Alaṅkāra, while his connexion with King Kaniṣṭha is elsewhere asserted.*

Thus far the traditions about Aśvaghoṣa's life, which are the oldest sources of our knowledge about him, may be regarded as comparatively authentic. But when we take up many other writings which bear his name, we find ourselves in the dark as to the identity of the person.† And the matter is made no clearer by the Tibetan tradition, which applies many epithets to him. This tradition dates from the 16th cent., and itself seems to be the result of confusion.

According to it, Aśvaghoṣa was living under King Bindusāra, the son of Chandragupta, and was connected with Kanika, the king of Tili and Mālava in the west. Of six epithets given to him we mention: Mātṛcheta, Dhārmika-Subhūti, Śūra. Comparing these different traditions, we find little reason to see in this Aśvaghoṣa the author of the Buddha-charita, except the connexion of the name with King Kaniṣka or Kanika. The Tibetan author, it is true, states expressly that the Kanika mentioned there is not to be confused with Kaniṣka, yet there is reason enough to suspect his accuracy.

The following are the works attributed to a person or persons bearing the name of Aśvaghoṣa.

1. 'Hymn in one hundred and fifty stanzas.' This has been handed down to us in a Chinese and in a Tibetan version. The two agree fairly well with one another, and in both the author is known as Mātṛcheta. The colophon to the Tibetan version identifies this Mātṛcheta with Aśvaghoṣa. But I-Tsing, the translator of the hymn into Chinese, seems to regard him as different from the author of the Buddha-charita. On the other hand, there is in Tibetan an epistle sent from Mātṛcheta to King Kanika of the Kuśa race.‡ King Kaniṣṭha is mentioned in Aśvaghoṣa's Alaṅkāra as of the Kuśa race. But there Aśvaghoṣa speaks of the king as of one who lived in the past. It remains quite uncertain whether Mātṛcheta and Aśvaghoṣa, on the one hand, and Kanika, Kaniṣka, and Kaniṣṭha, on the other, are respectively to be identified or not.

2. The Vajra-sūchī,§ a refutation of the caste-system, bears the name of Aśvaghoṣa as its author; but the same text in the Chinese translation (Nanjio, No. 1303) is ascribed to Fā Hien, lit. 'law-fame.' This name is usually rendered as Dharmayaśas, but may be Dhārmika-Subhūti, lit. 'lawful-glory.'

3. Further, a work, in the Chinese translation, called 'The Distinctions of the Fruits of Works' (Nanjio, No. 1349), is ascribed to a Bodhisattva 'Great Valour,' which is surely Mahāśūra in Sanskrit. Another book, 'Transmigration in the Six Resorts,' agrees with the above in substance, and its authorship is ascribed to Aśvaghoṣa.

The two instances given above seem to be confirmatory of the Tibetan tradition, but they are not strong enough to establish the identity of these Aśvaghoṣas with the author of the Buddha-charita.

4. Another book ascribed to Aśvaghoṣa is 'A Nirgrantha's Inquiry into the principle of Non-ego.'‖ It expounds the contrast of phenomena and reality, just as in the sermon delivered by Pūrṇayaśas to Aśvaghoṣa which is preserved in the Records of the Patriarchs. Probably this Aśvaghoṣa is the same as the Aśvaghoṣa of those Records.

5. There is mention of the name Aśvaghoṣa in the memoirs of Yuan Chwang. This Aśvaghoṣa was a contemporary of Nāgārjunana, of Deva, of Kumāralabdha, and of the man who detected a Brāhman possessed by a demon. Though Yuan Chwang calls this Aśvaghoṣa a Bodhisattva, we have no ground for identifying him with any of the Aśvaghoṣas mentioned above.

6. Finally, we have Aśvaghoṣa the author of *The Awakening of Faith*.¶

This last work represents a well-reasoned exposition of the doctrines of the final metaphysical principle and of the phenomenal world as contrasted with it. Everything phenomenal is unreal, because it is made up of constituents and is governed by the law of causality. Now reality transcends every distinction and qualification. It is the ὄντως ὄν, and cannot but be named *tathatā*, *i.e.* 'the

* Nanjio, No. 1329, *Ratnapiṭaka*, tr. by Kiṅkārya. He gives the name as something like Kaniṭa (or, -ṭṭha); but a later translator, Sūryayaśas, gives Kaniṣṭha.

† T. Suzuki has made a very exhaustive collection of the materials respecting these works and legends in his introduction to Aśvaghoṣa's *Awakening of Faith*, Chicago, 1900. But he was too anxious to regard any Aśvaghoṣa as identical with the author of the book he translated.

‡ On the connexion of Mātṛcheta with King Kanika and the questions connected therewith, see F. W. Thomas, art. in *IA*, 1903, p. 245 f.

Thatness.' The final aim of Buddhist enlightenment consists in the full realization of this absolute reality, which is the true and highest condition of Buddhahood. That is the eternal substance of the Truth revealed by Buddha, and is, therefore, the true doctrine and, at the same time, the true body or entity of Buddha, *i.e.* the *Dharma-kāya*. But the absolute, which is unique in its substance, does not remain without its manifestations. When it appears to us in its state of bliss, it is the Buddha in enjoyment (*sambhoga*). When it is manifested in this world in order to save us personally, it is the Buddha incarnate or in *kenosis* (*nirmāṇa*), as, for example, Śākyamuni. In order to attain the ideal of enlightenment, it is necessary for us to believe in any of these three aspects of Buddha's personality, and to be saved by his grace (*parigraha*, lit. 'grasping').

Thus we see in this work of Aśvaghoṣa a concise systematization of later Buddhist metaphysics in their consequences, and of Buddhist religious faith, expressed in the doctrines of the three personalities (bodies) of Buddha,* and of the relation between grace and faith.

Summing up these statements, we have not enough evidence either to affirm or to deny the identity of any of the Aśvaghoṣas enumerated under heads 1–6, except 4, with the author of the Buddha-charita. The same epithet may have been applied to many authors in different periods, because of their poetic talent or of their wisdom, which is said to have touched the heart even of a horse. The Tibetan tradition seems to have erroneously regarded these different persons as one with many names.

M. ANESAKI.

AŚVAMEDHA.—The *aśvamedha*, 'horse-sacrifice,' is one of the most imposing sacrifices in Indian ritual. It ranks as one of the great or solemn sacrificial ceremonies (*mahākratu* or *yajñakratu*). As early as the Rigveda itself two hymns are found composed for this particular occasion (i. 162 and 163). The sacrifice is described in detail in the Śatapatha-Brāhmaṇa (xiii. 1–5) and Taittirīya-Brāhmaṇa (iii. 8–9), as well as in the special treatises on ritual known as the Śrautasūtras, of Kātyāyana (xx.), Āpastamba (xx.), Āśvalāyana (x. 6 f.), Śāṅkhāyana (xvi.), and others. In the Mahābhārata (xiv. 71. 14 ff.) the horse-sacrifice which King Yudhiṣṭhira celebrated after his victory over the Kurus, as a purification from all sins, is described with epic diffuseness. The *aśvamedha* was thus the royal sacrifice *par excellence*. The privilege of sacrificing the horse belonged only to a ruler whose sovereign power was undisputed. It was designed to secure for him continued success, the fulfilment of all his desires, increase of strength and extension of the empire. Consequently the sacrifice was made before an expedition for conquest (*digvijaya*), or after a campaign which had ended in victory. The Aitareya-Brāhmaṇa (viii. 21 f.) gives a list, adorned with antique verses, of the kings of olden times who, after ascending the throne, marched victoriously through the whole earth and then celebrated a horse-sacrifice. The *aśvamedha* thus became a great State function in the performance of which the people took part officially, and with which were associated customs of a secular and often very gross character, accompanied by oratorical displays. In the strictly regulated ritual these last were prescribed in detail; but in olden times, before the ritual had hardened into fixed rules, they were a matter of spontaneous improvization. These two features, its more secular character and its national colouring, distinguished the *aśvamedha* from most of the other sacrifices, which were exclusively priestly.

The sacrifice began in spring or summer, and, with the preparatory ceremonies, occupied more than a year. First, a suitable victim had to be carefully selected. The animal chosen must be of pure breed and valuable, distinguished by special marks. After it had been set apart for sacrifice by the symbolical act of tethering to the sacrificial post, and had been bathed, it was granted full freedom again. It was allowed to run loose for a whole year, and to sport freely in the company of a hundred old horses. A hundred royal princes, a hundred noblemen, a hundred sons of officials of higher, and a hundred of those of lower rank, all armed in accordance with their station, formed its escort and guarded it against danger or theft, without interfering with its freedom of movement. Conflicts or wars (cf. especially Mahābhārata, xiv.) often resulted from attempts to steal the horse during its wanderings. If it were lost, the ceremonial had to be partly repeated and another animal substituted.

While the horse thus roamed about at a distance, the people at home awaited the time of its return, and in the meantime took part in all kinds of festivities. Gifts were offered daily to the god Savitṛ; daily also at a festive gathering before the king and the court the *hotṛ* had to give a recital. Every eleven days this cycle of recitations was repeated. The recital concluded with an appropriate chapter from the Vedas, together with singing, lute-playing, and impromptu verses, composed by a noble bard in honour of the king, the giver of the sacrifice, in which he was compared with the pious rulers of olden times. The recital itself was enlivened by dramatic action. According to the class of persons who formed the subject-matter of the recitation, it was arranged that the audience and chorus to whom the reciter addressed himself should consist of old or young people, snake-charmers, robbers, usurers, fishermen, bird-catchers, or sages. When the year had expired and the horse had returned, the sacrifice began with consecration (*dīkṣā*) of the king.

The ceremony proper lasted three days, and was accompanied by numerous other animal-sacrifices, and by the pressing of the soma. On the second day, the sacrificial horse, decked with gold, was once more yoked with three other horses to a gilded car, driven round, and then bathed. On its return, it was anointed by the three chief wives of the king and decorated, while the *hotṛ* and the superintendent of the sacrifice (Brāhman) performed a *Brahmodya*, or theosophical enigma-play. The horse was then bound, together with a he-goat, to its sacrificial post, the other animals for sacrifice, to the number of several hundreds, being bound to similar posts; and, having been covered with cloth, it was suffocated. The chief wife of the king had to lie down by the corpse under a covering and submit to an obscene ceremony, while the sacrificial priests took part with the women and maidens in sportive questions and answers (*Vajasaneyi-Saṁhitā*, xxiii. 22 f.), not distinguished by delicacy. As soon as the chief wife had arisen, the horse was skilfully cut up. After another series of enigmatic questions in which all the chief priests and the sacrificer joined, the served portions of the horse were roasted on a spit and offered to Prajāpati. On the third day the whole festival closed with the bath of purification of the donor of the sacrifice and with gifts to the sacrificing priests. The honorarium (*dakṣiṇā*), which was measured with a very liberal hand, was derived from booty captured in the conquered land. Even

ASYLUM.—Asylum (Lat. *asȳlum*, Gr. ἄσῡλον, 'refuge,' 'sanctuary,' neut. of adj. ἄσῡλος, 'inviolable,' from ἀ priv. and σύλη, σῦλον, 'right of seizure') means a place of shelter and protection from which a refugee is not allowed to be forcibly removed.

1. Among many peoples at different stages of civilization sacred places are asylums. Thus among the Aruntas of Central Australia there is in each local totem centre a spot called *erinatulunga*, in the immediate neighbourhood of which everything is sacred and must on no account be hurt. The plants growing there are never interfered with in any way; animals which come there are safe from the spear of the hunter; and a man who is being pursued by others cannot be touched as long as he remains at this spot.[1] At Maiva, in the South-Eastern part of New Guinea, 'should a man be pursued by an enemy and take refuge in the *dubu* [or temple], he is perfectly safe inside. Any one smiting another inside the *dubu* would have his arms and legs shrivelled up, and he could do nothing but wish to die.'[2] In Upolu, one of the Samoan Islands, a certain god, Vave, had his residence in an old tree, which served as an asylum for murderers and other great offenders; if that tree was reached by the criminal, he was safe, and the avenger could pursue no farther, but had to wait for investigation and trial.[3] In the island of Hawaii there were two *puhonuas*, or cities of refuge, which afforded an inviolable sanctuary even to the vilest criminal who entered their precincts, and during war offered safe retreat to all the non-combatants of the neighbouring districts who flocked into them, as well as to the vanquished. As soon as the fugitive had entered, he repaired to the presence of the idol and made a short ejaculatory address, expressive of his obligations to him in reaching the place with security. The priests and their adherents would immediately put to death any one who should have the temerity to follow or molest those who were once within the pale of the *pahu tabu*, and, as they put it, under the shade or protection of the spirit of Keave, the tutelary deity of the place. After a short period, probably not more than two or three days, the refugee was permitted to return unmolested to his home, the divine protection being supposed still to abide with him. In Tahiti the *morais*, or holy places, likewise gave shelter to criminals of every kind.[5]

2. In many North American tribes certain sacred places or whole villages served as asylums.[6] Thus the Arikaras of the Missouri had in the centre of their largest village a sacred lodge called the 'medicine-lodge,' where no blood was to be spilled, not even that of an enemy.[7] 'In almost every Indian nation,' says Adair, who wrote about the tribes of the South-Eastern States, 'there are several peaceable towns, which are called "old-beloved, ancient, holy, or white towns"; they seem to have been formerly "towns of refuge," for it is not in the memory of their oldest people that human blood was ever shed in them, although they often force persons from them, and put them to death elsewhere.'[1] Among the Acagchemen Indians, however, in the valley and neighbourhood of San Juan Capistrano in California, a criminal who had fled to a *vanquech*, or place of worship, was secure not only as long as he remained there, but also after he had left the sanctuary. It was not lawful even to mention his crime; all that the avenger could do to him was to point at him and deride him, saying, 'Lo, a coward, who has been forced to flee to Chinigchinich!' Yet this flight turned the punishment from the head of the criminal upon that of one of his relatives.[2]

3. On the coast of Malabar a certain temple situated to the south-east of Calicut affords protection to thieves and adulterous women belonging to the Brāhman caste; but this privilege is reckoned among the sixty-four *anatcharams*, or abuses, which were introduced by Brāhmanism.[3] Among the Kafirs of the Hindu-Kush there are several 'cities of refuge,' the largest being the village of Mergrom, which is almost entirely peopled by *chiles*, or descendants of persons who have slain some fellow-tribesman.[4] In the Caucasus holy groves offer refuge to criminals, as also to animals, which cannot be shot there.[5]

The Barotse of South Central Africa have a city of refuge, where anybody who has incurred the king's wrath or committed a crime is safe; the man in charge of it is expected to plead for him before the chief, and the refugee can then return to his house in peace.[6] In Congo Français, according to Miss Kingsley, there are several sanctuaries. 'The great one in the Calabar district is at Omon. Thither mothers of twins, widows, thieves, and slaves flee, and if they reach it are safe.'[7] In Ashanti a slave who flees to a temple and dashes himself against the fetish cannot easily be brought back to his master.[8] Among the Negroes of Accra, criminals used to 'seat themselves upon the fetish,' that is, place themselves under its protection; but murderers who sought refuge with the fetish were always liable to be delivered up to their pursuers.[9]

4. In Morocco the tombs of saints and mosques offer shelter to refugees, especially in those parts of the country where the Sultan's government has no power; even the descendants of the saint or his manager (*mḳaddam*) can only by persuasion and by promising to mediate between the suppliant and his pursuer induce the former to leave the place.[10] In other Muhammadan countries there are, or have been, similar places of refuge.[11] In Persia the great number of such asylums proved so injurious to public safety, that about the middle of the 19th cent. only three mosques were left which were recognized by the government as affording protection to criminals of every description.[12]

Among the Hebrews the right of asylum originally belonged to all altars (Ex 21[13f.]; cf. W. R.

Smith, *Rel. of Semites*[2], 1894, p. 148, n. 1); but on the abolition of the local altars it was limited to certain cities of refuge, three on either side of the Jordan (Dt $4^{41ff.}$ $19^{2ff.}$). Unintentional manslayers were sheltered in these cities; whereas, if a refugee was found guilty of murder, he had to be taken away from the asylum by the elders of his town and delivered to the next kinsman of the murdered person, to be put to death by him (Dt $19^{4ff.}$). According to the post-exilic law, the refugee could leave the place, after the high priest's death, without being exposed to the pursuit of the avenger of blood (Nu 35^{28}); but he was not permitted to purchase an earlier return to his possession with a money ransom (Nu 35^{32}). However, the restriction of the legal right of asylum to the case of involuntary homicide was undoubtedly a narrowing of the ancient custom. Many heathen sanctuaries of the Phœnicians and Syrians retained even in Roman times what seems to have been an unlimited right of asylum, and at certain Arabian shrines the god likewise gave shelter to all fugitives without distinction, and even stray or stolen cattle that reached the holy ground could not be reclaimed by their owners.[1]

5. In Greece many sanctuaries possessed the right of asylum down to the end of paganism, and any violation of this right was supposed to be severely punished by the deity.[2] According to an old tradition, Romulus established a sanctuary, dedicated to some unknown god or spirit, on the slope of the Capitoline Hill, proclaiming that all who resorted to it, whether bond or free, should be safe.[3] This tradition and also some other statements made by Latin writers[4] seem to indicate that from ancient times certain sacred places in Rome gave shelter to refugees; but it was only at a comparatively late period of Roman history that the right of sanctuary, under Greek influence, became a recognized institution of some importance.[5] This right was expressly conferred upon the temple which in the year 42 B.C. was built in honour of Cæsar;[6] and other imperial temples, as also the statues of emperors, laid claim to the same privilege.[7] When Christianity became the religion of the State, a similar claim was made by the Churches; but a legal right of asylum was first granted to them by Honorius in the West and Theodosius in the East.[8] Subsequently it was restricted by Justinian, who decreed that all manslayers, adulterers, and kidnappers of women who fled to a church should be taken out of it.[9]

6. The right of sanctuary existed among the pagan Slavs, or some of them,[10] and, as it seems, among the ancient Teutons.[11] After their conversion to Christianity the privilege of asylum within the church was recognized in most of their codes. In the Middle Ages and later, persons who fled to a church or to certain boundaries surrounding it were, for a time at least, safe from all prosecution, it being considered treason against God, an offence beyond compensation, to force even the most flagrant criminal from His altar. The ordinary of the sacred place, or his official, was the only one who could try to induce him to leave it; but if he failed, the utmost that could be done was to deny the refugee victuals, so that he might go forth voluntarily.[1] In the *Lex Baiuwariorum* (i. 7) it is asserted in the strongest terms that there is no crime which may not be pardoned from the fear of God and reverence for the saints. But the right of sanctuary was gradually subjected to various restrictions both by secular legislation and by the Church.[2] Innocent III. enjoined that refuge should not be given to a highway robber or to anybody who devastated cultivated fields at night,[3] and, according to Beaumanoir's *Coutumes du Beauvoisis* (xi. 15 ff.), dating from the 13th cent., it was also denied to persons guilty of sacrilege or arson. The Parliament of Scotland enacted that whoever sought the protection of the Church for homicide should be required to come out and undergo an assize, that it might be found whether it was committed of 'forethought felony' or in 'chaud-mellé'; and only in the latter case was he to be restored to the sanctuary, the sheriff being directed to give him security to that effect before requiring him to leave it.[4] In England a malefactor who took refuge in a consecrated church could not be removed from it; but it was the duty of the four neighbouring 'vills' to beset the holy place, prevent his escape, and send for a coroner, who then came and parleyed with the refugee. The latter had his choice between submitting to trial and abjuring the realm. If he chose to abjure the realm, he hurried, dressed in pilgrim's guise, to the port which was assigned to him, and left England, being bound by his oath never to return. His land was escheated, his chattels were forfeited, and if he came back his fate was that of an outlaw. But if the refugee would neither submit to trial nor abjure the realm, then the contention of the civil power was that, at all events after he had enjoyed the right of asylum for forty days, he was to be starved into submission; although the clergy resented this interference with the peace of Holy Church.[6] In the reign of Henry VIII. there were certain places which were allowed to be 'places of tuition and privilege'—in fact, cities of permanent refuge for persons who should, according to ancient usage, have abjured the realm, after having fled to a church. There was a governor in each of these privileged places, charged with the daily duty of mustering his men, who were not to exceed twenty in each town, and who had to wear a badge whenever they appeared out of doors. But when these regulations were made, the protection of sanctuary was taken away from persons guilty of murder, rape, burglary, highway robbery, or arson. The law of sanctuary was then left unchanged till the reign of James I., when, in theory, the privilege in question was altogether denied to criminals.[6]

Yet, as a matter of fact, asylums continued to exist in England so late as the reign of George I., when that of St. Peter's at Westminster was abolished.[1] In the legislation of Sweden the last reference to the privilege of sanctuary is found in an enactment of 1528.[2] In France it was abolished by an *ordonnance* of 1539.[3] In Spain it existed even in the 19th century.[4] Not long ago the most important churches in Abyssinia,[5] the monastery of Affâf Woira in the same country,[6] and the quarter in Gondar where the head of the Abyssinian clergy has his residence,[7] were reported to be asylums for criminals. And the same was the case with the old Christian churches among the Suanetians of the Caucasus.[8]

Among the ancient Irish the right of sanctuary also existed. This was of two sorts: temporary within the precinct (*maigen*) of a person of rank, and permanent within the land of a hostel (*bruden*) or the glebe (*nemed, termann*) of a church. The *maigen* varied according to the status of the owner of the land, ranging from the radius of one spear-cast to the entire plain in which the palace of a provincial king, the king of Ireland, or the Archbishop of Armagh, stood. Within the *maigen* the fugitive, when duly certified of the character of the place and granted formal permission to enter, was safe, so long as he in no wise injured the *maigen* or its owner, for a time, but must sooner or later incur the penalty of his original misdeed. Within the *bruden*, on the other hand, a homicide was safe from the vengeance of his victim's friends until he could obtain a fair trial before a *brehon*, or judge. 'The right accorded to the maigen of a dwelling was for the protection of the owner against scenes of violence on his premises by outsiders—not primarily in the interest of the fugitive; and as it depended on the will—or caprice—of the owner, it was uncertain. It was indeed not an asylum at all in the proper sense of the word. But the sanctuary of a church or the asylum of a bruden was absolute and inviolable, depending on no conditions and on no man's will or caprice.'[9]

7. In many cases the tombs of dead or the houses of living persons serve as asylums. The Arab poet Ḥammâd found a safe refuge at the tomb of his enemy's father.[10] In the monarchical states of the Gallas, in Eastern Africa, homicides enjoy a legal right of asylum if they have succeeded in escaping to a hut near the burial-place of the king.[11] Among the Barotse[12] and Kafirs[13] the tombs of chiefs are places of refuge. Among the Ovambos in South-Western Africa the village of a great chief is abandoned at his death, except by the members of a certain family, who remain there to prevent it from falling into utter decay; and condemned criminals who contrive to escape to one of these deserted villages are safe, at least for a time.[14] Among various peoples the domicile of the chief or king is an asylum for criminals;[1] and in some places in West Africa the same is the case with the house of the high priest.[2] In Usambara, again, a murderer cannot be arrested at any of the four places where the great wizards of the country reside.[3] But even the house of an ordinary man may possess the right of asylum. Among the Bareas and Kunamas, in Eastern Africa, a murderer who finds time to flee into another person's dwelling cannot be seized, and it is considered a point of honour for the community to help him to escape abroad.[4] In the Pelew Islands 'no enemy may be killed in a house, especially not in the presence of the host.'[5] In Europe the privilege of asylum went hand in hand with the sanctity of the homestead;[6] and the reach of a man's peace was proportionate to his rank.[7]

8. The right of sanctuary has been ascribed to various causes. Obviously erroneous is the suggestion that places of refuge were established with a view to protecting unintentional offenders from punishment or revenge.[8] The restriction of the privilege of sanctuary to cases of accidental injuries is not at all general, and where it occurs it is undoubtedly an innovation due to moral or social considerations. Very frequently this privilege has been attributed to a desire to give time for the first heat of resentment to pass over before the injured party could seek redress.[9] But although such a desire may have helped to preserve the right of asylum where it has once come into existence, it could hardly account for the origin of this right. It should be remembered that the privilege of sanctuary not only affords temporary protection to the refugee, but in many cases altogether exempts him from punishment or retaliation, and that shelter is given even to animals which have fled to a sacred place. And if the theory referred to were correct, how could we explain the fact that the right of asylum is particularly attached to sanctuaries? It has been said that the right of sanctuary bears testimony to the power of certain places to transmit their virtues to those who entered them.[10] But it is doubtful whether we have any evidence that the fugitive is supposed to partake of the sanctity of the place which shelters him. In Morocco, persons who are permanently attached to mosques or the shrines of saints are generally regarded as more

or less holy; but, so far as the present writer knows, this is never the case with casual visitors or suppliants, hence it is hardly from fear of the refugee that his pursuer refrains from laying hands on him. Prof. Robertson Smith has stated part of the truth in saying that 'the assertion of a man's undoubted rights as against a fugitive at the sanctuary is regarded as an encroachment on its holiness.'[1] There is an almost instinctive fear of disturbing the peace, and particularly of shedding blood,[2] in a holy place; and if it is improper to commit any act of violence in the house of another man, it is naturally considered equally offensive, and at the same time much more dangerous, to do so in the homestead of a supernatural being. But this is only one aspect of the matter; another, equally important, still calls for an explanation. Why should the gods or saints themselves be so anxious to protect criminals who have sought refuge in their sanctuaries? Why do they not deliver them up to justice through their earthly representatives?

The answer lies in certain ideas which refer to human as well as divine protectors of refugees. The god or saint is in exactly the same position as a man to whose dwelling a person has fled for shelter. According to Moorish ideas, the owner of the house or tent must, in his own interest, assist the fugitive; for, by being in close contact with him and his family and his belongings, the refugee is thought to be able to transfer to them curses and evil wishes. He is in the *'âr* of his host, and *l-'âr* denotes a compulsory relation between two persons, the constraining character of which is due to the belief in the transference of a conditional curse.[3] Ideas of this sort seem commonly to underlie the duty of assisting a suppliant;[4] and especially when the protector is so mighty a personage as a king or chief or high priest, his domicile then readily comes to be regarded as an inviolable place of refuge. Sometimes a criminal can, in a similar way, be a danger to the king even from a distance, or by meeting him, and must in consequence be pardoned. In Madagascar an offender escaped punishment if he could obtain sight of the sovereign, whether before or after conviction; hence criminals at work on the high road were ordered to withdraw when the sovereign was known to be coming by.[5] In Usambara even a murderer is safe as soon as he has touched the person of the king.[6] Among the Marutse and neighbouring tribes, a person who is accused of any crime receives pardon if he lays a *cupa*—the fossilized base of a conical shell, which is the most highly valued of all their instruments—at the feet of his chief; and a miscreant likewise escapes punishment if he reaches and throws himself on the king's drums.[7] On the Slave Coast, 'criminals who are doomed to death are always gagged, because if a man should speak to the king he must be pardoned.'[8] In Ashanti, if an offender should succeed in swearing on the king's life, he must be pardoned, because such an oath is believed to involve danger to the king; hence knives are driven through the cheeks from opposite sides, over the tongue, to prevent him from speaking.[9] So also among the Romans, according to an old Jewish writer, a person condemned to death was gagged to prevent him from cursing the king.[1] Fear of the curses pronounced by a dissatisfied refugee likewise, in all probability, underlay certain other customs which were prevalent in ancient Rome. A servant or slave who came and fell down at the feet of Juppiter's high priest, taking hold of his knees, was for that day freed from the whip; and if a prisoner with irons and bolts on his feet succeeded in approaching the high priest in his house, he was let loose and his fetters were thrown on to the road, not through the door, but from the roof.[2] Moreover, if a criminal who had been sentenced to death accidentally met a Vestal virgin, on his way to the place of execution, his life was saved.[3] So sensitive to imprecations were both Juppiter's high priest and the priestesses of Vesta, that the Prætor was never allowed to compel them to take an oath.[4] Among several peoples even ordinary women are regarded, in a way, as asylums, probably from fear of the magic power attributed to their sex. In various parts of Morocco, especially among the Berbers and Jbâla, or northern mountaineers, a person who takes refuge with a woman by touching her is safe from his pursuer. Among the Arabs of the plains this custom is dying out, owing to their subjection to the Sultan's government;[5] but among certain Asiatic Bedawîn, the tribe of Shammar, 'a woman can protect any number of persons, or even tents.'[6] Among the Circassians, 'a stranger who intrusts himself to the patronage of a woman, or is able to touch with his mouth the breast of a wife, is spared and protected as a relation of the blood, though he were the enemy, nay even the murderer, of a similar relative.'[7] The inhabitants of Barèges in Bigorre have, down to recent times, preserved the old custom of pardoning a criminal who has sought refuge with a woman.[8]

Now, as a refugee may by his curse force a king or a priest or any other human being with whom he establishes some kind of contact, to protect him, so he may in a similar manner constrain a god or saint as soon as he has entered his sanctuary. According to the Moorish expression, he is then in the *'âr* of the saint, and the saint is bound to protect him, just as a host is bound to protect his guest. It is not only men that have to fear the curses of dissatisfied refugees. Æschylus puts the following words into the mouth of Apollo, when he declares his intention to assist his suppliant, Orestes: 'Terrible both among men and gods is the wrath of a refugee, when one abandons him with intent.'[9]

EDWARD WESTERMARCK.

ATARGATIS.—Atargatis (Ἀτάργατις, Ἀταργάτη, Ἀτέργατις, Ἀταργάτειτις, Ἀττα[ρ]γάθη) is the Greek pronunciation of עתרעתה, a Syrian goddess often mentioned by classical writers. The Aram. name was shortened into תרעתה, the regular form in the Talmud, Syr. literature, and Armenian; and from this was derived Δερκετώ, Derceto, a

common Gr. and Lat. form. The origin of this name was a matter of much speculation to earlier scholars. Selden (*de Dis Syris*, 178) explained it as a corruption of אַדִּירְדָּג, 'great fish,' and connected it with Dagon; Sickler (*Die Hieroglyphen*, 74 f.) and Gesenius (*Com. üb. Is.* ii. 342) interpreted it as אַדַּרְגֹּר, 'greatness of fortune'; Movers (*Phönizier*, i. 594) as Aram. תַּרְעָא, 'cleft,' like Heb. נֶקֶב, as a designation for 'female'; de Vogüé (*Syrie Centrale, Insc. Sem.* 7 f.), followed by Baudissin (*Jahve et Moloch*, 25), as עַתַרְעָה, 'fullness of favourable time.' All these etymologies were set aside by the discovery of inscriptions bearing the name עתרעתה, the original Aram. designation of the goddess (see below). Ewald (*Inschr. von Sidon*, 1856, p. 52) at once recognized that this was compounded out of עתר, 'Atar, and עתה, 'Ate, two well-known Syrian deities, and in this view he has been followed by Levy (*Phön. Stud.* ii. 39), Nöldeke (*ZDMG* xxiv. 1870, pp. 92, 109), Baudissin (*Studien*, i. 238; *PRE*[2] ii. 172), Baethgen (*Beiträge*, 69 ff.), and nearly all recent scholars. Lagarde (*Mitt.* i. 1884, 77 f.) doubts the correctness of this view, and Jensen (*Hittiter und Armenier*, 1898, 157 f.) suggests that Atargatis is derived from a hypothetical Hittite goddess Tarkhu. Neither of these scholars has succeeded, however, in disproving the commonly accepted etymology.

'Atar, the first element in the compound, is the Aramaic form of the name that appears in Canaan as 'Ashtar(t), (Astarte); in Assyr. and Bab. as Ishtar; in South Arabia as 'Athtar; in Abyssinia as 'Astar; in Moab as 'Ashtar. Heb. ש and Arab. ث regularly correspond with Aram. ת, so that Heb. עשתרת becomes Aram. עתתר. *'Athtar* was soon assimilated into *'Attar*, and this was written עתר, the usual form in the inscriptions. The phonetic relation of these various forms shows that 'Athtar ('Ashtart, Astarte) was a primitive Semitic deity who must have been worshipped by the Aramæans from the earliest times. The first appearance of the name is in the Annals of Ashurbanipal (Rassam, viii. 112, 124 = *KIB* ii. 221 f.; Cyl. B, vii. 92 = *KIB* ii. 215, n. 4), where the form *Atar-samain*, 'heavenly Atar,' indicates the Aramaic origin of the divinity. It appears also in Syrian proper names such as Atar-bi'di, Atar-gabri, Atar-'idri, Atar-sûri (Johns, *Ass. Doomsday Book*, 17; Hilprecht, *Bab. Exp.* ix. 51, 76). A gem bears the inscription עתרעוז, 'Atar is strong' (Levy, *Phön. Stud.* ii. 38; E. Meyer, *ZDMG* xxxi. 1877, 732, n. 1). From none of these early mentions does it appear whether 'Atar is masculine or feminine. In South Arabia, Abyssinia, and Moab it is masculine, in Assyria and Canaan it is feminine (cf. Barton, *Semitic Origins*, ch. iv.). Winckler (*Altorient. Forsch.* i. 528) has shown, however, that Ashurbanipal in two texts equates Atar-samain with the Assyrian Ishtar, which is always feminine (in spite of the absence of fem. ending). Strabo also (xvi. 785) says that Athara is the same as Atargatis, and Atargatis is always feminine. *Athara* seems clearly to be a variant form of *'Athtar*, *'Attar*, and Nöldeke (*ZDMG* xxiv. 109) explains it on the analogy of Arab. *'Athur* for *'Aththur*, *'Ashshur*, 'Assyria.' Justin (*Hist. Phil.* xxxvi. 2) speaks of Arates (Arathis = Athares) as the wife of Damascus, for whom he built a temple. In the light of this evidence there can be no doubt that the Aramæan Atar was a goddess (see ASHTART).

'Ate or *'Athe*, the second element in the compound name Atargatis, appears in the forms עתה, עתא, and עת in Palmyrene proper names, *e.g.* עתנתן, עתעקב, Ἀθηακαβος, זברעתה, זברעתא, Σαβδααθης or Σαβδεαθης, נורעתה, עברעתה, עתה as the name of a man, and עתי as the name of a woman (de Vogüé, *Insc. Sem.* No. 30, 5, 19, 63, 74, 107, 143, 54; Mordtmann, 'Neue Beiträge z. Kunde Palmyra's,' *SMA* 1875, 47; Sachau, *ZDMG* xxxv. 1881, p. 740 f.). It appears also in Phœn. inscriptions from Cyprus in the names נרעת and עתרשף (*CIS*, No. 93, 79; cf. Nöldeke, *ZDMG* xlii. 1888, p. 471; Halévy, *Mélanges de critique et d'histoire*, 1883, 146). In Gr. inscriptions and authors it assumes the forms Ἄθη, Ἄθης, Ἄθας, Ἔθαος. These forms and the masc. verbs in the Palmyrene proper names suggest that 'Ate is a male divinity, but there is so much looseness in Palmyrene in the agreement of the verb with the gender of its subject that this argument is not conclusive. Pseudo-Melito (in Otto's *Corp. Apol. Christ.* ix. 426, 505; Cureton, *Spicileg.* 44, 25 Syr.) describes ܥܬܝ, 'Ati, as worshipped at Hadyab (Adiabene), and uses the feminine in speaking of her, but this testimony also is far from decisive. As uncertain as the sex of 'Ate is his (or her) identity. De Vogüé and Baudissin think that the name is ܥܬ, Heb. עת, in the sense of 'favourable season,' and that it was used originally merely to distinguish the 'Atar of Heliopolis from other 'Atars, but subsequently was separated from her as the name of an independent deity. This is very unlikely. Combinations of two deities into one are common in the Semitic world, but the separatiou of one into two is an unknown phenomenon. Levy (*Phön. Stud.* iv. 7) and Six (*Numism. Chron.* 1878, 108) hold that *'Ate* comes from *'Ante*, *'Anath*, but the Gr. equivalent Ἄθη makes this view difficult. Baethgen (*Beitr.* 71 ff.) identifies 'Ate with Attes (a Lydian deity), which appears in the proper names Sadyattes, Myattes, Alyattes, and he appeals to Lucian's story (*de Dea Syr.* 15) of the founding of the temple at Hierapolis by Attes the Lydian in honour of Rhea who had castrated him. In that case the phonetic relation of *Athes* to *Attes* is the same as that of *Athara* to *Attar* (see above). Hommel (*PSBA*, 1897, p. 81) thinks also that the original seat of the worship of 'Ate was in eastern Asia Minor (see ATE, ATTIS).

When so much doubt exists as to the character of 'Ate, it is difficult to determine what is the relation of 'Atar to this deity in the compound 'Atar-'Ate, or how the character of the primitive Semitic 'Atar is modified by this relationship. Meyer (*ZDMG* xxxi. 730) and Hommel (*l.c.*) regard 'Atar as the wife of 'Ate, but Hadad is always represented as her consort. Halévy (*l.c.* 224) suggests that 'Atar is the daughter of 'Ate, and compares 'Ishtar the daughter of Sin.' Baudissin (*PRE*[2] ii. 173) thinks that, if 'Ate is a real name and not a mere title of 'Atar, he is probably the son of 'Atar (cf. Ishtar and Tammuz and the legends given below of Atargatis and her son). Baethgen (*Beitr.* 71 ff.) thinks that the relationship is 'Atar = 'Ate, *i.e.* Attes has lost his identity in 'Atar; and he appeals to Lucian's story (see above). The philological method cannot throw much light on this problem, and we are compelled to turn to the allusions in the inscriptions and in classical writers in order to ascertain the character of Atargatis.

The earliest references to the worship of this goddess are found in fragments of Ctesias († *c.* B.C. 400) scattered through the writings of later classical authors (cf. Ctes. *Relig.* ed. Bähr, 393–395; Müller, in Dindorf's *Herodotus*, 16 ff.). Strabo (xvi. 785) says that Ctesias calls Atargate *Derkětó*. Diodorus Siculus (ii. 4), in dependence upon Ctesias (cf. ii. 20), narrates that Aphrodite was angry with Derkětó, and caused her to fall in love with a beautiful youth among those who sacrificed in the temple in Askalon. By him she became the mother of Semiramis. Filled with shame, she caused the youth to disappear, and placed the child in a desert, where she was fed by doves. She then

cast herself into a lake near Askalon and was changed into a fish, with the exception of her face. This is the origin of the half-human half-fish image of Derkětó. The same story is repeated by Athenagoras (*Legat. pro Christ.* 26) and by an anonymous author (Bähr, *op. cit.* 393 f.; Müller, *op. cit.* 18), who also calls Derkětó 'the Syrian goddess.' Eratosthenes (*Cataster.* 38) cites Ctesias as his authority for the statement that Derkětó was saved by a fish at Bambyce (Hierapolis, the modern Membidj) in northern Syria. He also calls her the goddess of Syria. Hyginus (*Astron.* ii. 41) states, on the authority of Ctesias, that a fish rescued Isis (*i.e.* Derkětó) from the sea, and therefore the Syrians regard fishes as holy, abstain from eating them, and worship golden images of them. Xanthus the Lydian, a contemporary of Ctesias, cited by Mnaseas, according to Athenæus (viii. 37), states (if the citation be genuine) that Atargatis because of her pride was seized by the Lydian Mopsus and cast with her son Ichthus ('fish') into a lake near Askalon, where she was devoured by fishes. Hesychius (*s.v.* Ἀτταγάθη) says that she is called Ἀθάρη by Xanthus.

The earliest epigraphic evidence of the worship of Atargatis is found on a coin bearing on one side the inscription עבד הדד, 'Abd-Hadad, on the other עתרעתה, 'Ataʾatu (de Luynes, *Essai sur la numismat. des Satrap.*, 1846, p. 39, pl. v.; Blau, *ZDMG* vi. 1852, pp. 473 f.). De Luynes supposed that this belonged to the Persian period, but it is probably to be assigned rather to the early Greek period. It comes perhaps from Hierapolis, and is interesting as confirming the statements of later writers that Hadad and Atargatis were the two great divinities of Syria. Other coins of 'Abd-Hadad show the more usual spelling עתרעתה, 'Ataʾateh (see Waddington, *RN* vi. 1861, p. 9 ff.; Six, *Numismatic Chronicle*, 1878, p. 105).

According to 2 Mac 12[26], Judas Maccabæus in the year B.C. 164 went forth against Carnion and the temple of Atergatis (τὸ Ἀτεργάτιον) and slew 25,000 people. In 1 Mac 5[43] this is described as τὸ τέμενος ἐν Καρναΐμ. From this it appears that the cult of Atargatis flourished during the Greek period not only in Hierapolis and Askalon, but also in Bashan. An inscription of the same period from Kefr Hauwar, on the road between Damascus and Banias, bearing the word [Ἀ]ταργάτη indicates probably that there was a temple of Atargatis in this place (Waddington, No. 1890). Excavations in Delos have disclosed a number of votive inscriptions to Atargatis dating from a period shortly before the beginning of the Christian era. Here occur the forms Ἀταργάτη, Ἀτέργατις, Ἀταργάτειτις (*BCH* iii. 407), and Ἀτάργατις (*ib.* vi. 495 ff., vii. 477, viii. 132). These inscriptions combine Atargatis and Adados (Hadad) and identify Atargatis with Aphrodite. In one case she is called Ἀφροδίτη Ἀτάργατις, in another ἀγνὴ Ἀφροδίτη. Her priests are called 'Hierapolitans,' either because this was a colony that had come from Hierapolis, or because the cult was known to be derived from that city.

Ovid (†A.D. 17) tells how Dercetis was changed into a fish in Palestine (*Metam.* iv. 44–46). Germanicus (†A.D. 19) calls her 'the Syrian goddess,' Derceto, and Atargatis (*Scholia on Aratus*, ed. Breysig, pp. 65, 98 f., 125, 176), and adds the new information that she was changed into a fish at Bambyce (Hierapolis). Strabo (†A.D. 24) says, 'Atargate (according to some MSS, Artagate) the Syrians call Athara, but Ctesias calls her Derkětó.' Here Atargatis is identified with 'Athar (=Athtar, Ashtart, Astarte) in the same manner in which she is identified with Aphrodite in the Delos inscriptions (cf xvi. 748, 785). Cornutus (†A.D. 68) records (*de Nat. Deor.* 6) that fishes and doves were sacred to Atargatis, the goddess of the Syrians, and therefore were not eaten. Pliny (†A.D. 79), in *HN* v. 13 (14), 69, says of Joppa, 'There is worshipped the fabulous Ceto.' Whether this is to be understood of the sea-monster (κῆτος), whose skeleton, according to Strabo and Pliny, was shown at Joppa, or whether it is to be regarded as a truncated form of Der-ceto, is uncertain (cf. Baudissin, *Studien*, ii. 178). In v. 23 (19), 81, Pliny identifies Atargatis with Derceto, and says that she was worshipped at Hierapolis, or Bambyce, or Mabog. In xxxii. 2, (8) 17, he speaks of the pond of sacred fish at the temple of Hierapolis. Plutarch (*Crass.* 17) says of the goddess of Hierapolis that some call her Aphrodite, others Hera, while others regard her as the divinity who out of moisture produces the seeds of all things, and has shown men the way to all good things.

A Palmyrene bilingual of the year A.D. 140 (de Vogüé, *Inscr. Sem.* 3=Waddington, 2588) mentions עתרעתה, or [Ἀταρ]γάτει, as one of the 'good' or one of the 'national' gods. On the strength of this inscription a broken Palmyrene text (*CIG* iii. 4480) is doubtless to be restored [Ἀταργ]άτει. Another inscription of the 2nd cent. from Astypalæa, near Crete, reads, Ἀταργατειτι ἀνέθηκαν (see Rayet, 'Dédicace à la déesse Atergatis,' *BCH* iii. 1879, pp. 406 ff.; cf. *CIG* iv. 7046; *ZDMG* xxxix. 43).

The fullest of all the accounts of the cult of Atargatis at Hierapolis is found in the treatise of Lucian († *c.* A.D. 200), *de Dea Syria*. Lucian was himself a Syrian, and speaks as an eye-witness. He never calls the goddess Atargatis, and refuses to identify her with Derkětó of Askalon, because the image in that place had a fish's tail, while the one in Hierapolis had perfect human form (14). He prefers to call her Hera (1, 16), although he admits that there is much to be said in favour of the view that she is Rhea (15). Nevertheless, there is no doubt that his 'Syrian goddess' is really Atargatis. His title Συρία θεός is one that is constantly applied to this divinity by other writers. Hierapolis is known to have been a chief centre of her cult. The priests of Atargatis at Delos entitle themselves Hierapolitans. In the temple was a pond of sacred fish, such as Pliny describes in the temple of Atargatis at Hierapolis; and Lucian himself narrates that the people said that the temple was built by Semiramis in honour of her mother Derkětó, and that they abstained from eating fish and doves, in the same manner as the people of Askalon (14).

The temple of Hierapolis is described by Lucian as the largest and richest in Syria. To it pilgrims came from all parts of Western Asia (10). It stood on a hill in the midst of the city, and was surrounded with two walls, one of which was very ancient. To the north of the sanctuary lay a court 100 cubits square. In this stood a row of huge stone *phalli*, one of which a man ascended twice a year, and remained on the top seven days offering prayers for the people, who placed gifts at the bottom. In the court there was also an altar of bronze, and round about it were a multitude of statues of gods, heroes, and kings, among them 'Semiramis.' Here also bullocks, horses, eagles, bears, and lions fed together (28–29, 39–41). In the inner temple, to which only certain priests were admitted, stood three golden images. The first was that of Hera (Atargatis), which had attributes not only of Hera but also of Athene, Aphrodite, Selene, Rhea, Artemis, Nemesis, and the Fates. In one hand she carried a sceptre, in the other a distaff. On her head, which was surrounded with rays, she wore a tower-crown, and she was encircled with a girdle like that of Urania. She stood on lions, and had a drum like that of Rhea (32, cf. 15). The second image bore a general resemblance to Zeus, although it was called by a different name. It was, doubtless, Hadad, who was represented armed with a thunderbolt. Between these two stood a third image, the sex of which Lucian could not determine. It had no name, he says, but was called merely σημήιον, 'sign.' [Baethgen (*Beiträge*, 73) is doubtless correct in regarding this statement as due to a mistake on Lucian's part of אתה for עתה. The third divinity was really 'Ate, whose name appears as the second element in עתרעתה, Atargatis.] As to the origin of the temple, some said it was built by Deucalion, others by Attes (= Ate?), others by Semiramis, and others by Stratonice. Lucian preferred to believe that it was the work of Dionysus (12–29).

The priesthood of the temple was very numerous, and was divided into classes that exercised different functions. Conspicuous among these were the *Galli*, or eunuch-priests. On

festal occasions young men worked themselves into a frenzy through music and other religious exercises, and then castrated themselves. After this they wore women's dress, and travelled about the country carrying an image of the goddess, which they worshipped with wild orgies, flogging one another and cutting themselves with knives (50–53, cf. *Asin.* 35–44). Of this custom Lucian offers two explanations. One was that it was in honour of Attes (Atę̂), who was castrated by Rhea, and wandered through the world in female attire; the other was that it was in memory of Combabus, who mutilated himself in order to avoid compromising himself with Queen Stratonice. There were also female devotees in the temple (43), and licentious rites were practised as a part of religion (22).

One of the great annual ceremonies consisted in carrying the third image (Atę̂) to the sea-shore and bringing thence jars of sea water, which were poured into a hole in the temple precincts (13, 33, 48). Another ceremony in the spring consisted in piling up trees in the outer court of the temple, heaping upon them garments, treasures, and all sorts of animals, and then burning the whole in the presence of all the gods of Syria, who were brought by their devotees to witness the rite (49). Domestic animals, except the hog, were offered in sacrifice. These were presented in the temple, and were taken home to be slain, but sometimes they were killed by being cast down from the portico of the temple. Children also were occasionally offered in this way. Pilgrims always shaved their heads when coming to the sanctuary, and young men and women presented their hair in gold or silver boxes before marrying. Tatuing in honour of the goddess was a common practice (54–60).

Apuleius (*Metamorph.* viii. 170) speaks of the 'omnipotent and all-producing Syrian goddess.' Ælian (*Hist. Anim.* xii. 2) speaks of the reverence for fishes at Hierapolis or Bambyce. Athenæus (viii. 37) gives the goddess the name of Ἀτέργατις. Arcadius (*de Accent.* ed. Barker, 36. 18) calls her Ἀταργατῖς. The book *de Legibus*, ascribed to Bardesanes († A.D. 223) (in Cureton, *Spicileg. Syr.* 1855, 20, tr. 31), calls her *Tar'atha* (ܬܪܥܬܐ), and says that she is worshipped in Syria and Edessa (the Gr. translation speaks of Rhea as worshipped in Syria and Osroëne). He also mentions castration as practised in her worship. Tertullian (*ad. Nation.* ii. 8, cf. *Apol.* 24) calls Atargatis 'the goddess of the Syrians.' Macrobius (beginning of 5th cent.) says that among the Syrians the sun is called Hadad, the earth Adargatis. The latter is represented mounted upon a lion, with her head encircled by rays (*Sat.* i. 23, 18). Jacob of Sarug († A.D. 521), in the documents published by Martin (*ZDMG* xxix. 1875, 132), states that Tar'atha (ܬܪܥܬܐ) was worshipped at Harran. Simplicius (6th cent.) has the form Ἀταράτη (cf. Lagarde, *Ges. Abhl.* 1866, 238). The Talmud (*Abōdā zārā*, 11*b*; tr. Ewald, 1868, p. 85) calls her *Tar'atha* (תרעתא), and says that she is worshipped at ובד, *i.e.* Mabog (Bambyce, Hierapolis). In Armenian writers the goddess appears as *Tharatha*. Moses of Chorene (ii. 27) says that Abgar built Edessa and brought into it his idols, Nabok, Bel, Bathnichal, and Tharatha. For other Armenian authorities see Lagarde, 'Armenische Studien' in *AGG* xxii. 1877, p. 58, § 846; Mordtmann, *ZDMG* xxxix. 43.

From these accounts it appears that Atargatis is merely a local form of the primitive Semitic goddess Ishtar-Athtar. Strabo and Hesychius both affirm her identity with Athara, and the Delos inscriptions call her Aphrodite. Like Astarte, she was a goddess of life-giving water and of fertility. The main seats of her cult, Askalon, Karnaim, and Delos, were places long devoted to the worship of Astarte. Doves were sacred to her as to Astarte, and, according to Artemidorus (*Onirocrit.* i. 8), fish were not eaten by the worshippers of Astarte any more than by the worshippers of Atargatis. The emphasis upon sex in the cult at Hierapolis, as described by Lucian, also favours the original identity of Atargatis with Astarte. At the same time it is doubtless true that, in the mind of the common people, the Astarte of Hierapolis was distinguished from the Astartes of other cities as a separate deity, just as Ishtar of Arbela was distinguished by the Assyrians from Ishtar of Nineveh. At Askalon there was a temple of Astarte as well as one of Derkĕtó, and there is no evidence that the Atargatis of Karnaim was regarded as the same as the old Ashtoreth of Karnaim. See ASHTART, ISHTAR.

Hierapolis was, doubtless, the starting point of her cult, because her name is Aramaic. Mabog, the native name of Hierapolis, is apparently מבד, 'spring,' and is derived from a sacred spring in the precincts of the goddess. From Mabbog or Manbog comes the Gr. *Bambyce*. From this centre the cult spread in every direction. We find it at Palmyra, in the Ḥauran, at Karnaim, at Askalon, and in the Greek islands. Into every place where the worship of Astarte had gone that of Atargatis seems to have followed. During the Hellenistic period she became well known in all ports of the Mediterranean, and by Greek and Latin writers she was commonly called 'the Syrian goddess.'

LEWIS BAYLES PATON.

ATAVISM.—This word is used in three senses. (1) It is used to denote the hereditary re-appearance of a character not seen in the parents, or even in the immediate ancestry, but found in an ancestral race or in one related thereto. Thus, markedly projecting canine teeth in man have been regarded as re-expressions of a Simian character, and supplementary mammæ on the breast of a woman have been regarded (probably quite erroneously) as atavistic re-appearances of a characteristic of the Lemuroids. (2) It is used to denote the hereditary re-appearance of a character not seen in the parents, but known to have occurred in a definite ancestor belonging to the stock. Thus, a child may have the peculiar hazel eyes or a peculiar lock of hair characteristic of a great-grandparent, and not expressed in the intervening lineage. To such cases the term 'reversion' is often restricted—'the full re-appearance in an individual of a character which is recorded to have occurred in a *definite* ancestor of the same race' (K. Pearson, *Gram. of Science*², 1900, p. 489), while 'atavism' is restricted to 'a return of an individual to a character not typical of the race at all, but found in allied races supposed to be related to the evolutionary ancestry of the given race' (*ib.*). This would be a useful distinction between atavism and reversion, but unfortunately some scientific writers have used the two terms in the very opposite way, applying 'reversion' to (1) and 'atavism' to (2). The distinction which Pearson makes seems quite clear, but we doubt if it is now practicable. (3) It remains justifiable to use 'atavism' and 'reversion' as synonyms denoting the hereditary re-appearance of characters which were latent in the parents at least, but which were expressed in definite—not problematical—ancestors near or remote. It need hardly be said that an atavism is not necessarily a deterioration; it may be a throw-back to a higher degree of differentiation. That depends on the direction in which the species or stock is evolving in relation to its ancestors.

Examples.—A dovecot with carefully bred pigeons was left to itself for some years, after which it was found to contain numerous blue pigeons, resembling in many ways the wild rock-dove (*Columba livia*), believed to be the ancestor of all the domestic breeds of pigeon. In exact experiment this reversion to the rock-dove type has been repeatedly observed. Cultivated flowers and vegetables, such as pansies and cabbages, sometimes produce forms hardly distinguishable from their wild progenitors. The nectarine, which is derived from a peach, may produce what is practically a peach again; the white flowering-currant, which is derived from the common red form, may have branches with red flowers. In a hornless breed of

cattle, derived originally from a horned breed, a horned individual may suddenly re-appear. A dark bantam hen, crossed with an Indian Game Dorking cock, produced amongst others a cockerel almost identical with a jungle fowl (*Gallus bankiva*) —*i.e.* with the original wild stock (Cossar Ewart). Similarly, in his horse-zebra hybridizations, Professor Cossar Ewart obtained forms whose stripings were at least plausibly interpreted as reversions to an extremely old type of horse, such as is suggested by the striped ponies of Tibet.

There is no doubt that organisms often show peculiarities which their parents did not possess, but which their ancestors possessed. Summing up such cases *descriptively*, we may say that they seem to illustrate atavism, but the use of the term *as an interpretation* is not justified unless we can give some reason for believing that the resemblance to an ancestor is due to the rehabilitation of latent items in the inheritance. To do this we have to try to eliminate other interpretations, and that is often difficult. (*a*) What looks like an ancient feature may be due to an arrest of development through lack of appropriate nutrition. (*b*) Similar conditions of life, *e.g.* of food and climate, may induce an acquired or modificational resemblance between the organism and its great-grandparent, but this would not be an atavism. (*c*) Many organisms normally have certain 'vestigial organs,' and these are often variable. A quantitative variation in a normally present vestigial organ is not what is meant by an atavism. (*d*) It is conceivable that an independent individual variation may happen to coincide with one that occurred generations before, but this is different from the re-awakening of a latent item in the inheritance. (*e*) Filial regression, or an approximation towards the mean of the stock, is of everyday occurrence in blended inheritance, and must be kept quite distinct from reversion or atavism. (*f*) The list of alleged atavisms must also be reduced by the subtraction of what are called Mendelian phenomena. In certain cases, such as peas and mice, the crossing of two sharply contrasted pure-bred parents results in hybrid offspring which are all like one of the two parents as regards the contrasted characters; when these hybrid offspring are inbred, their progeny resemble in definite proportions the two grandparents.

The fact seems to be that many phenomena have been labelled atavisms which admit of other interpretations, and that genuine atavisms are rather rare. Let us repeat that an atavism is a harking back to a more or less remote ancestor, the harking back being due to the re-assertion or re-awakening of ancestral contributions which have lain for several generations latent or unexpressed.

It seems unnecessary to use the term 'atavism' for the common phenomenon of resemblance to a grandparent. There is every reason to believe that an individual inheritance is like a mosaic, built up of many contributions, through the two parents, from the grandparents, great-grandparents, and so on. It is a normal and frequent fact of inheritance that an offspring exhibits a peculiarity known to have occurred in one of the grandparents but not in either of the parents. There seems little utility in calling this very frequent 'skipping a generation' an atavism, though it is of the same general nature, and though it is obviously difficult to decide where to draw the line. For how long must a character have been absent or latent before its re-assertion or re-awakening is to be called an atavism? A drone-bee arises from an unfertilized egg; it has a mother and two grandparents, but no father. But it seems rather absurd to call its resemblance to its grandfather atavistic or reversionary. This is a *reductio ad absurdum*, for the drone-bee would resemble its father if it had one! The case may serve to show that it is undesirable to use the term 'atavism' unless the throw-back is to an ancestor more than two generations antecedent.

The exact study of atavistic phenomena must have regard to characters which can be definitely measured and registered, and only when this study has reached secure results will it be possible to discuss with precision what may be called psychical atavisms, re-awakenings, often more fitly termed recrudescences, of ancestral traits which have lain latent, it may be, for generations. The garden of a shepherd's cottage which was swallowed up in a deer forest, lost all trace of its previous cultivation, and became a weed-ground. After many years, under more humane conditions, it was re-delved, and there sprang up many different kinds of old-fashioned flowers whose seeds had lain dormant for several generations. So may ancient flowers and weeds now and again re-appear out of latency in that garden which we call our inheritance.

LITERATURE.—See artt. HEREDITY, REVERSION, and the important works noted under these articles. See, in particular, Charles Darwin, *The Variation of Animals and Plants under Domestication*, 2 vols., London, 1868; Yves Delage, *L'Hérédité et les Grands Problèmes de la Biologie Générale*[2], Paris, 1903; J. Cossar Ewart, *The Penycuik Experiments*, London, 1899, also 'Experimental Contributions to the Theory of Heredity, Reversion and Telegony,' *Trans. Highland and Agricultural Soc. of Scotland*, 1901; I. H. F. Kohlbrugge, *Der Atavismus*, Utrecht, 1897; Karl Pearson, 'On the Law of Reversion,' in *Proc. Roy. Soc.* London, lxvi. (1900) pp. 140–164, also *The Grammar of Science*[2], London, 1900, p. 486; J. Arthur Thomson, *Heredity*, London, 1908, see ch. v.

J. ARTHUR THOMSON.

'ATE.—A Semitic deity first mentioned in Assyrian proper names such as *Ata-idri*, *Ata-suri*, *Ate-iana* (cf. *KAT*[2] 435), then in Palmyrene inscriptions under the forms עתה, אתא, עת, Ἄθη, Ἄθης, Ἄθας, and in Gr. and Syr. writers. This divinity was associated with the old Semitic mother-goddess 'Attar - Ishtar - 'Ashtart in the compound name עתרעתה 'Attar-'Ate, Atar-gatis (see ATARGATIS). The characteristics and even the sex are uncertain. It is possible that the Lydian god Attis is only another form of the name, in which case his myths may be used to supplement the meagre information in regard to 'Ate (see ATTIS).

LEWIS BAYLES PATON.

ATHANASIAN CREED.—See CREEDS.

ATHANASIUS.—**1. Life.**—There is no trustworthy record of the early years of Athanasius, but his writings show that his education was Greek (Gwatkin, *Studies of Arianism*[2], Camb. 1900, pp. 67–70). He is acquainted with Greek literature (Homer, Demosthenes, and Plato) and with the later Greek philosophy. In knowledge of the Greek Bible he is second to none of the Fathers.

He first passes into the light of history at the Council of Nicæa in A.D. 325, at which the Arian party was opposed by 'Athanasius, a deacon of the church of the Alexandrians, who was highly esteemed by Alexander the bishop' (Socrates, i. 8). The rest of the life of Athanasius coincides in the main with the history of the Arian controversy, in which he was the protagonist on the Catholic side. In A.D. 328 he succeeded Alexander as bishop (Cureton, *Festal Letters*, p. xxxvii f.), though it was asserted that he was 'too young' at the time* (p. xliv). It was further asserted that his election was secret (*Apologia*, § 6).

* Gwatkin (*Ar.* 67 [71], note) and Robertson (*Selected Works of Athan.* p. xiv, note) say that the assertion that A. was 'under age' (*sic*) at his consecration must have had some semblance of truth, and they draw the conclusion that he was about 30 in A.D. 328; but the argument is precarious. There is not sufficient evidence to show that a canon was accepted at this time at Alexandria prescribing 30 as the age qualification for the episcopate. The *Didascalia*, both Syriac (Lagarde, p. 10) and Ethiopic (Platt, p. 16), lay down the general rule that a bishop must not be less than 50 years of age, and the Apostolic Constitutions (Funk, p. 31) uphold the same limit. Canon xi. of the Council of Neocæsarea (A.D. 314 or later) prescribes 30 as the age for a presbyter, but does not touch the case of a bishop.

The objection to Athanasius on the score of his youth is instructive. He was, indeed, representative of the new age which began with the conversion of the Emperor Constantine. Eusebius of Cæsarea, the older contemporary of Athanasius, stood for the bygone order. He had been a confessor during the terrible Palestinian persecution, and so he feared heathenism chiefly as a persecuting power, and was lulled into security when Constantine adopted Christianity. But a new and more subtle danger was arising. Crowds of heathen followed the Emperor with a facile profession of his religion on their lips, and a traditional attachment to heathenism in their hearts. When, therefore, Arius represented the Son of God as a (heathen) demi-god, his teaching secured ready listeners. To the young Athanasius, the man of the new age, fell the task of detecting the working of the heathen leaven, and of meeting it with Christian medicine.

Athanasius succeeded Alexander in a troubled heritage. Not only were the (new) Arians to be reckoned with, but also the (old) Meletians. In 306, during the Galerian persecution, Meletius, bishop of Lycopolis, separated from Peter of Alexandria on the ground that Peter's treatment of the lapsed was too mild (E. Schwartz, in *GGN*, 1905, p. 164 ff.). The schism continued throughout the episcopate of Alexander. The Council of Nicæa endeavoured to heal the breach, but the election of Athanasius seems to have widened it; indeed, Gwatkin (*Ar.* 66, note) thinks it probable that the Meletians elected a candidate of their own, one Theonas.

Athanasius' career as bishop falls into three periods: (*a*) 328–345, the double contest, personal with the Meletians, doctrinal with the Arians; (*b*) 346–356, the steady growth of his influence over Egypt, and the decline of Arian power in that country; (*c*) 357–373, the contest with those who denied the Divinity of the Spirit, and the reconciliation of the old Conservatives of the East to Nicene orthodoxy.

(*a*) *First period* (A.D. 328–345). — During the first period the battle waged by Athanasius against Arianism was confused with personal issues. The Meletians worked for his deposition, because he was a strong man and not their own candidate; the Arians aided them, because he was known as an opponent of Arianism. His enemies declared his rule to be oppressive, and accused him of violence, and even of murder. At the Council of Tyre in 335, in which several Arian sympathizers took part, Athanasius was deposed. He appealed to Constantine, but the Emperor compromised the dispute by sending him into honourable banishment to distant Trèves. He returned at the accession of Constantius for a troubled period of sixteen months, but was expelled in Lent, 339, by the prefect Philagrius, his enemies asserting that the sentence pronounced at Tyre was still binding. Gregory, a Cappadocian and (according to *Epist. Encycl.* 4, 6) an Arian, became bishop. Athanasius fled to Julius, bishop of Rome, and after some negotiations was re-tried in 343 by a Council held at Sardica (Sofia, in Bulgaria), and was acquitted of the charges on which he had been condemned at Tyre. The Eastern bishops, however, seceded from the Council, and refused to receive Athanasius. The doctrinal question lay behind the personal. The result of the Council showed that the West was Nicene, while the East outside Egypt was in the main (though not Arian) certainly anti-Nicene. In 345 Gregory died, and Constantius conciliated Alexandria by allowing Athanasius to return to his see.

All through his period of exile Athanasius showed himself a true pastor to Egypt and Alexandria. His 'Festal Letters' (announcing the date of Easter each year and warning his flock to prepare for it) are preserved for many eventful years. They show the pastoral side of the bishop and the depth of his religious feeling. On the occasion of his expulsion by Philagrius, he wrote his *Epistula Encyclica*, a narrative of the acts of outrage with which the intrusion of Gregory was accompanied. The four *Orationes c. Arianos* were probably composed about the same time (so Loofs, in *PRE*[3]).

(*b*) *Second period* (346–356).—In the autumn of 346, Athanasius returned to Alexandria. The great welcome he then received and the ten prosperous years which followed are sufficient proof that the bishop had won the hearts of his people. During this decade he may be said to have completed his work of bringing Egypt round to the doctrine of the ὁμοούσιον. Indeed, his position became so strong that it excited the envy and alarm of the suspicious Constantius. For a while the political condition of the West stayed the Emperor's hand, but when Constantius became master of the whole Empire in 353, he marked out Athanasius for overthrow. The well-known affection of the Alexandrians for their bishop protected him for a year or two, but he was driven from his seat in 356. Syrianus, 'dux Ægypti,' with 5000 men broke into the church of Theonas in which Athanasius and his people were keeping vigil, and Athanasius was forced to flee for his life. For years he flitted from hiding-place to hiding-place in different parts of Egypt, encouraging his flock by letters and by secret visits. George, an Arian of Cappadocia, took the see of Alexandria, and ruled without gaining affection or success.

(*c*) *Third period* (357–373).—The ejection of Athanasius, however, greatly encouraged the various anti-Nicene parties of the East. It was followed in 357 by the issue of a manifesto by a few bishops gathered at Sirmium (Mitrovicz in Slavonia on the Save), which condemned the Nicene ὁμοούσιον and the 'Semi-Arian' ὁμοιούσιον, and stated without disguise the Arian doctrine of the Person of the Son. But this act roused the conservatives of the East, and compelled them to approach the theological position of Athanasius. While still hesitating to accept the word ὁμοούσιον, they began to adopt the language and arguments of the Nicenes. At the Council of Seleucia in 359 the majority signed the Lucianic Creed, a conservative confession, and deposed Eudoxius of Antioch, George of Alexandria, and some other leading Arians. Athanasius in exile heard the news. In his *de Synodis* he approaches the conservatives with a friendly appeal to them not to stumble at the *word* ὁμοούσιον, since (he says) they accepted the *doctrine* which it represents. This act was the beginning of a policy of conciliation which bore good fruit a few years later.

For the moment it failed. A new party, the Homœan, gained the Emperor's ear and the predominant voice in the Church. The Homœans, by their confession that the Son is *like* (ὅμοιος) the Father, stood opposed to the extreme Arianism which denied this likeness, but otherwise they represented colourless doctrine and a policy of toleration for all, including the Nicenes. (The Homœan supremacy, with the brief interruption of the reign of the pagan Julian [A.D. 361–363] and of Jovian [A.D. 363–364], lasted until the accession of Theodosius in A.D. 379.)

In 362 Athanasius returned from hiding and held a Council at Alexandria. The work of conciliation was continued. Arian clergy who came over to the Nicene side were allowed to retain their rank on accepting the Nicene Creed and anathematizing those who spoke of the Holy Spirit as a creature (κτίσμα, *ad Antioch.* 3). To the doctrine of the

Holy Spirit Athanasius had already devoted an important work, the Epistles *ad Serapionem* (356–361, Loofs). The subject remained with him to the end of his life, but he was unwilling to see any addition made to the bare clause as it stood in the Nicene Creed—καὶ εἰς τὸ Πνεῦμα τὸ ἅγιον (*ad Afros*, 10, 11).

Athanasius retained his position (with one short interval) under the Homœan emperor Valens. It was during this last period of his life (364–373) that he was able to see the promise of the coming decisive victory of the Nicene Creed. In Cappadocia, the province which had produced many of the Arian leaders, there now grew up under the leadership of Basil of Cæsarea a party devoted to Nicæa. Basil's early connexions had been with the conservatives, but Athanasius accepted his overtures, and gave the support of his name to Basil's schemes for reconciling the conservatives with the Nicenes. Acacius, the Homœan of Cæsarea in Palestine, and Meletius the conservative of Antioch, and others like them, became willing at last to accept the Nicene Creed. Egypt and the West were already Nicene, and the work of Basil, blessed by Athanasius, made Orthodoxy victorious. In 373, eight years before the Council of Constantinople registered the victory, Athanasius, Confessor and Reconciler, departed this life.

2. Theology. —*Introduction.* —(1) Athanasius, though an Alexandrian, was not a speculative theologian, but (as his Festal Letters show*) a great Christian pastor. Bishop of Alexandria in name, he was, in fact, the effective spiritual father of the numerous Christian congregations of Upper and Lower Egypt and of Libya. The ascetic spirit of Egypt, in which he shared, deepened his religious life without impairing his vigour as a Christian ruler. Arianism was to his pastoral mind not heterodoxy, but impiety and soul-destroying (ἀσέβεια, ἀνθρωποκτόνος). Redemption was the centre of his teaching.

(2) As far as Athanasius' theology was systematic, it was a systematizing of Scripture. His knowledge of the text was wide; he compares Scripture with Scripture, and appeals to the sense rather than to the words. As regards the contents of the Canon, there is no reason to believe that his opinions ever changed in any important particular, but his list of the Canonical books belongs to the last years of his life (Festal Letter 39, written for Easter, 367). In the NT his list coincides with our own; in the OT Esther is reckoned with the 'other' (ἕτερα) books, and is placed between Sirach and Judith.

(3) In forming an idea of Athanasius' teaching, we have to use his works, even those given by the Benedictines as genuine (*PG* xxv., xxvi.), with discrimination. The *Expositio Fidei*, *Oratio iv. c. Arianos*, *Vita Antonii*, and *Sermo Maior de Fide*, though probably genuine, are not free from difficulty. Some phrases may be non-Athanasian. *Historia Arianorum ad Monachos* was written, perhaps with the help of Athanasius, but not by his hand. The *de Incarnatione et c. Arianos* is probably of mixed authorship. The two *Libri cont. Apollinarium* are doubtful according to Loofs and Bardenhewer, non-Athanasian according to Stülcken and others. The genuineness of *de Virginitate* (*PG* xxviii. 251–282) has recently been defended by von der Goltz, but the phrase Πατὴρ καὶ Υἱὸς καὶ ἅγιον Πνεῦμα, τρεῖς ὑποστάσεις is in any case not likely to have come from Athanasius.

Discussions of the genuineness of Athanasius' works are found in Loofs' 'Athanasius,' in *PRE*[3]; in Stülcken's 'Athanasiana,' in *TU*, new ser. iv. 4; and in O. Bardenhewer's *Patrology*, p. 258 ff., Eng. tr., 1908; see also von der Goltz, 'de Virginitate,' in *TU*, new ser. xiv. 2a.

* See also the Letters *ad Dracontium* and *ad Amunem monachum* included among the 'ascetical works.'

1. *REDEMPTION.* —An account of Athanasius' theology begins naturally with his presentation of the doctrine of Redemption. Athanasius speaks of the death of a Divine Christ as 'the sum of our faith' (κεφάλαιον τῆς πίστεως, *Incarn.* 19; see, too, *Orat.* i. 34, where the same term is applied to the doctrine of the threefold name into which Christians are baptized).

'After showing the proofs of His Godhead from His works, He next offered up His sacrifice also on behalf of all, yielding His Temple (Jn 2[21]) to death in the stead of all, in order, firstly, to make men quit and free of their old trespass, and, further, to show Himself more powerful even than death, displaying His own body incorruptible, as firstfruits of the resurrection of all' (*Incarn.* 20).

In all references to Redemption, Athanasius gives an important place to the thought that Christ delivered mankind from physical extinction.

Adam and Eve were 'by nature corruptible, but destined by the grace which followed from partaking of the Word to have escaped their natural state, had they remained good' (*Incarn.* 5). They fell, however, and so corruption remained with them; the rational man made in God's image was disappearing (ἠφανίζετο, *Incarn.* 6) by a gradual course of deterioration. So the Word by whom man was made came into the world by the Incarnation in order to re-make man, that God's purpose in creation might not be disappointed. The mere coming of the Word in a human body availed in one aspect to save man. Human nature could not finally perish, seeing that the Word united Himself with it.

But a further work remained for the incarnate Word. Death, owing to God's sentence against Adam, had acquired a certain authority; this authority, however, was exhausted by the Passion of Christ (πληρωθείσης τῆς ἐξουσίας ἐν τῷ κυριακῷ σώματι, *Incarn.* 8). This annulling of Death was demonstrated by the Lord's resurrection with an incorruptible body, and those who believe in Christ know that they themselves have become incorruptible through the Resurrection (*Incarn.* 27).

In connexion with this annulling of the authority of death, the death of Christ is spoken of by Athanasius as a sacrifice or offering (θυσία, προσφορά, *Incarn.* 10); yet whether to God or to the Divine justice he does not say.

'By offering *unto death* (εἰς θάνατον) the body He Himself had taken, as an offering and sacrifice free from any stain, straightway He put away death from all His peers by the offering of an equivalent' (τοῦ ἀνταλλάγματος, *Incarn.* 9).

In another passage Athanasius uses the forensic analogy, yet without definitely saying that Christ's death was a satisfaction of Divine justice by a substitution. His statement follows Scripture closely:

'Formerly the world as guilty was under judgment from the Law, but now the Word has taken on Himself the condemnation (τὸ κρίμα), and, having suffered in the body for all, has bestowed salvation upon all' (*Orat.* i. 60).

But these statements are general; so far (says Robertson, p. lxx) as Athanasius works out the doctrine of redemption in detail, it is 'under physical categories without doing full justice to the ideas of guilt and reconciliation, of the reunion of *will* between man and God.'

On the other hand, Athanasius loves to dwell on the spiritual illumination of mankind wrought through the Incarnation, and the restoration thereby to man of the lost Divine likeness (*Incarn.* 14, 15).

If Athanasius does not attain to the Scriptural fullness of the doctrine of Redemption, yet his own teaching as to the Incarnation and the Passion is Scriptural in its grandeur. He seeks to express what he finds in the Scriptures, and often sums up the teaching of many passages in one terse phrase of his own. Regarding the purpose of the Incarnation, his summary is: 'He was made man, that we might be made Divine' (ἵνα θεοποιηθῶμεν, *Incarn.* 54; cf. *Orat.* i. 39). Any other attempt to summarize the work of the Incarnate Word is renounced by Athanasius.

'In a word,' he writes, 'the achievements of the Saviour resulting from His becoming man are of such a kind and number that, if one should wish to enumerate them, he may be compared to men who gaze at the expanse of the sea and wish to count its waves' (*Incarn.* 54).

ii. *THE DIVINITY OF THE SON.*—Athanasius is best known for his defence of the Godhead of the Son. His older contemporary Arius challenged the whole Christian world by the answer which he gave to the question, In what sense is Jesus the Son of God? Arius wished to maintain the doctrine of the Divine unity, and at the same time the doctrine of the personality or separate existence of the Son. Lest he should confess two Gods, he treated the title 'Son of God' as honorific only. According to Arius, the Son was not God, or eternal, or omniscient, or immutable, but a creature (κτίσμα), yet unique among the creatures. The Son as Son was later than the Father, therefore not eternal, therefore not God but a creature. This bald logic involved Arius in a great contradiction. Beginning by basing his argument on the title 'Son of God,' he ended by emptying the title of all meaning. The Son was not a Son, but only a favoured creature of God.

The doctrine of Arius is easy to state, for it was only a theory of something conceived of as finite; but this is not the case with that of Athanasius. It is true, indeed, that Athanasius accepted from the first the Nicene Creed and defended it to the last. Negatively, in agreement with its anathematisms, he contradicted the favourite Arian formulæ, ἦν ποτὲ ὅτε οὐκ ἦν—ἐξ οὐκ ὄντων ἐγένετο—ἐξ ἑτέρας οὐσίας, etc. Positively, in loyalty to the terms of the Creed, he taught that the Son was born ἐκ τῆς οὐσίας τοῦ Πατρός, and that He is ὁμοούσιος τῷ Πατρί. But these two last watchwords of orthodoxy were not the invention of Athanasius; nor were they, in their orthodox sense, of Eastern origin. Neither Athanasius nor any other Eastern received them without allowing his thought to play round them and put them to the test.

When we turn from the acknowledged fact of Athanasius' acceptance of the Nicene Creed to study his own works, we are met by two important facts: (1) Athanasius does not restrict himself to the Nicene watchwords, but (2) on the contrary he uses a great variety of language in order to assert the true Deity of the Son. His language is, in fact, a maze through which we might perhaps make our way more easily, if we could be sure of the dating or at least of the order of his works. But much remains uncertain. The two apologetic works (*c. Gentes; de Incarnatione*) are usually assigned to a date before the outbreak of the Arian controversy; but, as Loofs points out, the same kind of evidence might be urged in favour of a similar dating of some of the Festal Letters. The important *Orationes c. Arianos* are assigned by the Benedictines to *c.* 358 A.D., but Loofs gives good grounds for *c.* 338 A.D. The short *Expositio Fidei* contains no certain indication of date, though it is important to know at what period Athanasius made use of the rather surprising language found in it. If, however, we may accept in general the Benedictine dates in addition to Loofs' early date for the Orations, we may say that in his later works Athanasius seems to hesitate less to use and defend the special term ὁμοούσιον than in the early work. To this extent there seems to have been a development in Athanasius' teaching.

In his early works, however, far from confining himself to the watchword ὁμοούσιον and to the language of the Nicene Creed in general, Athanasius allows himself great freedom, and not seldom seems to avoid ὁμοούσιον. Thus in *Expositio Fidei* (§ 1) he writes: Τὸν αὐτοτελῆ . . . τὴν ἀληθινὴν εἰκόνα τοῦ Πατρὸς ἰσότιμον καὶ ἰσόδοξον ('Very Son . . . true image of the Father, equal in honour and glory'), while later in the section he uses even ὅμοιος τῷ Πατρί ('like to the Father'), the formula adopted by the Homœans in A.D. 359–360 (*de Syn.* 30) for evading the issue. In *Orat.* i. 40, in arguing with his opponents he uses for the moment ὅμοιος κατὰ πάντα, the formula of the fourth Council of Sirmium (*de Syn.* 8), and in iii. 11 he similarly employs ὅμοιος κατ' οὐσίαν, a variant of ὁμοιούσιος. These, no doubt, were intended to be only approximations to Athanasius' full meaning, but it is worthy of note that in i. 58, where he seems to aim at full and explicit statement, he gives not ὁμοούσιος but τῆς τοῦ Πατρὸς φύσίας ἴδιος καὶ ὁμοφυής. In *Orat.* iii. 1 he writes, in almost untranslatable phrase, πλήρωμα θεότητός ἐστιν ὁ Υἱός ('The Son is the completeness of Divinity,' *i.e.* is completely Divine).

Similarly Athanasius seems often to avoid the Nicene [γεννηθέντα] ἐκ τῆς οὐσίας τοῦ Πατρός. In the Orations (cf. *de Decr.* 26; *de Syn.* 35) he gives ἴδιον γέννημα τῆς οὐσίας τ. Π. ('proper offspring of the essence of the Father'). For οὐσία, 'essence,' 'substance,' Athanasius sometimes prefers φύσις, 'nature.' Thus he writes τὸν Μονογενῆ τοῦ Θεοῦ τὸν ἀχώριστον τῇ φύσει (*Omnia tradita*, § 3), and ἡ φύσις μία καὶ ἀδιαίρετος (§ 5). It is clear that Athanasius recognized that the terms οὐσία and ὁμοούσιος raised real difficulties. Οὐσία, 'substantia,' suggested to many thoughts of that which is material, while ὁμοούσιος suggested some previously existing οὐσία in which both Father and Son shared as brethren (cf. *de Syn.* 51). Consequently Athanasius received these two terms only in the sense in which they were used by the Nicene Council, and only for the purpose which the Council had in view. He contended so long not for the un-Scriptural word ὁμοούσιος, but for the official condemnation of Arianism which it registered.

'The Bishops,' he writes, 'were compelled (ἠναγκάσθησαν) to gather once more from Scripture the general sense (τὴν διάνοιαν), and to write that the Son is of one substance (ὁμοούσιον) with the Father' (*de Decr.* 20; cf. *de Syn.* 36).

Athanasius' own doctrine is best described as a direct and complete repudiation of the teaching of Arius. He denies *seriatim* all Arius' propositions, holding that the Christ of Arius could not be the Saviour of the world. Athanasius maintained that the Son is Divine, because He is the true Son of God (ὡς ἐκ πηγῆς ζωὴ καὶ φωτὸς ἀπαύγασμα, *de Syn.* 42). But he shrank from attempting to tie this truth to set phrases.

'The more I desired to write,' he says, 'and endeavoured to force myself to understand the Divinity of the Word, so much the more did the knowledge thereof withdraw itself from me; and in proportion as I thought I apprehended it, in so much I perceived myself to fail of doing so. Moreover, also I was unable to express in writing even what I seemed myself to understand; and that which I wrote was unequal to the imperfect shadow of the truth which existed in my conception' (*Historia Arianorum: Epistola*, § 1).

Athanasius' argument for the Divinity of the Son may be stated under five heads. (1) He argues from the notion of a Trinity (τριάς) that it is folly to suppose that it is partly created and partly uncreate, in part eternal and in part not eternal (*Orat.* i. 18). (2) He identifies the Son with the Word (Λόγος, *Orat.* i. 28), and urges that the Son must be eternal, because the Father can never have been without His Word or Reason (ἄλογος, *Decr.* 15). (3) He appeals to the Divine works of the Son, namely, Creation (*Orat.* ii. 22) and Redemption (*Incarn.* 20). (4) By a copious use of Scripture, and particularly of the Fourth Gospel and the Epistle to the Hebrews, he shows how great is the difficulty of reconciling the Arian theory of the Person of Christ with the language of Scripture. (5) Similarly, he shows that the Christian consciousness demands a Divine Christ (Χριστιανοί γάρ ἐσμεν, ᾧ Ἀρειανοί, Χριστιανοί ἐσμεν ἡμεῖς, *Orat.* iii. 28).

Defensively Athanasius meets the Arians with a

careful exegesis of the chief passages of Scripture which they quoted in defence of their views. The passages are collected and discussed in *Orat.* i. 37–iii. 58. They may be classified under various heads. Some of them seem to speak of the Son as a creature, *e.g.* Pr 8^{22} (ἔκτισέν με, LXX), He $3^{1,2}$ (τῷ ποιήσαντι αὐτόν); others of His advancement from a lower state, *e.g.* Ph $2^{9,10}$, Ps 45^{7}; others of His entire dependence on the Father, *e.g.* Mt 11^{27}, Jn 5^{30}; others of His progress in knowledge or of His ignorance, *e.g.* Mk 13^{32}, Lk 2^{52}; others of His prayers, *e.g.* Mt 27^{46}. Others again seem to draw a line of separation between Him and the Father, *e.g.* Jn 17^{3}. On the whole, it must be said that Athanasius shows a great grasp of Scripture, and that his interpretations are sounder than those of his opponents. Most of the passages cited above he understands of the human nature of Christ, telling the Arians that their objections are really objections to the Incarnation itself. The passages which refer to advancement he explains less convincingly as referring to the exaltation of human nature through union with the Word by the Incarnation.

iii. *CHRIST'S HUMAN NATURE.*—THE UNION OF THE TWO NATURES IN CHRIST. — Though Athanasius' language is not that of the Chalcedonian definition or of the *Quicumque vult*, he maintains in fact the true manhood and the true Godhead together with the true union of the two Natures in Christ. The apparently Nestorian language of such a passage as *Expositio Fidei*, § 1 (τὸν ἡμέτερον ἀνείληφεν ἄνθρωπον Χ. Ἰ. . . . ἐν ᾧ ἀνθρώπῳ σταυρωθεὶς . . . ἀνέστη ἐκ νεκρῶν), has to be judged in connexion with other statements of a different form.

'He became man; he did not merely enter into a man' (*Orat.* iii. 30). 'It behoved the Lord in putting on man's flesh to put it on in its completeness with its own passions' (μετὰ τῶν ἰδίων παθῶν αὐτῆς ὅλην, *Orat.* iii. 32). 'They [truly] confessed that the Saviour had not a body without a soul, nor without sense or intelligence; . . . nor was the Salvation effected in (through) the Word Himself a salvation of body only, but of soul also' (*Antioch.* 7). 'If the works of the Word's Godhead had not taken place through the body, man had not been deified; and again, if the things proper to the flesh had not been predicated of the Word, man would not have been completely delivered from them' (*Orat.* iii. 33; cf. 32).

iv. *DIVINITY OF THE HOLY SPIRIT.* — The Fathers of Nicæa contented themselves in their Creed with the brief clause, 'and in the Holy Ghost'; they added nothing regarding His Person or work. For thirty years after the Council met, Athanasius kept himself within the limits thus laid down. Though he was engaged in contending for the full Divinity of the Son, though in this contest he often uses the Trinitarian baptismal formula and the word 'Trinity' (τριάς), he does not attempt to complete formally his doctrine of the Trinity by extending or adapting to the Spirit the Nicene definitions which asserted the Divinity of the Son. Perhaps he realized that, when the doctrine of the Godhead of the Son was accepted, the acceptance of the Godhead of the Spirit must follow as a consequence.

In the Epistles *ad Serapionem*, written some time after A.D. 356, Athanasius begins to speak fully of the Divinity of the Holy Spirit. He learned that certain of the Arians were teaching that the Holy Ghost was a creature, one of the ministering spirits, superior to the angels only *in degree* (βαθμῷ, *Ser.* i. 1). It appears also that there were others who disagreed with the Arians as to the Deity of the Son, but were content to regard the Holy Spirit as a creature. To these last Athanasius utters the challenge: 'Is God a Trinity or a Duality?' (τριάς ἐστιν ἢ δυάς, *Ser.* i. 29).

Athanasius unfolds his doctrine of the Holy Spirit in his Epistles to Serapion, much as he develops his teaching on the Son in the Orations. (1) He maintains that the Trinity must be a real (eternal) Trinity, in which no creature is included (*Ser.* i. 9, 17, 20, 28; iii. 7). (2) He asserts that the work ascribed to the Spirit implies His Godhead. Thus he asks: 'Who shall unite (συνάψει) you to God, if ye have not the Spirit of God Himself, but the spirit of the creature?' (τῆς κτίσεως, i. 29; cf. i. 6). He carefully discusses passages which appear to speak of the Spirit as a creature (κτίσμα), and rejects the Arian interpretation of them (i. 3, 4, 10), pointing out that πνεῦμα anarthrous does not mean the Holy Spirit (i. 4, 9, in reference to Am 4^{13} κτίζων πνεῦμα). He appeals to 2 Co 13^{14}, and expounds Eph 4^{6} of the Father, the Word, and the Holy Spirit (i. 28). If his opponents point to passages (*e.g.* 1 Ti 5^{21}) in which only two Persons of the Trinity are mentioned, he answers that the Trinity is indivisible (ἀδιαίρετος) and united within itself, so that, when one Person is mentioned, the other Persons are understood (i. 14). He accepts fully the doctrine of περιχώρησις, 'circumincessio,' based on Jn 14^{10} 'I in the Father and the Father in me.'

'Therefore also,' he writes, 'when the Father gives grace and peace, the Son also gives it, as Paul signifies in every Epistle, writing, Grace to you and peace from God our Father and the Lord Jesus Christ' (*Orat.* iii. 11).

Athanasius avoids applying directly to the Holy Spirit the contested word ὁμοούσιον, except in a very few places (*e.g. Ser.* i. 27).

He writes: 'It is sufficient to know that the Spirit is not a creature' (i. 17). He describes the Spirit as 'united to the deity of the Father' (ἡνωμένον τῇ θεότητι τοῦ Πατρός, i. 12), and as immutable and unchangeable (ἄτρεπτον καὶ ἀναλλοίωτον, *Ser.* i. 26). Usually, however, he asserts the Deity of the Spirit *through His relation to the Son.*

'If the Son . . . because He is own offspring of the Father's essence is not a creature, but ὁμοούσιος τοῦ Πατρός, so neither would the Holy Spirit be a creature, because He is proper to the Son' (διὰ τὴν πρὸς τὸν Υἱὸν ἰδιότητα, iii. 1; cf. i. 33).

v. *PROCESSION OF THE HOLY SPIRIT.* — Athanasius can hardly be said to have a doctrine of Procession. He approaches it in *Ser.* i. 15, where he represents his opponents as saying: 'If the Spirit is not a creature (*i.e.* as we hold), but proceedeth from (ἐκ) the Father (*i.e.* as ye hold).' Cf. i. 33, 'Who deny that the Spirit (αὐτό) is from (ἐκ) the Father in the Son.' But if this seems to attribute to Athanasius the doctrine of Procession from the Father alone, Athanasius himself (*Ser.* iv. 4) describes the Spirit as ἴδιον τῆς τοῦ Λόγου οὐσίας, 'proper to the essence of the Word,' so that the two passages taken together supply evidence that Athanasius approximated to the Western doctrine of Procession from the Father and the Son. The same might be said of *de Incarn. et c. Arianos*, 9: 'David (a reference to Ps 36^{9}) knew that the Son, being with the Father (παρὰ τῷ Πατρὶ ὄντα), is the source (τὴν πηγήν) of the Holy Spirit,' but the genuineness of the passage is highly doubtful (Stülcken, p. 63 f.).

On this mysterious subject Athanasius does not forsake his custom of keeping as closely as possible to the language of Scripture. 'The Son is the Son of God,' he says, 'and the Holy Spirit is the Holy Spirit, and not the offspring (ἔκγονον) of the Father' (*Ser.* iv. 4). He doubtless prefers to speak of the Procession in Time: 'The Spirit who proceedeth from (παρά, Jn 15^{26}) the Father, and, being proper to the Son, is given by Him to the disciples and to all that believe on Him' (*Ser.* i. 2).

vi. *THE TRINITY.* — Athanasius is clear and express in his teaching that the Trinity is one in nature and cannot be divided (*Orat.* iii. 15; *Ser.* i. 2), but he is less precise in his doctrine regarding the nature of the (personal) distinctions within the Godhead. He writes with severe restraint, keeping himself as far as possible to the words of the

Baptismal formula (Mt 28^{19}) and the Pauline benediction (2 Co 13^{14}). Indeed, 'Person' is not one of Athanasius' theological terms; the phrase *εἰς θεὸς ἐν τρισὶν ὑποστάσεσι* (*de Incarn. et c. Arianos*, 10), 'one God in three Persons' (or 'Subsistences'), belongs to a passage of highly doubtful authenticity. In *de Syn.* 36 he reckons the phrase *τρεῖς εἶναι ὑποστάσεις* among the un-Scriptural phrases used by his opponents. It is true, indeed, that once (*Omnia tradita*, § 6) he uses the term much as Westerns use it:

'For the fact of those venerable living creatures (Is 6) offering their praises three times, saying, "Holy, Holy, Holy," proves that *the Three Subsistences* (*τὰς τρεῖς ὑποστάσεις*, if the text be sound) are perfect, just as in saying, "Lord," they declare the One Essence (*τὴν μίαν οὐσίαν*).'

In the *Expositio Fidei*, however, he points out the danger which lurks in the term:

'Neither can we imagine three subsistences (Persons) separated (*μεμερισμένας*) from each other, as results in the case of men from their bodily nature, lest we hold a plurality of gods like the heathen' (§ 2).

Accordingly Athanasius never makes *τρεῖς ὑποστάσεις* a test of orthodoxy, and in his later years he tells the Antiochenes (*Antioch.* 5, 6) that he received those who professed belief in *τρεῖς ὑποστάσεις* (meaning three 'Persons') on condition that they in their turn received those who confessed *μία ὑπόστασις* (meaning one 'Substance'). Indeed *ὑπόστασις*, a synonym of *οὐσία* in the Nicene anathematism, could never become fixed for Athanasius himself to the meaning 'Person,' though he might tolerate the innovation in others. Sometimes Athanasius writes simply *ἄλλος ὁ Πατήρ, ἄλλος ὁ Υἱός* (cf. *Orat.* iii. 4), and similarly, 'The Father is Father, and the Son Son' (*Orat.* iv. 2).

Conclusion.—Looking at the teaching of Athanasius as a whole, we see that it was shaped with a practical aim, and that it was expressed as little as possible in set theological terms. The profound mind of Athanasius realized that Christian truths strain to the breaking point the formulas in which men strive to express them. He invented no theological terms himself, and if in his later writings (from *de Decretis* onward) he strenuously defended the *ὁμοούσιον* of the Nicene Council, this defence was justified by an experience of many years that this word, and this word only, was a 'bulwark' (*ἐπιτείχισμα*) against Arian error (*de Syn.* 45).

LITERATURE.—i. *ANCIENT.*—The works of Athanasius printed in Migne, *PG* xxv.–xxviii. (with these works are associated a number of contemporary documents of great value). To these must be added the *Festal Letters* (almost wholly lost in Greek, but edited in Syriac with an Introduction by W. Cureton, Lond. 1848). Though several doubtful or spurious works are included in Migne, yet enough remains which is certainly genuine to yield a full account both of his life and of his teaching. Athanasius' writings ('Pamphleten,' as E. Schwartz calls them) illustrate in a living way both the vicissitudes of his own life and the varying fortunes of the Arian controversy. (The later writers, Rufinus, Socrates, Sozomen, and others tell us little in addition that is trustworthy, and, moreover, misrepresent much which is given in Athanasius' own writings.)

Information with regard to the MSS of the works of Athanasius is to be found in *JThSt* iii. 97–110, 245–258, two articles by F. Wallis, supplemented by notes by A. Robertson, and C. H. Turner; also in *JThSt* v. 108–114, notes by Kirsopp Lake; *JThSt* vii. 600–603, note by C. H. Turner, calling attention to G. Bertolotto's art. in the *Atti della Società Ligure di storia patria*, 1892, pp. 1–63. Bp. Wallis's work has been used and supplemented in the valuable account of MSS given by E. von der Goltz in his ed. of [Athanasii] *de Virginitate*, Leipzig, 1905 (=*TU*, new ser. xiv. 2a).

ii. *MODERN.*—Modern authorities have thrown much additional light on Arianism and on Athanasius. Full bibliographies are given in Gwatkin, *Arianism*, 1882 and 1900, and in Bardenhewer (see below). Gwatkin's book is itself almost a life of Athanasius. A. Robertson, *Selected Works of A. translated into English* (Oxford and N.Y. 1892), gives an important Introduction on the Life and Teaching of Athanasius. W. Bright, 'Athanasius,' in Smith-Wace's *DCB*, and Loofs, 'Athanasius,' in *PRE*^{3}, are both valuable. E. Schwartz, 'Zur Geschichte A.'s,' in *GGN*, 1904, 1905 (and 1908), throws light on some obscure points. O. Bardenhewer, *Patrology* (Eng. ed. by Shahan), Freiburg i. Breisg. 1908 (pp. 253–264), and A. Stülcken, 'Athanasiana,' *TU*, new ser. iv. 4 (on the genuineness of some disputed works), are both of value. Cf. J. F. Bethune-Baker, 'The Meaning of homoousios' (1901), in Cambridge *TS* vii. 1. Of general histories of doctrine it is sufficient to mention Harnack, *Hist. of Dogma* (Eng. tr. 1896–98), especially iii. 272 ff., 290 ff., iv. 1–163. Among general Historians of the Church, L. Duchesne, *Histoire ancienne de l'église*, ii. (1907), tells the story of Athanasius and the Arian struggle with much freshness.

ATHEISM AND ANTI-THEISTIC THEORIES.—*Introduction.*—Atheism is sometimes said to be equivalent to pancosmism, *i.e.* the doctrine that the universe consists of nothing but those physical and psychical existences which are perceptible by the senses or are cognizable by the imagination and finite understanding. Pancosmism, however, is a positive doctrine, while atheism, both by etymology and by usage, is essentially a negative conception, and exists only as an expression of dissent from positive theistic beliefs. Theism is the belief that all the entities in the cosmos, which are known to us through our senses, or are inferred by our imagination and reason, are dependent for their origination and for their continuance in existence upon the creative and causal action of an Infinite and Eternal Self-consciousness and Will; and in its higher stages it implies that this Self-existent Being progressively reveals His essence and His character in the ideas and ideals of His rational creatures, and thus stands in personal relationship with them. In its earlier stages theism conceives of God simply as the Cause and Ground of all finite and dependent existences; but as it develops, it realizes the idea of God as immanent and self-manifesting as well as creative and transcendent. Until it attains to this consciousness of felt personal communion with the immanent Cause and Ground of the universe, it is more appropriately described as deism.

As was said above, atheism presupposes the existence of theism. It can hardly be said to arise until the human mind has formed the conception of a Unitary Self-existing Cause on whom all things and persons depend, and to whom the sentiments of reverence and worship are directed. Anthropology shows that long before the idea of One Infinite Supreme Being is reached, uncivilized races, through the experience of dreams and supposed ghosts, as well as through the intuitive judgment that the energies in nature which resist human volitions are the manifestation of wills resembling their own, come to believe in the existence of superhuman beings who act for or against human welfare, and are thus the objects of worship or of fear. But along with this conception of a variety of finite superhuman personalities there dawns on the more advanced minds of savage peoples, through the intuitive idea of infinity, the felt Divine authority of conscience, and the gradual

intellectual perception of a pervading unity behind all the changing phenomena of nature, the conception of One Supreme Spiritual Reality who is the omnipresent Cause that originates and controls all the forces of nature, and in varying degrees manifests Himself within the human soul.

It is not till this theistic idea is to some extent present that real atheistic negation becomes possible. If a Hindu or a Greek came to disbelieve in one or all of the deities of his national pantheon, he would not necessarily be an atheist; for it often happened that this scepticism, which the vulgar called atheism, arose simply from a more or less clear apprehension of the One Supreme object of worship. Max Müller well says in his Gifford Lectures on *Natural Religion* (p. 228):

'We must remember that to doubt or deny the existence of Indra or of Juppiter is not Atheism, but should be distinguished by a separate name, namely, Adevism. The early Christians were called ἄθεοι, because they did not believe as the Greeks believed nor as the Jews believed. Spinoza was called an atheist, because his concept of God was wider than that of Jehovah; and the Reformers were called atheists, because they would not deify the mother of Christ or worship the Saints. This is not Atheism in the true sense of the word; and if an historical study of religion had taught us that one lesson only, that those who do not believe in our God are not therefore to be called Atheists, it would have done some real good, and extinguished the fires of many an *auto da fé*.'

Atheism, as we have seen, is not, like theism and pantheism, a positive belief the phases of which can be depicted in their relation to one unifying conception. It has no organic character. The history of it is little more than a collection of the instances in which doubt and negation in regard to some essential element in theism have arisen. And the occasion and cause of this atheistic frame of mind will generally be found in some new scientific or philosophical ideas, which have, for the time being at least, appeared to be incompatible with the current form of deistic or theistic belief.

The following lines of scientific and philosophical speculation have been especially influential in calling forth atheistic protests against theistic belief. First, *materialism*, or the theory that matter and physical forces constitute the ultimate reality of the universe, and that, through the aggregation of the elements of matter in various organic forms, life and the infinitely varied forms of consciousness have originated. Another line of speculation which has largely concurred with materialism in undermining religious belief is the doctrine of *sensationalism*, which originated early among Greek thinkers, and which the genius of our philosopher, John Locke, presented in so plausible a form that both in this country and in France it led to much atheistic negation. Locke himself was a devout theist; for though, according to his basal theory, all our ideas are derived from sensations or from reflexion on sensations, he still held that the human mind is compelled to postulate an adequate creative cause for all material and psychical existences. Had Locke, however, carried out his sensationalism to its logical results, it would have led him, as it led many sensationalists in France, to an atheistic conclusion. If all our ideas arose out of sensations, we could have no conception either of an infinite God, or of ultimate causation, or of that absolute moral imperative which has been to Kant and to several other thinkers the main foundation of theism. A third source of atheistic doubt, and one which has been strongly operative since Evolution became recognized as the method of nature, is *distrust of the argument from design*—an argument which, ever since the time of Anaxagoras, has been one of the chief supports of theism. This argument appears, however, to be recovering its former power even in the scientific world, for Huxley and other scientists have admitted that, when account is taken of the process of evolution as a whole,

'it is necessary to remember that there is a wider Teleology which is not touched by the doctrine of Evolution, but is actually based upon the fundamental proposition of Evolution' (Huxley, *Critiques and Addresses*, 1873, p. 305). See art. Design.

Among the intellectual causes which have led, not indeed to atheism but to extreme agnosticism, is the doctrine of *the relativity of knowledge*, which, when carried to such length as it has been by the Greek sceptic Carneades, and by recent thinkers such as Mansel and H. Spencer, precludes all insight into the essential nature and character of the ultimate cause and ground of the universe. This complete agnosticism has been ably criticized by Calderwood in *The Philosophy of the Infinite*, and by Martineau in several of his philosophical Essays and Reviews.

1. Criticism of atheistic materialism.—Of the alleged reasons for rejecting theism, materialism has been, and still is, the most influential. It is the basis of much of the earliest atheism, and also of the recent atheism which appears in the writings of H. G. Atkinson, Bradlaugh, Büchner, and Haeckel. For this reason it seems desirable, before presenting a brief sketch of the chief historical instances of atheism, to state what appear to be the most potent answers given by theists to the arguments for materialistic atheism.

Idealists, as their name implies, make short work with materialism; for their basal assumption is that matter and force have no existence apart from the sensations and ideas in self-conscious minds. Most theistic writers, however, hold that the experience of resistance to our volitional efforts justifies the conviction that entities exerting energy exist independently of perceiving minds. But while the theist maintains that these entities depend for their origination, their continuance in existence, and their special properties on the creative activity of an Infinite and Eternal Self-consciousness and Will, the atheist contends that matter is itself the ultimate and self-existent reality, that in virtue of its modes of motion and the properties which intrinsically belong to it, it can, when its elements are aggregated in certain ways, manifest life and, in the case of the highest organisms, all the forms of personal consciousness and volition.

Perhaps the most conclusive reply to the atheism which asserts that out of uncreated matter and energy all that we know of life and consciousness has been evolved, is based on an appeal to the recognized philosophical principle that no effect can contain more than is contained in the ground and cause from which the effect has proceeded. The American writer Dr. M. J. Savage thus expresses himself on this point:

'If you can prove to me that "dead" matter, the matter we find in a brick or a piece of marble, under some mysterious transformation comes to have the power to live, to think, to feel, to love, to hope, to sacrifice itself for another, to aspire, to look onward towards an immortal life—if you can prove to me that matter can do that, you have simply changed your definition of matter, and made it coincide with what I call spirit' (*Belief in God*, Lond. 1881, p. 40).

Haeckel would probably reply to this by saying that in his view the elements of the ultimate and self-existent 'Substance,' out of which the universe arises, have their psychical as well as their physical side or aspect, and that it is owing to the former aspect that organic compounds of matter become capable of feeling, thinking, and volition. Does he, then, mean that all the higher attributes of mind are already implicit in the ultimate eternal 'Substance,' out of which, by condensation or otherwise, that which we call matter, energy, and life proceeds? Is the perfection of all human ideals already present, though invisible to the scientific gaze, in 'the Infinite and Eternal Energy,' which is H. Spencer's mode of describing Haeckel's ultimate 'Substance'? If so, the self-existent 'Substance' is nothing less than the theist's Eternal

God; and the molecular corpuscles are simply variously limited modes which the will of God imposes upon a portion of His own eternal life, or, as Lotze and Martineau would say, are differentiations or individuations of His own essential being, to which He delegates some measure of individuality or selfhood. In each of them the Ground and Cause of all created things and persons is immanent and active, and through His creative presence there is no limit to the possibilities of the development of the creatures whom He calls into existence. If it were true, as Tyndall said, that 'in matter are the promise and potency of all terrestrial life,' that could be the case only in the sense that in the ground and cause of each molecule there are already involved all the energy, all the intellectual, moral, and spiritual powers and ideals, which are gradually evolved in the course of the development of the cosmos. The fallacy in Haeckel's 'Weltanschauung' is that, though he gives to the separate molecular corpuscles out of which the universe proceeds a mental side, a germ of consciousness, there is nothing in his account of these elements of matter and energy which at all explains how it comes about that all these innumerable corpuscles conspire together to produce the present harmonious and intelligible cosmos, or how sentient organisms should at length become cognizant of those authoritative ideals which prompt them to subordinate their own personal aims to the general good, and which enable them in a measure both to see and to act from the point of view of the immanent God. It is for want of this recognition of the constant creative presence of the source of ideals throughout the course of evolution that Haeckel's theory, no less than the theories of coarser materialists, must be condemned as unsatisfactory. It fails to show that the 'Substance,' which he represents as the cause and ground of all things, contains within itself the power to produce the effects which we experience in ourselves, and which we discern in the cosmos.

Some eminent physicists and philosophers, including Sir Oliver Lodge, Professor J. H. Poynting, and Professor James Ward, have recently assailed materialism on the ground that the mechanical and chemical movements which matter exhibits in its inorganic condition appear to be quite different from the action of matter in the case of living organisms.

'Matter,' says Sir Oliver Lodge, 'possesses energy, in the form of persistent motion, and it is propelled by force; but neither matter nor energy possesses a power of automatic guidance and control. Energy has no directing power (this has been elaborated by Croll and others—see, for instance, *Nature*, vol. xliii. p. 434—thirteen years ago, under the heading 'Force and Determination'). Inorganic matter is impelled solely by pressure from behind, it is not influenced by the future, nor does it follow a preconceived course nor seek a predetermined end. . . . The essence of mind is design and purpose. There are some who deny that there is any design or purpose in the universe at all; but how can that be maintained when humanity itself possesses these attributes? Is it not more reasonable to say that, just as we are conscious of the power of guidance in ourselves, so guidance and intelligent control may be an element running through the Universe, and may be incorporated even in material things?' (*Hibbert Journal*, Jan. 1905, p. 327).

The celebrated astronomer Laplace maintained that a Perfect Calculator,

'who for a given instant should be acquainted with all the forces by which nature is animated and with the several positions of the beings composing it, if, further, his intellect were vast enough to submit these data to analysis, would include in one and the same formula the movements of the largest bodies in the universe and those of the lightest atom. Nothing would be uncertain for him; the future as well as the past would be present to his eyes' (see Ward, *Naturalism and Agnosticism*, i. 41).

Professor Poynting pertinently asks whether this 'Perfect Calculator' would find all his predictions verified as his atoms (see ATOMISM) came in contact with living matter, and were themselves concerned with life.

'Suppose the man into whose brain the atoms entered were Laplace's friend and chief, Napoleon. If the calculator took into account every atom in Napoleon's frame, would he be able to calculate all the motions of Napoleon, all his actions on the similar surrounding groups of atoms which we call his generals? Could the calculator foretell the eclipse of Waterloo as surely as the astronomer foretells an eclipse of the sun? Is man, in fact, from the physical point of view a group of atoms, each of which behaves as it would with the same neighbours were it part of a non-living system?' (*HJ*, July 1903, p. 739).

After showing elaborately that there is contrast, rather than correspondence, between physical action and mental action, Professor Poynting concludes as follows, and his testimony to the real freedom of the will is specially interesting and important, as coming from a high authority in physical science:

'I hold that we are more certain of our power of choice and of responsibility than of any other fact, physical or psychical. . . . It appears to me equally certain that there is no correspondence yet made out between the power of choice and any physical action, and there does not seem any likelihood that a correspondence ever will be made out. . . . Holding this view, I am bound to repudiate the physical account of Nature when it claims to be a complete account. I am bound to deny that the Laplacean calculator can be successful when he takes man and the mind of man into his calculations' (*ib.* p. 748 *f.*).

While Sir Oliver Lodge holds that the mind or will thus controls the atomic movements of the brain, he yet maintains that this power of guiding energy does not involve any creation of energy whatsoever. 'Life,' he says, 'is not a form of energy, but guides energy.' On this secondary question he appears to differ from some contemporary thinkers, who agree with Sir John Herschel that in a volitional act the will does originate *some* force,

'though it may be no greater than is required to move a single material molecule through a space inconceivably minute.' 'It matters not,' continues Sir John, 'that we are ignorant of the mode in which this is performed. It suffices to bring the origination of dynamical power, to however small an extent, within the domain of acknowledged personality' (*Familiar Lectures on Scientific Subjects*, p. 468).

The difference between Sir Oliver Lodge and Sir John Herschel is of some importance in regard to the philosophy of religion; but it does not in any way affect the force of the argument against materialism. Both authorities agree that mind or will controls and guides the atoms of the brain, and that, therefore, will cannot possibly be a mere attribute or accompaniment of the cerebral structure.

In connexion with the criticism of materialistic atheism, reference has to be made to two lines of argument which have often been employed by theists in the past, but which are now falling, and probably justly, somewhat into disuse. One of these is the appeal to the inability of present science to prove the existence of any case of abiogenesis (*q.v.*), as if it afforded clear evidence of special Divine creation. But it is impossible to show that a natural passage from non-living to living matter has never taken place, or that it would not take place now if the fitting conditions for it could be reproduced. The argument from our ignorance is not conclusive; and probably most thinkers would agree with Sir Oliver Lodge that, 'though we do not know how to generate life without the action of antecedent life at present, that may be a discovery lying ready for us in the future' (art. 'Life,' in *Hibbert Journal*, Oct. 1905, p. 106). But if this discovery should one day be made, it would not at all destroy the force of the argument against materialism; for if under certain circumstances the elements of inorganic matter assume an organic form, and manifest psychical properties, that change can be accounted for only by assuming the presence in nature of a cause which guides the movements of the corpuscles, and is competent to confer on them, or to manifest in connexion with them, the germs of that self-conscious and self-directing principle of life which

no mechanical properties of matter could possibly generate. The creative power and directing influence of immanent intelligence and will are equally necessary to explain the emergence of organism and life out of the mechanism of the inorganic world, whether that emergence took place once only by a special creative act, or always takes place when the antecedent conditions are realized. As Professor Flint well says, 'Were spontaneous generation proved, materialism would remain as far from established as before' (*Anti-theistic Theories*, p. 164).

The other doubtful argument which has often been employed by theistic writers is that the universe must have come into existence at some point of past time. This again appears to be a question in regard to which dogmatism is out of place. Science assumes that matter and energy are indestructible; that the present arrangement of them results from a previous arrangement, and this in turn from one still earlier. Thus science affords no justification for the belief in a temporal origin of all things. When our present solar system is traced back to its earlier condition in a revolving fiery mist, it is not supposed that this discovery brings us at all nearer to the origin of the cosmos. Some theists have maintained, however, that an infinite regress of these secondary or scientific causes is inconceivable, and that we are compelled to assume that at some remote moment the great First Cause by a creative act started this series of entities and phenomena which science endeavours to understand. This alleged inconceivability is not admitted by some eminent theistic thinkers. Regarding the laws of nature as the method of God's creative action, they see no conclusive reason against the supposition that creation is perpetual, and that there never was a time when the universe did not exist as a visible garment and expression of God's eternal life. This appears to be the view of great scientists, such as St. George Mivart and Sir Oliver Lodge, and it is also the view of such theistic philosophers as Lotze and Martineau. It is at the heart of present physical and psychical reality, and not at some imagined beginning of things, that both science and philosophy most effectually find the immanent and living God. The universe, in all its particulars and throughout its entire history, depends for its existence upon the Eternal Cause, the methods of whose activity science gradually discovers, and whose essential character is progressively revealed in the authoritative ideals of truth, beauty, righteousness, and love, which constantly testify to their Divine and self-existent source at the centre of our dependent and created being (cf. Upton, *Bases of Rel. Belief* [Hibbert Lectures, 1894], p. 209 f.; and art. MATERIALISM).

2. Atheism in the East.—It is not till we reach the period of Greek civilization that we meet with atheistic arguments sufficiently explicit to call for detailed description and criticism. In the ancient civilization of China, materialistic atheism appears to have been rife; and in the 3rd cent. B.C. the eminent philosopher Mencius, the disciple of Confucius, speaks of it as a moral danger to the State. The Chinese appear to have been almost incapable of thinking of spirit as existing apart from matter. Dr. Legge, in his prolegomena to the edition of Mencius, translates an essay by a certain Yang Choo, which, as Dr. Flint says, is 'one of the oldest systems of ethical materialism and of materialistic ethics' (*op. cit.* p. 47). He advises men

'to care nothing for praise or blame, virtue or vice; to seek merely to make themselves as happy as they can while happiness is within their reach; to eat and drink, for to-morrow they die' (*ib.*).

Concerning recent materialistic and atheistic speculations in China, there does not appear to be at present much reliable information See CHINA.

In regard to materialism and atheism there is a great contrast between China and India. The introspective and philosophic character of the Hindus led them to dwell especially on that Absolute Spirit or Self which they felt to underlie, and to reveal itself in, all finite personalities. In comparison with this infinite and eternal Being, the visible world appears to them as an illusory appearance. Hence in Hindu speculation materialistic atheism plays but a small and inconspicuous part. In a conspectus of philosophical systems written by Mādhavāchārya in the 14th cent. A.D. (recently translated into English by Cowell and Gough, and published in Trübner's 'Oriental Series,' 2nd ed., Lond. 1894), there is mentioned as one of sixteen schools, including the Buddhists and Jains, a school called the Materialists, who denied the existence of the soul and God, and rejected the whole theory of *karma* and transmigration.

'These were known under various designations, and in the 14th century A.D. their ideas were fathered on a mythical ogre in the Mahābhārata, named Chārvāka. Denying transmigration, they rejected the entire claims of the Brāhmans. Matter was the only reality, and sense-perception the only form of knowledge. The pedigree of their text-book was traced back ironically (Macdonell) to Brihaspati, preceptor of the gods, and bitter verses survive, declaring, "There is no heaven, no final liberation, nor any soul in any other world"' (J. E. Carpenter, 'Oriental Philosophy and Religion,' in *DPAP* ii. 234). See also ATHEISM (Indian).

Atheism among the Buddhists as well as among the Greeks and Romans will be dealt with in separate articles following, and may therefore be passed over here.

3. Modern atheism.—Soon after the time of Christ scepticism declined, and its place was taken by that eclectic blending of Platonic, Aristotelian, and Oriental ideas which flourished in Alexandria and exercised at times considerable influence over Christian thought. The influence of the Church, and the reverence for Aristotle's writings, as well as the absence of any vigorous interest in science, explain the fact that until the close of the Middle Ages atheistic speculation was to a great extent in abeyance. It was not till the *Renaissance*, when new scientific discoveries were made, and freer principles of Biblical criticism began to be applied, that atheism again raised its head; and here, as in similar cases in India and Greece, the reputed atheism was in some cases genuine, but was more frequently a name applied to the theism or pantheism which was intellectually in advance of the theological thought of the time.

(*a*) *Atheism in England and France.*—It was not till the fifteenth century that materialistic interpretations of the universe began to show themselves in modern times. F. A. Lange, in his *History of Materialism* (vol. i. p. 225), mentions one isolated case in the 14th century—that of Nicolaus de Autricuria, who at Paris in 1348 was compelled to make recantation of several doctrines, and among others this doctrine, that *in the processes of nature there is nothing to be found but the motion of the combination and separation of atoms.*

'Here,' says Lange, 'is a formal Atomist in the very heart of the dominion of the Aristotelian theory of nature. But the same bold spirit ventured also upon a general declaration that we should put Aristotle, and Averroës with him, on one side, and apply ourselves directly to things in themselves. Thus Atomism and Empiricism go hand in hand together! In reality the authority of Aristotle had first to be broken before men could attain to direct intercourse with things themselves.'

The speculations which followed the incoming of the Copernican conception of the universe, such as those of Bruno and Vanini, were pantheistic rather than atheistic in their character. It was not till the first half of the 17th cent. that the ripe fruits of the great emancipation of thought began clearly to present themselves. On the

materialistic side these fruits appeared in the writings of Bacon, Gassendi, and Hobbes, and, on the spiritualistic side, in the works of Descartes. The materialism of the former writers cannot be called atheistic, for the atoms as they conceived them were not self-existent. There were probably a good many professors of materialistic atheism in this early part of the 17th century.

Père Mersenne, a contemporary and friend of Descartes, makes the startling statement that there were in his time as many as 50,000 atheists in the city of Paris alone. It seems likely, however, that the majority of these were called atheists simply because they declined to accept any longer the authority of Aristotle. Descartes himself had been accused of atheism on this ground.

About this time there was much scepticism and speculation which came very near to atheism, but escaped it by an adhesion that was, no doubt, in some cases insincere, but in other cases genuine enough, to the national Church. Whether the attachment of Thomas Hobbes to the English Church was sincere has been questioned. His philosophy was thoroughly materialistic. He held that even human sensation is nothing but the motion of corporeal particles; but he sheltered himself from the charge of atheism by saying that, in regard to his view of the universe, he confined himself exclusively to the phenomena which are knowable, and can be explained by the law of causality. Everything of which we can know nothing he resigns to theologians. The way in which, in his *Leviathan*, he utilizes religion for State purposes appears to render the genuineness of his theism very doubtful.

'He lays down the following definition, "Fear of power invisible, feigned by the mind or imagined from tales publicly allowed, *Religion*; not allowed, *Superstition*"' (Lange, *op. cit.*, vol. i. p. 283).

While both Thomas Hobbes and the other great English thinker of the 17th cent., John Locke, were attached to Christianity, and the latter no doubt most sincerely so, their writings had no little effect in preparing the way for future manifestations of positive atheism. Both the materialism which formed the basis of Hobbes' philosophy, and his selfish system of morals, were quite uncongenial to theistic belief. And Locke's doctrine of the origin of all ideas in sensation, though its atheistic tendency was, as we have seen, neutralized in his own case by his inconsistent belief in the necessity of an adequate causal ground for the universe, and by his recognition of the validity of the teleological argument, yet really undermined the rational basis of theism, and when consistently carried out, it, in conjunction with Hobbes' materialism, was largely instrumental in bringing about the positive atheism which flourished in France towards the middle of the 18th century. What kept Locke and, indeed, most thoughtful persons in England from atheism during the 17th and 18th cents. was the indestructible principle thus enunciated by Locke:

'Whatsoever is first of all things must necessarily contain in it, and actually have, at least all the perfections that can ever after exist; nor can it ever give to another any perfection that it hath not actually in itself, or at least in a higher degree; it necessarily follows that the first eternal being cannot be matter' (cf. Flint, *op. cit.* p. 142).

It should be added that, as Dr. Flint acutely remarks, the absence in England of much positive scepticism and professed atheism during these two centuries is partly to be accounted for by the strong tendency at that time, and also till far on in the 19th cent., to refer theological insight and philosophical knowledge to two quite distinct sources. In § 1 it has been argued that in the above principle lies the most conclusive refutation of materialism and atheism. But though Locke built his own theism mainly on this foundation, it is a principle which finds no justification in his own exposition of the origin of knowledge. It is a purely *a priori* conception and belief, such as are also the conceptions of moral authority and of infinity. Accordingly, when Locke's ideas were introduced into France in the 18th cent., his doctrine of the origin of all knowledge in sensation was consistently worked out, and led several thinkers to atheism. The belief in a separate and specially inspired source of theological truth had to a large extent passed away among French thinkers; and hence what was simply neutral materialism in London became often positive atheism in Paris. The physician La Mettrie, the author of *L'Homme Machine* (1748), was led, through observing in his own case the influence of the movements of the blood on the power of thought, to maintain that all thinking and willing have their origin in sensation. He admits that it is probable that a Supreme Being exists, but adds that, if so, it is a theoretical truth without any use in practice.

'For our peace of mind,' he says, 'it is indifferent to know whether there is a God or not, whether He created matter, or whether it is eternal.' But a little further on he appears to agree with a friend of his whom he represents as arguing that 'the world would never be happy unless it was atheistic' (Lange, *History of Materialism*, ii. 73).

Lagne, who gives an excellent account of La Mettrie's writings, remarks that

'La Mettrie's friend has only forgotten that even religion itself, quite apart from any revelation, must be reckoned among the natural impulses of man, and if this impulse leads to all unhappiness, it is not easy to see how all the other impulses, since they have the same natural origin, are to lead to happiness' (*ib.*).

In his treatises on *Volupté* and *L'Art de Jouir*, La Mettrie seeks to justify the pursuit of sensual enjoyment in a manner which Ueberweg justly describes as 'still more artificially exaggerated than frivolous.'

About twenty years after the publication of La Mettrie's *L'Homme Machine*, appeared the work which is regarded as the *chef-d'œuvre* of French materialism. Its title is *Système de la nature ou des lois du monde physique et du monde moral* (1770). On its title-page it professes to be written by a M. de Mirabaud, who was a deceased secretary of the French Academy, but the real author was known to be Baron d'Holbach. Holbach's system, says Ueberweg, 'combines all three elements of the empirical doctrine, which till then had been cultivated separately rather than together, viz. materialism (La Mettrie's), sensationalism (Condillac's), and determinism (which Diderot had at length admitted).' In this elaborate treatise the atheism is most pronounced, so that when a translation of it was published in London by the secularists in 1859, it bore on its cover the title *The Atheist's Text-Book*. It directly attacks the existence of God, and traces the origin of religion to fear and ignorance. Holbach substitutes for God matter and motion. The work is highly rhetorical, and in parts quite eloquent. Its ethics resembles that of Epicurus. Like Epicurus, Holbach points to the pleasure and happiness which friendship and sympathy can impart, and reaches a code of morals which superficially seems somewhat exalted. In his concluding chapter he says:

'Be just, because equity is the support of human society. Be good, because goodness connects all hearts in adamantine bonds! Be thankful, because gratitude feeds benevolence, nourishes generosity! . . . Forgive injuries, because revenge perpetuates hatred! Do good to him that injureth thee in order to show thyself more noble than he is; and in order to make a friend of him who was once thine enemy. Be temperate in thine enjoyment, and chaste in thy pleasures, because voluptuousness begets weariness, intemperance engenders disease' (p. 513).

It is characteristic of this ethical theory, as of all sensational ethics, that the intrinsic grandeur

and worth of all these virtues are undermined and destroyed by the egoistic motives to which they are referred.

Several other French writers of this epoch show anti-theistic leanings, even when they repudiate atheism, such as Diderot, in his later life, Helvetius, Lalande, Maréchal, etc. (see Flint's *Anti-theistic Theories*, pp. 469–474). The great astronomer Laplace is sometimes classed among atheists, because, when reminded by Napoleon that in his treatise on *Mécanique Céleste* he had said nothing about God, he replied, 'Sire, I had no need of that hypothesis.' But it is quite possible that in this reply he meant simply that he could account for the celestial movement by the forces of which alone science takes cognizance, and he may not have implied that these second causes do not demand for their existence a self-existent 'Cause of causes' (see § 1, above; and cf. Fiske, *Through Nature to God*, p. 141). It is related of David Hume that, when dining once with a party of eighteen at the house of Baron d'Holbach, he expressed a doubt as to whether it was possible to find any person who would avow himself dogmatically an atheist. On which his host replied, 'My dear sir, you are at this moment sitting at table with seventeen such persons.'

The greatest French writer, however, of this time, Voltaire, felt no respect for these sceptical or atheistic reasonings. That powerful and original thinker (like Locke in the previous century) saw that only by a spiritual First Cause could living and self-conscious beings be produced; and in the universe he saw such clear evidence of beneficent purpose that more than once in his writings he dwells eloquently on that old argument from design to which from the time of Anaxagoras and Socrates theists have confidently appealed, and which, as we shall afterwards see, the facts of evolution have by no means invalidated.

The materialistic atheism which flourished in France before and during the Revolution gradually decayed, owing partly to Kantian and Hegelian influence, and partly to that spiritual philosophy which was developed in France itself by Maine de Biran and Victor Cousin.

(*b*) *German anti-theistic theories.*—About a century after the advent of materialism and atheism in French thought, there arose in Germany, partly as a result of the extreme idealistic thinking, but to a still greater extent as a reaction against it, a succession of anti-theistic writers of whom the latest, Professor Ernst Haeckel, is still exercising great influence, both on the Continent and in Britain. The first of these in date, Ludwig Feuerbach, began his intellectual career as an idealist. Along with the still more celebrated writer David Strauss, he came forth from the extreme left wing of the Hegelian school. Both of these thinkers found the supreme object of interest not in the Hegelian Absolute Spirit, but in human nature; and hence Feuerbach was a humanist like Auguste Comte rather than a materialist.

'In his view,' says R. H. Hutton, 'God is but the magnified image of man reflected back upon space by the mirror of human self-consciousness. As pilgrims to the Brocken often observe, during an autumn sunrise, shadows of their own figures enormously dilated confronting them from a great distance, bowing as they bow, kneeling as they kneel, mocking them in all their gestures, and finally disappearing as the sun rises higher in the sky, so the German Atheist maintains that in the early dawn of human intelligence, man has been deluded by such a Brocken-shadow of himself, which has been childishly worshipped as an independent being and named God, but which must vanish soon' ('The Atheistic Explanation of Religion,' in *Essays Theological and Literary*, vol. i. p. 25. This article is an admirable exposition and criticism of Feuerbach's position).

The translation of Feuerbach's chief work, *The Essence of Christianity* (*Das Wesen des Christenthums*, 1841), by Miss Marian Evans (George Eliot) in 1854, which was reviewed in the before-mentioned article by R. H. Hutton, attracted much attention in this country. The feature in his thought which has led to his being classed among materialists is his doctrine that only the sensible is real.

'The body,' he says, 'is part of my being; nay, the body is its totality, is my Ego.'

Consistently with this view, he emphatically rejected all belief in personal immortality.

Far more decisively materialistic than Feuerbach was Carl Vogt, who in his *Physiological Letters* (1845–1847) developed the ideas of the French author Cabanis (1798), and argued that 'thought stands in the same relation to the brain as the bile to the liver, or the urine to the kidneys.' In 1852 appeared Jacob Moleschott's famous work, *The Circulation of Life* (*Der Kreislauf des Lebens*), which maintains that all vital phenomena can be explained as a perpetual circulation of matter from the inorganic to the organic world, and then back again from the organic to the inorganic. This doctrine has recently been acutely criticized by Sir Oliver Lodge, who contends that the phenomena of organization and life find their only satisfactory explanation in the assumption that a higher principle, life, guides and controls the elements of matter and energy (see his article on 'Mind and Matter' in *HJ*, Jan. 1905). 'Without phosphorus,' says Moleschott, 'there is no thought'; and he concludes that thought is a movement of the matter of the brain.

The book which in this materialistic and atheistic movement of the 19th cent. had much the same position and influence as Holbach's *System of Nature* had in the century preceding, was Professor Ludwig Büchner's *Force and Matter* (*Kraft und Stoff*, 1855). Büchner was the first of those German materialists who afterwards came under the influence of Darwin's book on *The Origin of Species* (1859). He professed that he found in Darwinism the chief support of materialism, and in the later editions of his book he declared that the doctrine of Natural Selection had wholly destroyed the force of the teleological argument. His general inference is that—

'not God, but evolution of matter, is the cause of the order of the world; that life is a combination of matter which in favourable circumstances is spontaneously generated; that there is no vital principle, because all forces, non-vital and vital, are movements; that movement and evolution proceed from life to consciousness; . . . that there is no God, no final cause, no immortality, no freedom, no substance of the soul' (Case, 'Metahpysics,' in *EBr*[10], vol. xxx. p. 647).

Sometimes Büchner speaks of mind as an effect of matter, and sometimes as a movement of matter, and he uses these expressions indifferently. He defines psychical activity as 'nothing but a radiation through the cells of the grey substance of the brain of a motion set up by external stimuli.' Büchner argues that his 'philosophic system, since it puts at its head not matter as such, but the unity and indivisibility of force and matter, cannot be described as materialism' (*Last Words on Materialism*, p. 273). But, as Professor Case points out, if a philosophy makes force an attribute of matter, as Büchner's does, it will recognize nothing but matter possessing force, and will therefore be at once materialism and monism, *i.e.* materialistic monism.

The most recent anti-theistic work of importance in Germany is Professor Haeckel's *Riddle of the Universe* (*Die Welträthsel*), of which there is an English translation by J. McCabe (see § 1, above). The peculiar feature of Haeckel's theory is that, like the ancient Hylozoists, he represents the original substance as having a psychical as well as a physical side. Because of this he contends that his philosophy is not materialism. As, however, in his doctrine mind is always spoken of as an attribute of body, and cannot be conceived to exist dissociated from matter, it would appear that his system, like

Büchner's, is fitly described as materialistic monism. Haeckel derives everything from an eternal primitive substance, which by condensation passes first into imponderable ether, and then by further condensation into the elements of ponderable matter. This eternal substance is God. His system bears some resemblance to that of Leibniz in so far as his monads possess the germs of perception and appetition. The souls of animals and men have no origin separate from that of their bodies. Sensation is the property of all matter. In plants and the lowest animals he considers sensation and will to be present, but only in a rudimentary and unconscious form. As to the point in evolution at which consciousness first clearly presents itself, he is not explicit.

'However certain,' he says, 'we are of the fact of this natural evolution of consciousness, we are, unfortunately, not yet in a position to enter more deeply into the question' (Haeckel, *Riddle of the Universe*, p. 191).

On this Case makes the weighty remark:

'Thus in presence of the problem which is the crux of materialism, the origin of consciousness, he first propounds a gratuitous hypothesis that everything has mind, and then gives up the origin of conscious mind after all. He is certain, however, that the law of substance somehow proves that conscious soul is a mere function of brain, that soul is a function of all substances, and that God is the force or energy, or soul or spirit, of Nature.' (See Professor Case's admirable article on 'Metaphysics' in *EBr*[10] for a fuller account and criticism of the systems of Büchner and Haeckel.)

As was before remarked, Haeckel's philosophy affords no explanation of how it comes about that the corpuscles from the primitive substance conspire not only to form organisms, but to produce an orderly and teleologically arranged cosmos. What is needed for this is not only the psychical character which he assigns to each corpuscle, but an intelligence and will dominating the whole and co-ordinating all its separate parts. He calls his philosophy the monistic or mechanical philosophy, as contrasted with the teleological.

'There is everywhere,' he says, 'a necessary causal connexion of phenomena, and therefore the whole knowable universe is a harmonious unity, a *monon*' (*Evolution of Man*, ii. 856).

But Haeckel's 'Law of Substance' gives no explanation of the cause of this 'harmonious unity,' nor does it at all account for the origin of the ideas which he makes the very bases of religion—the ideas, namely, of the good, the true, and the beautiful. In his system, spirit and matter are inseparable, and therefore spirit can neither create nor control matter. This circumstance alone shows that there is an impassable gulf between his world-theory and any world-theory that can be rightly termed theistic.

Along with German anti-theistic theories must be classed a doctrine which, so far from being materialistic, is intensely idealistic, namely, the doctrine of 'ethical idealism,' which is propounded by F. A. Lange in the third volume of his very able *History of Materialism*. Lange, under the influence of the agnostic side of the Kantian philosophy, came to the conclusion that there exist in the universe no reality or realities corresponding to our ideal conceptions. But these ideal conceptions, he contends, are in themselves of incalculable value to the soul, and it is in this sphere of the poetic imagination alone that we must look for the satisfaction of our religious sentiments and aspirations. The intelligible world is, in his view, a world of poetry. The greatest poems, he argues, have immortal worth, though the heroes celebrated in them may have had no historical existence. To this illustration pastor Heinrich Lang of Zürich very pertinently replied:

'Poems hold their own when they æsthetically satisfy: religion decays so soon as it is seen that the objects of faith are imaginary and not real.' An admirable criticism of the school of religious thought of which Lange is one of the leaders will be found in Martineau's Address on 'Ideal Substitutes for God' in his *Essays, Reviews, and Addresses* (vol. iv. p. 269 ff.).

4. **Positivism.**—Positivism, both as a philosophy and as a religion, appears to have about as much influence in England as it has in the land of its birth. In Mr. Frederic Harrison and Dr. J. H. Bridges it has had remarkably able exponents and advocates in this country; and its monthly organ, *The Positivist Review*, often reaches a high level of philosophical and sociological thought. As a philosophy, Positivism professes to be an exclusively non-metaphysical system. It teaches that the phenomenal world is the only knowable world, and it deprecates as wholly without value or interest all speculations concerning the nature of the ground or cause beneath or behind the phenomena of the sensible universe. While Herbert Spencer holds that our very conception of the relative character of all our scientific knowledge compels us to believe in the existence of an Absolute Reality behind the world of phenomena, and that it is this Unknowable Reality which forms the object of religion, the Positivists, on the other hand, maintain that what is wholly unknowable is wholly without interest to mankind, and therefore can never excite or satisfy religious ideas or emotions. According to Comte's celebrated law of the three stages of religious insight, mankind begins by assigning the causation of cosmical phenomena to the supernatural volition of personal deities, and finally to one Supreme Deity, when the stage of monotheism is reached. Reason, Comte held, gradually overthrows this theological belief, and in place of a personal cause sets up metaphysical abstractions such as centrifugal force, elective affinity, or vitality as the causal principles behind phenomena. Science, however, at length concludes that these abstractions rest upon no real experience; and the third and final stage is that of Positivism. The Positive stage of conviction, towards which all culture is approaching, means, he says, the recognition of the truth that all ontological causes (whether metaphysical or theological) are wholly beyond the scope of man's intellectual insight. It has been shown by many critics of Positivism that these three ways of considering the universe are not necessarily successive, but constantly occur together in the history of philosophical and religious thought.

There is one true and valuable feature in Comte's philosophy which raises it far above the level of the 18th century materialism of La Mettrie, d'Holbach, etc. They carried up the materialistic and mechanical principles, by which they explained the inorganic world, into the sphere of life and consciousness, and thus arrived at the description of man as a machine (*L'Homme Machine*). This, said Comte, is materialism, and against it he strongly protested. He would never allow that the mechanical theory was rationally applicable beyond the limits of the physical world, and held it to be self-condemned so soon as it was pushed into the provinces of biology and human character (Martineau, *Types of Ethical Theory*, i. 503).

Comte's religious conception appears to be atheistic, in so far as it rejects the view that nature and humanity are the products of a self-existent and self-conscious Eternal Cause. In the place of God, in the theistic sense, he substitutes the *Grand Être*—Humanity—as the supreme object in the universe. Some critics hold that the real object of the Positivist's adoration is the ideal of human perfection, which he practically hypostatizes and adores. Positivists, however, will not admit this, for this would be, in their view, equivalent to the worship of an abstraction. In the *International Journal of Ethics* for July 1900 (p. 425), Dr. Coit, the founder of the 'ethical culture' societies in England, says:

'So far as I am aware, the Positivists have never declared that Humanity is God. But they have maintained that all the homage

and obedience which has been rendered to God should now be transferred to Humanity. They have worshipped Humanity, they have prayed to it, they have found consolation and strength in communion with it. Surely, then, it has become their God.'

In the next number of the *Positivist Review*, however, Mr. Frederic Harrison expresses strong dissent from this statement, and denies that Positivists have prayed to and worshipped Humanity.

The non-metaphysical character of the Positivists' religion provokes a comparison of it with Buddhism. There are, however, vital differences between the two. The religious sentiments of Positivists do not centre in a glorified personal being; nor has Positivism as a religion anything corresponding to the doctrines of *karma* and transmigration, which bring Buddhism into some affinity with theistic religion. Cf., further, art. POSITIVISM.

5. Anti-theistic theories in England in the nineteenth century.—It was not till the middle of the 19th cent. that anti-theistic writings had much influence in England. The *Essay on the Origin and Prospects of Man* (3 vols., 1831)—a posthumous work by Mr. Thomas Hope, the author of a brilliantly written novel, *Anastasius, or Memoirs of a Modern Greek*—is a confused medley of materialistic speculations respecting the origin of the inorganic and organic worlds from molecules, which are represented as proceeding by way of radiation or evolution from the substance of God, the inconceivable primary cause. On its appearance Thomas Carlyle characterized the book as 'a monstrous Anomaly, where all sciences are heaped and huddled together' (*Miscellaneous Essays*, iv. 31). Some illustrative passages are quoted from it in Flint's *Anti-theistic Theories* (pp. 476, 478).

A much more lucid materialistic treatise, and also more decidedly atheistic, appeared in 1851, in the form of *Letters on the Laws of Man's Nature and Development*, from the pens of Mr. H. G. Atkinson and Miss Harriet Martineau. In this book Atkinson says:

'I am far from being an Atheist, as resting on second causes. As well might we, resting on the earth, deny that there is any depth beneath; or, living in time, deny eternity. I do not say, therefore, that there is no God; but that it is extravagant and irreverent to imagine that cause a Person; the fundamental cause is wholly beyond our conception' (p. 240).

As these writers, however, always speak of matter as if it were eternal, declare that 'the mind of man is the result of material development,' and assert that 'philosophy finds no God in nature, nor sees the want of any,' it is impossible to deny that their book is fundamentally atheistic. Like most atheistic treatises, it denies the freedom of the will and personal immortality, and declares that 'there is no more sin in a crooked disposition than in a crooked stick in the water, or in a hump-back or a squint.' At the time of its appearance the work was severely criticized by James Martineau in the *Prospective Review*, and there is another acute criticism of it in Professor J. S. Blackie's *Natural History of Atheism* (1877).

6. Secularism.—English Secularism appears to be almost entirely an indigenous growth. During the early portion of the 19th cent. there appeared several writings which, though by no means atheistic, yet prepared the way for the incoming of a non-religious and also of an anti-religious drift of thought. The phrenological writings of George Combe, though they were in his own case associated with theistic views, were calculated to encourage a materialistic view of mind. Thomas Paine and Richard Carlile were themselves Deists, but many of the admirers of their rationalism did not admit the validity of their deistic views. The philosophy of the philanthropic socialist, Robert Owen, exercised a strong anti-theistic influence. Owen held a doctrine somewhat resembling Haeckel's, in which God is conceived as permeating all the particles of the universe. At this time there was also an important circle of thinkers, of which Jeremy Bentham was the centre, and which was strongly antagonistic to positive religious beliefs. Professor Bain in his *Life of James Mill* says:

'That Mill's acquaintance with Bentham hastened his course towards infidelity it is impossible to doubt. Bentham never in so many words publicly avowed himself an atheist, but he was so in substance. His destructive criticisms of religious doctrine in *The Church of England Catechism Reviewed*, and still more his anonymous book on Natural Religion, left no residue that could be of any value. As a legislator he had to allow a place for Religion; but he made use of the Deity, as Napoleon wished to make use of the Pope, for sanctioning whatever he himself chose, in the name of Utility, to prescribe. John Austin followed on the same tack; but this course was too disingenuous to suit either of the Mills. It is quite certain, moreover, that the whole tone of conversation in Bentham's more select circle was atheistic' (cf. *Mind*, vol. ii. p. 527).

All these circumstances had probably some influence in bringing about that secularist movement in which George Jacob Holyoake and Charles Bradlaugh were the leading spirits. Bradlaugh in the *National Reformer*, and Holyoake in the *Reasoner*, appealed to a large number of readers, especially of the artizan class. The work thus begun has been continued down to the present time by a succession of lecturers and writers; but it has now to a large extent lost its positively atheistic character, and is merged in the larger movement of agnosticism, which the numerous cheap publications of the 'Rationalist Press Association' are doing much to advance. The name 'Secularist,' as distinguished from 'Atheist,' was originated by Holyoake in 1851. The latter word, to which Bradlaugh had no dislike, was objected to by Holyoake on the ground that it was often understood to mean 'one who is not only without God but also without morality.' The two leaders were of very dissimilar types of mind. Holyoake, like Robert Owen, of whom he had been a disciple, was of a constructive disposition; he would have liked to give to the word 'secularism' a meaning which would not have excluded theists. Bradlaugh, on the contrary, was naturally aggressive. He identified all theological ideas with superstition, and the work of undermining them he evidently found very congenial.

The chief logical ground on which they both rejected theism differed somewhat from that which was taken by earlier atheists of that century. These, as we have seen, asserted the existence of a First Cause, though they regarded its character as wholly unknowable. Holyoake and Bradlaugh, on the other hand, started with matter, maintaining that it needed no cause, being itself self-existent and eternal. Their contention was that the creation of matter by a self-existent Spirit is inconceivable. To this the theist replies that, though we have no experience of it, such creation would violate no necessary law of thought; and he further contends that the atheist's assertion that out of lifeless matter organization and life spontaneously arose is not only inconceivable, but actually violates the law of thought which compels us to believe that no cause for an effect can be admitted unless there is some element in it which can be conceived as capable of giving rise to the effect.

Another very prominent feature in both Bradlaugh's and Holyoake's attack on theism was their attempt to invalidate that argument from design in which so many thinkers, including Locke and Voltaire, have found a sure basis for theistic belief. Holyoake in his chief works, *Paley Refuted* and *The Trial of Theism*, dwells at great length on this question. Finding it impossible to explain the order and systematic organization of the cosmos on the materialistic hypothesis, he tries to overthrow the theist's explanation by contending that, if it were a real explanation, it would involve other necessary assumptions which experience shows to have no existence in fact. Admit,

he says, that there was a designer, then that designer must have been a person; and if a person, he could not have designed the universe unless he had possessed what all persons whom we know possess, namely, a cerebral organization, a brain; and, he concludes, there is no evidence of the existence of such a brain. This argument has also been employed by Professors W. K. Clifford and Du Bois-Reymond in the anti-theistic interest. It has been replied to by eminent thinkers, both scientific and philosophical. On the relations between mind and matter Sir Oliver Lodge says:

'Fundamentally they amount to this: that a complex piece of matter called the brain is the organ or instrument of mind and consciousness; that if it be stimulated mental activity results; that if it be injured or destroyed no manifestation of mental activity is possible. . . . Suppose we grant all this, what then? We have granted that brain is the means whereby mind is made manifest on this material plane, it is the instrument through which alone we know it, but we have not granted that mind is *limited* to its material manifestation; nor can we maintain that without matter the things we call mind, intelligence, consciousness, have no sort of existence. Mind may be incorporate or incarnate in matter, but it may also transcend it. Brain is truly the organ of mind and consciousness . . . but no one is at liberty to assert on the strength of that fact that the realities underlying our use of those terms have no existence apart from terrestrial brains' ('Mind and Matter,' *HJ*, Jan. 1905, p. 324 f.).

In § 1 reasons have been given for concluding that organization can be explained only by assuming that a higher principle guides the arrangement of the material particles. If this is the case, life is the cause of the structure of brain, while brain is posterior to life, and is the organ through which life and the material universe interact. Dr. James Martineau, in his article on 'Modern Materialism: its Attitude towards Theology,' very carefully discusses this question. He argues that, though a finite and created mind needs a cerebral organ for its communication with the physical world, it is highly probable that a self-existent and eternal Mind is not thus conditioned. 'Further,' he says,

'I would submit that in dealing with the problem of the Universal Mind this demand for organic centralization is strangely inappropriate. It is when mental power has to be localized, bounded, lent out to individual natures and assigned to a scene of definite relations, that a focus must be found for it and a molecular structure with determinate periphery be built for its lodgment. And were Du Bois-Reymond himself ever to alight on the portentous cerebrum which he imagines, I greatly doubt whether he would fulfil his promise and turn Theist at the sight; that he had found the Cause of causes would be the last inference it would occur to him to draw; rather would he look round for some monstrous *creature*, some cosmic megatherium, born to float and pasture on the fields of space' (*Essays, Reviews, and Addresses*, vol. iv. p. 254).

If the objector still insists that the Eternal Mind must have some material organ, both Sir Oliver Lodge and Dr. Martineau point out that

'it has been surmised that just as the corpuscles and atoms of matter, in their intricate movements and relations, combine to form the brain cell of a human being, so the cosmic bodies, the planets and suns and other groupings of the ether, may perhaps combine to form something corresponding as it were to the brain cell of some transcendent mind. The thing is a mere guess, it is not an impossibility, and it cannot be excluded from a philosophic system by any negative statement based on scientific fact' (Sir Oliver Lodge, *loc. cit.*, p. 325; cf. Martineau, *op. cit.*, p. 255).

In addition to these two arguments for atheism, Bradlaugh appeals to some metaphysical obstacles which, in his opinion, bar the way to a theistic conclusion. The chief of these is that we are necessitated by the laws of thought to conceive of Substance as 'that which does not require the conception of anything else antecedent to it'; and therefore Substance cannot have been created or originated. To this Dr. Flint well replies:

'If he [Mr. Bradlaugh] can conceive substance *per se*, and not merely through its qualities, effects, and relationships to his own faculties, he is logically bound to abandon sensationalism and all its consequences, and betake himself to absolute idealism or to mysticism' (*op. cit.*, p. 517).

In a similar strain Bradlaugh contends that, if God were infinite, it would be impossible to conceive of any addition to Him, and that, therefore, an infinite God and a created universe are incompatible ideas. Such arguments as these, even if they were valid (which all theists would deny), would have little or no weight with secularists in general; for such arguments assume the existence of an *a priori* source of knowledge, and this very few atheists would grant.

Besides Holyoake and Bradlaugh, there have been other secularist lecturers and writers, such as Charles Watts, G. W. Foote, Mrs. Besant (who has since become a leader among the theosophists), W. S. Ross, etc. An account of the books, pamphlets, and periodicals which have been issued by this school of anti-theistic thought will be found in Dr. Flint's *Anti-theistic Theories* (pp. 509–519). See also art. SECULARISM.

7. Recent Agnosticism. — In connexion with this subject, brief reference needs to be made in conclusion to some recent distinguished writers, whose speculations, though often by no means atheistic, have unquestionably weakened theistic belief in the case of many of their readers. The most eminent among them are the scientific writers, G. J. Romanes, W. K. Clifford, John Tyndall, T. H. Huxley, and the philosopher, H. Spencer. In 1878 there was published anonymously a decidedly atheistic work, entitled *A Candid Examination of Theism*, by Physicus. Many years later, Romanes acknowledged the authorship, and stated at the same time that he had then come to see that his most important objections to theism were invalid. In the above work he says that he had at one time been convinced by Baden Powell's work on *The Order of Nature*, that this order necessitates the hypothesis of an eternal creative intelligence and will, but that, on the appearance of Spencer's *First Principles* and Charles Darwin's work on *Natural Selection*, his views had undergone a total change, and that at the time of writing the *Candid Examination* he felt assured that the appearances of design in the universe could be explained without the assumption of a creating mind. About the year 1889, however, he wrote three articles on the 'Influence of Science upon Religion,' and these, together with some other notes on theism from his pen, were published, after his death, under the title *Thoughts on Religion*, by Dr. Charles Gore, now the Bishop of Birmingham. In these articles Romanes declares his recovered faith in the validity of the teleological argument.

'I think it is perfectly clear,' he concludes, 'that if the argument from teleology is to be saved at all, it can only be so by shifting from the narrow basis of special adaptation, to the broad area of Nature as a whole. And here I confess that to my mind the argument does acquire a weight which, if long and attentively considered, deserves to be regarded as enormous. For although this and that particular adjustment in Nature may be seen to be proximately due to physical causes . . . the more ultimate question arises, How is it that all physical causes conspire, by their united action, to the production of a general order of Nature? It is against all analogy to suppose that such an end as this can be accomplished by such means as those, in the way of mere chance or "the fortuitous concourse of atoms." We are led by the most fundamental dictates of our reason to conclude that there must be some cause for *this co-operation of causes*' (*Thoughts on Religion*, p. 67 f.).

He then proceeds to show that this adequate cause can be nothing short of a Divine Mind, though that Infinite Mind may be, and indeed must be, beyond the comprehension of man's finite intelligence. For the views of Dr. Romanes on the 'character' of God, and on Christianity, the *Thoughts on Religion* must be consulted. Bishop Gore mentions that his friend, shortly before his death, expressed his belief that it is by 'intuition' we become acquainted with God, and added that he was in cordial agreement on this subject with Knight's *Aspects of Theism*.

Professor W. K. Clifford held a world-theory somewhat similar to that of Haeckel. Everything, both physical and psychical, was, he maintained, composed of elements of 'mind-stuff,' and

when these elements are compounded in a nervous system, they manifest the phenomena of consciousness. As to the cause which so arranges these elements as to form out of them the actual orderly universe of matter and mind, his writings furnish no explanation. With Holyoake and Du Bois-Reymond, he regards the existence of a self-existent personal cause as highly improbable, owing to the want of evidence for the existence of a corresponding brain. What has been previously said in reply to Holyoake's secularistic atheism applies equally to Clifford's reasons for denying the existence of God. Clifford's view of religion was akin to Positivism.

'In such a moment of utter sincerity,' he says, 'when a man has bared his own soul before the immensities and the eternities, a presence in which his own poor personality is shrivelled into nothingness arises within him, and says, as plainly as words can say, "I am with thee, and I am greater than thou." Many names of Gods, of many shapes, have men given to this presence, seeking by names and pictures to know more clearly the guide and the helper of men.'

These words appear to point to a theistic conclusion, but Clifford disappoints this expectation; for his final judgment is that, 'after all, such a helper of men, outside of humanity, the truth will not allow us to see' (*Lectures and Essays*[3], 386).

Professor John Tyndall's Address before the British Association at Belfast in 1874 excited much attention, and called forth many criticisms from the theistic side. Among these perhaps the most important was a paper in the *Contemporary Review* on 'Modern Materialism: its Attitude towards Theology,' by Dr. James Martineau, between whom and Professor Tyndall there had often been mental encounters at the meetings of the Metaphysical Society. (This paper, together with another on 'Religion as affected by Modern Materialism,' is reprinted in vol. iv. of Martineau's *Essays, Reviews, and Addresses*.)

Though in the 'Address' Tyndall says, 'I discern in matter the promise and potency of all terrestrial life,' he declined to be called a materialist. His view somewhat resembled Haeckel's, in that he maintained that sensation could not arise unless the elements of matter had a psychical as well as a physical side. He did not, however, regard sensation as a property of matter, but rather as a universal concomitant of matter. The passage from the physics of the brain to the facts of consciousness he admitted to be altogether inconceivable by the human mind. As to the cause of the atoms and of the processes of evolution, his position was not atheistic but agnostic. In an Address at Birmingham, a few months later than the one at Belfast, he says, in reply to the question whether there are not in nature manifestations of knowledge and skill higher than man's:

'My friends, the profession of that atheism with which I am sometimes so lightly charged would, in my case, be an impossible answer to this question.'

Like Lange, he confines religion to the sphere of idealism and emotion. In reference to Tyndall's statement that 'we must radically change our notions of "Matter" if we are to understand how it carries with it the promise and potency of all terrestrial life,' Martineau remarks (*op. cit.* iv. 175) that what Tyndall says simply amounts to this:

"'Charge the word [matter] with your *quæsita*, and I will promise to elicit them explicitly." It is easy travelling through the stages of such an hypothesis; you deposit at your bank a round sum ere you start; and, drawing on it piecemeal at every pause, complete your grand tour without a debt. Words, however, ere they can hold such richness of prerogative, will be found to have emerged from their physical meaning, and to be truly θεοφόρα ὀνόματα—terms that bear God in them, and thus dissolve the very theory which they represent. Such extremely clever Matter—matter that is up to everything, even to writing *Hamlet*, and finding out its own evolution, and substituting a molecular *plebiscite* for a divine monarchy of the world—may fairly be regarded as a little too modest in its disclaimer of the attributes of Mind.'

The views of Professor T. H. Huxley differ in one important respect from those of his great friend, Professor Tyndall. The former, through his study of Hume, was inclined to accept the principles of sensational idealism, whereas the latter sided with the agnostic realism of Herbert Spencer. Huxley, accordingly, seeks to rebut the charge of materialism, by declaring that he is utterly incapable of conceiving 'the existence of matter if there is no mind in which to picture that existence' (*Method and Results*, Lond. 1893, p. 245). But, while he thus makes the existence of matter dependent on mind, he at the same time holds the doctrine of 'human automatism,' *i.e.* that while states of consciousness depend upon the molecular movements of the cerebral substance, 'there is no proof that any state of consciousness is the cause of change in the motion of the matter of the organism' (*ib.* p. 244).

At a meeting of the Metaphysical Society, when Huxley had read a paper on the subject, 'Has the Frog a Soul?' one of the members present said: 'I was walking down Oxford Street this morning, intending to go straight to the Marble Arch; but, happening to glance at my boots, I saw that I needed a new pair, and I accordingly turned into Regent Street, where my boot-maker lives.' Then, addressing Huxley, he asked, 'Am I to understand that the coming into my mind of the idea about the boots had no causal connexion with the change in the direction of my walk?' 'Most certainly you are,' replied the professor.

It is clear, then, that though Huxley in words rejects materialism, and asserts that the body is only a group of mental symbols, he is virtually a decided materialist, for he represents mind as dependent for its existence on this group of mental symbols, and possessed of no power to act in any way upon the reality for which these symbols stand.

As Huxley maintained that nothing is knowable but phenomena, *i.e.* states of consciousness, he held that we can neither affirm nor deny the existence of God or of any metaphysical realities behind phenomena. To describe his attitude towards these metaphysical questions he coined the convenient word 'Agnostic.' The charge of atheism he emphatically repels, saying:

'The problem of the ultimate cause of existence . . . seems to me . . . hopelessly out of reach of my poor powers. Of all the senseless babble I have ever had occasion to read, the demonstrations of these philosophers who undertake to tell us all about the nature of God would be the worst, if they were not surpassed by the still greater absurdities of the philosophers who try to prove that there is no God' (*Method and Results*, p. 245ff.).

With regard to the relation of the Darwinian account of evolution to the argument from design, Huxley expresses himself as follows:

'No doubt, it is quite true that the doctrine of Evolution is the most formidable opponent of all the commoner and coarser forms of Teleology. . . . The teleological and the mechanical views of nature are not, however, of necessity mutually exclusive. On the contrary, the more purely a mechanist the speculator is, the more firmly does he assume a primordial molecular arrangement, of which all the phenomena of the universe are the consequences; and the more completely is he thereby at the mercy of the teleologist, who can always defy him to disprove that this primordial molecular arrangement was not intended to evolve the phenomena of the universe' (*Critiques and Addresses*, pp. 305–307).

It would seem that Huxley should here have asked himself the question whether this 'primordial arrangement,' from which a universe abounding in marks of adaptation has proceeded, does not by a necessity of human thought demand an adequate cause. Romanes, as we have seen, did put this question to himself, and the answer to it in which he finally found satisfaction was that it is only on the hypothesis of the creative action of an Eternal Mind that the facts of physical and mental evolution are at all satisfactorily accounted for. Huxley, however, never fairly faces the question of ultimate causation, but concludes his criticism of the teleological argument with the words:

'Why trouble oneself about matters which are out of reach, when the working of the mechanism itself, which is of infinite practical importance, affords scope for all our energies?' (*ib.* p. 307).

He forgot that the human mind has other aspirations and faculties besides those which lead

to scientific discovery; that it cannot content itself with the ascertainment of the order of phenomenal succession, but must perforce, for the satisfaction of its rational, its ethical, and its religious nature, ever seek after insight into the reality and the character of the *Causa causarum*.

Herbert Spencer's attitude towards theism was by no means so negative or neutral as was that of Tyndall and Huxley; and with good right he maintained that his philosophical system might be pantheistic, but could not justly be termed atheistic. His conception of the basal reality of the universe rested upon an assumed *a priori* principle.

In opposition to the doctrine of Mansel and Sir W. Hamilton, he maintains,

'Impossible though it is to give to this consciousness of the Absolute any qualitative or quantitative expression whatever, it is not the less certain that it remains with us as a positive and indestructible element of thought' (*First Principles*[6], p. 77; cf. *Nineteenth Century*, July 1884, pp. 5–7).

In his view it is the same ultimate reality which in the inorganic world manifests itself in the form of matter and motion, and in living beings in modes of consciousness. His philosophy, however, furnishes no explanation of how, from the modes of matter and motion which physical science discerns, organic structures can spontaneously arise. He states that the volumes in which he would have explained the passage from the inorganic to the organic had for want of time not been written. What these volumes would have contained we can only conjecture from other passages in Mr. Spencer's writings, where he maintains that, in his doctrine of an infinite and eternal energy out of which all phenomena, both psychical and physical, arise, he has reached a reality which satisfies the demands alike of science and of religion. In 1884, he declares that

'though the attributes of personality, as we know it, cannot be conceived by us as attributes of the Unknown Cause of things, yet duty requires us neither to affirm nor to deny personality, but to submit ourselves in all humility to the established limits of our intelligence, in the conviction that the choice is not between personality and something lower than personality, but between personality and something higher; and that the Ultimate Power is no more presentable in terms of human consciousness than human consciousness is representable in terms of a plant's functions' (*Nineteenth Century*, July 1884, p. 7).

Were it not for the last clause in this quotation, one might suppose that Spencer held a view akin to the theistic doctrine of Lotze, i.e. that personality under human limitations must needs be imperfect, and that it is only in God that perfect personality is realized. Lotze's doctrine is theistic, because it implies that, in conceiving of God after the fashion of the highest form of human personality, we have a real and positive, though imperfect, insight into the nature of God. The last clause of the above quotation, however, denies the possibility of any such insight, and thus entirely separates Spencer's doctrine from true theism. Further, Spencer's attempt to derive all moral ideals and all consciousness of moral authority from the experiences of pleasure and pain, makes it impossible for him to recognize in our ideals any insight into the *character* of God; and hence his Ultimate Reality cannot be regarded as an adequate object of religious faith and worship.

This article may conclude with the obvious remark, that at the present time atheism in the definite form which it has often assumed in the past has almost entirely disappeared, and an agnostic form of rationalism has taken its place. Benn's treatise on *The History of English Rationalism in the Nineteenth Century*, and Robertson's *Short History of Freethought*, will give a tolerably clear idea of the forms of negation with which the defenders of theism will probably have to deal during the present century.

CHARLES B. UPTON.

ATHEISM (Buddhist). — 1. Buddhism, in so far as it is a philosophic system, is radically averse to the idea of a Supreme Being—of a God, in the Western sense of the word. It must be remembered that this atheism is not a characteristic peculiar to Buddhism alone. The 'Lord' (*Iśvara*) of the nominally theistic schools (*aiśvarikas*), when He is not conceived of as an Oriental despot, arbitrarily imputing sin or virtue and assigning hell or heaven to His creatures, is practically only an Organizer of the world, keeping account of the actions (*karma*) of creatures in order to ensure their due recompense, and, after each period of chaos, re-constructing the universe in order to set each creature in the place which befits it. All the Hindus believe, as a matter of fact, in endless transmigrations.

Another point worthy of remark is that, although the Buddhists maintain the uselessness of this 'Lord,' a mere delegate of the *karma* of creatures, they nevertheless personify the *karma*, or Law. 'Even if I hid my sin from every one, I should not hide it from the Law' (cf. *SBE* xxxv. 295). But, as a general rule, retribution for deeds is believed to operate automatically by reason of an energy called the 'indestructible' (the 'invisible' of the Brāhmanical treatises), and the system is therefore atheistic because it does away with the thought of a personal Being who would scrutinize the 'book of debts' of which their treatises sometimes speak. It must be acknowledged, however, that to believe in infallible and immutable justice is to recognize at least one of the thoughts which constitute the idea of God. The Buddhists know that good actions can mix with evil ones and counteract their unhappy consequences; they especially praise repentance, and by doing so raise themselves above the purely mechanical idea of *karma* (*q.v.*), which they view as an intelligent force.

It may be further remarked, that the contemplation of the Buddha plays in early Buddhism a rôle analogous to that which the *Sāṅkhya-Yoga* assigns to the contemplation of the 'Lord' (*Iśvara*).

2. It will be profitable to read the 2nd chapter of the *Brahmajālasutta* (Rhys Davids, *Dialogues of the Buddha*, Lond. 1899, p. 30), where the Buddha explains how the god Brahmā, being born at the commencement of the world-age in the midst of the heaven prepared for him by his *karma*, unconscious of his former existences, and witnessing the birth of the other gods whom he wished to have as companions, imagines that he is in truth 'the Supreme One, the Lord of all, the Creator, the Ancient of Days, the Father of all that are and are to be.' 'These other beings are of my creation. And why is that so? A while ago I thought, "Would that they might come!" And on my mental aspiration behold the beings came.'

The *Kevaddhasutta* (*ib.* p. 280) is also very instructive. It shows the reverence of the gods for the great Brahmā, and how Brahmā is inferior to the Buddha. A certain monk, in order to solve

a problem of cosmology, traverses the celestial regions, consulting the divinities. They refer him to Brahmā. 'He is more potent and more glorious than we. He will know it.' 'Where, then, is that great Brahmā now?' 'We know not where Brahmā is, nor why Brahmā is, nor whence. But when the signs of his coming appear, when the light ariseth and the glory shineth, then will He be manifest.' Soon after, Brahmā became manifest, and that monk drew near to him and asked, 'Where do the four great elements cease, leaving no trace behind?' Brahmā then took the monk by the arm and led him aside and said, 'These gods, my retinue, hold me to be such that there is nothing I cannot see, I have not realized. Therefore I gave no answer in their presence. But I do not know where the four elements cease. Therefore return to the Buddha, and accept the answer according as he shall make reply.'

3 In the later literature of Buddhism there are found formal proofs of the non-existence of a God who creates and organizes the world, for example in the *Bodhicharyāvatāra*, ch. ix. ver. 119 f.

'Theists say that God is too great for us to be able to comprehend Him; but then it follows that His qualities also surpass our range of thought, and that we can neither know Him nor attribute to Him the quality of a Creator. Theists further maintain that the nature of God is incomprehensible, and His work comprehensible. But (1) God has created neither souls nor elements which are eternal: He does not bring about the birth of knowledge in the mind [compare Malebranche], since knowledge is produced by its object; He does not allot pain and pleasure, which result from *karma*. Then (2) if God acts without desiring to act, it is because He is subject to another; if He acts because He desires to act, He is subject to desire; therefore He is not independent; and (3) if He is independent of others, why does He not accomplish at one and the same time the creation, preservation, and destruction of the universe? An eternal and immutable cause ought to produce all its effects at the same time. Thus everything is momentary.'

Hardy, *Buddhismus*, Münster i. W. 1890, p. 130; St. Clair-Tisdall, *The Noble Eightfold Path*, Lond. 1903, p. 161 *f.* (ch. iv. 'Buddhism and Christianity').

LOUIS DE LA VALLÉE POUSSIN.

ATHEISM (Egyptian).—No trace has yet been found of any definite atheistic teaching in Egypt. The contradictory, wholly incompatible, doctrines current in Egypt regarding the future life must have caused every thinking man to wonder and doubt, and when such a man appeared to accept them all and act upon them, if his motive was not simply to conform with custom, or to satisfy the superstition of his women-folk, it must have been the hope that one of the alternatives might possibly be correct enough to help towards bliss. The Song of the Harper, engraved in banqueting scenes in the tombs of kings and priests, urges to present enjoyment because death comes to all, and no one has ever returned to tell what has become of the dead; the most learned scribes and philosophers pass away and become as though they had never been. 'Follow thy heart greatly; but give bread to him that hath no field—so shalt thou have a good name among all posterity.' Such is the teaching of the Song. This text dates from the Middle Kingdom, but was in vogue also later. Another, of late Ptolemaic age, when the Egyptian religion was indeed on the decline, is put into the mouth of a deceased lady. Inscribed upon her tombstone, it is addressed to her husband, the high priest of Ptah at Memphis, who was almost, if not quite, at the head of the Egyptian hierarchy. She counsels merrymaking and enjoyment in the years of life upon earth: the 'western' land of the dead is a land of wakeless sleep, of heavy darkness, of forgetfulness; and apparently implies that nothing could relieve the misery if the dead could feel it. It seems that these views belonged in some degree to the varied face of orthodoxy, which preached the Psychostasia, the reward in rich fields of Aalu and abundant food and happiness; or, again, the attainment by the dead of all Divine powers; or, again, the sad doctrine of a gloomy existence in the dark under world, relieved only by one hour of illumination each night while the sun passed between two of the clanging gates.

LITERATURE.—There is no literature on the subject. For translations of the Songs, see W. Max Müller, *Die Liebespoesie der alten Ägypter*, Leipzig, 1899, p. 29 ff.

F. LL. GRIFFITH.

ATHEISM (Greek and Roman).—As a dogmatic creed, consisting in the denial of every kind of supernatural power, atheism has not often been seriously maintained at any period of civilized thought, and Plato goes so far as to assert that, while other erroneous views about the gods might be permanent, no one, after embracing in his youth the doctrine of atheism, had ever continued in it up to old age (*Legg.* 10. 888 C). Thus, in dealing with the statements of Greek and Latin texts, it is necessary to distinguish those thinkers, such as Xenophanes (fr. 15, Diels, etc.), who rejected the gods of the popular religion, from those who repudiated the idea of God in its entirety. There are further difficulties arising from the fragmentary and often untrustworthy character of our authorities. A charge of atheism was a favourite controversial weapon, and how careful we should be in accepting isolated statements which impute it may be learnt from a consideration of the cases of Socrates (Plat. *Apol.* 26 C) and of the early Christians (Gibbon, *Roman Empire*, ii. 225). Moreover, the sceptic is always liable to be confounded with the atheist. Thus the attitude of Protagoras towards the problems of theology is sufficiently indicated by the sentence preserved by Diogenes Laertius (ix. 51), in which he declares himself unable to affirm of the gods either that they are or that they are not. Nevertheless, other authorities (Epiphanius, *adv. Hæres.* iii. 2. 9; Diels, *Doxogr.* p. 591, 1) testify to his absolute denial of the existence of God. These considerations will show the difficulty of appraising the statements which impute atheism to the physicist Hippo, a contemporary of Pericles (Plut. *Comm. Not.* 31, p. 1075 A, etc.), or to the more notorious Diagoras of Melos. The latter, familiar to us from the allusions of Aristophanes (*Nub.* 830; *Av.* 1072), is said to have turned to atheism because the gods failed to visit with punishment a flagrant wrong which had been committed against him (Sext. *Math.* ix. 53). We have more definite information about Theodorus of Cyrene, a follower of Aristippus, who lived in the latter years of the 4th cent. B.C. His atheism was absolutely uncompromising (Diog. Laert. ii. 97; Epiphan. *l.c.*; Diels, *Doxogr.* p. 591, 25), and formed a reasoned element in a philosophical system which was subversive of the foundations of customary morality.

Again, atheism is the logical result of the rationalizing system of Euhemerus; but the charge is made against him (Plut. *Is. et Osir.* 23, p. 360 A) on precisely the same grounds as against the Stoics (Plut. *Amat.* 13, p. 757 C), and cannot of itself be held to imply more than his opposition to received religion. The same is true of the earlier attempt of Prodicus, who held that Divine honours were in the first place bestowed upon such natural objects as the sun and moon and the fruits of the earth, and next in order upon the civilizing benefactors of the human race (Gomperz, *Greek Thinkers*, Eng. tr., Lond. 1901, i. 430). To the same period belongs Critias, the leader of the Thirty Tyrants, who is ranked with the atheists by Sextus

Math. ix. 54) on the strength of some remarkable verses, referred by other authorities, erroneously, as it would seem (Diels, *Doxogr.* proll. p. 59. 1), to the *Sisyphus* of Euripides. These lines are conceived in the spirit of a Callicles or a Thrasymachus, as we meet them in the *Gorgias* and the *Republic*. The argument is founded on the Sophistic distinction between nature and convention; and the belief in God, which is made subsequent to the rule of morality imposed by law, is attributed to the policy of a cunning legislator, who sought to check secret immorality by the fiction of an eternal, all-seeing, and all-wise power, and to procure obedience to its decrees by investing it with awe-inspiring attributes.

Though denounced as a fiction in the age of the Sophists, the universality of religious belief among the nations of the world was always one of the strongest weapons possessed by the advocates of theism (Plat. *Legg.* 10. 886 A; Sext. *Math.* ix. 60). The only exception which ancient tradition, as preserved by Theophrastus in his treatise on *Piety* (Bernays, *Theophr. üb. Frömmigkeit*, p. 56), records was furnished by a doubtful story concerning the Thoës or Acrothoitæ. They are said to have been a tribe living on the borders of Thrace, who, like Hesiod's Silver Race (*Op.* 133 f.), neglected entirely to sacrifice to the gods, and were swallowed up by an earthquake as a punishment for their atheism (Porphyr. *de Abst.* ii. 7, 8; Simplic. *ad Epict. Enchir.* 31. p. 95, 34, Dübn). Thus, whether viewed in connexion with popular opinion or with scientific thought, atheism appears to have been regarded by the ancients as a mark of coarseness, depravity, or eccentricity.

LITERATURE.—See the commentators on Parmenides and Heraclitus, and L. Campbell, *Religion in Greek Literature*, Lond. 1898, p. 295. For the charges against astronomers, Plato, *Legg.* 12, 967 A. See also Jowett, *The Dialogues of Plato*[3], Oxford, 1892, Index; Zeller, *Stoics*, etc., Eng. tr. new ed. 1880, p. 465; G. Boissier, *La Religion romaine*[4], Paris, 1892; and other reff. throughout the article. A. C. PEARSON.

ATHEISM (Indian, ancient).—The beginnings of Indian atheism can be traced back into the Vedic period. In the Rigveda the national god Indra is derided in several passages (iv. 24. 10, x. 119); and we read (ii. 12. 5, viii. 100. 3) of people who absolutely denied his existence even in those early days. We have here the first traces of that naive atheism which is so far from indulging in any philosophical reflexion that it simply refuses to believe what it cannot visualize, and which, in a later period, was known as the disbelief of the Lokāyata system; that is to say, of crass materialism (see art. LOKĀYATA).

It is different with the atheism which had grown into a conviction as the result of serious philosophical speculation; this, in distinction from the other naive form, we may describe briefly as *philosophic* atheism.

When the old Vedic religion developed into pantheism, the figures of the old gods faded and became transient creatures. But, as such, they still lived in the philosophic systems of India, even in the atheistic Sāṅkhya system (see SĀṄKHYA), and in the religions of Buddha and Mahāvīra, which found support in this system, and, like it, recognize no *real* God. Here these shadow-like gods afford an illustration of a fact which can be noted throughout the history of religion—that religious ideas belonging to earlier periods project themselves into a later and differently-conceived view of the world—one with which in essence they have ceased to have anything to do, but to which, nevertheless, they adapt themselves. In the Sāṅkhya system, in Buddhism, and in the religion of the Jains, we find the belief in the existence of gods, demi-gods, and demons, as well as in heavens and hells. But the gods are only more highly organized and happier beings than men; like the latter, they are within the *saṁsāra*, 'circle of life,' and, unless they gain the saving knowledge which enables them to withdraw from worldly existence, they are obliged to change their bodies again. Nor have they escaped the power of death; consequently they are lower than the man who has reached the highest goal. In India, recognition of these faded gods of the people has been fully reconciled with the atheistic view of the world. In the Sāṅkhya system, belief in gods who have risen to evanescent godhead (*janyeśvara, kāryeśvara*) has nothing whatever to do with the question of God Eternal (*nityeśvara*), as regards whom the theists assume that He made the world by His will. The use of a special term (*Iśvara*, 'the powerful') in Indian philosophy obviously arose out of the endeavour to distinguish this God even verbally from the shadow-like gods of the people (*deva*).

The positive way in which the existence of God is denied is one of the characteristic features of the Sāṅkhya philosophy, which on that account is also continually denoted as *nirīśvara* ('godless'). Again and again in the Sāṅkhyasūtras it is stated that the existence of God cannot be proved (i. 92–94, v. 2–12, 46, 126, 127, vi. 64, 65, with the respective commentaries). Having regard to the aphoristic conciseness of this work, it is clear from this frequent repetition what importance was attached by the adherents of the Sāṅkhya system to this point—the actual absence of any strict proof of the existence of God. The denial of God in the Sāṅkhya philosophy is in essence the result of the following ideas: (1) the doctrine that there is inherent in unconscious matter the force which operates with physical necessity to develop itself for the purely receptive souls; and (2) the general Indian conception of the after-effects of the actions of living beings, which instigate that natural force and guide its activity into definite channels. Other reasons seem to have contributed, especially the realization that the problem of misfortune cannot be solved by any of the speculations of theism. This idea is made use of by Vāchaspatimiśra (12th cent. A.D.) in the *Sāṅkhya-tattva-kaumudī* to *Sāṅkhya-kārikā*, 57, as one of the main supports of the atheistic explanation of the world. It will be useful here, we think, to give a translation of this passage, which is so important and so characteristic of Indian thought. It runs thus:

'Every conscious action is, without exception, determined either by an egoistic purpose or by kindness. Since these two motives are excluded in the case of the creation of the world, it becomes impossible to assume that the creation of the world was due to conscious action. For a God whose wishes are all fulfilled can have had no personal interest whatever in the creation of the world; the possibility of any egoistic purpose consequently disappears. But neither can God have undertaken the creation from kindness; since *before* the act of creation souls suffered no pain—senses, bodies, and objects not having come into existence yet—from what could the kindness of God wish to have souls released? If, on the other hand, we suppose that the kindness of God was shown later, when, after the act of creation, He saw His creatures full of pain, we can hardly escape the argument in a circle: creation was the result of kindness, and kindness the result of creation! Further, a God who is actuated by kindness would create only joyful creatures, but not creatures in different conditions. If to this some one objects that the difference results from the difference in that work for which individuals receive a reward from God, we reply that in that case the direction of the work on the part of that conscious, highest Being is entirely superfluous, for the effectiveness of the work performed by individuals (that is to say, the consequences of merit and guilt) fully explains itself without any supreme direction on the part of that God. . . . On the contrary, that operation of unintelligent matter which we assume has no egoistic purpose behind it, nor is kindness its motive; consequently it cannot be substantiated as against *our* theory that the stated grounds of refutation apply to it as well.

This argument of Vāchaspatimiśra was repeated almost entirely by Mādhavāchārya (14th cent.

A.D.) in the Sāṅkhya chapter of his *Sarvadarśana-saṅgraha* (p. 228 of tr. by E. B. Cowell and A. E. Gough). These and similar reflexions had certainly already forced themselves upon Kapila, the originator of the Sāṅkhya philosophy, when he decided to take the bold step of publicly declaring for atheism. That no other doctrine in the Sāṅkhya system was so often and so fiercely attacked as this may be inferred even from the fact that Patañjali, the founder of the Yoga system (see art. YOGA), introduced the idea of a personal god in the hope that he would thus make the Sāṅkhya philosophy acceptable to his countrymen. The strict adherents of the Sāṅkhya doctrine, on the other hand, tried to derive from their own system new arguments by which to ward off the attacks made upon the denial of God. They placed first and foremost the sophistical alternative: Is God to be thought of as a free or as a fettered soul? Regarded as a *free* soul, that is to say, one not connected with a body or with any physical organ, God would be devoid of all qualities, and particularly of desire and will—the prerequisite of all creative activity; He would also be without any motive for directing the world. Regarded as a *fettered* soul, God would belong to the *saṁsāra*, and, like all other beings, would be deluded, and be hampered by human infirmities; in which case again He could not be creator and controller of the world, but only a nominal (*pāribhāṣika*) god who came into existence at the beginning of this world-period, and passes away with the end of it. If a theist raises against this argument the obvious objection that in that case God would belong neither to the free nor to the fettered souls, but must be assigned an exceptional place, he receives the answer, 'When a thing is defined as being unique in character, every basis upon which to argue is removed.'

This atheism of the Sāṅkhya philosophy, somewhat softened by the recognition of the gods of the people, was taken over, as we have already noted, into Buddhism and the religion of the Jains. But in all probability it also had an influence upon two schools of Brāhman philosophy—the Vaiśeṣika and the Nyāya (see the two articles). These two schools were originally atheistic, and did not go over to theism until after their amalgamation.

Deussen, *Philosophie der Upanishads*, Leipzig, 1899 (Eng. tr., Edin. 1905, esp. pp. 238, 407). See also artt. SĀṄKHYA, YOGA.

R. GARBE.

ATHEISM (Indian, modern).—In modern India, philosophic atheism still survives in the religion of the Jains. (For Jain and Buddhist atheism see the special articles.) As regards the materialism professed by the ancient Lokāyatas, the modern predominance of a religious attitude founded on *bhakti*, or faith devoted to a personal Supreme Deity, has practically extinguished it. Sporadic attempts to revive it have been made by isolated teachers, with but small success. The best known of these was the composition of the *Sūnīsār*, or 'Essence of Emptiness,' by a religious mendicant named Bakhtāwar, the promulgator of the so-called *Śūṇyavādī* doctrine. He flourished in the early part of the 19th cent. under the patronage of Dayā Rām, a Jāṭ Rājā of Hāthras in the central Gangetic Doab. Bakhtāwar's teaching went a step beyond simple materialism, and was an attempt to popularize it. According to him, nothing—God, or man, or any material object—exists. All is emptiness (*śūnyatā*). The one thing that exists is the Ego, and all conceptions are but reflexions of this Ego. 'It is an error,' he says, 'to think that the reflexion of my face in a glass is not my face, but is that of another. Similarly, whatever you see elsewhere is but yourself, and father and mother are non-entities. You are the infant and the old man, you are the wise man and the fool, the male and the female. It is you who are drowned in the stream, and it is you who pass over safely. You are the killer and the slain, the slayer and the eater, the king and the subject. You seize yourself and let go, you sleep and you wake; you dance for yourself and you sing for yourself. You are the sensualist and the ascetic, the sick man and the strong. In short, whatever you see, that is you, as bubbles, surf, and billows are all but water' (Wilson, *Rel. Sects*, 361).

It was not to be expected that such a dreary creed would retain many adherents, and it is doubtful if the few who were first attracted by it have left any representatives at the present day.

The atheism of the Sāṅkhya school is still professed by those learned men who follow that system of philosophy, and these and the Jains are the only real atheists of modern India.

LITERATURE.—Wilson, *Religious Sects of the Hindus*, Lond. 1862, 359 ff.

GEORGE A. GRIERSON.

ATHEISM (Jain).—Jainism is atheistical, if by atheism we understand the belief that there is no eternal Supreme God, Creator and Lord of all things; for the Jains flatly deny such a Supreme God. Nor need it surprise us that atheism should be essential to a religious system; for even the most orthodox Brāhmanical theologians, the Mīmāṁsakas of Kumārilabhaṭṭa's school, deny the existence of a Supreme God, though, of course, on other grounds than those of the Jains (see *Ślokavārtika*, sec. 16, Calcutta, 1907).

The Jains admit the existence of innumerable gods of many kinds and various degrees of perfection. But none of these gods is eternal; however long their life, it must come to an end when the merit of the god in question is exhausted. The longest life of a celestial being is that in the highest heaven Sarvārthasiddhi, which lasts between 32 and 33 *sāgaropamas* ('oceans of years'). Gods are embodied souls, just like men or animals, differing from them in degree, not in kind; for their greater power and perfection appertain to their divine body and organization, which is the reward for their good deeds in a former life, and which they lose on the exhaustion of their merit, to be born again in some other state of life. But those souls who are not born again, or, in other words, are liberated, go up to the top of the universe and remain there for ever in the state of absolute perfection; they have no longer any connexion with the world, and cannot, therefore, have any influence upon it. Accordingly the functions of a Supreme God, as Lord and Ruler of the world, cannot be attributed to liberated souls; and as the not yet liberated souls, *i.e.* the souls in the state of bondage, are subject to re-birth, none of them can be regarded as an eternal God. Therefore the Jains cannot acknowledge a Supreme God in our sense of the word.

Following up their theoretical views on this point, the Jains have strenuously combated, and denounced the fallacies of, the arguments by which the Nyāya and Vaiśeṣika philosophers tried to prove the existence of an eternal and omniscient God as Creator and Ruler of all things, viz. the famous argument that all things, being products, presuppose a maker who has an intimate knowledge of their material cause. The refutation of this argument will be found in the *Syādvādamañjarī*, in the *Commentary on the Saddarśanasamuchchaya*, and many similar works. The Jains also controvert the views of the Vedāntins and of the followers of the Yoga philosophy regarding Brahman or Īśvara as the Supreme God and Cause

of the world. But the Nyāya-Vaiśeṣikas seem to have been their most formidable opponents in this controversy about the existence of God.

Though the Jains are undoubtedly atheistical, as we understand the term, still they would probably object to being styled atheists. While admitting that the world is without beginning or end, and therefore not produced by a god, or ruled by one, they recognize a highest deity (*paramadevatā*) as the object of veneration, viz. the Jina, *i.e.* the teacher of the sacred Law, who, being absolutely free from all passions and delusion, and being possessed of omniscience, has reached absolute perfection after having annihilated all his *karma* (*Śaddarśanasamuchchaya*, 45 f., Calcutta, 1907). It must be remarked, however, that there are innumerable Jinas who, having proclaimed the sacred Law, have reached perfection, and have passed out of this world of change and woe. Prayers are addressed to them by the faithful, just as if they did or would bestow happiness and bliss on the devout adorer; but, of course, a Jina cannot show favour to anybody, as he is utterly indifferent to all that belongs to the world, and is entirely free from all emotions. He therefore does not reward the adorers or satisfy their wishes, but in his stead the gods who watch and control true Discipline (*śāsanādhiṣṭhāyikā devatās*) hear their prayers; for the practice of the discipline taught by the Jinas is the best mode of worshipping them. In the case of spiritual gifts vouchsafed to the worshipper, the explanation given comes to this: the adoration of the Jina purifies and sanctifies the soul of the worshipper through his meditating on the perfections of the Jinas. In this sense the Jinas are regarded as the highest deity (*paramadevatā*); temples are erected for their worship, and a kind of divine service is instituted in them on the model of that practised in Hindu temples.

LITERATURE.—There is no literature beyond the texts quoted in the article.

H. JACOBI.

ATHEISM (Jewish).—Atheism as a system of thought has no place in Judaism, and there is no equivalent for the term in the Hebrew language or literature. The deliberate denial of the existence of a Being who is responsible for the activity of nature and for the course of history presupposes a systematic analysis and explanation of natural and historical phenomena as the necessary effects of existing uncreated causes. The ancient Hebrew had no disposition to analyze the natural phenomena in the way the Greek did, and to trace them back to physical laws and principles—the indispensable basis of all conscious atheistic doctrines. He was more disposed to err on the side of polytheism than on that of atheism.

1. **Atheism in ancient Israel.**—Nevertheless there are passages to be found in the OT from which we can conclude that disbelief in the existence of God (or gods) was extant among the people in pre-exilic times, and that this disbelief was regarded by the prophets and psalmists as the source of the wickedness of the masses. It is also likely that the polytheism and idolatry against which the prophets contended were not the result of genuine superstition, but of real indifference towards all the gods served, whose worship was merely a pretext for indulgence in all kinds of licence and crime, and whose recognition was prompted mostly by political and social considerations. But the reason for this unbelief was always supposed to be thoughtlessness, indifference, ignorance, sensuality. There was no system of thought leading to the denial of God which the prophets deemed it necessary to combat. They merely wished to awake the people and to induce them to shake off their indifference. Jeremiah very often speaks in this tenor. The most outspoken passage is Jer 5^{12} 'They have denied the Lord, and said, He is not.' Here the prophet has in view the more intelligent members of his race, 'the great men' who ought to 'know the way of the Lord' (5^5). While pleading absolute ignorance and folly for the degraded masses with whom it would be useless to argue (5^4), he addresses himself to the leaders who are avowed atheists. The fact that they swear by the name of Jahweh (5^2) does not contradict the assumption that the prophet accuses the people of practical atheism. As their oaths are false, the perjurers only misuse the name of Jahweh without believing in His existence. Jeremiah employs the cosmological proof for the existence of God (5^{20-25}), in order to convince the people of their folly. But the confident use of the proof makes it quite clear that he merely intends to dispel the thoughtlessness of the people, and not to refute any antagonistic theories concerning the natural phenomena he refers to (cf. also Is 32^6, Pr 30^{1-4}, Ps 12. 36. 58^{11} 74). Psalms 10 and 14 (53) contain passionate outbursts against the *nābhāl* ('impious,' 'fool') who denies the existence of God, and thus degenerates into a dangerous criminal. 'The impious says in his heart, There is no God' (Ps 14^1). 'The wicked in the haughtiness of his countenance saith, He will not require. All his thoughts are: There is no God' (Ps 10^4). The *nābhāl*, however, typifies the whole people. 'There is none that doeth good, no, not one.' It is not likely that Ps 14^1 refers to Edom or some other enemy of Israel (see Baethgen, *Psalmen*[2], p. 36, Delitzsch, and others; the reading of 'Gebal' by Cheyne seems quite unfounded). Here it is the reckless ignoring or denial of the omniscience of God or His very existence that is dwelt upon by the psalmist as the immediate cause of the moral decay of the Jewish people (which in the end must lead also to political ruin). Atheism and immorality are regarded as being inseparably connected with each other.

2. **Post-exilic times.**—In late post-exilic times we lose sight of any atheistic tendencies that may have existed among the Jews, for there were no more prophets to chronicle the sins of the people. Moreover, the contact with Babylonian culture had given rise to the mythical beliefs which from the days of Ezekiel became identified with Judaism, and which have found definite recognition in the Talmudic and Rabbinic literature. Again, the revival of the religious and national spirit under Ezra was destined to dispel that ignorance and thoughtlessness of which Jeremiah and the psalmists complained, and the second Temple could not very well accommodate arrogant and defiant unbelievers. The influence of Hellenism was no doubt responsible for the slackening of religious fervour and the loss of national self-consciousness during the period immediately preceding the time of the Maccabæans, but that influence never went so far as to cause the Jews to adopt the Greek Pantheon or to deny the existence of an invisible God. It was their unflinching faith in their only (invisible) God that later on prevented the Jews in Alexandria and elsewhere from joining their fellow-citizens in the worship of the local deities, and created the feelings of hatred which resulted in the curious charge of 'atheism' being made against the Jews—a charge which Josephus refuted with great vigour (Josephus, *c. Apionem*, ii. § 6).

3. **Philo against Atheism.**—Jewish thinkers, however, have never ignored atheism. Philo devotes two chapters in his *de Somniis* (§§ 43, 44) to a refutation of all atheistic doctrines from a Jewish standpoint. The wicked say that 'this Universe is the only thing which is perceptible to the outward senses, and visible, having never been created, and being destined never to be destroyed, but being

uncreated and imperishable, not requiring any superintendence or care, or regulation, or management.' This view must lead to universal disorder and anarchy, that means to the ruin of mankind (*ib.* § 44). All that uphold this view are sure to meet with severe but well-deserved punishment, as all wicked people always do (§ 45). The world cannot exist without a ruler, as a house cannot exist without a master, or a country without a leader (*ib.*).

4. Atheism in Talmudic and Rabbinic literature.—The final ruin of the Jewish nation and its great humiliation by the Romans in the 1st cent. after Christ made reckless ignoring or denying of the existence of God impossible. The deepening of the religious sense and the attachment to the great literary products of the past caused by the downfall led to the development of the Talmudic and Rabbinic literature, which henceforth dominated Judaism and put an end to atheistic beliefs and practices. There is no reference in the Talmud to theoretical atheism, and no attempt is made to prove the existence of God. The *Min* or the *Apikoros* (Epicurean) is not necessarily an atheist, but one who denies one of the principles of the Jewish faith. Immortality, Resurrection, Divine origin of the Law, and several other tenets are of equal importance with the belief in God as regards the application of the above designations. The term that approaches most closely the meaning of the word 'atheist' is *kofer be' ikkar* (*i.e.* 'one who denies the first principle'), which occurs for the first time in Bab. *Shabbath*, 16*b*, and is frequently used in modern Rabbinic literature.

Among the Jewish thinkers and religious philosophers of the Middle Ages, there was none who denied the existence of God or could in any way be described as an atheist (although pantheistic ideas are frequently to be found in their works). The problem of reconciling Aristotle with the Bible necessitated the discussion of the question of creation, of the attributes of God, and of the eternity of matter (maintained by the Muhammadan atheists and adopted by Crescas), but the existence of a free, personal God had never been questioned by any Jewish philosopher down to Spinoza.

5. Spinoza.—Spinoza himself can scarcely be described as an atheist. To an atheist nature is possible without God, and matter is responsible to itself—not to mind—for its existence and development. Mind is altogether denied, for the assumption of mind is incompatible with the materialistic conception of the Universe which leads to atheism. Spinoza denies the existence of anything beyond God. Mind and matter are attributes of the same substance, of *deus* (*sive natura*). Certainly there is no free, personal God in existence according to Spinoza, and in a religious sense this amounts to atheism. But man himself is part of God, and is thus in no need of worshipping any Deity. It is the 'intellectual love of God' that makes man perfect—an idea which, although vague and capable of various interpretations, is incompatible with consistent atheism. The influence of the Jewish religious philosophy on Spinoza was too great to allow him to become anything but a pantheist.

6. Modern Jewry.—The philosophical views and ideas of modern Jews are so closely connected with the standard of culture and the ideas of the nations among whom they live, that they do not admit of separate treatment. Every school of thought has its Jewish followers, and Büchner, Darwin, and Haeckel are just as popular among free-thinking Jews as they are among free-thinking Christians. But the charge often made against modern Jews, that the proportion of atheists among them is greater than among their Christian neighbours, is unfounded. There is scarcely a Jewish thinker to be found who has included atheism in his system, while the great masses of the Jewish people all over the globe still faithfully believe in the God of their fathers, and twice daily proclaim their faith in the words of Moses: 'Hear, O Israel, the Lord our God, the Lord is one.' In the last decade or two there has been a tendency growing among the Jewish proletariat of the East of Europe to combine doctrines of atheism and hatred of religion with their socialistic ideas. The well-educated leaders of the working classes succeeded in spreading those doctrines among the young Jewish workers, by providing them with the necessary literature in their own Yiddish language by translation from the European languages. But the rise of the Jewish national (Zionist) movement has in the last few years proved most effective in stopping the growth of those tendencies, and is now bringing the despairing, ill-treated, starving Jewish labourer back to the camp of Israel and to the God of his fathers. With the revival of the hope for better times, the belief in God's mercy and omnipotence has also been revived. A great truth is expressed in the saying of the Rabbins: 'Israel, and the Law, and the Holy One (blessed be He!) are one.' Israel cannot exist without a firm belief in his God, 'the one and only God, the Creator and Ruler of the Universe.'

SALIS DAICHES.

ATHEISM (Muhammadan).—The Muslim world has at no time been a favourable soil for the growth or continuation of agnosticism, and in Arabic literature unorthodox tenets of all sorts are apt to be described by the word *zandaqah*, which, though of uncertain origin (being derived by some from the Syriac, by others from the Persian), is probably the correct term for such systems as deny the existence of a personal God and the moral government of the world. Another name for the holders of such opinions is derived from the word *dahr*, 'time,' and signifies 'believers in the eternity of the world,' *i.e.* in its having no beginning. The earliest persons credited with these doctrines are certain of Muhammad's Meccan opponents, including the leader of the long-continued opposition against him, Abū Sufyān b. Umayyah, who are all supposed to have learned their 'atheism' from the Christians of the Ḥarrah [? Ḥīrah] (Tha'ālibī, *Laṭā'if al-ma'ārif*, p. 64). The charge against Abū Sufyān is not borne out by history, and of the others we know too little to estimate its probability; but the supposition that such opinions would originate from Christians, and especially monks, seems to have been due to the cultivation by Oriental Christians of certain forms of Greek philosophy; whence, in the legend that tells us how the Khalīf Ma'mūn (ob. A.D. 833) acquired his library of Greek books, the Greek king is advised to send his library to the Muslim ruler on the ground that 'these sciences' have never been engrafted on a religious system without ruining it.

In early Arabic writers the system of the *Zindīqs* seems to be inextricably confused with that of Manes, whose followers were fiercely persecuted by the early Abbāsids. The *locus classicus* on the subject for the early Abbāsid period is in the *Zoology* (iv. 141–144) of Jāḥiẓ (ob. A.D. 869), where, however, a *Zindīq* is confuted by the Khalīf Ma'mūn by means of a puzzle which could only trouble one who believed in dualism. The verses which the author cites show, nevertheless, that the

persons with whom he is dealing held the leading tenets of the atheists: 'You have given presents,' says Ḥammād 'Ajarrad in a lampoon on 'Umārah b. Ḥarbiyyah, 'to one who asserts that the heavens made themselves, and that the earth was not laid out by its Creator.' On this the author makes the curious remark that no one asserts that the universe with its organization came of itself, and that Ḥammād's ascription of this doctrine to the persons whom he lampoons might count as a proof that he held them innocent; and that, in fact, the satirist was himself a colleague of the objects of his lampoon. Jāḥiẓ then proceeds to enumerate the persons who constituted this society of sceptics, and his list contains some names that are familiar from the *Kitāb al-Aghānī*, while others are more obscure: Ḥammād 'Ajarrad, Ḥammād the Reciter, Ḥammād b. al-Zibriqān, Yūnus b. Hārūn, 'Alī b. al-Khalīl, Yazīd b. al-Faid, 'Ubādah, Jamīl b. Maḥfūẓ, Qāsim, Muṭī', Wālibah b. al-Ḥabbāb, Abān b. 'Abd al-Ḥamīd, 'Umārah b. Ḥarbiyyah. 'All these were in constant communication, and might be considered one person.' Of these, Yūnus addressed a pamphlet to the Byzantine emperor, showing up the vices of the Arabs and the defects of Islām. Abān figures in a satire by the well-known poet Abū Nuwās (ob. A.D. 810), partly as a follower of Manes, but partly as a rationalist:

'I sat one day with Abān (plague on him!), when the time for the first prayer came, and the call was duly uttered by a correct and clear-voiced speaker.

We all repeated the call to prayer to the end. Then said Abān: "How could you testify to that [*i.e.* the Muslim formula of faith] without ocular demonstration? So long as I live I shall never attest anything but what I see with my eyes." Then I said: "Glory to God"; he said: "Glory to Manes." I said: "Jesus was an Apostle"; he said: "Of Satan." I continued: "Moses was the interlocutor of the Gracious and Faithful One"; he said: "Then your God must have a tongue and an eye. And did He create Himself, or who created Him?" So I held my tongue before this obstinate blasphemer.'

The poet then gives a list of sceptics, containing several of the names that have already been mentioned. In the tales told about them in the *Kitāb al-Aghānī* they are not distinguished from dualists, and 'their book,' which was said to be in the hands of the daughter of Muṭī' b. Iyās when arrested for *zandaqah*, was probably the work ascribed to Manes. In Ṭabarī, iii. 588 (A.D. 786), an account is given of their system which is clearly more positive than negative, enjoining washings, to which Jāḥiẓ (*loc. cit.*) adds respect for animal life and vagrancy.

'Vagrancy means with them that they may not abide two nights in the same dwelling; the vagrants among them always wander in pairs, and adopt four rules—saintliness, purity, veracity, and poverty.'

The author then tells a story about two of these *Zindīqs*, who suffered themselves to be beaten almost to death on suspicion of stealing jewels which they had seen an ostrich swallow, rather than let any harm happen to the ostrich. From these 'atheists' *par excellence* other free-thinkers were careful to distinguish themselves: *e.g.* the poet Basshār b. Burd (ob. A.D. 783), who himself had a reputation for unorthodoxy, and in one of his verses prayed to the Prophet Muhammad to join with him in an attack upon the Deity. Abū Nuwās himself was severely punished for being a 'dualist,' because he ridiculed the angels (Ṭabarī, iii. 964).

Although this sect was persecuted almost to extermination in the 2nd cent. of Islām, this fact did not prevent the rise of other systems branded by the orthodox as 'atheistic.'

The most famous founder of a system of the sort in the latter part or this and the first half of the 3rd Islāmic cent. was Abu'l-Ḥusain Aḥmad b. Yaḥyā al-Rāwandī, reckoned by later historians as one of the three *Zindīqs* of Islām. A sect bearing the name Rāwandī is mentioned by Ṭabarī shortly after the accession of Manṣūr (A.H. 140 [A.D. 757-8]) They came from Rāwand in the country between Qāshān and Iṣfahān, and held the strange opinion that Manṣūr was himself the Deity. Aḥmad al-Rāwandī was somewhat later, as he died in A.H. 245 or 250, but as early as A.H. 189 he recited his works in Baghdad. His followers were also called *abnā'u al-dawlah*, 'sons of the Empire,' with reference to a book by him called 'The Empire,' in about 2000 leaves. He appears to have taught the eternity of matter, as a book was written in refutation of his opinion that 'a body could not be created out of nothing.'*

Besides sectarians, there were persons of importance notorious for holding liberal opinions at most periods of the Khalīfate. In the 2nd cent., atheistic verses, it is said, were composed by the Umayyad Khalīf Yazīd b. al-Walīd b. 'Abd al-Malik (ob. A.D. 744; *Aghānī* vi. 123), who also displayed great contempt for the ordinances of religion. In the 3rd cent. the poet Abū Tammām (ob. A.H. 231 [A.D. 846]) had this reputation, though his extant poems appear to show no trace of unorthodoxy. It was earned with apparently more justice by his successor as chief poet in the following century, Abu'l-Ṭayyib Aḥmad al-Mutanabbī (ob. A.H. 354 [A.D. 965]), whose brilliant odes are, in the opinion of Muslim critics, defaced by utterances which imply disrespect for prophets and revealed religion. His most offensive line in their opinion is one in which he tells his patron, an 'Alid, 'the greatest miracle of the man of Tihāmah (*i.e.* Muhammad) is that he is thy father'; in another he tells a patron that if his sword had hit the head of Lazarus on the battlefield, Jesus would not have been able to restore him to life; and that if the Red Sea had been like his hand, Moses could never have crossed it.

Somewhat later in the 4th cent. of Islām comes the second of the great *Zindīqs*, Abū Ḥayyān 'Alī al-Tauḥīdī (ob. A.H. *c.* 400 [A.D. 1009]), whose works are said to have been more dangerous than those of the others, because, while the others proclaimed their unbelief, he expressed his in innuendoes. Such of his works as are now accessible seem harmless and even pious. Still, in a story told by him in an apparently lost book, copied by Yāqūt in his *Dictionary of Learned Men* (ii. 45–51), he pours ridicule on a secretary of State who is advised by his friends to study Euclid, but finds heresy in the first two definitions, and so will proceed no further. And, indeed, the study of Greek philosophy, of which portions were translated or travestied in Arabic, and taught to aspirants after the medical profession, was generally thought to indicate atheism; and 'the naturalists and physicians,' with whom the astrologer is sometimes joined, are said to deny the resurrection of the body, and therewith the future life.

It is curious that the writer who brings this accusation is himself the third of the great *Zindīqs*, Abu' l-'Alā Aḥmad b. 'Abdallah of Ma'arrah (ob. 1057 A.D.), 'discovered' by Alfred von Kremer, who translated many of his verses. Three of his works in particular were supposed to be tainted with unbelief: the *Luzūmiyyāt*, 'Double Rhymes,' made familiar by von Kremer; the 'Divine Forgiveness,' epitomized by R. A. Nicholson in *JRAS*, 1902; and a volume of poems called 'I ask pardon, and do thou ask it,' of which the present writer has collected some fragments in his dissertation, 'Index operum Abu' l-'Alæ Ma'arrensis,' in the volume of studies in memory of Amari. The most considerable collection of heretical or atheistic

* One of his criticisms on the Qur'ān is quoted in the *Letters* of Hamadhānī (ob. A.H. 396 [A.D. 1005–6]), ed. Beyrūt, p. 18. He asked the grammarian Ibn 'Arābī whether 'to make one taste the garment of hunger' (*Qur.* xvi. 118) was really an Arabic phrase.

epigrams composed by or attributed to this author is to be found in Yāqūt's *Dictionary of Learned Men* (i. 189–194); and, indeed, they seem to go in the direction of agnosticism as far as it is possible to go. All known religions are branded as error. Mankind consists of two classes—the wise who have no religion, and the fools who are religious. The real meaning of the assertion that there is a Creator outside space and time is that he who asserts it has no intellect.

'Do not suppose the statements of the Prophets to be true; they are all fabrications. Men lived comfortably till they came and spoiled life. The "sacred books" are only such a set of idle tales as any age could have and indeed did actually produce. What inconsistency that God should forbid the taking of life, and Himself send two angels to take each man's! And as for the promise of a second life—the soul could well have dispensed with both existences.'

It is remarkable that the author should also have preached vegetarianism in an extreme form, as apparently was done by the earlier *Zindīqs*; still more, that he should have devoted much of his time to the composition of sermons and other works of an edifying character.

In orthodox circles the possession of philosophical books long continued to be an indication of heretical tendencies, and the burning of such books by authority was not uncommon. The employment of Avicenna and similar students of Greek systems in government offices was unpopular, and is condemned by historians. In the 6th cent. of Islām there was a considerable development of pantheistic Ṣūfiism, which produced a series of works which, under pretence of orthodoxy and devoutness, in reality substituted for the personal God and the future life of Islām notions that were irreconcilable with either and were supported by an interpretation of the Qur'ān so far-fetched as to be ludicrous and irreverent. The most famous of these are the poem of Ibn al-Fāriḍ (556–632 A.H. [A.D. 1161–1235]), called from its rhyme *Tā'iyyah*, and the treatise of Ibn 'Arābī (550–638 A.H. [A.D. 1155–1240]) called *Fuṣūs al-Ḥikam*, 'Gems of Maxims.' Both these works at different times brought their owners into danger, and were the cause of riots (see Ibn Iyās, *History of Egypt*, ii. 119 [875 A.H.] and 219 [888 A.H.], where the latter book is described as the work of a worse unbeliever than Jew, Christian, or Idolater). Of the comments on the Qur'ān which this work contains it is sufficient to cite that on the story of the Golden Calf; according to Ibn 'Arābī (or the Prophet, who revealed this work to him in a dream), Moses found fault with his brother for not approving of the worship of the Calf, since Aaron should have known that nothing but God could ever be worshipped, and therefore the Calf was (like everything else) God.

Refutation of the opinions of the 'atheists' was one of the purposes of the science called *kalām*, or metaphysical theology. They are divided by the theologian Ghazālī (ob. 505 A.H. [A.D. 1111]), in his treatise called *Al-Munqidh min al-ḍalāl*, into three classes: the *duhrīs*, 'an ancient sect who denied the Creator, maintained the eternity of the world, and the eternity of generation,—these are the *zindīqs*'; the 'Naturalists,' who allow the existence of a Creator, but suppose the life and soul to be the result of the admixture of elements and humours in the body, and to cease at death; and the 'Deists,' viz. Socrates, Plato, Aristotle, and their followers.

A somewhat different division is given in the treatise on *Sects* by Ibn Ḥazm (ob. 456 A.H. [A.D. 1064]), where, after refutation of the Sophists, who make knowledge either non-existent or relative, the author deals with those who (1) say the world is eternal, without Creator or Governor; (2) say that the world is eternal, with a Creator and Governor; (3) say that, besides God, Time, Space, and the Soul are eternal. In addition to the other names that have been mentioned, this author gives the believers in these positions the name *mulḥid*, 'heretic,' and gives the name of one of the upholders of the first as 'Abdallah b. 'Abdallah b. Shunaif. It could not be expected that many names of the supporters of such unpopular opinions would be recorded.

LITERATURE.—There is no treatise, so far as we are aware, in any European language bearing on the subject. The original sources are given in the course of the article.

D. S. MARGOLIOUTH.

ATHLETICS, ATHLETICISM. — Athleticism, notwithstanding the great and elaborate developments which have taken place in the last hundred years, is to be understood only as an expression of a very primitive instinct—the instinct to play. All the evolution of twentieth century sports and games—the elaboration of rules, the development of muscle and nerve—is a provision for the impulse, the same in lambkins and in babies, in savages and in civilized men and women, to stretch their limbs, to overcome elemental forces, to contend against self-imposed difficulties and against each other.

It is interesting, in an attempt to analyze athleticism or to review athletics, to note the various forms of amusement which have sprung from that instinct to gambol, and the various factors in modern sports which make them appeal to various people. It is impossible to treat the subject exhaustively; one could scarcely enumerate all the different kinds of sport, much less discuss them. There are, however, some points worthy of consideration as suggesting the different kinds of development in physique and in character, acquired by different forms of exercise. Walking, running, leaping, dancing, hill-climbing, and swimming are our simplest sports. In these a man pits himself against natural difficulties, for the most part fighting against the force of gravity, and develops muscle and nerve in comparatively gross combinations of movements. In other words, there is achieved by these primitive exercises the kind of development of muscle and nerve which all young animals achieve when they learn to disport themselves in air, on land, or in water. That is the elementary stage of athletics, very like what the savage attains to when he executes a war-dance. It represents the demand of the body to be allowed to grow to its full stature—and a little over. The surplus we call *play*. In these days the same kind of simple development is achieved by such exercises as are now in England associated with the name of Sandow. If one has not opportunity to climb hills or battle with waves, one may 'bring up' the muscles by daily contest with improvised forces of an elastic nature, when the strain and the stress are finely adjusted and each day's ambition is to increase both. At this level of athleticism there seem to be only two kinds of gain—the opportunity to get rid of surplus energy, and the function of the muscle substance and the skin in disposing of elements in the blood which clog the vital mechanism.

Another kind of effect is experienced when implements are introduced for outdoor sport. About the simplest of exercises at this level are stilt-walking and pole-vaulting, and here we begin to realize a development which can never be achieved by primitive exercises. The feeling one has in pole-vaulting, when, by his own effort, he raises himself on a pole over a nine-foot fence, is quite different from the effect in simple high leaping. So also is the effect of high stilt-walking. In both of these there is demanded also a skill in movement which, added to the pleasant sensation,

makes a nerve-muscle combination on a plane much higher than that of natural movements.

This brings us to the innumerable varieties of games in which a ball of some kind is used. Of these football is the most elementary, so far as the impedimenta of the game are concerned. There has always been a great difference of opinion as to whether the Rugby or the Association game is the better, but the discussion is idle, for the two games are not comparable. The feeling and the skill in a Rugby game when one plays with an oval ball and is allowed to use one's hands freely, are obviously quite different from those of an Association game, which is played with a round ball and in which the use of the hands is not allowed. The same sort of idle dispute is waged over the respective advantages of golf and cricket. The two games have little in common, except that, in both, one tries to strike a ball with an implement under conditions which usually make the stroke difficult, and in those who are skilful at such games the nerve-muscle development is of a very high order. The same, of course, is true of other games—lacrosse, hockey, tennis, racquets, lawn-tennis, croquet, and the rest. A most important change comes about when the athlete employs something to carry him—a boat to row in or to sail, a bicycle, motor, or horse. The game of polo is probably the most athletic of all games. It develops strength and endurance; it requires co-operation between man and beast which is always inspiriting; and to be able to strike a ball which may be moving with great rapidity, the striker himself riding at breakneck speed, while all the time one hand is engaged with the pony, betokens a development of eye and nerve and muscle of the highest order. One is naturally tempted to pass from polo to other forms of horseback exercise, but one may not dwell upon the glories of the chase.

1. The *hygienic* effect of athleticism is its first justification. The contribution to the health of the community derived from sports is incalculable. It consists chiefly in the development of the chest from full breathing of fresh air; in the increase in the circulation from the acceleration of the heart's action; in the quickening of appetite and the promotion of digestion; in the elimination of waste products achieved by muscular exercise, rapid breathing, and perspiration; and, perhaps most important of all, in the rest and change it affords to a tired and dull brain. When we hear any one ask what form of exercise would be best for him, our answer, especially in the case of adults, should almost invariably be—that which he most enjoys. Even exercises so mild as bowling and croquet promote nearly all the good results just enumerated if entered into with zest and keenly pursued. On the other hand, caution should be exercised lest excess of effort lead to injury. The most important ill effect, and one not sufficiently considered and often entirely overlooked, is a dilatation or strain of the heart. This sometimes occurs in young people who are pressed to do too much. Boys at school may suffer irreparable injury from being made to play a strenuous game of football, or take a long cross-country run, when they are not toned up to the effort. More frequently heart-strain occurs in adults who are of a sporting nature—men who, perhaps on the occasion of their school sports, come ill-conditioned from the desk and try a quarter-mile race; or who tramp for eight hours on 'the Twelfth' without preparation; or who are carried away in the Christmas vacation, after weeks of muscular idleness, and ride to the finish on their first day with hounds. The next most important injury is perhaps apoplexy—a rupture of a blood-vessel. We read frequently of some one having suffered a paralytic shock when engaged in sport, and that means that he has neglected his exercises and allowed his blood-vessels to become hard, then has subjected them to an unwonted stress. It is doubtful if bones become brittle from want of exercise, though some authorities maintain that they do. It is certain that, without exercise, muscles become flabby and cannot meet unwonted demands of a severe kind. In wrestling, for example, which has become very popular of late (and deservedly so, for it calls into play more functions than any other game not implemented by tools), one is apt to ask the bones and muscles to do too much, and strain and laceration of muscle are very likely to follow. The lesson to be gathered is that one should keep oneself as fit as possible, take as much moderate exercise as may be, but never attempt anything severe without due preparation.

2. The good and the ill effects of athletics *in moulding character* are not to be so plainly set forth. It is certain, however, that sports have been and are of enormous importance in their effect upon a nation's mind and morals; and probably nowhere so much as on British soil. The kind of trite saying which echoes 'the Duke's' remark about our battles being won on the playgrounds of our schools, describes only a fraction of the influence exerted by athletics on a people's character. It would be unwise to be an unconditional advocate of sport, but it is useful to try to see what the effects of it are.

It may be well to dispose first of the evil effects often attributed to athletics. And, at the outset, let us observe that athletics never can give to man or boy, woman or girl, what they did not have at least potentially before. Athletics are a form of education, and can only elicit and develop the qualities, physical and mental, good or ill, already gifted by nature. Thus, for example, we are told that athletics tend to make men brutal, but that is true only of those who are already cruel. In any case, well-conducted sport, as, for example, modern football with its penalties for rough play, tends all the other way. In the present writer's opinion, the charge is most fairly laid at the door of those who conduct big 'shoots' in which there is wanton destruction of birds which may almost be described as domesticated fowl; and there are other so-called sports sometimes conducted so as to transgress the law of sport that every creature should be given a fair chance. But these are the exceptions. A good Master of Hounds is as humane as he is expert, as just as he is ingenious, in the pursuit of stag, fox, or otter. To a big-game hunter the temptation to kill for killing's sake, when, as often happens, no other white man is at hand to see, may be considerable. But even then self-restraint and humanity are part of the etiquette of the sport. Sometimes it is alleged of single-handed games, like golf, that they are selfish; that, when a man is playing for his own hand, he is doing something not so good as when he is playing for his side, as in cricket. The argument is superficial, as both results and theory show. It is safe to assert that the average cricketer plays as selfishly as the average golfer. In both cases the play itself makes wholly for self-forgetfulness. The man who, at the moment of the stroke, thinks what is going to happen to him because of it will thereby spoil his game. Both games, and all games, weed out those whose attention is not wholly upon the thing to be done at the moment. It will be found that most of the 'selfishness' in games crops up in the talk of the pavilion or clubhouse, when the salutary stimulus of the game is withdrawn. Other evils spoken of, and especially gambling, are quite accidental, and are no more part of athletics than weather or geography.

On the other hand, the advantages which ath-

letics confer cannot be gainsaid. First come the qualities which go to make up what we confusedly call physical courage—pluck, endurance, and indomitable resolve. But these are transferred in essence to a higher plane, and a sound athletic training teaches the adult, if he has it in him, not to be afraid, not to give in, and not to think too meanly of himself. Probably the most important, because the most constant contribution—and a very desirable one—is that which well-ordered games make to those qualities which are related to a sense of justice. It is questionable if it be possible to convey to a youthful mind a living meaning of fair play by any method so well as by the give-and-take of the playground. There also is to be learned a most wholesome discipline. First and foremost comes the training of the colt, to use a cricket phrase, reined and whipped to abide by the rules of the game, taught the obedience which he must give to the captain of his team, the unselfishness which he must show in sacrificing himself for the good of his side; and such discipline is invaluable. And in games, more easily perhaps than by any other means, a lad learns to take a just measure of himself, neither too high nor too low, to know what he can and what he cannot do, wherein he excels his fellows and wherein he falls short. Finally, we may repeat, one of the greatest advantages of sport, though not immediately recognized as of value, is that it offers an opportunity for sheer forgetfulness of the oppressive things in life, when in the zest of a mild game or the excitement of a dangerous contest, the sportsman is 'beside himself' for a brief spell, wholly removed from the sense of laboriousness and hardship and care. That way sanity lies. See also art. GAMES.

AMUSEMENT, GAMES, SPORTS.

G. R. WILSON.

ATIMIA.—An Athenian in full enjoyment of all civic rights was spoken of as *ἔπιτιμος* (*ἐπιτιμία* of the condition); the word *ἀτιμία* denotes, therefore, the various degrees of penal limitation of such rights (Lat. *capitis deminutio*).

How old such limitation of rights was in Athens is not known; it occurs as early as the legislation of Dracon (about B.C. 620), and by Solon's time (B.C. 594) apparently a large number of Athenians had incurred disfranchisement on various grounds. Solon restored their civic rights to such, with the exception of those who for treason or crimes of violence were in exile. From the wording of his law (Plut. *Sol.* 19) it would appear that we should distinguish two classes: (1) those who were living at Athens disfranchised, and (2) those who had gone into exile, which necessarily also involved loss of civic rights, and must in many cases have involved loss of property also; but it does not therefore follow that such perpetual exile should be regarded as forming part of the penalty of *ἀτιμία*, any more than that the confiscation of property, which in post-Solonian times is found sometimes conjoined with it, is so to be regarded. It is possible, indeed, that the Athenian law never attained a perfect clearness of conception in regard to this connexion.

The *locus classicus* upon this subject is a passage of Andocides (*de Myst.* 73 f.), in which he distinguishes the following three varieties of *ἀτιμία*: (1) deprivation of civic rights and confiscation of property, in which category he enumerates only public debtors; (2) loss of civic rights, without confiscation—inflicted upon thieves, those who received bribes, those guilty of breaches of military duty or thrice convicted of perjury, or children convicted of unfilial conduct; (3) a minor degree of disfranchisement (*κατὰ προστάξεις*), in which certain specific disabilities were inflicted for certain varieties of offence.

The distinction of three degrees of 'atimia,' made by Meier in his treatise *de Bonis Damnatorum* (Berl. 1819), which he entitles *infamia maxima, media*, and *minima*, upon the analogy of Roman law* and upon the basis of the above-cited passage of Andocides, does not seem to be substantiated by the evidence. For the passage of Andocides is clearly of the nature of a popular classification, which omits several well-established categories of offences, and is in general devoid of any logical principle of division. It would seem safer to adhere to the view enunciated by Caillemer, according to which 'atimia' *per se* was limited to the civic status of the subject; but we must also recognize that in practical effect it was a necessary concomitant of a sentence of exile (*ἀειφυγία*), and that, on the other hand, confiscation might in certain cases be conjoined with a sentence of *ἀτιμία*.

From this point of view 'atimia' must be distinguished simply as (1) total, and (2) partial.

1. Total 'atimia' meant the entire loss of civic personality (Lat. *caput*), so far as its active functions were concerned. The citizen who was pronounced totally *ἄτιμος* † was incapable of holding any civil or priestly office within the Athenian empire, or of acting as herald or ambassador; he might not appear in the Agora or attend meetings of the Senate or Assembly, or appear in any public sanctuary or public ceremonial; nor could he appear either as principal or witness in any court of law (see the enumeration of disabilities in Æschines, i. 21; Demos. *Meid.* 87: *οὔτε λαχεῖν ἀδικηθέντα*). Under the conditions of Athenian life the prohibition against taking part in the business of the public Assembly (*λέγειν καὶ γράφειν*) naturally covered most of the privileges here enumerated, and consequently this right is frequently spoken of as that which *par excellence* was forfeited by the *ἄτιμος* (Demos. *Steph.* i. 79: *τίνα τῆς πόλεως . . . καὶ τῆς ἐν αὐτῇ παρρησίας ἀπεστέρηκα*). In general, the condition of the *καθάπαξ ἄτιμος* was inferior to that of the alien (Demos. *Theocr.* 88: *μηδ' ἐλπίδα ἡμῖν εἶναι μηδεμίαν τοῦ μετασχεῖν τῆς καὶ τοῖς ξένοις διδομένης παρρησίας*), and is spoken of by Isocrates as worse than exile (Isocr. xvi. 47: *ἀτιμίας, ἣν ἐγὼ φυγῆς μείζω συμφορὰν νομίζω· πολὺ γὰρ ἀθλιώτερον παρὰ τοῖς αὐτοῦ πολίταις ἠτιμωμένον οἰκεῖν ἢ παρ' ἑτέροις μετοικεῖν*).

The *ἄτιμος*, in fact, was in the State, but was not of it.‡ Precisely how far his disabilities extended is not known; our authorities do not furnish an answer to all questions which suggest themselves. It has been pointed out, for example (see art. ADOPTION [Greek]), that *ἀτιμία* on either side would be a practical bar to adoption; but whether in law it was so is uncertain, and the suggestion might be hazarded that, in order to prevent the extinction of a family, testamentary adoption, at any rate, may not have been denied. Again, the case of one holding an hereditary priesthood presents a difficulty. And we may ask what legal protection was given to the life and property and personal dignity of one who was *ἄτιμος*, and under what forms. The consequences of *ἀτιμία* in detail are not treated by modern writers, who content themselves with the above-given generalizations as to its significance; but even these cannot be taken quite *au pied de la lettre*. It may be conjectured that redress of personal wrongs in the case of an *ἄτιμος* was secured, if at all, by means of a public prosecution (*γραφή*) undertaken by a friend of the aggrieved (see Demos. *Meid.* 47). The free use of depositions, which obtained in Attic legal procedure, would obviate the difficulty in regard to evidence (cf. Demos. *Meid.* 95). If so, we must say that in point of law a sentence involving total

* *Dig.* iv. 5. 11: 'Capitis deminutionis tria sunt genera, maxima, media, minima; tria enim sunt quæ habemus, libertatem, civitatem, familiam. Igitur cum omnia hæc amittimus [*e.g.* by death or slavery], maximam esse capitis deminutionem; cum vero amittimus civitatem, libertatem retinemus, mediam esse,' etc.

† Cf. Demos. *Meid.* 87: *ἀπέντων ἀπεστέρηται τῶν ἐν τῇ πόλει καὶ καθάπαξ ἄτιμος γέγονεν.*

‡ Cf. Arist. *Ath. Pol.* viii. 5: *ἄτιμον εἶναι καὶ τῆς πόλεως μὴ μετέχειν.*

ἄτιμία was equivalent to civil death, but stopped short of outlawry.* Attic law protected even the murderer who had fled beyond jurisdiction (*CIA* i. 6[4] ; Demos. *Aristocrat.* p. 631).

The crimes for which total disfranchisement was the penalty were the following : †

(1) *Treason* (προδοσία).—The penalty was death, confiscation of property, and a declaration of ἀτιμία, which became the unavoidable inheritance of the heirs of the disfranchised, falling also upon any who subsequently adopted them. To the same penalties those were liable who conspired to subvert the democracy (δήμου κατάλυσις).

(2) *Theft* (κλοπή) in its more serious forms ; cf. Andoc. *l.c.*: ὁπόσοι κλοπῆς . . . ὤφλοιεν, τούτους ἔδει καὶ αὐτοὺς καὶ τοὺς ἐκ τούτων ἀτίμους εἶναι.

(3) *Corruption* (δῶρον or δωροδοκία of the recipient ; δεκασμός of him who bribed) on the part of public functionaries (Demos. *Meid.* 113). For some forms at least of this offence the penalty was hereditary ἀτιμία and confiscation of goods.

(4) *Various offences in respect of military service by sea or land*—refusal to serve, desertion, cowardice in the field, etc. (Andoc. *l.c.*: ὁπόσοι λίποιεν τὴν τάξιν ἢ ἀστρατείας ἢ δειλίας ἢ ἀναυμαχίας ὤφλοιεν ἢ τὴν ἀσπίδα ἀποβάλοιεν). For all such offences disfranchisement was the penalty, and in some cases confiscation seems to have been conjoined.

(5) *Perjury* (ψευδομαρτυρία, with the particular variety ψευδοκλητεία, false assertion of service of writ). According to Andoc. *l.c.*, disfranchisement was incurred only after a third conviction, but other authorities seem to prove that a single conviction was sufficient (see Wyse on Isæus, v. 17 and art. PERJURY).

(6) *Unfilial conduct* (κάκωσις γονέων).—The law seems to have specified four varieties of the offence—actual ill-treatment, withholding food, expulsion from the house, and refusal of funeral ceremonial.

(7) *If a man gave in marriage to an Athenian citizen a foreign woman, falsely alleging her to be his daughter and a citizen of Athens*, he incurred loss of civic rights and confiscation of property.

(8) *Contempt of the sentence of a court or of the Council or Assembly.*—Disfranchisement fell upon a President of the Assembly (πρόεδρος) who put to the vote the illegal question of remitting a debt to the Treasury.

(9) *Unauthorized proclamations by the herald in the theatre.*

(10) 'Any one who *suffers injustice at the hands of the public Arbitrators* (διαιτηταί) may appeal to the whole Board of Arbitrators ; and if they find the magistrate guilty, the law enacts that he shall lose his civil rights' (Arist. *Ath. Pol.* 53 : case in point, Demos. *Meid.* 87). A Heliastic court could confirm or reverse this verdict on appeal.

(11) *Offences against the dignity of a superior magistrate* (Demos. *Meid.* 32 ; Greenidge, *Rom. Publ. Life*, p. 190).

(12) Disfranchisement was the penalty for any *proposal to modify the old* (*Drakonian*) *law relating to homicide.*

(13) *Condonation of a wife's adultery*, if she were caught in the actual commission of the offence.

(14) A law attributed to Solon visited with loss of civil rights the man who *in time of party-strife* (στάσις) *did not take a side* (Plut. *Sol.* 20 ; cf. Cic. *ad Att.* x. 1. 2 : 'ego vero Solonis, popularis tui, ut puto etiam mei, legem neglegam, qui capite sanxit, si qui in seditione non alterius utrius partis fuisset.' See on this Grote, *Hist. of Greece*, iii. 144 ; Mahaffy, *Problems in Greek History*, p. 87 n. The intention was that he should side with the established government, for armed assault upon it was itself a capital offence). This law was apparently obsolete by the end of the 5th cent. B.C.

(15) A law of Solon, traditionally derived from Egypt, but probably in existence in Drakon's time, made ἀτιμία the penalty on *a third conviction for incorrigible idleness* (ἀργία).

(16) Disfranchisement was the penalty for those who, having been guilty of *unchastity for hire* (ἑταίρησις), took office or spoke in the Council or Assembly, or who had *wasted their substance in riotous living.*

(17) Every citizen who, having reached the age of 59, at which he was competent to serve as *Public Arbitrator* (διαιτητής), *failed to do so*, became ἄτιμος (Arist. *Ath. Pol.* 53).

2. Partial atimia signified that a man lost certain of his rights, retaining in respect of the remnant an equality with his fellows. Partial 'atimia' in its various forms was the penalty in the following cases :

(1) Generally, one who initiated a public prosecution (γραφή) and thereafter dropped it, or who in the event did not obtain a fifth part of the votes of the jury, was fined 1000 drachmas and lost the right to bring a similar suit in the future (Harpocr. : ἐάν τις γραψάμενος μὴ μεταλάβῃ τὸ πέμπτον μέρος τῶν ψήφων, ὀφλισκάνει χιλίας καὶ πρόσεστιν ἀτιμία τις. Andoc. *l.c.*: ἑτέροις οὐκ ἦν γράψασθαι, τοῖς δὲ ἐνδεῖξαι, which would seem to include all forms of γραφαί ; others think that only the particular form in which the prosecutor failed was henceforth debarred to him. See Goodwin's Demos. *de Cor.* p. 331, n. 3).

(2) Any one who had been thrice convicted under a γραφὴ παρανόμων of submitting illegal or unconstitutional proposals was debarred in future from making any further proposals in the Senate or the Assembly.

(3) Certain disabilities attached to certain specified classes (these are cases of ἀτιμία κατὰ προστάξεις properly so called, although Andocides, *l.c.*, applies this term to all cases of what we have called 'partial atimia'). For example, those citizens who had remained in the city and constituted the military force of the Oligarchs in B.C. 411 were deprived of the right of sitting in the Senate or the Assembly. Andocides mentions other cases of deprivation of specific rights, but we know not on what grounds it was inflicted.*

3. Conditional atimia.—To these two degrees of disfranchisement, a third variety, which may be styled 'conditional atimia,' must be added. This form was not in consequence of a verdict of any court of law, but was in a way voluntarily assumed. The class concerned is that of all who were in any degree debtors to the Treasury. All such debtors as failed to meet their obligation by the date fixed by law became *ipso facto* ἄτιμοι in the full sense of the word until the debt was paid. The amount of the debt was immaterial. A list of such State-debtors was kept by the Praktores in the Acropolis. The ninth Prytany, or decimal part of the year, constituted the official limit of grace, on the expiry of which the Poletai sold the possessions of the debtor to double the amount owing ; in the meantime the debtor remained disfranchised, and if the proceeds of the sale were insufficient to pay the debt, he continued so until the balance was forthcoming. If the debtor died before the balance was paid, his heirs inherited his ἀτιμία until the claims of the State were finally satisfied. The moment the debt was discharged, full civil rights were *ipso facto* regained. In a general way, then, it rested with the man himself to retain or lose his citizen rights on this account. The institution of the Eranos, or Club, must have been of some importance in this regard.

If an ἄτιμος continued, nevertheless, to exercise any of the rights which he had lost, he was liable to the summary processes of arrest (ἀπαγωγή) or ἔνδειξις (information laid before a magistrate).† If transgression was proved, he might be punished, without further proceedings or appeal, with imprisonment or death. The above methods would be employed when there could be no dispute as to the existence of the disability, *i.e.* when the ἀτιμία was the consequence of conviction on some charge for which it was the penalty. It was possible, however, that a man might be notoriously or otherwise guilty of conduct (*e.g.* ill-treatment of parents, or unchastity—ἑταίρησις) which, if proved, involved disfranchisement, though he had never, owing to public apathy or his own influence, been charged before a court therewith. So long as he did not challenge public opinion by conspicuous exercise of his civil rights, he was safe ; but the attempt to speak in the Assembly or to hold office rendered him liable to the process called ἐπαγγελία δοκιμασίας, or challenge to stand judicial inquiry into character before a jury court. If the jury

* Outlawry was indeed known and applied by the Greeks, but is not indicated by the single expression ἄτιμος without the addition of further explanatory terms and phrases (see art. OUTLAWRY).

† In order to keep the article within bounds, a general reference to the classical work of Meier and Schömann, *Der attische Process* (new ed. by Lipsius, 2 vols., 1883–1887), for the justificatory texts must here suffice.

* Seeing that a woman had no political rights, perhaps we may class here the 'atimia' which by a law of Solon fell upon a woman taken in adultery : she was forbidden to adorn herself or to enter the temples (Æsch. *Timarch.* 183 : ἀτιμῶν τὴν τοιαύτην γυναῖκα καὶ τὸν βίον ἀβίωτον αὐτῇ παρασκευάζων).

† For a complete discussion of these processes, consult Meier-Schömann, *Der att. Proc.*[2] 270–294.

found a verdict of guilty, sentence of disfranchisement was formally pronounced. Whether from the moment of the challenge the right to ascend the Bema, etc., remained in abeyance until the issue of the trial is uncertain.

It is to be observed that a sentence of 'atimia,' once pronounced, was perpetual, and, moreover, was in certain cases an inheritance no more avoidable by a man's heirs than was his other estate (see art. INHERITANCE). Rehabilitation, at any rate, was so hedged round with conditions as to make it hopeless in the vast majority of cases. No citizen could propose a restoration of civic status to one disfranchised, without the protection of a preliminary Bill of Indemnity (ἄδεια), for the validity of which at least 6000 votes were requisite (Demos. *Timocr.* 46: ἄλλος οὗτος νόμος, οὐκ ἐῶν περὶ τῶν ἀτίμων οὐδὲ τῶν ὀφειλόντων λέγειν οὐδὲ χρηματίζειν περὶ ἀφέσεως τῶν ὀφλημάτων οὐδὲ τάξεως, ἂν μὴ τῆς ἀδείας δοθείσης, καὶ ταύτης μὴ ἔλαττον ἢ ἑξακισχιλίων ψηφισαμένων—by which we should probably understand 6000 votes in all, not 6000 affirmative votes). If the Bill of Indemnity were passed, the main proposal would be carried as a matter of course. But it is, in fact, easier to find examples of rehabilitation on a large scale than on a small, as, for example, the Act of Rehabilitation passed by Solon (Plut. *Sol.* 19). In times of national peril, above all, such wholesale enfranchisement was not infrequent (cf. Cic. *in Verr.* v. 6: 'perditæ civitates desperatis iam omnibus rebus hos solent exitus exitiales habere, ut damnati in integrum restituantur, vincti solvantur, exules reducantur, res iudicatæ rescindantur'). Examples from Athenian history are the decrees passed just before the battle of Salamis, and during the siege of Athens, and after the defeat at Chæroneia (see art. AMNESTY).

In the above account no notice has been taken of a species of ἀτιμία which, although a natural consequence of certain acts, was yet not part of their legal penalty. 'Atimia,' in this non-legal sense of the verdict of popular opinion, is alluded to by Demos. *Meid.* 72 (of the insult of a blow received in public), and by Aristotle (of the dishonour attaching to the suicide).* Similarly, and equally naturally, the sycophant, the disowned son, and the children of a man who had been executed, were all under this species of 'atimia' (cf. Demos. *Arist.* i. 30).

'Atimia' in this non-legal sense in Athens is akin to 'atimia' as it presents itself at Sparta, where there was not the same development of legal ideas and procedure; but all the more strong there was the force of public opinion, which perhaps to a greater degree than elsewhere in Greece was identical with law. At Sparta such 'atimia' fell upon all departure from the customs of the community (Xen. *Resp. Lac.* x. 7, iii. 3). An example is the case of Aristodemos who survived the battle of Thermopylæ (Herod. vii. 231: ἀπονοστήσας ἐς Λακεδαίμονα εἶχε ὄνειδός τε καὶ ἀτιμίην; cf. Xen. *op. cit.* ix. 4; Plut. *Ages.* 30). Those who surrendered at Sphacteria, however, were treated more leniently (Thuc. v. 34: ἤδη καί ἀρχάς τινας ἔχοντας ἀτίμους ἐποίησαν, ἀτιμίαν δὲ τοιάνδε ὥστε μήτε ἄρχειν μήτε πριαμένους τι ἢ πωλοῦντας κυρίους εἶναι—a penalty corresponding to 'partial atimia' at Athens). The number of those defeated at Leuctra made it impossible to carry out the law even to this extent. Spartans who remained unmarried were also subjected to a certain 'atimia,' being deprived of all claim of respect from their juniors, and excluded from certain festivals (Plut. *Lyc.* 15). Inability to provide the fixed contribution to the common mess excluded a Spartan *ipso facto* from the class of Peers (ὅμοιοι), which probably implied the loss of political rights, as distinguished from the civil rights, of citizenship (Arist. *Polit.* ii. 9; Xen. *Hell.* III. iii. 5). Apparently full rights were at once recoverable by conformity to the required conditions; even Aristodemos by his valiant conduct at Platæa recovered caste, though not, indeed, entirely (Herod. vii. 231 and ix. 71). It would hence appear that 'atimia' at Sparta was in general analogous to what we have called 'conditional atimia' at Athens.

The existence of 'atimia' as a penal measure is proved for other States of Greece (*e.g.* Chalcis and Eretria in Euboea, Chios, Lokris, Ephesos, etc.) by inscriptions ranging in date from the 5th to the 1st cent. B.C. In certain cases Athenian influence may have operated, as in Euboea (see Hicks, *Manual of Greek Historical Inscriptions*², No. 40: ὁμόσαι δὲ Χαλκιδέων τοὺς ἠβῶντας ἅπαντας. ὃς δ' ἂμ μὴ ὀμόσῃ, ἄτιμον αὐτὸν εἶναι καὶ τὰ χρήματα αὐτοῦ δημόσια); and perhaps also at Delphi, where, in the 2nd cent. B.C., at any rate, State-debtors were ἄτιμοι (Dittenberger, *Sylloge*², No. 306). But, in general, it is probable that the penalty of 'atimia' was practically a universal method among the Greek States, and followed immediately from the Greek conception of the relationship between the State and the individual (on this subject see Newman's *Politics of Aristotle*, vol. i. p. 30 f.).

LITERATURE.—Besides the works above specified, see also P. van Lelyfeld, *De infamia iure Attico*, Amst. 1835; H. M. E. Meier, *Historia iuris attici de bonis damnatorum*, Berl. 1819; Thonissen, *Le Droit pénal de la république athénienne*, Brussels, 1875. Paul Usteri, *Ächtung und Verbannung im griechischen Recht* (Berl. 1903), gives the most exhaustive treatment of the subject; following out the ideas of H. Swoboda (in *Arch-Epigr. Mitt. aus Österr.-Ung.* xvi. [1893] p. 49 f.), he draws a sharp distinction between ἄτιμος in the sense of 'outlawed' and ἄτιμος = 'disfranchised,' but without apparently attaining any very significant result.

W. J. WOODHOUSE.

ATĪSA (or **Dīpaṅkara**).—A learned Indian Buddhist friar, who effected the most profound reformation of Lāmaism. Entering Tibet in A.D. 1038, and finding the prevalent Buddhism in the hands of an immoral priesthood and extremely debased by demonolatry, he founded a new Order, on a purer Buddhist model, which he called 'Bound by the Orders' (*Kah-dam*). This afterwards became the 'Yellow-cap' sect or 'the Virtue Practisers' (*Ge-luk*), now the dominant State Church. In his reform Atīśa restored celibacy and purged the ritual of much of its grosser devil-worship. He wrote a great many doctrinal works, and translated into the Tibetan scriptures a large number of Indian Buddhist commentaries. The beneficial effects of his teaching also initiated other semi-reformed sects, the Saskya and Kargyu, which arose somewhat later. He died in A.D. 1052 at Ne-t'ang, near Lhāsa, where a large funereal mound, or *stūpa*, was erected over his grave and still exists.

LITERATURE.—C. F. Köppen, *Lamäische Hierarchie und Kirche* (Berlin, 1857–59), ii. 78, 117, 127, 235; L. A. Waddell, *Buddhism of Tibet* (1895), pp. 35, 36, 54, 57, also *Lhasa* (1905), p. 320 f.

L. A. WADDELL.

ATĪTS or, incorrectly, **Atiths**; **AVADHŪTS**, sometimes **Abdhūts**, **Audhūts**, **Avdhūts** (Skr. *atīta*, 'passed away [from worldly care]'; *avadhūta*, 'shaken off').—These two names can conveniently be taken together. They are generally applied in India to any religious mendicants, as indicating that they have 'passed away' from or become liberated from worldly cares, or have 'shaken off' all caste and personal distinction. *Avadhūt* is applied to both Vaiṣṇavas and Śaivas (*qq.v.*); but, so far as the present writer is aware, *Atīt* is applied only to the latter. Mr. Risley,* however, states that Vaiṣṇava Atīts exist in Bihār. In this technical

* Ar. *Eth. Nic.* v. 11: καί τις ἀτιμία πρόσεστι τῷ ἑαυτὸν διαφθείραντι ὡς τὴν πόλιν ἀδικοῦντι. This should not be taken, as is usually done, of a penal consequence. For upon whom should it fall?

* *Tribes and Castes of Bengal*, *s.v.* 'Atit.'

sense, *avadhūta* often occurs in Sanskrit literature, but the technical use of *atīta* seems to be more modern, and to be confined to the vernaculars. *Atīt* is often confounded with the word *atith* (Skr. *atithi*), 'a guest,' which has more than once given rise to fanciful explanations. In addition to this customary general sense, both words are sometimes employed to indicate special classes of religious mendicants.

In this narrower sense *Atīt* is applied to six and a half of the Dasnāmī, or ten sections of Śaiva mendicants, who claim spiritual descent from the great reformer Śaṅkarāchārya (*q.v.*). Three and a half of these sections, who are called *Daṇḍīs* from their habit of carrying a *daṇḍa*, or staff, are considered to have retained Śaṅkarāchārya's doctrine in all its purity. The rest, viz. the Vanas, Araṇyas, Purīs, Giris, Pārvatas, Sāgaras, and half the Bhāratīs, are reputed to have fallen to some extent from orthodoxy, but are still looked upon as religious characters. These are the Atīts. Unlike the Daṇḍis, they carry no staff. They differ from the latter also in their use of clothing, money, and ornaments, their methods of preparing food, and their admission of members from any order of Hindus. Some of them lead an ascetic life, while others mix freely in the world, carry on trade, and acquire property. Most of them are celibate, but some of them marry, and are then known as *saṁyōgī* ('married') or *gharbārī* ('householder') Atīts. They are often collected in *maṭhs*, or monasteries, and some officiate as temple-priests. They wear ochre(*gērū*)-coloured garments, and carry a rosary of the *rudrākṣa* seeds sacred to Śiva. They do not eat flesh or drink spirits. They worship Śiva, usually under the name of Mahādeva or Bhairon, and also pay devotions to the monkey-god Hanumān or Mahāvīra. Their religious theories (when they have any) are based on the *advaita* Vedānta (*qq.v.*) of their founder Śaṅkarāchārya.

The Śaiva Avadhūts (when the word is employed in the narrower sense) are ascetics of a sterner mould. They wear as few clothes as possible, making up the deficiency with mud, and let their hair grow long and matted (technically called *jaṭa*). They practise silence, and live on alms. In the cold weather they may be seen cowering over a small fire. Their life is in every way an extremely hard one. Gorakhnāth (*q.v.*), the founder of the sect of *Kānphāṭā* Yogīs, is often referred to as a typical Avadhūt of this class.

As regards Vaiṣṇavas, the term *Avadhūt* has a special significance. When Rāmānanda made his great reformation amongst the followers of Rāmānuja, and abrogated the distinction of caste in religious orders, he gave this title to his followers, to signify that they had, so to speak, 'put off the old man.' They had 'shaken off' all personal distinction by adopting a religious life, and thus quitting the ties of nature and of society. For an account of the religious tenets and customs of these Avadhūts, see RĀMĀNANDIN and BHAKTI-MARGA.

LITERATURE.—These names can hardly be called the titles of distinctive religious sects, and hence little has been written about them. The above article has been compiled partly from the writer's private notes and partly from the following works: H. H. Wilson, *Essays on the Religion of the Hindūs* (ed. 1861), i. 204 ff. ('Atīt'), 55 ff. ('Vaiṣṇava Avadhūts'); H. H. Risley, *Tribes and Castes of Bengal* (1891), *s.v.* 'Atīt'; W. Crooke, *The Tribes and Castes of the North-Western Provinces and Oudh* (1896), *s.vv.* 'Atit,' 'Awadhūt.'

GEORGE A. GRIERSON.

ĀTMAN.—1. Etymology.—The origin of the word *ātman* is doubtful. It is usual to compare it with the Greek *ἀτμός*, *ἀϋτμήρ*, *ἀϋτμή*, and the Teutonic *ātum*, *āðom*, *æðm*, and it is then derived either from *an*, 'breath' (*Petersburger Wörterbuch*), or *at*, 'go' (Weber), or *av* (=*vā*), 'blow' (Curtius, Grassmann, etc.). The development of meaning would therefore be—(1) breath, (2) soul, (3) self. However, *ātman* in the sense of breath (of the wind) occurs only in four passages of the Rigveda, mostly in hymns of younger date; and, what is more important, we find more frequently in the Rigveda the abridged form *tman* (in the case-forms *tmanam*, *tmanā*, *tmane*, *tmani*, *tman*), in the sense partly of a reflexive pronoun, partly of an adverb. It might then be that *ātman*, and perhaps also the Greek *αὐτός*, originate from two pronominal stems, *a* (in *a-ham*) and *ta* ('this'), and the meaning would be 'this ego,' 'this my own self.' However this may be, the word *ātman* came very early to signify 'the self in contrast with that which is not self,' and this meaning developed in four directions: (1) the own person, the own body, opposed to the outside world; (2) the trunk of the body as opposed to the limbs; (3) the soul as opposed to the body; (4) the essence as opposed to what is not essence. Examples of these various meanings are frequent in the Vedic texts.

2. Philosophical meaning.—It is evident from this that the idea of *ātman*, 'self,' is *relative*, pointing to something which is not the *ātman*, and *negative*, in so far as the positive sense is not in it, but in that which is to be excluded. Such relative-negative concepts are frequent in philosophy, and have been used with great advantage to signify the inner principle of the universe, excluding from it the whole content of the phenomenal world. Of this kind is the *ἀρχή* of Anaximander in contrast to all things which have antecedents; the *ὄν* of Parmenides in contrast to the *γένεσις* and *ὄλεθρος* which rule in the world of sense; the *ὄντως ὄν* of Plato in contrast to the *γιγνόμενον καὶ ἀπολλύμενον*; the *substantia* of Spinoza in contrast to the *modi*, of which the whole world, corporeal as well as intellectual, consists; and the *Ding an sich* of Kant in contrast to the whole phenomenal world, which contains the things only in so far as they exist *for us*, *i.e.* for our intellect in its innate forms, viz. time, space and causality. All these concepts, *ἀρχή*, *ὄν*, *ὄντως ὄν*, *substantia*, *Ding an sich*, are *negative*, for they state only what the principle is not, and not what it is. They are therefore empty of content, and herein lies their great value for the science of metaphysics, which has to do with a subject eternally unknowable. Of this kind is also the concept *ātman*, which requires us to direct our attention towards the Self of our own person, the Self of everything else, the Self of the whole world, and to discard all that, strictly speaking, does not belong to this Self. It is the most abstract, and therefore the best name which philosophy has found for its sole and eternal theme. All those other names, *ἀρχή*, *ὄν*, *ὄντως ὄν*, *substantia*, *Ding an sich*, still smack of the phenomenal world, from which they originate. *Ātman* alone touches the precise point at which the inner, obscure, never-appearing essence of things reveals itself. Nor is it by accident that Indian thinkers, above all others, arrived at this most abstract, and therefore best, expression for the eternal subject of all metaphysics; for the Indian genius is animated by a restless desire to penetrate to the depths, a longing to be rid of all that is external and non-essential, as we shall see later on in some famous examples from the Upaniṣads.

3. Brahman and Ātman.—There are two words, *brahman* and *ātman*, which are often used in the Upaniṣads to signify the inner essence of the individual as well as of the whole world, and which cannot be considered separate from each other. *Brahman* means originally, and wherever it occurs in the Rigveda, 'prayer'; and it is very strange (and recalls the similar case of the Biblical *λόγος*

how this word came to mean the essential principle of the world. In prayer the devotee felt himself elevated above his own individuality, above the phenomenal world, in union with the gods; in prayer he felt awaking within himself a power which was above all beings, above all worlds, and even above the gods. So it came about that to the question already raised in Rigveda, x. 81. 4, 'What was the wood, what was the tree, of which they have carved heaven and earth?' the following answer is given later on in a Brāhmaṇa (Taitt. Br. ii. 8, 9): '*Brahman* was the wood, *Brahman* was the tree, of which they have carved heaven and earth.' We cannot enter here into further details; let it suffice to say that we can follow in the Vedic literature step by step the path by which the word *brahman* from the original meaning 'prayer' came to signify the 'principle of the world.' It might be supposed that a similar development could be traced for the word *ātman*. And, indeed, there are some who believe that, side by side with the theological significance attached to the word *brahman*, there was a more philosophical tendency which circled round the word *ātman*, and that both views expanded more and more until they coalesced in the identification of *brahman* and *ātman* as it is found in the Upaniṣads. But this hypothesis is not confirmed by the facts. It is useless to attempt to gain in the hymns and Brāhmaṇas the necessary materials for a history of the word *ātman*, as we can for the word *brahman*. On the contrary, we see the word *ātman* emerging here and there, and quickly disappearing again, until the Indian thinkers, becoming aware of the advantage of this term, began to use it more and more frequently to express what they felt without being able to clothe it in words. In fact the word *brahman*, 'prayer,' originally expressed a subjective feeling; and it was only by intensifying this subjective, and at the same time metaphysical, character that they came to take hold of the word *ātman* as the most striking and happy expression for the inner essence of the individual, and for the inner essence of the whole world (see art. BRAHMAN). A few examples may serve to illustrate this process.

4. Examples from hymns and Brāhmaṇas.—Even as early as the Rigveda, in the profound and difficult hymn of Dīrghatamas (i. 164. 4), the poet asks: 'Who has seen how the firstborn, being the Bone-possessing (the shaped world), was born from the Boneless (the shapeless)? Where was the vital breath, the blood, the Self (*ātman*) of the world? Who went to ask him that knows it?' Here the poet, penetrating deeper and deeper, passes from the vital breath to the blood, from the blood to the *ātman*, or inmost Self. It may seem strange that the Indian philosophers ask earlier after the Self of the world than after the Self of the individual, but the mind is like the eye, which sees everything else before it sees itself.

Many other quotations of similar import will be found in the present writer's *Geschichte der Philosophie*, i. 1, especially p. 331 ff. It is said, for example, of Prajāpati (a mythical personification of the creative power) in the Taittarīya Āraṇyaka, i. 23: 'In building the worlds and the beings he entered with his own Self (*ātmanā*) into his own Self (*ātmānam*)'; in Atharvav. x. 8. 44: 'He who knows him does no longer fear death, him the wise, undecaying, ever-young *ātman*'; in Taitt. Br. iii. 12. 9. 7: 'He through whom the sun shines, enflamed by glowing fire—only the knower of the Veda when departing this life understands him, the great omnipresent *ātman*. He, living in the Brahmans as their greatness, is not augmented or diminished by works; the Self is his pathfinder; one who knows him is no more stained by evil deed'; in Taitt. Ār. iii. 11. 1: 'He who lives in us as our ruler, who is one, and yet appears in many forms, in whom the hundred lights of heaven are one, in whom the Vedas are one, the priests one—he is the intellectual Self (*mānasīna ātmā*) in man.'

These passages already approach the standpoint of the Upaniṣads, which is fully reached in the so-called 'Science of Śāṇḍilya' (Śatap. Br. x. 6. 3) and Chhānd. Up. iii. 14: 'Verily this world is *Brahman*. Let a man meditate upon it in silence as *Tajjalān* (origin, annihilation, and breath of the world). Mind is his stuff, life his body, light his shape, truth his thoughts, his Self the infinite. All-working is he, all-wishing, all-smelling, all-tasting, all-embracing, silent, unconcerned; He is my soul (*ātman*) in the inner heart, smaller than a rice-corn or a mustard-corn, or a millet-corn, or a rice-corn's kernel; He is my soul (*ātman*) in the inner heart, greater than the earth, greater than the atmosphere, greater than the heaven, greater than all these worlds. The all-working, all-wishing, all-smelling, all-tasting, all-embracing, silent, unconcerned, He is my ātman in the inner heart, He is the Brahman; to Him, when departing, I shall enter. Whoever obtains this, verily he does not doubt! Thus spake Śāṇḍilya, Śāṇḍilya.'

5. The Ātman in the Upaniṣads.—The words just quoted, 'He is my *ātman* in the inner heart, He is the *Brahman*,' contain the two words about which circle nearly all the thoughts of the Upaniṣads. Very often they are used without any distinction; but wherever, as in the quotation just given, a difference is observable, *Brahman* means the eternal principle as realized in the whole world, and *ātman* the same principle as realized in ourselves. Assuming this, the fundamental thought of all the Upaniṣads can be expressed by the simple equation:

Brahman = *ātman*,

meaning the identity of *Brahman* and *ātman*, or, as we should say, of God and the soul. It is thus expressed in the so-called 'great words': *tat tvam asi*, 'that art thou' (Chhānd. Up. vi. 8. 7), and *aham brahmā asmi*, 'I am Brahman' (Brih. Up. i. 4. 10). That means: *Brahman*, the power which creates all the worlds, supports them, and destroys them. This all-mighty, all-pervading, eternal power is identical with the *ātman*, with that which, rightly understanding, we have to consider as our soul, as our own unchanging, imperishable Self. The grandeur of this thought is manifest. We do not know what ways are reserved for philosophy in future ages, we do not know what discoveries may be made in times to come, but so much we know with certainty: if a solution of the riddle which this phenomenal world presents to us is possible in any way to mankind, the key to that riddle can be found only where Nature manifests herself not merely from the outside, but where she exceptionally reveals her secret to us, and allows an insight, however limited, into her abysmal depths, *i.e.* into our own inner Self, into our *ātman*. This way was trodden by the Indian philosophers in the Upaniṣads, and no future time will cease to learn from them. But what have we to consider as our Self, as our *ātman*? It was not without serious researches that the Indians came to a satisfactory answer to this question. *Ātman*, the Self, might be simply the body, it might be the vital principle, the individual soul (*jīva*) in us, it might be something higher than all this. It is wonderful to follow the Indian thinkers in their researches after the real essence of the *ātman*, as they lie open before us in the various Upaniṣads; here, however, we must limit ourselves to a few examples.

In the second *vallī* of the Taitt. Up. the philosopher takes man as he appears as a bodily existence. In so far he consists of food, he is *annarasamaya*, 'consisting of the essence of food'; but this body is only the sheath which envelops something else, the *prāṇamaya ātman*, 'the Self consisting of vital breath.' This, again, hides another being, the *manomaya ātman*, 'the Self consisting of will.' This, again, contains the *vijñānamaya ātman*, 'the Self consisting of consciousness'; and only by removing this, as an envelope, do we come to the inmost Self, the *ānandamaya ātman*, 'the Self consisting of bliss.' Having come to this, the text says: 'Verily this is the essence; for whoever obtains this essence is filled with bliss. For who could breathe, who could live, were not this bliss in the ether of his heart? For it is he who creates bliss. For whoever in that Invisible, Incorporeal, Unspeakable, Unfathomable finds peace, finds rest, he really has come to peace. But whoever assumes in it a distinction, a separation between himself and this *ātman*, there is fear for him; it is the fear of the man who thinks himself wise' (Taitt. Up. ii. 7).

As in this passage five different *ātmans*, one within the other, are distinguished, so another

text speaks of three *ātmans*—the corporeal, the individual, and the highest *ātman*. In Chhānd. Up. viii. 7, Prajāpati said: 'The Self (*ātman*) which is free from sin, free from old age, from death and grief, from hunger and thirst, whose wishes are true, whose counsels are true, that is to be investigated, that is to be understood; he obtains all worlds and all wishes, whoever has found that Self.' These words of Prajāpati were heard by the gods and by the demons; and in order to learn the true Self the gods sent Indra, the demons Virochana, to Prajāpati. He consented to teach them, and began his instruction with the words: 'Look at yourself in a vessel of water, and tell me what of your Self you do not see there.' They answered: 'We see, O venerable master, this our entire Self even to the hairs, even to the nails.' And he said: 'Well, that is the Self, that is the Immortal, the Fearless, that is the Brahman.' They went away with satisfied heart, but Prajāpati said: 'There they go away, without having perceived, without having found the Self.' Virochana, the messenger of the demons, remained content with the answer; but Indra, without returning to the gods, came back and said: 'O venerable master, just as this Self is well adorned when the body is well adorned, well dressed when the body is well dressed, well cleaned when the body is well cleaned, even so that Self will be blind when the body is blind, lame when the body is lame, crippled when the body is crippled, and, in fact, will perish as soon as the body perishes; therefore, I see no consolation in this doctrine.' Prajāpati then led him to a higher conception of the Self, saying: 'He who moves about happy in dreams, he is the Self, this is the Immortal, the Fearless, this is Brahman.' Indra departed, but, before reaching the gods, came back and said: 'Venerable master, it is true that the Self is not blind when the body is blind, not lame when it is lame, it is true that it is not affected by the infirmities of the body; it is not killed when the body is murdered, is not lamed when it is lamed, but it is as if it were killed, as if it were vexed, as if it suffered pain, as if it wept, —in this I see no consolation.' Prajāpati gave a new instruction: 'When a man, being asleep, reposing, and at perfect rest, sees no dreams, this is the Self, this is the Immortal, the Fearless, this is Brahman.' Indra departed, and returned again: 'Venerable master, in that way he does not know himself, does not know "I am this," nor does he know anything that exists. He is gone to annihilation. I see no consolation in this.' And now Prajāpati, after having led his pupil from the bodily Self to the conscious individual Self in dreams, and from this to the unconscious individual Self in deep sleep, revealed the full truth about the Self: 'O mighty Indra,' said he, 'this body indeed is possessed by death. It is the abode of that immortal, incorporeal Self. Possessed is the incorporated Self by pleasure and pain; for, because it is incorporated, there is no escape from pleasure and pain. But the incorporeal Self is touched neither by pleasure nor by pain. Bodiless are winds, clouds, lightning, and thunder; and as these, being hidden in the heavenly ether, rise from it, and, approaching the highest light, appear in their own form, thus does that serene being, arising from this body, approaching the highest light (the knowledge of Self), appear in its own form. He then is the highest spirit. He obtains all worlds and all wishes who knows and understands this Self.'

6. **Conclusion.**—Even in the oldest texts of the Upaniṣads there is found a bold *idealism* which maintains the sole reality of the *Ātman*, and denies an existence beyond the *Ātman*. This standpoint, however, could not be maintained for any length of time, for the reality of the phenomenal world imposed itself upon the mind; and, therefore, the desire to satisfy both convictions, that of the sole existence of the *Ātman* and that of the reality of phenomena, led to a kind of *pantheism* (represented chiefly by the Chhāndogya Upaniṣad), whose thesis was the identity of the universe and the *Ātman*. But this identity, however often proclaimed, was and remained unintelligible. Substituting for it the more comprehensible concept of causality, the thinkers of the Upaniṣads came to what we would call *cosmogonism*, asserting that the *Ātman* was the cause, and the world its effect. The *Ātman* creates this world, and, having created it, He incorporates Himself in it as individual soul.

Taitt. Up. ii. 6: 'He desired: "I will be manifold, I will propagate myself." He performed austerities. Having performed austerities, he created this whole world, whatever exists. Having created it, he entered into it.'

Even thus the *Ātman* remained what it was before, the Self in us. This Self creates the world, and enters into it as the individual soul. As early as the Kāṭhaka Upaniṣad this theory developed into a kind of *theism*, distinguishing between the highest *Ātman* who creates the world, and the individual *ātman* who lives in it. It is very remarkable that this theism then passed into the atheism proclaimed in the Sāṅkhya system. The highest *Ātman*, being distinguished from the individual *ātman*, in which it had its real certification, was no longer sufficiently certified, and was rejected by the thoroughgoing realism of the Sāṅkhya philosophy. There remained only material nature called *prakṛti*, and a multitude of individual *ātmans* called *puruṣas*. The last step in this process of degeneration was the *apsychism* of the Buddhists and the Chārvākas, who in part doubted, in part denied, the *ātman* altogether.

Thus the lofty idealism of the Upaniṣads was altered, and at last destroyed, by the realistic tendencies of a later age.

ATOMIC THEORY (Greek).—The originator of what is called the atomic theory was **Leucippus**, of whom even the ancients knew so little that Epicurus could entirely deny his existence—a conjecture which was revived in modern times, but may now be regarded as finally abandoned. Leucippus' native country was Ionia (Miletus ?), and he lived between the times of Parmenides and Democritus. We are acquainted with his teaching only in the form which it took in the mind of his disciple, **Democritus**. The latter was born at Abdera; but the ancient writers knew nothing about the period in which he lived except what he himself had stated in a written work. He was a young man, evidently, when Anaxagoras had attained a rather advanced age, this would imply that he was in his prime in the years B.C. 430–420 The logical consistency of his thought, the wide range of his knowledge of natural science, and the excellence of his composition, made the success of

his numerous writings very considerable. His views were thoroughly discussed and opposed by Aristotle and Theophrastus.

Leucippus was led to his theory by the reaction against the Eleatic School, whose views had been placed on a scientific basis by Parmenides. It had denied all motion and change, and declared them to be an illusion of the senses; the truth being, they maintained, that reason leads us to perceive that what exists is unchangeable. This assumption so entirely contradicts all experience that a more plausible explanation of the processes of nature had to be found; account had to be taken of Heraclitus' correct observation that a continual change is taking place in the world. But it was no longer permissible to explain—as was formerly done—this change as due to transformations of a primordial substance, for neither could the conversion of fire into water and earth, and *vice versa*, as Heraclitus claimed, be grounded on experience, nor could the Eleatic principle be ignored that anything that is permanent must be present in the change. While the Pythagoreans found this permanent element in number, and therefore entirely abandoned the explanation of materialism, Leucippus and Democritus recognized it in atoms—those particles of matter so minute that they cannot be further divided, and are not perceptible to the senses—of varying size and form, but all consisting of the same substance, or matter, which cannot be more narrowly defined. Particular things come into existence when these atoms combine, and disappear when they separate; but the atoms themselves are eternal and indestructible. The combination and separation of the atoms are not possible unless there be motion, nor this again, as the Eleatic School had already noted, unless there be empty space; but whereas the Eleatics had denied motion and empty space, the atomists held both to be real, indeed to be the only reality (Democr. *Fragm.* 125, Diels: *νόμῳ χροίη, νόμῳ γλυκύ, νόμῳ πικρόν, ἐτεῇ δ' ἄτομα καὶ κενόν*). For these principles Democritus also found support in special observations; *e.g.*, a body can grow only by the nutriment penetrating the open pores.

The atoms differ in form, composition, and condition; with the form is connected the size, and on this depends the weight. But these characteristics of bodies are primary, all other sense-qualities being secondary; *e.g.*, warmth was supposed to appertain to round atoms, whiteness to rough atoms, blackness to smooth atoms, sourness to small angular atoms, and sweetness to larger round atoms (there is some apt criticism by Theophrastus, *de Sens.* 68, in Diels[2], p. 376). Since it depends upon chance which kind of those different atoms that form a body makes most impression upon the senses, these secondary qualities are at the same time subjective (*νόμῳ*, see above). The other elements assumed by physicists are, of course, for Democritus composite bodies; but he made fire an exception by supposing it to consist of only one kind of atom, globular in form. On this point he was no doubt influenced by Heraclitus.

There are great difficulties in the question whence, in the ultimate analysis, the motion arises which causes combination and separation of atoms. It was clear to Democritus that all change is motion in space, though, at the same time, Epicurus was perhaps the first to say so expressly. The old atomists did not answer this question; on the contrary, they assumed an eternal, primordial motion of the atoms, and gave up the idea of specifying its first cause. Whether they thought of the motion as a falling movement like that of gravity or as an irregular whirl is not quite clear. Zeller takes the former view, Brieger and Liepmann the latter. In any case, they had no strict idea of gravitation or of the necessity of falling; and this makes the dispute very difficult to decide. In this motion the particles impinge upon one another, seemingly in consequence of their unequal weight, receive blows, break off other particles, and so produce a whirling motion, a kind of primordial dance in which several atoms combine, provided that their form renders them capable of adhering to one another (the modern theory has actually been led to make similar assumptions). Every such whirl may develop into a world; and this led the atomists to the assumption—to which Plato objected (*Tim.* 55 C)—that there were innumerable worlds, several of which had passed out of existence again through colliding with greater ones. The space between these worlds Epicurus called *μετακόσμια* (in Cicero, *intermundia*). Round the whirling mass of atoms a crust was formed out of hook-shaped particles. This crust, in the course of a long process of rotation, became thinner and thinner (the *flammantia mœnia mundi* of Lucretius, i. 73). The heavier atoms gathered in the middle and formed the earth, the lighter atoms remaining at the circumference. The crust holds fast those bodies which, coming from without, conglomerate at the edge of the world, and are aflame with the velocity of their motion: these are the stars. Worlds may perish by becoming feeble or old, but also by collision with other worlds.

In psychology also Democritus carried his views to their logical consequences. The human soul consists, in like manner, of atoms, and of the most mobile of these—that is to say, of fire-atoms, which are so distributed throughout all bodies that between every two body-atoms there is one soul-atom, and which produce both motion and thought. The preference here given to fire is again due to the influence of Heraclitus. Even the sensations are explained atomically; for instance, sight is produced by fine particles, which retain the form of bodies (*εἴδωλα, δείκελα*), detaching themselves from the surface of bodies and pressing upon the eye. Similarly sound is a material thing. But perception gives only a dull cognition; thought alone makes it clear (*γνώμης δὲ δύο εἰσὶν ἰδέαι, ἡ μὲν γνησίη, ἡ δὲ σκοτίη· καὶ σκοτίης μὲν τάδε σύμπαντα, ὄψις, ἀκοή, ὀδμή, γεῦσις, ψαῦσις· ἡ δὲ γνησίη, ἀποκεκριμένη δὲ ταύτης. Fragm.* 11 Diels).

To the school of Democritus belonged Nausiphanes of Teos (Diels, *Fragm. d. Vorsokr.*[2] i. 462), who became the teacher of Epicurus (*c.* 325 B.C.) and introduced him to the atomic theory. But while it had been the aim of Democritus to explain the world-phenomena in a uniform way, Epicurus merely wished to give his own views on human happiness a satisfactory basis in natural science (*Sent. Sel.* xii. *οὐκ ἦν ἄνευ φυσιολογίας ἀκεραίους τὰς ἡδονὰς ἀπολαμβάνειν*); he regarded the whole of natural science as superfluous except in so far as it served this purpose, and declined to recognize as final any solution of a question if it failed to rid us of fear (*Sent. Sel.* xi.). Consequently he accepted Democritus' theories without introducing much change into them (Cic. *de Fin.* i. 21: 'Quæ sequitur, sunt tota Democriti. Atomi, inane, imagines, quæ *εἴδωλα* nominant'). A number of the changes which he did make have been abortive, and, when carried to their logical conclusions, are such as to shake the foundation of the system. For instance, even the ancient writers had noticed that Democritus did not avail himself of chance as an explanation of certain phenomena (Eudem. *ap.* Simplic. in *Phys.* 330, 14). Epicurus, on the other hand, made frequent use of this expedient.

Again, the only existing things, according to him, are atoms and empty space, and he finds the former characterized by hardness (*ἀντιτυπία*), and the latter by pliability (*εἶξις*). The atoms, on

account of their minuteness, are not perceptible, and yet they are not infinitely small in a mathematical sense, but simply, by reason of their hardness, not further divisible. They fall downwards by their weight, like rain, and with equal rapidity, empty space yielding to them; here then, in opposition to Democritus, a characteristic primordial motion is ascribed to them. Since, however, in this way no contact could ever take place between them, Epicurus found himself forced to make the assumption—fundamentally monstrous, and derided even by the ancients—that certain atoms deviated very slightly ('nec plus quam minimum,' Lucr. ii. 244) from the perpendicular direction, thus colliding with others and producing all those processes which, from Democritus' point of view also, led to the formation of worlds. He made use of this deviation of atoms as an explanation even of the freedom of the will (Brieger, *Abhandl. für Hertz*, Berlin, 1888). The idea that the motion of the atoms is permanent, and does not cease even in the interior of the bodies formed from them, also appears to be new. Even the soul Epicurus makes to consist of material atoms, though not now merely of fire-atoms, but of fire, air, *pneuma*, and an indefinable substance which was supposed to be the vehicle of feeling; thus he gave the soul a separate status in contradiction to the logic of materialism. Perception he explained in exactly the same way as his great predecessor, but he seems to have laid greater emphasis on the identity of perception and motion in the soul-particles, being here, as often, influenced by Aristotle. While Democritus had explained the sense-qualities as subjective, Epicurus ascribes reality to them, and denies that the senses can ever deceive. But since all kinds of atoms are intermingled, and one person perceives more of one kind and another more of another, the same things may affect different men differently (Fragm. 250, Us.). Epicurus' teaching about the mingling was more correct than that of Democritus. The latter had assumed that parts of the mingled matter lay side by side, but was met by Aristotle with the objection that in this way only a medley could arise, and not a real mingling. Consequently, Epicurus now made, not the particles of matter, but the particular atoms come to the side of one another, and thus approached very near to the views of modern chemistry.

The school of Epicurus held to the teaching of its founder with greater tenacity than any other, and consequently in ancient times atomism subsequently underwent no development. Thus Lucretius, although he is hardly indebted directly to Epicurus, but to later Epicureans, faithfully reproduces the views of the master. A little before him lived the physician Asclepiades of Bithynia, who grounded his theory of medicine on the basic ideas of the Epicurean doctrine of atoms (M. Wellmann, in Pauly-Wissowa, ii. 1632).

ATOMIC THEORY (Indian).—In the oldest philosophical speculations of the Brāhmans as preserved in the *Upaniṣads*, we find no trace of an atomic theory; and it is therefore controverted in the *Vedānta Sūtra*, which claims systematically to interpret the teachings of the *Upaniṣads*. Nor is it acknowledged in the Sāṅkhya and Yoga philosophies, which have the next claim to be considered orthodox, *i.e.* to be in keeping with the Vedas; for even the *Vedānta Sūtra* allows them the title of *Smṛtis*. But the atomic theory makes an integral part of the Vaiśeṣika, and it is acknowledged by the Nyāya, two Brāhmanical philosophies which have originated with, or at least been favoured by, secular scholars (*paṇḍits*), rather than by divines or religious men. Among the heterodox it has been adopted by the Jains, and, as is stated in the *Abhidharmakośa vyākhyā*,* also by the Ājīvikas. It seems to have been unknown to original Buddhism; for the well-known Pāli scholar, Professor Franke, states that no mention is made of it in the Pāli canonical books. It is different, however, with the Northern Buddhists; for the Vaibhāṣikas and Sautrāntikas were adherents of the atomic theory, while the Mādhyamikas and Yogācāras opposed it, as they declared the external world not to be real.

The speculations of the sects and philosophical schools just mentioned may be arranged in three groups. The first is represented by the Jains; the second by the Vaiśeṣika and Nyāya *Sūtras* and the *Bhāṣya* on the latter by Vātsyāyana, and, on the other hand, by the Northern Buddhists; while the last phase of the theory is that which appears first in the *Praśastapāda-Bhāṣya*, the oldest systematic exposition of the Vaiśeṣika system, and has since been generally adopted by the combined Vaiśeṣikas and Naiyāyikas.

I. We place the Jains first, because they seem to have worked out their system from the most primitive notions about matter. These may be taken to be the following. Matter is an eternal substance, undetermined with regard to quantity and quality, *i.e.* it may increase or diminish in volume without addition or loss of particles, and it may assume any forms and develop any kind of qualities. Material substances may coalesce into one substance, and one substance may divide into many.

Now, the Jains maintain that everything in this world, except souls and mere space, is produced from matter (*pudgala*), and that all matter consists of atoms (*paramāṇu*). Each atom occupies one point (*pradeśa*) of space. Matter, however, may be either in the gross state (*sthūla, bādara*), or in the subtle (*sūkṣma*). When it is in the subtle state, innumerable atoms of it occupy the space of one gross atom. The atoms are eternal as regards their substance; each atom has one kind of taste, smell, and colour, and two kinds of touch. These qualities, however, are not permanent and fixed for the several atoms, but they may be changed and developed in them. Two or more atoms which differ in their degree of smoothness and roughness, may combine to form aggregates (*skandha*). The figures formed by the arrangement of the atoms into groups are manifold, and are precisely described in the *Bhagavatī*; every thing is believed to be formed of groups of one kind only. The atom may develop a motion of its own, and this motion may become so swift that by means of it an atom may traverse in one moment the whole universe from one end to the other.

It is evident, from what has been said, that there are not different kinds of atoms corresponding to the four elements, earth, water, fire, and wind; but though it is not explicitly stated, still we may assume that the atoms, by developing the characteristic qualities of the elements, become differentiated and thus form the four elements. For the latter are presupposed by the belief in elementary souls:

* The passage is quoted, *s.v.* 'Aṇu,' in a Buddhist dictionary now [1908] being printed in Calcutta, for the proofs of which the present writer is indebted to the courtesy of Prof. de la Vallée Poussin.

earth-souls, water-souls, fire-souls, and wind-souls, *i.e.* souls in various phases of development, which are embodied in particles of earth, etc. The elements must accordingly be regarded as the bodies, or even corpses, of particular living beings; at any rate they are not without beginning and end.

We must mention the opinion of the Jains concerning *karma*, *i.e.* merit and demerit, in its bearing on the atomic theory. *Karma* according to them is of material nature (*paudgalika*). The soul by its commerce with the outer world becomes literally penetrated with material particles of a very subtle kind. These become *karma* and build up a special body, the *kārmaṇaśarira*, which never leaves the soul till its final emancipation. Thus the atoms of which the *karma*-matter is composed are believed to be invested with a peculiar faculty which brings about the effects of merit and demerit. The opponents of the Jains understood this theory to mean that *karma* is the property of atoms, and produces a motion in them so that they combine to form the body, and that the internal organ enters it.*

II. In our second group the conception of atoms has been combined with that of the four elements in the following way: There are four distinct kinds of atoms corresponding to the four elements, earth, water, fire, and wind; and the distinctive qualities of the latter are already found in the several atoms. Now, the belief that all material things are made up of four elements, singly or jointly, was current in India probably long before the philosophical systems of which we are speaking came into existence. We first meet it in the *Chhāndogya Upaniṣad* (vi. 2 ff.). There it is said that the *Ens absolutum* created fire, fire created water, and water created earth (*anna*), and that these three elements combining produce all existing things. In other places, wind (*vāyu*) is regarded as an element, and at last space (*ākāśa*) was reckoned as the fifth element; for it seemed proper that there should be five elements corresponding to the five organs of sense.† This theory of the five elements has been adopted in the Sāṅkhya philosophy, and there it has been further developed by distinguishing two sets of elements, subtle (*tanmātra*) and gross (*mahābhūta*). The elements in Sāṅkhya are, however, not atomic or eternal, but are developed from primeval matter (*prakṛti*) by a process which need not be detailed here. Of these traditional five elements, the fifth, *ākāśa*, has a peculiar character of its own, as it is not considered to enter into combination with the other elements, but to be a simple, *i.e.* an infinite and continuous, substance; nor did the Buddhists even reckon it among their elements (*mahābhūta*). And the Vaiśeṣikas also, who distinguished space (*diś*) from *ākāśa*, the substratum of sound, count the latter among the simple and infinite substances (*vibhu*), together with space, time, and the souls. Accordingly, both Brāhmanical and Buddhistic atomists admitted only four atomic substances, viz. earth, water, fire, and wind. But in other details their opinions vary.

As we have as yet but defective and second-hand information about the atomic theories of the Buddhists, we shall first describe that of their opponents, the Vaiśeṣikas and Naiyāyikas.

1. Vaiśeṣika being chiefly concerned with physics, and Nyāya with metaphysics and dialectics, the physical side of the atomic theory was more the province of the former, and the metaphysical of the latter system. Hence it may be supposed that the atomic theory is more intimately connected with the Vaiśeṣika system, and indeed Bādarāyaṇa regards it as their cardinal tenet.‡

The opinions of the Vaiśeṣikas on atoms and their qualities, as well as the arguments connected therewith, are epitomized in a few aphorisms of the 4th and 7th chapters of the *Vaiśeṣika Sūtra* by Kaṇāda. They reasoned in the following way: Things that exist and are not produced from a cause are eternal; they may be inferred from (the fact that all known things are) products. Besides, as we call everything we perceive non-eternal, this idea of non-eternity presupposes eternity (IV. i. 1–4). And finally the fact that we do not perceive the ultimate, *i.e.* uncaused, causes of things, constitutes our ignorance, and thus we are forced to assume that these ultimate causes are eternal.

But there is another interpretation of the last sūtra (IV. i. 5), which consists only of one word, 'ignorance'; *i.e.*, as we can imagine no other cause of the destruction of a thing than the disjunction or destruction of its causes, it follows that the last causes must be eternal.

For the interpretation of the sūtras here given the writer relies not so much on the modern commentaries (for there is no old one in existence), as on their refutation by Śaṅkara, which shows us what was the meaning attached to them more than a thousand years ago. It is to be understood that these eternal things, the causes of the non-eternal ones, are the *atoms*; but they are not visible. For the sūtra goes on to declare that a great thing may be visible, if it has many constituent parts and possesses colour (IV. i. 6). The next sūtra (not in our text, but as quoted in the *Nyāya Vārtika*, p. 233) states that the atom is invisible, because it is not composed of material parts. Now, a thing is great if it is composed of many constituent parts, or if the parts themselves are great, or if they are arranged in a peculiar way (VII. i. 9, not as in our text, but as quoted by Śaṅkara on *Ved. Sut.* II. ii. 11). The reverse of this holds good with the small *aṇu* (*i.e.* atom); that is to say, the atom is not composed of parts.

The discussion, carried on in the next sūtras (10–20), comes to this. The expressions 'great, small, long, short,' as used in common parlance, are relative terms, the same thing being called great with reference to one thing and small with reference to another. These expressions refer to great (or long) things only, since only such are visible, and therefore they are used in a secondary meaning. In their *primary* sense 'great' and 'small' are not relative terms, but denote distinct kinds or *genera* of dimension (just as red and blue are different kinds of colour). For otherwise we should speak of great or small greatness, *i.e.* we should attribute qualities (great or small) to a quality (greatness), which would be against the principle that qualities have no qualities. Greatness and smallness are non-eternal in non-eternal things; in eternal things they are eternal, *i.e.* absolute or infinite. The absolutely small is called globular (*parimaṇḍala*).

About the other properties of the atoms we have the following statements. The qualities of earthen and other things—colour, taste, smell, and touch—vanish on the destruction of the thing itself; accordingly they must be eternal in eternal things, *i.e.* in atoms. And so they are in the atoms of water, fire, and wind. In earth, however, as well as in atoms of earth, (some) qualities are *pākaja*, *i.e.* changeable by heat (VII. i. 1–6). Different atoms may come into conjunction (IV. ii. 4). In the beginning of creation the atoms are set in motion by *adṛṣṭa*, *i.e.* merit and demerit of creatures in the past period (V. ii. 18). The internal organ also is an atom (VII. i. 23).

This is all the information about atoms we can gather from the *Vaiśeṣika Sūtra*. But, short though it be, it is enough to show us the actual state of the atomic theory at the time of Kaṇāda and the arguments used by him in establishing that theory. Two things deserve to be noticed. Firstly, the word for 'atom' used in our text, and, it may be added, in the *Nyāya Sūtra* too, is *aṇu*; only in the sūtra quoted in the *Nyāya Vārtika* do we meet with *paramāṇu*, the usual form with all later authors; but this may be a mistake of the Vārtikakāra, who quoted from memory. Secondly, the argument for the existence of atoms, which is based on the impossibility of unlimited division of a thing, was not yet made use of by the author of the *Vaiśeṣika Sūtra*.

2. In the *Nyāya Sūtra* by Gautama, and especially in the *Bhāṣya*, or old commentary on it, by

* *Vātsyāyana*, p. 191, and Vācaspati's remark in the footnote, and *Nyāya Vārtika*, p. 448.

† This subject is treated at some length in Dr. Sukhthankar's dissertation, 'Teachings of Vedānta according to Rāmānuja,' in *Wiener Ztschr. f. d. Kunde d. Morgenl*, xxii.

‡ *Vedānta Sūtra*, II. ii. 11 ff., and Śaṅkara's remarks on II. ii. 1.

Vātsyāyana, who wrote in the 5th cent. A.D. or earlier, some aspects of the atomic theory are discussed, and objections raised to it by opponents are refuted. Gautama shared the opinions of the Vaiśeṣikas on the physical properties of the atoms described above. For, since he incidentally remarks (IV. i. 67) that the black colour (of earthen atoms) is not eternal (though existing from eternity), it follows that he considered the properties of water, fire, and wind to be eternal. The metaphysical questions, however, relating to atoms are fully discussed by Gautama, and further explained by Vātsyāyana. In the two places (II. i. 36 and IV. ii. 14 ff.) where they occur, they are brought in at the end of the discussion of the 'whole and its parts.' The Naiyāyikas maintain that the whole is something more than its parts; it is a different thing (*arthāntara*), not separated from its parts, but rather something in addition to them. We perceive the whole thing as such, *e.g.* a tree, though we see only the front parts, and not the middle and back ones; and thus we see a thing though we cannot see the atoms of which it consists. The question of atoms is then discussed in this way. A thing consisting of parts is called a whole, but each part must again be considered as a whole, and so the parts of a part, and so on *ad infinitum*. If we never could come to last parts, we could not conceive the idea of the whole, and so the whole would be dissolved into nothing. But the division reaches its limit in the atom, which cannot be divided any further, as we assume it to be absolutely small.

Another proof is the following. If the division into parts had no limit, the mote (*truṭi*) would not differ in size from the highest mountain, because both would have the same number of parts (IV. ii. 1 f.). The text then proceeds to refute objections raised against the notion of atoms as indivisible smallest things without parts. *Ākāśa* ('air'), as the Vaiśeṣikas assert, is a simple, all-pervading, and infinite substance: the question is put whether it penetrates the atoms or not. If it does, the atom must have parts; if not, *ākāśa* would not be all-pervading. The reply is that the atom has no exterior or interior, nor is it hollow inside, but it is a simple not a compound thing. It is further objected that, since the atom has a form, being globular, and since the form of a thing consists in the disposition of its parts, the atom must have parts. And again, when three atoms are in juxtaposition, that in the middle touches the one to the left with its right side, and that on the right with its left side; and when the atom is surrounded on all sides, we can distinguish six sides of the atom which must be considered its parts. And if the six sides were reduced to one (*i.e.* if the atom were a mere point), then the aggregate of the seven atoms would take up no more space than one atom, and consequently a jar could be reduced to the size of an atom, and hence become invisible. These arguments are met by the declaration that the division of the atom into parts is not real, but a mode of expression only.

The following are some opinions on atoms, which are mentioned in the *Nyāya Vārtika* (6th cent. A.D.), but the authors of which are not named. Some thought that the mote which is seen in a ray of the sun entering a window is an atom. Others believed that atoms do not occur singly (*asaṁhata*), but always in aggregates (p. 234). Some, apparently Buddhists, maintained that the atoms were not eternal, because they possess motion. The Naiyāyikas agree with the Vaiśeṣikas that the atoms are set into motion by *adṛṣṭa*, *i.e.* merit and demerit, but expressly state that God (*Īśvara*) directs the action of the atoms.*

3. The chief opponents of the Naiyāyikas, who held different views on atoms, were Buddhists of the Vaibhāṣika and Sautrāntika schools, as was said at the beginning. The Vaibhāṣikas maintained that external things can be directly perceived, the Sautrāntikas that they can only be inferred. Śaṅkara, who comprises both under the name of Sarvāstivādin, describes their opinions on atoms in his commentary on *Ved. Sut.* II. ii. 18 thus: 'These Buddhists acknowledge the four elements, earth, water, fire, and wind, with their properties and products, including the organs of sense; the four elements are atomic; the earth atoms have the quality of harshness, the water-atoms that of viscidity, the fire-atoms that of heat, and the wind-atoms that of motion; in combination these atoms form earthly things,' etc.

More details we learn from the work of the Tibetan *ḥjam yaṅ ḥśad pa*, of which Wassilieff has given an abstract,* from the *Abhidharmakośa vyākhyā*, a work of the idealistic school Yogācāra (for a transcript of which the present writer is indebted to the courtesy of Prof. de la Vallée Poussin), and from Prajñākaramati's commentary on the *Bodhicharyāvatāra* (ix. 8 f., 95 f.).

The Vaibhāṣikas admitted that an atom had six sides, but they maintained that they made but one, or, what comes to the same, that the space within an atom could not be divided. Their opinion has been disputed by the Naiyāyikas in an old verse quoted in the *Nyāya Vārtika* (p. 521). They further asserted that atoms were amenable to sense-knowledge, though they were not visible apart, just as a dim-sighted man sees a mass of hair, though he cannot see a single hair. This view, too, was disputed by the Naiyāyikas, who maintained that the atom is transcendental (*atīndriya*), not perceptible to sense (*aindriyaka*).†

The Sautrāntikas seem to have regarded the aggregate of seven atoms as the smallest compound (*aṇu*).‡ Their opinion seems to have been that the (globular) atoms did not touch one another completely, but that there was an interval between them; but some held different views. All agreed that the atom is indivisible, though some admitted that it might be regarded as having parts, viz. eight sides. Both the Vaibhāṣikas and the Sautrāntikas declare that atoms are not hollow, and cannot penetrate one another.

Most points in the Buddhistical opinions which we have related are also discussed in the *Nyāya Sūtra*, *Bhāṣya*, and *Vārtika*; all the speculations on atoms we have dealt with in this our second group (the *Vaiśeṣika Sūtra* perhaps excepted) must, therefore, be regarded as having been current in the same period, *i.e.* in the beginning of our era down to the 6th cent. and later.

III. The latest improvement of the atomic theory consists in the assumption of *dvyaṇukas*, etc. It was first taught by *Praśastapāda* (p. 28), and is plainly referred to by Udyotakara;§ it was received as a tenet in all later works of what may be called the combined Nyāya-Vaiśeṣika. The fusion of these two schools began early, and seems to have been complete at the time when the *Nyāya Vārtika* was written; for in this work the *Vaiśeṣika Sūtra* is several times quoted simply as the *Sūtra* or *Śāstra*, and once (p. 222) its author is called *Paramarṣi*, a title accorded only to the highest authority. From that time *dvyaṇukas* are quite familiar in Sanskrit writers. It is assumed that two atoms (*paramāṇu*) form one binary (*dvyaṇuka*), and that three or more‖ *dvyaṇukas* form one *tryaṇuka*, which is 'great' and perceptible by the eye. From *tryaṇukas* are produced all things. Modern writers further assume *chaturaṇukas*, formed of four *tryaṇukas*, etc. The reasoning that led to this highly artificial theory is the following.¶ The rule that the quality of the product is derived from the corresponding quality of the cause does not apply to *dvyaṇukas* and *tryaṇukas*. For in that case the 'small' *dvyaṇukas* would produce a 'small' *tryaṇuka*, not a 'great' one as required. And if the smallness of the *dvyaṇukas* were produced from the like quality of the *paramāṇus*, it would be of a higher degree, just as two great things produce one greater

¶ Athalye's note to *Tarka Saṅgraha*, Bombay Sanskrit Series, p. 128.

thing; but the *paramāṇu* is that than which nothing smaller can be imagined. Therefore it is not the dimension of the cause, viz. of the parts, which produces the peculiar dimension of the *dvyaṇuka* and *tryaṇuka*, but another quality: *number*. The number of the *dvyaṇukas* in the *tryaṇuka* has the effect of producing, on the latter, greatness, a dimension which differs in kind from that of its parts. *Dvyaṇukas* have been assumed for the following reason. As great things are of two kinds, eternal (viz. the infinitely great ones, *e.g.* space) and non-eternal, so both kinds must be found in 'small' things. Eternal small things are, of course, the atoms. Non-eternal ones must therefore consist of atoms; they are the *dvyaṇukas*.* Now number is produced by the 'notion which refers to many unities' (*apekṣābuddhi*); and such a notion presupposes an intellect to form it; in our case it must be the intellect of one who perceives all the atoms and *dvyaṇukas*, and who therefore must be omniscient—that is, God. Without him in whose intellect the notion of duality in *dvyaṇukas* subsists, there would not be any *dvyaṇukas* or any *tryaṇukas*, and consequently there would not be anything whatever. This strange idea, found *in nuce* already in *Praśastapāda*, was brought forward by Udayana (12th cent.) as a proof of the existence of God.

Having passed in review all forms of the atomic theory which are known to us at present, we must now inquire into the origin of that theory. Two points appear to be of chief importance for our inquiry: firstly, that the name of atom is *aṇu*, 'small,' or *paramāṇu*, 'absolutely small'; and secondly, that 'small' was generally considered to differ, not in degree but in kind, from 'great.' In accordance with this notion which is shared by all, even by the opponents of the atomic theory, the small, or, as we had better call it, the infinitesimal, had to be assumed as existing, and needed no further proof. The idea of the infinitesimal in this sense seems to have already been current in the time of the *Upaniṣads*, where we frequently meet with the statement that *Brahman* is smaller than the small, and that the self (*ātman*) is small (*aṇu*). In order to arrive at the conception of the atom, the idea of the infinitesimal had not only to be applied to matter, but it had, at the same time, to be joined to the idea of its indestructibility. Reasoning from analogy apparently came in to help; as the absolutely great, *e.g.* space, is acknowledged by all to be eternal, so the absolutely small, the atom, must also be assumed to be eternal. At any rate, the notion of the infinitesimal led, by easy steps, to the conception of the atom. It was probably in this early stage of development that the Jains took up the idea of the atom and made use of it in their metaphysical speculations. But in India the inventors of a new theory have generally been forgotten, and the fame attached to it went to those who succeeded in defending the theory against all opponents and in thus putting it on a base of firm reasoning. This task seems to have been performed by the Vaiśeṣikas. For the atomic theory makes an integral part of their system, and in their *Sūtra* we find the outlines of the arguments used to establish it. Moreover, when the atomic theory is discussed in the *Vedānta Sūtra*, it is there ascribed to the Vaiśeṣikas, and at the same time treated as one of their cardinal tenets; we may therefore conclude that the author of the *Vedānta Sūtra* looked on the Vaiśeṣikas as the principal upholders, if not the authors, of the atomic theory.

When once firmly established, the atomic theory must have had much persuasive power with many philosophers; for it put in place of the primitive conception of matter as an eternal but quite undefined substance the more rational notions which offered an intelligible explanation of the perpetual change of things while still maintaining the eternity of matter. The Northern Buddhists adopted it, though they had to deny the eternity of atoms, according to the fundamental tenet of Buddhism that there are no eternal things. Even some adherents of Yoga admitted *paramāṇus*, defining them as the smallest particles in which the three *guṇas* are present.* The Mīmāṁsakas are said by Prajñākaramati to have acknowledged eternal atoms;† and the same holds good with the Ājīvikas, as stated above.

It must, however, be mentioned that Dr. W. Handt‡ has maintained the Buddhist origin of the atomic theory. 'Starting,' he says, 'from the fundamental view of original Buddhism, which looked on the *saṁsāra* as continual springing into existence and perishing, they regarded the whole material world as an aggregate of non-eternal atoms, just as the spiritual one was produced by the aggregate of the five *skandhas*.' But non-eternity seems to reverse the idea of the atom as it is generally understood. And if, as Handt asserts, the Buddhists, in order to explain the perpetual flow of existence, 'naturally hit on the assumption of non-eternal atoms which are divided into four classes according to the four elements,' still it would seem not to have sufficed them even for that purpose. For the Sautrāntikas have brought forward their famous theory of the momentariness of all things (*kṣaṇikavāda*). Every thing, according to this theory, exists but for a moment, and is in the next moment replaced by a facsimile of itself, very much as in a kinematoscopic view. The thing is nothing but a series (*santāna*) of such momentary existences (*kṣaṇa*). Here time is, as it were, resolved into atoms. This theory explains perfectly well the perpetual change of things, and apparently was invented for that purpose. Still, the Sautrāntikas retained the atomic theory alleged by Dr. Handt to have been invented by the Buddhists for the same purpose. We shall therefore not err in supposing that the Buddhists did not invent the atomic theory as a prop for their fundamental dogma, but advocated it because it belonged to the stock of physical and metaphysical ideas which passed current during the early centuries of the Christian era in Northern India.

ATOMIC THEORY (Muhammadan).—The genesis of atomic theories among Muslim thinkers is shrouded in obscurity. It is probable that such theories found their way into Islām through the medium of the Aristotelian physics and the Neo-Platonic commentaries dealing therewith. As far back, at all events, as we can follow the growth of atomism in this field, we find it imbued with the conceptions of Aristotelian and Neo-Platonic thought.

We can trace the presence of such atomistic doctrine as early as the 9th century. Al-Naẓẓām († A.D. 845) is mentioned as having been an opponent thereof, while al-Kindī († A.D. *c.* 870) wrote a treatise against its adherents.

The first recognizable form of the doctrine is that which it assumed in the hands of Abū Hāshim of Baṣra († *c.* 933 A.D.). His theory, which is practically

that of the Basrensian Mu'tazilites of the 10th cent., is found in the *Kitābu 'l-masā'il* of Abū Rashīd Sa'īd b. Muḥammad b. Sa'īd al-Naisābūrī, whose lifetime falls between A.D. 932 and 1068. We give here a concise summary of his views.

The atom (*al-juz' allaḏhī lā yutajazzu'*), or, as it is commonly called, the substance (*al-jauhar*), possesses in itself (*jauhar fard*), as the attribute involved in its very essence, the capacity of filling space (*taḥayyuz*). The 'substances' are of cubical form, and they are all of the same sort. Hence the only real difference amongst them lies in the fact that each occupies a definite portion of space (*ḥayyiz*). Besides existence and spatiality, each has likewise a certain range (*jiha*), or spatial persistence, by means of which others are prevented from usurping its position. Finally, the substances have the property of assuming accidents, in virtue of which they are qualitatively determined.

These substances move in empty spaces, and interact by pressure and impact. The proof of this is sought not merely on deductive lines, but by way of simple experiments. According to the older form of atomism, as set forth by Democritus, Nothing is no less a fact than Something (*μὴ μᾶλλον τὸ δὲν ἢ τὸ μηδὲν εἶναι*), and by 'nothing' in this case was meant simply empty space. As a result of the infusion of later theories, however, this idea is wholly discarded in Islām, and the states of being and not-being are distinguished as existing in the substance itself; or, in other words, even the non-existent, as something known, *i.e.* distinguished from something else, is possessed of substantiality.

The essence of the atom, or substance, is independent of its existence—a statement which probably means that such essence might form the content or object of the Divine thought or of human knowledge. The substances are not created by God: He simply brings them into existence, or lets them come forth. When they have attained the status of actual being, they have certain necessary modes of existence (*'akwān*), such as motion and rest, union and separation. Other accidents again are contingent, *i.e.* each several substance may assume an indefinite number and variety of accidents, so long as these are not mutually antagonistic.

The substances and the bodies they go to constitute are endowed with duration in time. Their annihilation—the cessation of their existence—is possible, but only in their totality, *i.e.* only if the whole world were to pass away at once.

Such, apart from insignificant differences of view, was the theory of the Basrensian thinkers. From these the scholars of Baghdad differed in many ways. The teaching of the latter school is known to us most fully in the form subsequently given to it—first of all, probably, by Abū Bakr al-Bāqilānī († *c.* 1012)—in the Ash'arite or orthodox *Kalām*. A most comprehensive account of this doctrine is given by Maimonides (1135–1204), and it is largely upon his description that the following outline is based.

The entire world, of which God is the absolutely free Creator, consists of indivisible substances or atoms, and their accidents. These substances, taken separately, are mere points; they have no magnitude or extension, and are thus imperceptible to sense. They have their *ḥayyiz*, or natural position, which, however, in contradistinction to *makān*, does not involve quantity or spatial magnitude. Only by aggregation do the infinitesimal substances become spatially extended bodies occupying the tri-dimensional *makān*. By union or separation of substances—which are all of the same kind—bodies are produced or dissolved. What is true of space holds good also of time. The latter is generated by the combination of points of time or moments (*'ānāt*). Motion also, like space and time, is discontinuous.

Every individual substance possesses at all times a large number of accidents. Some thinkers even hold that it possesses all possible positive accidents or their opposites. Negative states, or privations, in fact, are just as truly accidents as positive states: death as well as life, ignorance no less than knowledge, etc. Life, feeling, thought—in a word, the soul—are quite consistently classed amongst the accidents. Some writers regard the soul as belonging to all the atoms of the body, while others are of opinion that it is composed of finer atoms, or again, that the soul and the mind appertain to only one particular atom in the body.

No accident can subsist for more than an instant, and as the substance is inseparably united with its accidents, the measure of its persistence likewise shrinks to a moment of time. Now, since the entire aggregate of spatial points which constitutes the world can maintain itself only for a moment, it must follow that the world is created anew by God every instant. There is no such thing as causal connexion or natural law, nothing save the arbitrary act of an omnipotent Creator, to whom being and not-being are alike. God creates as many worlds one after another as He chooses, and when He ceases to create any more, what He then really creates is Nothing.

Here, then, is the religious purpose of this atomistic doctrine achieved. The theory is meant to be, not an explanation, but a subversion, of nature. All natural causes whatever are sacrificed to the arbitrary fiat of Allāh. Anything is possible; whatsoever is capable of being figured in thought or imagination may come to pass. Of everything that happens the opposite might quite as well happen, if Allāh but willed it so.

This atomistic teaching seems almost an anticipation of Occasionalism, especially as applied, not to the course of nature merely, but also to human action. The classical illustration is that of a man engaged in writing. It was maintained that Allāh creates within him, and, indeed, creates anew every instant, first the will, and then the capacity, to write; next, the movement of the hand, and, finally, the motion of the pen, concurrent therewith, etc. Every factor in the transaction is independent of every other, all the several stages of the process emanating from God alone. It is only in appearance that we have a coherent action; only in appearance is there a self-consistent and harmoniously-working world in space and time. That the world and human life appear to be pervaded by a causal nexus is due simply to the fact that meanwhile, and as a rule, Allāh does not choose to interrupt the continuity of events by a miracle. It is possible, however, that He might so intervene at any moment.

T. J. DE BOER.

ATOMIC THEORY (Mediæval and Modern).—**1. History.**—If we seek for an explanation of the phenomena of expansion, contraction, solution, and precipitation, we are inevitably led to adopt the hypothesis that matter is, in its minute structure, formed of particles with interspaces. If matter is a continuum, these phenomena are ultimate facts,

not to be likened to, and not to be explained by, any other facts. We may conceive the possibility of expansion and contraction of a continuum, but we cannot explain it. If, however, we assume that matter consists of discrete particles, a crowd of particles is like a crowd of people. Expansion is a widening out, contraction is a drawing in, of the crowd. Solution is the thorough mixture of two crowds, precipitation is the expulsion or segregation of certain members of the crowd. Other phenomena, too, find an easy explanation. Thus, evaporation is the passing away of members of the crowd from its boundary. It is no necessary part of the hypothesis that the space between the particles is a vacuum. We know that there is air between the members of a crowd of people. So there may be some kind of material between the particles of matter, displaced when other particles squeeze their way in.

When we trace the history of the speculations about the constitution of matter from mediæval into modern times, we find that the atomic doctrine of Greek philosophers—the doctrine that the minute particles are indivisible—has fallen into disfavour (see ATOMIC THEORY [Greek]). The mediæval philosophers no doubt thought of matter as composed of minute parts, and they followed the ancient philosophers in regarding the parts as of four kinds, four elements—fire, air, earth, and water. Ordinary bodies were 'mixed bodies,' mixtures of these four, in different proportions in different bodies. But the elements were not always elements in the modern sense. It was sometimes thought that they could be transformed one into another. Roger Bacon, for instance, in the 13th cent. held that the four elements were made of *hyle* (ὕλη), that each could be converted into the nature of another, and everything into anything else. Wheat is a possible man, and man is possible wheat (*de Arte Chymiæ*).

These four elements were still dominant when modern science began; and long thereafter they hindered progress, not disappearing indeed till the 18th century. At the beginning of the modern period, matter was regarded as consisting of particles, but the particles were not atomic. Thus Francis Bacon in the *Novum Organum* (1620) in several passages mentions the 'atoms' of Leucippus and Democritus only to discard them, and in one passage he says:

'Nor by this are we brought to the (Epicurean) Atom, which presupposes a vacuum, and matter immutable (both of which are false), but to true Particles, as they are found to be' (*Nov. Org.* bk. ii. § 8, Kitchin's tr.).

Bacon made an important contribution to the theory of matter by his clear statement of the doctrine that heat is a mode of motion of the particles:

'Heat is motion, not expansive uniformly in the whole, but expansive through the lesser particles of the body; and at the same time restrained, repelled, and reflected; so that it obtains an alternative motion, ever hurrying, striving, struggling, and irritated by repercussion; whence the fury of fire and heat has its origin' (*ib.* bk. ii. § 20, iii.). 'Heat is motion, expansive, restrained, and struggling through the lesser parts of (a body)' (*ib.* iv.)

These passages clearly imply a crowd of separate particles knocking each other further apart when heated, that is, when thrown into more violent motion. Between the particles Bacon appears to have supposed that there was an intangible, weightless, continuous material which he called 'spirit.' Had he lived later, probably he would have called it 'ether.' He speaks of

'the action and motion of spirit enclosed in tangible bodies. For everything tangible that we know contains an invisible and intangible spirit, and covers and seems to clothe it. Hence that powerful triple source (of effects) and wondrous *process* of spirit in a tangible body. For spirit in a tangible thing, (1) if emitted, contracts and dries up bodies; (2) if retained, softens and melts them; (3) if neither entirely emitted nor entirely retained, models them, gives them limbs, assimilates, carries them out, organizes them,' etc. 'Spirit has no weight' (*op. cit.* bk. ii § 40).

It may be worthy of note that Bacon held that the totality of matter is constant.

The first attempt at a detailed theory of the constitution of matter was made by Descartes in his *Principia Philosophiæ* (1644). He held that whatever we can clearly perceive is true, clear perception being of that which is present and manifest to the mind giving attention to it (pt. i. xxx., xlv.). Applying this doctrine to the parts of matter, he is led to the rejection of indivisible atoms. For however small we suppose the parts, we are always able in thought to divide any one of them into two or more smaller parts, and may accordingly admit their divisibility. Again, he holds that a vacuum or space in which there is absolutely no body is repugnant to reason. Extension in space is extension in substance. All space, then, is filled with matter. Sensible bodies are composed of insensible particles (pt. iv. cci.). These insensible particles are of three elementary forms (pt. iii. lii.), though constituted out of the same kind of material. The first element consists of very minute bits, of irregular shape and capable of very rapid motion; chips off the particles forming the second element, and entirely filling the spaces between them. The particles of the second form have become spheres by attrition. They are very minute, and beyond the range of vision. The third form is larger and slower in motion. The sun and stars are composed of the first element, the sky of the second, and the earth and planets of the third. The second and third elements appear to have vortices of the first element round them, and these vortices account for the forces which the particles exert upon each other. They are like the vortices which Descartes supposed to exist round the sun and planets to account for orbital motion.

This theory of the three elemental forms of matter, fanciful in its beginning, becomes more fanciful as he builds it up. It does not appear to have served, except in the mind of Descartes, to co-ordinate facts or to stimulate investigation. But it is important historically, as the first suggestion that it might be possible to consider in detail the ultimate structure of matter and to explain phenomena by this structure. It is important, too, in that it is purely mechanical, that all phenomena are to be explained by configuration and motion of the ultimate particles. Descartes insisted that the sensations are excited by the *motion* of matter only.

'Our mind is of such a nature that the motions of body alone are sufficient to excite in it all sorts of thoughts, without its being necessary that these should in any way resemble the motions which give rise to them, and especially that these motions can excite in it those confused thoughts called sensations' (pt. iv. cxcvii., Veitch's tr.). We perceive nothing outside ourselves 'except light, colours, smells, tastes, sounds, and the tactile qualities; and these I have recently shown to be nothing more, at least so far as they are known to us, than certain dispositions of the objects, consisting in magnitude, figure, and motion' (pt. iv. cxcix.).

That is, there is not a separate light principle or substance, smell principle, sound principle. These are in our minds. All the different senses are excited by the size, shape, and motion of the small particles of which matter consists.

Like Bacon, Descartes held that heat is a mode of motion of the particles (pt. iv. xxix.).

The most influential writer on the structure of matter in the generation succeeding that of Descartes is Robert Boyle, who in the *Sceptical Chymist* (1661), *Origin of Forms and Qualities* (1666), and other works, laid the foundation of modern chemical theory. He was probably an atomist.

'We may consider,' he says, '(1) that there are in the world great store of Particles of matter, each of which is too small to be, whilst single, sensible; and, being entire, or undivided, must needs both have its determinate shape, and be very Solid. Insomuch that though it be *mentally*, and by Divine Omni-

potence divisible, yet by reason of its Smallness and Solidity, Nature doth scarce ever actually divide it; and these may in this sense be called *Minima* or *Prima Naturalia*. (2) That there are also multitudes of corpuscles, which are made up of the coalition of several of the former *Minima Naturalia*, and whose bulk is so small, and their Adhesion so close and strict, that each of these little Primitive Concretions or Clusters (if I may so call them) of Particles is singly below the discernment of Sense, and though not absolutely indivisible by Nature into the *Prima Naturalia* that composed it, or perhaps into other little fragments, yet, for the reasons freshly intimated, they very rarely happen to be actually dissolved or broken, but remain entire in great variety of sensible Bodies, and under various forms or disguises' (*Forms and Qualities*, p. 71).

Yet in the prefatory address to the reader in the same work, he says that he has forborne to use arguments that are grounded on or suppose indivisible corpuscles called atoms. Though not a Cartesian he followed Descartes, as indeed all the world has followed him, in ascribing the qualities of natural bodies to the 'Catholick and fertile Principle *Motion*, *Bulk*, *Shape*, and *Texture* of the minute parts of Matter' (*Forms and Qualities*, last page). He, too, regarded heat as a vehement agitation of the parts of the body tending all manner of ways ('Heat and Cold,' *Works*, Shaw's ed. i. 560). Fire, however, is the violent agitation of the particles of a subtle matter. But it is for his clear idea of the nature of chemical combination that we are chiefly indebted to Boyle. In the *Sceptical Chymist* he discards the old elements, air, earth, and water, and says that these three are to be regarded as made up of mixed bodies rather than mixed bodies as made up of them; and by mixed bodies he means ordinary bodies which had been regarded as mixtures of air, earth, and water, and had so come to be called mixed bodies. He dwells on the idea that an enormous number of compounds may be made by various arrangements of corpuscles, and that they differ from each other in nothing but the various textures resulting from the magnitude, shape, motion, and arrangement of the small parts.

'One and the same parcel of universal matter may by various alterations and contextures be brought to deserve the name sometimes of a sulphureous, and sometimes of a terrestrial or aqueous body' (Shaw's ed. iii. 282).

Boyle agreed, then, with Descartes in thinking of matter as one in kind, the differences being due solely to shape, size, and motion of the parts.

Newton does not appear to have concerned himself very much with speculations about the ultimate structure of matter. He was, above all, an experimental philosopher, determining laws by experiment and observation, using mathematics to deduce their consequences, and comparing these consequences with further experiment and observation, thereby verifying or correcting the laws. The framing of atomic hypotheses did not come into this programme. In the *Principia* he hardly uses the hypothetical structure of matter at all. There is a suggestion of it in the determination of the velocity of sound, but a mere suggestion. In the series of queries at the end of the *Optics* (2nd and 3rd editions) he gave himself free play, and among a number of speculations he declared himself an atomist. 'It seems probable to me that God in the beginning formed matter in solid, massy, hard, impenetrable, movable Particles' (3rd ed. p. 375). In the history of the subject Newton is mentioned only as in all probability deflecting attention from it. His immediate successors were occupied so much in following out his methods that theories of matter were apparently little studied or considered by leaders in physical thought.

But the atomic doctrine was probably making way. One very notable contribution to the particle theory was made by **D. Bernouilli** in his *Hydrodynamica* (1738), § x.. He suggested that a gas consists of very minute corpuscles moving with very great velocities in all directions, and that the pressure of a gas against the walls of a containing vessel is due to the bombardment by these corpuscles. He showed that with this constitution the pressure would be inversely as the volume if the volume were changed, which is 'Boyle's Law'; and that if the temperature were raised by increase in the velocity of the corpuscles, the pressure would be proportioned to the square of the velocity. His reasoning is somewhat obscure and unconvincing, and, perhaps on that account, his theory remained almost unnoticed for more than a century, when it was re-discovered and was developed on better lines.

In 1758, **Boscovich** published his *Theoria Philosophiæ Naturalis*. In this work he begins with his celebrated hypothesis of the nature of an atom, and then seeks to show how physical phenomena, such as collision, cohesion, fluid pressure, viscosity, and elasticity may be accounted for if matter is composed of atoms such as he imagines. According to his hypothesis, an atom is a central point to which mass or inertia is assigned, a mass-point let us say, and towards this point force is acting so that another mass-point is urged towards it with an acceleration proportional to the mass of the first point, and varying with the distance in such a way that at a great distance the attraction is inversely as the square of the distance. But when the distance becomes very small the force undergoes one or more alternations of repulsion and attraction, finally ending with a repulsion which is infinitely great when the two points are infinitely near each other. Two central mass-points can therefore never actually coincide. Boscovich did not assign any formula for the force, probably considering that future experiment alone could determine the law, but it is easy to devise expressions which satisfy his general conditions.

For instance, if a mass-point is distant r from a mass-point m, and if its acceleration to m is expressed by $m(r-a)(r-2a)(r-3a)/r^3$, the force is attractive, and inversely as the square of the distance if r is very great, it increases as r diminishes to a certain point, and then diminishes to zero when $r=3a$. Between $r=3a$ and $r=2a$ it is a repulsion, again vanishing at $r=2a$. Between $r=2a$ and $r=a$ it is an attraction changing again to a repulsion when r is less than a, a repulsion becoming infinite when r is infinitely small. Whatever the velocity of approach, that velocity will be destroyed before the two points coincide, *i.e.* they never will coincide.

Perhaps we can form an idea of the way in which Boscovich's atoms would act, by imagining that two solid surfaces are brought together. At great distances apart there is merely the inverse square law of gravitative attraction. When, however, they come very near, there is mutual pressure, which we may represent by supposing that the surface atoms have come into each other's first sphere of repulsion, and outside pressure is required to overcome this repulsion. If the outside pressure is made very great, we may force the atoms through this sphere of repulsion into the second sphere of attraction, and we may have equilibrium at the point where the attraction again changes into repulsion. If we can reach this point, the surfaces will adhere even when the outside pressure is removed. Thus the hypothesis explains the adhesion of bodies pressed very closely together.

Boscovich's predecessors had, like Newton, imagined a little hard nucleus round the centre of the atom; Boscovich showed that the nucleus was unnecessary. Its place was efficiently taken by the repulsive force rapidly increasing as the centre was approached. The nucleus had no part to play, and might be discarded.

The hypothesis at once excited attention. It was adopted, for instance, by **Priestley** (*Vision*, 1772, and *Matter and Spirit*, 1777). In the next century it attracted **Faraday**, who definitely adopted it (see two letters to R. Phillips, *Researches in Electricity*, 1844–55, ii. 284, iii. 447). Faraday laid stress on the uselessness of the little hard nucleus of finite size

—an idea which had again gained ground in the form of the atomic hypothesis of Dalton. He urged that the powers of matter, the forces which it exerts, are all that we know about it. These powers or forces *are* the matter, and where they extend the matter also extends. Each atom, then, extends through all space. Faraday symbolized the forces by straight lines extending out on all sides from the atomic centres, and thought of light as tremors or minute jerks carried along these lines—an idea which has been revived and made precise by Sir J. J. Thomson.

In recent years, **Lord Kelvin** took up 'the inevitable theory of Boscovich,' and sought to show how the grouping of Boscovichian atoms could account for crystalline arrangement and for the phenomena of light.

For purposes of calculation, the Boscovichian atom is indeed inevitable, in some form or other, in any atomic theory in which the forces depend solely on the distance. Mathematically, there is no difficulty in thinking of one point, B, moving towards another point, A, with an acceleration expressed by $mf(r)$. We then define m as the mass of A. If A moves towards B with an acceleration $m^1f(r)$, we call m^1 the mass of B, and we say that the force is $mm^1f(r)$. But, physically, there is some difficulty in reducing all to force. We think of force as effort, symbolized by muscular effort; and if we have force alone, it is difficult to assign meaning to effort acting on effort. We must have a duality, at least in thought. If we think of force, we think also of that which the force moves, or perhaps more fundamentally that which resists the force, and we call this matter. If with Boscovich and Faraday we identify the moved with the mover, and say that the matter is but force, then we have a dual aspect of force. In one aspect it acts, in the other it suffers action. One is the symbol of will, the other of sensation. Whatever may be the ultimate fate of Boscovich's atom in physical theory, the conception of the unity of matter and force, and unity as force rather than as matter, is a permanent contribution to philosophical ideas.

We have now come to the time when chemistry began to influence atomic speculation. Up to the latter half of the 18th cent. it was a hindrance rather than a help. Of course, chemical knowledge was continually increasing, so far as concerned the extraction of the metals from ores and the preparation of definite substances. But progress in chemical theory was hopeless while the doctrine of the four elements, fire, air, earth, and water, held sway. About 1700 the phlogiston theory of **Stahl** came into vogue, and added to the confusion of thought. This theory held that the metals contained a something called 'phlogiston' which they gave off on combining with air, that oxygen was air deprived of phlogiston, that nitrogen was air containing phlogiston, and some chemists even supposed that hydrogen was phlogiston itself. There must have been some expression or symbolization of fact in a theory which was accepted by discoverers so great as Black, Cavendish, and Priestley. But it is difficult now, so entirely is our point of view changed, to see what facts it expressed. It is obvious only that any advantage in its adoption was far outweighed by the confusion of thought which attended it. Towards the end of the 18th cent. the fog in which chemical theory was enveloped began to lift. The atomic theory had been making way, though in a vague form, and in many minds Boyle's idea that chemical compounds consisted of definite groups of atoms had taken root. The word 'molecule,' originally used as equivalent to particle, was now adopted for atomic groups. The four elements, fire, air, earth, and water, were being gradually disestablished from their supreme position. A number of gases were discovered with definite properties, and obviously not mere modifications of air. Air itself was found to consist almost entirely of two gases which we now call nitrogen and oxygen, and so air ceased to be regarded as an element. Cavendish's discovery that water was a compound of hydrogen and oxygen removed it, too, from the list. Earth was resolved into at least several different earths, and the discovery by Lavoisier of the part played by oxygen in ordinary combustion killed phlogiston. Fire and flame, however, still remained as substances; for the idea that heat was a form of motion, or, as we should now say, of molecular energy, so often put forth in the 17th cent., had fallen into abeyance, and heat was regarded as a subtle substance. The way was being prepared for the atomic theory of Dalton, and there were several foreshadowings of it, the most notable by **William Higgins**, who in 1789 published *A Comparative View of the Phlogistic and Antiphlogistic Theories*, in which he says that 'we may justly conclude that water is composed of molecules formed by the union of a single ultimate particle of dephlogisticated air [oxygen] to an ultimate particle of light inflammable air [hydrogen], and that they are incapable of uniting to a third particle of either principle.' But it is doubtful whether he considered this as an example of a general principle, and he does not appear to have considered the 'ultimate particles' of an element as all alike.

In 1804 the modern doctrine of chemical combination was definitely formulated by **Dalton**, and communicated to his friends. In 1808 he first published it in his *New System of Chemical Philosophy*. According to Dalton, the particles or atoms—he uses the terms indifferently—in a simple body are all exactly alike, and in a finite space enormous in number.

'Chemical analysis and synthesis go no farther than to the separation of particles from one another and to their reunion. No new creation or destruction of matter is within the reach of chemical agency. We might as well attempt to introduce a new planet into the solar system, or to annihilate one already in existence, as to create or destroy a particle of hydrogen. All the changes we can produce consist in separating particles that are in a state of cohesion or combination, and joining those that were previously at a distance.' Compounds are definite groupings of definite atoms. Thus 1 atom of A + 1 atom of B may form 1 atom of C, binary; or 1 atom of A + 2 atoms of B may form 1 atom of D, ternary, and so on.

Here he uses 'atom' for C and D where we now use 'molecule'; and it is evident that he does not think of an atom as an indivisible particle, but as the smallest particle of a body which has the properties of the body. If this particle is divided, the substance is resolved into different substances. Dalton goes on to show that the relative weights of two elements entering into, say, a binary compound are proportional to the weights of the atoms themselves, and he gives the first table of atomic weights of the elements, taking the hydrogen atom, the lightest, as having weight 1.

Dalton's great advance appears to consist in the clearness of his conception of an element as consisting of particles all alike, and whether truly atomic or not, yet indivisible by ordinary chemical agency, and in his supposition that compounds consisted in general of small groups of these elementary particles or atoms. This gave an easily pictured hypothesis to account for the chemical fact, by this time established, that the elements combine in definite proportions, which are always integral multiples of the smallest proportions in which they enter into combination. From this time forward, chemists, freed from the burden of the four elements, sought for bodies which were not to be decomposed by ordinary chemical and physical agency. These they termed 'elements,' and they investigated the

proportions in which the elements entered into compounds.

Soon after the publication of Dalton's theory, Avogadro put forward the hypothesis that in gases at the same temperature and pressure equal volumes contain equal numbers of molecules—a hypothesis then supported by experiments on the combination of gases, and since shown to be in accord with the kinetic theory of gases.

We have seen that with Dalton the atom was not necessarily indivisible, but merely undivided, and in modern times probably no one has held the indivisibility. Indeed, quite early in the development of the atomic theory by chemists, the old idea was revived, that the atoms of the different elements were really made of one kind of material, differing only in the quantity or arrangement of that material. Prout held that all the atomic weights were exact multiples of the atomic weight of hydrogen, a supposition which seems to imply that other elements were really groups of hydrogen atoms not to be divided by known agency. Later, it was suggested that discrepancies with this theory might be accounted for by taking one half or one quarter of the hydrogen atom as the unit out of which other atoms were built. But subsequent research on atomic weights has not supported these suggestions. There were, however, other reasons for supposing some community of plan in atomic structure. If weights of different metals be taken, containing, on the atomic hypothesis, equal numbers of atoms, nearly equal quantities of heat are required in many cases to raise these weights through one degree of temperature. In electrolysis, equal quantities of electricity are required to turn equal numbers of atoms out of combination. If the atoms of different elements had, as their only common property, weight or gravitation, and in other qualities were entirely different, we should hardly expect these quantitative relations.

The chemical atomic theory, as set forth by Dalton, is a statical theory. For chemical purposes the atoms may, up to a certain point, be considered as little bodies somehow held together in compounds by forces which need not be specified; and their motion and the motion of the molecules need not be regarded.

By the middle of the 19th cent. the researches of Joule and others had led every one to reject the doctrine of heat as a substance, and had brought to the front the old idea that heat was the energy of motion and of separation of the atoms and molecules. The dynamic aspect of the atomic and molecular theory now began to be seriously studied. We have seen that D. Bernouilli made an early but fruitless attempt to show that gas pressure could be accounted for by molecular motion. Other attempts were made by Herapath in 1821, by Waterston in 1846 (published only in 1892, when Lord Rayleigh disinterred the paper from the archives of the Royal Society), and by Joule.

Joule, in 1848 (*Scientific Papers*, i. 290), was the first to publish a calculation of the velocity with which the molecules are flying about. But the general acceptance of the dynamical, or, as it is now termed, the kinetic, theory began with the work of Krönig, Clausius, and Maxwell about 1856, and from that time onwards the theory has been developed in a series of memoirs by various authors, especially by Clausius, Maxwell, and Boltzmann.

2. **Kinetic Theory.**—The kinetic theory has been studied chiefly with regard to gases. It supposes that a gas consists of an enormous number of molecules, all exactly alike in a given gas, but so small that their average distance apart is very great compared with the size of any one molecule. These molecules are flying about in all directions with very great velocities, continually colliding with each other and with the walls of any containing vessel. The collisions are of such a kind that on the whole the energy of motion remains the same so long as the temperature is constant. The molecules are so far apart that they do not act upon each other except just during the moment of collision. Between collisions, then, they move in straight lines, and the average length of path between two collisions is called the 'Mean Free Path.' The velocities of the molecules are not all equal, but are grouped about a mean value which remains constant, and when the gas is in a constant or steady condition the grouping about this mean value is constant. It can be shown from simple mechanical considerations that if $\bar{v}^2$ is the average of the squares of the velocities, if p is the pressure, and if ρ is the density, then $\bar{v}^2 = 3\ p/\rho$. If we suppose that $\bar{v}^2$ remains constant so long as the temperature is constant, when the density is changed by changing the pressure, p/ρ is constant. This gives 'Boyle's Law.' The mean velocity is not quite the same as $\bar{v}$ (the square root of the mean of the squares), but the difference is only small. For hydrogen at 0° C. $\bar{v}$ is about 1800 metres per second—over a mile per second. For oxygen and nitrogen it is about a quarter of a mile per second. It can be shown that in a mixture of gases it is necessary that the average kinetic energy of each kind of molecule be the same in order that the collisions shall not affect the general condition; hence it can be further shown that the number of molecules in equal volumes of two gases at the same temperature and pressure is equal. This is 'Avogadro's Law.' Experiment shows that the pressure of a gas in a closed vessel increases by equal amounts with equal rises of temperature, and is, in fact, proportional to the temperature reckoned from −273° C. as zero. Then $\bar{v}^2$ is also proportional to this temperature. Or the mean kinetic energy of the particles is proportional to the temperature reckoned from −273° C. On this scale of temperature the sun's surface is probably about twenty times as hot as the earth's surface, so that the molecules of hydrogen there have about twenty times as great a $\bar{v}^2$ as they have here. Their velocity is thus about $4\frac{1}{2}$ times as great, say, some 5 or 6 miles per second.

So far it is not necessary to enter into the structure of the molecules; but for further developments with regard to the specific heats of gases, structure has to be taken into account, and difficulties arise into which we need not enter.

The mean free path, or the average distance travelled in a straight line between two collisions, plays a very important part in the theory. It is evident that the rate of diffusion of one gas into another, or the diffusion of one part of the same gas into another part, will depend partly on the mean free path, partly on the velocity; and from certain phenomena depending on the rate of diffusion, most simply from the resistance to the travelling of one layer of gas over another, the mean free path can be calculated. For hydrogen at atmospheric pressure it is about 0·00002 cm., or, say, a little less than a hundred thousandth of an inch. For air it is almost half as much. This implies that the hydrogen molecule is effectively less than the air molecule, since it can thread its way farther through its neighbours without collision.

The greatest triumph of the kinetic theory consists in its determination of the size of the molecules and of the number in a given space. By the size of the molecules we are not to suppose some definite solid shape. Imagine two molecules approaching so closely that they just begin to deflect each other, *i. e.* just begin to collide. Draw equal

spheres round each, just touching. Then the radius of either sphere is termed the radius of molecular action, and the sphere round each molecule is taken to be the size of the molecule, even though the atomic centres may be far within the surface of the sphere. It is evident that the mean free path of a molecule depends partly on the number of molecules in a given space, and partly on their size, just as the distance a man can walk straight on in a street without touching another passenger will depend partly on the number of people, partly on their breadth from shoulder to shoulder. A relation can be found connecting the mean free path, the molecular size, and the number present in unit volume; and since we know the mean free path, this gives a relation between size and number. Another relation can be obtained from the supposition that when the gas is condensed to a liquid the contraction is due to all the molecular spheres coming into contact. We may illustrate this by thinking of a cloud of equal water drops in a vessel as representing the molecules. When the cloud sinks to the bottom of the vessel, the volume of water at the bottom will be equal to the volume of each drop multiplied by the number of drops. So the observed volume of liquid into which a given volume of gas condenses may be taken as equal to the volume of each molecule multiplied by the number of molecules. At least it may be taken as nearly equal. We cannot say how closely the molecules are packed in a liquid, and thus some uncertainty is introduced into the results obtained. Thus we have two relations between number and size, and from these two we can calculate approximately both number and size. The result obtained is that the number of molecules in a cubic centimetre of a gas at 0° C. and atmospheric pressure is about 6×10^{19}. The mass of a molecule of hydrogen, which we must suppose to consist of two atoms, is a little less than 10^{-24} of a gramme. The radius of molecular action, differing somewhat for different gases, lies between 10^{-7} and 10^{-8} of a centimetre. The number of molecules in a cubic centimetre of water is about 10^{23}, and the distance from centre to centre about 10^{-8} cm. (These results can be translated into inches if it is remembered that 1 inch = 2·5 cm.) The number of molecules of gas per cubic centimetre has been calculated in other ways, most notably from certain experiments on electric discharge, and the results obtained are in fair accordance with those given above. Unless, then, we reject the theory altogether, we may assume that we know with fair accuracy both the 'size' and the average distance apart of the molecules in a body.

The kinetic theory, when applied to account for the properties of solids and liquids, has made very little progress. In the gaseous condition the molecules, according to the theory, spend most of their time in moving in straight lines, and when the collisions do occur there is no need to consider the forces acting. It is enough to assume that, on the whole, collisions do not alter the general condition. Many properties can then be accounted for. But when we come to solids and liquids, the molecules are supposed to be so closely packed as to be always entangled with each other, and there is no mean free path. Hence we cannot go far without knowing the forces between the molecules; and even if we could specify the forces, the calculations of their effects in such complex systems would probably be exceedingly difficult. In the solid condition, we must suppose that the molecules do not move far from a mean position. Each is held by its neighbours, so that though it may be violently agitated it keeps slackly anchored, as it were, to one spot. In a liquid, the molecules are still entangled with each other, but they possess more energy, and are able to break away every now and then from their anchorage and get into new surroundings. A liquid may probably be regarded as a cross between a solid and a gas—solid-like if time be reckoned by millionths or billionths of a second, gas-like if it be reckoned by seconds.

3. **Atomic and molecular structure.**—Since the kinetic theory of matter arose, several attempts have been made to imagine atomic structures which should serve to give some account of phenomena. Rankine (Nichol's *Encyclopædia*, *s.v.* 'Heat,' p. 353) assumed that the atoms were little nuclei surrounded by atmospheres whirling round them in vortices—a revival of Descartes's idea. Though Rankine made use of the theory himself, it is obscure in detail, and has not been used by others.

The vortex atom of Lord Kelvin (*PRSE*, Feb. 1867) is a much more celebrated hypothesis. This atom is founded on Helmholtz's investigations on fluid motion. We are to suppose that space is full of a frictionless incompressible fluid of uniform density throughout. An atom is a vortex ring in this fluid, a ring-shaped portion of the fluid distinguished from the rest solely by its peculiar whirling motion. The whirling motion may be understood by running an india-rubber umbrella-ring along its stick. The friction makes it move round and round as it travels. The rings which an expert smoker makes are vortex rings. A spoon drawn sharply across a cup of tea makes half a vortex ring of which the two cut ends, as it were, appear as little whirlpools, the half ring being below the surface. We can make rings in real fluids, because they possess viscosity or friction. But in a frictionless fluid, the creation and equally the destruction of a ring would require forces to act which the fluid itself does not possess; so that a ring if in existence must have existed in all past time, and will persist in all future time, the same portion of fluid always existing in it. We thus have a suggestion for an indivisible and eternal atom. The difficulty of the mathematical investigation of the mutual actions of vortex rings is so great, that little progress has been made in the theory. But it possesses value in suggesting the possibility that all energy is of one kind, energy of motion either of the rings themselves or of the fluid outside the rings. In accounting for the eternity of the atom it perhaps goes too far. In recent years the theory has dropped into the background.

Another hypothesis, due to Larmor (*PRS* lxi. [1897] p. 275), supposes that space is filled with an elastic solid, or jelly, capable of vibrating and carrying waves. An atom is the centre of a strain or twist in the jelly. The strain is persistent, but it can move from point to point in the jelly, using new parts as it travels along. It is the form of strain which is the persistent atom. The atom may be likened to a kink on a rope which travels along the rope, new material continually passing into the kink to take the place of the material which passes out of it.

Larmor has developed this hypothesis in several memoirs, showing how electrical and optical phenomena are to be interpreted in terms of it.

The latest atomic hypothesis is one which assigns an electrical structure to the atom. Here we can only give a sketch of the subject. Fuller details will be found in *Electricity and Matter* and *The Corpuscular Theory of Matter*, by Sir J. J. Thomson, on whose researches the hypothesis is chiefly based, and in *Electrons*, by Sir Oliver Lodge.

The idea that the forces keeping the atoms together in the molecule are electrical in nature is

as old as **Davy.** It is rendered probable by the fact that electric charges put into a liquid will decompose it, and by the fact that one of the chief sources of electricity is the voltaic cell in which chemical combination occurs and charges are given out. We may suppose that, if a molecule contains two constituent atoms or groups of atoms, one of these is positively electrified and the other negatively electrified, and that it is the attraction between the two charges which binds the atoms together to form the molecules.

Faraday discovered that, when a liquid is decomposed by an electric current, a definite charge of electricity of each kind is required to disengage a definite amount of an element from a compound, and that, if we accept the atomic theory, the charge is proportional to the number of atoms disengaged. The hydrogen atom always requires the same charge. Other atoms require either the same charge as the hydrogen atom or twice the charge or a small multiple of it. There is no evidence for the existence of a smaller charge than that on the hydrogen atom, and apparently all other charges are exact multiples of it. Thus electricity appears to be, as it were, atomic. Any quantity of it consists of multiples of the hydrogen atom charge, which is an undivided unit. We have to suppose that, when we decompose a molecule, each constituent has a charge, one positive the other negative, and we have to put in equal neutralizing charges to render the products of decomposition neutral. This interpretation of Faraday's discovery may be regarded as the foundation of the theory of the electrical atom.

The superstructure began with a discovery made by **Crookes,** when investigating electric discharge in highly rarefied gases. If the discharge takes place between two metal plates in a space sufficiently rarefied, Crookes found that a stream of negatively electrified matter shoots straight out from the plate to which negative electricity is supplied. This stream of matter can be deflected by a magnet. Sir J. J. Thomson found that it can be deflected also by electric force. In a series of brilliant experiments on the deflections by known magnetic and electric forces, he made the immensely important discoveries that the mass carrying a given charge is the same whatever the gas used, and that it is $\frac{1}{1700}$ part of the mass of hydrogen which would carry the same charge. By further experiments he showed that each particle in the stream carried a charge equal to that of the hydrogen atom, so that the mass of each particle is $\frac{1}{1700}$ part of the mass of the hydrogen atom. These minute carriers of negative electricity he termed 'corpuscles.' They are usually now called 'electrons.' We must suppose that the electric forces during the discharge tear away the negatively electrified portions of the atoms at the negative plates, that these are alike for all atoms, and that their mass is but $\frac{1}{1700}$ part of the mass of the hydrogen atom. If the atom was neutral before the corpuscle was torn from it, an equal positive charge remains behind upon what is left.

In building up the electric atom we must bear in mind that all experiment shows that there are equal quantities of the two opposite charges. We do not know of such a thing as a charge of one kind alone. One kind of charge is always accompanied by the other kind of charge—either united to it as in a so-called neutral atom, or separated from it by a greater or less distance, yet connected to it by forces. We imagine, then, that an atom consists electrically of a charge of positive electricity and a greater or less number of electrons, and there are reasons for supposing that the number of electrons is proportional to the atomic weight. The oxygen atom will possess, for instance, 16 times as many electrons as the hydrogen atom. The positive charge is equal to the sum of all the negative charges on the electrons. This positive charge is supposed to be spherical, and to be distributed uniformly within the sphere. In some way it coheres and occupies a definite volume of the order of the atomic volume, say, 10^{-8} cm. radius. The spherical supposition is made for simplicity of treatment. The electrons are moving about inside the globe, and can move without resistance through the positive. With these suppositions, it can be shown that, if there were a single electron moving within the globe of positive, it would have a definite period of revolution round the centre of the globe, the same whatever its distance from the centre. With a number of electrons moving in orbits round the centre, each would affect the time of revolution of the others, but certain arrangements of orbits would persist. Other arrangements might be unstable, and then electrons might be thrown out of the atom. As the electrons circulate in their orbits, they radiate out energy in the form of waves, one wave for each revolution, and the hypothesis thus seeks to account for light and other radiation of like kind. If two such atoms approach each other, one may be so nearly unstable that it parts with one electron, giving it to the other, which may absorb it into its own system. One atom, then, gains a small balance of positive, while the other has acquired an equal small balance of negative, and, these opposite charges attracting each other, the atoms keep together and form a molecule.

The atom possesses an enormous store of energy in the motion of the negative electrons. It may become unstable through mutual action of these in their orbits, and some part may fly off to form a new atom. Thus the hypothesis seeks to account for the breaking down of the atoms which appears to occur in radium and other radio-active bodies.

We have seen that the mass of each electron is $\frac{1}{1700}$ part of that of the hydrogen atom. The hypothesis gives an account of this mass which we owe to J. J. Thomson. If a body with an electric charge upon it is moving, it acts like a short length of electric current, and it is surrounded by a field of magnetic force; that is, there is magnetic energy in the space around as well as electric energy. If the moving body is a sphere with the charge upon its surface, the quantity of magnetic energy is directly proportional to the square of its velocity, and is inversely as its radius. Now, the mass of a body may be measured by the energy required to get up in it a given velocity v, for that energy is $mv^2/2$. If the sphere has mass m and no charge, its energy when moving with v is $mv^2/2$. If it has a charge, then there is in addition the magnetic energy also proportional to v^2, say, $m^1v^2/2$, or the total will be $(m+m^1)\,v^2/2$. Suppose that when without charge the sphere has no mass, m will be 0. When it has a charge, there will still be mass m^1, or rather the sphere will behave just as if it had this mass. It is possible, then, that the mass of the electron is entirely due to its charge. Calculation shows that a massless sphere carrying a surface charge equal to that of the hydrogen atom, and about 10^{-13} cm. in radius, would behave as if it had mass $\frac{1}{1700}$ of the hydrogen atom.

If we could suppose that the hydrogen atom contains 1700 electrons, we could thus account for its whole mass. But it appears much more probable that that atom contains but one or a few electrons, so that if we are still to give an electrical account of mass, we must break up the positive globe into very small spheres enormous in number, and each containing a very small charge, far smaller than

that on the electron, these being scattered through the globe. But for this supposition there does not as yet appear to be any justification, *i.e.* it does not account for any observed phenomena.

Certain experiments do seem to show that the mass of the electrons is fully accounted for by the magnetic energy of their charges when in motion; but even if we accept this account it is very doubtful if we have 'explained' mass. Certainly all our measurements of energy involve the idea of mass, and it may perhaps be maintained that the magnetic energy in the space round the moving electron implies the existence of mass in that space to serve as a seat for the energy. If so, the electric theory of mass only takes the mass from the inside of the moving sphere and spreads it through the outside space. Again, we come to the Boscovich-Faraday conception, that an atom is wherever its force acts—not at the centre alone, but spread through all space.

Summary.—Present position of the atomic theory.—The belief that matter is granular in structure, that it consists of exceedingly minute discrete particles, is irresistible. The particle structure accounts for a vast host of observed facts, for which no other explanation has been suggested. We must accept it, unless we abandon all explanation by means of hypothesis, and are willing to content ourselves with mere description of phenomena—a frame of mind which is non-existent. When we pursue the particle structure into detail, we find an excellent explanation for the facts of chemistry in the hypothesis that, in a definite chemical compound, the particles are molecules, all alike, and that each molecule consists of a group of still smaller particles, which, without prejudice to their divisibility, we call atoms. The chemist finds that the compound can be resolved into bodies, each of which is incapable of further resolution by ordinary chemical agency, and which he terms 'elementary.' An element is supposed to consist of atoms all alike in each one kind. No explanation other than this has been devised for chemical phenomena, and it works so well that it has been universally accepted. So far, we cannot even conceive of any other hypothesis. The hypothesis that in a gas the molecules are, on the average, far apart and rushing about leads to a simple explanation of many gas properties, and has suggested properties hitherto unknown which investigation has shown to exist. Again, no alternative hypothesis has been offered; and if we accept this, we are bound to accept the determinations of number and size, determinations arrived at also from other starting-points.

So far, no special assumptions need be made as to atomic or molecular structure. But if we seek an explanation, on the atomic hypothesis, of certain electrical phenomena, we must imagine some definite structure for the atom. The electrical atom, in some such form as that described, is the only atom yet imagined which has any value for the purpose. It has served to explain many of the phenomena, and it has suggested researches which have led to new and important discoveries. It is easy to criticize it, to point out the large assumptions on which it is founded. There is, for instance, the coherent globe of positive electricity held together by unknown agency and allowing the negative electrons to move about freely in it. For this we require properties unlike the properties of any known electrical system. But the chief value of such a hypothesis lies, not in its objective truth, but in its success in accounting for, in co-ordinating, what we actually observe, and in predicting results which are afterwards verified. It is to be regarded as a 'working model' which gives the same results as the actual atom, though, it may be, by quite different machinery. From this point of view the electrical atom is a brilliant success.

We observe phenomena due to matter in large masses. Our senses tell us nothing of ultra-microscopic structure, and perhaps the sparkling of zinc sulphide when exposed to radium is the only phenomenon which can fairly be ascribed to single atoms, each sparkle being assigned to the impact of one atom. When we go behind observed phenomena and assume a minute structure to account for them—a structure far beyond the range of our senses in minuteness, and probably utterly beyond direct verification — it is possible to imagine many types of structure which will account for what we observe; just as when we stand in front of a clock which we cannot open, we can imagine many different trains of wheel-work which will account for the motion of the hands. We must, therefore, accept only provisionally any one type of atomic structure which may be offered. It is, on the highest valuation, only one possible solution of the problem. We must be prepared for alteration, for addition, for re-construction, as new phenomena are observed and need to be accounted for. We must be prepared even to abandon it altogether if some better 'working model' is devised. The hypotheses of science are continually changing. Old hypotheses break down and new ones take their place. But the classification of known phenomena which a hypothesis has suggested, and the new discoveries of phenomena to which it has led, remain as positive and permanent additions to natural knowledge when the hypothesis itself has vanished from thought.

LITERATURE.—For early history: R. Angus Smith, *Memoir of John Dalton, and History of the Atomic Theory*, London, 1856. For the present condition of knowledge on Atomic Weights: S. Young, *Stoichiometry*, 1908. For the Kinetic Theory: O. E. Meyer, *Kinetic Theory of Gases* (Eng. tr. 2nd ed.); an elementary exposition is given in Poynting and Thomson, *Heat*[3], 1908, ch. ix. For the Vortex-ring Theory: J. Clerk Maxwell, 'Atom' in *EBr*[8]; J. J. Thomson, *Motion of Vortex Rings*, 1883 [an advanced mathematical treatise carrying the subject to its furthest point]. For Professor Larmor's investigations: J. Larmor, *Æther and Matter*, 1900 [a mathematical exposition]. For Lord Kelvin's views on the Boscovichian Atoms, his *Baltimore Lectures*, Cambridge, 1904 [a treatise on optics]. For the Electrical Atomic Theory: J. J. Thomson, *Electricity and Matter*, 1904, *Discharge of Electricity through Gases*, 1898, and *Corpuscular Theory of Matter*, 1907; Sir O. Lodge, *Electrons*, 1906. For the use of the Electrical Theory in Optics: P. Drude, *Theory of Optics*, 1902 [a mathematical treatise on optics, developed on the Electro-magnetic Theory of Light, and using the conception of the electric construction of the Atom].

J. H. POYNTING.

ATONEMENT.—See EXPIATION AND ATONEMENT.

ATROPHY.—This term in its simplest meaning signifies lack of nourishment, but in its strictest use is applied to the diminution and enfeeblement of the limbs and organs, or parts of organs, of complex animals and vegetables as a result of disuse. The rapid decrease in weight of an animal as a result of starvation, or the wasting (emaciation) so commonly seen as a consequence of prolonged fever or malignant disease, does not even in the medical sense come under the heading 'atrophy'; this term is used to express such changes as the wasting of a muscle when its nerve supply is cut. Muscles are in reality the specialized end-organs of motor nerves, and without the necessary stimulus from the nerve-centres the muscle is useless. The atrophy of a muscle is brought about not only by dividing its dominant nerve, but also by destroying the nerve-centre in the spinal cord or brain from which its impulses to contract are derived. Examples of atrophied muscles from these causes may be found in every Poor Law infirmary in Great Britain. Similar results may be studied in other special sense-organs like the

eye; when the optic nerve is divided, or the visual centre in the brain destroyed, the retina, the delicate structure in the eyeball which is the recipient of light rays, quickly atrophies. It is likewise a matter of importance for the preservation of highly organized structures that they be kept in moderate use. It is common knowledge that living animals kept in dark places lose their acuteness of vision, and in fish, crustaceans, and burrowing forms of animal life the sense of vision is not only diminished but is actually lost, and the eyeballs diminish to inconspicuous dots.

The most interesting examples of atrophy and suppression of parts are those which come under the observation of naturalists and morphologists. These observers are especially interested in the effects produced by disuse of organs of animals and plants caused by changed habits of life, or by the increasing importance of other organs. This is illustrated by tadpoles. When the frog embryo emerges from the egg, it has a long tail and external gills; in the course of its metamorphosis limbs appear, and the tadpole assumes more and more the form of a frog; the gills and tail do not drop off, but are slowly absorbed and disappear, and the aquatic tadpole is changed to the amphibious frog. The disappearance and modification of the cartilaginous arches which supported its gills, and some correlated changes in the framework of the skull, are as remarkable, though not so obvious, as the atrophy of the tail. Similar atrophy of organs may be studied in many animal forms which in their early life enjoy a free existence, but later become fixed forms, such as ascidians. Many remarkable instances of the atrophy and disappearance of larval organs may be studied among invertebrates, especially sea-urchins and star-fishes. Whilst wondering at these remarkable things, we should not overlook the fact that many instances of this suppression of parts occur in the highest mammals, even in man. The fall of the milk-teeth is due to a process similar to that which causes the loss of the tail in tadpoles and ascidians. Puppies are born blind, owing to the existence of a vascular membrane occupying the space known as the pupil of the eye; this membrane atrophies, and the pups become sensible to light. In the human embryo this membrane is also present, but it disappears shortly before birth.

The bodies of all mammalia contain many remnants of organs which in the early stage of their development were of first-rate importance in their economy; but when the animals are born and become lung-breathers, the alteration in the manner of respiration leads to very great changes in a few of the larger blood-vessels, causing them to atrophy; but they remain throughout life detectable by the eye and scalpel of the anatomist. Even more remarkable are the great number of vestiges of parts which may be discovered in every special organ of the body; and the more specialized the organ has become, the greater the number of atrophied parts it contains. The brain abounds in such remnants, and contains rudiments of a third eye. The organ of hearing, and even the external ear, or auricle, contain many atrophied parts. This is true of the eyeball and its protecting lids. A child can verify for himself that a horse or a dog has three eyelids, merely by holding the paired eyelids apart; and if he examines the nasal side of his own orbit he will see the little pink cone representing the third eyelid (nictitating membrane) of the horse, dog, and owl, and with a magnifying glass may distinguish the delicate hairs upon it. The larynx, the heart, the liver, the intestines, and even the limbs abound in vestiges. In those remarkably modified mammals the whales, the hind limbs are represented by mere rudiments concealed in blubber.

Probably the result of atrophy in producing profound modification of outward form and structure and yet leaving traces of its steps in the form of atrophied organs is nowhere so convincing as, or more easily studied than, in those interesting flowers known as orchids. The present writer believes that it is hardly an exaggeration to urge that orchids hold the same relation in the floral world in regard to modification of form through atrophy and suppression of parts—the results of a changed environment—that whales hold for the same reasons among mammals.

Not the least important aspect of atrophy is its relation to sexual organs. It is well known that flowers represent the reproductive organs of phanerogamous plants, and that in many of them a single flower contains male and female parts. In some plants the sexes of the flowers are separate, some being male and others female. A careful investigation of the development of certain flowers which, when fully blown, are of single sex, shows that they possess the germs of organs belonging to both sexes, and that in the course of growth the organs of one sex develop and attain maturity, whilst those of the opposite sex remain rudimentary or completely atrophy. It happens, and not infrequently, that in a flower of a plant normally unisexual the male and female parts develop equally: such are called hermaphrodite. Exactly similar conditions have been detected throughout the animal kingdom, even to its summit—man. In the higher mammals, hermaphrodite forms are always sterile, and regarded as malformations. In addition to suppressed or atrophied parts resuming a former higher grade of development, they may even in their degenerate condition, like idlers in a community, be a source of much trouble. Very many curious and often dangerous conditions, known to surgeons as cysts and tumours, arise in the remnants of belated organs. Many occur in the neighbourhood of the mouth, tongue, and neck. Probably the two most persistently fatal are the vermiform appendix, and the remnant of the representative of the yolk-sac, known as Meckel's *diverticulum*, a fertile source of intestinal obstruction as well as a cause of malformation in that part of the alimentary canal known as the *ileum*.

When an organ, or part of an organ, which is usually suppressed, or represented by an atrophied rudiment in the adult, appears as a fairly formed part in an animal, it is regarded as a malformation. For example, men and women normally possess twelve pairs of ribs, but the vertebral segments in the neck, and some of those in the loin, possess minute undifferentiated ribs. In many vertebrates the corresponding cervical and lumbar vertebræ bear well-developed ribs, but, as they are always present, it is usual to speak of them as normal. Occasionally in man the rudimentary ribs in the neck and loin appear as well-developed elements in the skeleton. Thus a skeleton with thirteen pairs of ribs is described as being abnormal. The condition has a deeper meaning. The interpretation which the morphologist places on the matter is this: Man is descended from an ancestor who normally possessed more than twelve pairs of ribs; the cervical and lumbar ribs have undergone suppression, and are represented by rudiments or vestiges. When a vestige of this character reappears in a functional form, it is described as an example of atavism (*q.v.*) or reversion.

Atavistic phenomena are easily studied in plants. This has been a subject of great fascination since Goethe drew the attention of botanists to the fact that the various parts of a flower may be regardec as modified leaves. This does not mean that each

part of a flower is a metamorphosed leaf, but that we are able to trace every structural gradation, from leaves to bracts, from bracts to sepals; and not infrequently sepals will be replaced by or become converted into true leaves. The changes from sepals to petals, and from petals to stamens, are as gradual as from bracts to sepals; and the homology is often declared by the stamens becoming petals, and petals appearing as leaves. Even stamens occasionally revert in this way, and constitute abnormalities or monstrosities.

Atavistic conditions of this kind are met with in animals, especially in connexion with the appendages of crustaceans; and it is astounding to see a lobster with an antenna surmounting its eye-stalk and replacing the whole or part of its eye. Yet parallel malformations occur in sheep, dogs, and children, when the conjunctival covering of the eyeball reverts to skin and produces hair. Although men offer explanations of these curious phenomena, and call them reversions to ancestral types or adaptations to environment, or seek to solve them by the phrase 'natural selection,' it must be admitted that the cause still remains veiled in impenetrable mystery. It is also certain that, if we knew the cause of the shedding of the milk-teeth in children, we should be able to explain the origin of species, and the cause of the great division of plants and animals into males and females. ATTACHMENT.—Attachment may be considered in three relations: (1) attachment to the things of sense; (2) to objects of affection; (3) to the fruits of action.

1. *Attachment to the things of sense.*—This is the uncontrollable attraction that the physical and emotional environment has for the lower consciousness in man. Now it is obvious that attachment in this sense is perfectly natural, and is quite necessary for long stages of evolution during which the ego in man is gaining experience and learning the necessity for self-control, while the various faculties of the mind are developed through the activities induced by the struggle for life and goods. The characteristic of this form of attachment is that it centres in the personal self, and is essentially selfish, and so cannot be an abiding condition in the life of humanity. A time comes in the evolution of each individual soul when that attachment is weakened and a new centre formed; and it is religion that then begins to draw in opposition to that downward absorption in worldly affairs which claims so strongly the energies of man. There may indeed be long periods during which the attraction towards a spiritual life may seem almost inoperative, but sooner or later must come the conversion to a new course of life, when the old way will be forsaken and an upward path adopted.

2. *Objects of affection.*—Though attachment here, in the more primitive phases, is strongly permeated with selfishness, yet there is always and in all cases a centre of attraction formed outside the self, and this change, implying new motives, at once begins to humanize and improve the entire nature. From sex and family affections—extended gradually to comrades and friends—there eventually arises a wide love of mankind, losing all the elements of attachment as it grows in unselfishness and approaches union with the Divine.

3. *The fruits of action.*—Man seeks advantageous results; he sets his mind on success, and is proportionally elated or depressed as events turn out in accordance with his wishes or against them. He is attached to the outcome of his efforts, and is not content solely with doing his duty, or his best, and leaving the result to God. It is on this kind of attachment that the *Bhagavad Gītā* (ch. 5) has so much to say: 'The man who is devoted and not attached to the fruit of his actions obtains tranquillity; whilst he who through desire has attachment for the fruit of action is bound down thereby.' Man acts less and less selfishly as he rises towards perfection, and he remains undismayed and patient when the results appear adverse. When he has rid himself of all the lower attachments, he is no longer a slave to the lower desires, and has become ready to enter the abode of bliss, or the Kingdom of Heaven, for he has conquered self and obtained freedom.

ATTENTION.—

'Strange to say, so patent a fact as the perpetual presence of selective attention has received hardly any notice from psychologists of the English empiricist school. The Germans have explicitly treated of it, either as a faculty or as a resultant; but in the pages of such writers as Locke, Hume, Hartley, the Mills, and Spencer, the word scarcely occurs, or if it does so, it is parenthetically and as if by inadvertence. The motive of this ignoring of the phenomenon is obvious enough. These writers are bent on showing how the higher faculties of the mind are pure products of "experience"; and experience is supposed to be of something simply given. Attention, implying a degree of reactive spontaneity, would seem to break through the circle of pure receptivity which constitutes "experience," and hence must not be spoken of under penalty of interfering with the smoothness of the tale' (James, *Principles of Psychology*, i. 402).

This is the opening paragraph of James's chapter on Attention, which introduced into English-speaking countries a new and better way of treating the subject. Other writers on Psychology have written luminously on the subject, and readers of the works of Ward, Baldwin, Stout and others, may now have an adequate conception of the function of attention in the evolution of mental life, and of its significance in mental work.

While the empiricists have, for the reason stated by Professor James, thrust attention into the background, and have neglected the whole function of mental activity in experience, other schools also have conspired towards the neglect of this form of mental action. Idealism in all its forms finds scarcely any place for it and its function. As the empiricist, in the interest of a view which regarded experience as given and determined by the pressure of the external order on the mind, insisted that all experience is implicit in sense impressions, so the idealist regarded experience as determined by the evolution of the Idea. Will is, for some of them, especially for Mr. Bradley, the self-realization of the Idea. But in the evolution of the Idea there is no room for selective attention; there is scarcely room for any activity of the subject at all. It is curious that both idealists and empiricists come to practically the same result. Empiricists ignore selective attention, because they wish to account for all the products of experience by laws of association which cluster things together independently of the activity of the subject; and idealists, in the interests of the ideal order, regard experience as dictated by the objective selection of pure thought.

In truth, the question of attention and its significance involves the whole question of the possibility of spontaneity in life, and of whether the movement of life is wholly determined from without, or whether the organic being has the power of selecting, out of various possibilities, what it can be and do. Is there such a thing as subjective selection, as Dr. Ward calls it, or organic selec-

tion, as Professor Baldwin calls it? Or is the life of an organism determined for it by factors in which it has no function? Is there subjective selection, or is all determined by what is called Natural Selection? The question is too large to be argued here, but it is named because the same fundamental issue is raised by writers on attention. It may be well, then, simply to state the issue as it appears from the view of Biology before we discuss it from the narrower view of Psychology and Ethics.

The question may be broadly stated thus: Is there an autonomy of life? Is the proper activity of the organism a real factor in biology? And are there new concepts required to describe the functions of life, in addition to those which are required for an adequate account of the phenomena of the inorganic world? A quarter of a century ago, it was strongly affirmed that a true and adequate scientific account of vital behaviour could be reached only when the behaviour of life could be expressed in terms of physics and chemistry. Vital phenomena were only transformed physical and chemical processes. They were altogether determined by the pressure of physical and chemical activities. Let one read the writings of Huxley, or the art. 'Zoology' in *EBr*[9], and it will be seen that the physical and chemical explanation held the field. It holds the field no longer. There are now many who do not fear to speak of the autonomy of life, and who do not hesitate to affirm that the chief factor in biological science is the proper activity of the organism. It is questioned now whether any organic feature can be explained, even in the most general way, by the action of physical forces.

'What at first seems to be the result of mechanical pressure may afterwards be found to be an active process of growth, and what at first seems to be a full effect of capillarity among homogeneous elements may afterwards be shown to depend on specialized metabolic conditions of the surfaces as its principal *cause*' (Driesch, *The Science and Philosophy of the Organism*, i. p. 93).

As Driesch further shows, these processes do not constitute life, 'they are used by life.' In this sentence the issue is stated with clearness and precision. Life uses for its own purpose the physical and chemical processes, and account must be taken of the activity of life, if we are to understand the problem of vital behaviour.

Life, then, uses the physical and chemical processes, and by its own activity disposes of them for its own purpose, and puts them to uses not forthcoming in the inorganic world. Alien matter is taken up, transformed, raised to a higher level, and used for the weal of the organism. Life selects out of the environment what is needed for itself. There is selective activity on the part of life; it takes what it needs and neglects what it does not need.

'Turn a miscellaneous lot of birds into a garden: a flycatcher will at once be intent on the gnats, a bullfinch on the pease, a thrush on the worms and snails. Scatter a mixture of seeds evenly over a diversified piece of country: heath and cistus will spring up in the dry, flags and rushes in the marshy, ground; violets and ferns in the shady hollows, gorse and broom on the hilltops. . . . By the principle of subjective selection special environments are singled out by different individuals from the general environment common to all, and so far there is not necessarily any competition. Two artists or two anglers may be in each other's way, but an artist and an angler will hardly incommode each other. A garden would still interest a flycatcher if there were neither pease nor cherries in it, provided the insects remained; whereas the bullfinch would at once forsake it. Natural selection, as distinct from subjective selection, comes into play only when two anglers contend for the same fish, two artists compete for the same prizes, when the early bird gets the worm that the later one must go without' (Ward, *Naturalism and Agnosticism*[2], i. 295 f.).

For a complete explanation of biological phenomena, account must be taken, no doubt, of the two comprehensive factors summed up under the names of 'natural selection' and 'subjective selection.' This is not the place to deal with them in any comprehensive manner (see art. ACTIVITY and other related articles). Here it is sufficient to say that natural selection (comprehending under that name all external conditions, and all that Darwin sets forth under the comprehensive title of Natural Selection) is not sufficient to describe the behaviour of life, or to account for its manifold activities. Life itself counts for something in the final result. Growth, assimilation, and reproduction attest the activity of life. These show that life so far selects its environment, and that, if there are a thousand species in a square mile of ground, each selects its own environment, and each uses it in its own way, and for its own purposes.

The wider problem set to biology by the activity of the organism, and by subjective selection in relation to natural selection, is parallel to the problem set to the psychologist and the moralist by the relation of attention to the general conditions imposed on conscious individual life by the fact that there are logical laws, laws of association, psychological conditions of thought, action, and feeling, and other conditions which seem to determine the limits within which attention is to be exercised. As in biology we ask the question, Does natural selection account for vital experience without the postulate of the activity of the organism? so here we ask the question, Do the logical, psychological, and other laws and conditions of mental life account for mental behaviour without the postulate of the conscious activity of the individual subject?

As regards life in general, it is to be observed that its first work is concerned with those movements which are indispensable to vital functions and to its existence as a living body. As a primary condition of existence an organism must adapt itself to its surroundings, and a series of actions must proceed in order that such an end may be accomplished. These activities relate themselves to the general ends of self-preservation and the preservation of the species. A full account of the phenomena connected with this problem would lead us into the region of the relation of organ and function, the relation of appetite and desire to their objects, and also the relation of feeling generally towards physiological processes on the one hand and mental processes on the other. Without entering into these, we shall merely notice here that life can be described only as a series of actions having reference to an end. That end is the preservation of the individual or the preservation of the species. It is a question whether those activities which are said to be instinctive in the individual are really so; that is, whether they are the outcome of activities which at the outset were acts of choice, these being by repetition consolidated into habit; or whether they were automatic from the beginning. Some contend that actions at present instinctive were originally the outcome of choice, and that these actions, stimulated by a feeling of pleasure, which usually accompanies the exercise of vital functions, have been translated into habit, and have passed into the region of reflex action. Habit is 'lapsed intelligence,' *i.e.* voluntary action may become instinctive, or impulsive, and in the evolution of life may become habitual or reflex action.

But, if we take any organism as it stands, leaving undecided the question as to the forces which have operated to make it what it is, there is no doubt that every organism has to adjust itself to its environment. Whether it has been made by the slow processes of what is called natural selection, or whether it has had something to do with the making of itself, yet, as it is there in its circumstances and conditions, it has to strive,

to work, to adapt itself to varying conditions; and if it is to survive, it must select the most advantageous course of action. In the case of life generally this is comparatively simple. The individual organism adapts itself to its environment by a series of actions directed to the main ends of self-preservation or the preservation of the species.

'All acts of willing, whether external or internal, are divided into two great classes, the first comprising simple or impulsive acts; the second, complex acts, which imply freedom of choice. Simple or impulsive acts are determined by a single motive, whereas complex acts, though they may be determined by a single motive, imply a choice between several. An impulsive action, whether internal or external, is therefore quicker than an act of choice, which is preceded by a feeling of doubt and hesitation. The latter is also termed a free act, or an act of "free-will," because it expresses more clearly than any other the freedom, spontaneity, and independence of the individual with regard to external stimuli. Impulsive acts are also acts of volition, though in a lesser degree than acts of free-will, and possess the character of spontaneous consciousness, which distinguishes all manifestations of the will' (Villa, *Contemporary Psychology*, p. 213).

In an ordinary organism, up to the appearance of reflective consciousness, action is directed to its ends mainly by what Villa calls 'a single motive.' Driven by the impulse of hunger or of love, the action of the organism goes straight to its object. Whether this is the outcome of natural selection, or whether it is acquired by the organism itself as the result of a process of education, it is not necessary here to decide. For in either case the adaptation is there, and the action of the organism is the result of subjective need finding its satisfaction in an appropriate object. In any event, the action and its motive are simple, direct, and imperative.

In a life which is merely organic, the need of the organism may be regarded as in direct and simple relation to its external objects, and proceeds straight to the appropriation of them; in conscious life, or in the life which is on the way towards self-consciousness, other factors enter in, and the situation becomes more complex. Yet the more complex situation rises naturally out of the simpler. There is no abrupt break in the evolution of mental life, and we can scarcely say when what we call attention begins to be properly exercised. In every organism there is a centre, to which all movements are referred. The organism is aware of its own needs, and of the objects which are to satisfy those needs. With the growth of consciousness, the awareness becomes intensified, until, in the fully-developed self-conscious life, consciousness is aware of itself and of all its needs and aims. But consciousness in general is just this awareness, and this awareness involves that mental activity which we call attention. More fully described in the words of Dr. Ladd, attention is 'a purposeful volition, suffused with peculiar feelings of effort or strain, and accompanied by a changed condition of the field of discriminative consciousness, as respects intensity, content, and clearness' (*Psychology, Descriptive and Explanatory*, p. 61). While the description just given seems to apply in its fullness only to a mental life completely developed, it is in a measure applicable to all conscious life. It will be observed that in the definition given above there is no attempt to limit attention to the exclusive operation of any particular activity of the mind. It is, on the contrary, the synthesis of all the activities of the mind, whether of feeling, willing, or thinking. Attention is thus elementary and universal; it belongs to every state of consciousness, and is present in every field of consciousness, or, as is said by Dr. Ward:

'As to the subjective relation of objects, the relation of presentation itself, we have merely to note that on the side of the subject it implies what, for want of a better word, may be called *attention*, extending the denotation of this term so as to include even what we ordinarily call inattention. Attention so used will thus cover part of what is meant by consciousness—so much of it, that is, as answers to being mentally active, active enough at least to "*receive* impressions." Attention on the side of the subject implies intensity on the side of the object: we might indeed almost call intensity the matter of a presentation, without which it is a nonentity' (*EBr*[10], art. 'Psychology,' p. 41[b]).

Awareness of the stream of consciousness, as it passes on, becomes attention in the stricter sense as elements in experience become more or less intense. It is impossible here to enumerate all the elements which enter into consciousness, nor is it necessary. For the reaction of the mind against its presentations, whatever these may be, gives us at once the elementary condition of attention. At the outset, before mind has come to the possession of itself, it is possible that attention is without purpose, that it is aroused by change in mental experience—by pleasure or pain, or by the overstimulation of sense or faculty—and that it is exercised in an unthinking, involuntary way. But such rudimentary forms of conscious activity are the foundations on which voluntary, deliberate, and sustained attention are built up. Some, indeed, limit the term 'attention' to its more developed form, and refuse to recognize the more rudimentary forms as worthy of the name. But without the rudimentary forms there would be no possibility of the development of mental life, and no possibility of the deliberate sustained attention which fashions for itself a scheme of living, and shapes means for realizing it. Mental activity in accepting the given, in being interested in it, finds that it can enhance the intensity of some elements, may hasten or retard the flow of the stream of consciousness, may also discriminate between desirable and undesirable elements, and thus the value of attention is recognized. For mental life cannot grow without proper mental activity, and the proper name of such activity is simply 'attention.'

Usually the conditions of attention are just the conditions of consciousness in general. We have seen from Dr. Ward that a large part of the stream of consciousness is properly included under the phenomena of attention. It so happens that many writers on this topic so describe the conditions of attention as to leave out of sight any proper activity on the part of the subject. It is possible so to describe the effects of attention as to leave out all reference to the selective activity of the individual. One may say, with Professor Pillsbury, that 'the essence of attention as a conscious process is an increase in the clearness of one idea or group of ideas at the expense of others' (*Attention*, p. 11). This is quite true, only it leaves out the essential element of how attention was directed so as to produce that result. In fact, in the able work cited so much stress is laid on processes and conditions of attention that attention itself scarcely ever appears. Thus there are many valuable descriptions of the motor concomitants of attention, of its conditions, of the effects of attention on consciousness, and so on, and yet the proper character of mental activity receives hardly any recognition. We may quote from the summaries, usefully appended to each chapter. The summaries of the chapter on 'The Conditions of Attention' are these:

'The conditions of any act of attention are to be found in the present environment (objective conditions) and in the past experience of the individual (subjective conditions). The main objective conditions are the intensity, extent, and duration of the stimulus. The subjective conditions are to be found in the idea in mind at the time, in the mood of the moment, the education, previous social environment, and heredity of the individual' (p. 52).

Professor James has said:

'My experience is what I agree to attend to. Only those items which I notice shape my mind; without selective interest experience is an utter chaos. Interest alone gives accent and emphasis, light and shade, background and foreground—intelligible perspective, in a word. It varies in every creature, but without it the consciousness of every creature would be a grey,

chaotic indiscriminativeness, impossible for us even to conceive' (*Psychology*, i. 402 f.).

But Professor Pillsbury in his summary of the chapter on 'Interest and Feeling of Activity as Conditions of Attention' speaks thus:

'Neither interest nor "mental activity" can be regarded as a condition of attention. Interest is either a general name for the subjective conditions of attention when ascribed to the object, or it is used to designate a mood which accompanies all attending. Mental activity is really bodily activity—a mass of sensations that comes from the contraction of muscles in different parts of the body. The contractions result from motor innervations which accompany attention' (p. 68).

According to Professor James, we attend to things because they are interesting. Professor Pillsbury is of opinion that 'things are interesting because we attend to them, or because we are likely to attend to them: we do not attend to them because they are interesting' (p. 55). The cart and the horse are somehow united, but we are left in doubt as to which comes first. To us it appears that in the solution of Professor Pillsbury the cart is before the horse. His book is the largest and most elaborate of any work we know on 'Attention.' It contains many things which are of the highest value. But it does not seem to cast much light on its main theme. Attention in its proper meaning seems to be conspicuous by its absence. We quote from the chapter called 'General Conclusions':

'Using attention as a type, it is possible to bring many of the other mental processes under that head and to make it serve as a basis for the classification of states of mind. We have seen, for example, that attention influences recalled impressions in practically the same way that it influences their original entrance. When a memory image is once given in consciousness, it will be retained very much as a perception received immediately from the external world. Furthermore, attention largely determines which of the many possible associates of any impression shall become actual. In this sense it selects the memories offered by association just as it selects the objects of sense that shall be permitted to enter. By attention in this sense we mean again from the side of the conditions the effect of the sum-total of previous conscious states, as united in the purpose of the moment, the general trend of the preceding thought, the character of the man, his profession, and further back the complete series of earlier experiences and inherited tendencies which make him what he is. His thought about any subject, no matter what the starting-point, is an expression of himself in the fullest meaning of the term' (p. 313 f.).

When Pillsbury in the passage quoted describes attention as 'the effect of the sum-total of previous conscious states,' etc., has he not left out the most essential element in attention? When he speaks of the complete series of earlier experiences and inherited tendencies which have made 'him what he is,' has he not neglected the most potent factor, namely, the share which the man has in the making of himself? Take members of the same family, descended from the same parents, subject to the same kind of earlier experiences, the same inherited tendencies, responsive to the same environment in family, school, and neighbourhood, and how on his principles does he account for the manifold differences between them? It seems to the present writer that Professor Pillsbury, in his earnest desire to lay stress on the general conditions, has forgotten the personal equation of each individual. He has imitated the procedure of the biologist, who lays the whole stress on natural selection, and neglects the part played by the subjective in the evolution of life. General laws can never account for particular effects. It is a useful study to seek to find out the general conditions which have helped to make a man what he is; but that has to be supplemented by a particular study of the man in his habit as he lives. It does not help us much to say that Shakespeare was an Englishman, and that Burns was a Scotsman; for we have still to learn what were the topics which interested these great men, and what was the interest which directed their attention to this or to that line of thought and action. It is possible that we may never be able to give a scientific explanation of the individual in this relation or in any other; for the individual, as such, is outside of general rules, and must be accepted in all his concreteness as a subject of study by himself.

It is pointed out by Höffding (*Outlines of Psychology*, pp. 108–112) that, in immediate sensations and in the flow of them, interest and the attention determined by the interest play an essential part. He points out (p. 120) that we are not given over in a purely passive way to the impressions of the external world. Excitations from without call forth movements which serve to retain or pursue them. An involuntary search and accommodation help to determine the character of the sensation.

'If a sensation takes complete possession and almost succeeds in driving all else out of consciousness, it then arrests our activity also. An exclusive sensation therefore presupposes attention, but is not one with it. Besides, how does a sensation become exclusive? Excitations can flow in upon us simultaneously from several sides. The eye, *e.g.*, receives simultaneous excitations from several points of light. Several senses, moreover, may be in operation together. If purely passive, sensuous perception would afford at every instant a chaos of diverse sensations. But from the multitude of these diverse sensations, in every instant, one is selected which becomes the centre. Reflexly and instinctively the attention moves from one excitation to another . . . The motive which decides the attention to leave one excitation and turn to another is to be looked for in a sense of fatigue or in a feeling of dullness, which makes it a necessity or a recreation to turn to a new excitation, especially to one which is a natural counterpart or supplement of a preceding excitation. In every such transition an elementary choice takes place' (p. 120 f.).

Referring to the whole discussion for further elucidation, we may now say that even in sensations and in the flow of them choice has a part, and attention may determine what sensations may occupy the centre of consciousness, what may be thrust into the background, and what may be thrust altogether outside the threshold of consciousness.

But such attention may be involuntary, or may have the character of reflex movement. Yet this elementary choice is the necessary condition of such new arrangement of sensations as will be transformed into those results of human effort which we recognize in the contents of science, art, philosophy, and in all other results of human effort. Out of elementary choice and out of almost unconscious attention come the magnificent results which we have already named. We may attend to things because we cannot do otherwise. But when we have an express volition to attend to this or to that, we call it voluntary attention. All other attention is called non-voluntary or spontaneous. The relations between spontaneous and voluntary attention are manifold. They may be antagonistic to one another, or they may act in such a way that the one passes into the other. Thus voluntary attention to an uninteresting object may invest it with such interest as to make attention to it a spontaneous matter. For example, when we are occupied with any matter, as when a great misfortune has befallen us, or when we pass in review a certain course of conduct in order to find the cause of failure, it may take possession of our minds to such a degree that no effort of will can make us cease from brooding over it. An article has to be written, or a book is in process of preparation; the work is carried on to the loss of sleep, and we are unable to tear ourselves away from it; the attention which began voluntarily has become an obsession.

On the other hand, experience shows that, by the constant and ever-renewed effort of attention, a subject which at the outset was dry and uninteresting may become full of interest as we master it, and learn its meaning and its issues. The power of concentrating our attention on the subject may become stronger, the intervals of con

centration may become more prolonged, until no effort is needed to attend to the subject. Voluntary attention has become spontaneous (see Stout, *Analytic Psychology*, vol. i. p. 241 f.).

It would be tedious and would not be profitable to enumerate the various kinds of involuntary attention. Reference may be made generally to systematic treatises on Psychology, in which the various kinds are described. Vital needs, the calls of love or hunger, pleasure and pain, every relation between the organic being and his environment, may give rise to that exaltation of consciousness which calls forth the reactive energy which we name 'attention.' It is possible, however, to classify all of these under two great divisions, and to speak of them under the general heads of 'external' and 'internal.' The external are the presentations with the accompanying emotions which precede action. These are usually simple and single in their procedure. The internal are those which, as already indicated, consist in a variation of the current of presentations and feelings. In these we have emphatically the presence of choice, of the selection of one motive out of many, with the increase of intensity and urgency resulting from the concentration of the mind on it.

In the description of these external and internal movements an attempt has been made to introduce greater precision into psychological phraseology. Instead of the phrases 'involuntary' and 'voluntary,' which many still use as adequate, some psychologists have introduced the terms 'perception' and 'apperception' (*q.v.*). By 'perception' they mean a content of which we are conscious. When we concentrate ourselves on a content of consciousness so that it stands out distinctly or as distinctly as possible, we say that it is 'apperceived.' In the art. APPERCEPTION will be found the history and meaning of this term; it is sufficient to say here that those psychologists who use attention in this sense define it as that peculiar state, characterized by certain special feelings, which accompanies apperception. Spatial illustrations are used to describe the state of apperception. Consciousness is figured as a circle, the centre of which represents the focus or point of apperception. The circumference of the circle represents the threshold of consciousness; and of the various stimuli some pass along chords of the circle, while others pass along a diameter, and so through the centre. Or it might be represented by a reference to the great circles of navigation. These pass through the centre of the earth. Apperceived mental contents correspond to great circles, which pass through the centre of consciousness. These spatial illustrations do not add much to our knowledge, yet the distinction between perception and apperception might be very helpful, if writers on Psychology were to use the terms in precisely the same sense.

With regard both to our perceptions and to our apperceptions we are never wholly passive. We have seen that even in the immediate sensations, as well as in the flow of them, the attention is determined by interest, and the interest has a determining influence on sensations selected for closer examination. So it is in the flow of ideas. Here, too, interest has a determining influence. We can never account for the association of ideas, or for the ways in which ideas are clustered together in the mind, by a mere regard to the laws of association, or to any other laws of a general kind. There are laws of association, as there are laws of science, of logic, of psychology, but these do not act as if they aggregated themselves together merely by their own action. Like other general laws, they are used by life, and as regards mental laws they are used by the mind. The determining influence is in the conscious mind itself, which guides its action by its own law of action, so that each experience is essentially a unique experience. To determine accurately the practical problem of attention for any individual would be to determine the real character of personality. But that is beyond the scope of science, which deals with the general, and with the super-personal, or the infra-personal.

The characteristic difference between perception and apperception, or between involuntary and voluntary attention, is that in the one case the strain follows directly on the presentation of the stimulus, and in the other case the strain, or the turning of the mind in a certain direction towards a certain object, is present before the stimulus.

'The fusion of the sensation with the corresponding idea, whence perception arises, thus takes place in inverse order in voluntary and involuntary attention. We see in great measure what we wish to see, and as a general rule are able to see only what we wish. Hence the possibility of strokes of genius and prophecies, as also of illusory interpretations of facts. The originally sanguine tendency of human nature anticipates experience, and only gradually accepts correction from it. Fortunately experience has the power to open our eyes and force us to see. But the activity of the will is always an essential condition' (Höffding, *Outlines of Psychology*, p. 315).

The relation of attention to the general laws of the system in which we live is too large a subject to be discussed here. Generally it is analogous to the relation of life to the system of which life forms a part. The conscious subject lives in relation to an environment. In interaction with it, it realizes itself. But the process of self-realization is an active process. It reacts against the environment, it selects out of it what it can use, and what it needs and wants, and it makes out of it something new. Merely organic life modifies itself in order to adapt itself to its surroundings. Conscious life modifies its environment so as to make it in a measure accomplish its ends. It impresses itself on the environment, and modifies the earth so as to command its resources in the shape of food, clothing, and houses. Homes are built, cities are founded, facilities of travel are made to abound. We need not enumerate the resources of civilization. The forces of nature are at the service of man, just because man has modified nature to accomplish his ends. But these are the outcome of attentive activity, and cast light on the nature of attention, and on the relation of attention to the laws of the system. Attention of the intellectual kind may be set forth as the activity arising out of the desire to know what are really the laws of the system in which we live. No doubt this is the characteristic of the highest form of intellectual life. But it exists, and ought to be recognized. Into this also choice enters, for it is allowable for a man to think twice, or more than twice, in order that his thoughts in their flow may correspond with reality. Thus into the most abstract and intellectual of our pursuits voluntary activity may enter.

Truth has thus a value of its own, and the greatest determinant of attention is just the scale of values which human judgment has set up for itself. It is this scale of values that determines our interest, and our interest dominates our attention. Referring to the art. VALUE for the full account of the doctrine of values, we state briefly here that it is the characteristic quality of highly-evolved, conscious, moral, spiritual life to transform the given world into a world which will correspond with its highest ideal, and be the image of its deepest thought. What forms these may take, and what strivings may issue from the attempt to make a world in which our values may be realized, cannot be described here. But whatever value may be striven

after by this people or by that, or by this man or by that, it can be realized only by thinking about it, attending to it, working at it, till airy nothing obtains a local habitation and a name. Thus, for the man of science, truth may have the highest value, and he may concentrate his attention on the effort to see the flow of things as it is; for philosophy, everything else may be neglected in the desire to know reality, and to see it in its wholeness; while for the artist a thing of beauty is a joy for ever, and the beautiful is the value that is highest. On the other hand, for some the highest of the values is the good, and so on, around the whole circle of human activity. In whatever direction we look, we find that it is the scale of values that determines the interest of man, and sets him to work for its realization. Values—artistic, scientific, ethical, spiritual—are the dominating interests of conscious life, and these are the ends which all men seek to realize.

For the conscious spirit, then, the given world is plastic, something to be formed into a world of specific value in which it may find its appropriate home. The machinery of the world, its laws, whether mental or material, may submit to new directions, take on new meanings, and issue in results not to be accounted for apart from the activity of the conscious spirit. Material laws may find a new expression in the *Principia* of Newton, which, after all, is as much poetry as science. It is nature as transformed in the mind of Newton. The philosophy of Hegel, *e.g.*, or of other great masters in philosophy, is a revelation of personality, as much as, or even more than, it is a transcript of the meaning of reality. For each mind in the world has to make a world for itself, and it will be the centre of its own world. How each world so made corresponds to the world which is common to all, how the general is related to the individual world, is another question. What concerns us here is that the phenomenon which we call voluntary attention is the chief means by which the world of values is made; and without its working no world is possible for man.

JAMES IVERACH.

ATTIS.—Attis was a male Asiatic deity whose relation to Cybele, the Great Mother, was analogous to that borne by Adonis to Aphrodite, Baal to Astarte, Osiris to Isis, etc. Of Semitic origin, or at least greatly influenced by Semitic religion, his worship, always in dual connexion with that of the Great Mother, and never independent of it, became strongly centralized in Phrygia and Lydia, spread to the adjacent countries, was introduced into Greece, and finally became known throughout the Roman Empire. According to the legend given by Pausanias (vii. 17) as current among the Phrygians, the seed of Zeus, discharged in sleep upon the earth, begot the hermaphroditic monster Agdistis, who was afterwards deprived of male organs by the gods. An almond tree having sprung from these, the daughter of the river Sangarius ate of its fruit and bore Attis, who, after having been exposed, was reared by a he-goat, became very beautiful, and inspired passion in Agdistis. Being about to wed the king's daughter, Attis was struck with madness by Agdistis (who suddenly appeared during the nuptial hymn), and emasculated himself. Agdistis in repentance prevailed upon Zeus to preserve the body of Attis from wasting away or decaying. In Arnobius (*adv. Nationes*, v. 5–8) the fruit is the pomegranate, the daughter of the river-god is named Nana, and the king and his daughter are Midas and Ia. The Great Mother, created by Deucalion and Pyrrha on Mount Agdus, also loves Attis, and plans the marriage in order to rescue him from the shameless love of Agdistis, who strikes the entire company with madness. Attis mutilates himself under a pine tree, and Ia, after wrapping Attis in wool and mourning over him, kills herself. The fatal pine is borne by the Mother into her cave, where she and Agdistis wildly lament Attis. Zeus allows the body of the youth to remain undecayed, his hair to grow, and his little finger to move. Agdistis has the body of the youth consecrated at Pessinus, a city in Galatia near the borders of Phrygia, and also institutes annual ceremonies in his honour. The little finger (*digitus*, δάκτυλος) is interpreted as the phallus by Georg Kaibel (*GGN*, 1901, p. 513). In Diodorus Siculus (iii. 58, 59), Attis is a stripling whom Meion, the king of Phrygia and Lydia, slays because of an intrigue between him and the king's daughter Cybele. As a consequence of plague and famine, worship of both is instituted by the Phrygians. In Ovid's version of the legend (*Fast.* iv. 223 ff.), Attis breaks his pledge of chastity to Cybele; Sagaritis, the nymph who has sinned with him, is destroyed by the goddess; while the youth himself mutilates his own person in a frenzy on Mount Dindymon. In the version of Arnobius the blending of two forms of the Attis legend is apparent—one accounting for the birth of Attis, the other for his relation to Cybele—and the latter and Agdistis are really identical. A Lydian form of the legend, in which the youth is killed by a boar, is found (Paus. vii. 17).

There is no evidence of an Attis cult in Asia Minor until the 4th cent. B.C., though it must have existed long before that time. It never attained to great prominence in Greece, because of the strange and un-Hellenic nature of its rites. The same is true of it in Italy up to the Empire. There is no direct evidence of the existence of the worship of Attis at Rome under the Republic, and the general probability of its existence is rendered very slight by the lack of monumental and literary evidence where such evidence might be expected (Showerman, 'Was Attis at Rome under the Republic?' in *TAPA* xxi., 1900, pp. 46–59). Under the Empire, however, from the time of Claudius onward, it rapidly increased in importance, Attis being worshipped side by side with the Great Mother, and frequently appearing in literature and on the monuments with her. His prominence in the cult is indicated by his part in the annual season of festivals in honour of the Great Mother which covered the period March 15–27 (Hepding, *Attis, seine Mythen und sein Kult*, Giessen, 1903, pp. 123–176). On March 15 the college of *Cannophori*, or reed-bearers, took part in the ceremonies of the day by carrying reeds in procession—a custom explained as a commemoration of the finding of Attis by the Great Mother on the reedy banks of the river Gallus, but more likely a reminiscence of a primitive phallic procession (see Showerman, 'Canna intrat and the Cannophori,' in the *Classical Journal*, ii. 28–31). Sexual abstinence and fasting were prescribed for the day. On March 22 the sacred pine, the emblem of the self-mutilation of Attis, was borne in procession by the *Dendrophori* to the temple of the Mother on the Palatine, its trunk wound with fillets of wool and its branches hung with garlands of violets, the whole being regarded as a commemoration of the wrapping of Attis's body in wool by Ia and the decking of the original tree by the

Mother with the violets which sprang from Attis's blood. On March 24, *Dies Sanguinis*, fasting and mourning symbolized the grief of the Mother at the death of Attis. The special feature was the orgiastic dance and song of the priests, culminating in self-laceration, and even self-emasculation (not attested at Rome), in commemoration of the final deed of Attis. At night the mystics partook of a sacrament, and perhaps underwent the baptism of blood in the *taurobolium* (wh. see). March 25 was the day of rejoicing (*Hilaria*) at the resurrection of Attis. On March 27, after a day of rest known as *Requietio*, occurred the *Lavatio*, a ceremonial bathing of the goddess in the Almo, a stream a short distance south of Rome, followed by universal rejoicing, a feature of which was dramatic representation of the story of the Mother and Attis. The *criobolium* (wh. see), or sacrifice of a ram, involving the blood-baptism, and consequent purification and regeneration, of the person who performed it, was a ceremony created on the analogy of the *taurobolium*, a similar sacrifice to the Great Mother, for the purpose of giving full recognition to Attis in the dual worship. The high priest of the cult bore the traditional title of Attis. The Attis in Catullus lxiii. is intended to represent a type of the priesthood.

The Cybele-Attis myth, according to the philosophers, symbolized the relations of Mother Earth and her fruitage. Attis is the plant kingdom beloved by her; his emasculation is the cutting of her fruits; his death, his burial, and his preservation by the mourning Mother symbolize the death and preservation of plant life through the cold and gloom of winter; his resurrection is the return of the warmth of spring. The festival of the *Hilaria* occurred on March 25, the first day of the ascent of the sun, while the *Dies Sanguinis*—the day of lamentation and self-scourging—was the last day of winter. In the 4th cent. A.D., under the influence of syncretism, Attis came to be regarded as a symbol of the sun. He and the Great Mother were also sometimes thought of as a parallel to Christ and the Virgin (Isidor. *Ep.* iv. 31. 28).

In art, Attis appears only under the Empire, and for the most part in connexion with the Mother. He is usually standing or leaning against the pine, wears the Phrygian cap, and carries the pedum or syrinx. The most important statue of him is the Lateran Attis, discovered at Ostia, representing him as the shepherd-lover of the Mother, the symbol of the fruits of the earth and of the sun. Half nude, with a long mantle fastened over his breast, he reclines on a rock representing Mount Ida, his left elbow on the head of Idæan Zeus. In the left hand is the pedum, in the right fruit, flowers, and three spears of grain, on the head a pine garland with fruits, and a tiara with five rays, a half moon, and two spears of grain. The half moon indicates his identity with the Phrygian moon-god, Men.

GRANT SHOWERMAN.

ATTRACTION and REPULSION.—'Attraction' is the name given to those forces exerted between bodies which tend to draw the bodies together or to resist their separation. 'Repulsion' is the name given to forces that have the opposite effect. Both forces are to be seen exerted in the following familiar phenomena: in gravitating bodies, in various magnetic and electric phenomena, in chemical affinity, in the cohesion of the parts of a body, and in the adhesion of one body to another.

If we adopt the analysis given by Kant (*Monadologia physica*, 1756, and *Metaphysische Anfangsgründe der Naturwissenschaft*, 1786), we may even add: the very existence of a space-filling body presupposes these two forces or tendencies. A body must resist compression (repulsion), or it would become a mere mathematical point; and, again, it must resist expansion, or it would be scattered indefinitely through space.

Attraction and repulsion are to be differentiated from two other similar forces, tension and pressure, in that they act from a distance; and this characteristic has made them especially the subject of philosophical discussion. Can a body exert a force where it is not? The day has gone by when the metaphysician had the temerity to give an *a priori* answer to the question thus simply put; but in the 17th and 18th cents. the correct answer was a frequent matter of debate. The followers of Descartes, including Leibniz, were strongly opposed to the affirmative answer; for it seemed contrary to 'natural light' that a body can act where it is not (cf. Leibniz, Erdmann's ed. p. 767). For us of to-day the question is more complicated; but it still involves a truly metaphysical or *a priori* problem. On the one hand, empirical evidence leads us to believe that we do not know of any instance in nature of absolute contiguity between bodies. Moreover, mathematical intuition would add that the only true contiguity is where bodies have one point in common, and this, in turn, would involve complete coincidence of the two bodies; for the same problem of contiguity must be raised regarding all the points in each body. On the other hand, there is much prejudice, well or ill grounded, against the doctrine that a body acts at a distance. Faraday, it seems, had this prejudice; and his discovery of a medium between two bodies acted upon by magnetic forces, along with evidence of tension and pressure within this medium, justified his point of view. Again, there have been repeated attempts to reduce the forces operating in the phenomena of gravitation to pressure (cf. the theory of Le Sage, and Clerk Maxwell's article 'Attraction' in *EBr*[9]). Possibly this prejudice has its origin in the fact that our bodies must come in contact with objects to move them or to exert a force upon them, and, in turn, that when we are moved we feel the pressure of the outside body, or medium, upon the surface of our body. Such an explanation of this prejudice does not, however, do it full justice.

Here, then, the metaphysical problem arises: Is there an ultimate presupposition actually present in man's attempt to explain nature, forbidding him to rest satisfied with an explanation that involves the action of one body upon another from a distance? Whenever we are forced to adopt as an explanation such a force as gravity, ought we not simply to regard it, not as a final solution, but as a confession of ignorance? Does there not remain in all such cases an unsolved problem bidding us seek for a medium between the two bodies? Faraday sought a medium in one set of cases, and found it. Ought not science to seek it in all cases? Hence, is not this prejudice a fundamental methodological attitude? If so, we can call it an axiom, meaning by an axiom an assumption that seemingly we have to make, but have no hope of either proving or disproving. We cannot prove that bodies do not act upon one another from a distance, nor can we prove that they do; for these latter cases mean, at the most, that we have not as yet been able to find any known medium.

Moreover, the mathematical statement that in a continuous space all particles of matter must be separated, and therefore cannot be in absolute

contiguity, does not contradict this axiom. It simply introduces the larger metaphysical question: Is not nature a continuum, and therefore an inexhaustible source of problems; that is, does not all scientific explanation leave residual problems which arise the moment we think of any given system analyzed into yet minuter entities than those which we are considering, and so on *ad infinitum*? In short, our axiom means contiguity relative to the type of spatial objects involved in the problem at hand, not absolute or mathematical contiguity. Cf. artt. ATOMIC THEORY.

AUGSBURG CONFESSION.—See CONFESSIONS.

AUGURY.—See DIVINATION.

AUGUSTINE.—1. **Life.**—Aurelius Augustine (the prænomen 'Aurelius' is attested by contemporaries but does not occur in his own works or in his correspondence) was born of mixed heathen and Christian parentage, 13 Nov., A.D. 354, at Tagaste, a small municipality in proconsular Numidia. He was taught in his childhood the principles of Christianity, and great sacrifices were made to give him a liberal education. From his youth he was consumed by an insatiable thirst for knowledge, and was so inflamed by the reading of Cicero's *Hortensius* in his nineteenth year that he thenceforth devoted his life to the pursuit of truth. The profession to which he was bred was that of rhetorician, and this profession he practised first at Tagaste, and then successively at Carthage, Rome, and Milan up to the great crisis of his life (386). In his early manhood he had fallen away from his Christian training to the Manichæans, who were the rationalists of the age (373); and subsequently (383) had lapsed into a general scepticism; but he had already fought his way out of this, under the influence of the Neo-Platonists, before his conversion to Catholic Christianity took place at Milan in the late summer of 386. He spent the interval between this crisis and his baptism (Easter, 387) in philosophical retirement at Cassiciacum, and then, after a short sojourn at Rome, returned to Africa (autumn, 388) and established at his native town a sort of religio-philosophical retreat for himself and his friends. Early in 391 he was almost forcibly ordained presbyter at Hippo Regius, and nearly five years later (shortly before Christmas, 395) was raised to the rank of coadjutor-bishop. From the first he sustained practically the entire burden of the administration, and, soon succeeding to its sole responsibility, continued bishop of that second-rate diocese until his death, 28 August 430.

In this simple framework was lived out the life of one who has been strikingly called incomparably the greatest man whom, 'between Paul the Apostle and Luther the Reformer, the Christian Church has possessed.'* We cannot date from him, it is true, an epoch in the external fortunes of the Church in the same sense in which we may from, say, Gregory the Great or Hildebrand. He was not, indeed, without ecclesiastico-political significance. He did much to heal the schisms which tore the African Church. He regenerated the clergy of Africa by his monastic training school. And it must not be forgotten that the two great Gregorys stood upon his shoulders. But his direct work as a reformer of Church life was done in a corner, and its results were immediately swept away by the flood of the Vandal invasion.

2. **Writings.**—It was through his voluminous writings, by which his wider influence was exerted, that he entered both the Church and the world as a revolutionary force, and not merely created an epoch in the history of the Church, but has determined the course of its history in the West up to the present day. He was already an author when he became a Christian, having published (about 380) an æsthetical study (now lost), on *De pulchro et apto*. But his amazing literary productivity began with his conversion. His first Christian writings were a series of religio-philosophical treatises, in which he sought to lay the foundations of a specifically Christian philosophy. These were followed by a great number of controversial works against the Manichæans, Donatists, Pelagians, interspersed with Biblical expositions and dogmatic and ethical studies. The whole was crowned by four or five great books in which his genius finds perhaps its fullest expression. These are his *Confessiones* (397–400), in which he gives an analysis of his religious experience and creates a new *genre* in literary form; the *de Doctrina Christiana* (397–426), in which the principles of his Biblical exposition are expounded; the *Enchiridion ad Laurentium* on Faith, Hope, and Charity (421), which contains his most serious attempt to systematize his thought; the *de Trinitate* (395–420), in which its final formulation was given to the Christian doctrine of the Trinity; and the *de Civitate Dei* (413–426), in which are laid the foundations of a rational philosophy of history.

He seems to have been himself aware of the significance of the writings into which he had so unstintedly poured himself, and he devoted some of his last years to a careful survey and revision of them in his unique *Retractationes* (426–428), in which he seeks to compact them into an ultimate whole. The influence which they exerted from the beginning is attested no less by the spiteful comments on their volume which escaped from those less well affected to them (*e.g.* the interpolators of Gennadius), than by the wondering admiration of the better disposed (already, Possidius, *Vita*, ch. vii.). In point of fact they entered the Church as a leaven which has ever since wrought powerfully towards leavening the whole mass.

3. **Influence.**—(*a*) *Its extent.*—The greatness of the influence exerted by Augustine is fairly intimated by the suggestion that the division between the Eastern and Western Churches may properly be represented as having been 'prepared' by him.* No doubt, according to Renan's saying, the building of Constantinople contained in it the prophecy of the division of the Empire, and the division of the Empire the prophecy of the division of the Church. But it was Augustine who imprinted upon the Western section of the Church a character so specific as naturally to bring the separation of the Churches in its train. It must not be inferred, however, that his influence was felt only in the West. The prevailing impression to this effect implies some failure to appreciate not only the extent of the intercourse between the East and the West in Augustine's day, but also the indebtedness of the East to the West for its theological constructions. The interest of the Antiochenes in Western Christo-

* Harnack, *Monasticism and the Confessions of Augustine*, p. 123.

* Reuter, *Augustinische Studien*, vii. 499.

logical thought, as illustrated, for instance, in the *Eranistes* and the correspondence of Theodoret, is only one example of a much wider fact; and in any event, the great doctrines of the Trinity and the Person of Christ, which form almost the entirety of 'dogma' in the East, so far from being a gift from the East to the West, as often represented, had their origin in the West, and were thence communicated to the East—the former through the intermediation of 'the great Hosius,' and the latter through that of Leo the Great. Augustine, through whom—working, no doubt, in full knowledge of what had been done by the Greeks, but in entire independence of them—the doctrine of the Trinity received its completed statement, came too late to affect the Greek construction of this doctrine, and accordingly gave form on this great topic only to the thought of the West. But his Christological conceptions underlay the formulations of Leo, as those of Ambrose underlay his, and through Leo determined the Christological definitions of the East as well as of the West. Accordingly, while the doctrines of the East and the West on the Person of Christ have remained identical, in their doctrines of the Trinity the two sections draw somewhat apart, not only with respect to that perennial bone of contention, the *filioque* clause in the definition of the procession of the Spirit, but in what underlies this difference—their general conception of the relations of the Trinitarian Persons. This in the East is ruled by subtle subordinational inheritances (embedded in the Nicene formulary in the phrase *θεὸς ἐκ θεοῦ* and its equivalents), while in the West it is dominated by that principle of equalization which found its sharpest assertion in the ascription of *αὐτοθεότης* to Christ by Calvin, whose construction marks the only new (subordinate) epoch in the development of the doctrine of the Trinity after Augustine. This complete determination of Western thought on the fundamental Christian doctrine of the Trinity fairly illustrates at once the place of Augustine in Western Christian thought, and the effect of his supreme influence there in creating a specifically Western type of Christianity.

It is worth while, no doubt, to distinguish between the actual influence exerted by Augustine in the West, and what may perhaps, in a more external sense, be called the authority enjoyed by his name in the Latin Church. To no other doctor of the Church has anything like the same authority been accorded, and it seemed for long as if his doctrine of grace at least was to be treated as a definitely defined dogma, *de fide* in the Church. Already in 431 Celestine sharply reproved the bishops of Gaul for permitting Augustine's authority to be questioned in their dioceses; and soon afterwards, Gelasius (493) addressed to the bishop of Picenum a similar letter of rebuke for the like carelessness. Subsequent deliverances of Hormisdas (520), and Boniface II. (530–531), and John II. (534) confirmed the authority thus assigned him; and their encomiums were repeated by many later Roman bishops. It very naturally became, therefore, the custom of the 'Augustinians' in the Church of Rome—like Diego Alvarez, Jansen, Noris—to ascribe 'irrefragable authority' to his teaching; and the question was gravely debated among the theologians whether a truly plenary authority were really to be attributed to him, or whether he were only to rank as the first of the Church's authorized teachers. The result was very naturally that every tendency of thought in the Church was eager to claim for itself the support of his name; and the extraordinary richness of his mind, and the remarkable variety of, so to say, the facets of his teaching, lent him more than ordinarily to the appeal of numerous and even divergent points of view. The possibility of this was increased by the long period of time covered by his literary activity, and the only gradual crystallization of his thought around his really formative ideas. The Augustine of Cassiciacum or even of the presbyterate was a somewhat different Augustine from the Augustine of the episcopate; and not even at his death had perfect consistency been attained in his teaching. Accordingly the most amazing variety of doctrine, on almost every conceivable subject, throughout the Middle Ages, and later in the Church of Rome, has sought support for itself in some saying or other of his; and both sides of almost every controversy have appealed with confidence to his teaching. Schools of thought which had drifted entirely away from his most fundamental postulates still regarded and represented themselves as 'Augustinian'; and the Church of Rome itself, whose whole history since the second Council of Orange (529) has been marked by the progressive elimination of Augustinianism from its teaching, is still able to look upon him as the chief doctor of the Church, upon whom its fabric is especially built. Confusion became so confounded that the Confession of Faith which Pelagius presented to Innocent was inserted quite innocently into the *Libri Carolini*, and was even produced by the Sorbonne in 1521 against Luther as Augustine's own.

Obviously this universal deference to the name of Augustine furnishes no accurate measure of his real influence. It supplies, however, a fair general reflexion of its extent. In point of fact the whole development of Western life, in all its phases, was powerfully affected by his teaching. This, his unique ascendancy in the direction of the thought and life of the West, is due in part to the particular period in history in which his work was done, in part to the richness and depth of his mind and the force of his individuality, and in part to the special circumstances of his conversion to Christianity. He stood on the watershed of two worlds. The old world was passing away; the new world was entering upon its heritage; and it fell to him to mediate the transference of the culture of the one to the other. It has been strikingly remarked that the miserable existence of the Roman Empire in the West almost seems to have been prolonged for the express purpose of affording an opportunity for the influence of Augustine to be exerted on universal history.* He was fortunate even in the place of his birth and formative years; although on the very eve of its destruction, Africa was at this precise moment, in the midst of the universal decadence, the scene of intense intellectual activity—into which he entered with all the force of his ardent nature. He gathered up into himself all that the old world had to offer, and re-coining it sent it forth again bearing the stamp of his profound character. It belonged to the peculiarity of his genius that he embraced all that he took up into himself 'with all the fibres of his soul'; not, as has been said, 'with his heart alone, for the heart does not think, nor with the mind only; he never grasps truth in the abstract, and as if it were dead,'† but with his whole being, giving himself to it and sending it forth from himself as living truth, driven on by all the force of his great and inspiring personality. Accordingly, when, having tested everything that the old world had to offer and found it wanting, he gave himself at last to Catholic Christianity, it was with no reserves. Catholicism, frankly accepted as such, became his

* Harnack, *Grundriss d. Dogmengeschichte*, Eng. tr. p. 835.
† Portalié, in Vacant-Mangenot, *Dictionnaire de la Théologie Catholique*, i. 2453.

passion, and into the enthusiastic maintenance of it he threw all his forces. It was primarily as a Catholic Christian, therefore, that he thought, and worked, and lived. But the man who threw himself with such zeal into the service of Catholic Christianity was a man who had already lived through many experiences and had gathered much spoil in the process. He had sounded the depths of heresy in its most attractive form, and had drunk the waters of philosophy in its culminating development; life in the conventicles of the sects and in the circle of cultured heathenism was alike familiar to him. But, above all the spoil he brought from without, he brought with him himself. He was a man of the highest and most individual genius—intellectual, but far beyond that, religious—who had his own personal contribution to make to thought and life. If we cannot quite allow that there were in very truth many Augustines, we must at least recognize that within the one Augustine there were very various and not always consistent currents flowing, each of which had its part to play in the future. Within the Catholic Christian a philosopher of the first rank was restlessly active; and within both a religious genius of the highest order was working; while for the expression of the resulting complex of feelings and ideas a literary talent was available second to none in the annals of the Church.

It is no wonder, therefore, that the Western Church has felt the force of his influence in all the main lines of its development, and in no one of its prominent characteristics could it have been without him what it has become. In him are found at once the seed out of which the tree that we know as the Roman Catholic Church has grown; the spring or strength of all the leading anti-hierarchical and mystical movements which succeeded one another through the Middle Ages; at least the promise and pre-formation of the great types of Western philosophical thought; and, above all, the potent leaven of vital religion. Beginning in the first force of its fresh promulgation by overcoming the ingrained rationalism of the popular Christianity expressed in Pelagianism and its daughter movements, it refused to be bound by the compromises of the Council of Orange, compacted though they were into a system by the genius of a Thomas, and given irrefragable authority in the Church of Rome by the decrees of Trent, but manifested its power by outbreak after outbreak, from Gottschalk in the 9th to Jansen in the 17th cent.; and then burst all bonds and issued in the Protestant Reformation in the 16th century.

(*b*) *Augustine as a Church-teacher.*—No doubt it is pre-eminently as the great Catholic doctor that Augustine stands out on the page of history. To his own consciousness he was just a Catholic Christian; and the whole mass of his teaching was conceived by him as simply the body of Catholic doctrine. It is, accordingly, interesting to observe that it is precisely as the Catholic doctor that he has lived in the hearts of the people. The legends which have gathered around his name picture him pre-eminently as the expounder of the *principia* of the Christian faith, particularly of the mysteries of the Godhead, who abode continually *in excelsis disputans de gloria excellentissimæ Trinitatis*, and communicated to the Church the results of his high meditations 'as he was able'—a note of humility caught from his own habitual tone when speaking of himself.* The task to which he consciously gave himself was to apprehend, so far as it was given to him to apprehend, to proclaim, maintain, and defend the Catholic truth; and from this task he never swerved. It was no empty formula with him when he declared, as he repeatedly declared, 'This is the Catholic faith, and it is therefore also my faith'; and he was altogether in earnest when he exhorted his readers not to love him more than the Catholic faith, and his critics not to love themselves more than the Catholic truth.* The body of Catholic doctrine constitutes thus the traditional element in Augustine's teaching. But, of course, it by no means left his hands precisely as it entered them. Nor did he contribute to it merely intellectual precision and logical completeness; he impressed on it the stamp of his religious fervour, and transmuted its elements into religious entities.

It was particularly in the doctrine of the Church, which he thus took up and transfigured, that he became in a true sense the founder of Roman Catholicism, and thus called into being a new type of Christianity, in which 'the idea of the Church became the central power in the religious feeling' and 'in ecclesiastical activity,' 'in a fashion which has remained unknown to the East.'† This idea of the Church was, to be sure, so little the creation of Augustine that he took it over whole from his predecessors, and in his innermost thought, indeed, never thoroughly homologated it. It was Cyprian, not Augustine, who identified the Church with the Episcopate, and to whom the Church outside which there is no salvation was fundamentally the hierarchical institution. It was Gregory the Great who first spoke of the organized Church as the Divine *civitas*. To Augustine the Church was fundamentally the *congregatio sanctorum*, the Body of Christ, and it is this Church which he has in mind when he calls it the *Civitas Dei*, or the Kingdom of God on earth. He is, however, not carefully observant of the distinction between the empirical and the ideal Church, and repeatedly—often apparently quite unconsciously—carries over to the one the predicates which, in his fundamental thought, belonged properly to the other. Thus the hierarchically organized Church tends ever with him to take the place of the *congregatio sanctorum*, even when he is speaking of it as the Kingdom or City of God in which alone any communion with God is possible here, and through which alone eternal blessedness with God is attainable hereafter.

In the Donatist controversy, although the distinction between *habere* and *utiliter* or *salubriter habere* is made to do yeoman service, the conception of the Church as the sole sphere of salvation, passing into the conception of the Church as the sole mediatrix of grace, and therefore the sole distributor of salvation, was necessarily thrown into high emphasis; and the logic of the situation too directly and too powerfully identified this Church with the empirical Church for the deeper-lying conception of the *congregatio sanctorum* to remain in sight. Thus Augustine, almost against his will, became the stay of that doctrine of the Church as the sole instrument at once of true knowledge of the Divine revelation and of saving grace which provides the two *foci* about which the ellipse of Roman Catholic doctrine revolves. What before him was matter of assertion became in his hands a religion, and went forth to conquer the world. His profounder conception of the Church as the *congregatio sanctorum*, and the consequent distinction between the empirical and the ideal Church, with all its implications with respect to the action of the sacraments and the effect of ecclesiastical decrees, and even of excommunication, did not indeed remain unobserved or unutilized when occasion demanded. Thus, for example, they came forward in their completeness

† Reuter, *op. cit.* p. 499.

in the arguments of the Imperialists in the great controversies of the later 11th century.* These also, and in a truer sense than the Papalists in that debate, were 'Augustinians.' But the main stream of Augustine's influence flowed meanwhile in the traditionalist channel, and gave the world the Church as the authoritative organ of Divine truth and the miraculous vehicle of saving grace, through which alone the assured knowledge of the revelation of God could be attained, or the effective operations of His redeeming love experienced. Many of the subsidiary conceptions which fill out the system of Roman Catholic doctrine also find their direct prop in his teaching — its doctrine of merit, the distinctions between precepts and counsels, mortal and venial sins, and particularly the elaborate sacramental system, with its distinction between matter and form, its assertion of *ex opere operato* action, and of the indelible character of baptism and ordination, and even the doctrine of intention. On this side of his teaching the Roman Catholic Church may well be accounted Augustine's monument.

(*c*) *As a thinker.*—But beneath Augustine the traditionalist lay Augustine the thinker, and as a thinker he gave law not only to the Church but to the world. From the moment of his conversion, to be sure, religion became paramount with him. But this did not quench his philosophical impulse; it only made his specifically a religious philosophy, and himself, to adopt Rudolph Eucken's more precise definition,† 'the single great philosopher on the basis of Christianity proper the world has had'—in the richness of his thought and poetry of his expression alike, not unworthy of comparison even with his great master Plato.‡ He brought with him into Catholic Christianity not only a sufficient equipment of philosophical knowledge, but a powerful and trained intelligence, and an intellectual instinct which had to find scope. It was in the rôle of Christian philosopher, seeking to give form and substance to fundamental verities from the Christian standpoint, that he first came forward in the service of faith; and though later the religious teacher and defender of the faith seemed likely to swallow up the philosophical inquirer, they never really did so, but his rich and active mind kept continually at work sounding all depths. Thus not only was there imparted to all his teaching an unwonted vitality, originality, and profundity, but 'the activities set in motion were not confined to the narrow circle of theological science, but extended, directly or indirectly, to all forms of human life.'§ In every department of philosophical inquiry he became normative for the succeeding centuries; and until the rise of Aristotelianism in the 12th cent. and its establishment in influence by the advocacy of such teachers as Albertus Magnus and Thomas Aquinas, Augustinianism reigned supreme. Throughout the remainder of the Middle Ages it contended masterfully with its great rival, forming many compromises with it, and tending to off-set the rationalism into which Aristotelianism was ever degenerating by itself falling into mysticism. It thus became the support of the tendency towards Mysticism which prevailed through the Middle Ages, or rather its protection from the pantheism into which, when drawing more directly from Neo-Platonic sources, it was ever liable to deteriorate. From it every Catholic Reformer drew his strength, and to it the whole body of Reformers before the Reformation made their appeal. From its partial obscuration it emerged at the Renaissance, and burst again into full view in the 17th cent. to lay the foundations of modern thought. Siebeck accordingly bids us see in Augustine 'the first modern man'; * and, if Eucken questions the exactness of the designation, he is free to allow that the modern world finds in Augustine many points of contact, and, not only in questions of religious philosophy may wisely take its start from him rather than from Luther or Thomas, Schleiermacher or Kant, but in purely philosophical matters will find him in many respects more modern than Hegel or Schleiermacher.†

It was in the spheres of psychology and metaphysics that the dominion of Augustine was most complete. He aspired to know nothing, he tells us, but God and the soul; but these he strove with all his might to know altogether. His characteristic mark as a thinker was the inward gaze; the realities of consciousness were the primary objects of his contemplation; and from them he took his starting-point for reflexion on the world. Antiquity supplies no second to him in the breadth and acuteness of his psychological observation. And in his establishment of 'self-assured subjectivity,' as Windelband calls it,‡ in 'the controlling central position of philosophical thought' he transcended his times, and became 'one of the founders of modern thought.' If he may truly be said to have derived from Plato and Plotinus, in a far truer sense he stood above his Neo-Platonic teachers, and of his lineage have come Descartes and Malebranche and all that has proceeded from the movements of thought inaugurated by them. Even the famous ontological argument for the being of God, and, indeed, the very *cogito, ergo sum* of Descartes, have not merely their material but their formal pre-formation in him. It was not, however, in abstract thought alone, or chiefly, that he made his mark on the ages; his own thinking was markedly concrete, and nothing characterized it more strongly than the firmness of its grasp upon the realities of life, to the understanding and direction of which it was held strictly ancillary.

His impact upon the world might accordingly not unfairly be summed up, from one point of view, in the ethical revolution which he wrought. 'In essence,' remarks Harnack,§ 'Augustine's importance in the history of the Church and dogma lies in his giving to the West in the place of the Stoic-Christian popular morals, as that was recapitulated in Pelagianism, a religious, specifically Christian ethics, and so strongly impressing this on the Church that at least its formulas maintain up to to-day their supremacy in the whole extent of Western Christianity.' Indeed, we might do worse, in seeking an index of his influence as a thinker, than fix upon the place he has occupied in political theory and practice. The entire political development of the Middle Ages was dominated by him; and he was in a true sense the creator of the Holy Roman Empire. It was no accident that the *de Civitate Dei* was the favourite reading of Charlemagne: 'he delighted,' Einhard tells us (*Vita Caroli*, 24), 'in the books of St. Augustine, and especially in those that bear the title *Of the City of God*.' And in the great struggle between the Empire and the Papacy in the later 11th cent. it was expressly to him that the controversialists on both sides made their appeal. No Father is quoted by them as often as he, except, perhaps, Gregory the Great; and no series of documents is cited more frequently than his writings, except, perhaps, the pseudo-

Isidorian decretals.* Not only do writers like Walram of Naumburg and Widó of Ferrara reflect accurately his conception of the Church, with its emphasis on unity and its vacillation between the ideas of the *congregatio sanctorum* and a hierarchical organization—echoes of which still sound in William of Occam's *Defensor Pacis* and the discussions of the conciliatory party in the Roman Church whose ornament was Gerson—but they made their appeal to Augustine in their endeavours to give validity to their defence 'of the State as a Divine institution, of the moral significance and relative independence of the earthly sovereignty, of the necessary concordance of the *Sacerdotium* and *Imperium*,' and the like.†

On the theoretical side he must be accredited, in this aspect of his thought, with the creation of the science of the Philosophy of History. For the primary significance of the *City of God* lies in the fact that 'in it for the first time an ideal consideration, a comprehensive survey of human history found its expression.'‡ No doubt his external position at the division of the ages, when the old world was dying and the new world, under the dominion of Christianity, was struggling into its place, supplied him with incitement for the creation of this new science; and the demands which the times, in the crash of the secular order, made for an apology for Christianity, powerfully determined him to a general historical philosophy. But it was Christianity itself, as the entrance into the world of a renovating force, and his own particular conception of Christianity (leading him to conceive the history of human society no less than the course of the individual life, as the continuous evolution of the Divine purpose, and impelling him to interpret all the forces of time as working harmoniously onward towards that far-off Divine event to which all creation moves) that gave him not only the impulse to work out a philosophy of history, but the elements of the particular philosophy of history which he actually presents in his epoch-making treatise, which, incomplete and perhaps one-sided as it is, still retains full validity in its fundamental traits.

(*d*) *As a religious genius.*—Not even, however, in Augustine the philosopher do we find the Augustine whose influence has wrought most powerfully in the world. The crisis through which he passed at his conversion was a profound religious revolution; and if he gave himself at once to the task of constructing a philosophy, it was distinctively a Christian philosophy he sought to construct, built though it was largely out of Platonic materials: the authority of Christ, he tells us in the earliest of the writings in which this task was prosecuted, ranked with him even above that of reason. And if he devoted all his powers to the exposition and defence of the Catholic faith, it was because he saw in the Catholic faith the pure expression of religion, and poured into the Catholic faith all the fullness of his religious emotion. It is not Augustine the traditionalist, or Augustine the thinker, but Augustine the religious genius, who has most profoundly influenced the world. The most significant fact about him is that he, first among Church teachers, gave adequate expression to that type of religion which has since attached to itself the name of 'evangelical'; the religion, that is to say, of faith, as distinct from the religion of works; the religion which, despairing of self, casts all its hope on God, as opposed to the religion which, in a greater or less degree, trusts in itself; in a word —since religion in its very nature is dependence on God—religion in the purity of its conception, as over against a *quasi*-religious moralism. What requires particularly to be noted is that he gave full expression to this type of religion both in its vital and in its thetical aspects—the former most adequately in that unique book in which he reveals his soul, and admits us as spectators to the struggles of his great heart as it seeks to cleanse itself of all trust in itself and to lay hold with the grasp, first, of despair, next of discerning trust, and then of grateful love, on the God who was its salvation; and the latter most adequately in that long series of writings in which he expounds, defends, and enforces with logical argument and moving exhortation the fundamental elements of the theology of grace, as against the most direct assailants which that theology has been called upon to meet in the whole history of Christian thought. The great contribution which Augustine has made to the world's life and thought is embodied in the theology of grace, which he has presented with remarkable clearness and force, vitally in his *Confessions*, and thetically in his anti-Pelagian treatises.

It would be altogether a mistake to suppose that Augustine consciously discriminated between the theology of grace which was his personal contribution to Christian thought, and the traditional Catholicism which he gave his life to defend and propagate. In his own consciousness, the two were one: in his theology of grace he was in his own apprehension only giving voice to the Catholic faith in its purity. Nevertheless, however unconsciously, he worked with it a revolution both in Christian teaching and in Christian life, second in its depth and its far-reaching results to no revolution which has been wrought in Christian feeling and thought in the whole course of its history. A new Christian piety dates from him, in which, in place of the alternations of hope and fear which vex the lives of those who, in whatever degree, hang their hopes on their own merits, a mood of assured trust in the mercy of a gracious God is substituted as the spring of Christian life. And a new theology corresponding to this new type of piety dates from him; a theology which, recalling man from all dependence on his own powers or merits, casts him decisively on the grace of God alone for his salvation. Of course, this doctrine was not new in the sense that it was Augustine's invention; it was the doctrine of Paul, for example, before it was the doctrine of Augustine, and was only recovered for the Church by Augustine, though in that age, dominated in all its thinking by the dregs of Stoic rationalism, it came with all the force of a new discovery. And, of course, Augustine did not discover it all at once. Because his conversion was a vital religious experience, in which the religious relation was realized in thought and life in unwonted purity and power, the fundamental elements of his religious revolution were from the first present in his mind and heart; in his earliest Christian writings he already gives expression to both the formal and the material principles, as we may term them, of the theology of grace. The authority of the Divine revelation in and through Christ, embodied in the Scriptures, and the utter dependence of man on God for all good (*potestas nostra Ipse est, da fidem*), are already the most intimate expression of his thought and life. But just because the religious system to which he gave himself on his conversion was taken over by him as a whole, time was requisite for the transfusion of the whole mass by the consistent explication and conscious exposition of the 'Augustinianism' implicitly summed up in such maxims. The adjustment went on slowly, although it went on unbrokenly. It required ten years before the revived Paulinism attained even a fully consistent positive enunciation (first in the work, *De diversis quæstioni-*

* Mirbt, *op. cit.* p. 75. † Reuter, *op. cit.* p. 503.
‡ Seyrich, *Die Geschichtsphilosophie Augustins*, 1891, p. 68.

bus ad Simplicianum, 396); and, though the leaven worked steadily thereafter more and more deeply and widely into his thought, death intervened before all the elements of his thinking were completely leavened. That is the reason why Augustine was both the founder of Roman Catholicism and the author of that doctrine of grace which it has been the constantly pursued effort of Roman Catholicism to neutralize, and which in very fact either must be neutralized by, or will neutralize, Roman Catholicism. Two children were struggling in the womb of his mind. There can be no doubt which was the child of his heart. His doctrine of the Church he had received whole from his predecessors, and he gave it merely the precision and vitality which ensured its persistence. His doctrine of grace was all his own: it represented the very core of his being; and his whole progress in Christian thinking consists in the growing completeness with which its fundamental principles applied themselves in his mind to every department of life and thought. In this gradual subjection to them of every element of his inherited teaching, it was inevitable, had time been allowed, that his inherited doctrine of the Church, too, with all its implications, would have gone down before it, and Augustine would have bequeathed to the Church, not 'problems,' but a thoroughly worked out system of evangelical religion.

(*e*) *Augustine and Protestantism.*—The problem which Augustine bequeathed to the Church for solution, the Church required a thousand years to solve. But even so, it is Augustine who gave us the Reformation. For the Reformation, inwardly considered, was just the ultimate triumph of Augustine's doctrine of grace over Augustine's doctrine of the Church. This doctrine of grace came from Augustine's hands in its positive outline completely formulated: sinful man depends, for his recovery to good and to God, entirely on the free grace of God; this grace is therefore indispensable, prevenient, irresistible, indefectible; and, being thus the free grace of God, must have lain, in all the details of its conference and working, in the intention of God from all eternity. But, however clearly announced and forcefully commended by him, it required to make its way against great obstacles in the Church. As over against the Pelagians, the indispensableness of grace was quickly established; as over against the Semi-Pelagians, its prevenience was with almost equal rapidity made good. But there advance paused. If the necessity of prevenient grace was thereafter (after the second Council of Orange, 529) the established doctrine of the Church, the irresistibility of this prevenient grace was put under the ban, and there remained no place for a complete 'Augustinianism' within the Church, as Gottschalk and Jansen were fully to discover. Therefore, when the great revival of religion which we call the Reformation came, seeing that it was, on its theological side, a revival of 'Augustinianism,' as all great revivals of religion must be (for 'Augustinianism' is but the thetical expression of religion in its purity), there was nothing for it but the rending of the Church. And therefore also the greatest peril to the Reformation was and remains the diffused anti-'Augustinianism' in the world; and, by a curious combination of circumstances, this, its greatest enemy, showed itself most dangerous in the hands of what we must otherwise look upon as the chief ally of the Reformation—that is to say, Humanism. Humanism was the ally of the Reformation in so far as it too worked for the emancipation of the human spirit; and, wherever it was religious, it became the seed-plot of the Reformation. But there was a strong anti-'Augustinian' party among the Humanists, and from it emanated the gravest danger which threatened the Reformation. Where this tone of thought was dominant the Reformation failed, because religious depth was wanting. What Spain, for example, lacked, says R. Saint-Hilaire justly, was not freedom of thought, but the gospel.* In the first stages of the Reformation movement in the North, this anti-'Augustinianism' may be looked upon as summed up in Erasmus; and Erasmus, on this very ground, held himself aloof from the Reformation movement, and that movement held itself aloof from him. 'I am at present reading our Erasmus,' wrote Luther six months before he nailed his theses on the door of the Schloss-Kirche at Wittenberg, 'but my heart recoils more and more from him. . . . Those who ascribe something to man's freedom of will regard these things differently from those who know only God's free grace.' Do we realize how much we owe to Erasmus and his friends that they remained Roman Catholics, and thus permitted the 'Augustinianism' of the Reformation to plant its seed and to bear its fruit?

LITERATURE.—The literature upon Augustine is immense. An excellent selection from it is given by Loofs at the head of the art. 'Augustinus' in *PRE*[3], with which should be compared that given by Harnack, *Hist. of Dogma*, v. 61 f. The following deal directly with the influence of Augustine: Feuerlein, 'Ueber die Stellung Augustins in der Kirchen- und Kulturgeschichte,' in von Sybel's *Historische Zeitschrift*, 1869, xxii. 270–313; Reuter, *Augustinische Studien*, Gotha, 1887, vii. 479–516; Cunningham, *S. Austin and his place in the History of Christian Thought* (Hulsean Lectures for 1885), London, 1886; Schaff, *History of the Christian Church*, iii., New York, 1884, § 180, pp. 1116–1128; Eucken, *Die Lebensanschauungen der grossen Denker*, Leipzig, 1890 (2nd ed. 1896, pp. 216–250; 4th ed. 1902, p. 211, etc.); Nourrisson, *La Philosophie de Saint Augustin*, Paris, 1886, ii. 147–276; Werner, *Die Scholastik des späteren Mittelalters*, iii., Vienna, 1883, and 'Die Augustinische Psychologie in ihrer mittelalterlich-scholastischen Einkleidung und Gestaltung,' *SWAW*, Vienna, 1882, pp. 435–494; Siebeck, 'Die Anfänge der neueren Psychologie,' in *ZPhP*, 1888, p. 161 f., cf. his *Geschichte d. Psychologie*; Ehrle, 'Der Augustinismus und der Aristotelismus in der Scholastik gegen Ende des xiii. Jahrhundert,' *Archiv für Literatur- und Kirchengeschichte des Mittelalters*, 1889, v. 603–635, cf. also *ZKT*, Innsbruck, 1889, xiii. 172–193; Mirbt, *Die Stellung Augustins in der Publicistik des gregorianischen Kirchenstreits*, Leipzig, 1888; Koch, *Der heilige Faustus Bischof von Riez*, Stuttgart, 1895, pp. 129–191; Gwatkin, *The Knowledge of God*[2], 1908, ii. 179: Portalié, 'Augustine,' in *Catholic Encyclopædia*, ii. 84–104, New York, 1908. The text of Augustine is most generally accessible in *PL* xxxii.–xlvii.; and his chief writings are translated in *Nicene and Post-Nicene Fathers*, 1st ser. i.–viii., Oxf. and N.Y., 1886–88.

BENJAMIN B. WARFIELD.

AURANGZĪB. — Aurangzīb (Abū-l-Muẓaffar Muḥyī-ad-dīn Muḥammad Aurangzīb 'Ālamgīr Pādishāh Ghāzī), sixth of the so-called Mughal emperors of India, and third son of Shāh-Jahān, was born at Duhad, on the borders of Mālwa, on Nov. 4th, 1618. Nothing is recorded of his early years, except that he was held by his grandfather Jahāngīr as a hostage for his father's loyalty, and was educated in the conventional manner of Ḥanafī Muhammadanism. In 1636 he was appointed nominal governor of the Deccan, but his religious exaltation led him seven years later to renounce the world, and to adopt the rigorous rules of a *faqīr*. For a year he practised self-mortification in his retreat in the Western Ghāts, to the indignation of his father and the ridicule of his family. His active spirit, however, was not satisfied with the life of contemplation; he resumed public duties as governor of Gujarāt, and in 1647 was ordered to command the recently annexed provinces of Balḫ and Badaḫshān beyond the Hindū Kūsh. A brief experience convinced him of the uselessness of attempting to hold these distant provinces against the resistance of the Uzbegs, and he retired with heavy loss. He was equally unsuccessful in his next command, when he was sent in 1649 to relieve Kandahār, then besieged and soon captured by the Persians; nor was a second attempt in 1652 more fortunate. These campaigns, however fruitless to the empire

* *RCA*, 1857, p. 146.

taught Aurangzīb the lessons of strategy, and taught his followers to respect their commander's courage. They laid the foundations of his future dominating influence. He was again governor of the Deccan in 1655–57, when the illness of his father brought about a fratricidal struggle for the throne. Allying himself with his youngest brother, Murād Baḥsh, Aurangzīb defeated the Imperial army under Jaswant Singh at Dharmātpūr on April 25th, 1658, and again at Samūgarh on June 2nd, when his eldest brother Dārā was forced to fly. Agra fell into the hands of the victors; Shāh-Jahān was held a prisoner till his death seven years later; the other brothers were ruthlessly killed; and Aurangzīb, who had already been proclaimed Emperor at Delhi in July, 1658, formally ascended the throne on May 26th, 1659, with the title of '*Ālamgīr*, 'World-grasper.'

Though he had won the throne by treachery and by the murder of his brothers, Aurangzīb was humane by nature, and no subsequent act of barbarity has been proved against him during his reign of half a century. The keynote of his character was a rigid Muslim's puritanism. It is impossible to doubt his sincerity, for he had nothing earthly to gain and everything to lose by his stern adherence to every tittle of the law of Islām. He might have cast Muhammad's precepts to the winds, as his father and grandfather had done, and only strengthened his hold of his Hindu empire.

'There was nothing but his own conscience to prevent Aurangzīb from adopting the eclectic philosophy of Akbar, the luxurious profligacy of Jahāngīr, or the splendid ease of Shāh-Jahān. The Hindus would have preferred anything to a Muhammadan bigot. The Rājput princes only wanted to be let alone. The Deccan would never have troubled Hindūstān if Hindūstān had not invaded it. Probably any other Mughal prince would have followed in the steps of the kings and his forefathers, and emulated the indolence and vice of the court in which he had received his earliest impressions. Aurangzīb did none of these things. For the first time in their history the Mughals beheld a rigid Muslim in their Emperor, a Muslim as sternly repressive of himself as of the people around him, a king who was prepared to stake his throne for the sake of the faith' (Lane-Poole, *Aurangzīb*, p. 69).

In his daily life Aurangzīb observed not only the minute details of the Muslim ritual, but an extreme austerity. He ate no meat, drank only water, kept all the fasts and vigils, passed whole nights in prayer and reading the Qur'ān in the mosque, gave alms profusely, and used the utmost simplicity in his dress and manners. In accordance with the Prophet's precept that every Muslim should practise a trade, he made skull-caps; he was also a fine calligraphist, and twice copied the whole Qur'ān, which he knew by heart. Laxity of morals, lewd conversation, the dancing of the Nāch girls, even music, were his detestation. Since to the fanatical puritanism of a strict Muslim were added an indomitable will and a courage so cool that he would dismount and recite the ordained prayers at the customary hour in the very thick of a battle, it is clear that far-reaching changes were in store for the mixed populations and religions of India. The storm began to gather in 1669, when the temple of Viṣṇu at Benares was destroyed by his order, and the idols buried under the feet of good Muslims at the mosque at Agra. Three years later came a rebellion of the Hindu devotees called Satnāmīs at Nārnaul, which was sternly suppressed. Soon afterwards Aurangzīb imposed the intolerable *jizya*, or poll-tax, upon all non-Muslims, and turned the whole Hindu population against him. An interference with the infant princes of Mārwār led to a revolt of the Rājputs, and though this was more or less extinguished in 1681, Aurangzīb lost thereby the support of the finest fighting force in Hindūstān.

The loss of Rājput loyalty was felt as soon as the Emperor undertook the reduction of the Deccan, which he regarded as 'infidels' land,' *Dār el-ḥarb*, and resolved to make *Dār el-Islām*. He had nearly conquered Gulkanda when he was called away to fight for the throne in 1657, but since then a new Hindu power, more formidable than the Muhammadan kingdoms of Bījāpūr and Gulkanda, had arisen by the energy of Sivājī the Marātha freebooter, who had gradually established an era of brigandage on an heroic scale, built up a kingdom in the Western Ghāts, and widened his authority to the extent of levying blackmail over a great part of the Deccan. His death in 1680 did not end the revolt, and Aurangzīb found that he had to deal with an indomitable nation of freebooters, whose strength and skill in guerrilla warfare he was never able to break. The Mughal generals had been too often repulsed, and the Emperor took the field in person in 1681. He first attacked the old Deccan kingdoms which appeared to shelter the Marāthas: Bījāpūr fell in 1686, and Gulkanda in the following year. Their extinction, however, only strengthened the Marāthas, whose disbanded armies swelled the forces of rebellion. The effeminate Mughal troops, deprived of the Rājput 'stiffening,' grew more and more demoralized by year after year of guerrilla fighting; and, whilst Aurangzīb effected a kind of military occupation of the whole Deccan, except the Portuguese possessions and the extreme point south of Trichinopoly, his hold of the country was illusory; and the moment the Mughals turned their backs the hardy Marāthas emerged from their mountain fastnesses and recovered the territory lately occupied by their enemy. The country, devastated by the horde of invaders, welcomed the mountaineers as deliverers from a hateful foreign yoke. Aurangzīb was engaged in a hopeless struggle, yet he never lost heart. For twenty years he fought his evasive foe, planned every campaign himself, issued all general orders and controlled every detail, conducted sieges in person, and in extreme age was barely withheld from leading the assault. It was all in vain; Hindūstān itself was full of revolt in the prolonged absence of its Emperor; the Deccan was a desert; the army was enfeebled and clamouring for its pay; and the Marāthas ever hung about its skirts and insolently defied it. Finally Aurangzīb died, alone as alone he had lived, with all the puritan's sense of sin and unworthiness and dread of death, and full of the dejection of a colossal failure, on March 4th, 1707, in the 49th year of his reign, and the 89th of his age. With him the orthodox Muhammadan revival in India died also.

LITERATURE.—The native annalists are quoted in substance in Elliot and Dowson's *History of India as told by its own Historians*, vol. vii. (London, 1876). European contemporary observers are Bernier, *Travels*, ed. Constable (London, 1891); Manucci, *Storia do Mogor*, ed. W. Irvine (4 vols., London, 1907–8); Gemelli Careri, in Churchill's *Voyages*, vol. iv. (London, 1745); Tavernier, *Travels*, tr. V. Ball (2 vols., London, 1889). Fryer's *New Account of India* (London, 1698); and Hedges' *Diary*, ed. Sir H. Yule (3 vols., London, Hakluyt Society, 1887–9), may be consulted. The present writer contributed a biography of Aurangzīb to the 'Rulers of India' series (Oxford, 1893).

AURELIUS.—See MARCUS AURELIUS.

AUSTERITIES.—**1. Introduction.**—Asceticism, strictly so called, is not found among peoples of lower grades of culture, but the practice of various kinds of austerities is very common. These take the place in the social, moral, magical, and religious life of savages which asceticism holds in that of more advanced peoples, but it is also noticeable that in certain instances, as where these austerities have the form of a self-discipline or are performed as part of the service of the gods, they approach very near to some aspects of asceticism. In savage life the precarious nature of existence, exposure, the struggle for food, the constant state

of warfare between different peoples, the ravages of diseases whose nature and cause are misunderstood, and many other things, are productive of much suffering and call for great endurance on the part of those whom they affect. More particularly women must undergo many austerities, whether as mothers, or as workers, or as suppliers of food; yet many of these are cheerfully undergone. Thus in carrying her child for miles on long journeys in great heat and often with little food, and in relieving its wants at the expense of her own comfort, the savage mother, in thus fulfilling her functions of motherhood, will willingly bear pain and discomfort. Nor are similar forms of austerity lacking, especially among the poor, even in our highest forms of civilization, where want, toil, and suffering must be undergone to satisfy the conditions of existence. The savage methods of punishment, the various forms of the ordeal, of revenge or recrimination, are usually of the most cruel and painful kind. But all such forms of austerity do not concern us here. Those alone are dealt with which are self-inflicted or which are willingly borne, for definite purposes, subserving now magical, now religious, now ethical ends.

Unwilling as the savage is to suffer pain, his theory of the universe constrains him to undergo it on many occasions in order to fit him better for the ends of life, or to make life more tolerable, or to please the gods or spirits by whom he believes himself to be surrounded. Such austerities, undergone at one time for magical purposes, frequently change their nature. Thus they may come to be regarded as possessing a disciplinary character, in which case they are hardly to be differentiated outwardly from the disciplinary exercises, often of the same kind, of a higher asceticism, though they may not possess the same ethical or religious content. Others, again, as time goes on, may assume a more or less symbolic character, their excessive severity being then much lessened. On the other hand, even where such earlier forms of austerity survive in higher forms of religion, their severity is often by no means decreased, although the motive may have become a nobler one. Examples of this will be found in the various forms of austerity discussed here. These are mainly austerities connected with a variety of initiatory ceremonies, flagellation, fasting, mutilations of the body, tatuing, and medical rites, while some notice must be taken of self-restraint among savage races.

Before passing on to these, we may notice that the universal custom of sacrifice, involving a greater or less renunciation of property and possessions, of food-stuffs, and not infrequently life itself, or, as a substitute for that, of some part of the body, is a marked form of austerity; and its equivalent in the higher ascetic life—the devotion to poverty, the willing renunciation of comfort and luxury for the sake of love to God—has surely received a considerable impulse from this wide-spread custom of ethnic religion, though by no means wholly derived from it. In other cases, which need not be more fully detailed here, life itself is sacrificed in suicide, often through pride or shame or a sense of duty (see A. Sutherland, *Origin and Growth of the Moral Instinct*, London, 1898, ii. 35). Or, where it is thought that one ought to pass into the other world before the body and mind have become frail, decrepit, and worn out, life is often freely yielded up by the aged or the sick (see ABANDONMENT AND EXPOSURE). Though the custom may appear cruel and frequently is accomplished by cruel means, it is mostly a willing self-surrender of life that a higher life may be attained beyond the grave (see Letourneau, *Sociology*, London, 1893, 154 ff.; Westermarck, *Origin and Development of the Moral Ideas*, vol. i., London, 1906, p. 383 ff.).

2. Adolescence initiation ceremonies.—Among savage tribes the passing of a boy or girl to manhood or womanhood is usually accompanied by a number of ceremonies, several of which are most severe and painful, but must be undergone willingly in order to preserve their effect. This stage of life, being a highly critical one, the beginning of sexual existence properly so called, demands many safeguards, and, taken as a whole, the various ceremonies are intended to ward off or neutralize the evil influences incident to that period. Where a youth is concerned, there is the beginning of a new life which requires ceremonies of a purificatory kind, besides preparation for entrance upon a stage of new relations with the other sex. Hence there must be seclusion for a time, while the youth is usually debarred from intercourse of any kind with the other sex, and silence is frequently imposed. Fasting is also made use of, either in the sense of complete abstinence from food for a longer or shorter period, or abstinence from certain foods which are tabu at such a stage. This is intended to prevent the entrance of evil influences to the body with such foods, or to prepare the way for receiving them later on. Other ceremonies have the purpose of strengthening the youth for manhood; these are often of a severe character, and, joined with others which are intended to purify from the contagion of evil, easily pass over into tests of endurance. Some form of mutilation, more or less severe—the more severe forms being circumcision, loss of a tooth, or cutting of the flesh, —is frequent. In this case, perhaps, the primary intention is, by losing some part of the body, to secure the rest from evil influences; but it easily passes over into the idea of sacrifice, or some purificatory ceremony, or simply a test of endurance. Again, the youth at this period sometimes obtains a guardian spirit, whose nature is revealed to him in most cases by fasting in solitude, exposed to all the terrors which imagination and the sense of mystery may conjure up. This sense of mystery exciting fear is usually present at all these initiatory ceremonies, for now the youth is instructed not only in sexual matters but in such tribal lore—magical, religious, moral, or otherwise —as is confined to the men. Thus, though in different places the nature of the rites may vary, or their severity be greater or less, they call for the endurance of great austerities on the part of the youth. See art. INITIATION.

A few examples chosen from different localities will show the nature of the austerities undergone at this period. Among the northern tribes of Central Australia the long and complicated ceremonies of initiation to manhood include beating, which must not be resented, circumcision, sub-incision or cutting open the urethra, and biting the youth's scalp; while, as a rule, though fasting is not carried to an extreme, several foods are tabu. During the painful rites of circumcision and sub-incision the youth's mouth is gagged with 'fur-string' to prevent his crying out, while no attempt is made to spare him pain when his scalp is bitten, the object being to cause a plentiful growth of hair. With some of the tribes knocking out a tooth is part of the ceremony, with others it has no connexion with it (Spencer-Gillen[b], ch. i.). Among the Macquarrie tribes any exhibition of shrinking when the tooth is knocked out or the body scarified makes the youth unfit for manhood (Angas, *Savage Life*, London, 1847, ii. 224). With other tribes scourging is practised, and the young men must endure it silently (Ridley, *Kamilaroi and other Aust. Lang.*, Sydney, 1877, 154). With the Andamanese the initiatory period—for both youths and girls a period of fasting from several tabued foods—begins from the 11th to the 13th year, and lasts from one to five years, though sometimes a youth will extend the period in order to boast of his powers of endurance afterwards. It is said to be intended as a test of endurance or self-denial, but as various complicated ceremonies mark the first partaking of these foods at the time when tabu is raised from each, the intention probably goes further than this (Man, *JAI*, 1882, xii. 94, 129). In New Guinea the initiation of boys to the Malu cult is attended with great mystery and severity. They are not allowed to cut or dress the hair, to dance, feast, smoke, or behave in an unseemly way; they are beaten with clubs and severely wounded. These rites are said to have had a strong educative effect. Boys among the Cape York natives were secluded for a year, at the

end of this time a tooth was knocked out, and a year later a further test of endurance was applied (Haddon, *Head Hunters*, London, 1901, 50 ff., 191). Similarly in Mabuiaig lads were tortured and chastised, and the tests increased with a refractory boy, who was speared, scraped, or beaten with the nests of green ants which stung him furiously (*ib.* 140). In many parts of Africa similar rites are found. Thus among the natives of the Bondei region the *galo* ceremonies include passing the boy through a narrow pit smeared with the juices of a plant which burn his skin, incision of tribal marks on the arm, and the performance of secret ceremonials in some of which he is severely handled, death occasionally resulting (Dale, *JAI*, 1895, xxv. 189 ff.).

But it was among the tribes of North America that such austerities at initiation were most severe, especially where they were connected with the choice of a *manitou*. Thus among the Californian tribes abstinence and indifference to hardship and privations were insisted upon, and before the youth could rank as a warrior his naked body was stung with nettles till he could not move, after which he was laid on the nest of a virulent species of ant, which, swarming over his body and stinging it, caused him fearful agony. To discover his *manitou* he was made to fast for three or four days, and was intoxicated and harassed until he confessed to seeing it. A figure of the *manitou* was then moulded and placed on his breast, where it was ignited so that the figure might be indelibly marked on the flesh (Bancroft, *Native Races of the Pacific States*, London, 1875, i. 413 ff.). Among the New Mexicans the ordeal consisted in scarifying the skin till the blood ran, the candidate being expected to show no sign of pain (*ib.* i. 580). With the tribes of British Columbia boys were secluded at puberty and made to eat and drink very sparingly; in other cases they were made to bathe in all weathers, their naked bodies were whipped daily, they had to gash themselves with knives in the sweat-house, or lie out exposed to the elements all night. Prolonged fasts, bathings, forced vomitings, and other exhausting exercises for a longer or shorter period were among the means employed in solitude for obtaining mystic dreams and a knowledge of the *manitou* (Hill Tout, *JAI*, 1904, xxxiv. 32, 316; 1905, xxxv. 143–144). Rigorous fasting was compulsory on boys and girls among the Algonquin tribes, and the longer the period of abstinence the greater the merit which accrued. During these fasts, which were common to practically all the American Indian tribes, the greatest attention was paid to dreams, for it was mainly through these that the revelation of the *manitou* came (Tanner, *Narrative*, New York, 1830, 288; Schoolcraft, *Indian Tribes*, Philadelphia, 1857–1860, *passim*; Beverley, *Hist. of Virginia*, London, 1722, 177 ff.).

Similar austerities are found among the South American tribes. Thus, in Guiana, before the youth can marry he must endure the infliction of flesh-wounds, or he is sewn up in a hammock full of fire-ants, or undergoes other hardships (Im Thurn, *Indians of Guiana*, London, 1883, 221). Among the ancient Peruvians, at fifteen or sixteen years, boys had to practise rigorous fasts until they were worn out, to watch for twelve nights in succession, to fight with each other at the risk of wounds, or death, to undergo flogging, and many other privations, before receiving the signs of their new position as men (Garc. de la Vega, *Comm. Real.*, Madrid, 1609, vi. 35). So in ancient Mexico, before being introduced to the aristocratic warrior class, the youth, covered with rags, was shut up in different temples in succession, offering his blood to the divinity, watching and fasting for periods of four days and four nights (Lopez de Gomara, *Hist.*, Madrid, 1852, ii. 78). See § 8 (3).

In the case of girls, the arrival of puberty, in accordance with the universal theory of menstruation as containing an element of danger to the girl herself, but more especially to others, and even to nature itself, is marked by several painful ordeals. Among these the most common is the absolute seclusion of the girl for a longer or shorter period, so that no man may see her and that the sun may not shine on her. Fasting, excision, cuttings, and other barbarities are also commonly found at this period.

Girls in New Guinea, on the first signs of puberty, are shut up for three months and permitted only vegetable food (Haddon, *op. cit.* 135). In New Ireland they are confined for several years in the dark in small cages, and this custom is general over Melanesia (*JAI*, 1888, xviii. 284). Seclusion is also found among most African tribes, as among the Kafirs (MacLean, *Kaffir Laws and Customs*, Mount Coke, 1858, 101) and in Loango (Ploss, *Das Kind*, Leipzig, 1884, ii. 439). With the Bondei people the rite for girls, corresponding to the *galo* of the boys, lasts for twelve days. On the last day the girl fasts. During this period she is taught the *vihili*, or secrets, and this teaching is accompanied by severe and painful ordeals (*JAI*, 1895, xxv. 193). The custom of seclusion is common among the N. American tribes, varying from a few days to a year or longer. Girls among the Ahts are hidden behind mats in the house, where they can see neither sun nor fire, and are allowed no food for several days (Sproat, *Savage Life*, London, 1868, 93 ff.). Among Alaskan tribes the girl was shut up in a cage with a small air-hole, or in a hut, where she remained on hands and knees. This treatment lasted for a year, and no communication with others or exercise of any kind was allowed (*GB*² iii. 211). Bancroft cites many instances among the tribes of the Pacific coast. Thus among the Isthmian tribes the girl was closely confined, sometimes for a period of two years (*NR* i. 772, cf. 82, 110, 197, 278). Among the Californian tribes she was laid over a hole previously heated, and kept without food for some days. Or she was buried up to the neck and the ground about her beaten till she perspired profusely (*ib.* 414). Among the Salish tribes of British Columbia, seclusion in a cubicle for ten days was the rule, the girl being allowed little food or water. With other Salish tribes she was secluded outside the settlement for a month under many food restrictions (*JAI*, 1905, xxxv. 32, 319). In other tribes she had to squat for some days in a hole made in the hut, while her seclusion lasted for a much longer period. She fasted entirely for four days, and afterwards abstained from all fresh meats (*ib.* xxxv. 136). In S. America these customs also flourished among most of the tribes, as in Brazil, where the girl's back was cut with a sharp tooth, after which she was bound and hung in a hammock, in which she remained without food or drink for three days. New gashes were then inflicted upon her, and she remained in the hammock under less strict rules of abstinence until the third month (Lafitau, *Mœurs des Sauvages Amér.*, Paris, 1724, i. 290 ff.). The Uaupes of Brazil also seclude the girl for a month on an abstemious diet. When released she receives several severe scourgings at intervals, death sometimes ensuing as the result (Wallace, *Amazon*, London, 1895, 345). In Guiana the hammock seclusion lasted for a month, after which the girl's naked body was exposed to the bites of venomous ants (Labat, *Voy. en Guinée*, Amsterdam, 1731, iv. 365).

Similar instances might be cited, occurring among more advanced races, *e.g.* the Hindus, though with less severity. Here it may also be noted that, on account of similar beliefs regarding the danger and impurity of menstruation, women, among most savage tribes, must go into seclusion, often at some distance from the village, abstain from certain foods, or fast (see Stoll, *Geschlechtsleben in der Völkerpsychologie*, Leipzig, 1908, 835 ff.; *NR* i. 549; *JAI*, 1904, xxxiv. 323; *GB*² iii. 222 ff.). This is also found at higher levels of civilization (cf. Lv 15¹⁹ᵃ; Avesta, *Vendidād*, xvi.). Similarly, women, being tabu among many peoples at pregnancy on account of the danger arising from this critical period of their life, have frequently to go into entire seclusion, or are in some way separated from others, and must abstain from certain kinds of food (Crawley, *Mystic Rose*, London, 1902, 9, 167, 200, 417; *NR* i. 413, 734; *JAI*, 1882, xii. 354). See also §§ 6 (*b*), 8 (*b*).

3. Admission to secret societies or 'mysteries' at opening manhood or womanhood was, in many cases, also characterized by severe austerities, which, though no doubt intended as a preparation for the revelation of secret knowledge, myths, or ritual, can hardly be separated in their origin from the pains undergone at puberty, while in some cases they seem to have been intended also as puberty ceremonies. Yet, in so far as these and certain ordinary initiatory ceremonies pave the way for the communication of religious and, occasionally, moral teaching, we see such forms of austerity almost passing over to a kind of disciplinary asceticism, and certainly possessing the primitive meaning of ἄσκησις as 'training.' In Australian mysteries, for example, the advice given by the old men was intended to 'soften the heart,' and, as among the Kurnai, the stomachs of the boys were kneaded to drive out selfishness and greed (*JAI*, 1883, xiii. 296; 1884, xiv. 313), while unselfishness is taught in the Yao mysteries, a selfish person being called 'uninitiated' (Macdonald, *Africana*, London, 1882, i. 130; cf. the moral teaching given by headmen to boys at circumcision and initiation during the painful rites attendant thereon among the Mavendas of S. Africa, *JAI*, 1905, xxxv. 268). Further, in many of these mysteries, the initiation to which lasts for a long period of time, the candidate is supposed to die and come to life again as a new being. Although this idea may not have the intention of ascetic renunciation—*Stirb und werde*—yet in it and in the moral training for the attainment of 'selflessness,' so far as a savage can grasp the idea, we see a connexion with the later ascetic ideals.

In Africa, examples of such initiations are numerous. Among others may be cited those of the west coast, in which the youths are taken by their instructors into the depth of the forest, where they are subjected to a severe course of training during a year; they are naked and smeared with clay (M. H. Kingsley, *Travels in W. Africa*, London, 1897, 531). In the Mwetyi society of the Shekani tribes—a woman's society—the initiation lasts for two weeks, and is accompanied by severe ordeals and fasting, while the girls must gaze at the sun until they fall back in a swoon. Most of the ordeals are intentionally hard, so that the wills of the candidates may be broken and secrecy ensured (Nassau,

Fetichism in W. Africa, London, 1904, 249). With candidates for the Malanda society among the Batangas the sungazing ordeal is applied to the lads; then, while everything is done to augment their sense of awe and mystery, they are confined in a hut for twenty days along with a corpse, and beaten severely with rods until they are submissive (*ib.* 322). In Melanesia entrance to such societies is possible only after a severe initiation, including hardships and tortures. In other cases the candidates are stung with leaves of the nettle-tree, made to fast and to take live embers in their hands, and are trodden upon, or, as in the Welu society, they are each placed in a hole in the ground and burning fronds of the coco-nut palm are thrown on their backs, yet they must not utter a cry (Codrington, *The Melanesians*, London, 1891, 82, 87, 88). In these and many similar initiation rites the youths are daubed with clay, charcoal, mud, or filth, which must not be washed off till the ordeal is at an end; this rite may signify the putting away of the old life, as it did in certain Greek mysteries (Lang, *Custom and Myth*, London, 1884, 40; *JAI*, 1889, xix. 261; Demosthenes, *de Corona*, 313). Here, too, may be noted the initiatory customs used in the Eleusinian and other Greek mysteries, in which, besides other tests, the candidates had to prepare themselves by fasting for several days; the similar fasting before initiation to the cult of Osiris and Isis in Egypt; and the various tests of endurance undergone by candidates for initiation to Mithraism (see artt. MYSTERIES, MITHRA, SECRET SOCIETIES, and Apul. *Metam.* xi.).

4. **Initiation to the priesthood.**—As in savage societies the priest, sorcerer, or medicine-man has a commanding station and exercises so much influence by virtue of his relation to the spiritual world, it is natural that those who seek to enter upon that profession should be subjected to a severe course of training, involving many austerities. And as the communications of the medicine-man with the other world are usually associated with a state of trance, or his revelations are given in some ecstatic condition, the candidate's course of training is intended to adapt him for the production of these states either by reducing him to an abnormal condition of body and mind, or by accustoming him to the use of such severe methods as will readily produce them. The phenomena of hysteria, epilepsy, catalepsy, and such-like diseases are believed by savages, and indeed by many peoples at a higher grade, to denote possession or inspiration by gods, spirits, or demons. Hence such persons as are subject to them are often deliberately chosen for the profession of medicine-man, while their abnormal states are only heightened by the austerities undergone. In other cases, in accordance with the prevailing theory of the nature of inspiration and of the state into which the inspired person is thrown, the production of such states at will is the object of the painful processes to which the candidate must submit. The course of training includes solitude, exposure to the elements, scarifying the body, castigation, fasting, and drinking various unwholesome beverages. By all these means the candidate soon arrives at a hysterical or abnormal state. He acquires the faculty of seeing visions, of producing a convulsionary state of body, or of falling into a trance. A few examples of the method of training will suffice to show its severity and the painful nature of the austerities undergone (see also artt. MEDICINE-MAN and PRIEST).

In Greenland the preparation for the profession of *angakok* begins at an early age, and includes retirement into solitary places and a severe course of fasting. By these methods trances are produced in which the novice obtains a *tornak*, or guardian spirit, or falls into fits in which his ravings are held to be communications from the spirits (Rink, *Tales and Traditions of the Eskimo*, London, 1875, 58; Cranz, *Grönland*, Leipzig, 1770, 268). Among the American Indians similar methods are adopted: protracted fasts, severe bodily exercises, and solitary vigils all reduce the candidate to a hysterical state, in which he dreams or has revelations; and the greater his austerities the more vivid and copious are his visions, and hence the higher is the estimation in which he is held (*JAI*, 1904, xxxiv. 26; Schoolcraft, *Indian Tribes, passim*). Among the Isthmian tribes, youths are chosen for their natural aptitude to the office of *piaces*, or sorcerers, and are confined in a solitary place, subjected to a severe discipline for two years, fasting from all flesh meat and living only on a scanty diet of vegetables and water; while all sexual intercourse is prohibited (*NR* i. 777). In S. America we find similar methods employed. Among the Abipones the aspirants had to remain seated on the branches of a tree and to fast for several days. By this means they contracted 'a weakness of brain, a giddiness, and kind of delirium, which makes them imagine that they are gifted with superior wisdom, and give themselves out for magicians' (Dobrizhoffer, *Abipones*, London, 1822, ii. 68). Training for the office of *peaiman* in Guiana involves a painful and severe trial of endurance. The candidate fasts for protracted periods, wanders alone in the forest, and accustoms himself to drinking large draughts of tobacco-juice mixed with water. The terrors of solitude and the drinking of the nicotine produce intense delirium, in which he holds converse with spirits. Epileptic subjects are preferred for the office (Im Thurn, 334).

In Africa, among the Zulus, those who wish to become diviners have to acquire the power of intercourse with the spirits in states of coma or ecstasy by solitude, prolonged fastings, and flagellation, until they become a 'house of dreams' (Callaway, *Rel. of Amazulu*, London, 1884, 387; Grout, *Zulu-Land*, London, 1865, 158). Among the Bondeis the youth who aspires to be a doctor must submit to be scarified all over his body (*JAI*, 1895, xxv. 213). The *manangs*, or medicine-men, among the Sea Dayaks must prove their call to the office by prolonged fasting, and by ecstatic states and trances in which they foam at the mouth (Ling Roth, *Natives of Sarawak*, London, 1896, i. 266). And among the Todas, the *palal*, or priest, at his initiation must remain naked for three days and two nights, whether the weather is hot or freezing, and eat only a little porridge at night (Reclus, *Primitive Folk*, London, 1891, 221).

For similar trials among American tribes before appointment to the office of chief, etc., including fasting, flagellation, stinging with ants, see Letourneau, *Sociology*, 473; Biet, *Voy. en l'Isle de Cayenne*, Paris, 1664, iii. 10.

In these and hundreds of similar cases the discipline may be more or less severe, and its period longer or shorter, but the intention in all is the same. Not only so, but in future the medicine-man, or shaman, previous to communicating with the spirits, giving oracles, healing, and the like, must produce the abnormal state by these painful processes, which will, of course, be more or less extensive according as he readily passes over into that state or not. Frequently it is spontaneously produced, either because the shaman is a hysterical subject or on account of the training he has undergone; but generally it is artificially produced by fasting, by wild dances and screams, by contortions of the body, by flagellation, by cutting the flesh, or by swallowing various narcotics and herbs (cf. Parish, *Hallucinations*, London, 1897, 40). The result is a trance, a nervous seizure, frenzied movements, foaming at the mouth, and raving utterances. Similar results followed the hysterical excitement which attacked whole communities in the Middle Ages, and which was often produced by such artificial means, especially convulsive movements and dancing. They are seen again in the American Indian ghost-dances, in which, following convulsive gyrations, trance and catalepsy are induced, or in the indifference to pain and wounds among Muhammadan dervishes in consequence of ecstasy produced by similar movements (Tuckey, *Psycho-Therapeutics*[3], London, 1891, 12; Ellis, *Psychology of Sex*, London, 1902, ii. 161; Myers, *Human Personality*, London, 1903, ii. 190; and *Proc. Psych. Research Soc.* 1885, p. 31).

5. **Flagellation.** — As has been said above, scourging or beating is a frequent practice at the various forms of initiation. A wider view of this rite among savages and as a folk-survival leaves little doubt as to its original purpose. The scourging is intended to drive away the contagion of evil, and the malignant presence of demoniacal powers. The pain is inflicted less as a means of hurting the victim than of making these evil influences suffer, or of frightening them so that they will depart. This is especially noticeable where the scourging is done not with rods, but with branches or plants which are supposed to possess magical virtues; in such cases it is not always necessarily painful. It may, however, be made painful where the plant has poisonous juices or is of a stinging variety. But its original intention soon passes over into that of simply inflicting pain or undergoing voluntary suffering, either by way of hardening or as a means of self-discipline with a definitely religious or moral end. Here it becomes a true ascetic

austerity, but it may also be a pathological form of asceticism. Or, again, it may be used as an erotic stimulation, though here it assumes a pathological form as subserving genesic excitability. In other cases its religious disciplinary use is conjoined with some pathological erotic purpose, as in the case of Brother Cornelius and his penitents, or of Père Girard (Cooper, *Hist. of the Rod*, London, 1870, 122 ff. ; Zöckler, *Askese und Mönchtum*[2], 609). The pain caused by flagellation, again, made it an obvious and well-nigh universal form of punishment. With this and its previous use we are not concerned here. Finally, it remains to notice how, while subserving its primitive purpose or used simply as a means of producing pain, it may be regarded as a form of sacrifice to gods who will that their worshippers should suffer, or it may pass as a substitute for an offering of the person himself as a human sacrifice. Most of these purposes are also served by using instead of a scourge some stinging plant or some substance causing pain to the tissues when applied to the body, as has been seen in several cases of initiation rites.

The primitive purpose of flagellation is seen in the fact that those animals or men on whom the evils of a community were laid (scape-goat), and who were driven away or slain, had probably in the first instance been regarded as representatives of a spirit of vegetation who was slain. They were frequently scourged, and the scourging had the effect of driving off 'any malignant influence by which at the supreme moment they might conceivably be beset' (*GB*[2] iii. 128). When they were regarded simply as scapegoats, the scourging became a means of causing pain. Instances of this use of flagellation to drive away evil are found in many places. When a king was installed in the Sandwich Islands, the priest struck him on the back with a sacred branch, in order to purify him from defilement (Ellis, *Polynes. Researches*, London, 1829, iii. 110). Brazilian Indians scourge themselves on the genital organs with a certain plant at the time of the new moon (Nery, *Folk-lore brésilien*, Paris, 1889, 253). Sometimes the scourging is done on a substitute, as in New Caledonia, where, when a chief is ill, a girl is severely whipped to drive away the evil (Featherman, *Soc. Hist. of Races of Mankind*, London, 1891, ii. 92). Or it may be mutually inflicted, as in Peru at an autumn festival, where the people beat each other with torches, saying, 'Let all harm go away' (Acosta, *Hist. of the Indies*, Hakl. Soc. 1880, ii. 375). Similar practices still survive in folk-custom (*GB*[2] iii. 131 ff.).

With the same object of driving out the demon of disease which has entered into a patient's body, in accordance with the universal primitive view of the cause of sickness, flagellation is resorted to in savage medicine, the patient often undergoing great suffering through this cure. Thus among the Californian Indians, in cases of paralysis, the affected parts are whipped with nettles (*NR* i. 419). Among the Ainus beating with herbs to drive out the demons of sickness is part of the healer's method (Batchelor, *Ainus and their Folklore*, London, 1901, 313). In Timor-Laut, if a smallpox *prao* should be stranded on the coast, the people are beaten with branches, which are then put on the *prao* before it is launched away again, and the demon of smallpox is besought to depart (*GB*[2] iii. 98, citing Riedel). Women suffering from demoniacal possession in Burma are thrashed with a stick, the demon alone being supposed to feel the blows (Bastian, *Östl. Asien*, Jena, 1866–71, ii. 152). These methods survived into later medicine, especially in the case of madness, though here the curative virtue was evidently supposed to lie in the rough treatment to which the patient was subjected (Cooper, *op. cit.* 204).

The magical value of flagellation is seen in the flogging of women with thongs cut from the skins of the sacrificial goats by the Luperci at the Lupercalia in Rome. This act, communicating to them magically the beneficent influence of divinity, was believed to render them prolific (Ovid, *Fasti*, ii. 267 ff.). Although the numerous cases of scourging or stinging at initiation frequently have the primitive purpose here discovered, they are sometimes expressly said to be done with the view of causing pain or testing endurance. Thus, among the Bavendas, after circumcision, the youths, stripped naked, are beaten and suffer other hardships by exposure to the intense night cold, in order to harden them (*JAI*, 1905, xxxv. 252). Among other Bechuana tribes, after circumcision the youths are scourged at intervals with great severity, and it is a point of honour that they should show absolute impassibility even though the blood spouts from their backs, and the whip leaves life-long scars. At the same time they are allowed no flesh meat but what they can themselves obtain, and are subjected to the endurance of cold and hunger (Livingstone, *Missionary Travels*, London, 1857, 146 ff. ; *JAI*, 1889, xix. 268 ff.).

The primitive view of scourging has here, as in other cases, been superseded by a later conception of it as a painful test of endurance. At this point the cruel flogging of youths at Sparta in connexion with the cult of Artemis—the blood from the wounds caused by the whip being shed on the altar—can scarcely be viewed in any other light than that of a survival of earlier rites of initiation, especially as the Spartan youths, like the Bechuanas, were allowed no food save what they could discover for themselves. The flogging was done in presence of their parents, who encouraged them to show no sign of suffering; and so severe was it that the youths sometimes died. Various mythical explanations of this flogging were current, but it was generally regarded as a substitute for human sacrifice ordained by Lycurgus (Paus. iii. 16; Lucian, *Anacharsis*). But in the light of similar customs elsewhere, the origin must be sought in old initiation rites of a savage past, remains of which, like the 'bull-roarer' (βόμβος) and daubing with mud, were also found in the Greek mysteries. Similar scourgings took place elsewhere in Greece (Potter, *Antiq. of Greece*, Edinburgh, 1824, i. 258); and among the Thracians, according to Artemidorus, flagellation in honour of their Artemis was also practised.

Such tests of endurance by flagellation enter sometimes into festival dances, as among the Arawaks, where the men armed with whips lashed each other alternately until they were covered with bleeding wounds, yet the pain was 'borne and inflicted with perfect good temper' (Im Thurn, 326 ; cf. a striking match, resulting often in death, among the Mosquito Indians, *NR* i. 735). Probably this is to be connected with a group of rites in which blows, effusion of blood, etc., are intended to promote fertility (see § 8 (*b*)). For the discipline of self-flagellation in the Christian Church, see artt. ASCETICISM, FLAGELLANTS ; Zöckler, *op. cit.* 458, 528 ff. ; Cooper, *op. cit.* Beginning as an act of monastic asceticism in the 11th cent., it assumed a pathological form with the later orders of Flagellants (especially during the ravages of the Black Death), who regarded it as more efficacious than the sacraments.

Flagellation as a sacrifice or as a substitute for sacrifice has already appeared in the case of the Spartan youths. Perhaps the mutual flagellation of the Galli at the spring festival at Hierapolis, accompanied as it was by self-cuttings (Lucian,

de Dea Syria, 50), and the flagellation of the Egyptians at Busiris during the festival of Isis (Herod. ii. 61, 'for whom they beat themselves it would be impious for me to divulge'), also had this character. An analogous instance may be found in the custom of the Indians of Guiana who rub red pepper into their eyes when approaching any place haunted by spirits, in order that the latter may not see them. But it is probably in its intention a sacrificial act—the suffering endured being intended to placate the spirits (Im Thurn, 368). See art. FLAGELLANTS.

6. Fasting.—Fasting as a form of austerity enters largely into savage life. Hunger is one of the most pressing trials of the savage, although he can go for long periods with little food, like the Bushman observed to live for fifteen days on water and salt (Thompson, *Trav. in S. Africa*, London, 1827, 99). Sometimes, too, the savage will undergo fasting as a purely unselfish act, giving his food to his starving children or sharing his scanty supply with his fellows, who, when it is exhausted, starve to death with him (Nansen, *Eskimo Life*, London, 1893, 103, 115). Frequent periods of abstinence, especially in regions where the food supply is scarce, are forced upon him. We are here concerned, however, with voluntary fasts rather than with those imposed upon savage man. Although he regards fasting quite differently from the civilized ascetic, and probably has no strong wish to suffer the pangs of hunger, yet voluntary fasting is forced upon him for different reasons.

The origin of fasting is complex, but on the whole it seems to have been adopted at first for magical reasons. Man's experience of hunger in times of scarcity may have suggested to him that to fast voluntarily might guarantee him against scarcity, and also have the effect of increasing the food supply. Thus at the Intichiuma ceremonies of Central Australian tribes, which have for their purpose the increase of the totem food supply, fasting is a part of the rite (Spencer-Gillen[b], 290). On more purely religious grounds an analogy is found where the sacrifice of one person wards off danger menacing a whole group. Fasting is also intimately connected with the system of food tabus. In some cases these may arise from the selfishness of stronger members of a human group, who forbid others to touch certain foods sacred to themselves, or again from the wise practice of establishing a 'close' time when certain foods are likely to become scarce, as in Polynesia, where, if a bad harvest is feared, a tabu is placed on bananas, hens, etc., to establish a reserve (Letourneau, *Sociology*, 489). But they often arose out of man's peculiar views regarding the contagion of evil influences which might be warded off by, so to say, sacrificing a part in lieu of the whole. Food was eminently a vehicle for evil influences entering the body, hence by the tabuing of some particular food other foods would be rendered harmless. Tabu is also connected with totemism, where some particular animal or plant species is not eaten by those whose totem it is. But it also has a much wider range, and affects foods which may not be eaten at certain periods of life, *e.g.* before a youth is initiated, before marriage, during pregnancy, at the time of the couvade, during hunting or war. In this aspect fasting from the tabued food also acts as a kind of purification. Fasting in all such cases includes such varieties as abstinence from certain foods, or from meat, or from food with which women have had to do (sexual tabu), or from all food for a varying period. In certain cases kings or priests might not eat certain foods for tabu and other magical reasons, such as their being recognized as incarnate divinity, which often occurs. Frequently, too, women might not eat men's food, and *vice versa* (see Crawley, *Mystic Rose*, 172, etc.; cf. an instance cited by Im Thurn, 256, where the Indians would have starved rather than resort to cooking some cassava roots, because cooking was woman's work).

Whatever be the reason for a food-tabu, it argues considerable self-restraint, akin to the restraint which desires to discipline the body through fasting among peoples of a higher culture. To break such a tabu is universally considered the greatest crime, to be visited by severe punishment or by automatic results—sickness or death. Many instances are known where a savage would rather starve to death than eat some tabued food though that alone was available, and though all risk of detection by fellow-clansmen was out of the question. Again, since during periods of fasting as the result of famine, morbid conditions of psychic life are induced, with dreams and visions, fasting is in turn resorted to in order to produce these, as has already been seen (§ 4). Finally, since it is believed that the gods are pleased with suffering, fasting becomes a painful service rendered to them, or, again, it is used as a penitential discipline. This occurs in many barbaric cults at a higher stage than mere savagery, and in the later usage fasting speedily becomes an ascetic exercise (see art. FASTING).

(*a*) Fasting before marriage has mainly a magical aspect, and is doubtless intended as one means out of many of lessening the dangers supposed to attend this critical stage of sexual life, while it avoids the possibility of evil influences entering the body through food. The following typical examples will suffice. Among the Macusis the man must abstain from meat for some time before marriage, and will rather go without food altogether upon occasion than break this tabu (Im Thurn, 222). The newly-married pair among the Wa-teetas are shut up for three days without food, and among the Bondeis they eat nothing and only wash out their mouths with water on the day of the wedding (Thompson, *Travels in S. Africa*, London, 1827, 343; *JAI*, 1895, xxv. 199). Similarly with the Thlinkets, bride and bridegroom must fast for two days, then eat a little food, and again fast for two days (*NR* i. 111).

(*b*) The custom of a woman's abstaining from certain foods or fasting before the birth of a child, in which abstinence the husband frequently joins her, is intimately associated with and has the same *rationale* as the husband's fasting during the period of the couvade in which he lies in instead of his wife. The reason for the practice of fasting here is the intimate connexion between parents and child which is emphasized at such a time, so that they must abstain from all such foods as might injure the child through eating them. Thus in the Andaman Islands the mother abstains from pork, turtle, honey, iguana, and paradoxurus, and after a time her husband avoids the two last, 'in the belief that the embryo would suffer were he to indulge in such food' (*JAI*, 1882, xii. 354). Among the Californian Indians the mother fasted for three days after the birth, drinking nothing but warm water. This formed part of a ceremony of purification, and for two moons she was allowed no meat (*NR* i. 413). Where the couvade is concerned, the husband usually abstains for some weeks from all flesh food and lives on a very abstemious diet, and such customs are widely prevalent among most savage peoples (see art. COUVADE, and Lubbock, *Origin of Civilization*, London, 1870, 16 ff.).

(*c*) In many cases where fasting occurs at initiation, we almost see it passing over from its magical intention of the avoidance of evil influences and of a preparation for the reception of new food to an act of religious preparation for the divine and ethical revelations about to be made to the lad. A similar transition to a more religious view of fasting is seen in other cases. Among many peoples when the harvest, whether of corn, yams, bananas, etc., has been gathered in, no one may eat of it until the first fruits have been offered to a divinity or partaken of by a priest, chief, or king, and in some cases a fast of several days' duration takes place. This, though it is primarily a preparation for the reception of new food, is also part of a group of purificatory rites, while it has also a religious element. Thus, among the Creek Indians, part of the elaborate ceremonies included a strict fast for two nights and one day, while a bitter decoction was drunk in order 'to purge their sinful bodies.' This was followed by a sacramental eating of the new crops (Adair, *Hist. of the Amer. Ind.*, London, 1775, 96 ff.). A similar solemn fast took place among the Natchez for three days along with the observance of silence at the Fire Festival, when the maize was offered on the altar of the Sun; and was also observed among the Cherokees by the warriors, who at the same time abstained from sexual intercourse (Chateaubriand, *Voyage en Amérique*, Paris, 1835, 180 ff.; Featherman, *op. cit.* iii. 157). The Comanches had yearly gatherings to light the sacred fires, when they took 'medicine' for purification and fasted for seven days. Those who could endure to keep the fast unbroken became sacred in the eyes of the others (Palmer,

Harper's Magazine, 1889, xvii. 451). Again, where foods are tabu, either through totem restrictions or for some other reason, abstinence from them is frequently regarded as an honour done to the totem animal or to a divinity who would resent any breach of the rule, or it has the nature of a sacrificial act of self-denial. Thus among the Samoans, Fijians, and others, certain animals, which were probably earlier totems, were believed to be incarnate gods or sacred to particular deities, and each man had some particular animal species, which he would under no circumstances eat (Turner, *Samoa*, London, 1884, 112; Williams, *Fiji*, Lond. 1858, i. 219). Or among the Andaman Islanders at certain seasons a number of foods are abstained from because the god Puluga requires them at those times (*JAI* xii. 154). Or, as among various West African tribes, certain prohibited foods, or *orunda*, which a man will not eat even when suffering from hunger, are 'literally a sacrifice ordained for the child by its parents and the magic doctor as a gift to the governing spirit of his life,' and to eat of it would be a sin at once punished by the spirit and requiring atonement by expensive ceremonies and gifts (Nassau, *op. cit.* 73; M. H. Kingsley, *Travels*, 456), or they are not eaten because they are dedicated by man to the use of his attendant spirit (Dennett, *Folk-lore of the Fjort*, London, 1898, xxix.). Abstinence in all such cases is a religious rather than a magical act.

(*d*) Fasting to induce visions in which the spirits or divinities reveal themselves has already been noticed, but a few further instances will serve to show the austere character of the act. The Algonquins would fast six or seven days, 'till both their bodies and their minds became free and light, which prepared them to dream' (Tylor, ii. 411–412). Chiefs among the Columbians in times of perplexity practise both fasting and laceration (*NR* i. 203). In general, the American Indian fasted before any undertaking in order to receive direction in his dreams. Among the Caribs a father fasted for a long period in order to see in a vision the destiny of his newly-born son (Müller, *Amer. Urrel.* Basel, 1855, 214). Similar fasts were customary in Greece among the priests and priestesses of oracular shrines, in order to obtain visions (Paus. i. 24); and in India fasting is a recognized mode of obtaining intercourse with the gods (Meiners, *Gesch. der Relig.*, Hanover, 1806–1807, ii. 147). The visions and revelations obtained by Christian saints and ascetics are in some degree due to similar austerities.

(*e*) From the use of abstinence and fasting as a general religious act to its use as a species of sacrifice by which the gods are appeased, or as a penitential discipline, the step is not a long one. Instances of such uses are found mainly among barbaric and civilized peoples, though not unknown among savages; while fasting, either as a means of purification, or as a penitential discipline, or as a preparation for mystical illumination, rapidly became part of the practice of the Christian Church. Penance, including fasting, self-torture, and confession of evil, is found among many tribes of the American Indian stock, but among the ancient Mexicans it had an especially prominent place. Some fasts of a rigorous kind lasted from three to five days; others, probably less rigorous, from twenty to 160 days. These were binding upon either individuals or the whole people, were intended both as purifications and as penances, and, in the latter form, were accompanied by other extreme forms of self-discipline for sins committed. Such were generally imposed by the priests (Clavigero, *Hist. Mex.*, London, 1787, i. 353, 397 ff.). Fasts of a similar character and intention were also common in Peru. In Babylonia and Assyria fasting had also a systematic form, either for the whole people in times of danger (cf. Jon 3[5]), or for individuals as part of the penitential discipline with which men approached the gods seeking forgiveness, as is seen in the penitential psalms, *e.g.* 'Food I have not eaten, weeping is my neurishment' (Jastrow, *Rel. of Bab.*, Lond. 1898, 332; Sayce, *Rel. of Anc. Egypt and Bab.*, Edin. 1902, 418, 477). The more primitive savage custom of appealing to the gods through the pain borne by their worshippers is seen in a Fijian custom. A priest, after unsuccessfully supplicating his god for rain, slept for several successive nights exposed on the top of a rock without mat or pillow, hoping thus to move the obdurate deity to send a shower (Williams, i. 232).

In certain cases men fast until some act of revenge is performed, as in Fiji, where, to indicate sworn revenge, a man would deprive himself of favourite or necessary food (Williams, i. 129). Compare the curious Celtic custom of 'fasting against' a person (see ASCETICISM [Celtic]). This was a legal process in Ireland, by which any one who desired a stronger person to yield to his plaint sat fasting at his door until he yielded (*Ancient Laws of Ireland*, Dublin, 1869–79, i. 112 ff., ii. 46; Joyce, *Social Hist. of Ancient Ireland*, Lond. 1903, i. 204–207).

7. Mourning ceremonies.—Here again universally in savage and barbaric life the death of a relative or of some chief or great warrior, etc., involves the practice of many austerities, varying in degree, among the survivors. The motive of these is complex; and, though all may be regarded as different ways of showing grief, it seems certain that they did not all originate from that ground. Among mourning ceremonies of a simpler and less painful class may be enumerated wailing, wearing old or unusual clothes, the rejection of ornaments, rubbing charcoal, clay, and other substances on the body, shaving the hair or allowing it to grow unusually long, the discarding of pleasant food or of customary unguents, sleeping on the grave or in the open air (cf. Nassau, 10; Williams, *Fiji*, London, 1858, i. 4; M. H. Kingsley, *Travels in W. Africa*, 483, 487; Haddon, *Head Hunters*, 206; *JAI*, 1905, xxxv. 417). But others of a much more severe character are also extremely common, *e.g.* gashing or cutting the body, amputating a finger, and fasting.

(1) The origin of gashing or cutting the body may be found simply in an ecstatic expression of grief, at first spontaneous, then reduced to a custom. The pain caused by such methods of wounding, though in the ecstasy and delirium of grief it may be less than we imagine (Beckworth says of the horrible gashings of the Crow Indians that 'they seemed to feel no pain,' *14 RBEW*, p. 898), is itself an expression of sorrow. But other meanings were perhaps given to these self-inflicted wounds. Thus there may have been some idea of union with the dead through the blood spilt on the grave, as in N. S. Wales, where the men stood over it and cut each other with their boomerangs, letting the blood trickle down into it (cf. W. R. Smith, 305). This bond of union with the dead implies 'on the one side submission, on the other friendliness' (Spencer, *Cerem. Inst.*, London, 1879, 70). Or, again, the blood may be an offering to the dead in order to refresh them (*ib.*; cf. Westermarck, *Origin and Development of Moral Ideas*, i. 476). In either case the rite would have a propitiatory aspect. It is found among the Australians, Melanesians, Polynesians, in Africa and America, and it existed in ancient Israel (Lv 19[28]), among the Greeks, Turks, Huns, etc. (cf. Stoll, *op. cit.* 88 ff.; Spencer, *op. cit.* 70–71), and with some of these peoples assumed a ghastly form, while it was frequently proportionate to the rank of the dead person. The wounds included lacerating or cutting the arms, breasts, or legs, piercing them, slitting the ear lobes, wounding the head, etc. Thus the Crow Indians made two cuts down the length of the arm, tearing away the skin, or cut the flesh on the breast and shoulders (*BE*, *loc. cit.*); the Tongans cut and bruised themselves with shark's teeth, shells, axes, clubs, and knives (Mariner, *Tonga Islands*, London, 1817, i. 380, 403); the Spartans tore the flesh from their foreheads with pins and needles to gratify the ghosts of the dead (Potter, *op. cit.* ii. 204). The descriptions of mourning ceremonies among all savage tribes supply copious instances of the severity of these lacerations.

(2) The mutilation of some member of the body, usually a finger, occasionally an ear, is also found as a common sign of grief at mourning ceremonies. Spencer regards this as an act of sacrificial propitiation of the dead and a sign of submission (*op. cit.* 56), and it certainly has the significance of a propitiation of divinities or spirits, *e.g.* in cases of illness, etc. (see § 8, 2). In some cases it may be regarded as a substitute for human sacrifice, giving a part in place of the whole, as when a widow has her finger chopped off in the Nicobar Islands, evidently in place of being slain at her husband's grave (Tylor, ii. 363). But it might readily become a formal expression of grief, as in Fiji, where, on the death of a chief, orders were given that a hundred fingers should be cut off (Williams, i. 197). Yet even in Fiji a child's finger was cut off as a sign of affection for a dead father (*ib.* i. 177). Usually a joint or the whole of the little finger is cut off, though another finger may be removed later when this is lacking. This painful custom is found among some Australian tribes, in Tonga and Fiji, among various N. and S. American Indian tribes, among the Hottentots

when a widow re-marries, and occasionally with Chinese widows as a sign that they will not re-marry (Stoll, *op. cit.* 274 ff.; Spencer, *op. cit.* 55 ff.; Kolb, *Caput Bonæ Spei*, Nuremberg, 1719, 572; Giles, *China and the Chinese*, London, 1879, 202).

(3) The custom of fasting is here met with once more as a natural expression of mourning, often of a severe and prolonged character. The Fijians fasted for a dead chief for ten or twenty days (Williams, i. 197). Some of the Salish tribes of British Columbia fast for four days after a death, while a widow must not eat fresh meat for a year, a widower for a shorter period (*JAI*, 1905, xxxv. 138–9). The Andamanese must abstain from certain favourite foods, and here relations are often joined in this custom by other members of the tribe as a token of sympathy (*JAI*, 1882, xii. 142, 146). The Japanese partake only of a spare vegetable diet during the period of mourning, while in Korea the mourners drink rice water for some days, and then are allowed to partake of gruel for the rest of the time (*JAI* xii. 225, xxv. 350).

(4) Finally, though the custom of a wife's being slain at her husband's death may have become a mere customary rite, and though its origin may be sought in sacrificial ideas and in the belief that she must accompany him beyond the grave, it is frequently found as an extreme act of austere devotion, the wife devoting herself to death out of affection. Instances of this are found in Fiji (Williams, i. 189), where wives were frequently sacrificed at their own instance; in India, where a wife lit the pyre with her own hands; in China, where wives will take their own lives to follow their husbands into the next world (de Groot, *Rel. System of China*, Leyden, 1894, ii. 1. 735 ff.); among the ancient Greeks, with whom historic instances of this suicidal devotion are recorded (Euripides, *Supp.* 1000 ff.; Paus. iv. 2. 7); and among the ancient Celts (Leahy, *Heroic Romances of Ireland*, London, 1905, i. 105; cf. Cæsar, vi. 19, slaves and clients beloved by the dead; Mela, iii. 2. 19; see artt. SĀTĪ and MOURNING).

8. Mutilations.—A great variety of ethnic mutilations involving a considerable degree of pain may be classed among austerities. Each one of these may have a different origin or intention, some may be mere customary or symbolic followings of archaic rites, but this makes no difference in the degree of suffering which is borne or in the stoical patience with which it is endured (see art. MUTILATIONS).

(1) The custom of *cutting the body* and using the blood for some specific purpose is widely extended, and has already been met with as a mourning ceremony.

(*a*) It is found as part of the ceremonies of initiation in various quarters. Thus in North Central Australia the final ceremony among several of the tribes consists of making a series of cuts on the back and one on the neck of the candidate. These are said to commemorate certain events in the *Alcheringa*, or mythical period (Spencer and Gillen[b], 335). A similar rite is found among S. Australian tribes (Schürmann, in *Nat. Tribes of S.A.*, Adelaide, 1879, 231 ff.). Scars are also made on the face and body at puberty among the Ba-Mbalas (*JAI*, 1905, xxxv. 402) and elsewhere in Africa (Burton, *Abeokuta*, London, 1863, i. 104; Denham, *Travels in Africa*, London, 1828, iii. 175: 'the process is said to be extremely painful on account of the heat and flies'). These appear to be of the nature of totem or tribal marks. Among the Abipones the marks were made with thorns, and ashes were rubbed into the wounds—a species of tatuing (Dobrizhoffer, ii. 36 ff.).

(*b*) Cutting or gashing the body in order to obtain blood, usually for magical purposes or for use in various ceremonies, is found all over Australia. Thus among the Dieri two men are bled with a sharp flint, and the blood is allowed to flow on others of the tribe. The ceremony was intended to produce rain, the blood representing rain (Gason, in *Nat. Tribes of S. Aust.* 276). Among the Wiradthuri tribes, at initiation rites men wounded their gums or the flesh under their tongues with sharp pieces of bone, and allowed the blood to fall on the seat used in the ceremony; and among the Kamilaroi, at the *bora*, quantities of blood were collected from gashes made in men's arms with flint or shell (*JAI*, 1895, xxv. 301, 325). Among the Central Australian tribes 'it is astonishing what an enormous amount of blood is used for decorative purposes by these savages, one of whom will think nothing of bleeding himself perhaps twice a day for a week or two in succession.' Here it is also drawn from gashes in the body for a variety of other purposes—to seal a covenant, to be administered as a strengthening potion, or applied to the body of the sick or aged (Spencer-Gillen[b], 596 ff.). Among the Basutos the hands of those who have carried a corpse to the grave are scratched with a knife, and magic stuff is put into the wounds to remove the contagion of death (*GB*[2] i. 302). Here, too, may be mentioned a group of customs already alluded to (§ 5), in which the inhabitants of a district divide into two parties and engage in a sham fight, in which, however, severe blows are given and received, blood is shed, limbs are broken, and sometimes life itself is taken, the fight lasting for some hours. This fight takes place at some given moment in the processes of agriculture, and has for its object the promotion of fertility. The *rationale* probably is that the blood shed fertilizes the earth, for among the Acobambans of Peru women caught the blood and sprinkled it on the fields (Bastian, *Der Mensch in der Geschichte*, Jena, 1860, iii. 73). Similar fights, more or less severe, have been observed among the Tongans, American Indians, African tribes, among the Khonds, in China; they occurred in the form of stone-throwing in Greece at certain festivals; and they still occur in modified form in European folk-custom (see Frazer, *Pausanias*, iii. 267).

(*c*) Incisions in the flesh and blood-letting are also customary before marriage in many places. Incisions which leave raised scars are made on the bodies of young men and women among the Kikuyus of E. Africa, the purpose being ornamental (*JAI*, 1905, xxxv. 255). Elsewhere the blood-letting, followed by each spouse drinking or swallowing the blood in food, has the purpose of uniting them, and shrinks in some cases to a mere symbol (Crawley, *Mystic Rose*, 385; see artt. BLOOD, BROTHERHOOD [artificial]). Or, again, the opening of a vein in both bride and bridegroom is a species of blood-offering, mainly among American Indian tribes (Zöckler, *op. cit.* 80).

(*d*) Frequently the making of scars and cicatrices, painful as the process is, seems to have mainly an ornamental purpose, as among the Australians (Spencer-Gillen[b], 56), Tasmanians and Melanesians (Letourneau, *Sociology*, 80), and N. American tribes, *e.g.* the Thlinkets (*NR* i. 97), though with most of these they are also made for other purposes. Among West Coast African tribes, with whom tatuing is rare, cicatrices are made by cutting the skin and then placing in the wound the fluff of the silk cotton tree (M. H. Kingsley, *op. cit.* 530). In New Guinea women make scars on the chest when a brother spears his first dugong (Haddon, 113).

(*e*) Finally, gashes are frequently used to draw blood as a propitiation of the gods. Thus, among

the Mosquito tribes of Central America, besides sacrifices to influence the gods before war or any important undertaking, blood was drawn from tongue, ears, or other parts of the body (*NR* i. 723, 740). Similar gashings were made by the priests of Baal (1 K 18^{28}, cf. Jer 41^{5}), the Aztecs at the feast of the Earth-goddess, and the Peruvians, both of whom drew blood from gashes in arms, legs, ears, nose, etc. (Garcilasso de la Vega, i. 52; Zöckler, *op. cit.* 84). These are sometimes thought to be relics of earlier human sacrifice, like the commutation of a human victim among the Gauls, who made an incision in the victim's flesh (Pomp. Mela, iii. 2, 18). But possibly they may have been intended to promote union with the divinity through the vehicle of blood. Connected with this is the custom of self-castration seen in the Phrygian worship of Cybele and analogous cults in Syria, etc. In these the priests also wounded themselves in the arms and scourged each other (Tert. *Apol.* 25; Lucian, *de Dea Syria*, 50). Similarly in the Roman cult of Bellona the priests made gashes in their shoulders and the blood was sprinkled on the image of the goddess and used in the sacrifices (Lactantius, i. 21; W. R. Smith, 304).

(2) *Amputation of fingers.*—This practice, already met with as a mourning ceremony, is also found sporadically as a sacrificial observance. In sickness Bushmen sacrifice a joint of their fingers (Farrer, *Prim. Manners and Customs*, London, 1879, 143). The Cochimis of California, when all other means had failed, cut off a finger from a daughter or sister of a sick man, in the belief that the blood would preserve him (Adelung, *Gesch. von Califor.*, Lemgo, 1769, i. 76). This was also done by the Tongans in cases of illness as a propitiatory offering to the gods, while a man would also cut off his own finger to avert their anger when danger threatened (Mariner, *Tonga Islands*, i. 454, ii. 210). During initiation the candidate among the Mandans held up his finger to the Great Spirit expressing his willingness to offer it, and then had it chopped off with a hatchet (Lewis and Clarke, *Travels*, London, 1817, 86). In India the practice is found in custom and myth. Mothers will cut off their own fingers as sacrifices for the preservation of their children, while Siva is said to have cut off his finger to appease the wrath of Kali (Tylor, ii. 401). Mothers in Bengal frequently draw blood from their chests, when a husband or son is ill, to propitiate the goddess Chandika (Rajendralāla Mitra, *Indo-Aryans*, London, 1881, i. 111). This may also have been a Celtic practice, since in one legend Ethne the Horrible is said to have cut off the ends of her children's little fingers to make them longer-lived (Windisch-Stokes, *Irische Texte*, Leipzig, 1891–1897, iii. 363). We may compare with these rites the Chinese custom of cutting pieces of flesh from the thighs, while offering a prayer to Heaven to accept this as a species of self-immolation on behalf of a sick relative, who then was given the flesh to eat (de Groot, *op. cit.* iv. 2, 386).

(3) *Circumcision.*—This has already been found as one of the rites of initiation to manhood; and, in general, where it occurs it is performed at puberty, though sometimes, as with the Jews, it takes place in childhood. We are not concerned here with the various reasons assigned for it by the different peoples who practise it, or with its original intention, though this may have been, as already suggested in other cases, to ward off danger from the whole organ by removing a part, which part might also harbour dangerous influences. What concerns us here is the painful nature of the rite, and its wide-spread use. Practised by many peoples of antiquity, Egyptians and others (Herod. ii. 104), it is found among most African tribes, in N. and S. America, in Polynesia, Australia, and parts of Melanesia, and sporadically elsewhere. Among most of these peoples it is regarded as a disgrace not to have it done, or as rendering a man unclean. If the patient shrieks or cries, this is frequently considered unmanly, but occasionally he is in such a frenzied state as not to feel pain at the moment. But sometimes, besides the actual pain of the cutting, the youth has to undergo other ordeals. Thus, among the Bantu peoples of W. Africa cayenne pepper is squirted on the wound (Nassau, *op. cit.* 12), and among the Mavendas of S. Africa the candidates are subjected to exposure for some time in a nude condition and to treatment of a harsh nature (*JAI* xxxv. 268). See art. CIRCUMCISION, and Andree, *Ethnographische Parallelen*, Leipzig, 1889, 166 ff.; Ploss, *Das Kind*, Leipzig, 1884, i. 340 ff.; Stoll, *op. cit.* 499 ff.; Wellhausen, *Prolegomena*, Edinburgh, 1885, 360; *L'Anthropologie*, Paris, 1896, vii. 653 ff.

(4) The practice of *sub-incision* or *mika* or *pura-arilṭha-kuma* has already been referred to (§ 2). This terrible rite involves the slitting open of the under side of the urethra, and is found in Queensland, N. S. Wales, S. Australia, and among N. and W. Australian tribes (Spencer-Gillen[a], 212 ff.; *ib.*[b] 133, 328 ff.). Analogous to this is the custom of semi-castration, practised, according to Kolb, by the Hottentots (*op. cit.* 420 ff.), though it has been questioned by later observers; it is also found among the Ponapes in the Caroline Islands and in the Friendly Islands (Finsch, *ZE* xii. 316). For other mutilations of the sexual organs for different purposes among the Dayaks, Battas, ancient Romans, etc., see O. Hovorka, *Mitt. der Anthr. Gesell. in Wien*, 1894, xxiv. fasc. 3; *JAI*, 1892, xxii. 45; Stoll, *op. cit.* 496 ff., 921 ff.

(5) Girls at puberty among many separate peoples must also undergo the equally painful rite of excision, probably with the same original intention as circumcision, and like it frequently an initiation ceremony. It is found among various African peoples, in Nubia, Abyssinia, Galla and Masai Lands, on the west coast, and also in the south, while it is also met with among several S. American peoples, occasionally in N. America, and sporadically in Indonesia (Stoll, *op. cit.* 523; Ploss, *Das Kind*, i. 379 ff.; Merker, *Die Masai*, Berlin, 1904, 60 ff.; Martius, *Zur Ethnog. Amerikas*, Leipzig, 1867, 445; *JAI*, 1904, xxxiv. 133). With it may be classed the cutting or artificial rupture of the hymen, mainly among several Australian tribes, but occurring elsewhere also. With the Australians it is an initiatory rite, and also serves as an immediate preparation for marriage (Spencer-Gillen[a], 93; *ib.*[b] 133). Even more painful is the rite of 'infibulation' of marriageable girls, which is found mainly in the Nile region, the Sudan, Galla and Somali Lands, Nubia, Kordofan, and the Abyssinian highlands, and also in Pegu (Stoll, *op. cit.* 548 ff.).

(6) Among other forms of mutilation causing considerable suffering may be mentioned (*a*) knocking out one or more of the front teeth, usually as an initiation ceremony, though various interpretations of its purpose are current among those who practise it, and with some it is regarded as an ornament. Perhaps arising as a preparation for the reception of new food at puberty, it soon became a mark of acquired manhood, and sometimes, as with the Kavirondos, any one not undergoing it endangered his life in battle (Johnston, *Uganda Protectorate*, London, 1902, ii. 728). Among many Australian tribes it is found as a regular initiation ceremony performed only on youths, but among the central tribes it has ceased to be so, and is performed on both sexes indifferently (Spencer-Gillen[a], 588 ff.). The custom is found among most African tribes,

Bantu and Negro; in N. America, *e.g.* among the Seri Indians, who practise it on girls before marriage (*17 RBEW*, p. 169); in Formosa among the Pepos, who think it assists breathing (Ploss, *Das Kind*, ii. 424); while it was practised by the ancient Peruvians, who regarded it as a punishment ordained on their ancestors and binding upon themselves, or as a service rendered to the divinity (Garcilasso de la Vega, ix. 3; Herrera, *Historia general*, Madrid, 1730, v. 6, 1). It is also found as a mourning mutilation at the death of a chief in the Sandwich Islands (Ellis, *Tour through Hawaii*, London, 1826, 146).

(*b*) Filing the teeth, usually to sharp points, grinding them down, and breaking part of them, are found sporadically, sometimes as initiation ceremonies. Among the Malays the first method takes place soon after circumcision; the rite, though painful to behold, is borne with great patience (Skeat, *Malay Magic*, London, 1900, 355). Elsewhere, as in Sumatra, Borneo, etc., the teeth are filed, broken, or pierced, and then ornamented with gold or blackened, the operation sometimes causing great pain (Marsden, *Sumatra*, London, 1811, 52; *Hist. gén. des voyages*, Hague, 1757, xv. 97; Ling Roth, *Natives of Sarawak*, ii. 78). But the custom is also supposed to preserve the teeth. Filing the teeth was also practised by the Mayas of Yucatan (Diego de Landa, *Relación*, Paris, 1864, 31), as it is still among some East African tribes (*JAI*, 1904, xxxiv. 138), and peoples of the Congo region (Stoll, *op. cit.* 255); and, as among the Californian tribes, they were ground down to the gums (*NR* i. 333 f.; see also Frazer, *Totemism*, Edinburgh, 1887, 28; *ZE* xiv. 213).

(*c*) Making holes or slits in the nose, lips, cheek, or ears, in which are inserted various objects, is a world-wide practice, and, though regarded as a means of ornamentation, was probably in its origin of a magical character (the objects serving as amulets), while it was also and still is in many cases associated with initiation rites. Frequently the hole or slit is begun in childhood, but the permanent object is inserted only at puberty. Only the most extreme instances of this form of mutilation need be referred to here. Among the Thlinkets the under lip of female children is pierced and a small object inserted. As time goes on, a larger object is placed in the slit to extend the aperture, causing a painful and continuous strain, until, at the age of maturity, a grooved block of wood sometimes six inches long and half an inch thick can be inserted (*NR* i. 99). The Botocudos of S. America treat the under lip and the ear lobe in the same manner, gradually enlarging the apertures, until wooden plugs of a considerable size can be inserted, the ear lobe sometimes reaching to the shoulder (von Wied-Neuwied, *Reise nach Brasilien*, Frankfort, 1820, ii. 5). Every variety of these mutilations, either singly or together, is found over the American continent; lip-slitting occurs in Africa, ear-slitting and ear-extension in Fiji, Easter Island, and the Nicobar islands, while ear-piercing, with a religious significance, occurs all over India, Burma, and the Malay Peninsula (see Stoll, *op. cit.* 98 ff.; Hovorka, 'Verzierungen der Nase,' *Mitt. der anthr. Ges. in Wien*, xxv. pts. 4 and 5, 1875; *3 RBEW*, p. 76 ff.).

(*d*) The well-known and painful custom of deformation of the foot among Chinese women is regarded as the chief point of beauty and attractiveness, while it has apparently also some erotic character. The process is begun in early childhood by bandaging the feet firmly so that all growth is hindered, until they become little more than stumps, rendering walking a matter of difficulty (Brandt, *Sittenbilder aus China*, Stuttgart, 1895, 53 ff.; Ploss-Bartels, *Das Weib*, Leipzig, 1904, i. 173 ff.). A similar custom is found among the Kutchin Indians, where a child's feet are bandaged to prevent growth, small feet being there thought handsome (Richardson, *Arctic Searching Expedition*, London, 1851, 384).

9. Tatuing.—This custom is of world-wide extent; but while every variety of motive is ascribed to it, it frequently has a religious or magical significance, and it is commonly done as an initiation rite. Among the Eskimos the process usually consists in passing a needle and thread dipped in soot below the skin (Egede, *Besch. von Grönland*, Copenhagen, 1790, 153). More usually pricking the skin or cutting it, and then rubbing in some pigment, is resorted to. Or in some cases figures are cut or cauterized on the skin and the cicatrices painted, as in the Deccan and among the Mosquito Indians (Forster, *Voyage round the World*, London, 1777, 588; *NR* i. 716). Still, however done, the process involves much suffering, especially where great parts of the body are tatued; but to shrink from it or to show signs of suffering is held as evidence of cowardice. Mœrenhout says of the operation in Polynesia that it was the cause of such sufferings that sometimes the girl died under them. Yet in spite of this the operation, which is a tedious one, is seldom or never refused (Wilson, *Miss. Voyage*, London, 1799, 339). Nearly every observer of the actual carrying out of the process speaks of its extremely painful and even dangerous character. Hence it may be regarded, for whatever purpose it is undergone, as by no means the least serious of the many kinds of austerities practised by lower races. Thus, when it is undergone at puberty, it affords a test of the individual's capacity for enduring pain and showing courage (cf. *JAI*, 1882, xii. 331). Where it has a religious significance, as in Fiji, where it was held to have been appointed by the god Ndengei, it may be regarded as a kind of offering made to a divinity, while it also secured the entrance to, or the recognition of the individual in, the other world, un-tatued persons being there subjected to torture (Williams, *Fiji*, i. 160; cf. *FL*, 1894, v. 33, 318; Hall, *U.S. Explor. Exped.*, Philadelphia, 1846, 99, for other instances). The practice of making marks or designs on the body by cuts or scars, into which some pigment is often rubbed, is found among many peoples, especially those with darker skins (Australians, Tasmanians, Papuans, etc.), and must involve considerable suffering. See art. TATUING; Joest, *Tätowiren, Narbenzeichnen und Körperbemalen*, Berlin, 1887.

10. Medical austerities.—The methods of healing used by the medicine-man, or doctor, in savage societies are often of a drastic and acutely painful nature, though they are generally borne submissively by the patient. Resting mainly upon the theory that all disease is caused by evil spirits, the object of the treatment is to drive these away or to obtain possession of the object which they have placed in the body. Hence a great part of the treatment consists of yelling and singing, noises of all kinds, dances, and fumigations. But in addition the patient is subjected to a variety of vigorous remedies wrought upon his person. Among the most common of these are scarifying the flesh and bleeding. Thus among the Andamanese the flesh is cut with quartz or glass flakes (*JAI*, 1882, xii. 85), elsewhere, as among the Dinkas (*JAI*, 1904, xxxiv. 156), with knives, and sometimes, as among the Bondeis, a very smarting medicine is rubbed in (*JAI*, 1895, xxv. 215). Similar scarifications are used by many other peoples—Australians, Papuans, American Indians, both north and south. A primitive method of cupping is found in different parts of Africa, consisting of making an incision in the flesh, placing a horn above the incision, exhausting the air by

suction, and then closing the orifice. The horn is then gradually filled with blood (Nassau, *op. cit.* 183). Sucking the surface of the skin till it is blistered, or sucking blood from an incision in the flesh, is common, *e.g.* in N. America (Bancroft, *passim*; Pétitot, *Traditions indiennes*, Paris, 1886, 434). There, too, kneading and pounding the body violently, and pressing the fists into the pit of the stomach until the patient's strength is exhausted, are in great favour, and occasionally the medicine-man bites the patient with his teeth and shakes him (*NR* i. 246, 355; Kane, *Wanderings*, London, 1859, 225). Another remedy is to make the skin smart by applying pungent spices, or by stinging it with ants or whipping it with nettles (*GB*[3] i. 301, iii. 216). This, like flagellation in cases of madness, is intended to drive off the demon of disease. A favourite remedy for fever and other diseases among American Indians is the sweat-bath. This is a small hut which by various means is heated to suffocation. In it the patient is placed, and afterwards, dripping with perspiration, he rushes out and plunges into cold water. This treatment sometimes causes death, but it is also in use as a purificatory rite (*NR* i. 246, 285). A similar remedy for madness is found in Gabun (Nassau, *op. cit.* 273). It is to be noticed also that sometimes the relatives of the patient, or even of the medicine-man, fast, to assist the progress of the remedy (Ploss, *Das Kind*, i. 150; Dall, *3 RBEW*, p. 426). See Bartels, *Medecin der Naturvölker*, Leipzig, 1893.

11. Self-restraint.—A certain degree of self-restraint, especially in marital relations, though scarcely coming under the heading of 'Austerities' as do other forms of self-restraint, *e.g.* fasting, is found on particular occasions among lower races and may be taken notice of here, since it shows the power of current theories or beliefs or customs to strengthen the will even of a savage, and cause it to stifle bodily desires. Thus, though the ultimate purpose is no doubt different, such forms of self-restraint are yet akin to the self-discipline and continence of later forms of asceticism. Examples of continence are most marked during war or hunting, the intention probably being the avoidance of possible loss of strength and also of the potential dangers lurking in sexual relations generally. But in some cases the prohibition has assumed a religious sanction, especially among American Indian tribes. The Winnebagos observe continence in war because it was commanded by the Great Spirit; among other tribes it is said to be based on religious grounds, and the Dakotas thought that the violation of captives would be resented by the spirits of the dead (Drake, *Ind. Tribes*, Philadelphia, 1884, i. 188; Waitz-Gerland, *Anthrop.*, Leipzig, 1859–1871, iii. 158; Schoolcraft, *op. cit.* iv. 63).

A religious motive is also to be seen in those cases where such continence has become a binding form of tabu, as among the Maoris, with whom, not only during war, but on other important occasions, women are strictly tabu to men, who must not approach their wives until war is over (*JAI*, 1889, xix. 111; Waitz-Gerland, vi. 349). This is also found in parts of New Guinea, where the warriors are *helega*, or sacred, for some days before fighting, and must not even see a woman (Chalmers, *Pioneering in N. G.*, London, 1885, 65). But the original basis of such continence may be seen in the Seminole belief that connexion with women enervated men and unfitted them for their duties as warriors (Schoolcraft, v. 272); or, as in Halmahera, that they must practise continence during war else they will lose their strength (Riedel, *ZE* xvii. 69). This rule of continence is practically universal among savages, and applies to the period immediately preceding war or during the actual course of the war, while it also appears at higher levels of civilization (cf. Cæsar, vii. 66; 2 S 11[11]). The rule also applies frequently before or during a hunting or fishing expedition. Chastity is part of a seven days' tabu among the Malays when fishing (Skeat, *op. cit.* 315), but a similar rule prevails generally in such cases; while, as among the Aleuts, it is connected with religious beliefs, since during a whaling expedition unfaithfulness on the part of the men or their wives would be punished by the whale, an object of reverence to them (Reclus, *op. cit.* 53). In some cases, too, the rule of continence is accompanied by fasting, ceremonial preparations, and the infliction of pain. Thus, among the Nutkas, before war, some weeks are spent in preparation, which consists mainly of abstinence from women, bathing, scrubbing the skin with briers till it bleeds, and finally painting the whole body jet-black (*NR* i. 189). Among the Bondeis a man is scarified down the arms as a charm against sword-cuts (*JAI*, 1895, xxv. 205); while, before hunting, the Indians of Guiana subject themselves to the stings of ants and the irritation caused by the hairs of certain caterpillars (Im Thurn, 229). Again, probably on the principle of sympathetic magic and the intimate connexion between a man and his wife, fasting and other forms of rigorous discipline are enjoined on women in many quarters while the men are absent on war or the chase, as in the Babar Islands, where women must fast and abstain from sexual intercourse (Riedel, *Selebes en Papua*, Hague, 1886, 341).

The rule of continence is also followed in various other circumstances. In Congo, when the *Chitomé* is on circuit, a fast of continence is proclaimed, the penalty for breaking it being death. By such continence 'they preserve the life of their common father' (Reade, *Savage Africa*, London, 1863, 362). Strict continence is also observed by men during the Cherokee new year's festival of purification already referred to (§ 6 (*c*)). It is also a common tabu after slaying a man or touching the dead, here probably connected with the contagion of death, which necessitates the avoidance of one's fellows till a certain time has elapsed or certain purifications have been performed. Fasting frequently accompanies continence on such occasions. Contact with women is forbidden for one month after the shedding of blood among the Kikuyus of E. Africa (*JAI*, 1904, xxxiv. 264); and among the Natchez, after the first scalp-taking or securing a prisoner, the warrior had to abstain from seeing his wife or eating flesh for a month (Charlevoix, *Histoire de la Nouvelle France*, Paris, 1744, vi. 186; cf. Westermarck, *op. cit.* i. 375). In many places continence must be observed for a time after marriage and after a birth (Crawley, *op. cit.* 345 ff.; Lubbock, *op. cit.* 81).

Even among savages chastity on the part of the priesthood is sometimes a necessity. Thus Algonquin priests were ordained to a life of chastity, and could not eat food prepared by a woman (*NR* ii. 212), and in Yucatan the 'captain,' during his three years' tenure of office, had to observe the same rule (*ib.* ii. 741). This corresponds to the general rule of chastity found among higher priesthoods, while there, too, celibate orders are found, *e.g.* those in Mexico dedicated to the service of Quetzalcoatl, and the virgins of the sun in Peru, who, though regarded as the brides of the Inca, had otherwise, on pain of a cruel death, to live in chastity, in this exactly resembling the Vestal virgins in Rome (Zöckler, *op. cit.* 85; Prescott, *Peru*, London, 1890, 53; cf. also the purity enjoined on the Roman Flamen Dialis and his household).

LITERATURE.—This is given in the article.

J. A. MACCULLOCH.

AUSTRALASIA (Ethnology, Religions, and Ethics).—*Australasia* is here taken in its widest sense, so as to cover the great insular world which comprises nearly the whole of the Indian and the Pacific Oceans, and constitutes one of the five main divisions of the globe. The term is practically synonymous with *Oceania*, which is still favoured by most Continental geographers, but for which English writers now generally substitute *Australasia*, as harmonizing better with the other divisions, and at the same time serving to recall its essential characteristics—'firstly, that it is geographically a southern extension of Asia; and secondly, that the great island-continent of Australia forms its central and most important feature' (A. R. Wallace, *Australasia*, p. 2).

As thus understood, this Oceanic region comprises five main insular groups, which form the subjects of separate articles, but may here be summarily tabulated with their more important subdivisions:

I. Australia with Tasmania.
II. Malaysia, comprising the Malay Peninsula; the large Sunda Islands (Sumatra and Java); the Lesser Sunda Islands (Bali, Lombok, Sumbawa, Flores, Sumba, Allor or Ombay, Timor, Wetta, Serwatti); Borneo; Celebes; Jilolo or Halmahera; Ceram; the Moluccas; Sulu; the Philippines; Formosa; and the outlying Andaman and Nicobar groups.
III. Papuasia, with two sections:
  1. *New Guinea*, with the D'Entrecasteaux, Louisiade, and other insular dependencies.
  2. *Melanesia*, comprising the Bismarck Archipelago (New Britain, New Ireland, Duke of York); Solomon; Santa Cruz; Banks; Fiji; New Hebrides; New Caledonia; and Loyalty Archipelagoes.
IV. Polynesia, including New Zealand; Tonga (Friendly); Cook or Hervey (Mangaia, Rarotonga, etc.); Austral (Tubuai); Society (Tahiti); Low (Tuamotu); Marquesas (Nukahiva, Fatuhiva, etc.); Navigator (Samoa); Union (Tokelau); Ellice (Funafuti); Savage (Niuë); Sandwich (Hawaii) and Easter (Rapanui) groups.
V. Micronesia, comprising the Pelew (Palau); Ladrones (Marianne); Caroline; Marshall (Ralick, Radak); Gilbert (Kingsmill); Phœnix and Penrhyn (Manahiki) groups.

For Madagascar, which should properly be included in No. II., see art. Africa. The Seychelles, Mascarenhas, and other scattered clusters in the Indian Ocean are excluded because uninhabited when discovered, and the same remark applies also to Norfolk, Kermadec, Pitcairn, and a few other South Sea islands. Note that South Sea is synonymous with Pacific Ocean.

All the lands in this table have been occupied by man since the remotest times, and it is argued in the art. Asia that the cradle of the human family lay most probably in Malaysia (Java). From this central area of dispersion the first migratory movements ranged north to Asia, west to Africa, and east and south over the whole of the Oceanic world by land connexions which have since been greatly reduced by subsidence (see art. Ethnology, § 3). It would thus appear that the first inhabitants of Australasia must have been direct descendants of a Pleistocene precursor whose prototype is found in the Javanese *pithecanthropus erectus*, and who are themselves represented by the black elements still persisting in Malaysia (Malay Peninsula, Flores, Timor), in Papuasia, Australia, and even in Polynesia and Micronesia, though here mostly absorbed or assimilated by later intruders from Asia. As in Africa, there are two black elements in Oceania: (*a*) the dwarfish *Negritos* surviving in the Andamans, in the Malay Peninsula (Sakais, Semangs), in the Philippines (Aëtas), and in Java (the nearly extinct Kalangs); and (*b*) the medium-sized or even tall *Papuasians*, who form nearly the whole of the population in New Guinea (Papuans proper), and throughout Melanesia. For several reasons, such as their physical, linguistic, and religious differences, it is desirable to treat the Papuans proper and the Melanesians as two distinct though closely related sub-groups, while both may be conveniently comprised under the collective name of *Papuasians*. The Melanesians, for instance, are of Malayo-Polynesian speech, and worship no devils, whereas the Papuans speak numerous languages fundamentally distinct from any others, and are pronounced demonolaters. Dr. Hamy speaks of their origins as lost 'dans les profondeurs d'un insondable passé,' while W. Volz shows that in pre-Malay times they occupied all the Pacific Ocean (*AA*, Nov. 1894). Their westward extension to the large Sunda Islands, where no full-blood Papuans are now found, is also established by B. Hagen, who groups together the Battas, Gayos, and Alas of Sumatra, the Ulu-ayars of Borneo, the Semangs and Aëtas of Malacca and the Philippines, the Torajas, and the Toalas recently discovered by Dr. Sarasin in Celebes, the Melanesians, Papuans, and Australians, 'as local varieties and remains of a great wide-spread primitive southern race,' which he calls 'the old pre-Malay ethnical element' in Oceania (*Globus*, 1904, 76, No. 2, p. 24 f.). These pre-Malayans therefore constitute the substratum, the true aborigines, everywhere in Australasia.

Their watery domain was later, but still in remote pre-historic times, encroached upon first by Caucasic and then by Mongoloid immigrants, both from the Asiatic mainland. It is shown in art. Asia that during the Stone Ages two branches of the western Caucasians reached the uttermost confines of the continent, one probably from Europe through Mongolia to Korea and Japan, the other from North Africa through Irania to India and Indo-China. Some of the northern branch, all dolmen or megalithic builders, appear to have passed from Japan to Micronesia, where they may have joined hands with those of the southern branch who ranged from Indo-China southwards to Malaysia and thence eastwards to Polynesia. Thus are explained those astonishing *marais* and other monolithic structures which are found scattered over the Pacific islands as far east as Rapanui (Easter Island), and culminating in the stupendous works of Ponapé (Eastern Carolinas) with cyclopean walls 10 to 18 feet thick, constructed of huge basaltic blocks, some measuring 25 ft. in length by 8 ft. in circumference (F. J. Moss, *Atolls and Islands*, *passim*). There is a trilithon at Maui (Tonga group) which looks like one of those 'Druidical-like shrines' seen by Mr. R. T. Turley in North Korea, where some of the people 'show Caucasian and not Mongolian features' (*Geograph. Jour.*, April 1904, pp. 478, 479). That the two Caucasic streams must have met and commingled in these North Pacific waters is shown, amongst other indications, by the fact that the Nukuor islanders near Mortlock (Central Carolinas) still speak a pure but archaic form of the Maori language away to the south (New Zealand).

In order to distinguish between the Mongoloid (Malayan) peoples and these primitive Caucasians who long sojourned in the Eastern Archipelago, and are there still represented, amongst others, by the Mentawi islanders (west coast Sumatra), Logan introduced the term *Indonesian*, which has now been extended to all the natives of European type throughout Australasia. They are found sporadically in Papuasia and Melanesia, and are in exclusive possession of Polynesia, so that all the South Sea Islanders east of a line running from New Zealand by Samoa to Hawaii may be called Indonesians, and the collective names *Mahori*, *Sawaiori*, and others formerly applied tentatively to them may now be discarded. Their claim to be regarded as an Oceanic section, not of the 'Aryans,' as is sometimes assumed, but of the pre-Aryan Hamitic and Iberian Caucasians, can no longer be seriously questioned, since by the unanimous testimony of all competent observers they are one of the very finest races on the globe, with physical characters connecting them anthropologically with

the western Caucasians. Of the Tonga natives Lord George Campbell writes:

'There are no people in the world who strike one at first so much as these Friendly Islanders. Their clear light copper-brown coloured skins, yellow and curly hair, handsome faces, their *tout ensemble*, formed a novel and splendid picture of the *genus homo*; and, as far as physique and appearance go, they gave one certainly an impression of being a superior race to ours' (*Log Letters from 'The Challenger'*; and see also Guillemard's *Australasia*, ch. 14).

But it was shown above that the whole Oceanic area was first peopled by the Papuasians, which explains the constant occurrence of a black strain, very marked in Micronesia, but also met with all over Polynesia. The natives of Niuë (Savage Island) have a tradition that, when they occupied the island from Samoa, they found a black population with whom they intermixed. The same statement is made by the Hervey people, and is confirmed by their dark complexion and kinky hair, while in Mangaia the Melanesian features—frizzled hair, dark-brown skin, and full beard—predominate. Even the Tahitians and Maoris, both in other respects splendid Caucasians, here and there betray the dark element in their protruding lips, very dark-brown skins, curly hair, and slightly developed beard. In Malaysia the above-mentioned Mentawi islanders are the finest of all the surviving Indonesians, and of them Von Rosenberg writes that, 'as regards physical appearance, speech, customs, and usages, they stand almost quite apart. They bear such a decided stamp of a Polynesian race that one might far sooner compare them with an inhabitant of the South Sea Islands' (*Der malayische Archipel*. i. 189).

'It is somewhat difficult to say what the original type of the true Polynesian was; but it is probable that the handsome, tall, oval-faced, high-browed, lithe, active, light brown, black straight-haired, black or very dark brown-eyed, cheerful, dignified individual so frequently met with, is the nearest to the true original Polynesian' (Percy Smith, *Hawaiiki*, p. 14).

As the western Indonesians moved eastwards to their present homes in the Pacific, their place was taken by the Asiatic Mongols, who are now represented in the Eastern Archipelago by the light- or olive-brown populations commonly called *Malays*. They form, in fact, the Oceanic section of the Mongol family, and as their right to be regarded as members of this family is no longer contested, the point need not here be laboured. Interminglings with the pre-Malayan dark and fair elements (Papuans and Indonesians) have caused considerable local modifications and given rise to some marked varieties, such as the Nias Islanders, the Bornean Dayaks and Kayans, the Bugis and Minahassas of Celebes, the Tagalogs and others of the Philippines, and the Formosan aborigines. But the dominant historical Malays, whose original home was in the Menangkabau district of Sumatra, and whose language has become the *lingua franca* of the Archipelago, are a true Mongoloid people, distinguished by their 'light yellowish and brownish skins, long lank and black hair, small stature, rather oblique eyes, and prominent cheek-bones' (Meyer, *Minahassa auf Celebes*, Berlin, 1876, p. 7). These Oceanic Mongols do not occupy the whole of the Archipelago, the eastern parts of which are still held by full-blood and half-caste Papuans, the ethnical parting line, as drawn by Wallace, running from east of the Philippines along the west side of Jilolo through Bouro, and curving round the west end of Flores, then bending back by Sandalwood so as to take in Rotti near Timor (Wallace, *Malay Archipelago*[5], p. 590).

Now comes a difficulty. All the Australasian peoples except the Papuans and Australians—Malayans, Malagasy, Philippine Islanders, Melanesians, Indonesians, and Micronesians—speak numerous idioms which differ greatly in their lexical and phonetic characters, and often even in their grammatical structure, but are none the less regarded as members of a common stock language which is usually called Malayo-Polynesian, and has a prodigious range—from Madagascar to Easter Island, within some 2000 miles of the South American coast, and from New Zealand across the Pacific to Hawaii. All are *polysyllabic* and *untoned*, whereas those of the south-eastern Mongols—Indo-Chinese and others—are *monosyllabic* and *toned*. But the Malayans belong to this connexion, hence should presumably speak toned languages like Burmese, for instance, or Siamese, or Annamese. The explanation seems to be that the Oceanic Mongols reached their present domain in remote times, before the Indo-Chinese tongues had become disintegrated—that is, before the development of monosyllabism by phonetic decay. Not only do such untoned languages still survive on the mainland, but they so closely resemble the Oceanic tongues that they may be called proto- or archaic-Malayan. Of the continental Malay mother tongue there are several varieties, such as Khmer (Cambodian), Redais, Bahnar, Samré, and Charay, which are all toneless, and have a great number of words in common with the Oceanic Malay, while 'the grammatical structure of both is absolutely identical' (C. Fontaine, quoted by H. Mouhot, in *Voyage dans les royaumes de Siam*, etc., Paris, 1868, p. 216). The organic kinship is seen especially in the characteristic infix system, which is everywhere precisely the same, as in the Khmer *sauk*, 'to corrupt,' *samnauk*, 'a bribe'; the Malagasy *tady*, 'twisted,' 'a rope,' *tomady*, 'strong'; the Javanese *hurub*, 'flame,' *humurub*, 'to flare up'; the Tagalog *kapatir*, 'brother,' *kinapatir*, 'brotherly'; the Malay *sipit*, 'to grasp,' *sinipit*, 'an anchor,' and so on (the infix elements always the same, *m*, *n*, and *mn*).

A harder problem is the extension of this *vrai groupe malay continental* (Dr. Hamy) not only to the Mongoloid Oceanic lands, but also to Melanesia, whose black inhabitants speak many more primitive varieties of Malayo-Polynesian than either the Polynesians or the Malayans, although they are neither Polynesians nor Malays themselves, but a branch of the primordial Oceanic Negroid race. Here Dr. Codrington, the leading authority on the subject, vouches for three essential points: (1) the substantial unity and homogeneous character of the Melanesian tongues, under considerable dialectic diversity, and apart from a number of Indonesian enclaves, such as Uea, Futuna, Fate, Mae, Tikopia, and Ongtong Java; (2) their fundamental kinship with the Malayo-Polynesian family; and (3) their archaic character as compared with all the other members of that family. 'As compared with Fiji [a Melanesian tongue], the languages of Tonga and Samoa [Indonesian] are late, simplified, and decayed' (Codrington, *Melanesian Languages*, Oxf. 1885, p. 26). The question therefore arises, How came these savage head-hunters and cannibals to lose their original forms of speech, such as still survive amongst the kindred black peoples of New Guinea and of Australia, and have but recently become extinct in Tasmania? And then, how did they everywhere, from the Bismarck to the Loyalty groups, acquire Malayo-Polynesian languages of primitive type? Early Indonesian or Malayan conquests, followed by miscegenation, naturally suggest themselves, but are excluded by the absence of those modified Negroid physical characters which must necessarily have resulted from such postulated interminglings. The Melanesians are quite as full-blood Negroes as the Papuans, and show even more marked Negro features than the somewhat modified Australian aborigines. Codrington, who gives a few instances of mutual assimilation and interchange of type and speech, especially in Fiji, remarks that—

'It is conceivable, on the supposition that the languages now spoken by Melanesians are not originally their own, that the original stock is not now represented anywhere, either in vocabulary or in grammar, that languages derived from without have entirely taken the place of some earlier [Papuasian?] speech; but it is difficult to allow it to be more than possible. . . . There is the great difficulty that the present Melanesian languages certainly have not been introduced by intruders speaking the present Malay or Polynesian languages.' He then suggests a tentative solution of the problem which 'would account for the Polynesians having a language allied both to the Malay and to the Melanesian' (p. 81).

It should be added that Malayo-Polynesian has not the remotest connexion either with the heterogeneous tongues of the New Guinea Papuans or with the homogeneous agglutinating languages of the Australian aborigines. As a rule the Negritos both of the Philippines and of Malacca have lost their original tongues, and now generally speak those of the surrounding Malayan peoples. On the other hand, the Andamanese may claim to have developed in their long secluded island homes perhaps the most remarkable form of speech known to philology. It has no kinship with any other, and its most striking feature is a superabundance of pronominal prefixes and formative postfixes, so that 'in adding their affixes they follow the principles of the ordinary agglutinative tongues; in adding their prefixes they follow the well-defined principles of the South African [Bantu] tongues. Hitherto, as far as I know, the two principles in full play have never been found together in any other language. In Andamanese both are fully developed, so much so as to interfere with each other's grammatical functions' (R. C. Temple, *Anthrop. Journ.* 1882, p. 123). Yet, like the Australians, these paradoxical 'Mincopies,' as they were formerly called, have an infantile arithmetic with no words for the numerals beyond *two*.

In the Oceanic area the various religious systems may be broadly described as consisting of diverse forms of the crudest and the most advanced animism, leading in some places to the purest psycholatry, in others to nature- and ancestor-worship, above which has been raised a luxuriant growth of myth and legend. With all this are combined some strange aspects of demonology and tabu, wide-spread over the Indo-Pacific domain, besides totemism, ordeals, omens, and fetishism, in forms which throw light on the origin of these practices. Less wide-spread are true idolatry, shamanism, priestcraft, animal and human sacrifices, lycanthropy, tree-cult, witchcraft, the evil eye, rain- and weather-doctoring, and the other superstitions usually associated with primitive religions. The ethical standards present enormous differences, although the Oceanic peoples may in a general way be spoken of rather as non-moral than immoral. In fact, the moral sense, as understood by more advanced races, must be regarded as still dormant amongst Polynesians, who indulge openly in unbridled licence; Melanesians and Borneans, who glory in the trophies acquired in their head-hunting expeditions; and Papuan marauders, who treat with fiendish cruelty the captives secured for their cannibal feasts. Nor are these atrocities confined to the lower races, as seen by the unspeakable horrors of the cage-prisons in the unprotected Malay States described by H. Clifford (*In Court and Kampong*, p. 161 f.).

In Sumatra also the Battas open hostilities by offering to their war-god a boy eight or ten years old, who is buried to his neck in the ground and then stuffed with a mixture of sliced ginger, red pepper, and salt. When he is nearly raving mad with thirst, he is induced by the offer of a little water to promise to plead the tribal cause in the next world. But, the promise made, molten lead instead of water is poured down his throat, and his head is cut off and buried in an earthenware pot under a large tree in the village. These Battas are idolatrous cannibals, who, before the fight begins, prepare a rudely carved wooden effigy with a square hole in the place of the navel. The pot is then dug up and the soft parts of the head are thrust into the hole, which is closed with a leaden plate. The idol thus becomes animated (*hat hierdurch seine Seele bekommen*), and is at once sent off to the enemy, from whom another is received in exchange, and the pot is put aside for future use (Von Rosenberg, *Die malayische Archipel*, i. 60). And thus we seem to get a hint of how crude animism may in some places have passed through the fetish stage of the indwelling soul up to true idolatry or image-worship. The *Panghulu-balang*, as the Battas call this wooden effigy, has already become a true anthropomorphic entity—'has received its soul'—and, like the war-gods of Olympus, can now champion their cause in this and the next world.

Amongst the Karo Battas the doctrine of soul receives its utmost development. Here the *tendi*, like the *kra* of the Gold Coast negroes (see art. ETHNOLOGY, § 9), is a second *ego*—a sort of 'double' dwelling in the body, which it may occasionally leave—and at death becomes a *begu* (spirit, properly 'shade') on earth, or a *dibatta* (god) of the middle spaces. Often there are as many as seven such *tendis*, which are partly generated as individualized activities or properties of man. Two are clearly distinguished, one more specialized which later becomes a *begu*, the other representing more generally the vital force, and after death resolved into breath, or becoming wind, and returning to the soul of the world (*Weltseele*). Not only men, but animals and even plants, are endowed with *tendis*, and the *Si Dayang*, as the rice *tendi* is called, is represented as a goddess who plays a great part in the creation myth. She is the maker of man, the creative and sustaining power of the universe, the All-life, the gracious mother of nature, these cosmic notions being no doubt due to later Hindu influences (J. H. Neumann, quoted by W. Foy, in *Centralblatt f. Anthrop.* 1904, v. 299).

In the neighbouring Nias archipelago the Malayan natives are both idol- and devil-worshippers, and also head-hunters in the southern districts. Having no idea of a pure bodiless spirit, they fabricate numerous stone and wooden statuettes as tutelar deities, protectors of the chief, of the village, of the weapon, or else guardians against sickness and other troubles. The chief god, however, is *Lubu-langi*, who dwells in the wind, which, although it is invisible, can still be felt. This god is conceived as a tree waving in the atmosphere and shedding fruits which become either spirits or men, forefathers of the present generation, according as they fall in space or on the ground. In fact, Lubu-langi is the origin of everything, and from him comes nothing but good. Their forefathers dwell in constant association with him, and that is why they are invoked for blessings and against all kinds of evils. Here we have a peculiar form of ancestor-cult, which is paid also to the subordinate chthonic god *Batu-beana*, while appeal is likewise made to the other deities, amongst them some goddesses, all collectively called *Aju*. But more numerous appear to be the demons, of whom the most powerful and most dreaded is *Nadáiya*. Of them no images are made, since they dwell in the woods, the fields, the gardens, the houses, even in men and animals when they fall sick. Then they send for the *Éré* (wizard), who smells out the particular spook that is causing the mischief, and bribes him with the heart and blood of a fowl to leave the sick man and go away. If this and stronger measures fail, it is concluded that there are several devils about, and these are got rid of by stopping all the

doorways except one, through which they are driven off by cutting and slashing in all directions and making a tremendous uproar with much shouting, tom-tomming, and beating of pots and cans. The Nias people are not clear about an after-life, but say that the body came from and returns to nothing, while the soul joins the company of the ancestors with Lubu-langi, nothing being said about rewards or penalties. Earthquakes, the tides, eclipses, and other natural phenomena are due to sinister influences, even the rainbow being a net cast out by Nadáiya to ensnare mortals, while comets consist of an ordinary star with a long tail to which a devil clings, careering through space to strew the (Nias) world with woes.

Farther south the Indonesian Mentawi people are similarly plagued with demons, and here, strange to say, the natives of Pora Island migrate after death to an adjacent islet where all become devils, hence this is called 'Devil Island.' Hence also after the burial everybody makes off in all haste, fearing the return of the new-made demon. There are no idols or religious rites, but numerous oracles and omens and divinations by the inspection of birds' entrails, exactly as amongst the old Etruscan *haruspices*; and children are specially guarded against the evil eye of passing strangers. Much dancing accompanies all festive gatherings, which would appear to have a sacred character, since they wind up, if possible, with a human sacrifice, the victim being obtained by raiding a neighbouring island. The *sinétu* (fiends) are of course the root of all evil, and when they are appealed to in the woodlands which they infest, they are supposed to reply in the thin squeaking voice of an old man (Von Rosenberg, i. *passim*).

Most of the other Sumatrans, and all the Javanese, formerly Buddhists and Brāhmans, have been Muhammadans since about the close of the 15th cent.; but the new religion is merely lip service, a threadbare cloak thrown over the still fresh garb of Hinduism, which itself barely conceals the everlasting vesture of pagan times. Here, therefore, and especially in Java, we have three religious systems intermingled, or rather superimposed one on the other (cf. art. ABORIGINES, § 5). Hindu blood still flows in the veins of the Javanese nobility, such as the 'Emperor' of Solo (Surakarta), and the Prince of Jokjokarta, while the triumphs of Hindu architecture are still everywhere conspicuous, as on the Batta and Padang uplands of Sumatra, even in Bali and Sumbawa, and culminate in the stupendous temple of Boro-budur in Central Java. Hence it is not perhaps surprising that the early Indian religious and moral notions still survive and display a more vigorous growth than the arid teachings of Islām. The Qur'ānic texts may be daily read in the tasteless mosques, but in serious trouble Allāh and his Prophet are forgotten, and resort is had to the ancient shrines, where sacrifices and prayers are still offered to the old Hindu deities. Even the primeval tree-cult is kept alive, the chief objects of veneration being various species of the fig-tree, such as the pipal (*Ficus religiosa*) and *F. benjamina*. Beneath the shade of these wide-branching giants the natives often gather to worship the old earth-gods, for whose long-forgotten names those of the Hindu pantheon are substituted. Respect is also paid to the turtle-doves and to the monkeys (*Cercopithecus* and *Somnopithecus*) which have their homes in the branches of the sacred pipal-tree, and even to certain strangely shaped blocks and rocks, carrying the mind back to the stone-cult of primeval times (E. Carthaus, in *Kölnische Zeit.*, Aug. 26, 1906).

Hinduism still holds its ground in Bali and parts of Lombok, but is here also associated with many old superstitions, so that these islands present the strange spectacle of large Hindu communities professing every form of belief, from the grossest heathendom to pure pantheism. It is everywhere evident enough that 'just as Hinduism has only touched the outer surface of their religion, it has failed to penetrate into their social institutions, which, like their gods, originate from the time when Polynesian [Indonesian] heathendom was all-powerful' (W. Cool, *With the Dutch in the East*, p. 139).

A local myth relates how these gods established themselves in Bali after their expulsion from Java by the Muslim invaders in the 15th century. They had first to contend with the wicked Rakshasas, who fiercely resented the intrusion, but in the struggle were annihilated, all but the still worshipped Mraya Dewana. Then new thrones for the Olympians had to be erected as in Java; but there being no mountains at that time in Bali, the four nearest hills in East Java were brought over and set down in the east, west, north, and south, and assigned to the different gods according to their respective ranks.

Hinduism never made much progress in Borneo; nor has Islām anywhere penetrated much beyond the seaboard, so that the great bulk of the Dayaks, Kayans, and other aborigines are still pagans. Head-hunting, cannibalism, and human sacrifices, attended with shocking barbarities, are being slowly repressed by the British and Dutch authorities; but the Muslim and Christian propagandists appear to make little headway amongst the heathen tribes of the interior. All are still in the wild state, and the whole island has not inaptly been described as '300,000 square miles of savagery.' As in Africa, the human sacrifices, formerly universal, were the direct outcome of the prevalent ancestor-worship, the ostensible motive being to dispatch messages to dead relatives, or to honour them by these sanguinary rites. For this purpose a slave was tied up and bound round with cloths, and then, 'after some preliminary dancing and singing, one after another would stick a spear a little way—an inch or so—into his body, each one sending a message to his deceased friend as he did so' (W. B. Pryer, *JAI*, 1886, xvi. 234). The wicked, however, cannot receive their messages, since they are doomed, Sisyphus-like, to be everlastingly clambering up the rugged slopes of Kina Balu, the highest peak in Borneo (nearly 14,000 feet). The good, that is, those who have collected most human heads in this world for provision in the next, easily reach the top, whence they are ushered into heaven. But in other places, where the mountains are not so high, even the elect have to overcome many obstacles during their long wanderings up hill and down dale, across rivers, through fire and water, until 'at last they are safely landed in the heaven of their tribe' (C. Bock, *Headhunters of Borneo*, p. 223).

Dr. W. H. Furness describes the Borneans as 'savages of a high order,' without 'any definite forms of religious worship,' although they make 'wooden idols,' regarded apparently as mere 'scarecrows to frighten off evil spirits' (*Folklore in Borneo*, p. 4). They are 'saturated with superstitions; every pool, every tree, every rock is the home of an evil spirit, and all mysterious noises in the forest are ghostly whisperings. Everywhere are signs and omens to warn man of danger, or direct his course,' and the mountains are so infested with *antu* (demons) that 'the summits can be gained only at the risk of body, and, still worse, of soul' (*ib.* p. 6). Head-hunting 'is part of their religion; no house is blest which is not sanctified by a row of human skulls, and no man can hope to attain to the happy region of *Apo Leggan* unless he, or some relative of his, has added a head to the household collection' (p. 14). The practice is explained by the myth of the great chief *Tokong*, who when on a raid was told by *Kop*, the frog, to carry off the heads of the enemy. Having done so, the war party retreated quickly to the river

down which they had come. After they had again embarked, the current of the stream was, for their sakes, reversed, and like a flash they were carried up-stream to their homes. During their short absence the rice crop had ripened, the sick were all well again, the lame could walk and the blind see; so they ever afterwards observed the custom that Kop had taught them (p. 15). In the Kayan cosmogony there was at first nothing but sky and water, when a huge rock fell from the heavens, and rising above the surface was covered with soil by the action of the little *halang* worms. Then from the sun was dropped the wooden handle of a big sword, which, taking root in the soil, grew to a great tree, with branches spreading over all the new land, and this was followed by a rope-like vine from the moon, which also took root and twined round the tree. Now the vine became the husband of the tree, which gave birth to a male and a female, from whose union are sprung the Kayans and all the other Bornean tribes, and lastly Tokong, father of head-hunting. At first they were only half-human, with head, chest, and arms, but no legs, so that they had to crawl along the ground by their arms, an idea perhaps suggested by the octopus, which plays such a large part in the Oceanic mythologies (pp. 7–9). The Kayan Hades is not in the sky but underground, and, like the Greek Hades, has its Charon and its Styx, a deep wide ditch swarming with worms, and crossed, not by a ferry, but by a fallen tree-trunk which is guarded by the great demon *Maligang*. By him all comers are challenged, and if they have no record of bravery, no store of captured heads, the tree-trunk is shaken until they fall into the ditch, to be tortured for ever by the worm that dieth not. But there are 'many mansions,' as for those dying a violent death, or on the battlefield; for mothers dying in child-birth, or for suicides. In *Apo Leggan*, one of the chief divisions, dwell those dying of sickness or old age, and these 'have much the same lot as they had in this world; the poor remain poor, and the rich maintain their rich estate' (p. 16).

In Malacca the dominant Malays are all nominal Muhammadans; but here, as elsewhere in the Malay world, the cloak of religion is a very loose garment which covers a multitude of primeval rags and tatters. These were never touched or repaired by Brāhman or Buddhist, who appear to have got no farther than *Singapore*, the 'Lion City' over against the mainland. Hence Islām is here directly superimposed on the old heathendom, which it has barely penetrated a little below the surface. Raja Dris, himself a Musalmān, tells us that the people of Perak are still specially noted for many strange customs and superstitions 'utterly opposed to Muhammadan teaching, and savouring strongly of devil-worship. . . . An enormous belief in the supernatural is possibly a relic of the pre-Islām state' (*JAI*, 1886, xvi. 227). One is here reminded, however, that even the Arabs, if they do not worship the devil, still pelt him with stones at Muna near Mecca 'in the name of Allāh.' Referring to the Malays generally, Miss Bird (Mrs. Bishop) wishes that 'it were possible to know to what extent they are a *religious* people as Muslims. That they are bigots and have successfully resisted all attempts to convert them to Christianity there is no doubt, as well as that they are ignorant and grossly superstitious' (*Golden Chersonese*, Lond. 1883, p. 361). Elsewhere (p. 314) she tells us that 'buffaloes are sacrificed on religious occasions, and at the births, circumcisions, marriages, and shaving of the heads of the children of wealthy people. The buffalo sacrificed for religious purposes must be always without blemish. Its bones must not be broken after death, neither must its horns be used for common purposes. It is slain near the mosque with solemn sacrificial ceremonies, and one half is usually cooked and eaten on the spot by the "parishioners."'

But the most striking survival from pagan times is the universal belief in the wer-wolf superstition, which here of course takes the form of the wer-tiger. In Borneo there are wooden idols of tigers with indwelling souls (C. Bock, *op. cit.* p. 226). But in the Malay lands the tiger himself is worshipped, and the belief that men assume his form at night is inextinguishable. H. Clifford remarks that—

'In the Malay Peninsula we live in the Middle Ages. Magic and evil spirits, witchcraft and sorcery, spells and love-potions, charms and incantations are as real and as much a matter of everyday life as are the miracle of the growing rice and the mysteries of the reproduction of species. Tales of the marvellous and the supernatural excite interest and fear in the Malay, but they occasion no surprise. Every Malay knows that strange things have happened in the past, and are daily occurring to them and to their fellows. Thus the existence of the Malayan Loup Garou to the native mind is a fact and not a mere belief. The Malay *knows* that it is true' (*op. cit.* p. 65).

Then follows a wer-tiger story which for vividness and intense horror could scarcely be surpassed. For details, see art. LYCANTHROPY; and for prevalent religious notions in Minahassa and other parts of Celebes, see art. AIR.

Even magic, which becomes gradually divorced from the religions of more advanced peoples, is still interwoven with the beliefs and practices of the Malayan Muhammadans. In his *Malay Magic* (p. 60) W. Skeat tells us that one of the ways by which the Malays 'get magic' is to run against the ghost of a murdered man. As this is not easy, a mystic ceremony must be performed at the grave on a Tuesday at full moon, when the person needing help conjures the departed spirit and states his request. After a time an aged man appears, and to him the request is repeated, and is supposed to be ultimately granted. The magic here in question appears to be what is elsewhere called *mana* (Melanesians), *wakanda* (Dakotans), *orenda* (Iroquoians), *arungquiltha* (Aruntas), and by other names. It colours all primitive beliefs, from which it is inseparable, although by some recent theorists it has been regarded as something apart from religion.

A link between the Malayan and Papuan domains was discovered by Wallace in the island of Jilolo (Halmahera), whose 'Alfuro' inhabitants 'are radically distinct from all the Malay races. Their stature and their features, as well as their disposition and habits, are almost the same as those of the Papuans; their hair is semi-Papuan, neither straight, smooth and glossy, like all true Malays, nor so frizzly and woolly as the perfect Papuan type, but always crisp, waved, and rough, such as often occurs among the true Papuans, but never among the Malays' (*op. cit.* p. 316). The term *Alfuro* applied to these aborigines has no ethnical value, being the general Malay designation of the uncultured non-Muslim peoples in the eastern parts of Malaysia.

From them the transition is easy to New Guinea, the home of the true *Papuans*, on whose religious views much light has been thrown in recent years. In the western parts, subject to Holland as far as 140° E., prevalent features are pure demonolatry and the worship of ancestors represented by the so-called wooden *karwar* effigies of the dead, fashioned by the wizards. In the Sekar district, lately visited by J. S. A. van Dissel, scraps of food, tobacco, and sugar-cane are scattered about wherever goblins are suspected to be lurking. Here the arch-fiends are the so-called *Atitigi*, gigantic monsters of white colour, with an eye in front and another behind, six fingers on each hand, and the right index finger furnished with a very

ong sharp nail. They dwell in underground caves, and hunt down mortals, whom they eat if the flesh is found to their taste. To test the quality, a piece of the flesh is first scooped out with the long finger-nail, and if palatable the victim is roasted and eaten, but otherwise is allowed to go free. These supernatural beings are vulnerable only in the eye-sockets. Here the tabu marks (*kèra-kèra*)—leaves, rags, shells, bast, and the like, with a painted male figure attached to a post sunk in the ground—are very effective, since their violation would bring on not only the vengeance of the owner, but also the wrath of the presiding deity, causing illness and death (W. Foy, *loc. cit.* p. 305).

Dr. A. B. Meyer has made a careful study of the above-mentioned *karwars*, which are met with among the *Mafors* (not *Nufors*) of the North-West Coast, and appear to be real idols, not merely ornaments or emblems, as is often asserted. He calls them *Ahnenbilder*, 'ancestral effigies.'

'After a burial a block of wood is brought from the forest, and first roughly hewn and then furnished with eyes, nose, ears, and mouth, usually by the village magician, all amid much feasting and dancing, which is kept up for several days. When the supplies, mostly sago and palm-wine, run out, more is sent for. Meanwhile the soul of the departed is still flitting about, and every effort is now made to entice him into the finished image. A tremendous uproar is raised with shouting, yelling, and drum-beating in all the houses and neighbouring hamlets, and this is continued for several evenings, a wizard all the time holding the block in his hands with much contortion of face until he falls down—a sign that the soul has entered its future abode, from which it can no longer escape and go about working mischief. Henceforth much homage is paid to the idol, which is carefully put away under the best mats in a corner of the house, and hidden from the eyes of any uninvited guests. It is consulted and invoked on all occasions by the near relatives, its intercession being sought by offerings of tobacco, by adorning it with shreds of bright cloth, and holding it in the hand till it moves, that is, till it answers. It accompanies travellers on long journeys to guard them from harm, until at last, having lost its virtue [its *mana* ?], it is thrown aside as so much lumber, or otherwise disposed of, for this point still remains obscure. But there is no doubt that 'the Mafors worship the departed spirits. This belief in the immortality of the soul is the main principle of their religion, and with it are associated many rites and usages' (*Glauben u. Sitten der Papúas*, etc., *passim*).

In recent times the upper reaches of the Fly River, about the Anglo-Dutch frontiers, have been depopulated by the incessant razzias of the ferocious west coast tribes, especially the *Tugare* or *Tugere* cannibals, whose extreme savagery and cruelty may be taken as representing the lowest state of human culture in New Guinea, if not in the whole world. Little is known about their religious views, if they have any; but we have now *official* information regarding the almost incredible horrors accompanying their slave-raiding expeditions. 'They are a cannibal tribe of pirates,' writes the Rev. S. MacFarlane, 'who make periodical raids upon the villages along the eastern coast. They break the arms and legs of the prisoners, so as to prevent their fighting or running away, and then keep them as fresh meat until required, cooking one or two bodies at a time' (*Cannibals of New Guinea*, London, 1888, p. 106). Or else the captives' palms are pierced, a string passed through the holes, and the arms tied together at the back. When the flotilla arrives they are thrown into the water, and fished out by those on the beach sticking barbed spears into the fleshy parts. Then they are put on mats, a rope secured to a tree is passed round their necks to make them sit up, and after much slow torture they are wrapped in dry coco-nut leaves, hoisted some six feet from the ground, and slowly roasted with fire-sticks. 'When the rope is burnt, and the body falls to the ground, the wildest and most savage scene takes place. The natives rush with knives in their hands, each slashing a piece of the body, which may be still alive, in the midst of diabolical noise and yells of rejoicing' (L. Loria, *Official Report*, 1895, Appendix S, p. 44 f.).

In British New Guinea, witchcraft causes much trouble, and everywhere presents the same general features. A sorcerer, paid for the purpose, prepares a parcel of rubbish containing a hair or something taken from the person to be operated upon. The parcel then acquires diabolical powers and frightens people, who sometimes sicken and die through fear. Thus the sorcerers cause great trouble, and 'the people generally would gladly see them put down, but fear keeps them from reporting their threats and swindles' (*Report* for 1892–4, p. 37).

Various forms of tabu are met everywhere, but in the British districts 'it has never been grounded on any deep religious sentiment, consequently has never taken deep root. So far as is known at present, it is used only in order to store up food for a coming feast. It is most frequently applied to coco-nut and betel-nut trees. In some places the prohibition is announced by a syren of wood on a string wielded by a fishing-rod. From the Fly River to the far east, branches, usually of sago, are tied on the prohibited trees. Sometimes strings are put round gardens; branches are tied into the door of a house that is not to be entered, or are laid across a road that is not to be traversed' (*ib.* p. 38). With the statement about storing up food should be compared the practice in New Caledonia at the other end of Papuasia. Here *tapu* has no religious significance, and is associated exclusively with the question of food—that is, the question which most interested primitive man. It is much the same in the Marshall Islands, where Mr. F. J. Moss tells us that recently the despotic king of Majuro speared a man for picking a green coco-nut 'when the tapu had been placed upon them' (*Through Atolls and Islands*, p. 126). The reservation and safeguarding of food, particularly in times of scarcity, would thus appear to be the original purpose of the institution, the religious sanction being a later development, as amongst the more advanced Indonesians of New Zealand, where 'tapu and its observances, in a sense, took the place of religion' (A. Hamilton, *Art Workmanship of N. Z. Maori Race*, 1898, p. 370).

Both in British and German New Guinea ancestor-worship is a prominent feature of the religious systems, and here the moral sense is scarcely yet awakened, so that little or no provision is made for saints and sinners in the after life. Thus in Murua (Woodlark Island), at the east end of New Guinea, 'all people, whether good or bad, when snatched away by death, go like the wind to the small island of Watum; there they enjoy the full pleasures of life, the women cultivating and cooking food for their lords and masters' (J. P. Thomson, *British New Guinea*, p. 184).

A far higher plane of thought has been reached by the kindred *Melanesians*, though not in the ethical order. They are still mostly inveterate head-hunters and cannibals, as is clearly shown by the very latest observers, such as Dr. H. Schnee and Carl Ribbe. The treacherous and sanguinary head-hunters of the Solomon Islands are referred to by Ribbe as 'von Natur lügnerisch, verräterisch, räuberisch, hinterlistig, diebisch, und grausam angelegten Kannibalen' (*Zwei Jahre unter den Kannibalen der Salomo-Insulen*, 1903). They appear to have even deteriorated since their first contact with Europeans; and, if not devil-worshippers in the strict sense of the term, they certainly betray great fear of the surrounding demons, in many places setting up scarecrows to drive them away. An equally dark picture is drawn by Dr. Schnee of the Bismarck and Admiralty natives, amongst whom cannibalism with all its attendant horrors, such as the lingering death of the victims and the bartering of dead bodies in the local 'markets,' is far more prevalent than had hitherto been sup-

pected (*Bilder aus der Südsee*, 1904, *passim*). Yet the strictly religious views of these undoubted savages may be called 'respectable,' in some instances almost elevated—a phenomenon obviously due, perhaps like their language, to the proximity of the Indonesians of the Eastern Pacific. Although the English word 'devil' is common enough, adopted by the natives in ignorance of its meaning, there is very little true demonolatry. Dr. Codrington says none at all: 'It may be asserted with confidence that a belief in a devil, that is, of an evil spirit, has no place whatever in the native Melanesian mind' (*The Melanesians*, p. 117). This seems to be stated rather too forcibly; but the writer is our very best authority on the religious beliefs of these aborigines. Even gods are little in evidence; at least, there is not a Supreme Being nor are there any very powerful subordinate deities, nor yet true fetishes, that is, natural objects, such as a tree, rock, storm, or waterfall animated by an indwelling spirit; nor professional shamans, or hereditary priests. 'There is no priestly order, and no persons who can properly be called priests,' but any one may undertake the priestly functions who can gain access to some object of worship, and such a man 'is in a way their priest and sacrifices for them all' (*ib.* p. 127).

The quintessence of the Melanesian system appears to be a belief in spirits and in the subtle power called *mana*, which is common also to Polynesia, and presents analogies with the *wakanda* of the Dakotans (see art. AMERICA, i. 382[a]) and with the Augustinian *grace*.

For Maoriland, Hamilton defines *mana* as 'power, authority, influence, prestige' (*op. cit.* p. 396). The same definition would also apply to the *orenda* of the Iroquoians, 'which exactly expresses this potentiality, this atmosphere, which they believe inheres in and surrounds every personality. . . . Anything reputed to have been instrumental in obtaining some good or accomplishing some end is said to possess *orenda*' (Sidney Hartland, *Address*, 1906, p. 5).

With regard to spiritual beings, the essential point to note is the distinction clearly drawn by the natives between two classes of spirits, the *bodiless* and the *disembodied*—that is, pure spirits that never were men, and the ghosts of the departed. Both are worshipped, the homage paid to the first being pure psycholatry, to the second ancestor-cult, so that the two primitive forms of animism have been evolved in Melanesia. In general, all pure spirits, most ghosts, and some men have *mana*, and after death those souls alone are worshipped who are supposed to possess it. These are, of course, mainly the chiefs; hence the remark of the Fijian chief that after death he would be a *kalou*, that is, would be invoked and worshipped; while common people, having no *mana* in this life, would have none in the next, and so would be neglected and soon forgotten. There are numerous minor deities—gods of the sea, land, mountains, valleys; and these may apparently be either pure spirits or ghosts, the natives themselves getting confused when it comes to particulars. For details and accessories (magic, witchcraft, weather-doctoring, sacrifices, Hades, and the like), see art. MELANESIA.

For *Micronesia*, where both Papuasian and Polynesian elements are represented, one of our best guides is J. Kubary, who has made a thorough study especially of the *Mortlock Islanders* on the south-central fringe of the Caroline Archipelago. Here the influence of the Indonesian myth-mongers already begins to be felt, while the dominant ancestor-worship presents some peculiar features, its main purpose being to uphold the prestige of the chiefs both in this and in the next world. In some places the headmen have both a temporal and a divine aspect, being at once the supreme rulers, the supreme gods (*die Hauptgottheiten*), and the priests of their several tribes. At the same time, the officials honour the spirits of their own forefathers, invoking them on all ordinary occasions before the somewhat costly appeal in the last resort to the supreme god—that is, to the tribal chief. In theory this chief is absolute, but does not receive divine honours till after his death, and, as the souls of all the departed are also supposed to be deified, the number of the *anu* (spirits, minor gods) would be legion, but for the provision that practically only those are honoured who were distinguished by some special qualities when alive. They do not communicate directly with mortals, but only through the *au-ua-ro-ar*, a kind of shaman, whose office is not hereditary, each deity choosing one for himself without monopolizing his services, since he is still free to act on behalf of any other god willing to employ him. Besides the tribal (ancestral) gods there are several others, such as the war-god *Arong*, honoured in the form of a fish, and *Anu-set*, the sea-god. Arong represents a famous hero, Rassau, who was slain in the island of Lukunor and buried in the sea; hence all warriors who fall in battle are now also buried in the sea, so that they may join the brave Rassau, the mythical god of the sea. Whether the myth was invented to explain the practice, or is a local tradition coloured by the surroundings, is uncertain, but it shows how 'religion, like all other institutions, has been profoundly influenced by physical environment, and cannot be understood without some appreciation of those aspects of external nature which stamp themselves indelibly on the thoughts, the habits, the whole life of a people' (J. G. Frazer, *Adonis, Attis, Osiris*).

Besides the ancestral and other gods, there is no lack of demons, one of whom infests the large trees, but is dangerous only to young girls and children. Apparitions and other supernatural phenomena are much dreaded, and no Micronesian would venture from home alone after nightfall. They also believe in divination, and 'have two ways of foretelling the future, one by means of knotted cocoa leaves, the other more complicated, but known only to the professional soothsayers' (Kubary, *Die Bewohner der Mortlock Inseln*, p. 259). Tabu is universal, and there is a 'mourning tabu' for the great chiefs, which is exceedingly burdensome to their bereaved subjects. Other forms are concerned with the food question, as in New Guinea and New Caledonia.

Polynesia (see Table, p. 236[a], No. IV.) is a region of surprising, almost monotonous, uniformity in the physical and mental characters, the speech, social and religious institutions, and oral literature of its Indonesian inhabitants. The oral literature is partly historical and traditional, but mainly sacred and religious—cosmogonies and theogonies merging into semi-divine dynastic genealogies, all based on an underlying system of primitive religious notions, without some knowledge of which it is impossible to understand them. Despite the labours of Sir G. Grey, G. Turner, W. W. Gill, A. Fornander, Percy Smith, and some other Indonesian students, only a few of these legends have yet been rescued from oblivion, and so great are their volume and variety that Adolph Bastian, their chief interpreter, ventures to say that 'the Polynesian range of thought is next to or beside the Buddhist the most extensive in the world, stretching through the length and breadth of the Pacific Ocean, and even farther if Micronesia and Melanesia as far as Malaya be included'; and he adds that the mythologies are meaningless without a knowledge of the religious substratum on which they are

raised (*Die heilige Sage der Polynesier*, p. ix.). In this work Bastian himself has published three priceless documents with valuable commentaries: a very old creation myth from New Zealand (*Die Schöpfungssage der Maori*); from Hawaii a complete theogony, beginning, like all Polynesian myths, with Chaos and Night; and *The History of Ancient Hawaii* in the Hawaiian language, by David Malo, a converted native.

Apart from their great variety and the sublime cosmic concepts often embodied in the texts, students are puzzled to understand how such voluminous unwritten records could be accurately handed down from very remote times, as many of them certainly have been. On this point Mr. Percy Smith remarks that 'it is difficult for a civilized people which habitually uses writing in recording events to conceive of the powers of memory possessed by people who have nothing but the memory to trust to. Some few instances of this may be mentioned. A Maori and his wife dictated to Mr. Elsdon Best over 400 songs, and could generally tell the names of the composers and the incidents alluded to in them. Another dictated to the writer 164 songs, and these were so impressed on his memory that the quotation of one line was sufficient to recall the whole of the song at once. Another has written eleven volumes of MS. treating of the traditions, songs, customs, etc., of the Maoris, and this at a very advanced age, all of this matter having been retained in his mind, and including hundreds of proper names' (Smith, *Hawaiiki*, p. 20). It is to be remembered that most of the documents are of a sacred character, hence jealously guarded by the priests, who were mostly hereditary, so that 'it was the duty of the father, and very often the grandfather, to educate their offspring in the tribal lore. This teaching was accompanied with many ceremonies and *karakias*, or incantations, invocations, etc., in order to impress the pupil with the importance of the matter. There was a special sanctity attached to many things taught; deviation from the accepted doctrines was supposed to bring on the offender the wrath of the gods' (*ib.* p. 19). The statement may thus be accepted that the Maori cosmogony is of immense antiquity, having been transmitted *verbatim* from priest to priest for thousands of years.

In this as in many other such records the distinction is not always clearly drawn between the divine and the human elements. Sometimes gods become men and men gods, while the theogonies are called genealogies, and often merge imperceptibly in the human genealogies, as if the 'inspired singers,' after deriving the deities from mortals, had redressed the balance by reversing th process. Thus *Maui*, who looms so largely in Polynesian romance, appears to be at first human, and then through his exploits becomes clothed by later generations with divine attributes, and in another place we are told that one Maui (for there are several) is the son of *Tangaroa*, and becomes man, Tangaroa himself being both god and man. The renowned chief Tu-tarangi also, who in Rarotonga is only an eponymous hero, or at most a demigod, is known to the Niuë islanders as a deified ancestor. Now Turner, a great authority, tells s that 'the Savage [Niuë] islanders worshipped the spirits of their ancestors' (*Samoa a Hundred Years Ago*, p. 306). Here perhaps we have n explanation of the apparent confusion. The a l-pervading ancestor-cult evidently underlies the whole mythological superstructure, and from this source were derived the gods of the Polynesian Olympus.* But the living chiefs are the direct heirs of these Olympians, consequently their genealogies are mere continuations of the theogonies, and to the native mind there is no real confusion at all. Thus it is that, as above remarked (by Bastian), everything becomes clear when we grasp the root ideas out of which flourish these wonderful efflorescences of Indonesian thought.

At times the Polynesian singers appear to soar into the ethereal spaces and to realize the concept of a Supreme Being, as when out of the transformed body of Tangaroa (Taaroa and other variants) the lesser gods, the demiurges, fabricate the universe, and Taaroa himself is spoken of as *Toivi*, the 'Eternal,' or else, like the Hindu Brahma, or the Dodonian Zeus that 'was, is, and shall be,' is described in the loftiest language as dwelling 'in the limitless void of space, when the World was not yet, nor the Heavens, nor the Sea, nor Man; from on high he calleth, changing to fresh forms, root of the earth, under-prop of the rocks, Taaroa as the Sea-sands in the broad expanse, bursts into Light, cometh down as Wisdom, born the Hawaii land, Hawaii the Great, the Holy.' Similar elevated language pervades the Mangaian cosmogony, which begins with *Te-aka-ia-Roe*, the 'Root of all Being,' and is logically developed in harmony with those of the other Polynesian systems (Gill, *Myths and Songs, passim*). Here, too, the genealogies of the gods pass gradually, as in Hawaii, and with scarcely a break, to those of mortals, all in the interest of the living rulers of the land. Such sublime conceptions, such subtle theosophies, such personifications of Chaos, Immensity, Gloomy Night, and other pure abstractions, in these children of nature, excite wonder and remain inexplicable in their present fragmentary state. Everywhere we find Heaven, Earth, the Universe, the After-World, recurring under diverse names and forms, personified by language, embodied in theocratic and anthropomorphic philosophies — echoes, as it were, of the Vedic hymns reverberating from isle to isle over the broad Pacific waters. The question arises, Have there been Vedic contacts? It is a chronological question which cannot be answered until the date is approximately determined of the eastward migration of the Indonesians from Malaysia. Did the migration precede or follow the arrival of the Hindu missionaries in that region? This vital point has engaged the attention of Mr. R. Studholme Thompson, whose 'Origin of the Maori' appeared in *The Maori Record* for 1906–1907.

Some light is thrown on the origin of a whole class of bird-omens by what Dr. Turner tells us of a superstition prevalent in Savaii (Samoa group), where '*Sepo Malosi* ("Sepo the Strong") was worshipped as a war-god, and incarnate in the large bat, or flying-fox. While the bat flew before the warriors all was right, but if it turned round and shut up the way it was a sign of defeat and a warning to go back' (*op. cit.* p. 51). And again: 'The bat was also an incarnation [of Taisumalie, "Tide gently Rising"]. One flying ahead of the troops was always a good omen' (p. 57). We are at once reminded of the flights of the eagles seen by Romulus and Remus at the foundation of Rome, although at that time the Western Aryans may have ceased to believe in any spirits incorporated in the birds. We also learn something about the origin of ordeals from the statement that in the Samoan temples were kept conchs, stones, coconut shells, and other such objects of superstitious veneration, which were used as aids in the administration of justice. In the presence of such ordeals 'the truth was rarely concealed. They firmly believed that it would be death to touch the cup [coco-nut shell] and tell a lie' (*ib.*). And when these things became discredited, as having lost their hidden virtue—their *mana*, so to say—they were replaced by more efficacious processes: the poison-cup, hot iron bars, stones to be fished out

of boiling water, duelling, and the like. But the principle was the same, a steadfast belief in a supernatural power regulating the application of the tests in the interests of justice. For other Indonesian beliefs and religious observances, see art. POLYNESIA.

Owing perhaps to the difficulty of distinguishing between the purely social and the religious institutions of primitive peoples, a great diversity of opinion prevails even amongst the best observers regarding the religious views of the *Australian aborigines*. Some hold with Ernest Giles that they have no beliefs on the subject of gods or an after-life, and that those who credit them with such notions 'have been imposed upon, and that until they had learned something of Christianity from missionaries and others, the blacks had no beliefs or practices of the sort' (*Australia Twice Traversed*, Lond. i., 1889, 45). This may be taken as the extreme view on the negative side, and with it Carl Lumholtz so far agrees as to assert that 'at all events it is certain that neither idolatry nor sacrifices are to be found in Australia. Nor have the natives, so far as I know, ever been seen to pray' (*Among Cannibals*, p. 284). Elsewhere we read that 'it is a well-known fact that the Australian natives are almost wholly devoid of religious susceptibilities' (p. 339), and that to deposit food or other things with the dead 'was an idea which they could not comprehend' (p. 275), implying disbelief in an after-life. And the remarks of George Angas are quoted (p. 284) on the Murray River tribes, who 'appear to have no religious observances whatever. They acknowledge no Supreme Being, worship no idols, and believe only in the existence of a spirit, whom they consider as the author of ill, and regard with superstitious dread. They are in perpetual fear of malignant spirits, or bad men, who, they say, go abroad at night; and they seldom venture from the encampment after dusk . . . without carrying a fire-stick in their hands, which they consider has the property of repelling these evil spirits.'

This belief in an evil spirit is already something; but Lumholtz himself goes much further, and after referring inconsistently to 'their fear of *the spirits of the departed*' (p. 277), admits 'a wide-spread belief in the soul's existence independently of matter, the Kulin tribe (Victoria) believing that every man and animal has a *Muurup* (spirit) which can pass into other bodies, leave a person in his lifetime, and visit other people in their dreams. After death it may appear again, visit the grave of its former possessor, eat remnants of food lying near the camp, and warm itself by their night fires. A similar belief has been observed among the blacks of Lower Guinea' (p. 279; here read 'Upper Guinea,' and cf. the *kra* described in art. ETHNOLOGY, § 9). Then a native woman is mentioned who 'repeatedly brought food to the grave of her deceased husband' (p. 282); and 'definite religious notions' are credited to the southern tribes, while 'some very interesting information in regard to the idea of a God . . . has been furnished by Mr. Manning, who in 1845 discovered among some tribes of New South Wales a doctrine of the Trinity (*sic*), which bears so striking a resemblance to that of the Christian religion that we are tempted to take it to be the result of the influence of missionaries. But according to the author, the missionaries did not visit these tribes until many years later' (p. 283). They recognize a supreme, benevolent, omnipotent Being, *Boyma*, with an omniscient son, *Grogoragally*, mediator between Boyma and mortals, and a third person, half human, half divine, *Moogeegally*, the great lawgiver to men, and lastly 'a hell with everlasting fire, and a heaven where the blessed dance and amuse themselves' (*ib.*). After this the passage quoted in *Primitive Culture*[3] (i. 418) by Tylor, that they have no idea of a supreme divinity, creator, and judge—that, 'in short, they have nothing whatever of the character of religion, or of religious observance, to distinguish them from the beasts that perish'—will appear extravagant to all competent observers of these aborigines.

The extreme view on the positive side of the question, that is, the belief in 'a tribal All-Father,' is perhaps most clearly emphasized by Dr. A. W. Howitt, who finds this belief wide-spread in 'the whole of Victoria and of New South Wales, up to the eastern boundaries of the tribes of the Darling River' (*Tribes of South-East Australia*, p. 500). Amongst those of New South Wales are the *Euahlayi*, whom Mrs. Langloh Parker (*Euahlayi Tribe*, Lond. 1905) describes as having a more advanced theology and a more developed worship than any other Australian tribe. These now eat their hereditary totems without scruple—a sure sign that the totemic system is dying out, although still outwardly in full force. Amongst the Aruntas, Kaitish, and the other Central and Northern tribes studied by Spencer and Gillen, the system still survives, and totems are even assigned to the mysterious *Iruntarinia* entities, vague and invisible incarnations of the ghosts of ancestors who lived in the *Alcheringa* (*q.v.*) time, the dim remote past, the beginning of everything. They are far more powerful than living men, because their spirit part is associated with the so-called *churinga*, stocks, stones, or any other object which is deemed sacred as possessing a kind of *mana* which makes the yams and grass to grow, enables a man to capture game, and so forth. That the *churinga* are simply objects endowed with *mana* is the happy suggestion of Sidney Hartland, whose explanation has dispelled the dense fog of mystification hitherto enveloping the strange beliefs and observances of these Central and Northern tribes.

> 'They are mysterious objects in the closest association with the tribal ancestors, the outward and visible sign, if not the embodiment, of the ancestral souls or invisible portions, and as such regarded with veneration. They are endowed with *mana*, emanating from the ancestors whom they represent—*mana*, which not merely heals wounds, but when the churinga are brought ceremonially in contact with the body, produces other physical, mental, and even moral effects. . . . The churinga is intimately associated with the ancestor, and has "feelings" just as human beings have, which can be soothed by the rubbing in the same way in which those of living men can be' (Address at Brit. Assoc., York, 1906).

Hence a man, as he sings and rubs it with his hand, 'gradually comes to feel that there is some special association between him and the sacred object—that a virtue of some kind passes from it to him, and also from him to it' (Spencer-Gillen, *Northern Tribes*, ch. viii. p. 278 f.). By whatever name it be called, this is obviously *arungquiltha*, the Australian *mana*, and it is equally obvious that the primitive Australian religions are still interwoven with magic (see above).

About the religious and ethical views of the extinct *Tasmanians* a good deal of information has been gathered from various sources by Brough Smyth (*Aborigines of Victoria*), J. Bonwick (*Daily Life*, etc., *of the Tasmanians*), and Tylor (*JAI* xxiii. 141, Nov. 1893). Socially they appear 'to have remained to our day living representatives of the early Stone Age, left behind in industrial development even by the ancient tribes of the Somme and the Ouse. . . . The life of these savages proves to be of undeveloped type alike in arts and institutions, so much so that the distinction of being the lowest of normal tribes may be claimed for them' (Tylor, *loc. cit.* 148, 152). Yet the religious sense had certainly been awakened. They feared to move about after dark, believing that their deceased relatives might be hovering about, and

there was a god who presided over the day and an evil spirit or demon over the night, and to the god the women addressed songs or prayers to secure the safe return of their absent husbands (Smyth, ii. 390). Bonwick, however, doubts this, while admitting that 'the Tasmanians had some dim apprehension of a future state' (p. 167), and refers to the case of a native who put a spear in a tree beside a dead body, 'to fight with when he sleep' (p. 174). The evidence is altogether very conflicting, although on the whole rather against the belief in a beneficent deity, and Dr. Nixon, first bishop of Tasmania, is quoted as saying that 'no trace can be found of the existence of any religious usage, or even sentiment, amongst them, unless, indeed, we may call by that name the dread of a malignant and destructive spirit, which seems to have been their predominant, if not their only, feeling on the subject' (p. 172). And there the matter must rest, since the last of the race died about 1890.

LITERATURE.—W. Ellis, *Polynesian Researches*, 1853; A. H. Keane, 'Relations of the Indo-Chinese and Inter-Oceanic Races and Languages,' in *JAI* ix. 254, 1880; A. R. Wallace, *Malay Archipelago*, 1886; H. von Rosenberg, *Die Malayische Archipel*, 1878; H. Clifford, *In Court and Kampong*, 1897; W. H. Furness, *Folklore in Borneo*, 1899; C. A. H. KEANE.

AUSTRALIA.—1. Introduction.—Linguistic research shows that Australia is occupied by three distinct groups of languages, of which two are related to each other, while the third is independent of them in vocabulary and grammar, and shows little internal cohesion. The last group, named 'northern' by Schmidt, occupies the north of Australia and descends beyond 20° S. only in the centre, where it is found as far as 27° S. (the Aruntas). The other two groups, 'old' and 'new' Australian, distinguished by the way in which they form the genitive, occupy the remainder of the continent. By far the greater area falls to the 'new' group, split into nine sub-groups. The main 'old' Australian area is in Victoria with traces along the east coast; it seems to be related to the Tasmanian languages. The two Australian groups are related to each other in syntax and vocabulary, but less intimately than are the component parts of each group among themselves (*Man*, 1908). The grouping of tribes arrived at on this philological basis does not correspond very closely to those given by any other mode of classification, for material culture, social organization, initiation ceremonies, and burial customs give somewhat conflicting results; but on the whole the three last are distributed in a way which may be harmonized with the linguistic data, if we allow for a certain amount of lateral transmission. Thus, the eight-class tribes are wholly within the 'northern' area; they reckon descent in the male line, and though there are other districts in Australia—notably parts of Victoria and the coast of Queensland—where there is patrilineal descent of the classes or phratries, both these and the no-class areas belong to the old Australian speech-groups or are contiguous to them.

The same holds good with regard to the initiation ceremonies. The rites of circumcision and sub-incision are unknown in Victoria, New South Wales, the greater part of Queensland, and the coastal portions of West Australia; but we may readily explain their penetration into the Neo-Australian south-central area as the result of transmission, though, of course, some amount of infusion of foreign blood may have contributed to the result. Simple burial is, as a rule, characteristic of both the Australian groups, and in the old group it is accompanied by the practice of building a hut upon the grave—a custom which they shared with their neighbours, the Tasmanians. The grave seems to be looked upon as the abode of the soul, though we find sporadically the belief that the spirits of the dead travel to the west, or, where there is a belief in a god, to reside with him. In the 'Northern' area, on the other hand, and certain adjacent districts, the body is submitted to various processes, and the essential funerary rite seems to be the disposal of the bones, which marks the time at which the spirit of the dead is believed to go to its own place. It may be noted that special treatment of the bones is a well-marked feature of funeral rites in parts of New Guinea.

When we come to deal with the more intangible sphere of beliefs, we are on more uncertain ground; it is indisputable that belief in a tribal All-Father prevailed in Victoria, New South Wales, and parts of South Australia; that it has been recorded but rarely outside this area does not necessarily mean more than that the recorder has not penetrated very far into the ideas of the natives with whom he was familiar. So far, however, as our evidence goes, it seems that the All-Father belief is pre-eminently characteristic of the old Australian group; it is found among important tribes of the Neo-Australian group, such as the Wiradjuri and the Kamilaroi, but there is no record of it among the Darling tribes and in the greater part of Queensland. So far as we have evidence for it, the totemism of the northern area seems to differ widely from that which is found elsewhere in Australia, and save among the Dieri and other contiguous tribes there is no record of *Intichiuma* ceremonies except in this part of the continent.

2. Religion.—There has been a good deal of controversy as to the genuine aboriginal character, and, this being conceded, the real status of the Australian All-Father. There is, however, satisfactory evidence that Baiame, about whom the controversy has turned in the main, was recognized in the Wellington valley before the advent of the Church of England Mission in 1832 (*Man*, 1905, No. 28); and, though a Wesleyan mission existed there in 1828, before Henderson collected his facts, there is no reason to suppose that it could have exerted any great influence, certainly not enough to introduce such a figure as Baiame into the initiation rites of the aborigines, as it must have done if the theory of the missionary origin of these anthropomorphic beings is to be maintained.

There is naturally more doubt as to the precise position occupied in the aboriginal view of the universe by Baiame and his congeners; some authors have denied that the term 'god' can properly be applied to them (*Folklore*, ix. 290–329), while others have maintained that they are eternal, omniscient, all-powerful creators. Probably the truth lies nearer the latter than the former view. At the initiation ceremonies of the Euahlayi tribe, according to Mrs. Langloh Parker, an excellent

authority, Baiame is proclaimed as 'Father of All, whose laws the tribes are now obeying.' He established the rule that tribes at the fishing ground should keep peace; he gives rain to the orphan who cries for it; he is prayed to at the *bora* ('initiation ceremonies') and at funerals, and his name means 'great'; his figure is made in earth on the *bora* ground (Parker, *Euahlayi Tribe*, 7 f.). Some of the difficulties which surround the question of the status of the Australian All-Father have arisen, however, because the disputants have overlooked the fact that the beliefs of the various tribes show not only different degrees of development, but actual differences in kind. Schmidt has pointed out (*Anthropos*, 1908) that we seem to have three strata: (1) the belief in an All-Father pure and simple; (2) the belief in an All-Father who has taken over features of a tribal ancestor; (3) the belief in a being of this kind who is also the creator, has wives and children, and (in the case of Baiame) is sometimes depicted as ruling the world through a subordinate. As examples of these three classes of belief may be cited: (1) the Kurnai view of Mungan-ngaua; (2) the Theddora, Wolgal, Ngarego, and Yuin view of Daramulun; and (3) the Wiradjuri, Kamilaroi, and Euahlayi view of Baiame. Bunjil also, the All-Father of the Central Victorian tribes, belongs to the third category. This theory depends on complicated considerations connected with the distribution (*a*) of phratries, (*b*) of totems, and (*c*) of sex-totems, from which Schmidt has produced evidence in favour of a primary dark race, represented by the crow, upon which two successive waves of migration, represented by the eaglehawk and the emu, have descended. He argues that both Daramulun and Baiame were not indigenous, but originally tribal heroes of the invaders, the former of the eaglehawk race, the latter of the emu race; or, at any rate, that Baiame, if he were the All-Father of the indigenous tribes, combined therewith the character of tribal ancestor of the invading tribes. On this point there is not much evidence on either side, but, such as it is, it tells in favour of the view that Baiame was introduced by the invaders; for it is reported (*Australian Anthropological Journal*, i. 14) that the Minkins, on the Lower Leichardt, south of the Gulf of Carpentaria, believe in a god Gooaree who lives in Warnoo; Baiamai came from Warderah and taught them initiation ceremonies. So, too, the Mikadoons in the same neighbourhood believe in Gumboo, and say that Baiamai, who taught them initiation ceremonies, came from an island beyond Australia. Howitt has already called attention (*Native Tribes*, p. 498) to the fact that the evil spirit, Coen, at Sydney, had a namesake Kohin on the Herbert River; and if, as it seems, we are entitled to regard these as identical, there is no reason for mistrusting the evidence for a belief in Baiame just south of the Gulf on the score of its distance from the seat of the Baiame-cult in N. S. Wales. In this connexion it may be noted that precisely at this point south of the Gulf the Neo-Australian languages stretch northwards into the territory of the northern group. In this account Baiame figures as tribal hero, not as creator or All-Father, precisely as Schmidt's theory requires.

The following tribes are mentioned by Howitt (*op. cit.* 488 ff.) as having the All-Father belief: Narrinyeri (Nurrundere or Martummere); Wiimbaio (Nurelli); S. W. Victoria (Pirnmeheal); Wotjobaluk, Kulin, and Woĕworung (Bunjil, Mamingorak, or Mamingata); Kurnai (Mungan-ngaua); Wathiwathi (Tha-tha-puli); Tatathi (Tulong); Theddora, Ngarego, and Yuiñ (Daramulun, Papang, or Biamban); Kamilaroi and Wiradjuri (Baiame); Port Stephens and Herbert River (Coen); S. Queensland (Maamba and Birral). About some of these, however, *e.g.* Birral, we have no information, and it is mere guesswork to include them among the All-Fathers. Birral may well be identical with Bedall (Thorne, *Queen of the Colonies*, 317), who is said to have made the world long ago, when he floated on the water, in form like a huge turtle two miles across the back. In this being we see few or none of the traits of the All-Father. In the Moreton Bay district, however, Buddai seems to have been the equivalent of Baiame (Lang, *Cooksland*, 1847, 459).

There is therefore good *prima facie* evidence for the existence of the belief in an All-Father south-east of the line from the mouth of the Murray to Moreton Bay. Beyond this area we have certain evidence only from the west coast between Geraldton and Albany, where Mamma Gnara, Father of All, is reverenced (*Trans. Roy. Soc. S. Aust.* xvi. 488). Captain Bradshaw has informed the present writer that on the Victoria River a being is recognized who watches over the morals of the tribes, and the same is reported of Kohin on the Herbert River; but in neither case is the epithet 'Father of All' reported, and there is no evidence even of moral influence on the part of the beings reported from the Larrakia of Port Darwin by Foelsche (Curr, *Australian Race*, i. 253). The Cape River tribes are said (*ib.* iii. 146) to believe in a being in the sky, to whom good men go when they die.

In the central area some tribes seem to believe in a being not unlike Baiame; but the evidence as to the beliefs of these peoples is hardly satisfactory. Spencer and Gillen (*Northern Tribes*, 502 f.) say that Twanyirika of the Aruntas and Unmatjeras, and Katajalina of the Binbingas are bugbears, pure and simple, whose function is to keep the women and children in subjection; Tumana of the Kaitish and Murtu-murtu of the Warramungas are simply Alcheringa (*q.v.*) ancestors. Atnatu of the Kaitish stands by himself; he made the Alcheringa and stands in a real relation to the initiation ceremonies; for he is pleased when the operators sound the bull-roarer, and angry when they do not; but he does not trouble himself about morality.

In this account, however, there is no mention of the being known as Altjira, whom Strehlow reports as known to the Aruntas (*Veröffentlichungen aus dem Völker-Museum Frankfurt*, i. 1), and who seems to have been mentioned by Gillen in the *Report of the Horn Expedition* (1896) under the name of Ulthaana ('spirit'). It is therefore open to question how far the account given by Spencer and Gillen in *Northern Tribes* can be regarded as exhaustive.

For the Dieri our evidence is equally uncertain. Gason reported that they believed in a good spirit Mura-mura; but subsequently the Mura-mura were ascertained to be mythical ancestors, like the Muk-Kurnai and the Alcheringa ancestors generally (Howitt, *op. cit.* 487). Recently, however, it has been asserted that the Dieri believe in Mura, a good spirit, distinct from the Mura-mura.

Associated with the All-Father of the south-eastern area is often an evil being, sometimes described as his son, sometimes independent. Thus Henderson (*Notes*, 147) says:

'Mudgegong is an evil spirit, who, after having derived his existence from Piame (= Baiame), declared war upon him and now endeavours with all his power to frustrate his undertakings. The offspring of Piame were numerous, but the whole with the exception of two were destroyed by Mudgegong, who converted them into different wild animals. . . . The evil spirit seemed to be described under the form of the eaglehawk. . . . Certain dramatic representations appear to be performed; the principal one is emblematic of the destruction of the eaglehawk by Piame.'

Another account (Macarthur, *N. S. Wales*, 1837, ii. 301) makes Wandong—one of the sons of Baiame mentioned by Henderson—the author of evil; and a third makes Daramulun himself the opponent (on these myths and their explanation see Schmidt,

in *Anthropos*, iii.). The same antithesis is made between Bunjil and Palyan, Coen and Potoyan, etc. Schmidt's view is that these myths date from the racial conflicts: where the crow race gained the day, Bunjil ('eaglehawk') is the defeated; elsewhere Mudgegong ('eaglehawk') is also defeated, but not by the crow.

It should be noted that there is a certain amount of confusion in the various reports; thus Coen, whom Howitt regards as equivalent to Daramulun, is depicted as an evil being (see Howitt, *op. cit.* 486). Other evil beings are Brewin among the Kurnai (*JAI* xiii. 191, xiv. 321, note 2), Tou in South Australia, Koochie among the Dieri, Jingi in West Australia.

It has, however, frequently happened that an evil being has been reported, who, on examination, turns out to be simply the spirit of a dead man. Thus among the Wiradjuri *buggeen* is not a proper name; in Western Victoria Nisbet (*Colonial Tramp*, 1891, 99) reports an evil deity Muurup, who comes in the lightning to destroy them, eats children, etc.; the owl is his messenger; he lives under ground and commands the evil spirits. But we learn from Howitt that *Muurup* is the soul of a dead man; hence the name can hardly be of any specific deity, but must apply to the dead in general, who are especially feared in the south of Australia.

Female deities are unknown in Australia, but in a certain number of cases the evil being is believed to be of the female sex; thus Kurriwilban, wife of Kogorowen, is described as an enemy of mankind (Threlkeld, *Aust. Language*, 1892, 48).

3. **Burial.**—From the point of view of burial customs, the Australian tribes fall into two groups. (1) In New South Wales, Victoria, South Australia, and the coastal portions of West Australia, simple burial without alternative rites, such as cremation, is the rule, save in an enclave near the mouth of the Murray River. (2) In Northern Territory and Queensland, simple burial without alternative rites is also found, though how far the absence of alternative rites means that our information is defective is an open question; but, as a rule, the body is exposed on a platform, or the flesh is eaten, or the body is buried and the bones subsequently exhumed. The main funeral ceremony is connected with the disposal of the bones. This rite, however, is often reserved, as is cannibalism, for specially favoured individuals, such as warriors, magicians, etc. Alternative rites are used where the subject was unimportant, owing to old age or youth.

Corresponding to these two classes—simple burial and complex rites—there seem to be different views as to the destiny of the soul. In the south the grave seems to be regarded in many cases as its abode; in the north it remains with the body or the bones till the latter are finally disposed of, and then goes to its own place. Fear of the dead seems to be more prominent in the south.

In Victoria and the south of N. S. Wales a hut was frequently built upon the grave, in which the widow or another relative sat during the time of mourning. This is also a Tasmanian custom, and strengthens the evidence for the intimate connexion of the Victorian tribes with the Tasmanian (see *Folklore*, vol. xix. [1908] p. 388).

4. **Future life.**—Australian beliefs as to a future life are generally vague, and our information is defective. At Port Lincoln (*Trans. Philosophical Institute of Victoria*, v. 188) it was believed that the soul was so small as to be able to pass through a chink; after death it went to an island, and could dispense with further nourishment; a redbill accompanied the soul on its journey. Near Adelaide, however (Gerstäcker, *Reisen*, 1854, iv. 364), it was held that the soul lived in trees during the day, and came down at night to eat caterpillars, frogs, etc.; concurrently with this (?), it was believed that the soul went west to an abyss at death. The Euahlayi believe that the spirit of a dead man goes with the spirits of dead relatives to Oobi Oobi, a sacred mountain, from which he is hoisted to Bullimah, Baiame's residence, by certain spirits called *Mooroobeaigunnil* (Parker, *Euahlayi Tribe*, 90 f.).

According to Spencer-Gillen[b] (145, 174), re-incarnation is everywhere the creed. This has been questioned by Strehlow (*Globus*, xci. 285, xcii. 123; *Veröffentlichungen aus dem Völker-Museum Frankfurt*, i., Introduction), and the real facts are not yet ascertained. Strehlow, however, reports two Aranda beliefs. According to one, there is an island of the dead, from which a spirit returns for temporary re-incarnation, lasting for a year or two, and is finally annihilated; the other affirms that the good dead live with Altjira, the sky-being. In the place of the re-incarnation doctrine, Strehlow finds the belief that the germ (*ratapa*) of a child issues from the body of a totemic ancestor, or that an ancestor throws a small bull-roarer at a woman, in whose body it changes to a child.

5. **Cult of the dead.**—Although totemic ancestors figure largely in myth in some parts, there is nothing in the nature of a cult of ancestors. The dead are feared; certain powers are ascribed to them, such as raising storms, sending rain, procuring a good catch of fish, and appeals of various sorts are made to them (Collins, *Eng. Colony in N. S. Wales*, 1798–1802, i. 601; J. S. Lang, *Aborigines*, 31; Lumholtz, *Among Cannibals*, 1889, 282; Ogle, *Colony of West Aust.*, 1839, 58; Salvado, *Mémoires historiques*, 1854, 276; Stephens, *Hist. of S. Aust.*, 1838, 78, etc.), but not specially as ancestors. Near Adelaide the spirits of enemies were kept quiet by magic spells (*Verh. d. Gesell. f. Erdkunde*, i. 194). Sleeping on the grave of a dead man was one of the methods of becoming a magician (Mauss, *Pouvoirs*, 17, etc.). There is a wide-spread belief that natives, when they die, return as white men (Roth, *Bull.* 5, p. 16). There are also traces of a belief in transmigration (*Man*, 1905, No. 28).

6. **Soul.**—All natives of Australia seem to have held an animistic view of man, though the sky-beings are regarded as corporeal. But as to their view of the soul, etc., we have only scanty information. Mrs. K. L. Parker records that the Euahlayi attributed to each person three spirits: Yowee, the soul which leaves the body only at death; Dowee, a dream spirit; Mulloowil, a shadow spirit; and, sometimes, Yunbeai, or tutelary animal ([?] spirit) (*Euahlayi Tribe*, 35).

On the Tully R., Qu., the soul is associated with the shadow and the breath; the *koi* goes away during sleep; after death it goes into the bush. On the Bloomfield R. the *wau-wu* is associated with the breath, but is independent of the ghost. At Cape Bedford it is part and parcel of a man's spiritual part. On the Pennefather R. the *ngai* and the *choi* are distinguished; the latter leaves the corpse at death and wanders in the bush; the former passes into the body of son, daughter, or sister. Both are associated with the heart and afterbirth (Roth, *Bull.* 5. 17–19).

7. **Magic.**—With regard to magical practices, there are well-marked differences between the northern group and the remainder of Australia. Among the central tribes magic is practised by both men and women without special initiation, save in the Anula tribe, where the magician is the producer of evil, not the doctor. The initiated medicine-man has the duty of protecting the community or individual members against the magic of others. Among the south-eastern tribes, however, the medicine-man is both worker of magic and doctor indifferently; and, so far as can be seen,

the practice of magic is usually confined to initiated men, though Mrs. Parker mentions a witch-woman among the Euahlayi.

In some tribes the magician is so by birth; among the Anulas only one kin performs these functions; among the Tongarankas a boy inherits his powers from his father (Mauss, *op. cit.* 10; Howitt, 404). More often, however, initiation is by revelation from the dead, from spirits, or from the All-Father, or else knowledge is communicated by other magicians. Occasionally a man who has escaped miraculously from a violent death is reputed a magician.

It is commonly believed that at their initiation medicine-men have introduced into their bodies certain stones, usually fragments of quartz, upon which their magic powers depend, and which may be caused to leave their bodies if they partake of alcohol, hot drinks, etc., or are bitten by ants. The Euahlayi believe that all magicians have a *nagual* ('individual totem'), which is forbidden food to them, which they can cause to appear to others, and whose shape they can themselves assume.

The commonest form of magic, practised all over Australia, is 'pointing'; hair, etc., are used in the south and east; spells are common; in Queensland a man's lifeblood is said to be withdrawn by the *mangani*; and magic may be worked by an effigy of the victim (Roth, 5. 28; Howitt, 354; Spencer-Gillen [b], 455; Mauss, *Pouvoirs, passim*, etc.).

In connexion with magic, mention must be made of rain-making. The office of rain-maker was often distinct from that of medicine-man, especially among the Dieri, where all participated in the rites; the ceremonies may almost be termed religious. The same remark applies to the totemic ceremonies of the centre and north.

8. Totemism.—The *nagual*, associated with the magician among the Euahlayi and elsewhere, is probably rare in most parts of Australia (for possible cases see *Aust. Assoc. for the Advancement of Science Reports*, iii. 515, v. 638; *Science of Man*, vii. 91; cf. *Man*, 1904, No. 53). Of kin totemism in the S. and E. we know little beyond the names of the animals. In some cases the killing of the animal is forbidden, but among the Euahlayi there is no restriction. It is the *nagual* that is sacrosanct, but it is forbidden to mimic or speak ill of a totem. The totem also helps the human being (Howitt, 400; Parker, 21).

The totemism of the north and centre appears to be generically different from that on the south and east. The local grouping, the great number of totems, and their connexion with *Intichiuma* ceremonies, are all important differentia. Still more important perhaps is the fact that in the south-east totems are animals; in the south, centre, and in South Queensland, animals and plants, the latter fewer than the former; among the Aruntas both in fairly equal numbers; and in North Australia, as in New Guinea, the plant totems outnumber the animals (see Schmidt, in *Anthropos*, iii.).

A progressive change is also noticeable with regard to the eating of the totem, which is permitted among the Arandas alone; in both the Aranda and the Kaitish tribes the totem must be eaten at the *Intichiuma* ceremonies. Among the Warramungas it is offered to men of the totem by others, but not eaten. Finally, in the Binbinga and other tribes it is neither eaten nor offered. It has been mentioned above that the *yunbeai* ('nagual') may be regarded as a fourth soul. There are traces of a similar animistic view of ordinary totemism. Among both the Euahlayi and the Warramungas one of the divinatory ceremonies to discover a murderer consists in observing the tracks near the body; the track of a snake indicates that a man of the snake totem is the culprit (Spencer-Gillen [b], 519, 526; K. L. Parker, *op. cit.* 89).

So-called 'sex-totemism' is found in South Australia, Victoria, and New South Wales, mainly on the coast. Each sex has a 'brother' or 'sister,' whom they respect and regard as the creator of their sex. The sacrosanct animals are usually small birds (wren, nightjar, etc.) or the bat.

9. Initiation ceremonies.—The initiation ceremonies fall into two main groups: (1) the central tribes west of a line from near Adelaide to the south end of the Gulf of Carpentaria practise circumcision, and, with the exception of a small area near Adelaide, sub-incision also; knocking out of teeth is known and practised in this part of Australia, but has no special significance; and (2) along the west coast and in Victoria and New South Wales the initiation ceremony consists in the knocking out of the boy's tooth. North of the Queensland border even this feature is wanting, and combats, real, not simulated, with spears, clubs, etc., test the manhood of the youths. Whereas in the central area the ceremonies are performed by successive stages, so that a youth attains his privileges gradually, the initiation customs of the eastern tribes admit him at once to all the privileges of manhood, though, of course, his share in the government of the tribe is naturally small until he has attained riper years (Howitt, 509–677; Curr, *op. cit.*, *passim*; Spencer-Gillen [b], *passim*).

In connexion with the initiation ceremonies, mention must be made of the system of food prohibitions, which perhaps attains a greater development in Australia than in any other part of the world. Eyre (*Journal*, 1845, ii. 293) records particulars of South Australian customs. Up to the age of nine or ten, boys were free to eat any food; then twenty or thirty different animals and birds were forbidden them; ten years later some of these restrictions were relaxed, but new ones were imposed; married men up to the age of thirty-five were forbidden eight or ten articles of diet; old men were, again, free to follow their inclinations. There were similar lists of prohibited foods for girls and women.

10. Bull-roarer.—There are well-marked variations with regard to the bull-roarer. In the south-east of New South Wales it is associated with Daramulun; elsewhere in the colony and in Central and North Australia it is associated with a spirit or spirits in the exoteric doctrine; but the young men are taught its real nature at initiation. Both in New South Wales and in South Australia two bull-roarers were used, one large, the other small, which were sometimes said to be male and female. Among the west coast tribes of the Gulf the bull-roarer is rare, but here too the women are told that it is the voice of an evil spirit. On the Georgina River a large sacred bull-roarer is found, and side by side with it a small one, which is simply a toy. In some parts of North Queensland children of both sexes use it as a toy, in others only boys. On the Bloomfield River the boys are taught the use of it at the initiation ceremonies; but they are permitted to use it in the presence of women, so that it partakes more of the character of a toy. See BULL-ROARER.

AUTHORITY.—*Definition and scope.*—The word 'authority,' as used in ordinary language, always implies a certain amount of coerciveness. The most common meaning is that of a power to enforce obedience. But the sense varies according to the sphere in which the authoritative power is exercised. As regards action, it is the power which enforces obedience. Authority and obedience are correlative terms, supremacy being implied on the part of authority, and dependence on the part of those who have to obey. Authority has the right and the power to say the last word, and to give a decision from which there is no appeal. Its judgment is final. But there is also a use of the word which reveals it as operative in the sphere of opinion, belief, and action. The final test of belief and of opinion is action, and authority in this regard is the power which is held to have the right to influence opinion, to induce belief, and so to lead to action. That is to say, this view really is a phase of the view which looks on authority as the power that enforces obedience, for it shows authority at work in that sphere which ultimately issues in obedience. It reveals the process by which obedience is won. The right to influence opinion, to induce belief, to persuade a man to take a certain course of conduct, which belongs to authority, is thus the way to command obedience. Yet there is a shade of difference in the two aspects of authority set forth above. In that view which regards authority as the power that commands obedience, we abstract from the way and means by which it persuades the man to obey, and fix our attention on the categorical command which must be obeyed. In the other case, authority is presented as rational, as proving its right to command, as presenting itself in an attitude of persuasion, as leading the object of authority to lend his own assent to the demand made on him. The power to create opinion, to influence belief, and to constrain to action is exercised with a view to enforce obedience. This power may be exercised in many ways, varying according to the sphere of operation, the means available, and the end in view. In the intellectual sphere it may take the form of authoritative opinion, the view of a man who has the expert knowledge which few others have at command. It may take the form of testimony as to matters of fact of which he is or has been the only witness. In short, it may take a thousand forms; but the outcome in every case is to win assent, to constrain belief, and to influence action.

The common element in all forms of authority is ultimately to enforce opinion, and to constrain belief. Without this element of coerciveness, authority has no real meaning. All authority inhibits, forces, or pains. It is of its very nature so to act. But, on the other hand, authority must be prepared to justify itself, and to show that it has the right to command, and the power to enforce its behests. It is not an end in itself; it is a means to an end. What that end may be it is not necessary here to determine. It may be that Höffding is correct when he says:

'Authority can never be anything but a means, and the principle of authority is subordinate to the principle of personality, as mediate value must always be subordinate to immediate value. The burden of proof must always lie with those who wish to inhibit, limit, force, or pain. Authority pleads as its justification that it is the necessary condition for the complete carrying out of the principle of personality' (*The Philosophy of Religion*, p. 279).

To Höffding the principle of authority, while it has its own place and function, is subordinate to the principle of personality. This is a different contrast from the familiar one of the antithesis of authority and reason, with which literature is so well acquainted. Höffding is concerned with the principle of the Conservation of Values, and for the right estimate of values the principle of personality, he holds, is of supreme worth. It is not necessary to enter into his theory, or to discuss it. The main thing is that for him the principle of authority is not ultimate. It must justify itself. There is another view which we may take from Mr. Arthur Balfour.

'Authority, as I have been using the term, is in all cases contrasted with Reason, and stands for that group of non-rational causes, moral, social, and educational, which produces its results by psychic processes other than reasoning (*The Foundations of Belief*, p. 219). 'If we are to judge with equity between these rival claimants, we must not forget that it is Authority rather than Reason to which, in the main, we owe not religion only, but ethics and politics; that it is Authority which supplies us with essential elements in the premises of science; that it is Authority rather than Reason which lays deep the foundations of social life; that it is Authority rather than Reason which cements its superstructure. And though it may seem to savour of paradox, it is yet no exaggeration to say that, if we would find the quality in which we most notably excel the brute creation, we should look for it not so much in our faculty of convincing and being convinced by the exercise of reasoning, as in our capacity for influencing and being influenced through the action of Authority' (*ib.* p. 229 f.).

In drawing out the contrast between authority and reason, Mr. Balfour dwells with delight on customary opinion, habit, and on that 'group of non-rational causes—moral, social, and educational—which produces its results by psychic processes other than reasoning.' He has forgotten to observe that in all these processes reason is, at all events, implicit. For the customs, traditions, and social, moral, and educational influences in the midst of which we live, have been the products of rational beings, of beings, in short, who have been implicitly rational from the beginning. All the causes which he claims for authority may be better assigned to reason. He refuses to let reason possess authority, for, he says, 'Authority as such is, from the nature of the case, dumb in the presence of argument.' It is instructive to read why it should be so. But we may not linger over his ingenious argumentation. Our contention is that authority need not fear argument, when it insists on its legitimate claim to influence or coerce men. But then its claim must, like all claims, submit to criticism; and, when it does so, it need not take refuge in groups of non-rational causes, or in that dim mysterious region of instinct to which Mr. Balfour consigns it. For there are many voices which speak to us with authority, and to none of them can we turn a deaf ear without paying an appropriate penalty. That penalty may be stated, and the sanction of any true authority may be vindicated, to the satisfaction of reason.

It may be broadly stated that in every sphere of human activity, and in every sphere of human thought, there is something which may rightly be called authority. The sanctions by which authority vindicates its attitude may vary with each sphere, but in all of them there is authority with its appropriate sanctions. It is not our purpose to make an exhaustive enumeration of the spheres in which authority has its appropriate place and function. To do so would be to enumerate all the sciences, all the arts, all the philosophies, and, in short, all those achievements of the human mind which are embodied in the literature of the world. But we may ask—

1. Is there an authority in science? And if so, what are its functions, and what are its sanctions? Waiving the question as to the abstract nature of science, and as to the depreciation of it on that account, may we not say that it is through the achievements of science that we have won control over the external world, and subdued it to the uses of man? It may be quite true that nature is more complex and more subtle than our sciences, and that, while we speak of heat, light, electricity, gravitation, and dwell on these in our abstract fashion, every particle of matter is at the same

time in some state of temperature, in some electric condition, and so on. Yet so far science has read the meaning of nature, and has subjected itself to the authority of nature. The external world has been controlled by man, and subdued to his uses only because he has submitted himself to its authority. It is possible for a man to strive to ignore the law of gravitation, but, if he does so, he will never build a house. Practical work in the external world is possible only if a man submits to the authority placed on him by the nature of that world. We do not mean only that he must recognize those great and universal characteristics of nature which science has expressed under such generalizations as the law of gravitation, the law of the conservation of energy, and such like,—he must have regard to the particular nature of every natural object with which he has to do. He must deal with stones according to the qualities of stones, with timber according to the qualities of timber, and with other things after their kind. These dictate to science and to men generally the conditions under which work must be done. In building his bridges man must make allowance for the contraction of iron under cold and for its expansion under heat. The nature of his material and the laws of physics speak to him with an authoritative voice, and if he ventures to disregard that authority, he must pay the price. He will find it sanctioned by tumbling houses, falling bridges, and general wreck and ruin. Nature will do anything for one who knows how to make her work, but she will do nothing for one who does not know her way and her limitations. We take from the sciences our first example of authority, and we have begun here because we find that the authority of nature can be justified, and that reason quite recognizes the validity of the claim which nature presents to man in the system in which he lives.

Reason can recognize the processes and methods of nature. Indeed, the possibility of science depends on the presupposition of the rationality of nature. Acting on that supposition, science has questioned nature, has experimented with her, has come to know her, has summed up its knowledge of nature in the special sciences, and has succeeded in this venture just because it has recognized the order of nature as real, objective, authoritative. The value of the generalizations of science lies in the fact that they represent nature, and that they may be verified in the processes and in the facts of nature. This means that the order of nature is recognized by man as authoritative, and science has taken it as such. No doubt, there is a correspondence between the order of nature and the constitution of the human mind. The correspondence exists, whatever the explanation of it may be. It would lead us too far afield to inquire into the origin and character of the correspondence. Nor is it necessary; for, whether we hold that mind gives laws to nature or the converse, the correspondence stands. Mind and nature are related the one to the other. So, whether we inquire into the order of nature or into the constitution of mind, we are led to something common to both. For nature is rational, is a system, and mind finds that the rationality in nature is akin to the rationality of which it is conscious in itself.

2. Authority of the laws of reason.—When we inquire, therefore, into the constitution of mind, we start with the presupposition that we shall find it rational, just as we have found nature to be rational. One of the chief characteristics of mind is that it has the power of transcending particular experiences, and of making universal and necessary propositions, which it believes to be true always and everywhere. These judgments are disclosed to it on reflexion, but from their very nature they lie at the foundation of all experience, and without them experience would not be possible. They are of such a kind that the mind recognizes their truth and validity as soon as it understands them. They bear on the face of them their own irresistible evidence. It is impossible for us to think of an event happening without a cause. The law of causation rules our thinking, and of an unrelated event we are unable to conceive. Axioms are axiomatic. We cannot think without them. It makes no difference whether we call them 'axioms,' or designate them 'postulates'; in either case they are there as the foundation of all our thinking. Without them we should fall into contradiction, and lapse into confusion. Thought must be consistent with itself, that is, it must not be self-contradictory, and thought must be consistent with reality. On the other hand, these universal and necessary judgments must be prepared to vindicate their validity. They must submit to criticism, and show themselves in their universal and necessary character. They must show themselves in all the glory of their self-evidence; they must be prepared to prove that the opposite of them is inconceivable; and they must prove that, unless we accept them, our thinking will be self-contradictory. It is not necessary to enumerate these axioms. Two and two make four, a thing cannot be and not be at the same time—on such axioms as these all are agreed, whatever the explanation of their validity may be. All thinking must assume the law of non-contradiction, as all fruitful thinking must recognize the validity of the laws of logic.

These axioms are authoritative, and are authoritative in the ordinary meaning of the term. They enforce obedience to them under the sanction that, if they are disregarded, thinking will be inept, unfruitful, nonsensical. In this sphere the antinomy between authority and freedom, between authority and reason, between the principle of authority and the principle of personality, does not emerge. For the principle of authority here is the very principle of reason itself, and these necessary and universal judgments are those which make freedom, personality, and reason possible. For reason can be exercised only on the basis of universality and necessity. Because there is a fixed order of nature, and necessary laws of reason, freedom is possible, and ideals may be conceived and realized. If there were no axioms, if there were no universal and necessary judgments, no fixed properties of things, it would not be possible for mind to conceive ends and adopt means for their realization. Nor would it be possible for man to maintain a rational relation to a random world. The main thing, however, to insist on here is that these universal and necessary judgments speak to us with authority, coerce our opinions and beliefs, and constrain us to action consistent with them. They have thus the note of authority, and enforce themselves on us with very drastic sanctions. Our thinking, our action, and even our feeling must be consistent with them, and must proceed with a due regard to their supremacy.

3. Authority in the sphere of civil life.—We have seen that authority is rightly exercised over us by the external order of the world, and by the laws of mind itself, and that the sanctions are of the most real and emphatic order. Can we find a legitimate sphere for authority, with appropriate sanctions, in the sphere of civil life, in the sphere of morals, and in the sphere of religion? It is impossible to say that in these spheres a denial of authority involves self-contradiction. Disloyalty,

disobedience, and anarchy are possible, as history abundantly shows. Take the case of government, and ask, What is the place of authority in it? Here clearly we must bring in a number of considerations which were not needed in relation to the authoritativeness of laws of nature and laws of mind. With his usual insight and sagacity, Bishop Butler sets forth the essential note of government when he says:

'The annexing pleasure to some actions, and pain to others, in our power to do or forbear, and giving notice of this appointment beforehand to those whom it concerns, is the proper formal notion of government. . . . If civil magistrates could make the sanctions of their laws take place, without interposing at all, after they had passed them, without a trial and the formalities of an execution; if they were able to make their laws execute themselves, or every offender to execute them upon himself—we should be just in the same sense under their government then as we are now; but in a much higher degree, and more perfect manner' (*Analogy*, pt. 1, ch. ii.).

Attaching pleasure to some actions and pains to others, and giving notice of the appointment beforehand, is the proper notion of government. Let us take this conception with us, as we seek to investigate the function of authority in civil government. The State is the source of authority within its dominions. It is the maker of laws: in its judicial function it is the administrator, and in its executive function it is the active agency in enforcing obedience. All local authorities are derived from the State. These may be administrative, like town and county authorities, authorities dealing with public health, and so on; they may be judicial; or they may be commercial; yet each delegated authority derives its power from the State, and is responsible to the State for its exercise. The authority of each independent State is supreme within its own dominion. It might be asked, What is the State, and from what source is its authority derived? That is too large a question to be discussed here (see art. GOVERNMENT). But it may be well to learn from competent authority what is meant by law, by sovereignty, and by subjection and obedience. Austin tells us that—

'Laws set by God to men, laws established by political superiors, and laws set by men to men (though not by political superiors) are distinguished by numerous and important differences, but agree in this, that all of them are set by rational and intelligent beings to intelligent and rational beings' (*Lectures on Jurisprudence*, vol. i. p. 3 [3-vol. ed. 1861]). Again, 'Of the laws set by men to men, some are established by political superiors, sovereign and subject; by persons exercising supreme and subordinate government, in independent nations, or independent political societies' (p. 2). As to the source of law, it is thus stated: 'Every positive law, or every law simply and strictly so called, is set by a sovereign person, or a sovereign body of persons, to a member or members of the independent political society wherein that person or body is sovereign or supreme. Or, changing the expression, it is set by a monarch or sovereign member to a person or persons in a state of subjection to its author' (p. 169). Again, 'The notions of sovereignty and independent political society may be expressed concisely thus: if a determinate human superior, not in a habit of obedience to a like superior, receive habitual obedience from the bulk of a given society, that determinate superior is sovereign in that society, and the society (including the superior) is a society political and independent' (p. 170).

It may be well to refer in this connexion to Maine's *The Early History of Institutions*, p. 349 f., for an independent contribution to Austin's theory of sovereignty and subjection. As to the theory itself, it is very abstract, and the great political facts are reduced and attenuated to abstractions, in which the fact of sovereign service and the loyalty of subjects have disappeared. It is well to have a description of abstract sovereignty and abstract obedience attenuated to the uttermost. Yet, after all, it does not help us much in our inquiry. It may be desirable for the student to read more modern contributions to the theory of the State, especially those which have been influenced by the philosophy of Kant, and by the great idealist school more or less dominated in this regard by Hegel. Reference may be made to Green's 'Principles of Political Obligation' (*Collected Works*, vol. ii. p. 445):

'It is a mistake to think of the State as an aggregation of individuals under a sovereign—equally so whether we suppose the individuals as such, or apart from what they derive from society, to possess natural rights, or suppose them to depend on the sovereign for the possession of rights. A State presupposes other forms of community, with the rights which arise out of them, and exists only as sustaining, securing, and completing them. In order to make a State, there must have been families of which the members recognized rights in each other (recognized in each other powers capable of direction by reference to a common Good): there must further have been intercourse between families, or between tribes that have grown out of families, of which each in the same sense recognized rights in the other. The recognition of a right being very far short of the definition, the admission of a right in each other by two parties, whether individuals, families, or tribes, being very different from agreement as to what the right consists in—what it is a right to do or acquire—the rights recognized require definition and reconciliation in a general law. When such a general law has been arrived at, regulating the position of members of a family towards each other and the dealings of families or tribes with each other; when it is voluntarily recognized by a community of families or tribes, and maintained by a power strong enough at once to enforce it within the community and to defend the integrity of the community against attacks from without, then the elementary State has been formed.'

For the vindication of the exercise of authority in a State, it is not sufficient to dwell on the abstract relationship of sovereign and subject or on the independence of a State; the authority must be vindicated on other grounds. Green has shown that a State is not an assemblage of mere individuals under a common government. Individuals are already united by moral bonds; they are in families, in tribes, and as such are in mutual recognition of rights and duties. Those in authority must do service, and must justify their action on the ground of recognized worth or good achieved; or even on the lower ground of utility. Authority must justify its existence. Aristotle has well recognized and insisted on the obligation to service which attaches to those who exercise authority. He shows that a State is not an association formed exclusively for the acquisition of wealth, or for military strength, or for the encouragement of commerce. The object of the State is the promotion of the higher life. When men are associated together in a State, 'the object of their association is to live well—not merely to live.'

'Virtue and vice are matters of earnest consideration to all whose hearts are set upon good and orderly government. And from this fact it is evident that a State which is not merely nominally, but in the true sense of the word a State, should devote its attention to virtue. To neglect virtue is to convert the political association into an alliance differing in nothing except in the local contiguity of its members from the alliance formed between distant States, to convert the law into a mere covenant, or, as the sophist Lycophron said, a mere surety for the mutual respect of rights, without any qualification for producing goodness or justice in the citizens. But it is clear that this is the true view of the State, *i.e.* that it promotes the virtue of its citizens' (Aristotle's *Politics*, bk. iii. ch. 9, Welldon's tr. p. 124 *f.*).

The authority of a State is not justified by the mere fact of sovereignty; the sovereignty must be of a certain character. According to Aristotle, it must be an institution in which goodness, virtue, and justice are produced in the citizens. The State, in more modern phraseology, must be an institution in which a man can find himself, realize himself, and by its means be able to live a rich, full, and gracious life. It must be the home in which his ideals are so far realized, which in the history of the past and in the situation of the present affords ideals worthy of imitation to the citizen in all the variety of his manifold endeavour. The authority of a nation over its citizens is thus justified by the tradition of the nation, by its achievement in former ages, by the ideal it sets before them at the present hour, and by its promise for the future. The authority of a State can neither be measured nor justified by the material force which it has at its command to enforce obedience. Force is no remedy, nor can it win

the loyalty of the governed. Without loyalty the exercise of authority is hindered, confined, rendered ineffective. It makes no difference in the final issue whether power is exercised by a king or by the citizens themselves; for, if it is exercised unworthily, it casts a blight on the flower of loyalty, which is essential to the full exercise of authority. Briefly, it may be said that the State is an ethical institution, and while material force is needed, yet the exercise of that force is conditioned by the fact that it must always be exercised for the good of the community, and in the interests of the higher values. Authority and loyalty must go hand in hand in every State which is worthy of the name. Of the manifold relations of governor and governed, of the claims which the State has a right to make on its citizens, of the freedom of the individual over against the State, and of the limits of civil obedience it is not possible to speak here. Nor is it necessary, for the due exercise of authority in this sphere must always be in such ways as to carry with it the consent of the citizen, to arouse his loyalty, to deepen his sense of obligation to the State, and to quicken him to do the State enthusiastic service. In this sphere, too, authority has to justify itself by its fruits.

4. **Authority in morals.**—We have passed insensibly to the exercise of authority in the sphere of moral life. Is there a Categorical Imperative? Is there an Ought, a law binding on us, which we must obey unconditionally, and cannot disobey except at our direst peril? To these questions it is not possible to give an exhaustive answer within our limits. The facts of the moral life are so various, the explanations of them so numerous, and the theories of ethics so manifold, that it is difficult to isolate the voice of authority, and to give here a distinct and categorical answer. Yet the ordinary moral consciousness speaks of virtue and vice, of good and evil, and of right and wrong, and it has definite meanings when it uses these ethical contrasts. It has a notion that virtue and vice relate to character, that good and evil relate to the end of life, and that right and wrong refer to a standard. It is conscious, also, that they all relate somehow to an ideal of conduct. When it speaks of right and wrong, it sets up a standard of conduct; when it speaks of good and evil, it passes a judgment on the end and purpose of life; and when it speaks of virtue and vice, it recognizes an ideal of character which it feels ought to be realized in practical life.

Students of ethics will remember Kant's treatment of the ordinary moral consciousness, which in his *Metaphysic of Ethic* he analyzes, on the way towards his theoretical exposition of ethic. Kant lays stress on the Good Will as the absolute example of Good. He insists that the aim of the practical reason is to produce an absolutely good will, not a will which is good only as a means to happiness. A good will is the supreme good, though it may not have attained to completeness. Inasmuch, however, as a perfectly goodwill is not attainable in its fullness here, Kant proceeds to set forth the notion of duty. He assumes that the good will in its completeness is wholly rational, and obeys without question or hesitation the law of reason. But in a being like man, who has passions and desires as well as reason, the good will is not wholly good. Hence the need of the conception of Duty. Kant insists that duty excludes not only all direct violation of morality but all acts the motive of which is inclination, even when these are not in themselves opposed to duty. In the second place, he shows that the moral value of an action is determined by the maxim or subjective principle of will which it manifests, not in relation to the object which acts upon desire. And he concludes, in the third place, that duty may be defined as the obligation to act from reverence for law (cf. J. Watson, *The Philosophy of Kant Explained* [1901], to which the present writer is deeply indebted). Man, however, is a being whose desires are not invariably in harmony with reason. But a good will cannot be determined by natural inclination; it must be determined solely by the principle of duty for duty's sake. There is thus a dualism in human nature, there are wants and desires which demand satisfaction, and there is reason, which prescribes conformity to duty. What is the relation of duty to desire? In answering this question, Kant passes from the analysis of the moral consciousness to the problem of moral philosophy. And among other questions he asks this one, What is the nature of the supreme good? He derives it from the idea of moral perfection, which reason forms *a priori* and connects inseparably with the conception of a free will. The principle of morality is, and must be, independent of experience, and derives its authority solely from reason. As Dr. Watson says:

> 'We learn three things: firstly, that all moral conceptions proceed from reason entirely *a priori*; secondly, that it is of supreme importance to set the conceptions of morality before the mind in their purity, and not merely in the interest of a true theory of morality, but also as an aid in practical life; and thirdly, that the principles of pure practical reason, unlike those of theoretical reason, do not depend in a sense upon the peculiar nature of man, but are derived from the very conception of a rational being, and therefore apply to all rational beings' (*op. cit.* p. 317).

Following out these assumptions, Kant proceeds to set forth the metaphysic of morality. The Categorical Imperative is expounded, and in pursuance of it he sets forth the laws of the universal imperative of duty. 'Act as if the maxim from which you act were to become through your will a universal law of nature.' Another law reached by him after a prolonged discussion, into which we cannot enter, is, 'Act so as to use humanity, whether in your own person or in the person of another, always as an end, never as merely a means.' And a third law arises to complete the series: 'Act in conformity with the idea of the will of every rational being as a will which lays down universal laws of action.' [We use the translation of Dr. Watson.] Enthusiastic Kantians have compared these with Newton's three laws of motion. There need be no hesitation in recognizing their abiding worth. Nor need there be any hesitation in acknowledging the indebtedness of mankind to Kant for his lofty teaching regarding the conception of Duty. It is a permanent gain that he has shown the impossibility of deriving the Categorical Imperative from what he calls the Hypothetical Imperative. It is the practice in some schools of thought to derive the binding character of obligation from the fact that, if we are to gain an end, we must use the appropriate means. This is quite true. If I am to become a teacher, I must qualify myself for the office. And so with regard to the use of any other means by which an end is gained. I may decline to be a teacher, and so be discharged from the training needed for a teacher. But I may not decline to be moral. The demand of morality on me is absolute. For this demonstration the world is indebted to Kant.

The severely abstract character of Kant's ethic has given rise to difficulties. It is hard for the student of his ethic to find a point of contact with this working-day world. It is also severely intellectual, and seems to disregard the real nature of man. A common prayer of religious men, both in the congregation and in solitude, is, 'Incline my heart to keep Thy law.' If this prayer is answered,

and the heart is inclined to keep the law, immediately the act is removed from the sphere of duty, for inclination has nothing to do with duty. To touch morality with emotion would seem to destroy its character. Yet on some occasions Kant seems himself to be filled with emotion. This is specially the case in his commanding and striking address to Duty, and when he contemplates the majesty of the starry heavens above and the moral law within. Are we to say that in these moments Kant is lifted out of the sphere of morality? The truth seems to be that Kant in his analysis of the moral consciousness has forgotten the feelings and emotions and desires. Or, when he remembers them, he thinks of them only as disturbing elements, as hindrances to the working of the Categorical Imperative. He has not apparently contemplated the possibility of a man doing his duty because he likes to do it. If statutes may become songs, if a man may learn to love the law, how does it stand with him? Is he moral or is he outside of morality? Apparently in his analysis Kant has left out this possibility. It is curious to reflect that Herbert Spencer also comes to a similar conclusion, for he thinks that in a perfectly evolved State the sense of obligation will cease, as duty will become pleasure, and the strain will no longer be needed (*Data of Ethics*, § 47). In his exposition Dr. Watson says:

'A perfectly good will agrees with the rational will of man in conforming to objective laws, but it differs in not being under an obligation to conform to them. An imperative has no meaning as applied to the Divine will or any other holy will, such a will being by its very nature in harmony with the law of reason. Imperatives are therefore limited to beings whose will is imperfect, such as the will of man, expressing as they do the relation of objective law to an imperfect will' (*op. cit.* p. 318).

It seems a somewhat curious outcome. Is an Imperative less imperative when I consent to its rationality, and consent with my whole nature so completely that all its impulses, desires, and longings are constrained so thoroughly that all opposition to it passes away? Is the imperativeness of the Imperative less than before? Does an Imperative ever become real and operative until I lay it on myself, and make it binding on myself? Does it cease when I am able to make it wholly operative? It would seem, therefore, that there is something lacking in the analysis of the moral consciousness instituted by Kant. It neglects feeling. It forgets that the moral appeal is directed not to the intellect alone; to the will alone. It commands that the inclinations, the passions, and the desires shall be yoked to duty, and that man as a whole and as a community shall become moral. Moral authority does not cease when the will of man becomes wholly the good will, nor does obligation cease when man is wholly moralized. The statute does not cease to be a statute when it becomes a song, nor does the law vanish when the heart of man is inclined to keep it. We may not inquire further, in this place, into the nature of moral obligation, nor need we discuss the various views of it which have appeared in the history of ethics. It is sufficient for us to have indicated that morality has authority, from whatsoever source it may be conceived to flow. Man feels that he is bound to attain a certain character, to live up to a certain standard, and to attain to that ideal of life which can be described as good. The inward moral feeling must agree with an objective reality, and his judgment of values must be rooted in reality. The objective worth must be realized in the inward life. Here, however, we pass beyond the bounds of ethics, and enter into the sphere of religion.

5. **Authority in religion.**—In the sphere of religion, authority takes on a new form, speaks to us with a new voice, and passes from the sphere of the impersonal into that of the personal life. As Hegel finely says:

'All the various peoples feel that it is in the religious consciousness they possess truth, and they have always regarded religion as constituting their true dignity and the Sabbath of their lives. Whatever awakens in us doubt and fear, all sorrow, all care, . . . we leave behind on the shores of time; and as from the highest peak of a mountain, far away from all definite view of what is earthly, we look down calmly on all the limitations of the landscape and of the world, so with the spiritual eye man, lifted out of the hard realities of this actual world, contemplates it as something having only the semblance of existence, which, seen from this pure region, bathed in the beams of the spiritual sun, merely reflects back its shades of colour, its varied tints and lights, softened away into eternal rest' (*Philosophy of Religion*, Eng. tr., vol. i. p. 3).

It is in the sphere of religion that all the authorities referred to above are harmonized, unified, and made effective in a grander manner. For it is here that we can gather them into a unity, and see them to be one, for they reflect the absolute, central unity of the universe. When we speak of the unity of nature and the authoritative character of its system, we really mean the unity which is given to the universe by the mind which informs it, and by the presence enshrined in it. It is the primary revelation of God, and speaks to us with a Divine meaning; and when we read its meaning we are thinking the thoughts of God. So, also, when we read and decipher the laws of reason, think out the first principles of reason, and act on its axioms, we are dealing with reason which is not merely ours, but is also objective and authoritative. So, also, when we read history, dwell on the life of man organized into communities, and realize what in this sphere authority and subjection mean, here too we are in a Divine presence, and the powers which be have been ordained of God. All authority is thus ultimately Divine authority. This is true whether we regard the world from the theistic or from the pantheistic point of view. In the latter case authority comes from the perfect whole, in the former case it comes from the living God who has made, sustains, and rules the world. So, too, the binding power of morality flows from God. It is for this reason mainly that we are dissatisfied with the analysis of Kant, and regard it as imperfect. For religion comes to ethics and seeks to deliver it from the dry abstractions on which it delights to dwell, and strives to bring it into the warm relation of personal affection. It would relate moral feeling, moral aspiration, and moral obligation not to an impersonal law or to abstract truth, but to a Living Presence, to a Holy Person, to a Loving Will. Religion would not distinguish minutely between a Divine nature and a Divine will, nor would it seek to derive the Divine authority from a Divine will as distinguished from a Divine nature, for to religion the Divine will is only the expression of the Divine character.

As to the authority of nature, of truth, of civil society, of moral law, religion regards it as valid in its own place and way. They are expressions of the Divine nature, and express it as far as they can. But nature is an imperfect expression of the Divine nature. It may show forth certain aspects of the Divine nature, but the full meaning of God cannot be expressed in nature, or in human reason, or even in man as yet. God has really put a meaning into His works, and that meaning we are bound to read. Science is our interpretation of that meaning so far as we have been able to read it. There is a wider, deeper meaning in history, and in the nature of man, for here we deal with a world of persons, each of whom has or may have a meaning in himself. But even here the language of human life and destiny which God has had to use to express His meaning is not adequate to its work. For man is imperfect, man has been so far non-rational and

non-moral, and the meaning of an absolutely moral and rational Personality cannot be expressed by these imperfect means. Yet nature and history do in some measure reveal God, and their value for religion consists in the fact that they reveal the living, personal God. It is for this reason that they speak with an authoritative voice. They reveal God. But the source of all authority is God, and the motive to obedience is love to God, who has thus revealed Himself to man through nature, reason, and history. The ultimate sanction of this authority is transformed from the old mode of coercion, and has become something new. No longer is man impelled by the fear of consequences, or by the dread of an external penalty somehow connected with disobedience. The strongest sanction is that he dreads with unspeakable terror the possibility of estrangement from God, and of losing that fellowship which is his very life.

This, then, is the nature of authority in religion. And it sums up in itself all other authorities. It deepens the sources of authority, it transforms its sanctions, and in so doing makes them more than ever coercive. It is also to be observed that this authority is wielded by God Himself and by Him alone. God alone is Lord of the conscience, and He alone can command the conscience. Any other authority is at best ministerial, and is authoritative only in so far as it can produce and substantiate its credentials from Him. Laws of nature, laws of reason, laws of civil authority, laws of morals, are binding on men so far as they are laws of God, and no further. This seems to be what authority is from the religious point of view.

Again, from the religious point of view all things and agencies have their value in this, that they express God's meaning, and are of worth just so far as they are able to express that meaning. Thus they have to be supplemented and added to by those other ways of Divine expression which are to be found in the history of man and in the fullest revelations of God. This is not the place for a lengthy discussion of revelation, or of that form of it which Christians believe to be the highest and fullest, viz. the revelation of God given to man in Christ. Nor can we even indicate how in the revelation of God in Christ there is a complete expression of the Divine nature, and the manifestation of authority binding on all. Truth for the intelligence, life for the heart, and energy for the will are summed up in Him who is the Way, the Truth, and the Life.

Leaving these topics for adequate treatment in their proper places, we may note here that the authority of God vindicates itself on every ground on which it could be vindicated. We instinctively bow down in obedience to the highest and the best, to the wisest and the most pure, to the mightiest and the greatest. We bow down to this authority and regard its behests as binding, not merely because we recognize its right to command, but because we find also that its service is perfect freedom, because we are persuaded that it can guide, strengthen, comfort, and console. Here also authority appears finally in its strongest and most persuasive form. Perhaps the most picturesque, as it is also the strongest form of authority, is that exerted by a person upon persons. Think of the loyalty of soldiers to the general in whom they trust, think of the devotion of disciples to a master, think of the loyalty of men to a great political leader; they will work for him, serve him, live for him, die for him; his word will send them forth to fulfil his will or die. This element of personal devotion appears in religion in the very form which religion in its highest flights takes. From this point of view natural laws, laws of reason, laws of morals, become ways by which we acquaint ourselves with God; but these do not satisfy, they simply impel us on to acquaint ourselves with God and be at peace.

From this point of view certain discussions regarding the ways by which God makes Himself known simply become irrelevant. There is no need to inquire into infallibility, or inerrancy, or any other categories of the same kind. These are categories which men cannot use. Nor are they needed. For the ways by which God makes Himself known are simply means to an end, and we need not spend time on their characteristics. We only ask, Do they lead to God? However good and sure the ways may be, their ultimate value lies in this—that they lead to God. Yet men may linger in them, admire them, speculate about them, their beauty, inerrancy, and so on, till they place them in a position which belongs to God alone. It is time that men should use them as they are meant to be used, and cease to attribute to them qualities which belong to God alone.

Authority then is real, is ever present with men, is indispensable for the training and education of man. It is exercised in many ways and in many degrees. It has to justify itself not merely by the exercise of power, and by the ruder kinds of penalty; it has to meet the demands of human reason, to satisfy the requirements of the human conscience, and to prove itself the guide, the counsellor, the friend of man. The will must find in it purpose, guidance, and energy; the heart must find in it something to stir the emotions, to win the affections, and to arouse the higher passions of love and desire. And the intelligence must find in it truth, principle, and reality. When we trace all authority up to God, we have named that name which at once satisfies all the demands that men have a right to make on the authority which confronts them with an absolute claim to loyalty and obedience.

JAMES IVERACH.

AUTOMATISM.—Originally the 'automatic meant that which happens of itself and without any visible external cause, and the uses of the word in the various sciences may all be traced back to this etymological signification.

1. The first of these is the *physiological*. When motions are observed in an organism which are not apparently initiated by any external stimulation, the action is described as automatic, and this automatism is one of the chief marks of a living body. Physiologists, however, generally hold that such spontaneity is only apparent, being really a secondary rearrangement and interaction of the chemical and physical forces which have been taken into the organism.* All physiological activity is thus taken as continuous with and included in the general scheme of physical interactions.

* See, however, art. ATTENTION, p. 213[a], and H. Driesch, *The Science and Philosophy of the Organism*, London, 1908.

2. When this point of view is extended to the *psychological* plane and confronted with the fact of consciousness, it may engender that form of psycho-physical parallelism known as psycho-physical automatism, or the Automaton Theory. As the various physical energies are taken to form a closed system with a fixed amount of energy and incapable of being affected by anything alien or extraneous (such as consciousness), it must on this theory be denied that consciousness has any efficacy, *i.e.* that its presence in any way alters the course of physical change. Why it should exist at all becomes a problem; but it may be regarded as an *epi-phenomenon*, a sort of unsubstantial reflexion which accompanies, and is probably in some unexplained way produced by, the flux of physical changes, or as a series of changes running parallel to, and somehow corresponding with, the physical changes, but of a fundamentally different order. The scientific aim of the doctrine of psycho-physical parallelism is to distinguish sharply between psychical and physical process, and it has the methodological advantage of freeing the consideration of the latter from the perplexing influence of the former. It may assume a double form, according as the automatism is supposed to be conscious or not. If the automatism is unconscious, the motions of the organism merely simulate the phenomena of feeling and consciousness. According to Descartes, animals are unconscious automata of this kind. But inasmuch as the only consciousness of which any one has direct experience is his own, this argument may, and indeed must, be extended also to human actions. Another's consciousness is always an inference by analogy drawn from his actions. We assume our fellow-men to be conscious, because they behave as we do, who are. But though in our own case we have direct experience of the existence of consciousness, we have not even here direct experience of its *efficacy*, if (with, *e.g.*, Hume) we choose to set aside the testimony of the direct experience of agency as a proof of 'causation.' The theory of psycho-physical automatism, then, fits in well enough with the assumptions of physics; but it comes into conflict with the biological presumption of the survival-value of any characteristic of life which has been progressively developed. For, unless consciousness possessed efficacy and altered the course of physical change, it is hard to see how it could have had survival-value. A complete refutation of psycho-physical automatism, however, can be achieved only by displaying the methodological nature of its fundamental assumptions.

3. *In psychology proper*, action is said to be automatic wherever the organism functions without the voluntary control (and in extreme cases even without the knowledge) of consciousness. Thus functions which are 'automatic' in the first sense may or may not be 'automatic' also in this; while, if the second sense of 'automatism' is adopted, it follows that *all* bodily motions are 'automatic' also, in this third sense. In practice, however, psychologists do not work with this theory, but are wont to distinguish between voluntary and automatic psychic processes. Automatism in this sense is closely related to the phenomena of Volition (*q.v.*) and Habit (*q.v.*). Fully conscious volition occupies an extreme position on a continuous scale, the other end of which is steeped in complete automatism. Such volition appears to be the condition of organic response only to relatively *new* situations, and, as involving effort, strain, thought, and time, is too expensive a process biologically not to be economized as much as possible. Accordingly, the volitional character of an action recedes more and more into the background as a function becomes established. As actions become familiar and habitual by repetition, volition and consciousness both tend to fade from the experience which accompanies the action, though for a long time the continuance of these factors as powers kept in reserve is suggested by their re-appearance in emergencies. In this way what was originally a highly conscious, difficult, and volitional act (*e.g.* walking or reading) may become degraded into almost any degree of facile automatism, though it should always be remembered that this psychological declension means a biological gain. Hence it may even be maintained that the distinction between the *secondary* automatism which is acquired, and the *primary* automatism of all the organic functions which are not (normally) under the control of the will or within the cognizance of consciousness, may ultimately be abolished. The difference between them may be reduced to one between acquisitions of a newer and of an older date, and primary automatism may be regarded as that part of vital functioning which has become so regular and certain as no longer to require conscious supervision. This interpretation is evidently attractive from an evolutionary standpoint, but as evidently it needs to be combined with some biologically acceptable theory of the transmission (or apparent transmission) of habits.

The philosophic importance of this secondary automatism is considerable. For it enables the moralist to include within the sphere of his competence many acts and processes which *as experienced* are no longer voluntary or even conscious, and so facilitates the evolutionary treatment of ethical data. It plainly suggests, moreover, a definite theory of the origin, function, and future of consciousness. If it is a law of function to tend from the conscious and volitional towards the habitual, involuntary, and unconscious, it would seem that any perfectly adjusted functioning must be unconscious, that consciousness itself was essentially a concomitant of a disturbance of habit, and that unconscious functioning was both the beginning and the end of conscious life. Thus consciousness would be essentially evanescent and transitory. This inference can be avoided only by denying that the growth of automatism is to be conceived as a mechanical process. It must be conceived as teleologically conditioned throughout, *i.e.* as a device for the facilitation of reactions upon stimulation, and for the economizing of a consciousness which always has more work than it can properly attend to, and so attends to the calls upon it in the order of their urgency. A good deal of evidence may be adduced, from the actual distribution of consciousness and automatism in the performance of organic functions of the same antiquity, to show that the lapsing into automatism does in point of fact occur in this teleological way.

4. In addition, however, to the actions which are removed from conscious control after having once been conscious, other automatisms are found to occur which seem never to have formed part of the conscious personality. They seem to be initiated outside the normal course of experience, and to intrude upon it as aliens. They may assist it, or more frequently disturb it, whence they are usually regarded as *pathological*. Such automatisms are usually sporadic and discontinuous, but may attain to a considerable degree of coherence and persistence in cases of 'multiple' and 'alternating' personality (*q.v.*). They have been classified as *sensory* (*e.g.* dreams [*q.v.*] and visual and auditory hallucinations [*q.v.*]) and *motor* (automatic speaking and writing), and their interpretation raises the important question of *sub-*

conscious mental life (see SUBCONSCIOUSNESS) and its relation to consciousness. It is also thought by some that in such automatisms traces of supernormal knowledge and powers may be detected, and these have been claimed as evidence of the possibility of communications from the departed. Their biological value for the guidance of conduct is not as a rule great, and this is precisely the reason why they are usually treated as pathological. But the whole subject has not yet been adequately studied. It is clear, however, that historically these automatisms have contributed greatly to the belief in possession, inspiration, and in the supernatural generally.

F. C. S. SCHILLER.

AUTONOMY.—The term 'autonomy,' as employed by very early writers, is distinctly political, signifying civil or national independence. Some authors of the 17th and 18th cents. use it to denote the freedom of the religious conscience. Kant is the only one who introduces it into the language of moral philosophy, in a truly characteristic sense ('Grundlegung zur Metaphysik der Sitten,' *Sämmtliche Werke*, ed. Rosenkranz, Leipzig, 1838–1842, viii. 71 ff.; 'Kritik der praktischen Vernunft,' *ib.* p. 145 ff.). By autonomy of the will, Kant means the faculty that the will possesses of being its own lawgiver, of being itself, by its own nature, the source and substance of the moral law, the moral law itself.

Under what conditions can the will be autonomous? When it is determined by its own form, not by its object. This condition is fulfilled if the will obeys only general laws, if it admits only of those maxims (*i.e.* motives) which can be transformed into general laws. The will which always acts with regard to the universal, as such, provides its own laws: it is autonomous; it is free. For to be free is to obey absolute imperatives, and imperatives of this kind are not the outcome of experience, but solely of reason as practical reason.

The opposite of autonomy is heteronomy. It is simply the subjection of the will to some object or other, *i.e.* ultimately, to the desire of being happy. Heteronomous imperatives are never absolute, because they imply empirical conditions in the subject and object, which do not exist everywhere and at all times. They therefore cannot submit to that moral position which consists in the unconditional surrender of the free will to absolute laws (*i.e.* of the will to itself, for nothing is absolute in the practical order of things except liberty itself); or, in other words, of the empirical will to the pure will. One form of heteronomy is theonomy. It consists in obeying God, because He has sanctioned certain laws, arbitrarily imposed by Him, by means of punishments and rewards.

The ethics of autonomy, therefore, is the ethics of the pure will or of liberty. This pure will naturally has an object, but it is not the matter of this object that determines it; it is its form only, or rather the quality that makes it worthy of being sought after by a will which aims at realizing the universal, *i.e.* general, laws. Thus general happiness can be sought after by a free will; yet not always so far as to embrace the well-being of humanity, which is of interest to our human sensibilities, but only in so far as it can form the contents of a general law, which concerns the understanding of all rational beings.

Autonomy is a kind of summary, forming the kernel, of Kantian ethics. Before it can be thoroughly appreciated and criticized, a general examination of the ethics must be made. We shall confine ourselves to a few brief remarks. In particular, notice that in Kant the idea of an autonomous will has two motives. (1) The first is the conception of liberty that it has within it. According to Kant, the will ceases to be free when it is determined by the attraction which any object other than itself may exercise over it. This is what might be called the ascetic element of Kant's ethics. In all love, of whatever kind it is, he perceives only motives that are governed by the passions and self. (2) We must desire the universal, for only the universal is presented to us as an element of pure reason; all that is empirical is contingent. Here we find ourselves in the presence of the rational and social element of Kant's ethics. These two arguments, which in Kant are blended in one, are in reality of very different kinds. The submission of the empirical will to the pure will is not connected with the idea of the universal, which Kant identifies elsewhere with the social; on the other hand, this notion of the universal affects the will only when it becomes the object of an attraction, the contents of a feeling. Kant's ideal is a will which is identical with reason, but experience does not bear out the inference, and it is not conclusively proved, that the man whose will has become 'pure,' in the sense implied by Kant, is the moral man *par excellence*. It seems, indeed, that he would lack what constitutes the soul of all complete and profound morality. The Kantian idea of autonomy is an abstract idea stripped of all psychological basis. It expresses an ideal of liberty indeed, but Kant was quite unable to deduce from it practical rules for human conduct.

Of present-day philosophers, the chief to revive the idea of autonomy is Cohen ('Die Ethik des reinen Willens,' *System der Philosophie*[2], 1907, pt. ii.). But, inspired by Fichte's ideas, Cohen conceives autonomy, not as the faculty of practical reason, producing laws freely for human conduct, but as the faculty of man, making the human individual the supreme end of all his actions. Under this conception, autonomy becomes, in a direct and positive manner, a social principle, which it is in Kant only indirectly or rather negatively.

LITERATURE.—F. Jodl, *Geschichte der Ethik in der neueren Philosophie*, Stuttgart, 1882–89; F. Paulsen, *Kant*, Stuttgart, 1898; V. Delbos, *La philosophie pratique de Kant*, Paris, 1904.

EUGÈNE EHRHARDT.

AVALOKITEŚVARA.—1. *The name.**—(*a*) Īśvara, which, among *naiyāyikas* (philosophers) and *bhāktas* (devotees) alike, refers to the personal and supreme god, means etymologically 'king,' 'monarch.' It is an epithet common to the Bodhisattvas, or at least—for that name includes every individual who seeks to attain the Bodhi, even although he is still a 'natural man' (*pṛthagjana*)—to all the Bodhisattvas who are in complete possession of the qualifications of Bodhisattvas, viz. those who are 'great Bodhisattvas' (Bodhisattva-Mahāsattva), 'masters of the ten stages of Bodhisattva-ship' (*daśabhūmi-īśvara*) (see *Mahāvyutpatti*, 22, 15). But, when speaking of Avalokita, who is not only a 'great god' but a 'god-providence,' we cannot forget that Śiva is called the 'great lord' (Maheśvara) or simply, 'the lord' (Īśvara).

(*b*) The meaning of the compound 'Avalokiteśvara' is not at all clear. Scholars do not agree as to its signification. It may mean either 'the lord of what we see,' *i.e.* 'of the present world,' or 'of

* See Kern, *Gesch.* i. 324, *Inscr. uit Battambang*, 76; Burnouf, *Introduction*, 226; Minayeff, *Grammaire palie*, p. 7: 'le souverain qui voit tout'; Grünwedel, *Lamaism*, p. 130; Rhys Davids, *Buddhism* (1880), p. 200 ff.; Waddell, *Lamaism*, p. 40, and *JRAS*, 1894; Watters, *Yuan-Chwang*, i. 343: 'the beholding lord.'

* These numbers refer to the paragraphs of the article.

the view,' or 'the lord whom we see,' 'the lord revealed,' 'the master who is or was seen.'*

But the Tibetans, and no doubt their Indian authorities also, took it to mean 'the lord who looks'; for their translation 'Spyan-ras-gzigs' seems to dispense with the idea of 'visible lord.'† Some modern interpreters have understood the Sanskrit name to signify: 'lord who looks down from on high.' This meaning is not quite satisfactory, for Avalokita, like all Bodhisattvas, looks both at the Buddha (*'Bhagavanmukhāvalokanapara'*) and at the creatures with a look of compassion (*'karuṇāsnigdhāvalokana'*).‡

This interpretation makes Avalokita an active present participle, which, as M. Kern remarks, is bad grammar; but Burnouf failed to see in this inaccuracy a decisive argument against the current interpretation, and we may agree with him.§ Further, from the grammatical point of view, Avalokiteśvara, 'lord of compassionate glances' = Avalokana, 'lord of special mercies,' 'lord with compassionate glances.'‖ Avalokita is the god whose face is turned in every direction in order to see everything and to save everybody; he is called 'the all-sided one,' '*samantamukha*.'¶

(*c*) One of the most notable names of Avalokita, and certainly the one which gives us the best idea of the character which had been ascribed to him for a very long time, is *Lokeśvara, Lokanātha*, 'Lord, Protector of the world.' M. Kern expresses it very well when he says that he is the 'god of the present,' 'he who bears the world,' 'son of a Buddha (Amitābha), as the present is the son of the past,' the concrete counterpart of the 'Body of Law' (*Dharmakāya*), the present form of the Buddha, 'the god of daylight and of the living, as Amitābha, who dwells in the setting sun, is the god of Paradise.'** The texts clearly show that Avalokita is the sun; and, in fact, Padmapāṇi, 'lotus-bearer,' which is a name of Avalokita, is also a name of Sūrya ('sun'). Avalokita is the Viṣṇu of the Buddhists.

2. If Avalokiteśvara signified originally 'the lord who is seen,' 'de geopenbaarde Herr,' 'the revealed god,' it looks as if we ought to trace back this conception to the very origin of the personage under discussion. This would present difficulties.* However that may be, as it is very difficult to arrange our literary and iconographic material historically, we shall content ourselves with placing it in logical order. There will be good reason to doubt whether this plan gives an accurate idea of the evolution of Avalokita, because popular religion and religion as described by the sources are two very different things.

3. Although the *Mahāvastu* gives a sketch of the theory of the *bhūmis* ('spiritual stages') of the Bodhisattvas, although it abounds with 'areas' or 'fields of Buddhas' (*Buddhakṣetra*), there are no Great Bodhisattvas in it, playing the part of protector of creatures and patron of Buddhas, and there is not a trace of Avalokita.

In the *Lalita*, among the 32,000 Bodhisattvas, who listen to Buddha, the author mentions Maitreya, Dharaṇīśvara,† several others, and particularly a *Mahākaruṇāchandrin*. Dr. Waddell remarks that, in the Tibetan translation, this last name is replaced by *Mahākaruṇasattva* ('Sñin-rje chen-po sems-dpa'); now *Mahākaruṇa*, 'the great and merciful one,' is one of the innumerable synonyms of Avalokita. We leave it to the reader to judge whether this information is sufficient to contradict the popular opinion that there is no mention of Avalokita in the *Lalita*.‡

4. A great many authorities§ do not give Avalokita unrivalled supremacy, but place him along with a certain number of companions, five or eight, apart from the crowd of Bodhisattvas, and accord him a kind of pre-eminence: 'the sons of Buddha, with Avalokita and Mañjughoṣa at their head . . .,' 'Avalokita, Samantabhadra ('the wholly auspicious'), Mañjughoṣa ('lovely voice' = Mañjuśrī'), Kṣitigarbha ('earth-womb'), and Vajrin ('thunderbolt-holder' = Vajrapāṇi),' whose special task is the struggle against the demons.

In these texts we are confronted with a great superhuman saint, the chief of that noble group of Bodhisattvas who, according to the Great Vehicle, constitute 'the congregation' (*Saṅgha*) or third jewel. Avalokita plays a most important part in some of the sūtras, *e.g.* in the *Dharmasaṅgīti*, where he extols charity, 'the great compassion,' the only function of the Bodhisattvas, to which one must give oneself up entirely without fear of committing sin; if the exercise of charity involves wrong-doing, it is yet better to suffer the pains of hell than to deprive a creature of the hope he has

* See Kern, *Insor. uit Battambang*: 'lord contemplated' = Avalokita īśvara = vyakta īśvara, *i.e.* a name of Śiva; 'lord of the view *or* of that which is seen' = dṛṣṭi-guru, *i.e.* another name of Śiva.

† *Spyan-ras = chakṣus*, 'eye.' It is a lofty expression. We have, *e.g.*, 'thugs-rjei spyan-ras-kyis gzigs-pa: karuṇāchakṣuṣā avalokayan' (Sarat Chandra, *Dict.*). *Gzigs* also is a word of elevated style, meaning 'to see,' and, owing to the influence of the name of Avalokita, meaning 'to give,' 'compassion.' If the Tibetan translation caused any doubt, the following quotation from the versified Kāraṇḍa (Burnouf, *Introd.* p. 226) would dispel it: 'He is so called because he regards with compassion beings suffering from the evils of existence.' The Mongol has *niduber utchektchi*, 'who beholds,' from *niduber utchego*, 'to see,' from *nidun*, 'eye.'

‡ *Sādhana* (text of incantation), quoted by Foucher, *Icon.* ii. pp. 16, 18. Waddell explains 'look down from on high' by the fact that the usual dwelling-place of Avalokita is on mountains. This information is correct, and establishes a point of contact between Avalokita and Śiva. But the prefix *ava* has no such precise meaning. The *vyavalokana*, 'glance,' like the smile (*smita*) and the beam (*raśmi*), is a mode of communication.

§ Burnouf, *Introd.* p. 226, note. *Parijita* (*Mahāvyutpatti*, 126, 63) seems quite clearly to mean *parijitavān*, and it is possible that there are other examples.

‖ See Böthlinck-Roth, *s.v. lok* with *ava* (§ 2). Further, *avalokita* means 'a person to whom good-bye has been said,' 'one who has been seen for the last time' (see indexes to *Divyāvadāna* and *Mahāvastu*). Avalokiteśvara is indeed the lord of the departed and the help of the dying. The present writer owes these valuable observations to Mr. F. W. Thomas.

¶ *Lotus*, ch. xxiv.; Kern, ii. 171; Beal, *Catena*, 384. Like *samantachandra* and *samantālokha*, it is an epithet common to all the Bodhisattvas (*Lalitavistara*, 550, 11).

** See Kern, *op. cit.* With regard to the solar character of Amitābha and Avalokita, the first of the meditations on Amitābha, as it is described in the *Amitāyurdhyāna*, is full of information: 'all beings . . . see the setting sun' (see § 9). Amitābha is Śiva unrevealed; Avalokita is Śiva revealed. The infinite indivisible light which characterizes the former (*amita-ābhā*) is contrasted with the finite light (*mita*) of the latter: 'Brilliant is Lokeśvara, who bears on his head Amitābha, brilliant with, as it were, the appearance of the sun and the moon with their finite splendour.' Elsewhere Avalokita is represented as having the sun as his body (*dinakaravapus*). The Paradise of Amitābha is closely connected with the town of Varuṇa in the West, the city of the sunset, which is usually called Sukhā (Max Müller, *SBE* xlix. p. 22). It may also have some connexion with the city of Kusāvatī, where the 'great King of Glory' reigns (*Mahāsudassanasutta*, *SBE* xi. p. 247).

* The present writer thinks that M. Kern gives a perfect explanation of the nature of Avalokiteśvara, who is a Buddhist Śiva in visible form, while Amitābha is the Śiva Brahman. The former is characterized by the 'measured' light of the sun and the moon, the latter is ethereal and infinite light (*amita*). The Battambang inscription is very clear. But the present writer thinks that before becoming Śiva, Avalokiteśvara was a Bodhisattva, and, as such, was named Avalokita.

† 'Lord of the earth,' one of Śiva's names, a 'dhyānibuddha' in the *Suvarṇaprabhāsa*; according to Waddell, 'a common title for Mañjuśrī' (*JRAS*, 1894, p. 55).

‡ Lunar names (*chandra*) are frequent among the Bodhisattvas (cf. *Mahāvyutpatti*, 23).

§ *e.g. Bodhicharyāvatāra* (ch. ii. 1, 48). In *Mahāvyutpatti* (published A.D. 816–838) 23, we find the following order: Avalokiteśvara, Maitreya, Ākāśagarbha, Samantabhadra, Vajrapāṇi, Mañjuśrīkumārabhūta, Sarvanīvaraṇaviṣkambhin, Kṣitigarbha, Mahāsthāmaprāpta, Ratnaketu, Ratnapāṇi, etc. It must be observed that Ratnapāṇi (a future so-called Dhyānibodhisattva) is not the first of the Bodhisattvas 'beginning with Ratna,' and also that Mañjuśrī holds quite a subordinate place. Cf. *Dharmasaṅgraha*, xii., where among the eight Bodhisattvas there is no mention of Avalokita.

placed in you.* Avalokita is a Great Bodhisattva, but he is not the only one, nor is he unquestionably the first.

It is probably this stage in the history of Avalokita that is represented in the very old reliefs, where a 'Lotus-bearer' Padmapāṇi (afterwards the equivalent of Avalokita) appears with four or seven other Bodhisattvas, surrounding a Buddha or below a Buddha.†

There is reason to believe that Maitreya (the future Buddha), for example, whose doctrinal position is better established, must originally have taken precedence of him,‡ and there are noteworthy and well-authenticated writings, such as the Sanskrit-Tibetan Lexicon (*Mahāvyutpatti*) and the Chinese records, which lead us to believe that Maitreya was able to maintain his position. In any case, it must be noticed that the rôle of 'Good Bodhisattva,' helpful and divine, the very noble (*paramārya*), the giver of security (*abhayanduda*), etc., was divided among Kṣitigarbha and his companions, before it became the more or less exclusive designation of Avalokita.§ Now it must be borne in mind that the preceding remarks are very hypothetical; for, from the dawn of the Christian era, in certain circles at least, Avalokita became an important personage and a jealous god.

5. *Lotus of the True Law, Sukhāvatīvyūha, Amitāyurdhyānasūtra.*—(*a*) Avalokita is not the protagonist of the *Lotus*, but there is a whole chapter on his *ἀριστεία*, his 'gesta,' in Skr. his *māhātmya*.‖ He is far superior to the other Great Bodhisattvas (Akṣayamatī, etc.), who along with him listen to Śākyamuni, with the single exception of Mañjuśrī, who is probably his equal. He is the 'saviour'; it is better to think of him than to do honour to thousands of Buddhas. He assumes the form¶ of Buddha, Bodhisattva, Maheśvara, Kuvera, Vajrapāṇi,** as the case may be, the more easily to fulfil his task of mercy. Akṣayamati ('undecaying intelligence') presents him with flowers; he divides them between Śākya and the stūpa of an 'extinct' Buddha. According to the versified text, his real dwelling-place is in the 'Sukhākara,' the paradise of Amitābha, where he sits sometimes on the right and sometimes on the left of Buddha.

(*b*) The *Sukhāvatī* and the *Amitāyurdhyānasūtra*†† supply us with a very fine theology of Amitābha and Avalokita, a theology which has the twofold distinction of being almost orthodox, while seeking to present a rational account of all the exaggerations of *bhakti*, or devotion.

Amitābha or Lokanātha was in ancient times a *bhikṣu* called Dharmākara,† 'mine of the law'; it is now ten ages (*kalpas*) since he became Buddha, and it will be a very long time before he is extinct. In principle all the Buddhas are equal; they possess the same intrinsic perfections, the same knowledge.‡ But it is very probable that they are differentiated in the exercise of their Buddhahood, according to the vow that they have made. Now Dharmākara, the future Amitābha, under the Buddha Lokeśvararāja,§ vowed that, when he reached Buddhahood, he would have a 'Buddha field,' wondrously blessed, the happy land (*Sukhāvatī*),‖ and that is why there flock to him from all the 'Buddha fields' the beings appointed to *nirvāṇa*, either as future arhats or as Buddhas.¶ It is with Amitābha that those who are guilty but possess the promise and potency of deliverance spend their period of probation in lotus-flowers; with him also the Bodhisattvas become prepared for their last birth, by having good opportunities of going to visit, to honour, and to listen to the Buddhas of all the worlds.** After this period these Bodhisattvas will become Buddhas, and will have in their turn spheres of their own. As regards Avalokita, it is at the end of our age that he will appear as the thousandth and last Buddha of the age.††

The Bodhisattvas are not equal among themselves. In the heaven of Amitābha there are two, Avalokita and Mahāsthāmaprāpta,‡‡ almost as great and luminous as Buddha, who sit on thrones equal to his. Avalokita is the more majestic; this is due to his vow to bring all beings, without exception, into the 'happy land.' And while his glorious body illumines a great many worlds, he traverses them all in different forms, sometimes real and sometimes magical; like Amitābha himself, he has parts of himself incarnated here and there; he never forgets for a moment his rôle as provider of the Sukhāvatī. And it is he, rather

* See *Śikṣās*, p. 286; *Bodhicaryāvatāra*, p. 314.

† See Grünwedel, *Buddh. Art in India*, pp. 196, 201 ff.

‡ Maitreya is the only Bodhisattva acknowledged in the Little Vehicle. He is the second in *Mahāvyutpatti*, 23, the first in *Dharmasaṅgraha*, xii; and plays the chief part in the foundation of the Great Vehicle. Grünwedel (*Buddhistische Kunst*) has some hesitation in recognizing Avalokita in the Gāndhāra sculptures, and is certain only of the identification of Maitreya (*Buddh. Art in India*, p. 192 n.). Nevertheless, the view which, following his example, we express on the chronological and dogmatic priority of Maitreya is supported not only by the fact that Maitreya alone is recognized by the Little Vehicle (Beal, *Buddhist Records*, ii. 61), but also by certain statements of the Chinese pilgrims, who were more interested in the heaven of Maitreya than in that of Amitābha, more interested in the coming of Maitreya than in the present living Avalokita (see especially *ib.* ii. 223, i. 227).

§ More or less exclusive, according to Wassilieff, as is proved by the collections of the one hundred and eight names, of divinities in Kandjur, *Rgyu*, xiv.: Avalokita, Maitreya, Ākāśagarbha (Khagarbha), Samantabhadra, Vajrapāṇi, Mañjuśrī, Sarvanivaraṇaviṣkambhin and Kṣitigarbha (Wass., 175), the eight Bodhisattvas of the *Dharmasaṅgraha*, with the addition of Avalokita and the omission of Gaganagañja.

‖ See the translations of Burnouf and Kern. The *Māhātmya* forms ch. xxv. of the Chinese edition. In China it is one of the official texts of the religion of Avalokita (see I-tsing, in Takakusu, 162; Beal's tr., *Catena*, p. 389).

¶ The *Śikṣās* ascribes to every Bodhisattva this power of transformation. Even the wish of all the Bodhisattvas to become food and drink (*pānabhojana*) in times of famine is taken literally.

** The association of Vajrapāṇi with divinities who are anything but Buddhist is worthy of note. In the hundred and eight names of Tārā (ed. de Blonay) Vajrapāṇi begs for mystical recipes from Avalokita. See E. Senart, *Congrès d'Alger*, 'Vajrapāṇi'; and below, p. 259ᵇ n. ‖.

* *Sukhāvatīvyūha* (Chinese tr. 147–186), in two redactions, edited by Max Müller, *Anecd. Oxoniensia*, and also in fac-simile Musée Guimet, II., translated in *SBE* xlix, with the *Amitāyus*, the Skr. original of which seems to be lost (translated into Chinese in 424). On this text cf. also *JBTS*, 1894, 2, 1.

† On the human antecedents of Amita and Avalokita, cf. also Rémusat, *Fo-kous-ki*.

‡ There are two things which have no limit, the brilliance of Amitābha and the *prajñāpratibhāna* of every Buddha. The light of Amitābha illumines all the fields of Buddha, owing to the 'special vow' of this Buddha to lighten his own field and an infinite number of other fields. Although Amitābha is praised, glorified, and preached by all the Buddhas, he cannot lay claim to any kind of monarchy. A fairly just idea of the system may be formed by regarding the Buddhas as saints (in the Roman Catholic sense of the word), who are all saints for the same reason, but among whom piety distinguishes more or less powerful saints. Cf. *Mahāvastu*, iii. 330. 15.

§ A name of Avalokita.

‖ More refined in charity is the wish expressed in *Karuṇapuṇḍarika* 'to have a Buddha field' inhabited by inferior beings overwhelmed by calamities, in order to have a more worthy object of pity.

¶ In the kingdom of Amitābha all the Bodhisattvas are in their last birth, and live there without limit, owing to their special wish (*praṇidhānaviśeṣa*) to save others. It is noteworthy that our text admits the existence of arhats, saints according to the Little Vehicle, *i.e.* beings appointed to attain to *nirvāṇa* without passing through the stage of Buddhahood. The Great Vehicle believes that all beings will become Buddhas, but this was not the belief of Hiuen Tsiang.

** They do not even have to move in order to worship and listen to the Buddhas of all the worlds.

†† Schmidt, *Über die tausend Buddhas* (p. 106); and Rémusat, *Cosmogonie, Mélanges Posthumes*.

‡‡ In modern (Tibetan) pictures of the Sukhāvatī, Vajrapāṇi takes the place of Mahāsthāma (Foucher, *Catalogue*, p. 33). The Japanese representation of the Sukhāvatī is nearer the original text. Maitreya, Avalokita, and Mahāsthāma often have stūpas on their heads (Grünwedel, *Buddh. Kunst*, p. 193 and fig. 83).

chan Amitābha himself, who is the lord of the Sukhāvatī.*

This ostentatious and short-sighted glorification of Amitābha and Avalokita corresponds, in our opinion, to a doctrine of salvation, very different from the ordinary doctrine of the Great Vehicle. According to the Little Vehicle, the Buddhas were only instructors; in the 'rationalist' Great Vehicle they have become models, and the Bodhisattvas appear as friends, counsellors, protectors;† their presence does not in any way lessen the necessity for personal effort. In the Sukhāvatī, Amitābha and Avalokita save the faithful almost in spite of themselves, as the cat saves her young by taking them in her mouth (a Kraiṣnavite metaphor). There is, however, one reservation: beings guilty of 'mortal sins' are excluded from the Sukhāvatī. The *Amitāyurdhyāna* does away with this restriction: the parricide is saved if he pronounces the name of Amita. In a word, our theologians, as well as those of the *Viṣṇupurāṇa*, have to distinguish between ordinary people who are liable to hell, etc., and devotees who are naturally exempt.

(*c*) It is to this period that the iconographic monuments seem to belong, about which the Chinese pilgrims had given us their testimony, before the archæologists examined them; and we are quite justified in referring to them here, as the *Amitāyurdhyāna* speaks of statues in which the characteristics of the god are reproduced. We find isolated statues of Avalokita, among which the giant statues deserve mention, and groups in which he is facing Maitreya, Tārā, and Mañjuśrī, and probably also Mahāsthāma—wonderful statues, recurring throughout the whole Buddhist world from the extreme North-West to Ceylon.‡ They give us a sculptured representation of the texts, which describe in detail the attitude, colour, and qualities of the gods. The *Amitāyurdhyānasūtra* places a 'magical' Buddha, twenty-five leagues high, on the head of the glorious body of Avalokita, seated on the left of Amitābha; this is clearly represented in the icons (to which attention has already been drawn by Hiuen Tsiang), where Avalokita wears in his head-dress a seated statue of a Buddha, who, at a very early date, if not from the very beginning, was identified with Amitābha.§

The Chinese pilgrims seem to have recognized a characteristic of the Great Vehicle in the fact that worship was bestowed on the Bodhisattvas, Mañjuśrī and Avalokita, and on the Prajñā. Hiuen Tsiang mentions that a statue of Maitreya was worshipped in a district which is quite 'hīnayānistic' (*Buddh. Records*, ii. 61)—the same thing happened with the statues of Avalokita in Ceylon—but he tells the curious story of Guṇaprabha, who, when he was transferred to the heaven of Maitreya, refused to worship him, because an 'ordained bhikṣu' is superior to a Bodhisattva (i. 192).‖

6. Avalokita rises still higher in the *Kāraṇḍavyūha** and in the *Śūraṅgama*;† but here the theology seems to be extremely involved; we have now to deal not with a sūtra, but with Purāṇic literature. On the other hand, the iconography and the manuals on incantation demonstrate that, on account of the above-described notion of the providential polymorphism of Avalokita, that god is identified with all the Hindu deities, both mild and cruel. Avalokita is a Buddhist Śiva, an ascetic and a magician.

(*a*) In some of its features the *Kāraṇḍavyūha*‡ recalls the *Lotus* and the *Amitāyurdhyāna*: Avalokita learns the law from Amitābha, he comes to worship Śākyamuni, and brings him flowers and Amitābha's compliments; he is therefore in some way inferior to the Buddhas. But, on the other hand, he is far superior to the Buddhas and also to Samantabhadra: no Buddha possesses clairvoyance (*pratibhāna*) equal to his, all the Buddhas together could not estimate his worth. No other being besides him has a marvellous body, which the Buddhas have difficulty in seeing, and each pore of which contains thousands of Buddhas, saints of all kinds, and entire worlds. And it is from the body of Avalokita (Foucher, *Cat.* p. 25), regarded from another point of view, that the inferior gods issue: the sun and the moon come out of his eyes;§ Maheśvara, who will be called Mahādeva, and receives the promise of Buddhahood, comes from his forehead; Brahmā from his shoulder, etc. We have said that, in addition to being demiurge, Avalokita is also a saviour; from his fingers flow rivers which cool the hells and feed the *pretas* ('ghosts'); he terrifies all the demons and puts Vajrapāṇi to flight.‖

There is no need for astonishment at this extraordinary mastery over men and things. Avalokita is the great yogin, the great magician (*vidyādhipati, anekamantraśatāvakīrṇa*); he is in possession of the formulæ (in which he glories in the *Amitāyurdhyāna*); but, above all, he possesses the only, the true, formula *ōṁ maṇi padme hūṁ*.¶

* He is called Sukhāvatīśvara (*Trikāṇḍaśeṣa*).

† See the 'Code du Mahāyāna en Chine,' where Avalokita does not play any part at all (J. J. M. de Groot, p. 98).

‡ The information of the Buddhist pilgrims on this point is confirmed and explained by the miniatures published by M. Foucher. The last inscription devoted to Avalokita is dated 1229 (Oudh). On Avalokita in Ceylon, cf. Foucher, *Icon.* 110; Beal, *Buddhist Records*, ii. 247; *JRAS*, 1900, p. 42. Some authors think that Mount Potala, to the east of the Malay Mountains, is perhaps the original home of Avalokita. It is well known that this Potala has been transported to China and to Tibet (*Tāranātha*, 144, 203; Foucher, *Icon.*, 28; Waddell, *Lhasa*, 1905, pp. 364, 388).

§ The relation between 'Dhyānibuddhas' and their Bodhisattvas is explained in the art. Ādibuddha. Wassilieff mentions Vairochana as the father of Avalokita. Cf. Grünwedel, *Buddh. Art in India*, p. 196 *f.*

‖ For a study of this problem the reader is referred to art. Mahāyāna. To avoid any misunderstanding, let us merely point out that the *Avalokitavrata* and the *Bhadracharīpraṇidhāna* (Nanjio, 1142), which corresponds closely to it, are looked upon as sacred texts by the Sautrāntikas, who are supposed to belong to the Little Vehicle.

* See the Calcutta edition, 1873; Csoma-Feer, p. 246; Hodgson, *Extracts*; the summary of Rajendralāla (*Buddh. Lit.* pp. 95, 101); the masterly exposition of Burnouf (*Introd.* p. 221). The Tibetan translation probably belongs to A.D. 616 (Schlagintweit, p. 84; Rockhill, p. 212), but the original is supposed to have been in existence from the time of the mythical king Lha-tho-tho-ri (A.D. 427); see Grünwedel, *Myth.* 451, 247. On the *Maṇi-bka-hbum*, 'the hundred thousand precious commandments,' a glorification of Avalokita, which is wrongly supposed to belong to this time, see Rockhill, 212, and Schlagintweit, 84. For the history of the Rākṣasīs, cf. Beal, *Buddhist Records*, ii. 241.

† Ch. vi. See Beal, *Catena*, 39. 284; Nanjio, 399 (tr. A.D. 384–417); Wass., 175; Csoma-Feer, 249; and the quotations from the *Śikṣāsamuchchaya*. Enumerating the innumerable, we distinguish 32 manifestations of the god, 14 cases in which he provides safety, etc. For the worship of Avalokita and Amitābha the reader is referred also to the Chinese sources.

‡ Śākyamuni speaks to Maitreya, Sarvanīvaraṇaviṣkambhin and Ratnapāṇi. Avalokita receives 61 designations. Are the lists of 108 names later?

§ *Śūryāvalokanakara* (see Foucher, *loc. cit.*); cf. the name Avalokita.

‖ *Vajrapāṇividrāvaṇakara*. In the *Bodhicharyāvatāra*, Vajrapāṇi is *par excellence* the demon-dispeller, and the charitable visitor of hells; but from most ancient times Avalokita too has been engaged in the salvation of infernal beings.

¶ It is this famous formula that is in view in the *Divyāvadāna* (foot of p. 613) which makes no mention of Avalokita. Śākyamuni imparts it to Ānanda; it was preached by the six Buddhas, it is known to Śakra, Indra, etc.; it constitutes a talisman of the first rank (see Burnouf, *Introd.* p. 541; Kern, *Gesch.* i. 400). The Tibetans claim that it fell down to them from heaven about A.D. 400. So far as the present writer knows, it is neither mentioned nor contemplated in Nanjio, No. 326 (tr. A.D. 420), which contains two *dhāraṇīs* and two *bījas*. A great deal has been written about the 'formula of six syllables.' We may mention Klaproth, *JA*, March 1831; Rémusat, *Mélanges*, p. 99, *Fo-koue-ki*, p. 118; Schlagintweit, pp. 54 and 55; Grünwedel, *Lamaism*, p. 82.

There is no doubt that the tantrik literature gives it an obscene interpretation. *Maṇi* and *padme* in this jargon have a very distinct value. On the other hand, Rémusat's cosmological explanation does not seem altogether improbable. See F. W. Thomas, *JRAS*, 1906, p. 464.

Is there a Buddha who possesses this 'hexasyllabic (*ṣaḍakṣarī*) knowledge (*vidyā*)'? No. Is there a being who possesses it? No. It belongs to Avalokita alone, and he reveals it to whomsoever he pleases. This magical omnipotence has its other side: whoever knows the formula does away with the god, whose 'heart,' *i.e.* 'mystery,' the formula is, and in his way is another Avalokita.*

Further, the single word 'Adored one' (*vandita*) is a sufficient description of him. He is the refuge, Buddha, Dharma, and Saṅgha all in one. Whosoever pronounces or traces on his body the magical syllables receives a body which participates in the body of the thunderbolt (*vajrakāyaśarīra*), the apex of knowledge of the Buddhas (*Tathāgata-jñānakoṭi*), and becomes like a *dhātustūpa*, a stūpa with relics.†

(*b*) Iconography and the manuals of incantation,‡ which illustrate and supplement each other in a marvellous way, prove that this deification of Avalokita is not merely verbal, but that it is in close connexion with worship and daily idolatry.§ All the Tibetan forms of Avalokita are replicas of the Hindu cults, which are attested as early as the 10th and 11th cents., but are undoubtedly much more ancient. In fact, our literary evidences (*sādhanas*) prove that the foreigner had had an influence on the mother-country, for there are representations of Avalokita, as well as of other gods, after the fashion of Udyāna, of China and other places.

It would be impossible to describe the whole iconography of Avalokita; that task has quite recently been performed extremely well.‖ We shall merely notice a few characteristic features.

Avalokita is polymorphous; but, in many cases and until the more degenerate times, he retains the human form, two arms and a head. There is usually on his head a small figure of the Jina Amitābha.¶ In one hand he bears the lotus (*padma*),** with the other he makes the gesture of the 'bestower of favour,' and a ghost (*preta*) is represented holding up its thin lips towards the ambrosia which flows from his fingers. As satellites Avalokita has Tārā (sometimes in two forms, calm and angry), Hayagrīva ('horse-necked'), the guardian of the 30,500,000 magical formulæ, and Sudhana, who is also a friend of Maitreya. When Avalokita has four arms, two of them are joined in *añjali* (the hands forming a cup) as a sign of respect; the other two hold the lotus and the rosary. But the ascetic attributes are the antelope's skin and the water-pot. And then, when the god receives the names of Śiva, Amoghapāśa, Hālāhala, Nīlakaṇṭha, Padmanarteśvara, etc., his arms, his faces, and his eyes become multiplied, and he carries tridents encircled with serpents, skulls filled with flowers, bows, arrows, etc.

Among the curious figures, besides those which clearly show the identification with Śiva, the following are noteworthy: (1) the figure of Siṁhanāda ('lion's cry'). This was the name given to the solemn declarations of Śākyamuni; Mañjuśrī, who in Buddhism is the personification of wisdom, is mounted on a lion. Avalokita becomes confused with Mañjuśrī, is seated on the lion, carries the book and the sword of Mañjuśrī, but all the time retains his own attributes as well. (2) The figure with the thousand arms, in which the arms, arranged in the form of a peacock's tail, give a graphic representation of the metaphor;* this is a sculptured interpretation of the universality of the god. (3) The figure with eleven heads (three, three, three, one, one, the last one being the head of Amitābha) and a thousand arms is the translation, as it were, of his former name Samantamukha.† It corresponds to a legend which shows very clearly the character of Avalokita: 'May my head split asunder,' the god had said, 'if I fail in my vow to save beings!'—an old Buddhist expression. As a matter of fact, he did give way for an instant to discouragement, on seeing the inefficacy of his efforts; his head split into a thousand pieces, and Amitābha put it together again. There are several forms of this story, in which the old is mixed with the new.

We shall also quote a modern Nepalese inscription which gives a good account of the dignity and the physiognomy of our hero: 'The chiefs of the Yogins call him the King of the Fishes (*Matsyendra*), the devotees of the female deities (*śāktas*) call him *Śakti*, the Buddhists call him *Lokeśvara*. All honour to this being, whose true form is Brahman.'‡ This identification of Avalokita with the Śakti *par excellence*, *i.e.* with the personification of the cosmic female energy, shows, in a more striking way than the coupling of the god with the twenty-one Tāras, § that the Chinese transformation of Avalokita into a woman had probably been already effected in India.‖

7. We need not say very much about the Tibetan doctrine of incarnations, according to which all

* This magician (*māyāvin*) with eleven heads—this shows the best and truest form of his polymorphism—is incomprehensible. He appears and disappears like a meteor (*jvalann ivāgnipiṇḍaḥ*). He has a hundred thousand arms and a hundred thousand times ten million eyes. He exists in the past, the present, and the future (*trikāla*). He was at work when Śākyamuni was merely a worshipper. There is no limit put upon his activity except when all beings have entered nirvāṇa. The Buddhas, in fact, are only some of the saints whom he has 'matured,' and who owe everything to him; there is deliverance only in the hexasyllabic formula.

† Let us recall the fact that the *Kāraṇḍavyūha* in verse adds some details in the 'Ādibuddhistic' sense (see art. ĀDIBUDDHA). But note that there is nothing to indicate the generation of Avalokita by Amitābha (in the *Maṇi-bka-ḥbum*, Avalokita is born from a white ray from Amitābha's left eye, or he issues from a lotus as a young man of sixteen years of age); nor is there any trace to be found of the system of the 'Dhyāni-buddhas' and their 'sons'; Vajrapāṇi is a malevolent being, Ratnapāṇi is a personage of secondary rank. Avalokita is nowhere, so far as we can see, called Padmapāṇi.

‡ The *bīja* of Avalokita seems always to be *hrīḥ*; his *mantra* is the hexasyllabic formula (see the beautiful plate, Schlagintweit, p. 55), but sometimes we find *oṁ vajradharma hrīḥ*.

§ There are representations of Avalokita after the style of the *Kāraṇḍavyūha* and of the *Māyājālābhisambodhi*.

‖ Foucher, *Iconographie*, i. and ii.

¶ *Trikāṇḍaśeṣa*, which gets its information from Vyāḍi (Vindhyavāsin ?) gives the names Lokeśvara, Amitābhaśekhara, Padmapāṇi, and also Khasarpana, Kāraṇḍavyūha, Sukhāvatiśvara. Tārā is the daughter of Avalokita.

** Already at Sāñchi the 'lotus' is represented in the hand of a great many personages, as an offering intended for Buddha. Those who carry lotuses are not all Avalokitas, for Maitreya is among them (see Grünwedel, *Buddh. Kunst*, p. 167). It is worthy of notice that neither the *Lotus of the True Law* nor the *Sukhāvatī* nor the *Amitāyus* nor the *Kāraṇḍa* seems to know Padmapāṇi.

* 'With an eye in the palm of each hand' (Sandberg, *Colloquial Tibetan*, p. 197). Sometimes *only* sixty-six arms are represented (Foucher, *Catal.* 15).

† See Schlagintweit, p. 54; Schmidt, *Forschungen*, p. 202 (the head is broken into ten pieces). This number *eleven* recalls the eleven Rudras, and shows us Avalokita as a disguised Śiva. [Being Vāgiśvara, he is none the less Brahmā when he becomes Śiva.] It may be useful to mention that the *Avalokitaekadaśamukhadhāraṇīs* (Nanjio, 327, 328) were translated into Chinese in 557–581. Among the other *Samantao* (*Mahāvyutpatti*, 23, 31, 36, 38, 63) the most famous is Samantabhadra (*Lotus*, xxvi.; Kern, p. 437, note), a double of Śiva, and the only one of the 'Dhyānibodhisattvas' who is not a *pāṇi* (*vajra*, *ratna*, *padma*, *viśvapāṇi*).

‡ Inscription dated 792; see *Ind. Antiquary*, ix. 192, Kern, *Vermenging*, p. 14; on Matsyendra, see Wilson, ii. 80, and i. 214; Kern, *op. cit.*, 42, and Lévi, *Népal*, i. 349 ff. He belongs to the mysterious line of 'Siddhas,' masters of the Haṭhayoga, civilizers (?) of Nepal. Sometimes he is the son of Ādinātha, and is placed five spiritual generations previous to Gorakhnāth; sometimes he is Gorakhnāth's disciple. There may be concealed under his name a historical personage identified with Abjapāṇi = Padmapāṇi. But although the mythical explanation finds very little favour, euhemerism in such a subject seems almost chimerical. An important iconographic detail is that Avalokita is white, except in Nepal, where he is red (Foucher, *Cat.* 15, etc.).

§ *JBTS*, 1894, 2. 1.

‖ On the Chinese Avalokita, see Eitel, *Handbook*, p. 23.

the monastic dignitaries are *nirmāṇas* (sprul-pa = khoubilgan) of the chief deities; it will be sufficient to refer the reader to the article LĀMAISM and to the sources. We shall merely say that Avalokiteśvara, the patron of the Tibetan Church, is incarnated in the person of the Great Lāma (rgyal-ba ryga-mtsho), while Amitābha dwells in the Great Pandit (Pan-chen) of the rival monastery. Waddell, though without adequately setting forth his proofs, maintains that the theory is a recent invention (1640). There is no doubt that Lāmaic hierarchy is peculiarly Tibetan; but it is quite as certain that many Hindu Siddhas or Yogins have, by their magic, succeeded in identifying themselves with gods.

L. DE LA VALLÉE POUSSIN.

AVARICE.—Avarice may be defined as an absorbing passion for earthly possessions and a selfish gratification in their retention. It includes both the getting and the keeping of wealth. In the getting the avaricious man is tempted to put aside all considerations that stand between him and his object, and in the retention he looks less to the beneficial use to which any possession can be put than to his own luxury in possessing it. In ordinary language, avarice is largely restricted to this second feature, while the passionate desire that begets the avaricious character is described as covetousness (wh. see). Avarice is thus applied more frequently to parsimony in the storing of wealth, and covetousness to rapacity in seeking after wealth. Covetousness stirs up the discontented to clutch at what other people have; avarice begets the miser who hoards greedily all that he has.

The avaricious mind seems almost to make money or possessions ends in themselves, and yet it may be doubted whether money is not always thought of as a means of gratifying the love of pleasure or the love of power in some of their many forms. The miser gloats over his gold, but even in his most debased state he probably sees in it the possibility of acquiring ease or satisfying ambition. He probably pictures in his imagination the splendour with which he might surround himself, the security he has against poverty, or the greatness of the one who will inherit all as his heir. Certainly, at first, avarice leads men to amass money because of the command it gives over the conveniences and luxuries of life, and because of its efficacy as an instrument of ambition (cf. Martineau, *Types of Ethical Theory*[2], 1886, ii. 172).

Avarice springs, therefore, from two of the strongest human passions, the love of pleasure and the love of power; although it may continue even when pleasure and power seem no longer likely to be gratified. In its last stage it becomes repellent to all, as its selfish absorption reveals the degradation and folly of the mammon-worshipper.

The degradation of avarice is graphically described by Dante, who represents the miser as cleaving to the dust, in *Purgatory* (Longfellow's tr. xix. 120 ff.)—

> 'Even as our eye did not uplift itself
> Aloft, being fastened upon earthly things,
> So justice here has merged it in the earth.'

A similar conception is found in Milton's description of Mammon (*Par. Lost*, i. 680 ff.), whose looks and thoughts even in heaven were always downward bent—

> 'admiring more
> The riches of heav'n's pavement, trodden gold,
> Than aught, divine or holy, else enjoy'd,
> In vision beatific.'

Cf. also Bunyan's account of the man with the muck-rake, who was so intent upon the things of earth that he had no eye for the crown of glory. It is little wonder that the folly of the miser in giving up his life to the hoarding of earthly possessions is keenly felt by the noblest writers. Dante (*Inferno*, vii. 64) expresses the thought of all spiritual minds when he depicts the ignorance and folly of avarice—

> 'For all the gold that is beneath the moon,
> Or ever has been, of these weary souls
> Could never make a single one repose.'

The miser is represented frequently in literature, as in Molière's *L'Avare* and in Plautus's *Aulularia*, on which Molière's play was founded. The unhappiness of the avaricious is well summed up in the closing words of Euclio, the miser in the *Aulularia*: 'Nec noctu, nec diu, quietus unquam eram: nunc dormiam.' He has bestowed his treasure upon his son-in-law, and has thus divested himself of all future cares. *Now* he hopes to sleep quietly, while formerly he had no rest by day or night.

The petty meannesses of the miser are illustrated in the *Characters* of Theophrastus (ed. Ussing): 'If he gives a dinner, he does not serve up as much food as is necessary. . . . When sent out . . . on a public commission, he leaves the provisions for the journey to his family, and lives at the expense of his fellow-travellers. . . . If one of his friends is to have a wedding, or is about to have his daughter married, he speedily undertakes a journey to spare the marriage present.'

Restraints may be put upon avarice by the laws of a country. Thus, certain methods of increasing wealth may be declared illegal. Stealing, fraudulent practices in trade, adulteration to make extra profit, the exaction of exorbitant interest, may all be declared punishable offences. Law may also deal with the misuse of wealth, *e.g.* money may not be hoarded by any one in such a way that his functions as a citizen are not performed. A man is not allowed to be dependent on the State for support while he has money at his command. A father is bound to use his wealth to support his children. Children are bound to support their parents. In these and other ways law may put limits to the right of a citizen to hoard possessions.

A further extension of these social restraints is bound up with all theories of socialism or communism. Under these all private capital would be almost, if not altogether, abolished. Rent might still be paid to the community, but interest would cease. Each individual would be remunerated in proportion to the services he had rendered. Thus socialism would seek, by abolishing the present system of competing capitalists, served by competitive wage-labour, to strike at the system that encourages the avaricious nature.

In the individual life an effort may be made to check avarice by one great act, as by the vow of poverty, depriving the subject of all personal interest in property and all power over it. This vow, along with the vow of chastity and obedience, was adopted by the Dominicans and Franciscans to complete the irrevocable surrender of those who entered the religious state.

For the most part avarice has been restrained by the application of general ethical and Christian truths to the personal life, and in particular to the earning, saving, and spending of wealth. Christianity teaches that selfishness is a deadly sin which must give place to a supreme love for God, and to the love of neighbour as well as self. Wealth is to be looked upon not as an end in itself, but only as a means towards attaining higher ends in life. When a man earns money, he should not be taken possession of by worldly things, but possess them as if he possessed them not. He should not hoard wealth uselessly in fear of want, for he should believe that, if he seeks first the kingdom of God, all things needful for life will be added by God.

In using wealth, he is not to allow himself to be dominated by the selfish love of pleasure or of power, but, regarding himself as a steward of God, he is to use it as a means of procuring a free and independent human existence and development for himself and those around him.

Grose, London, 1875; Martineau, *Types of Ethical Theory*[2], London, 1886; Stalker, *Seven Deadly Sins*, London, 1901; Mozley, *University Sermons*[2], London, 1876; Fowler and Wilson, *Principles of Morals*, Oxford, 1894; Hannay, *Spirit and Origin of Christian Monasticism*, London, 1903.

D. MACRAE TOD.

AVERROËS, AVERROISM.—1. Life.—'Averroës' is a corruption of the Arabic name Ibn Rushd. Abu 'l-Walid Muḥammad ibn Aḥmad ibn Muḥammad ibn Rushd was born at Cordova in the year A.H. 520 (A.D. 1126), of a family of standing. His grandfather, who was kādi of Cordova, wrote some important works on law. His father also, and afterwards Averroës himself, held the post of kādi. He studied law in his native town, and medicine under the guidance of Abū Jafar Hārūn of Truxillo. He enjoyed the friendship of Ibn Zuhr, a famous physician, and the acquaintance of the celebrated theosophist Ibn 'Arabī. In 548 we find him at Marrakesh (Morocco), being presented by Ibn Ṭufail to the Amir of the Faithful, the Almohad Abū Ya'qūb Yusūf. His account of this introduction has been communicated as follows:

'When I came into the presence of the Amir of the Faithful,' he says, 'I found him alone with Ibn Ṭufail, who began to eulogize me. . . . After asking my own, my father's, and my family name, the Amir opened the conversation with the question: "What is the opinion of philosophers on the sky? Is it an eternal substance, or did it have a beginning?" A sudden fear seized me, and rendered me speechless.' The Amir, however, soon put him at ease by himself treating the question with a knowledge unlooked for in a prince, and sent him away laden with presents.

It was Ibn Ṭufail too who advised Averroës to write a commentary on Aristotle. He told him that the Amir often complained about the obscurity of the Greek philosophers, and of the translations then existing, and said that he ought to undertake the explaining and arranging of them. There is a passage in Ibn Ṭufail's philosophical romance, *Ḥay ben Yaḳẓān*, that is supposed to be an allusion to Averroës, who was just then beginning to write.

In A.H. 565 Averroës was appointed a kādi at Seville, and, about 567, was installed at Cordova. From this time onwards he devoted himself to the composition of his greatest works, although he felt burdened all the time with public duties. He travelled a great deal. In 574 he was at Marrakesh, in 575 at Seville, and in 578 back again at Marrakesh, where Yusūf appointed him his chief physician, a post that had been held by Ibn Ṭufail. When Yusūf sent him back to Cordova, he bore the title of 'Grand Kādi.'

Averroës continued in favour during the beginning of the reign of Ya'qūb al-Mansūr, Yusūf's successor; then he fell into disgrace. This was the result of the opposition his writings encountered from the theologians, and it bears witness to the influence that his philosophy was beginning to exercise. They accused him of various heresies (see below, § 3); and even went the length of trying to make him pass for a Jew. After undergoing an examination on the subject of his orthodoxy, he was banished to Lucena, near Cordova. The Amir also ordered (*c.* 1195 A.D.) all the works of the philosophers to be burned except treatises on Medicine, Arithmetic, and elementary Astronomy.

These decrees were afterwards reversed, and Averroës was recalled to Marrakesh; but he did not long enjoy his return to favour, dying on the 9th of Safar, A.H. 595 (11th Dec. A.D. 1198). His tomb is at Marrakesh, outside the Tagazūt gate.

2. Works.—Averroës' great claim to glory lie in his being pre-eminently Aristotle's commentator. To this he owes his renown and popularity in the West in the Middle Ages. His philosophy proper has been fiercely attacked, and, in the present writer's opinion, often misunderstood. But the care with which he composed his commentaries, their compass, their abundance, and their ingenuity, have caused them to be used as a basis for the study of philosophy in schools.

In accordance with a custom which still prevails in Musalmān teaching, these commentaries are of three kinds: short, medium, and long. These three degrees correspond to the three years or three periods into which philosophical instruction was divided. It is in this way too that the Qur'ān or the *'aḳāid* ('articles of faith') is commented on in the universities of Islām, recourse being had to more and more comprehensive glosses, according to the progress of the pupils.

In Latin or Hebrew we have the three kinds of Averroistic commentaries for the *Second Analytics*, the *Physics*, the treatises on the *Sky* and the *Soul*, and the *Metaphysics*; but no long commentaries for the other works, and none at all for the *History of Animals*, and the *Politics*. In Arabic we have the medium commentaries on *Politics* and *Rhetoric*, a treatise on four books of Aristotle on *Logic*, and a translation of fragments of Alexander's commentary on *Metaphysics*. H. Derenbourg has brought into evidence the existence of an Arabic collection of short commentaries or compendiums (*jawāmi'*) in the library of the Escurial. This work has almost exactly the same contents as that mentioned by the author of the *History of the Almohads* (Fagnan's tr. p. 211).

Besides this great work, his commentaries, we have a somewhat important work on Polemics, the *Tahāfut al-Tahāfut* ('Vanity of Vanities'), which was levelled against the theologians. It is in the Arabic text. There are also a few fragments in Arabic which are not so important. Among the works that Renan mentions as having been written by Averroës besides his commentaries, but which are perhaps not all clearly distinct from them, are: commentary on Plato's *Republic*, opinions on al-Fārābī's *Logic* and on his manner of comprehending Aristotle, discussions on a few of Avicenna's theories, commentary on Nicolaus's *Metaphysics*, treatises on the abstract intellect and its relation to man's, and a commentary on the Profession of Faith (*'Aḳīdah*) of the Mahdī Ibn Tūmart. Averroës was the author also of works on Jurisprudence, Astronomy, and Medicine. Of the last named, we possess the text of a treatise which, in the Middle Ages, enjoyed a somewhat wide-spread reputation, the *Kulliyāt* (*i.e.* 'Generalities').

3. Doctrine.—It is by no means certain that the Western writings which we possess on Averroës give us a very true idea of his doctrine. His philosophy was fiercely attacked by the theologians, who represented it in the light most favourable for their own ends. With the intention of pointing out the dangers that it presented to the faith, they forced assertions out of it, they drew overstrained inferences from it, they told whither, according to them, this doctrine led rather than what it really was. We know this method of procedure well from the work of al-Ghazālī entitled *Tahāfut* ('Destruction,' or 'Vanity of Philosophers'), where he applies it to al-Fārābī and Avicenna. This work has now been carefully studied. It is clear that al-Ghazālī reproaches 'philosophers,' not so much for explicitly professing anti-religious doctrines, as for holding opinions and hypotheses which are not likely to be useful for proving religious truth, but from which conclusions contrary to the faith would rather be

inferred. This does not mean that al-Fārābī and Avicenna did not seek sincerely to establish a philosophy compatible with dogma.

Now the same thing happened in the case of Averroës. He was opposed by theologians, not only by Musalmāns, but by Christians as well; and we see his system not from his own point of view, but through the distorting criticism of these theologians. Some of these authors are, indeed, more accessible than Averroës, whose ideas have to be sought either in the rare Arabic texts or in the Latin translations, whose style is very obscure and difficult.

It seems that even Renan, in spite of all his intelligence, his facility, and his perspicacity, has not absolutely guarded against this fundamental injustice; and too often, in his slightly wavering explanation of Averroës' philosophy, he presents not so much the authentic doctrine of Averroës as that which has been attributed to him. The following is, very briefly, Averroës' doctrine according to Renan:

> It had a very evolutionary character. Eternal matter, the evolution of the germ by its latent power, an undetermined God, the impersonality of the intelligence, the emersion and re-absorption of the individual, constitute its essential points. He further represents Averroës as a downright determinist, whose God does not recognize individuals, but can recognize only the general laws of the universe. He says, moreover, in several places that Averroës denies resurrection. Not firmly enough impressed with the great influence of Neo-Platonism in Islām—an influence brought into evidence by Dieterici—he tries to trace the ideas of the Arabic philosopher to Aristotle, which he sometimes finds rather difficult, and is surprised that the theories to which the Arabs give preference are precisely those that appear in Aristotle only in an obscure and secondary manner.

We cannot quite agree with these different ways of looking at Averroës. We believe that he must be studied as belonging to the school called *al-falāsifa* ('Philosophers'), of which we shall hear more in connexion with al-Fārābī and Avicenna; that the doctrine of this school is more Neo-Platonic than Peripatetic; that Averroës' doctrine is precisely the same in principle, differing from it only in unessentials; and this is exactly what appears from a perusal of the work entitled *Tahāfut al-Tahāfut* ('Vanity of Vanities') which Averroës wrote in reply to al-Ghazālī's *Tahāfut*. Al-Ghazālī attacked al-Fārābī and Avicenna. Now it frequently happens that Averroës finds al-Ghazālī's criticism justified, and he reproaches his predecessors for giving him this advantage. Then he modifies something in their system; but these modifications deal only with details, or with the manner of exhibiting the doctrines; they are not really essential.

Is there any need, as has been suggested, to regard these modifications of Averroës on the doctrines of the school of 'Philosophers' as an approximation to the system of the Peripatetics? This, again, is by no means certain. It is doubtful whether there is much less Neo-Platonism in Averroës than in his predecessors. His opponents in the Middle Ages accused him of having often misunderstood Aristotle, and sometimes their criticism seems well founded.

Let us now exhibit some of the chief points in Averroës' philosophy by comparing them with the corresponding points in Avicenna's philosophy. This is not a very easy task; for Averroës himself seems, more than Avicenna, to feel the difficulties of the philosophical problems. He is less confident, less systematic, more analytic; he disputes more, is more troubled about the opinions of others, and seems to have less firmness about his own conclusions.

(1) *Eternity of the world.*—The doctrine of the eternity of the world had early partisans in Islām in the *Mu'tazilites*, such as Abu'l-Hudaīl and Tumāmah. The former considered the creation as simply the act of putting the universe in motion. We have a fragment of Averroës, published by Dr. Worms, which is very clear on this question. He recognizes that there is a creation, and that the world needs a motive power; but he interprets these two ideas in a different manner from the theologians. He believes in a creation that is being renewed every instant in a constantly changing world, always taking its new form from the preceding; but he does not admit creation *ex nihilo*. According to him, this continuous and incessant creation is more worthy of the name of creation than that which is accomplished once for all. Averroës claims that fundamentally this idea does not differ from that of the theologians. The fact remains, however, that in his system infinity can be reached in time—a point which the orthodox doctrine does not admit. But for him, as well as for the theologians, creation does not take place in time: it is produced for all eternity; and time is produced and created at the same moment as the world, according to the doctrine of the orthodox school. Time, for all these Musalmān thinkers, is the result of the existence of the world, and is manifested in the movement of the spheres.

The world then, although it is eternal, has a 'mover' or 'agent.' On this point Averroës rectifies a proof of Avicenna's which does not seem conclusive to him. The mover or agent is that cause of the world, eternal, like it, which produces it each instant and moves it. Celestial bodies, indeed, do not have a perfected existence except through movement; that which gives them this movement is their 'agent.' In this way Averroës distinguishes between eternity with cause and eternity without cause (*æternitas secundum tempus, æternitas secundum essentiam*). God alone is eternal without cause and without mover or agent. The world is eternal, but has an agent.

(2) *Origin of multiplicity.*—Renan remarks that the problem which engrossed Averroës most was that of the origin of beings; we might say, with more precision, the origin of multiplicity. Indeed, it engrossed the whole Arabic school. God being one, how does multiplicity emerge from Him? Avicenna recognized the principle that 'out of one only one can spring'; consequently, he thought that first of all there came from God a primary being, one alone, called the 'first cause,' from whom then evolved the multiplicity of beings. Averroës does not absolutely maintain this principle. The opinion he professes is neither so clear nor so absolute, although he meant it to be more supple and synthetic.

He admits, like all his school, the succession of the celestial spheres, considered as incorruptible, animated, and moved by intelligences. He makes a few changes in the details of their procession. He holds that multiplicity exists, not only in the different aspects of knowledge that they have of one another, but also in their mutual distances and in the 'dispositions' that they have in them. Averroës, moreover, does not admit that the celestial bodies are composed of matter and form, as Avicenna admitted—an opinion which leads to the conclusion that the existence of these bodies is not necessary, for matter and form depend on one another for subsistence. By rejecting this opinion, Averroës continues to diminish the importance of the rôle of creator.

A single power, he holds, comes from the first principle. The whole world results from it, and all its parts are so ordered and connected that the whole, moved by this single energy, acts in concert. Thus, in animals, the different faculties, the members, and the actions, are united in a single body; and each animal is judged a single being, having at its disposal a single power. It is because of this diffusion of power, intellect, and soul, in the

heavens and in the sublunary sphere, that it can be said that God created, maintains, and preserves the world, as we read in the Qur'ān. It does not necessarily follow that, because this power penetrates into manifold beings, it is itself manifold. There flows then from the unit, *i.e.* from the first principle, a power, single itself, which becomes manifold in the beings that participate in it.

This system certainly shows how the lives of the different beings that compose the world harmonize. But Averroës seems to have avoided explaining the origin of these beings.

(3) *Knowledge in God.*—Averroës gives us his idea of the philosophic argument that 'the first principle comprehends only its own essence.' He does not agree with the theologians that we are then driven to the conclusion that God is ignorant of the whole world, and does not know His own creation. The meaning of this assertion is that God comprehends in His essence beings in their most exalted state of existence; and when the philosophers say that He does not comprehend the beings that are below Him, it signifies that He does not know them in the way in which we know them, but in a certain manner that is peculiar to Him. For if any other being existed who possessed a knowledge similar to God's, God would have an 'associate' in His knowledge, and He would no longer be unique. This is why it is impossible to say that Divine knowledge is general, or that it is particular; these are modes of human knowledge, and they refer to beings, who are the causes of human knowledge, but who cannot be the cause of God's knowledge.

To sum up: we cannot, according to Averroës, admit that the knowledge of God depends on beings, for then the less perfect would be necessary to the more perfect; nor that God does not comprehend in His essence things and their order, for then He would not be intelligent. It stands to reason, therefore, that He conceives things in a higher order of existence than that in which we know them.

This theory of the different orders of existence is, nevertheless, a little obscure. Averroës tries to explain it by comparing it to colour, which is one in its essence but has different degrees of existence, according as it is in bodies, or in our sight, or our imagination, or our other faculties in their order. In view of this explanation it would be unjust to claim that Averroës' system denies Providence.

(4) *The soul and the intellect.*—We may take it that Averroës' psychology is, as a whole, constructed like that of Avicenna. But there is one point in this system which we must not forget, the distinction between the soul and the intellect.

This distinction is especially important in its bearing on the question of the survival of the soul and its 'unity.' It has often been said that Averroës taught the 'unity of the soul' and the unity of the intellect in the universe, and that he denied the immortality of the individual soul. The present writer does not believe that this latter assertion is correct; the former, about the universal unity of the soul or of the intellect, undoubtedly is. But still we must try to discover the exact meaning of this expression.

According to the school of 'Philosophers,' the intellect and the soul are not merely distinct in degree; that is to say, the intellect is not merely the most elevated kind of soul. We feel that there is a more profound difference between these two ideas, a real difference in their nature. The intellect alone seems absolutely free from all matter; it is essentially that which is opposed to the common idea of matter; it represents the higher domain of general or abstract; it is pure thought. The same can by no means be said of the soul. The idea of soul, in Musalmān philosophy, is closely allied to our modern ideas of power and energy. The soul is the energy that animates matter; and as such, far from being absolutely opposed to matter, it is, on the contrary, profoundly mixed up with and involved in it. At times we are inclined to believe that the Arabic philosophers have an idea of this power similar to that of the modern psychical schools, and that they believe that it depends on some subtle matter, which is more delicate than ordinary matter, and is not usually apprehended by the senses. That is the impression given by reading passages like the following:—

'There are some who say that the soul resides in a subtle thing called celestial heat, in which are the souls that form the bodies. No philosopher will deny that there is a celestial heat in the elements which serve as support for the faculties of animals and plants. Some call this heat the "natural celestial faculty." Galen calls it the "informing faculty." These souls form bodies; this is the reason why Plato says that the soul is separate from the body; for if it depended on it, it would not create it. The soul is something that is added to the innate celestial heat. Each species has its soul, intermediary between those of the celestial bodies and the souls that are here below in the visible bodies. It has therefore been said: "At the death of the bodies, the souls return to their spiritual condition and to those subtle bodies which none can see."' (*Tahāfut*, p. 138).

It follows, then, that if the intellect exists perfectly and actually only when general and freed from the conditions of individuality, the soul, on the contrary, though belonging to the universal power that circulates in the world, may be individual and remain so. That is what Averroës points out after a passage in which he has been speaking of the unity of the intelligence: 'This argument,' he says, 'is of value for the intelligence, for there is nothing in the intelligence of the nature of individuality; but it is a different thing with the soul; for even if it is despoiled of the accidents by which individuals are multiplied, the most celebrated of the sages say: "It is not exempt from the condition of individuality"' (*op. cit.* p. 137).

The soul, therefore, according to this doctrine, may remain individualized after the death of the body. It *may* do so. Arguments of a purely philosophical order do not force us to believe that this individuality really exists, but they show that it is possible. Such seems to be Averroës' point of view on the question of the immortality of the soul. In the end, he leaves it to revelation to settle this question. 'It is a very difficult problem,' he says. The philosophical introduction to the problem is pushed to the point we have just seen—the knowledge that the soul forms the body, and that, since it forms it, it cannot depend upon it. We cannot therefore deduce the destruction of the soul from that of the body. This agrees with what we find in Avicenna.

Belief in the survival of individual souls, combined with belief in the eternity of the world, brings up a difficulty with regard to infinite number. Since the number of souls produced at the beginning of the world is without end, there would be an infinite number of individuals existing at one and the same time. Now, most of the Arabic philosophers, Avicenna excepted, refused to admit infinite number. Averroës agrees with the majority. He seems to solve the difficulty by counting only a single soul as a principle; he does not apply number to the particular souls that are bound to it. There is but one soul, just as there is but one light; its multiplication to infinity in individuals is only a secondary matter. In short, Averroës refuses to admit infinite number in the case of objects that are quite detached from one another; but he does admit it, in a secondary manner, in the case of objects previously bound to a general unity.

Such is, as nearly as we can judge, the real import of Averroës' system on the problem of the unity and the survival of the soul. It is also evident that it is quite impossible to admit the contrary opinion, which is that Averroës denied the survival of the soul. For there is no doubt that Averroës claimed to remain one of the faithful. Now it is an absolute impossibility that he could believe himself a Musalmān and at the same time deny the immortality of the soul. His thought must have been, like that of the whole school of Philosophers, that the former philosophy was true in the main, and that the Muhammadan faith was also true; that consequently there should be no essential point of contradiction between them,

but that, on the contrary, the one should complete and explain the other.

As for the question of 'the unity of the intellect,' it is by no means the same as that of 'the unity of the soul.' It is, moreover, a question that presents no difficulty if it is made quite clear what the author means by the terms in question.

The unity of the intellect signifies merely the universality of general ideas. Averroës explains this universality of rational knowledge at the same time as its perpetuity: 'Ghazālī,' he says, 'has taken this argument from the Philosophers: the intelligence, starting with the individuals of any species, lays hold on a single conception, which is the quiddity of this species, and which is not divided with the persons that are multiplied through origin, position, or constituent. This conception, therefore, cannot be subjected to birth and destruction, like the individuals to which it pertains. This is why the sciences are eternal; neither are they born nor do they die except by accident, that is to say, by their relation to such and such an individual. They are not perishable in themselves.'

General ideas, according to the school of Philosophers, exist really in the active intellect, *i.e.* in the world of celestial intelligences. This world is eternal, and is harmoniously arranged under the First Principle, which is God. The human intelligence perceives general ideas only in so far as they succeed in entering into relation with the active intellect, in which these ideas reside. These exist actually. Whenever man's intellect perceives them, this intellect itself becomes perfect; it is completely developed and actual. Before this, it was incomplete, unfinished; it was not yet the intelligence but only a prelude to the intelligence, a general possibility of understanding, what the Philosophers call the 'material,' or passive, intellect. We see in the works of al-Kindī, al-Fārābī, and Avicenna the different degrees through which the intelligence passes in order to become actual instead of 'material,' as it originally was, *i.e.* to pass from the potentiality to the fact.

This system is quite clear. It is very evident that the material intelligence, which is a mere possibility, is not persistent in itself. The only persistent intellect is the realized, 'acquired,' or 'perfected' intellect, as the Philosophers call it. It is, therefore, a grave error to deduce, as Munk has done, from the non-immortality of this material intellect, the non-immortality of the human soul.

From this point of view, then, it can easily be understood why the Philosophers considered the question of individual survival in connexion with the unity of the soul, but not in connexion with the unity of the intellect.

(5) *Resurrection.*—Al-Ghazālī accused the school of Philosophers of denying resurrection. The accusation was grave, considering the importance of this dogma in the Qur'ān. Averroës denies the charge, and gives his views on this subject at the end of his *Tahāfut*. Renan gives a somewhat free translation of a few lines of this passage (*Aver.* p. 158). Averroës says that the theory that denies resurrection is nowhere found among the Philosophers. He remarks that the religious law, prior to philosophy, always taught resurrection, and that this dogma is useful for leading people to seek after the happiness of the beyond. 'Philosophers,' he says, 'teach happiness only to a few well-educated men, while religions make it their aim to teach the crowd; but this special class of philosophers arrive at complete existence and perfect happiness only by associating with the multitude' (*Tahāfut*, p. 139). They must therefore accept the teaching that suits the people, interpreting it as best they can.

Averroës interpreted this doctrine thus: the body which we shall have in the other life will not be the same as that of this life; 'that which will be resuscitated will be a representation of what is seen in this world; it will not be that very thing *in essentia*. For what has perished cannot be born again, except in so far as it is individualized; and existence can be bestowed only on the semblance of what has perished, not on the object that has perished in its identity.' To strengthen his argument, he uses the words of Ibn 'Abbās, a traditionist who had great authority in Islām: 'There is of the other world nothing but names in this world.' 'That proves,' says Averroës, 'that the future existence has a kind of generation more elevated than that of actual existence, and constitutes a more excellent order than the order of this world' (*op. cit.* p. 140).

Here again it is clearly a question of interpretation, not a denial of the doctrine. In the same way, we must not understand in a dogmatical sense passages such as Renan quotes (pp. 156, 157), in which Averroës disapproves of the use of myths regarding the state of souls after death, or says that it is not the sanctions of the other life that must press men on towards virtue in this life. That simply means that too precise a representation of the other world may be false and dangerous, and that virtue may have nobler motives than fear of punishment or promise of reward.

(6) *Truth and law.*—In politics, Averroës, like al-Fārābī, follows in the footsteps of Plato, whose *Republic* he commented on; and, according to the custom of Oriental thinkers of his school, he does not criticize the text he comments on. He accepts it as truth, almost as religious truth. He accepts, therefore, that political ideal, half socialistic, half mystic, which on many points, such as the status of woman, does not at all agree with the customs of Islām.

We must not lose sight of the part played by syncretism, which dominated the whole philosophy of the Oriental Middle Ages. Ancient philosophy was considered true as a whole; and all its documents, even the most diverse, could be brought into accord, the commentator having the settled conviction that they could neither contradict one another nor contradict religious truth. There are two important treatises of Averroës in which he tries to point out this conformity between religious truth and philosophical truth. This work required some 'interpreting' of the Qur'ān and a slight changing of its meaning. We get used to efforts of this kind in the study of the philosophers previous to Averroës, and certain more or less heterodox sects in Islām, like those of the Faithful Brothers of Baṣra or the Brothers of Purity. We find, too, in Averroës the extreme form of this conception, which, admitting *a priori* the two truths, philosophical and prophetic, ends in assimilating the philosopher and the prophet. Just as there must always be prophets here on earth, or at least great mystics, who bring the human world into relation with the world beyond, so also must there be philosophers. And here the idea takes a distinct turn that makes it still more unusual. As the human intelligence exists in actuality only by its union with the active intellect, there must always be in the human race, if this intelligence is really to exist and subsist, a few men of great intellectual gifts, a few great philosophers whose spirit participates in eternal truth.

In this passage, Averroës is no longer Peripatetic; but neither is he original; he is merely in accord with his world and his time. He is a syncretist; he is combining mysticism with a system that, from many points of view, is somewhat antagonistic to it. He is placing a kind of illuminative

system at the end and summit of his philosophy, just as his predecessors did, although he himself did not give the impression of being naturally much drawn to considerations of that kind.

4. Short history of Averroism.—Averroës' influence was felt in Jewish philosophy and Christian scholasticism. His commentaries were translated into Rabbinic Hebrew and into Latin. The Jews translated them during the 13th and the first half of the 14th century. In the 13th cent., Jacob, son of Rabbi Anatoli, of Naples, and Moses ben Tibbon, of Lunel, edited versions of several treatises; in the 14th, Kalonymus translated some others. Samuel b. Tibbon and Juda b. Solomon Cohen, of Toledo, compiled philosophical encyclopædias in which, we might say, they transcribe Averroës' works. The Spaniard Shem-Ṭob b. Joseph b. Falaquera inserted several long passages from Averroës in his own works. Towards the middle of the 14th cent. Averroism reached its zenith in Jewish schools, and Levi b. Gerson of Bagnols commented on Averroës, just as Averroës had commented on Aristotle. This great influence on the Jews lasted until the 15th century. At this period, we still find Pico della Mirandola following the teaching of Elias del Medigo, professor at Padua, the last representative of Averroism among the Jews.

Avicenna was translated into Latin before Averroës. The first translators were Dominico Gondisalvus, Archdeacon of Toledo, and the Jew, Juan Avendeath of Seville; they worked under the direction of Raymond, Archbishop of Toledo. Their translations were made from 1130 to 1150. The Jews had cut down the work; the translators put into form the version prepared by the Jews.

A few years later, translations of al-Kindi and al-Fārābī were edited by Gerard of Cremona and Alfred of Morlay. In 1230, Michael Scot, a courtier of Frederick of Hohenstaufen, began to translate Averroës. Of most importance are his interpretations of the commentary on *de Cœlo et Mundo* and of the treatise *On the Soul*. Hermann, a German, likewise attached to the house of Hohenstaufen, translated, from Averroës, the *Ethics* in 1240 and the *Poetics* in 1256. Alfonso X. and Frederick II. were the patrons of these works. It is well known that in 1240 Frederick addressed a series of philosophical questions to the Musalmān scholars, to which he received only very vague answers.

Is it really owing to these versions, executed from the Arabic, that Aristotle's works have passed into the West; or have the Latin versions, taken directly from the Greek, played the principal part in this transmission? M. Forget, who, a few years ago, again took up this question, concluded that the priority cannot be given comprehensively either to the one or to the other group of versions. It depends upon the treatise. The Arabic was the first to make known the eight books of *Physics*, the nineteen books on *History of Animals*, the treatises *On the Sky and the World*, *On Plants*, *On Meteors*, and summaries of the *Rhetoric*, and the *Poetics*. The first complete version of the *Ethics* was from the Arabic. The treatise on *The Soul* and a part at least of the *Metaphysics* were first known from the versions made directly from the Greek.

At the end of the 15th and the beginning of the 16th cent., when Averroism reached its zenith in North Italy, Niphus and Zimara made some corrections on the old versions of the commentaries of Averroës. Then new versions were written, based on the Hebrew translations. These new translations were, for the most part, very obscure. Among the translators may be mentioned Jacob Mantino of Tortosa, a Jew, physician to Paul III., Abraham of Balmes, also a Jew, and Giovanni Francesco Burana of Verona, a Christian.

Averroism encountered the same opposition from the theologians in the Christian world as it had met with from the Musalmāns. Later, because of its unusual form, it was opposed by the Humanists, who loved to philosophize in a freer manner and a more elegant style. The Hellenistic scholars criticized Averroës' interpretation of Aristotle, and the Platonists, having Marsilio Ficino in their mind, placed the doctrine of the Academy in all the freshness of its renaissance in opposition to Aristotle and his commentator.

In the Middle Ages, Albert the Great, Thomas Aquinas, and Gilles of Rome wrote against Averroism. Raymond Lully attacked it fiercely. Petrarch declared his dislike towards it, and intended to refute it. Formal condemnations of Averroism were passed at different periods: by the provincial council of Paris in 1209; by Robert de Courson in 1215; by William, bishop of Paris, in 1240; by Etienne Tempier, also bishop of Paris, in 1270 and 1277. Shortly after, these censures were ratified by the theologians of Oxford, over whom Robert of Kilwardeby, Archbishop of Canterbury, presided.

Averroism, which, through the Jews, had held sway in the centre of France until the 14th cent., continued in vogue in the schools of Northern Italy until the 16th century. In the school of Padua it raised the famous disputes in which Achillini and Pomponazzi took part. Its reign extends down to the appearance of modern experimental science, that is, to the time of Galileo.

LITERATURE.—I. *EDITIONS OF AVERROËS' WORKS.*—The two most important Latin editions of Averroës are those of Niphus, 1495–97, and of Junta, 1553. Arabic or Hebrew texts: *Taḥāfut al-Taḥāfut*, Cairo, A.H. 1303; J. Müller, *Philosophy and Theology of Averroës*, Munich, 1859 (Germ. tr. 1875); *Il commento medio di Averroe alla Poetica di Aristotile*, edited in Arabic and in Hebrew by Lasinio, with Ital. tr., 1872; *Il testo arabo del commento medio di Averroe alla Rettorica di Aristotile*, by the same editor; Freudenthal and Fränkel, 'Die durch Averroes erhaltenen Fragmente Alexanders zur Metaphysik des Aristoteles,' with translation into German, in *MBAW*, 1884; M. Worms, 'Die Lehre von der Anfangslosigkeit der Welt bei den mittelalterlichen arabischen Philosophen,' in Baeumker and von Hertling's *Beiträge*, Münster, 1900.

II. *WORKS ON AVERROISM.*—Renan, *Averroès et l'Averroïsme*[3], Paris, 1869; Munk, *Mélanges de philosophie juive et arabe*, Paris, 1857, also art. in Franck's *Dictionnaire des Sciences philosophiques*; F. Lasinio, 'Studi sopra Averroe,' *Annuario della società italiana per gli studii or.*, 1872–73; A. F. Mehren, 'Et sur la philosophie d'Averroès, concernant ses rapports avec celle d' Avicenne et de Gazzâli,' *Muséon*, vii. 613; Forget, 'Les philosophes arabes et la philosophie scolastique,' *Compte rendu du troisième congrès scientifique international des catholiques*, Brussels, 1895; P. Mandonnet, *Siger de Brabant l'Averroïsme latin au xiiie siècle*, 1899; T. J. de Boer, *The History of Philosophy in Islam*, London, 1903.

BON CARRA DE VAUX.

AVESTA.—The Avesta, the sacred book of ancient Iran, contains the teachings of the prophet Zarathushtra, or Zoroaster, and serves at the present day as the holy scriptures of the Parsis of India and the so-called Gabars of Persia (see artt. GABARS, PARSIS). Although fragmentary in its present form, the Avesta is one of the great religious monuments of antiquity, and preserves the records of a faith that was once among the greatest in the Orient, and that might well have spread through Europe in early ages, but for the victories of the Greeks over the Persians at Marathon, Platæa, and Salamis, and for the triumphal incursion of Alexander into the East.

1. Name.—The designation 'Avesta' is derived from the Pazand *avastā*, Pahlavi *āpastāk*, or *avistāk*, a word of uncertain meaning and derivation. Possibly this term, like the Sanskrit *veda*, may signify 'wisdom,' 'knowledge'; more probably, however, it is derived from a presumable Av. form *upastā*, and denotes 'the original text,' 'the scriptures,' as opposed to the term *zand* (cf. Av. *āzainti*), 'commentary,' 'explanation.' In the exegetical and religious works of the Middle

Persian period these two words occur together constantly in the phrase *āpastāk va zand*, which refers to the original Avestan text and its Pahlavi paraphrase and commentary, and it is the erroneous inversion of these words that gave rise to the name *Zend-Avesta*, which was used by Hyde (1700) and by Anquetil du Perron (1771), and was adopted from the latter by the earliest succeeding translators.

2. Original form.—The Avesta in its present form is only a small remnant of a sacred literature of considerable extent. Pahlavi tradition tells of scriptures in 1200 chapters, the Arab historians Ṭabarī (*Annales*, i. 675) and Mas'ūdī (ed. Barbier de Meynard, ii. 123) refer to a copy inscribed on 12,000 cowhides, various Syriac writers allude to an extensive sacred book, and Pliny the Elder (*HN* xxx. 1. 2) mentions 2,000,000 verses composed by Zoroaster. Such direct references to the extent of the original Avestan writings are in agreement with the frequent insistence in Pahlavi literature on the loss of texts during the dark centuries after Alexander, and they are further confirmed by the fragmentary character of the Avesta as now extant. All doubts as to the existence of that larger literature, however, are removed by the Pahlavi *Dīnkarṭ* and the later Persian *Rivāyats*, which give a detailed account of the early scriptures and a summary of their contents.

According to these works, there were originally 21 Nasks (Nosks), or books, each of which was considered to correspond with one of the 21 words of the Ahuna-Vairya (*q.v.*) prayer, and comprised both the Avestan text and the Pahlavi commentary. These 21 Nasks were divided into three groups of seven books each, the first (called *gāsān*, or Gāthā group, and consisting of Nasks 21, 1, 2, 3, 11, 20, 13) containing the spiritual and moral teachings, the second (called *dāṭik*, or legal group, and consisting of Nasks 15–19, 12, 14) containing laws and prescriptions, and the third (called *hāṭak-mānsarik*, or Hadhamanthra group, and consisting of Nasks 4–10) containing matters belonging partly to the first and partly to the second group. The number of sections in each Nask varied from 22 to 65, but many of these sections were no longer extant at the time of the composition of the *Dīnkarṭ*. Of Nasks 8, 9, and 10, for example, each of which had originally 60 sections, only 12, 15, and 10 sections respectively are said to have existed 'after Alexander.' The subjects treated in the Nasks may be briefly summed up as follows: Nask 1, virtue and piety; 2, religious observances; 3, exegetical—the three chief prayers of the religion being explained in it; 4, cosmogony; 5, astronomy and astrology; 6, performance of the ritual, and the benefit to be derived therefrom; 7, qualifications and duties of the priesthood; 8, ethical considerations and various aspects of human life; 9, directions for various ceremonies; 10, conversion and instruction of King Gushtāsp (Vishtāspa) and his wars with Arjāsp; 11, various religious and worldly duties; 12, an account of mankind from the creation of the primeval man to the advent of Zoroaster, and various genealogical information; 13, account of Zoroaster and the Saviour that is to come; 14, worship of Ormazd and the archangels; 15, dispensing of justice and various laws; 16, criminal, civil, and military law; 17, priestly and ritual code, general regulations; 18, law of property and family relations; 19, the Vidēvdād, or Vendīdād, pollution and purification; 20, religious duties, good attributes and qualities; 21, praise of Ormazd and the archangels. From this summary it appears that the original work was not purely religious, but was somewhat encyclopædic in character.

3. History.—According to traditions, the substance of which there is no good reason to doubt, the Zoroastrian scriptures were preserved with great care in the early centuries of the faith, especially under the later Achæmenians. Ṭabarī states that King Vishtāspa, Zoroaster's patron, sent the original copy of the Avesta, written in letters of gold, to the 'Stronghold of Records' at Stakhra (Persepolis)—a tradition which is in substantial agreement with the Pahlavi account in the *Dīnkarṭ* (III. 3, VII. vii. 3 n., V. iii. 4) of a sumptuous copy that was preserved in the 'treasury of Shapīgān' at Persepolis (cf. Jackson, *Persia Past and Present*, p. 306 f.). According to the Pahlavi treatise *Shatroīhā-ī Airān*, another copy, containing 1200 chapters inscribed on gilded tablets, was kept in the 'treasury' of the fire-temple at Samarkand (cf. Modi, *Aiyādgār-i Zarirān, Shatroīhā-i Airān*, Bombay, 1899, pp. 133–136, and *JRASBo* xx, No. 54; and Jackson, *Nöldeke Studien*, Strassburg, 1906, pp. 1031–1033). These two archetype copies, hitherto preserved with zealous care, were destroyed in the invasion of 'the accursed Iskandar' (Alexander) in B.C. 330, when he burned the palace of the Achæmenians at Persepolis, and when his conquering hosts took possession of Samarkand.

The ravages of Alexander broke the power of the Zoroastrian faith, and the Seleucid and Parthian rule in the five following centuries forms a period of depression and darkness in its history, entailing a loss of extensive portions of the original scriptures. Despite the consequent neglect, considerable portions of the texts were preserved in scattered works and in the memory of the priests. Under the last of the Arsacids, early in the 3rd cent. A.D., an attempt was made to collect such parts of the Avesta as had survived. According to a proclamation of Khusru Anūshirvān (A.D. 531–579), King Valkhash, who is generally identified with Vologeses I., ordered that all sacred writings should be searched for, and that such portions as were preserved only in oral tradition should again be written down. This work was eagerly continued by the founder of the Sasanian dynasty, Artakhshīr Pāpakān (A.D. 226–240), who commissioned the high priest Tansar to collect the scattered fragments, and by his son, Shāhpūhr I. (A.D. 241–272). In the reign of Shāhpūhr II. (A.D. 309–380) a final revision of the Avestan texts was made by his prime minister, Ādarbād Māraspand, and this collection, consisting of a fixed number of books, was then declared canonical (see Darmesteter, *Le Zend-Avesta*, iii. Introd. pp. xx–xxxvi, 'Zend-Avesta,' *SBE* iv. pp. xxx–xlvii, and *JA*, new series, iii., Paris, 1894, pp. 185–250, 502–555; consult also the discussion of Darmesteter's article, in two papers, by the Parsi High Priest Darab Dastur Peshotan Sanjana, *Tansar's Alleged Letter*, Leipzig, 1898, and the same author's *Observations on Darmesteter's Theory*, Leipzig, 1898; and Mills, *Zarathushtra, Philo, the Achæmenids, and Israel*, Chicago, 1906, pp. 21–76).

Far more serious even than the ravages of Alexander and the centuries of neglect, were the results of the Muhammadan conquest of Persia and the inroads of the Qur'ān. Through religious persecutions and civic disabilities the worshippers of Ormazd were compelled to abandon their faith or go into exile, and as many Zoroastrian books as could be found were ordered to be burned. The small body of texts that escaped destruction and loss was preserved by the few Zoroastrians who remained in Persia and by the Parsis, their co-religionists who had taken refuge in India; and the books contained in these manuscripts, recopied from time to time, constitute the Avesta as we now have it. The oldest Indian manuscripts date from the 13th and 14th centuries; the Persian are not older than the 17th. No single manuscript contains all the extant texts.

4. Present contents.—The Avesta in its present form consists of the following divisions: (*a*) *Yasna*, including (*b*) the *Gāthās*, (*c*) *Visparad*, (*d*) *Yashts*, (*e*) Minor Texts, such as *Nyaishes*, *Gāhs*, etc., (*f*) *Vendīdād*, (*g*) *Fragments*. These divisions fall naturally into two groups. (1) The first group comprises the Vendīdād, Visparad, and Yasna, which are classed together for liturgical purposes. In the ritual these are not recited as separate books, but are intermingled with one another, and the manuscripts often present them in the order in which they are to be used in the service. In this case the Pahlavi translation is omitted, and the collection is called *Vendīdād Sādah*, 'Vendīdād Pure,' that is, without commentary. On the other hand, these books also appear in some manuscripts

See art. ARDASHIR I. vol. i. p. 774.

as separate entities, and in that case each part is usually accompanied by a rendering in Pahlavi. (2) The second group comprises the Minor Prayers and the Yashts, which are often included with these in the manuscripts, and is called *Khordah Avesta*, 'Abridged Avesta,' or 'Small Avesta.' This forms a species of prayer-book for the laity.

(*a*) *Yasna.*—The Yasna is the chief liturgical work of the canon. It is recited in its entirety in the Yasna ceremony, which, apart from a number of subordinate rites, is devoted chiefly to the preparation and offering of the *parāhōm* (the juice of the Haoma plant, mingled with milk and aromatic ingredients). Parts of the book, however, deal only indirectly with the ritual. The Yasna is composed of 72 chapters, called *Hāiti*, *Hā*, which are symbolized in the girdle of the Parsis (*kusti*), woven of 72 strands. Several of these chapters are mere repetitions to swell the apparent number. Chapters v. and xviii. are substantially identical with chapters xxxvii. and xlvii., and chapters lxiii., lxiv., lxvi., lxvii., and lxxii. are composed of texts occurring elsewhere. The book falls into three nearly equal divisions (i.–xxvii., xxviii.–lv., lvi.–lxxii.). The first part begins with an invocation of Ormazd and the other divinities in order of rank (i.–ii.), and the dedication of the oblation (*myazda*) and other offerings with similar formulas (iii. 1–8, iv.). After a short prayer (viii. 5–8) there follows the *Hom Yasht* (ix.–xi.), in which Haoma, the branch from whose twigs, like the Soma of the Hindus, a sacred drink was prepared, is personified and worshipped both as plant and as divinity. This section is in turn succeeded by the Zoroastrian creed (xii.) and by other formulas (xiii.). With chapter xiv. begin the so-called *Staota Yesnya*, chapters of the *Stōt-Yasht*, or twenty-first Nask, of the earlier Avesta, which continue, with interruptions, as far as chapter lviii. In the early chapters of the *Staota Yesnya* are found invocations of the spirits of the day (xvi.), of the periods of day and year, and of the various forms of fire (xvii.). Chapters xix.–xxi. contain commentaries on the three most sacred prayers, the *Ahuna Vairya*, *Ashem Vohū*, and *Yenghē Hātām*, and represent part of the third original Nask, called the Bak Nask. The succeeding chapters (xxii.–xxvii.) make up a further liturgical sequence, called *Hōmāst Yasht*, which accompanies the second preparation of the Haoma juice in the ceremony. The five *Gāthās*, which together with the *Yasna Haptanghāiti* form chapters xxviii.–liii. (excepting lii.), stand out in marked contrast with the other parts of the Yasna, and are described in the next paragraph below. Chapter liii. is a brief interpolation between the fourth and fifth Gāthās. Chapter liv. consists of but a single verse, aside from the introductory formulas, and forms the *Airyaman Ishya* prayer, with which the Saoshyants are to restore the dead to life at the day of resurrection. After a brief poetical summary of the Gāthās (lv.) comes the *Srōsh Yasht* (lvii.), a long and detailed glorification of the angel Sraosha, preceded by a briefer chapter in the same vein (lvi.) by way of introduction. Chapter lviii. is in praise of prayer in general, and especially of the prayer to be recited at the Last Judgment. The following chapter (lix.), with its renewed invocations, leads over to a formula of blessing on the house of a pious worshipper (lx.), a formula of exorcism (lxi.), and a series of stanzas to be recited in propitiation of the sacred fire (lxii.). Chapters lxiii.–lxviii. constitute the *Āb-zōr*, 'offering to the waters,' which consists of an introduction (lxiii.–lxiv.), praises of Anāhitā, the goddess of the waters (lxv.), and the formulas used in the consecration and offering of the holy water (lxvi.–lxviii.). The book ends with further invocations (lxix.–lxxii.), which mark the conclusion of the Yasna ceremony.

(*b*) *Gāthās.* — The metrical Gāthās ('songs,' 'psalms') constitute the oldest as well as the most important part of the whole Avesta, and differ from the other parts in language, metre, and style. They are five in number, comprising 17 hymns (*Yas.* xxviii.–xxxiv., xliii.–xlvi., xlvii.–l., li., liii.), and are arranged according to their metres, and named Ahunavaiti, Ushtavaiti, Spenta Mainyu, Vohu Khshathra, and Vahishtoishti, after their opening words. These Zoroastrian psalms contain the teachings, exhortations, and revelations of the prophet Zoroaster himself, who seems a more distinct personality here than elsewhere in the Avesta. The style of the Gāthās is noticeably different from that of other parts, being almost free from the tiresome uniformity and barren reiteration of some of the later portions; and although there is a constant recurrence of the cardinal tenets, these do not become monotonous, because of their varying expression. Ceremonies and ritual observances are but little referred to, and the Haoma-cult, the *Fravashis*, and the whole naturalistic pantheon do not appear in these hymns, either because they present the religion in an earlier and loftier form, or, more probably, because they are concerned chiefly with the prophet's teaching regarding the conflict between Ormazd and Ahriman, the relation of the human individual to that conflict, its ultimate outcome in the routing of the forces of evil and the final victory of Ormazd, the last judgment, and the longed-for kingdom of Ormazd. The detached character of the verses, which nevertheless are a logical sequence, has led to the supposition that, like the verse portions of many Buddhistic works, they were the text of discourses of the prophet and a summary of his teachings in a form available for oral tradition (cf. Pischel and Geldner, *Vedische Studien*, Stuttgart, 1889, i. 287).

In the midst of the Gāthās is inserted the so-called 'Yasna of the Seven Chapters' (*Yasna Haptanghāiti*), which is written in prose, but in the same dialect as the Gāthās. It consists of a number of prayers and ascriptions of praise to Ormazd, the Amesha Spentas, or archangels, the souls of the righteous, the fire, the waters, and the earth. By some scholars it is held to represent a later and more developed form of the religion than appears in the Gāthās. Its language, in fact, shows certain departures from the Gāthic dialect. Under the Gāthās are also included four specially sacred prayers or formulas. These are the *Ahuna Vairya* (*Yas.* xxvii. 13), the *Ashem Vohū* (*Yas.* xxvii. 14), *Yenghē Hātām* (*Yas.* iv. 26), and the *Airyaman Ishya* previously mentioned (*Yas.* liv. 1).

(*c*) *Vīsparad.*—The Vīsparad (Av. *vīspē ratavō*, 'all the lords') is not a body of connected texts, but consists merely of additions to portions of the Yasna, which it resembles in language and form. It comprises 24 (according to some, 23 or 27) chapters, called Kardah, and is about one-seventh as long as the Yasna. The Vīsparad contains invocations and offerings of homage to 'all the lords,' whence its name. In the ritual its chapters are inserted among those of the Yasna.

(*d*) *Yashts.*—The Yashts (Av. *yeshti*, 'worship by praise') form a poetical book of 21 hymns, chiefly in verse, in which the angels of the religion (*yazatas*) and the heroes of ancient Iran are praised and glorified. The order in which the divinities are worshipped corresponds largely with the sequence in which they are used to name the days of the month. In external form the Yashts are characterized by their identical introduction and conclusion, but they differ greatly in length, age, and character. The first four are largely composed of

late and ungrammatical material, and the last two consist chiefly of regular Yasht formulas with a number of quotations from other passages. On the other hand, the intervening longer Yashts are almost entirely in verse, and have considerable poetic merit. Of chief importance among these are: Yasht v., in praise of Ardvī Sūrā Anāhitā, the goddess of the waters; Yasht viii., which exalts the star Tishtrya, and recounts his victory over the demon of drought; Yasht x., dedicated to Mithra, who, as the god of light and of truth, rides out in lordly array to wreak vengeance on those who have belied their oath or broken their pledge; Yasht xiii., devoted to glorifying and propitiating the guardian spirits (*fravashis*) of the righteous; Yasht xiv., in honour of Verethraghna, the incarnation of victory; and Yasht xix., which sings the praises of the Kingly Glory (*kavaya hvarenah*), a sort of halo or radiance said to have been possessed by kings and heroes of Iran in olden times as a sign of their rulership by divine right. Much of the material in the Yashts is evidently drawn from pre-Zoroastrian sages; there is a mythological and legendary atmosphere about them, and Firdausi's *Shāh Nāmah* serves to throw light on many of the events which they portray, and on allusions that would otherwise be obscure.

(*e*) *Minor Texts.*—Chief among the Minor Texts are the *Nyaishes*, or Zoroastrian Litanies, a collection of five short prayers or ascriptions of praise addressed to the Sun, Moon, Water, and Fire, and to the angels Khurshēd, Mihr (Mithra), Māh, Ardvisūr (Ardvī Sūrā Anāhitā), and Ātash, who preside over these elements. These litanies form an important part of the Khordah Avesta. They are composed of fragments from the Yasna and Yashts, and contain invocations, supplications, deprecations, and obsecrations employed daily by the laity as well as by the priesthood. Under the heading of Minor Texts come also the five *Gāhs*, addressed to the spirits of the five periods of the day; the two *Sīrōzahs*, the greater and the lesser, which in their 30 paragraphs invoke in turn the divinities of each day of the month, and which are recited especially on the thirtieth day after the death of a Zoroastrian; the *Āfrīngāns*, or blessings, four in number, used for various purposes with an accompanying offering: the *Āfrīngān-i Dahmān*, repeated in honour of those who have died in the faith; the *Āfrīngān-i Gāthā*, recited on the five concluding days of the year, when the souls of the dead revisit the earth; the *Āfrīngān-i Gahanbār*, composed chiefly of instructions to worshippers concerning participation in the celebration of the six special festivals of the year; and the *Āfrīngān-i Rapithwin*, recited at the beginning and end of summer. All of these belong to the Khordah Avesta.

(*f*) *Vendīdād.*—The Vendīdād (Av. *vīdaēvodāta*, 'the law against the demons'), although inserted for liturgical purposes among the Gāthās in the Zoroastrian ritual, is not actually a liturgical work but a priestly code prescribing the various purifications, penalties, and expiations. It originally formed the nineteenth Nask of the Avesta handed down to Sasanian times, but its parts vary greatly both in point of style and in time of composition. Much of it must be of late origin.

In its present form it contains 22 chapters, called fargards. Chapter i. is a dualistic account of creation that attributes all the disagreeable features of the otherwise delightful regions of the earth to the counter-creative activity of Ahriman. Chapter ii. tells the legend of Yima, of the Golden Age, and of the coming of a terrible winter and destructive floods, to preserve mankind from which the princely Yima is directed by Ormazd to build an enclosure (*vara*). The following chapter (iii.) treats of the pleasures and pains of earthly life, the manner of life prescribed for bearers of corpses (a special class of men), praise of agriculture, and the defilement of the earth by corpses. Chapter iv. concerns legal matters—breaches of contract, assault, punishments. Chapters v.–xii. relate mainly to impurity incurred through contact with the dead and to the methods of purification for removing the pollution, notably by undergoing an elaborate lustration for nine nights, the so-called *Barashnūm* (ix.). Chapters xiii.–xv. are devoted chiefly to the treatment to be accorded to the dog, an animal held in almost reverential regard by the early pastoral Zoroastrians. In chapters xvi.–xvii. instructions are given for purification from several sorts of uncleanness, and for the disposal of parings of the nails and clipped ends of the hair. Chapter xviii., one of the most interesting and instructive in the Vendīdād, deals, among other things, with the character of the true and the false priest, and with the cock that wakes the pious to prayer early in the morning; and it relates a conversation between the angel Sraosha, club in hand, and the evil spirit Druj, concerning the progeny of the latter. In chapter xix. are found an account of the temptation of Zoroaster and the revelation of the destiny of the soul after death. Chapters xx.–xxii. are chiefly of a medical character.

(*g*) *Fragments.*—In addition to the preceding books there are also a considerable number of fragments. There survive, for example, three chapters from the original Hādōkht Nask, the last two of which are eschatological in character, and deal with the destiny of the soul after death. Of special interest is a similar metrical fragment (Fr. W. 4), which refers to the efficacy of the *Airyaman Ishya* prayer, which is to be chanted by the Messianic Saoshyants at the day of judgment, to confound Ahriman and his hellish crew and to raise up the dead (cf. Haas, 'An Avestan Fragment on the Resurrection,' *Spiegel Memorial Volume*, Bombay, 1908, pp. 181–187). Among the longer fragmentary texts may be mentioned also the *Āfrīn-i Paighambar Zartusht* in honour of Zoroaster, a blessing invoked upon kings, and the so-called *Vīshtāsp Yasht*, an enigmatical compilation, disconnected and ungrammatical, which is in no wise related to the regular Yashts. Many fragments are found as quotations in the Pahlavi ancillary literature. Most important of these is the *Nīrangistān*, a work in three fargards, or chapters, collecting and commenting upon a number of Avestan *Nīrangs*, or ritual prescriptions. The commentary cites additional directions of the same kind from another source. This work is of value for our knowledge of the ritual and for Avestan lexicography, but unfortunately the manuscript material is poor and the text consequently imperfect. Another Pahlavi treatise that contains Avestan passages is the *Āfrīn-i Dahmān*, also called *Aogemadaēcā* after the first quoted Avestan word. The Pahlavi commentaries on the Vendīdād and the Yasna, and other Pahlavi works, such as the *Shāyast-lā-Shāyast*, the *Vijīrkart-i Dīnīk*, and the *Pursishnīhā*, contain a large number of Avestan quotations, many of them from the lost Nasks, and brief formulas and prayers are found here and there in manuscripts of the Khordah Avesta. Mention should likewise be made of the additions to Avestan lexicography in the *Frahang ī-Ōīm*, an Avesta-Pahlavi glossary (ed. Hoshangji Jamaspji and Haug, Bombay, 1867; cf. Reichelt, in *WZKM* xiv. 172–213, xv. 117–186). For a complete list of fragments and their editions see Bartholomae, *Altiran. Wörterbuch*, pp. viii–x.

The extant parts of the Avesta owe their preservation chiefly to their employment in the ritual. The liturgical portions, constantly used in priestly observances and ceremonies, were naturally considered of greater importance and cherished with greater care, whereas the other books that may have escaped destruction gradually fell into desuetude and neglect, were not copied as much as the parts occurring in the ritual, and finally disappeared altogether. Thus it happens that the present Avesta corresponds but little with the traditional 21 Nasks in arrangement or in extent. Only two of these original 21 books are now represented with any degree of completeness. The Vendīdād, or nineteenth Nask, has

survived in approximately its full form; yet even this shows evidence of having been patched up and pieced together. Many of the chapters of the Stōt-Yasht, or twenty-first Nask, are contained in the Yasna, where they extend, with interruptions, from chapter xiv. to chapter lviii. (cf. Geldner, 'Awesta-litteratur,' in *GIrP* ii. 25–26). There exist also, in addition to these two remnants, an important part of the Bakān Yasht, or fourteenth Nask (most of the Yashts being referred back to this otherwise lost book), and portions or fragments of others are extant. Altogether there are preserved specimens of about 15 of the original 21 Nasks. This material is supplemented, however, by various passages that have been translated from the Avesta into Pahlavi, and have come down to us in that form. The Pahlavi *Būndahishn*, for example, is largely based on the old Avestan Dāmdāt Nask, and serves in a measure to replace its loss.

5. Age and growth.—The present form of the Avesta dates, as has been mentioned above, from the Sasanian period, but the various portions differ considerably from one another in age. The relative age of the component parts can be approximately determined by a study of their metre, grammar, and style. Although it is impossible to go into details here, it may be said in general that the later texts as a rule are written in prose, show lack of grammatical knowledge on the part of their authors or compilers, and consist to a very great extent of formulaic material. The application of this threefold criterion shows the chronological order of the texts to be somewhat as follows: (1) Gāthās (*Yas.* xxviii.–liii.), including (2) the Yasna Haptanghāiti (*Yas.* xxxv.–xlii.) and some other compositions in the Gāthā dialect (*Yas.* xii., lviii. and the four most sacred prayers, or formulas, mentioned above), (3) metrical Yasna and Yashts (*Yas.* ix.–xi., lvii., lxii., lxv.; *Yt.* v., viii.–x., xiv., xv., xvii., xix.), portions of Vendīdād ii.–v., xviii.–xix., and scattered verses in the Vīsparad, Nyaishes, Āfringāns, etc., and (4) the remaining prose portions of the Avesta.

The determination of the actual date of composition of the different parts of the Avesta is largely a matter of speculation. According to the generally accepted view, the Gāthās, the oldest part in substance as well as in form, date back to an early period of the religion, if not to the prophet Zoroaster himself, whereas certain minor portions of the scriptures may have been written or compiled as late as the time of Shāhpūhr II. of the Sasanian dynasty. The extreme limits of the period of development would thus be about B.C. 560 and A.D. 375. In his latest works (*Le Zend-Avesta*, iii., Introd.; see also *Zend-Avesta*², *SBE* iv.), the brilliant French scholar, Darmesteter, put forth a radical theory in regard to the composition of the Avesta as we now have it. In his opinion all sacred writings that may have existed under the Achæmenians were lost after the invasion of Alexander, and not a page of any earlier work has come down intact. The pre-Alexandrian spirit may be recognized, however, in the Vendīdād, which, although later than the Gāthās in composition, is older in material and Achæmenian in tone. According to this theory, the Gāthās, though the oldest part of the Avesta in form, represent the latest growth of the Zoroastrian spirit and show the influence of Gnosticism, the school of Philo Judæus, and Judaism. Darmesteter assigns their origin to the middle of the 1st cent. A.D. This radical hypothesis concerning the age and growth of the Avesta met at once with spirited opposition on the part of scholars best qualified to judge, and can hardly be said to have any acceptance to-day. Avestan specialists are at present agreed that there is no adequate reason for making so strong a claim that the tradition was lost. It is known that the latest Parthian monarchs were filled with the true Zoroastrian spirit, and it can be proved from Greek, Latin, and other writings that the tradition of the wisdom of Zoroaster lived on during the long period between Alexander and the rise of the house of Sāsān in the 3rd cent. A.D.

6. Language.—The language in which the Avesta is written is named 'Avestan.' It belongs to the Iranian branch of the Indo-Germanic family of tongues, and is most closely allied to the Sanskrit, though individually quite distinct from the latter. This relation to the Sanskrit was one of the means of establishing the authenticity of the Avesta, and is still of the greatest importance in its interpretation. In its phonology Avestan agrees with Sanskrit in its vowels in general, but shows a greater variety in its *e* and *o* sounds. Final vowels, except *ō*, are, as a rule, short. A striking peculiarity is the insertion of transitional and epenthetic vowels, the latter giving rise to improper diphthongs. Some of the consonants are identical with those of Sanskrit, others correspond uniformly with certain Sanskrit sounds. The Sanskrit voiceless stops *k*, *t*, *p*, for example, are generally represented in Avestan by the spirants *kh*, *th*, *f*, when followed by consonants; Sanskrit initial *s* appears in Avestan as *h*. Because of this close correspondence, many Avestan words and phrases may be changed at once into their Sanskrit equivalents by the mere application of certain phonetic laws. In inflexion the language shows nearly the richness of Vedic Sanskrit, and it possesses almost equal facility of word-formation. In syntax it differs from the Sanskrit in certain points, showing marked individuality, especially in the later portions.

Two dialects may be recognized in the Avesta: one the Gāthā dialect, the language of the oldest parts, often called *Gāthā Avestan* (*GAv.*); the other, the language of the great body of the Avesta, called *Younger Avestan* (*YAv.*). The Gāthā dialect is more archaic, bearing to the Younger Avestan somewhat the relation of the Vedic to the classical Sanskrit. Possibly this older dialect may owe some of its peculiarities also to an original difference of locality. Its chief characteristic is the lengthening of all final vowels and the frequent use of parasitic vowels. Its grammatical structure is remarkably pure. The same cannot be said of all the texts written in Younger Avestan, as the late compositions in this dialect, owing to linguistic decay, show many corruptions and confusions. All that is old or written in metre, however, is correct, and occasional inaccuracies in such parts must be attributed to faulty transmission.

7. Metres.—The metres of the Avesta deserve considerable attention, because they assist in determining the relative age of the various parts. Almost all the oldest portions of the texts are found to be metrical; the later, or inserted portions, are, as a rule, though not always, written in prose. The Gāthās are composed in metres that have analogies in the Vedas. These were the only metrical parts known to the later Zoroastrians until Western scholars discovered the rhythmical structure of many passages in the later texts. Almost all of these versified portions, especially frequent in the Yashts, are written in eight-syllable lines (cf. Geldner, *Über die Metrik des jüngeren Avesta*, Tübingen, 1877).

8. Alphabet.—The Avesta is written in an alphabet far younger than the language it presents. The characters are derived from the Sasanian Pahlavi, which was used to record the oral tradition when the texts were collected and edited in Sasanian times. The writing is read from right

to left. Nothing is known about the original Avestan script.

9. Pahlavi version.—The Pahlavi version of the Avesta was made in Persia in Sasanian times, when the general understanding of the sacred texts became more and more imperfect. Some of the exegetical portions and works of interpretation belong even to Muhammadan times, and may be assigned to the period between 700 and 900 A.D. Of the Pahlavi version there are now extant the entire Yasna, Vīsparad, and Vendīdād, with some portions of other texts. The rendering is a word for word translation of the original, with the addition of occasional independent explanatory glosses. The original Avestan construction is usually adhered to verbatim, and the glossator has to eke out the inflexional poverty of the language in his day by the use of particles. These determinatives, however, are often omitted, and the loss of the sole means of indicating syntactical relation adds greatly to the ambiguity of the Pahlavi paraphrase. This version, with the accompanying glosses, presents the traditional Zoroastrian interpretation from an early time, and is of the greatest value for an understanding of obscure ideas and an insight into native thought. It is also of material assistance in determining the meaning of a word or phrase, and it serves to check the results of purely linguistic analysis. It must be conceded, nevertheless, that it abounds in errors and inaccuracies, and that its explanations are often fanciful. Furthermore, the more abstract or obscure the original, the less the commentator attempts to explain it. The Gāthās, for example, have in general very few glosses, whereas some other parts of the Avesta are accompanied by an elaborate commentary. The chief defect of the version lies in its disregard of the principles of the grammar, of which its authors seem to have had scarcely any knowledge. As a result of the slavish adherence to the original, the style of the Pahlavi version is very clumsy in comparison with the Pahlavi of independent treatises.

About the year 1200 a large part of the Pahlavi version was translated into Sanskrit by Neryosangh, son of Dhaval, a Zoroastrian priest, who seems to have possessed a thorough knowledge of Pahlavi. His translation is of great value as a help in understanding the Pahlavi version, which he follows in construction and renders word for word. This method often obliges him to sacrifice the Sanskrit syntax to that of the original Pahlavi, and his language consequently assumes a peculiar Iranicized aspect. A further striking peculiarity of the Sanskrit of Neryosangh's version is his disregard of the rules of *sandhi*, or euphonic vowel-combination, so uniformly observed in other Sanskrit works. Neryosangh seems on occasion to have correeted the Pahlavi rendering when he thought it at fault, thus showing that he must have referred at times to the Avestan text itself and reached an independent decision as to its meaning.

A modern Persian translation of portions of the Pahlavi version of the Khordah Avesta was prepared in Persia at some time between 1600 and 1800 A.D., and two separate translations into Gujarati were made in India early in the last century, and appeared at Bombay in 1818 within five months of one another. These are the last independent native versions made before the percolation into India of the influence of Western scholarship. These later versions have some merit, in that they occasionally help us to understand an obscure or ambiguous passage in the Pahlavi, but they never venture upon an explanation other than that of the version on which they are based, and consequently they content themselves with reproducing the Pahlavi paraphrase and commentary without change.

10. Discovery.—The story of the discovery, or opening, of the Avesta to Europe has a special interest, since the Avesta has been known to the Western world for only a little more than a century. A manuscript of the Yasna seems to have been brought to Canterbury as early as 1633, and a copy of the Vendīdād Sādah was brought from Surat in 1723 by an Englishman, George Boucher, and deposited in the Bodleian Library at Oxford, where it was for a long time chained to the wall as a curiosity. No one, however, was able to read these manuscripts, and Thomas Hyde (*Historia Religionis Veterum Persarum*, Oxford, 1700) drew his information chiefly from later Parsi sources. To a young Frenchman, Anquetil du Perron, belongs the honour of being the first to decipher these texts. Some tracings made from the Oxford manuscript were sent to Paris and came to his notice. Du Perron at once conceived the idea of going to India or Persia and obtaining from the priests themselves the knowledge of their sacred books. In his eagerness to carry out his plan he did not wait for promised financial support from the French Academy, but enlisted as a soldier among the troops about to start for India, and left Paris with them in November, 1754. Before he had gone far on his journey, however, the government gave him his discharge from the army, and presented him with his passage to India. After innumerable discouragements, and in spite of almost insurmountable obstacles, he succeeded in winning the confidence of the priests, with whom he was able to communicate after learning Modern Persian. These he gradually induced to teach him the language of the Avesta, to let him have some of the manuscripts, and even to initiate him into some of the rites and ceremonies of their religion. After seven years among the Parsis, he returned to Europe in 1761, stopping at Oxford, before he returned to Paris, to compare his manuscripts with the one in the Bodleian Library in order to assure himself of their authenticity. During the next ten years he worked upon the texts and prepared a translation, which, together with explanatory material, he published in 1771 under the title *Zend-Avesta, Ouvrage de Zoroastre*.

The enthusiasm aroused by this discovery was soon followed by discussions regarding the authenticity of the scriptures that had been made accessible. Some scholars were disappointed not to find the important philosophical and religious ideas they had expected, and did not sufficiently realize the difficulties of pioneer work of this kind. It was suggested, therefore, that the so-called Zend-Avesta was not genuine, but a forgery. The foremost advocate of this view was the Orientalist Sir William Jones, who claimed that the Parsis had palmed off on du Perron a conglomeration of worthless fabrications and absurdities. In France the genuineness of the book was accepted almost universally, and the German scholar Kleuker was an ardent supporter of its authenticity, translating du Perron's work into German, and adding a collection of classical allusions to the Magi and the religion of the ancient Persians (9 parts, Riga and Leipzig, 1776–83). This discussion as to the authenticity lasted for fifty years, during which time little or no work was done on the texts themselves.

About the year 1825 the texts began to be studied by Sanskrit scholars. The close affinity between the two languages had already been noticed by various scholars, but the Danish philologian Rask first pointed out more exactly the relation between them. He had travelled in Persia and India, and had brought back with him many valuable manuscripts of the Avesta and the Pahlavi writings. In a little volume published in 1826 he

proved the antiquity of the language in which the Avesta was preserved, showed that it was distinct from Sanskrit, though closely related to it, and made some investigation into the alphabet of the texts. At about the same time the French scholar Burnouf began to study the Avesta. He soon found philological inaccuracies in Anquetil's translation; and with the help of Neryosangh's Sanskrit version, he was able to restore sense in many passages where before there had been but little. These further steps soon settled the question of authenticity. The foundation thus laid was built upon by such scholars as Bopp, Haug, Windischmann, Westergaard, Roth, and Spiegel, whose efforts were directed mainly to the establishment of a better text and the development of principles of investigation. For a long time the battle raged about the question of the relative value of the traditional and the linguistic methods, some scholars extolling the value of the Pahlavi version and the priestly tradition, and others placing supreme faith in the results of comparison with Sanskrit and other tongues. It is only in recent years that it has become generally recognized that in the interpretation of the Avesta neither of these methods should be employed to the exclusion of the other. Both have positive value, and a judicious balance of these two principles will henceforth doubtless be a fundamental requisite for sound scholarship in this field, which is being cultivated by a small but active band of workers.

LITERATURE.—i. *TEXTS*: Westergaard, Copenhagen, 1852-54; Spiegel, 2 vols., Vienna, 1853-58 (only Yasna, Visparad, and Vendidād, but with the Pahlavi translation); Geldner, 3 parts, Stuttgart, 1886-96 (the standard ed.); Haug, *Die fünf Gāthās*, 2 vols., Leipzig, 1858-60; Mills, *Gāthās*, Leipzig, 1892-94 (with Avesta, Pahlavi, Sanskrit, and Persian versions, and translations of the first three); Baunack, 'Die drei wichtigsten Gebete der Parsen . . . und das siebenteilige Gebet (Yasna Haptaṅhāiti),' in *Studien auf dem Gebiete der griechischen und der arischen Sprachen*, i., Leipzig, 1886, pp. 303-473; Burnouf, *Vendīdād Sadé*, Paris, 1829-43: Brockhaus, *Vendīdād Sadé*, Leipzig, 1850; Antia, *Vendīdād Sadé*, Bombay, 1901; Sanjana, *Nirangastān*, Bombay, 1894; Dhalla, *Nyāishes* (with versions and tr.), New York, 1908; Geiger, *Aogemadaēcā*, Erlangen, 1878; Haug, 'Hâdôkht Nask,' in *Book of Arda Viraf*, Bombay, 1872, pp. 270-316 (with translation); Jamaspji and Haug, *Old Zand-Pahlavi Glossary*, Bombay, 1867; Reichelt, 'Frahang i-Oīm,' in *WZKM* xiv.-xv.; Darmesteter, *Le Zend-Avesta*, iii., Paris, 1893 (including various fragments). For other fragments see Bartholomae, *Altiran. Wörterb.*, Strassburg, 1904, pp. ix-x.

ii. *TRANSLATIONS*: Anquetil du Perron, *Zend-Avesta, Ouvrage de Zoroastre*, 2 vols., Paris, 1771; Kleuker, *Zend-Avesta*, 9 parts, Riga and Leipzig, 1776-83 (a German translation, with additions, of the preceding); Spiegel, *Avesta . . . übersetzt*, 3 vols., Leipzig, 1852-63 (tr. into English by Bleeck, 3 parts, London, 1864); Pietrazewski, i., Berlin, 1864 (a *curiosum* of distorted learning); Darmesteter and Mills, in *SBE* iv., xxiii., xxxi.; de Harlez, *Avesta*[2], Paris, 1881; Darmesteter, *Le Zend-Avesta*, 3 vols., Paris, 1892-93; Söderblom, *Ur Avesta*, Stockholm, 1908; Mills, *The Gāthās of Zarathushtra*, London, 1900; Bartholomae, *Die Gāthās des Awesta*, Strassburg, 1905.

iii. *GRAMMAR AND LEXICOGRAPHY*: Spiegel, *Grammatik der altbaktrischen Sprache*, Leipzig, 1867, and *Vergleichende Grammatik der altēränischen Sprachen*, Leipzig, 1882; Geiger, *Handbuch der Awestasprache*, Erlangen, 1879; de Harlez, *Manuel de l'Avesta*, Paris, 1882; Bartholomae, *Handbuch der altiranischen Sprachen*, Leipzig, 1883, and 'Vorgeschichte der Iran. Sprachen' and 'Awestisch und Altpersisch,' in *GIrP* i., Strassburg, 1895-1901; Jackson, *Avesta Grammar*, i., Stuttgart, 1891; Kanga, *Practical Grammar of the Avesta Language*, Bombay, 1891; Pizzi, *Grammatica elementare dell' antico iranico*, Turin, 1897; Justi, *Handbuch der Zendsprache*, Leipzig, 1864; Bartholomae, *Altiran. Wörterbuch*, Strassburg, 1904, and *Zum altiran. Wörterbuch*, Strassburg, 1906; Mills, *Dict. of the Gāthic Language of the Zend Avesta*, Leipzig, 1902 ff. (still in progress); Blochet, *Lexique des fragments de l'Avesta*, Paris, 1895; Schuyler, *Index Verborum of the Fragments of the Avesta*, New York, 1901; Geldner, *Metrik des Jüngeren Avesta*, Tübingen, 1877; Reichelt, *Avestisches Elementarbuch*, Heibelberg, 1908.

iv. *COMMENTARIES, ETC.*: Spiegel, *Commentar über das Avesta*, 2 vols., Leipzig, 1864-68, and *Neriosengh's Sanskrit-Uebersetzung des Yaçna*, Leipzig, 1861; Sanjana, *The Pahlavi Version of the Avesta Vendīdād*, Bombay, 1895; Bharucha, *Collected Sanskrit Writings of the Parsis*, i. (Khordah Avesta), Bombay, 1906; also much of the literature cited under i., especially Spiegel and Mills—the latter is also contributing numerous discussions of individual *Hās* of the Yasna to *ZDMG*, *JRAS*, *JAOS*, *Muséon*, etc.

v. *GENERAL DISCUSSIONS*: West, 'Contents of the Nasks' (translation of the Dīnkarṭ passages on the subject)=*SBE* xxxvii.; Spiegel, *Erānische Alterthumskunde*, iii., Leipzig, 1878, pp. 771-797; Haug, *Essays on the Parsis*[3], London, 1884; Ayuso, *Los Pueblos iranios y Zoroastro*, Madrid, 1874, pp. 31-55; Geldner, 'Awestalitteratur,' in *GIrP* ii., Strassburg, 1896-1904, pp. 1-53 (Eng. translation by Mackichan, in *Avesta, Pahlavi, and Ancient Persian Studies in Honour of . . . Sanjana*, Strassburg, 1904, pp. 2-82); Browne, *Literary History of Persia*, i., London, 1902, pp. 95-102; Sanjana, *Zarathushtra and Zarathushtrianism in the Avesta*, Leipzig, 1906; Mills, *Zarathushtra (Zoroaster), Philo, the Achæmenids, and Israel*, Chicago, 1906. A. V. WILLIAMS JACKSON.

AVICENNA, AVICENNISM.—1. **Life.**—The name 'Avicenna' is the Latinized form of the Hebrew 'Aven Sīnā,' the transcription of the Arabic 'Ibn Sīnā.' Abū 'Alī al-Ḥusain ibn 'Abd Allah ibn Sīnā was born in the year A.H. 370 (A.D 980-981), in the city of Kharmaitan. The son of a money-changer, and very precocious as a child, he received a first-class education. According to Musalmān custom, he began by learning the Qur'ān and belles-lettres (*adab*). He then studied Indian arithmetic under the guidance of a greengrocer. His next tutor was a philosopher called Nātili, otherwise unknown, who came to reside with his father at Bokhara, and taught the boy the elements of Logic, Euclid, and the Almagest. Avicenna studied medicine without the help of a teacher, and, while quite young, began to visit the sick. Aristotle's *Metaphysics* presented great difficulty to him at first. He read it forty times without understanding it, but at last grasped its purport by means of al-Fārābī's commentaries.

His medical talent soon brought him into favour with royal households. He cured the Sāmānid Sultan of Bokhara, Nuḥ, son of Manṣūr, and then became one of his intimate friends. This gave him access to the Sultan's library, a very valuable one, which shortly afterwards was unfortunately burned. Avicenna was officially employed at the court of Bokhara. Nevertheless, he soon turned his back on it, and travelled through many towns in search of a suitable patron. After short sojourns in Korkanj, Nasā, Abīward, and Tūs, he arrived at Jorjān, where he became connected with al-Juzjānī, who afterwards became his disciple. In fact, it is to him we are indebted for the rest of his life-story. The first part of this biography is culled from Avicenna's own account, which has been preserved by Ibn Abī Uṣaibia. This work is doubly precious to us because there are very few autobiographies in Arabic literature.

The *Shaikh*, as Avicenna was called, continued to lead this wandering life, like many savants of his time, in the hope of finding a powerful and faithful patron, whose influence and favour would be lasting. He became, for a time, the protégé of an admirer in Jorjān, then of the Princess of Rai; but he soon passed on to Kazvīn and Hamadān. He cured the Amir of Hamadān, and was entrusted with the post of Vizier. But his term of government was not a happy one. He accordingly renounced all public functions, and, hidden in the house of a druggist, became immersed in the composition of his greatest works. As he had a strong desire to leave Hamadān, he applied secretly to the Amir of Iṣfahān. The Amir of Hamadān discovered this step and straightway imprisoned him; but his captivity did not interrupt his literary work. After many adventures, he succeeded in escaping along with his brother, Juzjānī, and two servants, all five disguised as Ṣūfīs, and at last found a sure refuge with the Buwayhid prince Alā ad-Daula, who reigned in Iṣfahān. There he received the honour and dignities he so well deserved; and there he enjoyed, what he appreciated far more than any honours, tranquillity. At night, he held philosophical meetings, over which the Amir himself sometimes presided.

And meantime he finished his greatest works. Avicenna died in A.H. 428 (A.D. 1036–7), at the age of 58, in the course of a journey, made in the train of his master, to Hamadan.

His biography gives the impression of very great activity—an activity, too, which was exercised in more ways than one. Avicenna loved wine and pleasure almost as much as intellectual work; and he committed excesses which shortened his life. Legend has seized upon his character, and has made of him a sort of powerful but beneficent sorcerer, the hero of strange adventures and burlesque farces. A whole volume of Turkish tales is devoted to him.

2. Works.—Avicenna's works are very numerous. In Philosophy, the greatest is *ash Shifā* ('the Cure'). The Shaikh composed it by degrees at his different residences during his wanderings. When it was finished, he made an abridgment of it entitled *Najāt* ('Healing'). This abridgment, written in very concise language, but clear and logical, is suitable for study. Another famous philosophical work is entitled *Ishārāt*. The full title is *Kitāb al-ishārāt wa'l-tanbīhāt*, that is to say, 'Book of theorems and propositions.' Juzjāni considered this Avicenna's best work, while he himself put a high value on it. It has been commented on by the scholar Nasīr ad-Dīn Tusi († A.H. 672 [A.D. 1273–4]).

Avicenna's other philosophical treatises are: *Philosophy el-Arudi*, *Philosophy el-Alāi*, so called from the names of the patrons to whom they are dedicated; *Guide to Wisdom*, composed by the Shaikh when in prison, and often commented on; an epistle on *The Fountains of Wisdom*, printed several times in the East; several treatises on *Logic*, one of which forms a part of the *Najāt*; a treatise *On the Soul*; a short poem on *The Soul*, rather a mysterious piece, which has been commented on; an epistle on *The Human Faculties and their Perceptions*, printed at Constantinople; lastly, a series of mystical treatises, and a few poems in Persian.

In Medicine, Avicenna composed the voluminous work entitled *Canon of Medicine*, so celebrated in the Middle Ages. He also produced works on the different sciences, abridged Euclid and the Almagest, and devoted some time to Astronomy. Shortly before his death, he asked Ala ad-Daula for permission to resume the astronomical observations which had been interrupted by troubles and wars. He was also credited in the Middle Ages with some treatises on Alchemy.

3. Antecedents and characteristics.—Avicenna belongs to the school which in Arabic literature took the name of 'School of Philosophers' (*al-falāsifa*). This name denotes all the philosophers who made a special study of Greek works, and the scholars who translated them. Shahrastāni (tr. Haarbrücker, ii. 212 f.) gives a list of about twenty who, before Avicenna's time, received this title of Philosopher. Among them are the Christian or Sabæan translators, Hunain son of Isḥāq, Thābit son of Qurra, Yaḥyā son of Adi. Among the Musalmāns, the most celebrated representatives of this school, before Avicenna, are al-Kindi and al-Fārābī. Of these, al-Kindi is the real organizer of Arabic Scholasticism, while to al-Fārābī Avicenna is greatly indebted in Metaphysics, as he acknowledges, and probably also in Logic and Psychology. It is now generally granted that this school was a development of Neo-Platonism rather than strictly Peripatetic. Avicenna seems to have cleared up and systematized the work of his predecessors. In the following account of his original work, we shall not consider the medical or merely scientific portions, but confine our attention to his philosophical outlook.

4. Philosophy.—Avicenna's Philosophy may be sub-divided as follows: Logic, Physics, Psychology, Metaphysics, Mysticism, and Ethics. This division is in conformity with the custom of his school.

(1) *Logic.*—The parts of the *Najāt* relating to Logic were translated into French by Pierre Vattier (see Lit. at end of art.). The *Ishārāt* also contains some important passages in this connexion. In a treatise on the *Classification of the Sciences*, Avicenna gives Logic a very prominent place indeed among the sciences. His reason is not only the importance of Logic in itself, but also the comparatively extensive knowledge that the Arabs had of Aristotle's logical works. They were not so intimate with his other philosophical works. In this same treatise Avicenna further subdivides the science of Logic into nine different parts, which correspond respectively to the eight books of Aristotle, preceded by Porphyry's *Isagoge*, one of the best-known works of the Oriental Middle Ages.

The first part, corresponding to the *Isagoge*, is a kind of general philosophy of language, and is occupied with the terms of speech and their abstract elements; the second treats of simple abstract ideas, applicable to all beings, and is called by Aristotle the *Categories*; the third deals with the composition of simple ideas in order to form propositions, which is the subject of the *Hermeneutics*; the fourth unites the propositions together to form demonstrations, and corresponds to the First *Analytics*; the fifth discusses the conditions to be fulfilled by the premisses of reasoning, and is like the Second *Analytics*; the sixth, seventh, and eighth parts respectively treat of probable reasoning, false reasoning, and the art of persuading, and correspond to the *Topics* or *Dialectics*, the *Sophistic*, and *Rhetoric*. The ninth and last part treats of discourses whose aim is to stir the soul or the imagination, like the *Poetics*.

Logic, then, is taken here in a very broad sense; syllogistic is only a part of it. Syllogistic with Avicenna has no very special quality except that of being clear and well arranged, free from vain subtleties and all scholastic trifling.

Although, as we have seen, Avicenna gave Logic a very important place, he did not, at the same time, exaggerate its power. He shows very clearly that this power is, above all, negative. 'The aim of Logic,' he says in the *Ishārāt*, 'is to provide mankind with a rule, the observance of which will prevent him from erring in his reasoning.' Logic then, strictly speaking, does not discover truths, but helps man to make the best use of those he already possesses, and prevents him from making a wrong use of them.

Reasoning, according to Avicenna, starts from terms settled at the outset — the first data of experience and the first principles of understanding. The chain of deductions proceeding by a known deduced from a previously known is not unlimited; it must have a starting-point, found outside of the reasoning, which will be the base of the logical fabric. First, from direct experiences or ideas, descriptions or definitions are formed, and then, by means of these, arguments are arranged. Avicenna cleverly explains what definition is: by definition man is enabled to represent objects; by argument he is able to persuade. Avicenna gives both the senses and the reason a share in the formation of the primary data of the sciences. According to him, imagination always supports reason; opinion also, and even memory, fulfil the same office. There are primary principles which all hold because of common feeling, or because of the opinion of scholars which the illiterate do not contradict; others, again, arise from habits formed in childhood; and others are based on the experiences of life. All these principles (of feeling) join with the first principles, or principles of reason, which are produced in a man by his intellectual faculty without requiring the slightest conscious effort to persuade him of them. The mind realizes itself convinced and is

not even aware of how the conviction has arisen. A self-evident example of these first principles is: 'The whole is greater than the part.' This philosophy is very sound. It is a scholasticism, not yet antiquated, open and sincere, in many places recalling the analyses of Leibniz.

Avicenna further discusses the form and matter of definitions and arguments, distinguishes between definition and description, and sums up, in the manner of the Peripatetics, the different kinds of questions that arise in science: first of all, what a thing is, and if it is; next, where it is, when it is, how it is; and, lastly, why it is. We see here an application of the doctrine of the Categories. Avicenna recognizes the four causes — material, formal, efficient, and final. He shows that they may all appear together in a definition. Thus an axe may be defined as 'an iron implement, of such and such a shape, for cutting wood.' At the very beginning of his Logic, Avicenna explains species, difference, property, and common accident, which together furnish another method of constituting definition.

The Sciences are founded on experiences and reasonings. They have objects, questions, and premisses. As there are universal premisses (see above), so each science has its own peculiar premisses. The different objects of the sciences establish a hierarchy among themselves, according to their dignity. Besides this, the sciences are divided into theoretical science and practical science. The principal subjects of theoretical science are Physics, Mathematics, and Theology; and of practical, Applied Physics, Mechanics and Art, and Ethics. The problem of the classification of the sciences was very popular in the Middle Ages, both in the East and in the West.

(2) *Physics.*—In the philosophical part of his Physics, Avicenna discusses several of the primary ideas of the human intellect, *e.g.* power, time, and movement. He desires from Physics a first acquaintance with the ideas which Scholasticism employs in Logic and Metaphysics, that is to say, with the ideas of form and matter and the categories. The ideas of form and matter are suggested by observation of the physical world: 'Physical bodies, strictly speaking, are constituted of two principles, matter and form; then there are attached to them the accidents which arise from the existence of the nine categories.' Scholasticism divides these accidents into primary qualities, which are inherent in the body, and secondary qualities, which can be taken away without annihilating the body, but which contribute to its perfection.

Avicenna's conception of power is more closely allied to dynamics than to statics. He is interested in the energy acting from within the body rather than in the forces which move it from without. Like Aristotle, he allows that each body has a natural place, to which it always returns, by some hidden power, when it has been removed from it. The commonest example of these innate powers is 'weight.' This idea of power is developed in Psychology and Metaphysics. In Physics there is no infinite power. Its effects are always either greater or less. Avicenna recognized the principle of mechanics that 'what is gained in power is lost in speed.'

Time he explains by movement, and it cannot be imagined otherwise. Time cannot be conceived in immobility; it would then be of fixed duration, and no longer true time. 'Bodies,' says Avicenna, 'are in time, not in their essence, but because they are in movement, and movement is in time.' Time was created, and it is nowhere except in itself. For the world in general, it is measured by the movement of the stars.

Avicenna also speaks of the locality of bodies, then of space and impenetrability. He tries to show, by somewhat subtle reasoning, that bodies cannot move in a vacuum, because, he thinks, the dimensions of a vacuum are impenetrable, from which he concludes that a vacuum does not exist. He does not admit the possibility of actual infinity. Like the ancients, he believes that the world is finite, and that there is outside of it neither fullness nor emptiness, but absolute nothingness. He admits, again, that bodies are divisible *in potentia* to infinity, and he rejects atomism. Atomism had its partisans at this time, the *mutakallim* ('theologians'), with whom Avicenna disputes. In this connexion too, he analyzes the idea of contact very cleverly.

Avicenna unfortunately hardly managed to rid himself of the errors of Peripatetic Physics, although he had the opportunity several times. Yet, from a philosophical point of view, his account, besides forming interesting reading, bears witness to a very acute intellect.

(3) *Psychology.*—In Avicenna's doctrine, Psychology is carefully systematized, and adheres to the scholastic form. Beings, and also the faculties, are classified methodically according to a hierarchic arrangement. The general plan of this grand construction is as follows:

There are three kinds of minds. These are, in ascending order, the vegetable mind, the animal mind, and the reasonable or human mind.

The vegetable mind, or nature, possesses three faculties: (1) nutritive power, which, when resident in a body, changes another body into the form of the first; (2) power of growing, by which the body itself increases, without changing its form, until it has attained its full maturity; (3) power of generation, which draws from the body a part similar to itself *in potentia*, which will, in its turn, produce other bodies similar to it *in actu*.

The animal mind possesses two kinds of faculties: motive faculties and apprehensive or perceptive faculties. (1) The motive faculties embrace appetitive power and efficient power. The appetitive power itself is either attractive or repulsive. If attractive, it is simply desire, concupiscence; if repulsive, it is irascibility, passion. The efficient power, which is the producer of movement, resides in the motor nerves and the muscles. (2) The perceptive faculties of the animal mind are classified as external and internal. The former include the five senses—sight, hearing, smell, taste, and touch. The latter have their beginning in the common sense, a sort of centre in which all the perceptions assemble before being elaborated by the higher faculties. The common sense is situated in the front part of the brain. The first faculty to act on the perceptions is the formative faculty or imagination. It strips the sensible form of the conditions of place, situation, and quantity, and then retains it after the object has ceased to make an impression on the senses. The formative is followed by the cogitative faculty, which works first of all by way of abstraction on the perceptions, now prepared, and draws notions out of them. The estimative faculty next groups these notions into what might be called judgments, but which are quite instinctive and not intellectual. This faculty it is which constitutes 'animal intelligence.' For example, the sheep knows by it to flee from the wolf. The last of the faculties of the animal mind is memory, which is situated in the back part of the brain.

The human mind alone possesses intelligence. This intelligence is divided into active intelligence, or practical reason, upon which morality depends, and speculative intelligence, or theoretical reason, which perceives ideas. The perception of ideas is built up through three faculties, which act so as to make the intelligence pass from mere power to actuality. The first of these faculties, the material intellect, is only a general possibility of knowing; the second, the intellect of possession, recognizes first principles; the third is that which is directly fitted to receive the forms of things that are intelligible. It is called the perfected intellect. It seizes hold of that which is intelligible, when, outside the human mind, it unites with the 'active intellect.'

There naturally arise, in the course of this theory, physiological questions regarding the functions of the senses and the localization of the different faculties. Avicenna treats of these as

best he could at a time when the biological sciences were as yet hardly in their infancy.

For example, he discusses the manner in which visual images are transmitted to the eyes, and draws a parallel between two processes of explanation, which he attributes respectively to Aristotle and Plato. He accepts Aristotle's method and rejects Plato's.

The discussion of the intelligence also brings up the question of universals. This question was not so pre-eminently important in Arabic as in Western scholasticism. Avicenna is a realist. Like the Neo-Platonists, he admits that the intelligibles, which are universals, exist in the active intellect. The human intelligence comprehends them *in actu*, when it unites with the active intellect. It also frees them from the particulars which the senses recognize. But this process of abstraction is not sufficient; it is only preparatory, and gives the comprehension of the universals only *in potentia*. Before this can pass to actuality, man's intelligence must become united with a superior intelligence. The reasonable mind starts from the sensible, and little by little rises above it, approaching meanwhile the region of universal realities. Psychology ends in Metaphysics.

The following are Avicenna's proofs of the spirituality of the soul. The soul perceives its own peculiar essence; intellectual power perceives ideas apart from organs; the locale of intelligibility cannot be a body. The immortality of the soul follows directly from its spirituality. The dependence of the soul on the body is not essential but accidental. Another form of this proof is that the soul is a simple substance.

Avicenna believes that the soul is created at the same time as the body is formed, and is to a certain extent in harmony with the body it is to animate. This condition of compatibility with the body makes metempsychosis impossible.

(4) *METAPHYSICS.*—There is one part of Avicenna's Metaphysics which seems quite old-fashioned now, and we must go back in imagination to the beginning of science to find any sense in it. It treats of the procession of the superior intelligences and the production of the celestial spheres. On the other hand, there is a part which seems still good and sound, although it has a systematic character no longer found in modern works of philosophy. This part treats of primary cause and necessary being. The following is, very briefly, the theory of the spheres:

The scale of beings, mentioned above [see § (3)], from the vegetable world up to man, is continued beyond man into the region of the stars. At the top of this scale is the Necessary Being, the principle of principles, who is perfect unity. From this first Being emerges the world of ideas, which is a collection of pure intelligences, simple substances, exempt from multiplicity and change. Below this world of ideas or intelligences is the world of souls. The souls are essences, bound to pure intelligences, which animate bodies. The bodies that they animate in this supra-human region are the stars, which are classed after the manner of ancient astronomy. Beneath the intelligences of the stars, below the last of them, which animates the moon, is the active intellect. From it flows the sublunary world.

Very noticeable in this theory is the analysis of the world of ideas into active intellect and astronomical intelligences. The unchangeableness of the stars is an old belief which was disputed down to the time of Galileo; and the comparison of their spheres with a superior kind of animal is an idea which dates back further than the Hellenic world, and which was long dear to the East.

In connexion with this system, which strikes a modern reader as uncouth, Avicenna discusses in a dignified manner the metaphysical theory of causality. He considers that the pure intelligences are the causes of each other in descending order, and the causes also of the souls of the spheres, and, through them, of their bodies. He holds, then, that intelligence is essentially active; it is even productive of being; and cause usually is simply intelligence. Elsewhere cause is identified with being itself; it is perceptible especially in the primary Being, who is intelligence and principle at the same time, and includes in His essence everything of which He is the principle. 'He comprehends everything in a universal manner, and at the same time no attribute of any particular thing, in the heavens or on the earth, is hid from Him, not even the weight of a *dirrah* (an atom).' He is, at the same time, a final and an efficient cause. The final cause precedes the efficient *in potentia; in actu* the efficient precedes. The cause of the efficient cause is the final end and aim.

God is not the actual moving power of the stars, for this function would beget a certain multiplicity in Him, and, according to the spirit of Avicennism, He must above all safeguard His simplicity. He moves the stars by the intermediation of the first caused, that is, of the first intelligence which springs from Him. This intelligence knows itself and it knows God. From this double knowledge arises a duality. The duality then changes to triplicity when the first caused still knows itself as possible in itself, and as necessary in the primary Being. In this way this philosophy introduces multiplicity into the world.

The doctrine of universals reappears in connexion with that of causes. There are causes of kind and causes of individual; the general has its own causes, the particular has others. A thing has a cause of its quiddity and another of its being, *i.e.* a cause by which it is what it is, and another by which it exists. If a thing is to be individualized, its idea must be able to receive the effect of particular causes.

The idea of the necessary Being is the terminus of the theory of causality. The necessary Being as such has no need of causes. He exists from the beginning complete, with all His qualities. He is absolute. He is pure good, for He possesses the perfection of existence, and existence in itself is goodness: existence, always *in actu*, is pure good. He is pure truth, for that is called true which can justly be said to exist, and, as His existence is necessary, He is therefore absolute truth.

The theory then takes quite a geometrical form. A demonstration composed of three lemmas proves the necessary Being:

(1) All possibles cannot spring from one possible cause, on which their series mounts up infinitely; (2) a series of causes finite in number cannot be possible in themselves and necessary to each other, so that they depend on one another in a circle; (3) everything produced has a cause, and every cause is determinating. This consequently signifies that all possibles must have cause, that causes are not linked together infinitely, and do not return on themselves. Therefore the series of possibles ends in the necessary Being.

This theory is a very fine effort to prove God and to deduce the world from Him in a vigorous way, by a dialectic of mathematical precision. Faith in the power of reason is manifested in this system. To us, who are now more sceptical, it seems pure rationalism, but rationalism in its infancy and slightly deceived by itself. It is redeemed, however, by its vigour and power.

(5) *MYSTICISM.*—It is doubtful whether Avicenna was really a mystic in the religious sense of the word. Here again he has followed the custom of the Neo-Platonic school, regarding mysticism as primarily a subdivision of philosophy. Ibn Ṭufail seems to say that Avicenna had a kind of esoteric doctrine called *ḥikmat-al-ishrāq*, 'philosophy of illumination,' which really contained his true ideas. But we know from one of the treatises of Suhrawardi al-Maqtūl that this philosophy is almost exactly Avicenna's own Neo-Platonism with a different nomenclature.

Passing over mysticism as related to asceticism,

ecstasies, and illumination, we shall confine our attention to Avicenna's teachings on Providence and the future happiness of the soul, in so far as they are complementary to metaphysics and morals. He describes Providence as the fact that the whole world is encompassed by the knowledge of primary Being. This knowledge is cognizant of the most perfect order as that which flows naturally from the Being. The theory of optimism, exhibited in this idea, is similar to Leibniz's: evil is not a part of Divine decree *in essentia*; its place there is accidental. Avicenna recognizes the three kinds of evil: want, physical suffering, and sin. We find evil only in what is still *in potentia*, and has not yet attained perfection. It affects only the individual; species are shielded from it. Evil, moreover, is always a good from some superior point of view. 'It does not enter into the plan of Divine wisdom to abandon lasting and universal good, because of fleeting evil in individual things.' Like Leibniz, Avicenna decides that, however common it may be, evil is not the general rule; it is only the exception to the good.

After death, the reasonable soul attains perfection. To effect this, it must become conscious and intelligent, and receive within it the form of harmony and well-being which pervades the world of superior essences. It unites with this idea of perfection, and so becomes like it. Only the soul which has been prepared by the practice of the virtues enjoys this happiness. Otherwise its taste is vitiated; it cannot attain its end, and accordingly suffers. But if a man has lived a mediocre life, his actions never reaching the height of his intentions, his soul, when freed from the body, becomes the centre of a struggle between his pure desires and his bad habits. Only when purified by this grievous struggle does it attain perfect bliss.

(6) *ETHICS.*—Avicenna, enamoured of the speculative part of philosophy, was on that account less interested in practical philosophy and moral analysis. In his mystical works, he has some fine pages on morals, but their character is distinctly metaphysical. He also wrote on ethics as well as a short treatise on *Government*, which was published recently. It is written in a practical spirit, but is really an elementary treatise in economics. It explains how a man should govern himself, his wives, his children, and his servants.

From the very earliest times, humanity felt a need of organization. First of all, man had to settle in places where he could most easily and comfortably live. This led to the setting up and choice of dwellings. Once established, these required looking after. This duty was entrusted to the woman. From the woman the family was born, and, as it increased, servants were added to the household.

Man's need of subsistence was also the primary promoter of commerce and the arts. Avicenna divides the arts into three kinds: (1) those which are dependent on intelligence of the highest order, *e.g.* guidance, judgment, counsel; these are exercised only by the great; (2) those dependent on education, *e.g.* writing, speaking, medicine; (3) those founded on strength and courage, as military arts. Every individual should learn one of these and apply himself to it.

The good wife is her husband's associate in ruling and guiding. The best kind of wife is intelligent, religious, fond of her children, and sparing in words.

The management of the family is based on fear, dignity, and care. If a man does not make himself feared, his wives will domineer over him. The husband must see to the dignity of the family life by providing for clothing, veiling his wives, and preventing any jealousy from arising among them. The wife must give unremitting attention to her children and servants. Avicenna says a few words about the education of the one and the choice of the other. The woman whose mind is not occupied with domestic cares thinks of nothing except how she can best attract the attention of men by the beauty of her dress, and forgets the honour due to her husband.

5. Avicenna's school.—The school of Avicenna does not boast any very celebrated names. His philosophy was combated and refuted among the Musalmāns of the East by orthodox theologians, especially by al-Ghazālī. For the history of the school of 'Philosophers' proper in Western Islām, see AVERROËS, AVERROISM.

LITERATURE.—(*a*) On the MSS of Avicenna's works: C. Brockelmann, *Geschichte der arabischen Literatur*, Weimar and Berlin, 1897–1902. For Avicenna's life: Ibn Abī Uṣaibia, *'Uyūn al-Anbā'*, ed. Müller, Königsberg, 1884, pp. 2–20. Avicenna's general philosophy: Carra de Vaux, *Avicenne*, Paris, 1900; S. Munk, 'Ibn Sīnā,' in Franck's *Dictionnaire des sciences philosophiques*; T. J. de Boer, *The History of Philosophy in Islam*, London, 1903. A very important work is now in process of preparation in Germany on the *Shifā* of Avicenna.

(*b*) The *Najāt* was published at Rome along with the *Canon of Medicine* in 1593; the *Ishārāt*, ed. Forget, Leyden, 1892; *La Logique du fils de Sīnā*, tr. Vattier, Paris, 1658.

On psychology, Landauer, 'Die Psychologie des Ibn Sīnā,' in *ZDMG*, 1876; Martin Winter, *Über Avicennas opus egregium de anima*, Munich, 1903; Carra de Vaux, 'La Kaçidah d'Avicenne sur l'âme,' in *JA*, 1899. On mysticism, see collection of treatises published by Mehren: 'L'Oiseau,' in *Muséon*, 1887, 'Hāy ben Yaqzān,' in *Muséon*, 1886, *L'allégorie mystique Hāy ben Yaqzān*, Leyden, 1889, *L'Oiseau*, 1891, *La Prière*, *La Fréquentation des lieux saints*, *La Délivrance de la crainte de la mort*, 1894, *Le Destin*, 1899; Ethé, *Avicenna comme lyrique persan*; Carra de Vaux, 'La Philosophie illuminative d'après Suhrawerdi Meqtoul,' in *JA*, 1902. On morals, 'Un Traité inédit d'Avicenna,' in the *Mashriq*, Beirut, 1906 (text).

BON CARRA DE VAUX.

AWE.—In the presence of an awe-inspiring object, we feel ourselves subdued, but are placid: we are powerfully laid hold of, but neither resist nor desire to be set free. On the contrary, we are drawn towards the object, and its presence is welcomed by us, though with a serious and pensive joy. The affections, then, are enlisted, as well as the imagination. The appeal is made to that part of our nature that is open to influences from what is higher or greater or grander or better than ourselves. We feel our inferiority, indeed, but there is no resentment; we are conscious that the superiority in the case is the complement, and not the contradiction, of ourselves. This is in line with the experience of the finite resting on, and complemented by, the infinite, and of 'the less being blessed of the better.'

Greater, higher, grander, better—these are the conditions of the possibility of the emotion of awe; and there is the further condition that these should not appear as threatening us with danger, but as friendly, or, at any rate, as not unfriendly. If all were on our own level, this peculiar emotion could not arise; and if we were threatened with evil, a contrary emotion would be aroused. The antithesis to the awe-inspiring in objects is the commonplace and the obvious, or the despicable and the mean—everything that tends to lower, and not to elevate, the soul. Dealing with what impresses us, awe is by its very nature contemplative and ennobling; it allies itself with our ideals and our aspirations, and is helpful towards enabling us to purify and to perfect character. That is its ethical value. Hence, mystery intensifies it—the unknown and the unknowable. We cannot but be serious in the presence of mystery. The feeling of the mysterious, when it takes possession of us, necessarily subdues us and keeps us humble.

We shall better understand the nature of the emotion, if we note the objects that call it forth. Some of these are impersonal, and some are personal. Of the impersonal causes, we have (*a*) phenomena of nature showing either the vast or the incomprehensible, objects that transcend our power of understanding or that give special scope and exercise to our imagination—such, therefore, as are exceptionally impressive and create in us a certain indefinite yearning, wonder, and admiration; *e.g.*, the starry heavens, the magnitude or vastness of

space, the infinity of time, the origin of life, the mystery of generation, and the like. But, besides these, we have (*b*) intellectual theories and moral principles—generalizations of commanding sweep and laws of transcendent excellence. Of the two things that made the profoundest impression on Kant, the Moral Law was one: the grandeur of it, the unconditionality of it, the authority of it—all contributed to make it awe-inspiring to a degree. In all this we have the feeling of feebleness or unworthiness on our part, and the contrast of might and worth set over against our impotence and imperfections. Next, we have (*c*) awe as associated with persons—an intellectual genius like Plato or Aristotle, a literary genius like Shakespeare or Goethe, a scientific genius like Newton, an ethical or a religious genius like St. John or St. Paul. But, of course, the highest of all examples is God—supreme in Majesty, the source of all the excellences ('wisdom, love, might'), and the fountain of Holiness. We have here the realization of the Ideal, which points the contrast, —'Woe is me! for I am undone; because I am a man of unclean lips, and I dwell in the midst of a people of unclean lips: for mine eyes have seen the King, the Lord of hosts' (Is 6^5). It is the contrast of the sinful and the weak, in presence of the Pure and the Strong; and yet, the purity and strength do not repel but attract us. It is felt that underneath the majesty and greatness lie beneficence and mercy: in the hands of the Supreme, we feel ourselves secure. Again, we have (*d*) things sacred causing awe—things associated, therefore, with the Divine. Such are shrines and holy places (see art. 'Bethel' in Hastings' *DB* and in *EBi*), the soul-moving services of religion on special occasions—the dispensing of Communion in Protestant Churches and the Elevation of the Host in the Church of Rome. Last of all, and akin to this, is (*e*) the awe that is associated with solemnity—*e.g.* the presence of Death, the death-chamber, funeral rites. Speaking of St. Edmund, Carlyle says:—

'They embalmed him with myrrh and sweet spices, with love, pity, and all high and awful thoughts; consecrating him with a very storm of melodious adoring admiration, and sun-dyed showers of tears;—joyfully, yet with awe (as all deep joy has something of the awful in it), commemorating his noble deeds and Godlike walk and conversation while on Earth' (*Past and Present*, bk. ii. ch. iii.).

Now, this being so, there can be little difficulty in perceiving the relation between awe and fear. The dictionary subsumes the one under the other: it makes awe simply a species of fear or dread. No greater error could be committed; for neither in their nature nor in their results have the two much in common. It would be ill both for ethics and for religion if they had.

It is the peculiarity of fear (*q.v.*) to agitate and unsettle us. It deranges the body and unhinges the nerves, producing well-marked outward effects (shaking of the limbs and frame, disturbance of vocal utterance, erection of the hair, and such like); but it has well-marked psychical effects also—intellectual and volitional. The first effect of fear is to stimulate us to resistance or to circumvention, and, if the terror is not excessive, it braces us for the effort; but, beyond that stage, it becomes detrimental and may be ultimately disastrous. However exhilarating fear in moderation may be, its normal action on the intellect is disturbing and disconcerting: it destroys the power of correctly appreciating the situation, and creates a tendency to magnify the danger, and so an inability to perceive the right course of action to be pursued if the impending evil is to be prevented. If at one moment the intellect, under fear, counsels resistance, at another moment it encourages to flight; till, last of all, it becomes powerless to counsel in any form—it simply collapses. So that, thus far, fear may be defined as 'nothing else but a surrender of the succours which reason offereth' (*Wisdom of Solomon* 17^{12}). But the effect on the will is no less conspicuous. Danger, if moderate, may act advantageously on the will and arouse it to effective opposition; but, beyond this point, the result is disquieting and weakening, until, in extreme cases, absolute paralysis sets in, and the subject can do nothing but remain helpless and await his fate. And so, fear *repels*, and does not attract; and its tendency is to *paralyze* both intellect and will and bring about disaster. Moreover, when the moment of fear is past, our attitude towards the object that created it is one of *hatred* or *dislike*.

Not so with awe. In most of the respects now enumerated, it is the antithesis of fear. It has a calming and quieting influence on the body (as seen in the bowed head, the soft walk, the restrained speech, and the reverential look, of the subject of it); and, inasmuch as it *attracts*, instead of repelling, it produces satisfaction and contentment, and a desire to continue in the presence or under the influence of the object that inspires it. In awe, we feel ourselves in the hands of superior power, but power that is conceived as beneficent or not maleficent, as well-disposed, or at least not ill-disposed, towards us, and under whose protection we may rest *secure*. The consciousness of danger (and therefore fear) is wanting, and the feeling of reliance takes its place. We trust the awe-inspiring object, and are attracted towards it, and we rest in the experience of it, and are satisfied. Hence the importance and significance of awe as a religious emotion, with its concomitants of reverence and veneration. It lies at the root of worship, and is the indispensable condition of the highest spiritual peace.

Hence, further, awe enters into the sublime. Not every sublime object, indeed, need beget awe (for pain sometimes is associated with sublimity, and fear is a distinctly felt ingredient of it, producing uneasiness); but much that is sublime also impresses us with awe. Both are results of the manifestation of power or excellence, and both are most effective when associated with Personality. Moral heroism, for instance, and magnanimity are of this stamp—greatness of soul rising superior to misfortune or adverse circumstances. 'Athanasius contra mundum' (a unique figure defying opposition, standing erect in solitary grandeur in the face of fearful odds) can never cease to move us strongly—to draw forth our admiration and to enlist our regard; and there are many acts of self-sacrifice and many lives of disinterested devotion that are sublime and awe-inspiring in the highest degree. They elevate our thoughts and win our affections; they purify our souls, and we feel that we are all the better for the contemplation of them.

WILLIAM L. DAVIDSON.

AXE.—There were several forms of axe, or adze, in use amongst the Greeks, as amongst other nations; but a special controversy has arisen over the πέλεκυς or λάβρυς with double blade, owing to its association with Zeus Labrandeus.

The double axe is derived from one of the Stone Age types, in which the handle passes through the middle, and the stone is thinned away to the two flanges. Examples of this type may be seen in

any good collection, such as the Pitt-Rivers Museum at Oxford. The type was first translated into bronze, and then the form was modified, the wings growing and assuming a more curved outline. It may have been some variety of this axe that permitted the feat of Odysseus.[1] The axe is an ordinary tool or weapon in common use. In the black-figured vase-paintings of the Birth of Athene, Hephaistos uses it to split the divine skull.[2] Specimens with the marks of use on them have been found with other tools in a carpenter's shop at Anthedon,[3] and with other tools at Gournia and Palaikastro in Crete,[4] and at Troy.[5] A late Attic relief shows a youth holding one as a tool.[6] On other works of art, Ino attempts to kill Phrixus with this axe,[7] Theseus fights with it,[8] the Amazons are frequently armed with it.[9] It is represented as part of Gaulish war-spoil, along with other arms and weapons, upon many reliefs;[10] and it was dedicated as war-spoil.[11] It was used to slay the sacrificial victim by the Hittites and at Pagasæ,[12] and in Crete, where a priestess is represented with one in each hand,[13] and there is other evidence to be considered anon. Here is enough to prove that this axe was a war-weapon, or tool, and a sacrificial implement in common use.

We are now in a position to understand its meaning in the hands of divine persons. Zeus of Labranda is well known to have held it:[14] but so does Artemis,[15] so does Dionysus,[16] so does Apollo in Asia Minor,[17] so do the local heroes in Asia[18] and elsewhere.[19] These use it, no doubt, as a weapon of war; and Zeus with his axe manifestly protects Labranda as Athene armed cap-à-pie protects Athens, or any other armed deity stands forth in his might. We may even fairly suggest that the name Labranda has some such relation to *labrys* as Damascus or Toledo to their famous sword-blades.

The use of the axe in sacrifice seems to be enough to account for its representation along with the ox-skull, first as a memorial of sacrifice, and then as a decorative scheme. Here our evidence comes largely from Crete and the Mycenæan age. Mr. A. J. Evans has found representations in which the ox-head is surmounted by an axe, the handle being fixed in the skull: one is a Knossian seal,[20] another a Mycenæan vase-painting from Salamis.[21] The object called by Evans 'horns of consecration' (see ÆGEAN RELIGION), which is obviously a stand of some sort, and apparently is a conventionalized ox-skull,[22] also had the axe fixed in it;[23] one was found in the Knossian shrine with a hole, and a small double axe of steatite lying near, so that it may be fairly assumed that the axe stood in the hole.[24] The axe also becomes an ornament of vases and other works of art.[1] We may compare with this the use of the ox-head with wreaths in a frieze, so common in Roman times; and the reliefs of ox-heads with other sacrificial implements carved on altars.[2] The axe shown is found carved with a late dedication to Apollo in Asia Minor, once apparently to commemorate the sacrifice of a bull.[3] It may perhaps be mentioned that the ox-skull, or its model, is hung up as a charm in gardens and vineyards by the modern Greeks, commonly in the Asiatic islands, and less commonly elsewhere.

The axe was an object of dedication, like any other weapon or tool. We have seen it as part of war-spoil; the axe was also dedicated to Apollo at Delphi;[4] and in the Dictæan cave of Zeus 19 axes were found,[5] along with 20 lance-heads, 25 darts, 160 knives, pins, and tweezers, a cart drawn by oxen, human and animal figures, vases, and other things. All the Cretan axes are *simulacra*, being too thin or too small for use; but most are perforated, and some have handles. Other tiny axes of this sort have been found, of different types: thick and solid, like stone axes; thin, and sometimes marked with dots like dice; sometimes the handles are perforated for hanging. These have been also dedicated to Zeus in Dodona, Olympia, and Palaikastro (Crete);[6] to Artemis in Arcadia,[7] in Ithaca,[8] and at Ephesus;[9] and to Athene and Artemis Orthia at Sparta.[10] The axe also becomes a motive of ornament;[11] and axes were found made of gold and bone in tombs and elsewhere.[12]

It is obvious that these dedications cannot be held to have any peculiar appropriateness to Zeus, because they are dedicated also to Athene, Apollo, and Artemis, and with them are found many other things that are not peculiar to Zeus. They are not for use; they may be either models of war-spoil,[13] or ornaments, or perhaps fractions of the axe-unit of exchange. Similar axes are known in modern times as fractions of the axe-unit, and there are indications that the unit was known in Greece;[14] or again, the shape may have remained as traditional after they ceased to be used in exchange.

It remains to discuss the graphic representations of the axe. The blocks that compose the walls of the palaces at Knossos and Phaistos are scored with a number of different signs, which occur either alone or in conjunction, just as the symbols of writing might do. Amongst these is the double axe, which is repeated alone a number of times on the four sides of a square pillar in the corridor at Knossos. Whether the pillar be sacred or not[15]—and there is at least room for doubt—there is no sufficient ground for regarding these signs as sacred. Such an explanation would account for only one out of many signs, all used together in the same way. It must also be

15 A. J. Evans, 'Mycenean Tree and Pillar Cult,' in *JHS* xxi 106 ff.

remembered that these signs were certainly covered over with plaster, as some of them still partially are. The Italian excavators of Phaistos regard them as literary signs; they all, or nearly all, occur on gems. Several, including the double axe, occur on the literary tablets of Knossos, and are interpreted as writing by Evans himself.[1] They are probably masons' marks; and some of them, including the double axe, have been noticed on stone blocks, apparently used for masons' marks, in other places, as the old Hellenic blocks used to build the mediæval fortress of Cos,[2] and the stones of Heriot's Hospital, Edinburgh.[3]

The above is enough to show that the double axe is not necessarily sacred, or necessarily connected with Zeus. But this is no reason why the axe should not have been the object of worship. Axe-worship is, of course, not fetish-worship, as some have loosely called it; but instances are not uncommon of weapons being worshipped, whether as weapons or as iron. Evans, in his paper on 'Mycenean Tree and Pillar Cult,'[4] has alluded to the subject; and A. B. Cook has collected evidence for axe-worship outside Crete.[5] The evidence for Crete is of varying value: the most weighty piece of evidence is the representation on the Hagia Triadha sarcophagus: a priestess is pouring some red liquid into a jar between two double axes.[6] The other evidence, such as axes set between horns, held in the hands of god or priestess, or visible on the ground of engraved seals, is indeterminate; but these may strengthen the case for worship, if it be established otherwise. Cook publishes a cut of a priest sacrificing before a number of objects, including an ibex, a star, a crescent moon, and two knobbed sceptres with a (one-flanged) axe set upright upon a stool (Assyrian); a Persian seal shows a worshipper before a stool with similar objects upon it. A coin of Tenedos[7] shows an axe upright standing on steps between two supports; another, an axe connected with a jar by a fillet. These seem to be the most significant facts that bear on an axe-cult; it is impossible here to recount all that has been brought in evidence to prove it, or to discuss the far-reaching and often fanciful inferences that have been drawn from them. The reader, however, may be reminded that there are several distinct questions, which have been often confused: (1) Was there an axe-cult? (2) Was the axe specially connected with Zeus? (3) Was the axe a symbol of Zeus, that is, was it treated as Zeus because associated with Zeus? (4) Is λαβύρινθος derived from λάβρυς? (5) Is the Knossian palace the Labyrinth?

LITERATURE.—The literature has been given throughout the article. W. H. D. ROUSE.

AXIOM.—I. Meanings of the term.—The various senses in which the term 'axiom' is used are easily confused, and require to be carefully distinguished. We may mention five senses of the term, all of which are historically important. (1) Axiom in a predominantly *epistemological* sense: a proposition whose truth is self-evident; an immediately certain, objective truth. (2) Axiom in a predominantly *psychological* sense: a proposition of whose truth the man who calls it an axiom feels a fixed persuasion, while he regards the proposition as indemonstrable, and his faith as something fundamental and, for him, necessary; a proposition held to be true with an unwavering faith. (3) Axiom in a predominantly *logical* sense: a first principle which, itself not demonstrated, can be used as a basis for demonstrations. (4) Axiom in a predominantly *social* sense: an opinion which is, as a fact, accepted by all who are competent to understand its import. (5) Axiom in a predominantly *psycho-genetic* sense: an opinion which the innate constitution and the original instinctive tendencies of the mind lead us to accept, and which we therefore do not derive merely from our experience.

1. From the point of view of sense (1) all our knowledge is supposed to be either 'mediate' or 'immediate.' An axiom is a proposition known to be true, not 'mediately,' but 'immediately.' For this view, 'intuitive knowledge,' 'immediate insight,' 'direct assurance,' or 'evidence' is presupposed, as a possible form of knowledge and of consciousness. The criterion of an axiom is said to be that, when we consider the import of a given axiomatic proposition, this state of consciousness, this direct assurance, arises, and makes wholly unquestionable the truth of the particular axiom which comes under our observation. Here the stress is laid, therefore, first upon the *immediacy* of the insight in question. To think the axiom, and to know it to be true, are supposed to be simply inseparable acts. The assurance or 'intuitive knowledge' in question is further regarded according to sense (1) as *objective*. One does not mean by the term 'axiom,' when thus used, merely to point out the fact that a given person *feels sure* that this axiom is true. Sense (1) implies that whoever accepts the truth of the axiom 'intuitively knows,' that is, directly observes, the perfectly objective fact that the axiom is true.

2. Sense (2), on the contrary, lays stress upon what may turn out to be the *subjective necessity* with which some one *feels convinced* of the truth of the proposition. When such a feeling of necessity attends a conviction, and when no demonstration of the truth of the conviction can be given beyond the mere observation that, so long as one conceives the meaning of the proposition, one feels thus convinced, sense (2) requires one to call the proposition an axiom. Sense (2) therefore makes the criterion of an axiom *relative to the subject who feels the necessity*, and who is unable to give other reason for his conviction.

Sense (1) is present in the mind of Descartes when he speaks of propositions which we 'clearly and distinctly perceive to be true.' Sense (2) is emphasized if one lays stress upon some sort of 'unswerving' and, as one conceives, necessary 'faith' or 'assurance.' Aristotle maintains that the 'principle of contradiction' is immediately evident in sense (1). But in sense (2) various subjects, appealing each to his own subjective necessity, may regard as axioms propositions which other thinkers are known to regard as false. Thus the proposition that 'water cannot turn solid' might be regarded as an axiom in sense (2) by a dweller in the tropics, who, hearing for the first time a story of frosty weather in high latitudes, rejected it as essentially incredible, and found his unbelief wholly insurmountable.

Senses (1) and (2) are often confused. The question as to the relation between objective 'evidence' and subjective 'certainty' is central in the theory of knowledge, and only a thoroughgoing sceptic will deny that there is indeed a close connexion between at least *some* of our 'assurances' and the objective truth. But the danger of confounding mere 'conviction' with objective 'evidence' is manifest throughout the history both of science and of religion.

3. Sense (3) makes the use of the term 'axiom' *relative to a given or proposed theory or system*, consisting of propositions and of reasonings. In this third sense an axiom is a proposition which is not demonstrated in the course of the development of the system in question, but is assumed or accepted at the outset, and used as a basis for demonstrations that form parts of that system. If the system in question constitutes, or is regarded as constituting, the *whole* of the possible system of knowledge, then the axioms in sense (3) appear as

1 *JHS* xvii. 38–46, xxi. 273; *BSA* vi. pl. ii.
2 *Arch. Anzeiger*, xvi. 133.
3 *Heriot's Hospital* (Edinburgh), plates facing p. 174.
4 *JHS* xxi. 106 ff.
5 *Transactions of the Third International Congress for the History of Religions*, 1908, ii. 184–194; A. B. Cook, *Cretan Axe-Cult outside Crete*.
6 Cook, p. 189.
7 *Ib.* p. 184, figs. 2, 4; p. 191, fig. 14.

'absolutely first principles,' since, by hypothesis, they are essential to the rational demonstration of the truths of this system, and are nowhere to be proved in the course of any investigation that we can make. But if one is explicitly confining one's attention to some more or less *limited* province of knowledge, or to some special system of propositions, axioms in sense (3) may be entirely relative to that special system, and are then merely the principles presupposed, used, but not demonstrated, by the system in question.

Axioms in sense (3) might therefore be neither self-evident truths nor yet necessary convictions of anybody, but merely 'assumptions' or 'postulates.' On the other hand, sense (3), in so far as it requires an axiom to be a 'first principle,' emphasizes a character which we are all especially accustomed to connect with the term, namely, that character of logical *universality* which a majority of axiomatic propositions are very commonly regarded as possessing. Senses (1) and (2) could be satisfied by particular, or even by individual, propositions. Thus the proposition 'I suffer,' uttered by one who has toothache, may be viewed by the sufferer either as a necessary persuasion of his own or as a 'self-evident' objective truth. Various theories of knowledge have used such 'intuitive evidence' of present experience as the very type of axiomatic knowledge. But particular propositions and reports of experience can be used as the principles of a set of demonstrations only when they are asserted along with universal propositions. And therefore at least some axioms, in sense (3) of the term, must be universal assertions. It especially belongs to sense (3) to emphasize this universal character of at least part of the axioms of any theories.

Sense (3), in contrast with, and sometimes to the exclusion of, senses (1) and (2), has been made prominent in various modern logical discussions of the principles of theoretical science. Thus, by the 'axioms' of a given mathematical theory, recent writers mean, in many cases, propositions which one uses simply as the 'fundamental hypotheses' of the theory in question (*e.g.*, of the theory of some one of the 'non-Euclidean' or 'non-Archimedean' geometries, or of the Cantorean 'Theory of Assemblages'). One need not assert such hypotheses to be true, except in the sense that one treats them, at least provisionally, as self-consistent assumptions about a logically possible state of things, and uses them as 'principles' or as 'primitive propositions' in some statement of a theory. An axiom, in this sense, is often opposed to a *theorem*, which is a proposition that is shown to follow from the principles, and that is, in this sense, demonstrated in the course of the theory in question. In two different statements of a theory (*e.g.* in two different theoretical developments of geometry or of number-theory) decidedly different sets of 'hypotheses' or 'postulates' may be used as the axioms of the theory. In such cases what is an axiom in one statement of a theory may appear as a theorem in another statement, and conversely; and the concept of a 'first principle' becomes then relative, not merely to the theory in question, but to a particular way of stating that theory, and of showing that certain propositions follow from certain other propositions.

If one insists, as Aristotle did, upon sense (3) as applying to certain propositions which are said to form the indemonstrable principles of *all* science, so that, without these absolutely first principles, no system of knowledge whatever is possible, then indeed, *unless* one is a philosophical sceptic, one has to assert that the absolutely first principles are also axioms in sense (1). For if all science rests upon a determinate set of absolutely first principles, and if no science can demonstrate these principles, then either all science is uncertain or some principle is 'immediately evident.' Hence for Aristotle, and for those who follow his way of treating the theory of knowledge, there are propositions which are axioms both in sense (1) and in sense (3). In consequence of the Aristotelian tradition, senses (1) and (3) have therefore come to be viewed by many philosophers as actually inseparable; so that the 'first and fundamental truths' and the 'self-evident' or 'immediately known' propositions are, in discussions of the problems relating to axioms, not infrequently simply identified. But the logically important distinction between the relatively first principles of a given theory and the intuitively evident propositions (if such there be) has been brought afresh to light, especially by the modern logical investigations of scientific theories, and should never be forgotten in dealing with the topic. If a proposition is to be called an axiom both in sense (1) and in sense (3), special reasons (such, for instance, as those of Aristotle) should be advanced for asserting that this is the case. As a fact, it can never be 'self-evident' that a proposition is an axiom in sense (3); for one can ascertain that a principle is indeed a logical basis for certain demonstrations only by taking the trouble to go through the demonstrations themselves—a highly 'mediated' procedure.

4. Sense (4) uses as the criterion of an axiom the 'universal assent,' the 'consensus' of 'all rational beings,' or sometimes the consensus of all the 'competent,' of all the 'normal,' or of the 'wise,' or of some class of knowing beings whose common opinion in the matter is treated as the standard opinion. The criterion here in question has frequently been emphasized, and its history forms part of the long annals of the doctrine of Nature, or of 'the natural,' or of the 'Law of Nature' and the 'consensus of humanity' as the standard whereby both opinions and deeds are to be judged. Criterion (4) becomes an exact one only for those who hold that, as a fact of human nature, there are indeed propositions which *nobody* denies, or which *all* who understand their import affirm. In practice, however, those who appeal to 'universal assent' as the warrant for an axiom usually render their criterion somewhat inexact, by the very fact that they employ this criterion in arguments directed against opponents, who, as appears, call in question either the truth, or the evidence, or the interpretation, of the axiom that is under consideration. If the opponent himself does not wholly assent, one can hardly appeal to 'universal assent' as an evidence against him, without modifying the sense in which one calls the assent 'universal.' Such modification occurs if one regards the consensus in question as that of the 'wise,' or of the 'competent,' or if one insists, in a well-known polemic fashion, that 'nobody who is in his senses' doubts the supposed axiom. Thus, in practice, an axiom in sense (4) is usually conceived in some close connexion with senses (1) and (2)—the connexion being often much confused in controversy. Not infrequently a thinker first explicitly asserts that a proposition is, for himself personally, an axiom in sense (2); then he draws the conclusion that it therefore must be an axiom in sense (1); and thus he proves, by a more or less lengthy mediate course of reasoning, that the proposition, being 'immediately evident,' cannot be proved. Since, perhaps, some opponent still remains unconvinced, and declines to admit the 'immediate evidence,' the defender of the proposition in question hereupon makes use of sense (4), and now undertakes quite convincingly to silence the objector by assuring him that nobody objects to the proposition, since it is 'known to all.' Or, if the opponent even yet persists in calling attention to the 'immediately evident' truth that at least he himself objects, the defender of the axiom finally confuses sense (4) itself by a convenient definition of the 'assent of all,' whereby the opponent is excluded from the 'all' who are worthy of consideration; and hereupon the matter becomes, of course, quite clear, although not to the opponent.

Such processes have played a great part in the history of controversy. A famous example is furnished by the controversies which have been suggested by Locke's revival, in

the First Book of the *Essay on the Human Understanding*, of the ancient questions as to whether all men possess in common a knowledge of logical, of mathematical, and of moral truths. Especially in the case of moral principles has the interest in making out whether there is any agreement amongst all men regarding the distinction between Right and Wrong been prominent in controversy ever since Locke. Numerous defenders of an axiomatic basis for morals have sought in Anthropology for the evidence that, regarding some moral opinions, all men agree, and have conceived their principles as definable in terms of sense (4).

5. Finally, in sense (5) of our list, an axiom is defined by reference to the famous doctrine of 'innate ideas.' This doctrine is one which Locke's equally famous attack upon it, in the First Book of his *Essay*, long made central in controversy; and the partisans of innate ideas, in the various forms which this doctrine has since assumed, have frequently connected, in many often conflicting ways, senses (1), (2), and (4), and to a certain extent sense (3), with the use of the criterion for an axiom which sense (5) emphasizes. From the point of view of sense (5) it is essential to an axiom that it should come to our consciousness by reason of the very 'constitution' or 'original nature' of the mind. Since the modern evolutionary view of the mind emphasizes the importance of our instinctive tendencies and inherited aptitudes as psychologically determining our whole intellectual life, evolutionists of the type of Spencer have been led to favour a theory of the innateness of those predispositions which, when developed through our individual experience, lead us to regard some propositions as certainly true, and as true far beyond the range of our personal experience. For Spencer an axiom is, in general, an expression in an individual of the results of the 'experience of the race,' and is in so far, indeed, innate in the individual. Such a doctrine has established new connexions between senses (4), (5), and (2), and has to some extent connected senses (1) and (3) with (5).

Nevertheless, it is at least possible that an axiom in sense (5) might prove to be an actually false proposition, for the 'innate constitution of the mind' might involve one or another aptitude to believe error. In fact, an evolutionary view, closely resembling Spencer's, might lead, in a thinker less optimistic about human nature than is Spencer, to the doctrine that certain instinctive tendencies, determined by evolution, are still such as to deceive the individual. Thus the innate hostility and resentfulness which form one aspect of human nature may be viewed, by an evolutionist, as a necessary result of the conditions of conflict under which humanity has developed. And such tendencies might easily lead, in a civilized man, to a belief regarded by the individual as axiomatic in sense (5), and probably also in sense (2). This belief might take the form of the principle that one ought to avenge all injuries, and to destroy, if possible, all enemies. As a fact, however, this belief, although dependent upon the very 'constitution' of the mind of one whose ancestors have lived by war and have enjoyed blood revenge, may be, and is, a false principle of ethics. Or again, a lover's beliefs about his beloved are deeply affected by the innate constitution of his mind, and may appear to him to be, not only in sense (5) but also in sense (2), axiomatic. Yet they may be in many respects false. A pessimist, such as Schopenhauer, is fond of emphasizing the innate 'illusions' which, according to him, characterize human nature. Buddhistic doctrine is equally emphatic in characterizing the most cherished and innate convictions of common sense as both logically false and morally destructive. Salvation for the Buddhist depends upon discovering axioms in sense (1) which are extremely hard to discover, so that only the Buddhas ever attain to them. But, when once seen, these axioms are for the enlightened indeed 'self-evident.' And the knowledge of them sets aside those axioms in sense (2) which are also axioms in sense (5), and which, according to Buddhism, are due to the innate deceitfulness of desire. So little, for some men, does either innateness or subjective necessity imply self-evidence and truth.

Axioms in sense (5), furthermore, need not always be axioms in sense (2); for, as partisans of innate ideas generally admit, any individual may remain unaware of some of his inherited aptitudes for conviction. On the other hand, there is no reason why a *new* assurance, or an axiom in sense (2), may not appear in the life of somebody whom revelation or a sudden growth or 'mutation' (such as may occur in the course of evolution) endows with a faith which, just because it is novel, does not constitute an axiom in sense (5).

As for senses (4) and (5), they very frequently coincide in their denotation, but need not do so. Although what 'the very constitution of the human mind determines us to believe' is, *ipso facto*, 'believed by all,' *in case* the constitution in question is precisely the constitution 'common to all human minds,' there is no reason why the innate might not also be the individual, the congenital *variation* of this or of that mind. The individual may possess an aptitude for conviction which belongs to his 'constitution,' but which no other man, or nobody who has preceded him, possesses or has possessed. This is as possible as is a new individual revelation due to any other source than the inherited temperament of the individual. Prophets, Buddhas, poets, geniuses generally, have often been credited with such aptitudes for forming out of the depths of their own natures new convictions, which they have then taught to other men. On the other hand, as Locke and other empiricists have frequently insisted, those convictions which in sense (4) are more or less common to many or even to all men need not on that account be regarded as mainly determined by our innate constitution. They may be supposed to be due to experience, which moulds men to common results.

The foregoing survey shows us that the five senses of the term 'axiom' here in question are in a large measure independent of one another, so far as their logical intension is concerned, while by virtue of their various applications, now to the same, now to different sets of propositions, these five meanings of the term 'axiom' have become painfully confused in the history of controversy and of the theory of knowledge. The result is that the term 'axiom' is a very attractive and a very dangerous term, which should never be employed by a careful thinker without a due consideration of the sense in which he himself proposes to employ it.

II. History of the term.—As to the history of the term 'axiom' and of its uses, the ancient sources are above all: (i.) Aristotle's theory of the axioms as propositions conforming both to our sense (1) and to sense (3); (ii.) Euclid's actual use of his axioms in his geometry, especially in sense (3), and in union with certain propositions called 'postulates' (which were also theoretical principles in our sense (3)). The treatment of the principles of science and of morals in sense (4) as principles 'known to all,' or as known to the 'wise' or to the 'competent,' has its beginnings in pre-Socratic philosophy, plays an important part in the Platonic *Dialogues*, and is in various special cases and passages carefully considered by Aristotle; but becomes especially prominent in the Stoical theory of knowledge and of ethics. While sense (2) plays a part throughout the history of ancient thought, it becomes especially important in Christianity and in modern discussions of the psychological aspects of the problem of knowledge.

Sense (5), implied by the Platonic theory of reminiscence, but long put into the background by the Aristotelian theory of knowledge, has come to play a very great part in modern discussion. Its completest classic expression is probably the one to be found in Leibniz's *Nouveaux Essais*.

The later discussion of the nature, the existence, the various senses, and the use of axiomatic truths, has been dominated since 1781 by three great movements: (1) the critical philosophy of Kant; (2) the various forms of modern Empiricism, Positivism, 'Pragmatism'; (3) the modern logical investigations of the principles of science—investigations which were especially stimulated by the famous inquiry into the axioms of Euclid's geometry, and which have since extended to the whole range of the foundations of mathematics, and also to the principles of theoretical physics, and to still other branches of scientific theory.

III. **Significance for modern philosophy.**—In the attempt to deal with the extremely complex philosophical problems which are suggested by the foregoing five senses of the term 'axiom,' there are one or two guiding considerations which any student of the topic may well bear in mind.

(*a*) First, not every philosophy which tries to avoid scepticism is forced to admit the existence of axioms in sense (1). The necessity of such an admission as the sole alternative to scepticism exists, indeed, for one who holds the opinions ascribed in the foregoing sketch to Aristotle. If all science depends upon a determinate set of absolutely 'first principles' (in sense (3)), then, unless these principles are also axioms in sense (1), our result would remain sceptical, for all scientific theory would lack basis. But the Aristotelian theory of scientific procedure is not the only possible one. That theory depends upon conceiving the structure of scientific theory as necessarily linear, with chains of syllogisms leading from determinate beginnings to the conclusions that constitute the scientific theory. But for a thinker such as Hegel, the ideal form of the totality of scientific theory is cyclical rather than linear. Truth may be, as a whole, a system of mutually supporting truths, whose absoluteness does not depend upon any one set of first principles, but consists in the rational coherence and inevitableness of the *totality* of the system. To assert such a doctrine involves considerations which cannot be developed here. It is enough that such a thesis has been attempted. From the point of view there would indeed be axioms in sense (3), viz., in relation to certain *partial* systems, such as this or that mathematical or logical doctrine, whose theoretical development would indeed depend upon chains of deductive reasoning. And there would also be necessary truth, both in the parts and in the whole system. But there would be no *absolutely* first principles, and there would also be no *immediate* certainties—nothing, in fact, that is *purely* immediate in the whole system of truth. The whole would be mediated by the parts, and conversely.

(*b*) Second, the traditional alternative: either this proposition is self-evident or else it is dependent upon some other proposition from which it is deduced, or else it remains uncertain, does *not* exhaust the logical possibilities regarding the rational discovery of truth. Omitting here the complex problem as to the relation between our experience of particular facts and the general truths which our scientific theories aim at establishing, we may point out that there are propositions such that *to deny them implies that they are true.* As Aristotle already observed, the principle of contradiction is itself a proposition of this type. Euclid's geometry contains more than one instance where a proposition is demonstrated by showing that the contradictory of the *probandum* implies the truth of this *probandum*. The proof that this is, in fact, the case may be no easy one, and may involve elaborate mediations. But any proposition A, such that the contradictory of A implies A, is, *ipso facto*, a true proposition, although nobody may yet have come to *feel* its necessity.

When we prove a proposition, however, by showing that its contradictory implies it, we do not make this proposition 'self-evident.' Nor yet do we demonstrate the proposition merely by reference to other propositions which we have to assume as prior certainties. What we find, in such cases, is not so much 'self-evidence,' as 'self-mediation'—an essentially cyclical process of developing the inter-relations which constitute the system of truth. In case, then, there are no axioms in sense (1), we need not abandon either the ideal or the hope of the attainment of rational truth.

(*c*) Third, axioms in sense (2) we need and use wherever and whenever we are engaged in practical activities, or are absorbed in contemplations, such as require a laying aside of the critical sense and a limitation of the business of reflexion. But the assertion 'I am sure of this' is never logically equivalent to the assertion 'This is true.' And it is no part of the business of science or of philosophy to seek, or to remain content with, merely private 'convictions' or 'persuasions,' however 'necessary' the subject feels them to be.

(*d*) Fourth, axioms in senses (4) and (5) interest the anthropologist, and the student of society, of history, of religion, of psychology; they can never satisfy the student of philosophy, or in particular, of logic, and of truth for its own sake.

(*e*) Finally, sense (3), interpreted not absolutely but relatively, so that an axiom is a principle which lies at the basis of a certain selected system of propositions, and which is not demonstrated in the course of that system, remains *the sense in which the term 'axiom' is still most serviceably employed in modern theory.* Philosophy seeks not absolute first principles, nor yet purely immediate insights, but the self-mediation of the system of truth, and an insight into this self-mediation. Axioms, in the language of modern theory, are best defined, neither as certainties nor as absolutely first principles, but as those principles which are used as the first in a special theory.

LITERATURE.—A complete view of the literature of the problems regarding axioms is impossible, since the topic is connected with all the fundamental philosophical issues. A few sources are:—Aristotle, *Analyt. Post.* i. 2, 3, *Metaphys.* iii. 2, iv. 3, 4; see also Zeller, *Philos. d. Griechen*[3], II. ii. 234-240. Of works bearing on the topic we may specially name:—Descartes, *Discourse on Method*, and *Meditations*; Spinoza, *Tract. de Emend. Intellectus*, and *Ethics*, especially pts. i. and ii.; Locke, *Essay on the Human Understanding*, esp. bks. i. and iv.; Leibniz, *Nouveaux Essais*; Reid, *Inquiry into the Human Mind*[7], 1814, and *Essay on the Powers of the Human Mind*[3], 1812; Kant, *Kritik der reinen Vernunft*; J. S. Mill, *Logic*[8], 1872; Hegel, *Logic*; H. Spencer, *Principles of Psychology*[2], 1870–72. Bertrand Russell's *Foundations of Geometry*, 1897, and *Principles of Mathematics*, 1903, and L. Couturat's *Logique mathématique*, contain summaries of the principal problems and results regarding the mathematical 'first principles' which are of philosophical importance.

JOSIAH ROYCE.

AZAZEL.—When the word 'Azazel' was first introduced into a Western Bible or language is unknown to the present writer. It does not occur in the Concordances of the Greek, Latin, and German Bibles; it found a place in AVm at Lv 16[8. 10. 26] for the 'scapegoat' of the text, and in the text of the RV, 'dismissal' being its interpretation on the margin. In Greek it seems to have appeared first in print in Montfaucon's *Hexapla*, 1713, at Lv 16[26], from Cod. X (Coislinianus, now M). It is found a second time, according to Field, in the text of that Codex at v.[10], *εἰς ἀζαζὴλ εἰς τὴν ἔρημον τὴν ἀποπομπήν*; this reading

being shared, according to Holmes-Parsons, by Cod. 18. (In Redpath, *Concordance to the Proper Names of LXX*, p. 7, this reference to v.[16] is missing.) Though it appears in the Hebrew Bible three times in the famous chapter on the yearly Feast of the Atonement, lexicographers as yet completely disagree as to its explanation. The latest work on Hebrew lexicography, that of Brown-Driver-Briggs (1900), explains the word as '*entire removal*,' seeing in the form a 'redupl. intens. abstr.' from √[עול]=Arab. عزل, 'remove' =='entire removal' of sin and guilt from sacred places into the desert on the back of a goat, the symbol of entire forgiveness. This explanation is said to be preferable to another, which finds in it a proper name, either of a rough and rocky mountain (*Yoma*, 67*b*, קשה שבהרים), or of a spirit haunting the desert. The form עֲזָאזֵל is, in this case, considered as changed from עַזָּאזֵל; עַזָּא, עַזָּאל being another name of a fallen angel. The name is not found elsewhere in Hebrew. In the Syriac Bible it is pronounced 'ăzāzā'īl, and explained by the lexicographers as another name of the archangel Michael (after Theodore of Mopsuestia, *Thesaurus Syriacus*, p. 285*i*). The name became well known among the Syrians as that of a martyr in the days of Maximian, identified with St. Pancras of the Western calendars; see 'Histoire de Saint Azazaïl, texte syriaque inédit avec introduction et traduction française: précédée des actes grecs de Saint Pancrace, publiés pour la première fois par Frédéric Macler,' Paris, 1902 (*Bibliothèque de l'École pratique des hautes études*, fasc. 141), and cf. on it H. Delahaye, *Analecta Bollandiana*, xxiv. 93–95, and Brockelmann, *ZDMG* lviii. 499–501. Recently the whole conception has been derived from the Babylonians; cf. J. Dyneley Prince, 'Le Bouc Emissaire chez les Babyloniens' (*JA* x. 2. 1, pp. 133–156, Ju.-Ao. 1903); but M. Fossey (*La Magie assyrienne*, Paris, 1902, p. 85) seems to be right when he declares: 'Je ne puis rien voir de semblable.' If one reads Lv 16 with an open mind, the impression is that Azazel must be a being related to Jahweh in something of the same way as Ahriman to Ormazd, or Satan (Beelzebub) to God. To go into details on the rite of Atonement or the stories about the fallen angels (Gn 6[1-2]) is outside the scope of this article.*

LITERATURE.—Driver, art. 'Azazel,' in Hastings' *DB*; Benzinger-Cheyne in *Encyc. Bibl.*; Volck in *PRE*[3]; *Jew. Encyc.*; the Comm. on Leviticus; Marmorstein, *Studien zum Pseudo-Jonathan Targum*, 1905, p. 37 ff. EB. NESTLE.

* In the Book of Enoch (ch. 6), *Asael* is the name of one of them, in the Greek text (ed. Radermacher) Ἀσεάλ, Syncellus Ἀζαήλ; in ch. 8 ff. *Azazel* in the Ethiopic, Ἀζαήλ in the Greek and Syncellus, Ἀζαζήλ according to Irenæus; he is thrown εἰς τὴν ἔρημον τὴν οὖσαν ἐν τῷ Δουδαήλ (Gr. Δαδουήλ), explained by Geiger as abbreviated from *Beth Ḥadudo* (the modern *Beth-ḥudēdun*), the crag down which the goat for Azazel was pushed.

B

BAAL, BEEL, BEL (fem. **Baalat, Beela, Beltu**). — Ba'al is a primitive title of divinities, which is found in all branches of the Semitic race (Arab. بَعْل, *ba'l*; Eth. *ba'ăl*, *bâ'l*; Min. and Sab. *ba'l*; Sin. בעלו, *ba'lu*; Nab. בעל; Canaanite and Heb. בַּעַל, *ba'al*; Phœn. and Pun. בעל, *ba'l*; Aram. and Syr. בַּעֲל, ܒܥܠ, *be'ēl*; Palm. בול, *bôl*, and בל, *bēl*; Bab. and Assyr. *bēl*).

i. *PRIMITIVE MEANING OF THE NAME.*—The application of this name to deities is secondary; primarily it is a common noun denoting 'possessor,' 'owner.'

(1) It denotes ownership of physical objects. Thus the *ba'al* of a house, field, ditch, or animal is its 'proprietor'; the *ba'alat*, its 'proprietrix' (so in Heb. Phœn. Aram. Assyr. Arab. Eth.). The *be'ālīm* of a town are its 'citizens' (so in Heb. Phœn.). Even in the singular the word may be used for 'citizen' (cf. *CIS* 120, חרנא בעלת בונתי, 'Irene, a citizen of Byzantium'). (2) It denotes a 'possessor' of certain physical characteristics. Thus a two-horned ram is described as a *ba'al* of two horns; a bird, as a *ba'al* of two wings; a hairy man, as a *ba'al* of hair (so in Heb. Assyr. Aram. Eth.). (3) It denotes a 'possessor' of certain mental qualities. Thus a discerning man is called a *ba'al* of discernment; a hostile man, a *ba'al* of hostility; a sinful man, a *ba'al* of sin; a dreamer, a *ba'al* of dreams; an eloquent man, a *ba'al* of the tongue (so in Heb. Assyr. Aram. Eth.). (4) It denotes a 'possessor' of certain rights or claims over others. Thus a plaintiff is called *ba'al* of a case; a prosecutor, *ba'al* of one's justice; a confederate, *ba'al* of one's covenant (so Heb. Assyr. Aram. Eth.). (5) *ba'al* denotes a 'husband' as the 'owner' of a wife (cf. Dt 5[18 (21)] where house, field, male slave, female slave, ox, and ass are enumerated with wife as a man's possessions) (so in Heb. Nab. Palm. Aram. Arab. Assyr.). It is noteworthy, however, that *ba'al* is not used of the master of a slave, or of any other person who exercises authority over men. For the idea 'master,' or 'lord,' the Semitic languages in general use the words *'ādhôn*, *mār*, *rabb*, but not *ba'al*. Only in Bab.-Assyr. has *bēl* (=*ba'al*) developed the general meaning of 'lord' and become a synonym of the other names of authority; but this usage is evidently secondary, since it is not found in the other dialects. Even the meaning 'husband' cannot be primitive, because the *ba'al* or 'owner' type of marriage was not original among the Semites. The evidence is abundant that the primitive constitution of Semitic society, as of so many other early peoples, was matriarchal (see 'ASHTART, 2). In such a society, where the mother was supreme and marriage was only a temporary union with men of other tribes, the husband obviously could not be called *ba'al* or 'owner,' since the wife was far too independent. He was known rather as *'abu*, 'nourisher,' which in the meaning of 'husband' is older than in the meaning of 'father' (cf. Jer 3[4] and old Bab. usage). In the stage of fraternal polyandry, which among some at least of the Semites succeeded the matriarchal stage, the husband was not yet a *ba'al*, and was probably still known as *'abu* (see 'AMM). Only at a relatively late date, when society had finally passed to the monogamous or polygamous stage and wives were secured by purchase, did the husband become an 'owner.' The old word *abu* could no longer be used in the sense of 'husband,' and was set apart to express the idea of 'father,' which now for the first time became important, since children now first knew their fathers. A new term, accordingly, had to be found to express the new conception of the husband as an 'owner.' The other names of authority, *'ādhôn*, *mār*, *rabb*, had already been pre-empted to express the relation of master to slave and of superior to inferior; but *ba'al*, 'owner,' was an indefinite word that might be applied to the new relationship. It appears, accordingly, that in primitive Semitic usage *ba'al* designated an owner of things or qualities, but not an owner of persons.

As a title of deity, *ba'al* retained its primitive meaning as a common noun, and described the divinity in question as an 'owner' or 'occupier' of some physical object or locality, possibly also as a 'possessor' of some attribute (see below, ii. 10). If the numen was regarded as masculine, it was called a *ba'al*; if feminine, a *ba'alat*. The name was thus the equivalent of Arab. *dhû* (fem. *dhât*), 'he of, possessor of,' which in the South Arabian inscriptions alternates with *ba'al* in names of gods. In Babylonian the common noun *bēl* (=*ba'al*) developed the secondary meaning of 'master,' or 'lord,' and, corresponding to this, in the Assyro-Babylonian religion *bēl* described the god as an 'owner' or 'lord' of persons. Thus in their inscriptions the Assyrian kings group the great gods of the nation under the general formula *bêlê rabûte bêlêya*, 'the great lords, my lords.' In such cases we have *ba'als* of tribes and *ba'als* of persons, but this conception is

not found among the other Semites and cannot be primitive. Corresponding to the original usage which limited the name *ba'al* to owners of things, the *be'ālîm* are elsewhere uniformly regarded as proprietors of objects and of places, not as owners of persons. Lords of tribes or of individuals are *'ĕlôhîm*, *'ădhônîm*, *mᵉlākhîm*, *rabbîm*, *martn*, but never *bᵉ'ālîm*. One never meets *Ba'al-Israel*, *Ba'al-Moab*, *Ba'al-Ammon*, as one meets *Ba'al-Sidon*, *Ba'al-Lebanon*, *Ba'al-Maon*, but instead *'Ĕlôhê-* or *Melek-Israel*, *-Moab*, *-Ammon*.

In Bab.-Assyr. the worshipper addresses his god as *Bêlî*, 'my lord,' or *Bêltî*, 'my lady' (cf. *Madonna*, *Notre Dame*); but this is not found in the other dialects, except where there is direct borrowing from the Babylonian. This is the case in *Bêltî* of Palmyra (de Vogüé, *Inscr. Sémit.* 1868, 52, 155). She is the consort of the Babylonian *Bêl*, who is worshipped alongside of the native *Bôl*. The *Ba'alat* of Gebal appears in Greek and Latin writers as *Bēltis* (=בעלתי), Βῆλτις (Abydenus in Müller, *FHG* iv. 283, 9), Βήλθης (Hesychius, *s.v.*), Βαάλτις (Philo Byblius in *FHG* iii. 569, 25), *Balti* (*CIL* iii. Suppl. 10393, 10964); but this is never found in native Sem. inscriptions, and is due to late syncretistic identification of the *Ba'alat* of Gebal with *Bêltis* of Babylon. The same is true of Βαλάνιος (=בעלן), 'our ba'al,' a title of Juppiter Heliopolitanus in *Chron. Pasch.* i. 561. It is noteworthy, however, that, while the worshipper does not speak of the god as 'my *ba'al*,' he may call himself 'slave of the *ba'al*,' e.g. in the Phœn. proper names *'Abd-ba'l*, and the Palmyrene name *'Abdi-bôl*.

Where *ba'al*, 'proprietor,' is identified with *mélek*, 'king,' as is the case in certain Phœnician inscriptions, this is due to syncretistic combination of the tribal god of the invading Semites with the local numen of Tyre, and is analogous to the syncretism that is seen in such Heb. proper names as *Ba'al-Yah*, 'the *ba'al* is Jahweh' (1 Ch 12⁵), or *Yo-ba'al*, 'Jahweh is the *ba'al*,' if Kuenen's restoration of Jg 9²⁶ be correct. Here Jahweh, the conquering God of Israel, is identified with one of the local *ba'als*. Thus Melkart (=מלך קרית), 'king of the city,' is called the *ba'al* of Tyre (*CIS* 121, לארון לסלקת בעל צר, 'to our lord, to Melkart, the *ba'al* of Tyre'). Similarly we find *Milk-Ba'l*, 'king-owner,' a compound deity like *Milk-'Ashtart* (*CIS* 123*a*, 147, 194, 380); *Ba'al-Malûku*, the name of a son of the king of Arvad (*KIB* ii. 173), perhaps the prototype of the obscure *Ba-al-ma-la-gi-e* of the treaty of Esarhaddon (*KAT*³ 357); and *Malak-bêl* in Palmyra (cf. also Jer 32³⁵). In *CIS*, p. 155, the god בעלאדן (=*Ba'al-Adonis*) occurs; cf. the proper name ארובעל, Lat. *Idnibal* (*CIS* 139), and Βεελ-μαρι (*CIS* I. i. p. 111). Such late combinations in Phœnician do not invalidate the general conclusion that *ba'al* as a divine name designates primarily the owner of a sanctuary and not the master of his worshippers.

If this be true, it follows that there are as many *bᵉ'ālîm* as there are sacred objects and sacred places which they inhabit. Except in late theological abstraction, there is no such thing as a god *Ba'al*. The OT speaks habitually of the *bᵉ'ālîm* in the plural (Jg 2¹¹ 3⁷ 8³³ 10⁶· ¹⁰, 1 S 7⁴ 12¹⁰, 1 K 18¹⁸, 2 Ch 17³ 24⁷ 28² 33³ 34⁴, Jer 2²³ 9¹³ (¹⁴), Hos 2¹⁶ (¹⁸)· ¹⁹ (¹⁷) 11²). According to Jer 2²⁸ 11¹³, they were as numerous as the cities. This plural cannot be understood of images of one god *Ba'al* (so the older interpreters, and more recently Baethgen and Baudissin), for idols are never mentioned along with altars, standing stones, or asheras as part of the equipment of sanctuaries of the *bᵉ'ālîm*. Neither can it be treated as a 'plural of majesty' like *Elohim*, for, unlike *Elohim*, when a divine name it is never construed as a singular. It can be taken only as indicating a multitude of local numina. When the singular *ba'al* is used, it requires a noun in the genitive to indicate which *ba'al* is meant; e.g. *Ba'al-Ḥazor*, *Ba'al-Ṣidon*, *Ba'al-Ḥarran*, etc. The contention of Baudissin (*PRE*³ 326) that these are merely the local forms of one god *Ba'al*, like the local forms of *Zeus* among the Greeks, is untenable, because there is no evidence that *ba'al* ever became a proper name like *Zeus*, and because the Semites never combined names of gods with names of places in this fashion; *e.g.* we never meet such combinations as *'Ashtart-Ṣidon*, *'Ashtart-Gebal* to distinguish the various forms under which *'Ashtart* was worshipped.

If *ba'al* is used without a following genitive, it regularly takes the article in the OT and in the inscriptions. Thus the *ba'al* of Jg 6²⁵· ²⁸· ³⁰· ³¹· ³² is the local numen of Ophrah, 'the *ba'al*' of 1 K 16³¹· ³² 18²¹· ²²· ²⁵· ²⁶· ⁴⁰ 19¹⁸ 22⁵⁴ (⁵³), 2 K 3² 10¹⁸⁻²⁸ 11¹⁸ 17¹⁶ 21³ 23⁴· ⁵ (and the corresponding passages in Ch), Jer 2⁸ 7⁹ 11¹³· ¹⁷ 12¹⁶ 19⁵ 23¹³· ²⁷ 32²⁹· ³⁵, Hos 2¹⁰ (⁸) 13¹, Zeph 1⁴ is Melkart, the *ba'al* of Tyre, whose cult was introduced into Israel in the reign of Ahab (1 K 16³¹ᶠ.), whence it spread to Judah through the influence of Ahab's daughter Athaliah (1 K 22⁵⁴ (⁵³), 2 K 8¹⁸). In these cases it cannot be said that 'the *ba'al*' means the image of one god Ba'al, or that the article is used to distinguish the local manifestations of one deity (Baudissin, *PRE*³ 328).

In Babylonian, where there is no article, *Bêl* alone, as a designation of Marduk, the chief god of Babylon, becomes a true proper name; but this usage is not found in the other dialects. The insertion of the article in Heb. and in Phœn. shows that *ba'al* has not yet lost its appellative force.

Only in proper names is the article with *ba'al* omitted, *e.g.* in the place names *Bamoth-ba'al* *Ḳiryath-ba'al*, in the Heb. personal names *Jerub-ba'al*, *Ish-ba'al*, *Meri-ba'al*, *Ba'al-yada'*, *Ba'al-Yah*, *Ba'al-ḥanan*, and in numerous similar Phœn. personal names, such as *Ba'al-ḥanan*, *Ḥanni-bal*, *Ba'al-yaton* (see Bloch, *Phön. Glossar. s.v.* בעל; Scholz, *Götzendienst*, 168 ff.); but these formations do not prove that *ba'al* is a proper name any more than the similar formations with *'ab*, 'father,' *'aḥ*, 'brother,' *'am*, 'uncle,' *melek*, 'king,' *'ādhôn*, 'lord,' prove that these words are personal names of deities. The absence of the article in these cases is due to the fact that these formations go back to a time when the article had not yet been developed in the various Semitic dialects. *Ba'al* is no more a proper name in these compounds than *θεός* in analogous Greek names. In the same manner we must estimate the omission of the article in names of gods compounded with *ba'al*, e.g. *Milk-ba'al*, *'Adhôn-ba'al*, *'Ashtart-shêm-ba'al*, *Tanit-pen-ba'al*, perhaps *Ba'al-Gad* and *Ba'al-Ẓāphôn* (see below, ii. 8, 10). When Βῆλος without the article is mentioned in the Greek inscriptions, the context shows that only the local deity is meant. Even in the Occident no one god Ba'al arose, but there were many local *ba'als*, whose names were either transliterated or translated into Greek or Latin. Augustine was still conscious of the appellative force of the name in Punic, when in his commentary on Judges (*PL* iii. 797) he translated *ba'al* 'dominus.' Jerome in his commentary on Hos 1² translates it 'ἔχων, id est habens'; and Servius (*ad Æn.* i. 621) says, 'lingua Punica Baal deus dicitur.' In view of these facts it is impossible to agree with Baethgen (*Beiträge*, p. 16) when he says, 'It is clear that there was originally always one and the same Ba'al, who stood in relations to various localities'; or with Baudissin (*PRE*³ 327), 'Ba'al was apparently originally a title of the male divinity in general. Afterwards, when a number of such divinities were worshipped alongside of one an-

other, this word became the designation of the chief god of each locality.' On the contrary, in Sem. inscriptions and in Sem. literature, outside of Babylonia and Assyria, *ba'al* never loses its appellative force. Only in the theological speculations of Gr. and Lat. writers does *Belus* appear as a great god. This syncretism is to be regarded as the work of the Greeks, who were ignorant of the primitive meaning of *ba'al*, and thus were able to identify all the Sem. *b'ālîm* with the Bab. *Belus* (see below, iii. 7).

If there was no such thing as a god *Ba'al*, and this name designated merely the individual proprietor of a particular sanctuary, then it is evident that the traditional identification of this deity with the sun has no foundation. It is true that the sun was the *ba'al* of certain places, as Larsa, Sippar, Heliopolis (Ba'al-bek), Beth-Shemesh; but this was only one of many kinds of *ba'als*. The moon was the *ba'al* of Ur, of Ḥarran, of Palmyra, and perhaps also originally of Sin-ai (from Sin, the moon-god). Other gods of all sorts were *ba'als* of other places. If *Ba'al-ḥammān* has anything to do with the sun, this proves only that the sun was the *ba'al* of certain places (see below, ii. 5). By the Greeks and the Romans the local *ba'als* were identified with Zeus, Saturn, and Herakles as well as Sol. Only in the speculations of late writers such as Macrobius, who are disposed to regard all gods as of solar origin, is *Ba'al* formally identified with the sun. This theory has been revived and has been given wide currency in modern times (*e.g.* Creuzer, *Symbolik u. Mythologie*[3], ii. 413; Movers, *Phönizier*, i. 169; Baudissin, *PRE*[3] 329 ff.), but is nevertheless destitute of scientific foundation. So also Baethgen's theory that *ba'al* was primarily the god of heaven (*Beiträge*, p. 264), or any other theory that identifies *ba'al* with a single god, goes to pieces on the fact that this word is not a proper name but an appellative.

In the light of these facts it appears that the *ba'al*-cult carries us back to the polydæmonistic stage of religion (see POLYDÆMONISM). Among the Semites, as among other ancient peoples, and as among savages in all parts of the world, every object in nature that could do something, or that was believed to be able to do something, was reverenced as divine. The objects of worship were conceived, after the analogy of human beings, as living persons consisting of soul and body. The phenomenon was the body, the indwelling spirit was the *ba'al* or 'owner.' In the case of celestial or atmospheric phenomena the name of the divinity was usually the same as that of the phenomenon (see below, ii. 8). Thus Shemesh was at once the sun and the sun-god; Ramman, the thunder and the thunder-god. In other cases the numen was distinguished from the physical object by being called its *ba'al*. This is a striking difference between Indo-European and Semitic polydæmonism. Among the Indo-Europeans *Daphne*, 'the laurel,' is also the name of the nymph that inhabits this tree; *Amymone*, the sacred spring at Nauplia, is also the name of its indwelling nymph; *Athene*, the patron goddess of Athens, bears the same name as her city: but among the Semites the numen of a palm-tree is not called *Tamar* but *Ba'al-tamar* (Jg 20[33]); the numen of a well, not *Be'ēr* but *Ba'alath-be'ēr* (Jos 19[8]); the numen of a mountain, not *Lebanon* but *Ba'al-Lebanon* (*CIS* 5); the numen of a city, not *Sidon* or *Gebal* but *Ba'al-Sidon* (*CIS* 3) and *Ba'alat-Gebal* (*CIS* 177). This difference of conception is significant for the later developments of Indo-European and of Semitic religion. The Indo-European could never free himself from the identification of his gods with nature, and consequently the highest forms of his religion remained pantheistic. The Semite, on the other hand, was accustomed from the earliest times to distinguish between the object and its *ba'al*. His religion tended towards transcendentalism, and in its highest form among the Hebrews became pure theism. Apart from this more independent relation of Semitic numina towards the physical objects that they inhabited, there was no essential difference between the *b'ālîm* and the nymphs, dryads, satyrs, fauns, genii, fairies, gnomes, elves, and local gods of primitive Indo-European religion (see Usener, *Götternamen*). The *b'ālîm*, as a rule, had no names of their own and no identity or existence apart from the objects or localities that they inhabited. Their cult was a lower stage of religion than polytheism, for they were not gods in any proper sense, but only *δαίμονες*, *numina*, spirits. Hence the name polydæmonism, which recent writers apply to this sort of religion instead of the ambiguous term 'animism' used by earlier writers. Out of the *b'ālîm* gods might grow by groups of phenomena coming to be regarded as manifestations of a single power, or by a particular *ba'al* coming to be the patron of a tribe or of a city; but, apart from such developments, the *b'ālîm* remained simply local dæmons.

ii. *CLASSIFICATION OF THE BA'ALS.* — The ba'als may be classified, according to the physical objects which they inhabit, as terrestrial and celestial. Among the terrestrial ba'als we may enumerate:

1. **Ba'als of springs.**—For the primitive Semitic nomad in the desert the spring was the most wonderful object in nature. Its waters gushed miraculously out of the arid sands, giving life to vegetation, to man, and to beast. On it the existence of the tribe depended, and about it as a centre the tribe rallied. It is no wonder, therefore, that it was reverenced as divine, and that its numen was regarded as the mother of the tribe, the giver of all earthly blessings (see ASHTART, 3). In all branches of the Sem. race springs retained their sanctity down to the latest times.

The following sacred springs may be mentioned.—Among the Arabs: the *Zemzem* at Mecca (Wellhausen, *Reste*[2], 103 f.); among the Canaanites and Hebrews, *'En-mishpāṭ*, 'the spring of decision,' an oracular fountain at Kadesh, 'the sanctuary' (Gn 14[7]); *Beer-laḥai-roi*, between Kadesh and Bered (Gn 16[14]); *Beer-sheba'*, 'well of seven' (Gn 21[31] 26[33], Am 5[5] 8[14]); *'En-rogel*, near Jerusalem, by the sacred stone Zoheleth, where Adonijah offered sacrifices and was proclaimed king (1 K 1[9]); *Gihon*, 'the gusher,' an intermittent spring near Jerusalem, where Solomon was crowned (1 K 1[33]), probably the same as Bethesda (Jn 5[2-4]), the modern Virgin's Fountain, which is still regarded with superstitious reverence by the people of Jerusalem; the *Dragon's Well*, also near Jerusalem (Neh 2[13]); *'En-shemesh*, 'spring of the sun' (Jos 15[7] 18[17]); *Baal-Gad*, or *Baal-Hermon*, probably the sanctuary at the source of the Jordan at Paniας (belonging to the god Pan), or Cæsarea Philippi, the modern Baniας.—Among the Phœnicians: a spring at Joppa connected with the myth of Perseus and Andromeda (Paus. iv. 35. 9); the 'sanctuary of the spring *Yidlaʿ*' (*Eshmunazar Inscr.*, line 17); the nymph Ἀνωβρέτ (=עין עברת, 'overflowing spring') in Philo Byb. (*FHG* iii. 570 *f.*, frag. 4, 5); the river *Adonis* (=אדוני, 'my lord'), the modern Nahr Ibrahim, which bursts from a cave in the side of Lebanon at Afḳa, the seat of the cult of 'Ashtart and Adonis, according to Lucian (*Dea Syr.* 6) and Euseb. (*Vit. Const.* iii. 55); the river *Asklepios* (the Gr. equivalent of the Phœn. Eshmun), near Sidon (Antoninus Martyr, ed. Tobler, p. 4; Levy, *Phön. Stud.* i. 30 *f.*).—In the Phœnician colonies: the spring Μακαρία (=מקור, 'fountain'), the daughter of Herakles (Melḳart), at Marathon (Paus. i. 32. 6); the spring Κυάνη at Syracuse (Diod. Sic. v. 4. 1), and the hot springs at Himera, in Sicily (*ib.* iv. 23. 1), both of which were connected with myths of the Tyrian Melḳart-Herakles; the spring at Gades, in Spain (Strabo, iii. 5. 7; Pliny, *HN* 97 [100], 219).—In Syria: *Mabbog* (=מבוג, 'spring'), the native name of Bambyce or Hierapolis, the sanctuary of the goddess Atargatis (see ATARGATIS); the oracular spring Kandalia, at Antioch (Sozomen, *HE* v. 19).—In Assyria: *Rish-Eni*, 'the fountain-head' (Ashurnaṣirpal, *Annals*, i. 104). Many of these sanctuaries have retained their holiness down to the present time, being regarded as the seats of Christian saints or Muslim *auliyā'* (pl. of *walī*, 'patron saint'); and in all parts of the Muslim world springs are still regarded as the abodes of powerful spirits, whose favour is sought through sacrifice and offerings

(see Curtiss, *Ursem. Religion*, pp. 94 ff., 113 ff., 121 f., 163, 270). On spring-worship in general see Baudissin, *Studien*, ii. 154–170, and the bibliography there given on p. 154.

The numina that inhabited the sacred springs were known as their *bᵉʿālîm*; thus Baʿalath-bᵉʾēr, 'proprietrix of the well,' is the name of a town in the Negeb (Jos 19⁸, cf. Bēālôth, Jos 15²⁴, 1 K 4¹⁶). In 2 S 5²⁰ (=1 Ch 14¹¹) the name Baʿal-pᵉrāzîm is explained in such a way as to indicate that it meant originally 'proprietor of the breaking forth of waters.' It was one of the fountains that gush out of the sides of the Valley of Rephaim, the modern Wady el-Werd. The sacred river Bēlus, near Ptolemais (Acre), took its name from the *baʿal* that inhabited it (Pliny, *HN* xxxvi. 26 [65], 190; Jos. *BJ* ii. 10. 2). In Arabic the phrase 'that which the *baʿl* waters,' or simply '*baʿl*,' means land irrigated by subterranean waters (Lane, *Arab. Lex. s.v.*; Nestle, *Isr. Eigennamen*, p. 126; W. R. Smith, p. 99 ff.; Wellhausen, *Reste*², p. 146). The same usage survives in Mishnic Heb. שדה הבעל (*Baba bathra*, iii. 1), or simply בעל (*Suk.* iii. 3; *Terum.* x. 11; *Shebi.* ii. 9), and in the Gemara בית הבעל, in the meaning of 'land subterraneously watered' (see Levy, *Chald. Wörterb. s.v.*). If the text of Ca 8¹¹ be correct, Baʿal-hāmôn can mean only 'owner of the torrent,' but it is possible that this name is corrupted out of the better known *Baʿal-Ḥermôn* (see below, 4) or *Baʿal-ḥammān* (see 5). The title בעלמי, which follows the name of Hadad on the Hadad statue from Zenjirli, possibly means 'owner of water' (see D. H. Müller, *WZKM* vii., 1893, p. 50 ff.). On the strength of the Arabic expression *baʿl* for 'land subterraneously watered,' and of Hos 2⁸ᵗ, which speaks of the *bᵉʿālîm* as givers of corn, wine, oil, wool, flax, vines, and fig-trees, W. R. Smith (p. 104 ff.) concludes that the *bᵉʿālîm* were primarily the numina of subterranean waters, and that they became the 'owners' of land by making it fruitful, just as the husbandman creates ownership in otherwise worthless land by irrigating it. These were doubtless an important class of the *bᵉʿālîm*; but in view of the numerous other sorts that we shall consider in the following paragraphs, it cannot be said that they were the only kind, or even the original kind. Here, as elsewhere, the attempt to trace religious conceptions to a single root is a failure. Polydæmonism was complex in its origin and protean in its manifestations.

2. Baʿals of trees.—In the Arabian desert, trees grew only in watered oases, consequently they shared the sanctity of springs in the esteem of the primitive Semites. The date-palm in particular, whose fruit formed one of the staples of life, could not fail to be worshipped as a divine benefactor. The Garden of Eden, with the tree of knowledge of good and evil and the tree of life, in Gn 2⁸⁻¹⁷ is a primitive Sem. tradition of an oasis with its sacred palm-trees.

According to Ṭabarî (ed. de Goeje, i. 922; ed. Nöldeke, p. 181), in the city of Najrân, before the introduction of Christianity, a great palm was worshipped and hung with garments and ornaments at the time of the annual feasts (see Osiander, *ZDMG* vii., 1853, p. 481). The sanctuary of the goddess al-ʿUzza at Naḫla, 'the date-palm,' consisted of three *samura* trees, of which one was regarded as the proper abode of the goddess (Wellhausen, *Reste*², p. 38). This seems to have been the same as the tree known as *Dhât anwâṭ*, 'she of the hanging,' to which the people of Mecca resorted yearly to adorn it with their weapons and to offer sacrifice (Krehl, *Rel. der vorislam. Araber*, p. 73 f.). By the holy spring Zemzem, at Mecca, there once stood a sacred tree (Dozy, *Israeliten zu Mekka*, p. 93). According to the Qurʾân (*Sura* xix. 23–25), the Virgin Mary was nourished before the birth of Jesus by the fruit of a palm-tree miraculously produced out of season.

Among the Canaanites and Hebrews the cult of trees is copiously attested by the OT. According to Hos 4¹³, they sacrificed under oaks, and poplars, and terebinths (cf. Is 1²⁹). Dt 12², Jer 2²⁰ 3³·¹³ 17², Ezk 6¹³ 20²³, 1 K 14²³, 2 K 16⁴ 17¹⁰, Is 57⁵ state that they sacrificed 'under every green tree,' and Is 65³ 66¹⁷ speak of sacrifice in gardens. The following individual holy trees are mentioned: the burning bush at Sinai (Ex 3²); the tamarisk at Beersheba (Gn 21³³, cf. 26²⁵ 46¹); the oracular mulberry trees in the valley of Rephaim (2 S 5²⁴= 1 Ch 14¹⁵); the pomegranate at Gibeah (1 S 14²); the tamarisk at Ramah (1 S 22⁶); the palm-tree of Deborah between Ramah and Bethel (Jg 4⁵); the 'oak of weeping' below Bethel (Gn 35⁸); the terebinth at Ophrah, where the angel appeared to Gideon, and where he offered sacrifice and built an altar (Jg 6¹¹. ¹⁹. ²⁴); the terebinth of Moreh, 'the diviner,' at Shechem, where Jahweh appeared unto Abram, and Abram built an altar (Gn 12⁶ᶠ. 13¹⁸), and where Jacob buried the images and the jewels (35⁴), probably the same as 'the terebinth of the diviners' (Jg 9³⁷) and 'the terebinth of the standing stone that was by the sanctuary of Jahweh' (Jos 24²⁶, Jg 9⁶); the tamarisk at Jabesh (1 S 31¹³, cf. 1 Ch 10¹²). The *ʾăšērāh*, or sacred post, so often mentioned in the OT as part of the equipment of a sanctuary, was perhaps merely a conventionalized symbol of a living tree. If so, its use is an additional evidence of tree-worship among the Canaanites and Hebrews (see Poles). The persistence of this cult among the Hebrews is shown also by the combination of cherubim and palm-trees in the decoration of the Temple (1 K 6²⁹. ³². ³⁵). Such passages as Ps 52¹⁰ (8) and 92¹⁴ (13) suggest also that trees were planted in the court of the Temple, as in the modern Ḥaram. Even so late a writer as Zechariah sees myrtle trees at the entrance to Jahweh's abode (Zec 1⁸⁻¹¹). The cult still lingers in the Talmud, in the belief that certain trees are inhabited by demons (Grünbaum, *ZDMG* xxxi. 253 ff.).

Of the Phœnicians, Philo Byblius says that the plants of the earth were in ancient times esteemed as gods and honoured with libations and sacrifices, because from them the successive generations of men drew the support of their life (Müller, *FHG* iii. 565). Tyrian coins frequently exhibit cypresses standing in temple enclosures and palm-trees adored by a worshipper. There was a grove of Asklepios (Eshmun) between Beirut and Sidon (Strabo, xvi. 2. 6), a tree believed to enclose the body of Adonis at Gebal (Plut. *de Is. et Osir.* 15 f.), and a grove sacred to ʿAshtart at Aphaka (Euseb. *Vit. Const.* iii. 55; *Laud. Const.* 8). In the Phœn. colonies sacred trees existed in Arados (Lajard, *Mithra*, pl. vi. 1, 2), in Cyprus (Servius, *ad Æn.* v. 72; Athenæus, iii. 27; Strabo, xiii. 1. 51–65), in Rhodes (Paus. iii. 19. 10), in Crete (Diod. Sic. v. 66, 1; Athen. l. 49), at Corinth (Paus. ii. 1. 3, ii. 2. 4; Athen. xv. 22, p. 678*b*), in Arcadia (Paus. viii. 24), at Naukratis (Athen. xv. 18, p. 675 f.), at Carthage (Virg. *Æn.* i. 441 ff.; Tert. *Apol.* 9), in Iberia (Lajard, *Mithra*, p. 287 ff.).

In Syria holy trees were known at Baalbek (Mionnet, *Médailles Antiques*, v. 302 f.), at Damascus (Mionnet, v. 292 ff.), at Palmyra (Lajard, *Cyprès*, pl. iii. 1), at Antioch (Strabo, xvi. 2. 6; Soz. *HE* v. 19), at Mount Kasios (Servius, *ad Æn.* iii. 680). The early Syrian Christians felt it their duty to cut down 'the trees of the demons,' but many could not resist the temptation to turn to them for help when they were sick (Kayser, *Jacob v. Edessa*, p. 141). For survivals of tree-worship among the Sabians of Mesopotamia, see Chwolson, *Ssabier*, i. 293, ii. 29, 33, 34. The cult of trees in Babylonia and Assyria is attested by numerous reliefs and inscriptions on seals. Most frequently the female date-palm is depicted being fertilized by winged figures that symbolize the winds (see Schrader, *MBAW*, 1882, p. 426 ff.; Bonavia, *Bab. and Or. Record*, iii.; Tylor, *PSBA* xii. 181–184). In all parts of the modern Sem. world holy trees are still found which are visited with prayer and sacrifice, and on which bits of cloth torn from the garments are hung to serve as reminders of the worshipper (Doughty, *Arabia Deserta*, i. 448 f.; Curtiss, *Ursem. Rel.* pp. 96 ff., 154 ff.). For literature on tree-worship see Baudissin, *Studien*, ii. 184.

The numina that inhabited such sacred trees were known as their *bᵉʿālîm* or *bᵉʿālôth*, as the case might be. Thus in Arab. a palm-tree that imbibed water with its roots, and did not need to be watered, was known as *baʿl* (Lane, *Arab. Lex. s.v.*). A village near Gibeah bore the name of Baʿal-tamar, abbreviated from *Beth-baʿal-tamar*, 'house of the baʿal of the palm' (see below, iii. 2; Jg 20³³; Euseb. *Onom. Sac.* 238. 75). With this Baudissin (*Studien*, ii. 211) compares Zeus Demarous, the father of Herakles-Melḳart in Philo Byblius (Müller, *FHG* iii. 569, fr. 2, 24), which represents a Sem. *Baʿal-Timār*, or *Baʿal-Timārôn*, just as *Zeus Karmelos* represents *Baʿal-Carmel* (see below, 4). With this is also to be compared the river *Tamuras*, in Strabo (xvi. 2. 22), the modern Nahr Damûr. Precisely analogous are the Arab. names of gods Dhu-ʾAnama (*ZDMG*, 1875, p. 611) and Dhu-l-Ḫalaṣa (Wellhausen, *Reste*², p. 47), which describe the deities in question as owners of the plants known as *ʿanama* and *ḫalaṣa*.

3. Animal baʿals.—In all branches of the Sem. race names of animals used as proper names, particularly of clans and of places, prove a primitive totemistic cult.

Thus in the OT we have the names *Aiah*, 'vulture'; *Aijalon*, 'stag'; *Arieh*, 'lion'; *Becher* and *Bichri*, 'young camel'; *Gemalli*, 'camel'; *Gedi*, 'kid'; *Deborah*, 'bee'; *Dishon*, 'mountain goat'; *Zeeb*, 'wolf'; *Zimran*, 'mountain sheep';

Hagabah, 'locust'; *Hezir*, 'swine'; *Huldah*, 'weasel'; *Hamor*, 'ass'; *Humṭah*, 'lizard'; *Telaim*, 'lambs'; *Jonah*, 'dove'; *Ja'el*, 'mountain goat'; *Car* and *Cheran*, 'lamb'; *Caleb*, 'dog'; *Lebaoth*, 'lions'; *Laish*, 'lion'; *Naḥash*, 'serpent'; *Nimrah*, 'leopard'; *Susah*, 'mare'; *'Eglah*, 'heifer'; *'Epher*, 'young gazelle'; *'Achbor*, 'mouse'; *'Oreb*, 'raven'; *'Arad*, 'wild ass'; *'Etam*, 'vulture'; *'Akrabbim*, 'scorpions'; *Parah*, 'cow'; *Ẓibiah*, 'gazelle'; *Ẓippor*, 'sparrow'; *Ẓorah*, 'hornet'; *Pir'am*, 'wild ass'; *Par'osh*, 'flea'; *Rachel*, 'ewe'; *Seirah*, 'goat'; *Shu'al*, 'fox'; *Shaphan*, 'badger'; *Shephuphan*, 'a kind of serpent'; *Tola'*, 'worm'; *Taḥash*, 'porpoise'; *Ẓibe'on*, 'hyæna'; *Sha'albim*, 'fox'; *Leah*, 'wild cow'; *Nun*, 'fish'; *Ḥoglah*, 'partridge' (list taken from Gray, *Heb. Proper Names*, p. 88 f.). For similar animal names among the Arabs and Syrians see W. R. Smith, *JPh* ix. 75–100; Nöldeke, *ZDMG*, 1886, pp. 148–187. The worship of the bullock among the Hebrews is attested by Ex $32^{4ff.}$, 1 K $12^{28f.}$, Hos 8^6 10^5 13^2, and by the survival of אַבִּיר, 'bullock,' as a title of Jahweh. Such place names as *Beth-car*, 'house of the lamb'; *Beth-lebaoth*, 'house of lions'; *Beth-nimrah*, 'house of the leopard'; *Beth-ḥoglah*, 'house of the partridge,' are analogous to *Beth-Dagon*, *Beth-El*, *Beth-Shemesh*, compounded with names of gods, and seem to indicate that these places were seats of totemic animal-worship. If the name Dagon be derived from *dag*, 'fish,' this is an additional evidence of Sem. animal-worship (see DAGON). The *śe'irim*, 'hairy ones, he-goats,' of Lv 17^7, Is 13^{21} 34^{14}, 2 Ch 11^{15}, like the hairy Jinn of the Arabs (W. R. Smith, p. 119 ff.), are survivals of the same sort of cult. In Arabia we find also *Asad*, 'lion'; *Nasr*, 'vulture'; *'Auf*, 'bird of prey' (see ARABS, I. 3); in Babylonia, *NIN-SHAḪ* = *Bêl-shaḫi*, 'lord of the wild boar.'

Totemic animals were classed by OT writers along with other local numina under the general name of the *be'ālim*, but it was not Semitic usage to speak of the *ba'al* of an animal as one spoke of the *ba'al* of a spring or of a tree. The bullock was worshipped directly, not the *ba'al* of the bullock (yet compare *Bêl-shaḫi* above). The reason for this, apparently, was a stronger sense of personality in the animal. It was an individual like a man, while a spring or tree was not an individual but an abode of one. The only exception to this rule is the name Ba'al-zebub, the god of Ekron, whose oracle was consulted by Ahaziah (2 K $1^{2.3.6.16}$). If the text be sound, this means 'owner of flies'; so LXX Βάαλ μυῖα θεός. Baudissin (*PRE*^{3} ii. 515) compares Ζεὺς ἀπόμυιος in Pans. v. 14. 1, viii. 26. 7; Clem. of Alex. *Protrept.* ii. 38, ed. Dindorf (cf. Pliny, *HN* x. 28 [40]. 75; Aelian, *Nat. Anim.* v. 17), but there is no evidence that the cult of this deity was of Sem. origin. The name *Ba'al-Zebub* occurs nowhere else than in the passage just cited in 2 Kings. Cheyne (*EBi* i. 407) holds that this form is a contemptuous Jewish perversion of Ba'al-zebul = *Be'el-zebul*, 'owner of the dwelling,' the form which occurs in the best MSS of Mt 10^{25} 12^{24}, Mk 3^{22}, Lk $11^{15.18f.}$ (see below, 6). If so, this name has nothing to do with flies, and the one instance of a compounding of *Ba'al* with the name of an animal disappears (see BAALZEBUB).

4. Ba'als of mountains.—The sanctity of mountains among all the Semites was due, perhaps, to the awe which their grandeur inspired, perhaps to their connexion with clouds and storms.

In Arabia, Sinai was counted holy from the earliest times (Ex 3^1 4^{27} 24^{13}). Its name is probably derived from the moon-god Sin. It retained its sanctity down to a late date (1 K 19^8). Other Arabian holy mountains were Hirâ, Taur, Tabîr, Ko'aika'ân, and 'Arafât (v. Kremer, *Culturgeschichte des Orients*, ii. 14). In Ethiopic *dabr* means both 'mountain' and 'monastery.' According to Dt 12^2, Jer 2^{20} 3^6 17^2, Ezk 6^{13} 20^{28}, 1 K 14^{23}, 2 K 16^4 17^{10}, Is 57^7, Hos 4^{13}, the Canaanites and Hebrews sacrificed 'upon every high hill.' So conspicuous was this cult that it seemed to the Aramæans that the gods of the Hebrews were gods of the hills (1 K $20^{23.28}$). The following holy mountains are known in Canaan:—Hor (Nu $20^{25ff.}$), Peor (Nu $23^{28f.}$), Nebo (Dt 32^{49} 34^1), which derives its name from the Babylonian god Nebo (Is 46^1); the hill at Kiriath-jearim where the ark was kept (1 S 7^1), the mountain of the land of Moriah (Gn 22^2. ^{14}), Zion (Is 2^2. ^{3} and often), the Mount of Olives (2 S 15^{32}, 1 ℣ 117), Mizpah (Jg 20^1. $^{18.26.28}$ 21^1. $^{2.5}$, 1 S 7^5), Ramah (1 S 7^{17} $9^{12.14.19.25}$), Gibeah (1 S 10^5. ^{13}), Gibeon (1 K 3^4), the mountain at Ophrah (Jg 6^{26}), Ebal and Gerizim (Dt 27^4. ^{12}, Jos $8^{30.33}$, Jn 4^{20}), Tabor (Jg 4^6. $^{12.14}$, Hos 5^1), Carmel (1 K $18^{20.30}$), Gilead (Gn 31^{45-54}), Hermon (Jerome, *Onom. Sac.*, ed. Lagarde, p. 90, 19 ff.; Euseb. *Onom. s.v.* Ἀερμών). In the case of Hermon the ancient sanctity is still attested by the numerous ruins of temples that remain upon its slopes. The word *bāmāh*, which in the OT has come to be the general designation of seats of idolatrous worship, seems to denote primarily a 'height.' It is thus a witness to the wide diffusion of worship on hill-tops (see HIGH PLACE). Among the Phœnicians, Philo Byblius names Anti-lebanon, Lebanon, Kasios, and Brathy as holy mountains (Müller, *FHG* p. 566, frag. 2, 7). Baudissin (*Studien*, ii. 247) conjectures that Brathy is a corruption of Tabor. Strabo (xvi. 2. 15 f.) also mentions a sacred promontory near Tripolis. For holy mountains in the Phœn. colonies see Baudissin, *Studien*, ii. 249. For holy mountains in Northern Syria and Mesopotamia see Baudissin, ii. 246. For modern survivals of this cult see Curtiss, *Ursem. Rel.* p. 153 ff.

The divinities that inhabited these mountains were their *be'ālim*. The name of Serbâl, the traditional Sinai, is probably compounded with *ba'al*. An Egyptian text speaks of the '*ba'al* upon the mountains' (W. M. Müller, *Asien u. Europa*, p. 309). In Canaan we find Ba'al-Pe'or (Nu 25^{3-5}, Dt 4^3, Hos 9^{10}, Ps 106^{28}), or simply *Pe'or*, as the name of the god (Nu 25^{18} 31^{16}, Jos 22^{17}, cf. *Beth-Pe'or*, Dt 3^{29} etc.); Bāmôth-ba'al, 'the high places of the *ba'al*' (Nu 22^{41} $23^{1f.}$, Jos 13^{17}); Har-hab-ba'ālāh, 'mount of the *ba'ālāh*' (Jos 15^{11}); *Zeus Atabyrios* = Ba'al-Tabor (Gesenius, *Thes. s.v.* תבור); Ba'al-Hermon (Jg 3^3, 1 Ch 5^{23}); *Zeus Karmelos* = Ba'al-Carmel (Tac. *Hist.* ii. 78); among the Phœnicians, Ba'al-Lebanon (*CIS* 5), probably the same as the god 'Amurru, lord of the mountain' (Reisner, *Hymn.* p. 139, lines 143, 145; cf. *KAT*^{3} 433), and Ζεὺς ὄρειος of Philo Byblius; *Ba'li-ra'si* = Ba'al-ra's, 'ba'al of the promontory' (Shalmaneser II., fragment of annals, *KIB* i. 141); *Zeus Kasios* = Ba'al-Ḳasiw, 'ba'al of the precipice,' in Nabatæan inscriptions אלה קציו (Baudissin, *Studien* ii. 238); at Carthage, *Saturnus Balcaranensis* = Ba'al-Ḳarnaim, '*ba'al* of the two horns,' who was worshipped on a two-peaked mountain near Carthage, the modern Jebel bû Ḳurnein, where a temenos and altar have been discovered with hundreds of stelæ, dating from the 2nd and 3rd cents. A.D., bearing the inscription 'Saturno Balcaranensi, domino, magno, sancto, augusto' (Toutain, *Mélanges école franç.*, Rome, 1892, pp. 1–124, pl. i.–iv.).

5. Ba'als of stones.—Among the Semites, as among other primitive peoples, *maṣṣēbôth*, or fetish-stones, were reverenced as abodes of spirits.

Among the Arabs the most famous instance is the black stone at Mecca, which still forms the religious centre of the Muslim world. There was also a holy stone at the sanctuary of al-'Uzzâ at Naḫla (Wellhausen, *Reste*^{2}, p. 39), and at the sanctuary of the god of Petra (Suidas, *s.v.* Ζεὺς ἄρτης; Epiphan. *Panarion*, li.). The prohibitions of the Law assume that such stones were standing in all parts of Canaan, and were adopted by the Israelites as part of the worship of Jahweh (Lv 26^1, Dt 12^3 16^{22}, Jer 27^9 39^5). The following holy stones are particularly mentioned: the twelve pillars at Sinai (Ex 24^4); 'Lot's Wife' (Gn 19^{26}); the stones at Gilgal, 'the circle' (Jos $4^{3.20}$); the stone at Beth-Shemesh (1 S 6^{18}), at Zor'ah (Jg 13^{19}); the pillar of Rachel's grave at Bethlehem (Gn 35^{20}); the stone of Bohan (Jos 15^6 18^{17}); the stone Zoheleth, near Jerusalem (1 K 1^9); the 'foundation-stone' in the Temple (Bab. Talm. *Yoma*, 54*a*); the stone of help at Mizpah (1 S 7^{12}); the stone 'Ezel, near Gibeah (1 S 20^{19}); the stone at Bethel (Gn 28^{18-22} 31^{13} 35^{14}), at Ophrah (Jg 6^{20}), at Shechem (Jos 24^{27}, Jg 9^6); the stones on Ebal (Dt 27^4), on Mount Gilead (Gn 31^{45-52}). Among the Phœnicians the name Ẓur, Tyre, 'rock,' is perhaps derived from the sacred stone of the local god. Coins of Seleucia, in Pieria, bear the inscription 'Zeus Kasios,' and show an upright stone standing in a temple (Mionnet, *Médailles Ant.* v. 276 f.). The goddesses of Gebal and of Paphos were similarly represented (see ASHTART, 4), so also in Syria the god Elagabal at Emesa (Cohen, *Déscription des monnaies*, p. 530 ff., Nos. 126–129, pl. xv. 127). At Nisibis in the 4th cent. there was a similar holy stone (*Beitr. z. Alterthumskunde*, 1880, p. 772; see MAṢṢĒBĀH). For stone-worship in modern Arabia see Zwemer, *Arabia*, pp. 36, 39, 284, and for modern Syria see Curtiss, *Ursem. Rel.* p. 90 ff.

Similar in character to the *maṣṣēbôth*, or 'standing stones' were the *ḥammānîm*, which along with altars, *'ăshērîm*, and idols formed part of the equipment of high places (Lv 26^{30}, Is 17^8 27^9, Ezk $6^{4.6}$, 2 Ch $14^{4.(5)}$ $34^{4.7}$). In the Palmyrene inscription (de Vogüé, *op. cit.* 123*a*) a *ḥammāna* is dedicated to the sun. In an inscription from Um el-'Awamid (*CIS* 8) and in the Ma'sub inscription (Hoffmann, 'Phön. Inschr,' *AGG* xxxvi., 1890, p. 20 ff.) the deity *'El-ḥammān* occurs. Over 2000 inscriptions on small upright stelæ, like gravestones, from Carthage, bear the inscription, 'To the Lady Tanit, face of Ba'al, and to the Lord *Ba'al-ḥammān*, so and so has dedicated this.' Ba'al-hammān is also mentioned frequently in inscriptions from Malta, Sicily, and Sardinia. In three inscriptions (*CIS* 404, 405; Euting, *Karth. Inschr.* 123) the dedication is to *Hammān* without the prefixed *Ba'al*. Rashi first suggested that *ḥammān* was derived from the late Heb. and Rabbinic word *ḥammā*, 'sun,' and translated it

'sun-images'—an opinion that has been followed by many modern versions and commentators; but this translation is unknown to the ancient versions. LXX renders ξύλινα, βδελύγματα, εἴδωλα, τεμένη, ὑψηλά; Jerome, *simulacra, delubra*. No support is afforded to this theory by the fact that a *ḥammāna* is dedicated to the sun, since, according to 2 Ch 34[4], the *ḥammānîm* belonged to 'the *bĕ'ālîm*' in general. That *Ba'al-ḥamman* had solar attributes, or that the name means 'owner of the sun' or 'glowing *ba'al*,' has not been proved. *Ba'al* is never compounded with *shemesh*, 'the sun,' or with the names of any of the other heavenly bodies (see below, 8); it is unnatural, therefore, to regard *ḥammān* as a synonym of *shemesh*. To take it as an adjective, 'glowing,' agreeing with *Ba'al*, is also without analogy (see below, 10). The suggestion of Renan (*CIS* I. i. 288 f.), that *ḥammān* is the same as the Egyptian god Amun Ra, is untenable, because in Heb. his name appears as 'Amon. The theory of Halévy (*Mélanges*, p. 426), that *ḥammān* is Mt. Amanus, and that *Ba'al-ḥammān* is the *Ba'al* of this mountain, is more in accordance with Sem. analogy; but in the Bab.-Assyr. inscriptions Amanus appears as Amana without the strong initial guttural. It is also hard to see how objects used in the cult of this deity should have been called 'Amanuses.' For such a usage there is no analogy in the worship of other mountain-gods. We seem accordingly to be shut up to the view that *ḥammān* is a cult-object of unknown etymology, and that *Ba'al-ḥammān* is the deity that inhabits this object. This is strictly in accordance with the analogy of such names as *Ba'al-tamar*, 'Ba'al of the palm,' and *Ba'alath-be'ēr*, 'Ba'alath of the well.' From the OT references it appears that the *ḥammānîm* were artificial products, 'the work of their fingers' (Is 17[8]), that they 'rose up' (Is 27[9]) 'above the altars' (2 Ch 34[4]), that they could be 'cut off' (Lv 26[30]), 'broken' (Ezk 6[4]), and 'hewn down' (Ezk 6[6], 2 Ch 34[7]). These expressions seem most applicable to stone pillars similar to the *maṣṣēbôth*. It is interesting to note that in none of the passages where *ḥammānîm* are mentioned are *maṣṣēbôth* mentioned. On the contrary, the *ḥammānîm* are combined with the *'ăshērîm* in Is 17[8] 27[9], 2 Ch 34[4. 7], just as the *maṣṣēbôth* and the *'ăshērîm* are ordinarily combined. This suggests that the *ḥammānîm* are only variant forms of the *maṣṣēbôth*, perhaps artificially hewn, while the latter were native rock. In all probability the stelæ dedicated to *Ba'al-ḥammān* at Carthage and other Phœn. colonies were just such *ḥammānîm*.

A survival of stone-worship is seen in proper names compounded with צוּר, צֻר, 'rock,' *e.g.* *Ẓuri-el*, 'my rock is a god'; *Ẓur-Shaddai*, 'a rock is Shaddai'; *Eli-ẓur*, 'my god is a rock'; *Beth-ẓur*, 'house of rock'; and, in the Panammu inscription from Zenjirli, *Bar-ẓur*, 'son of rock' (Lidzbarski, *Nordsem. Epig.* p. 442). In the light of these facts we should probably estimate the use of *Ẓûr* as a name of Jahweh (Dt 32[4. 15. 18. 30f.], 1 S 2[2], 2 S 22[3. 32. 47], Is 17[10] 30[29], Hab 1[12] etc.). The proper name *Riẓpah*, 'hot stone,' probably refers to a meteoric stone or supposed 'thunderbolt' that was reverenced as a fetish.

The sacred stone was regarded as the residence of a divinity, and therefore was known as *beth-el*, 'abode of deity' (cf. Gn 28[18-22], where Jacob calls the stone that he sets up *beth-el*, and Gn 31[13], where God says, 'I am the God of Bethel, where thou didst anoint a *maṣṣēbāh*, where thou didst vow a vow'). This name for holy stones was common also among the Phœnicians, from whom it spread to the Greeks and the Romans as βαίτυλος, βαιτύλιον (see STONES).

The divine proprietor of the 'house of deity' was its *ba'al*, just as the human owner of a house was its *ba'al*; *e.g.* Ba'al-ḥammān, 'owner of the stele,' in the numerous Punic inscriptions referred to above. The form *Ba'al-maṣṣēbāh* does not happen to occur, but is perfectly in accord with Sem. habits of thought, and is the necessary counterpart to the conception of the *maṣṣēbāh* as a *beth-el*.

6. Ba'als of sanctuaries.—In a few cases, apparently, the *ba'al* is not named from the sacred object in which he is supposed to reside, but from the sacred enclosure that surrounds this object. The Sabæan goddess Dhât Himâ, 'she of the holy ground' (*ZDMG*, 1877, p. 84), thus takes her name from her temenos. A similar formation seems to be found in בעלת ההרמת (*CIS* 41), which with Renan is probably to be rendered '*Ba'alat* of the inner sanctuary.' After this analogy also we should perhaps interpret Bal-addiris (=בעל חדר), who was worshipped at Sigus, in Numidia (*CIL* viii. 5279; Suppl. 19121-19123). If Ba'al-zebul be the correct reading instead of *Ba'al-Zebub* (see above, 3), then this '*ba'al* of the dwelling' may take his name from the sanctuary in which he was worshipped (but see below, 8).

7. Ba'als of places.—In the foregoing cases we are told what the particular natural phenomenon was with which the *ba'al* was connected. In other cases the phenomenon is not mentioned, but the *ba'al* is named from the place in which he was worshipped. Thus in Canaan we find Ba'al-Me'on (Nu 32[38], Jos 13[17], Ezk 25[9], 1 Ch 5[8]), Ba'al-Shalishah (2 K 4[42]), Ba'al-Ḥaẓor (2 S 13[23]); in Phœnicia, Ba'al-Ṣidon (*CIS* 3), Ba'al-Tyre (Hoffmann, *AGG* xxxvi., 1890, p. 19), Ba'alat-Gebal (*CIS* 1, 177); in Syria, Belos of Apamea (*CIL* xii. 1277); in Asia Minor, Ba'al-Tarsus (Scholz, *Götzendienst*, 149), Ba'al-Gazur (Head, *Hist. Num.* 631). In all these cases we must suppose that the divinity was connected with some striking physical phenomenon, only we are not told what this was, but are merely given the name of the town where it was located. Sometimes we know from other sources that there were sacred springs, trees, or stones in the places in question.

8. Celestial ba'als.—The object with which the divinity was connected was not necessarily situated on the earth; it might be the sky, one of the heavenly bodies, or some atmospheric phenomenon. Thus in Palmyrene, Phœnician, and Punic inscriptions we find frequent mention of Be'ēl-she'mayin, Ba'al-shāmēm. This name is not derived from *shemesh*, 'sun,' as many have supposed, on the strength of identifications of this god with the sun by late Greek writers, but is derived from *shāmayim*, 'sky,' as Augustine (*Quæst. in Jud.* xvi.) correctly translates, 'Balsamem quasi dominum cœli Punici intelliguntur dicere.' It does not mean 'Lord of Heaven' in any abstract theological sense, but 'the one who lives in the sky.' It is thus the exact equivalent of the Sabæan god, *Dhû-Samâwî*, 'he of the sky.' *Ba'al-Shāmēm* is the Sem. counterpart of Varuṇa, Οὐρανός, among the Indo-Europeans. It is noteworthy, however, that, while the latter worship the sky directly, the former worship the *ba'al* of the sky (Lidzbarski, *Ephemeris*, i. 3).

Closely connected with *Ba'al-shāmēm* in conception is Ba'al-ẓephôn (ẓāphôn), 'owner of the north.' This was the name of a town on the Red Sea (Ex 14[2. 9], Nu 33[7]). A goddess, Ba'alat-ẓāphôn, was also worshipped at Memphis (W. M. Müller, *Asien u. Europa*, p. 315). In the annals of Tiglath-pileser III. (*KIB* ii. 26 f.) a peak of Lebanon bears the name *Ba'ali-ṣapuna* (cf. Sargon, *Annals*, 204). In the treaty between Ba'al, king of Tyre, and Esarhaddon, king of Assyria, one of the gods mentioned is *Ba'al-ṣapunu* (*KAT*[2] 357). There was a town Zaphon in Gad (Jos 13[27], Jg 12[1]), also in Southern Palestine (*KIB* v., No. 174, 16), but it does not seem likely that this god can have derived his name from either of these insignificant places, since his cult spread all the way from Phœnicia to Egypt. *Ẓāphôn* is rather an abbreviation of *Ba'al-ẓāphôn*, and that in its turn of *Bêth-ba'al-ẓāphôn*, just as we find the series *Mā'ôn*, *Ba'al-Mā'ôn*, and *Beth-ba'al-Mā'ôn* (Nu 32[3. 38], Jos 13[17]). Moreover, *Ẓāphôn* alone occurs as the name of a deity in the Phœn. proper names בדצפן from Abydos (*CIS* 108), עבדצפן from Carthage (*CIS* 265), צפנבעל from Carthage (*CIS* 207, 857). The last name is *Ba'al-ẓāphôn*, with the elements reversed. The name *Gîr-ṣapûnu*, 'client of *Ẓāphôn*,' appears also as the name of an eponym in the time of Ashurbanipal (*KIB* i. 207, iv. 139). These names throw light upon the Heb. proper names Ẓaphon, Ẓephon, Ẓephonites, Ẓiphion. If *Ẓāphôn* is a god, we may either suppose with Gray (*Heb. Pr. Names*, p. 135) that this is a case of compounding two divine names, like Jahweh-Elohim, or, more probably, we may regard *Ẓāphôn*, 'the north,' as an object that might either be worshipped directly or be regarded as the abode of a deity, so that the god might be called indifferently *Ẓāphôn* or *Ba'al-Ẓāphôn*. The sanctity of the north as the dwelling-place of the gods is widely attested among the Semites (Is 14[13]; cf. Baethgen, *Beiträge*, p. 22f.; Baudissin, *Studien*, i. 278). *Ba'al-*

ṣāphôn, 'owner of the north,' accordingly, is nearly synonymous with *Ba'al-shāmēm*, 'owner of the sky,' although in the Phœn. pantheon the two deities existed side by side (*KAT*[2] 357). The name *Ba'al-zebul*, 'owner of the dwelling' (see above, 3 and 6), may be given with reference to this heavenly abode rather than with reference to an earthly sanctuary (so Cheyne, *EBi* 514).

The worship of the sun, moon, and stars was universal among the ancient Semites (cf. Baethgen, *Beiträge*, p. 61; Grunwald, *Eigennamen*, pp. 30–35; Jastrow, *Rel. Bab.*[2] pp. 134, 151; *KAT*[2] pp. 361–370); but, as noted above, it was not customary to speak of the *bᵉ'ālîm* of these celestial objects as one spoke of the *ba'al* of the sky or the *ba'al* of the north. Like animals, they seemed to possess personality, and were worshipped directly as gods rather than as the abodes of gods. By the Hebrews they were spoken of collectively, not as the *bᵉ'ālîm*, but as 'the host of heaven.' The same holds true of atmospheric phenomena. *Ramman*, 'thunder' (*KAT*[2] 442); *Regem*, 'storm'; *Baraḳ*, 'lightning' (*KAT*[2] 446); *Resheph*, 'flame' (*KAT*[2] 478); *Riẓpah*, 'thunderbolt' (?); *Barad*, 'hail'; *Maṭar*, 'rain'; *Geshem*, 'shower'; *Ṭal*, 'dew'; *Ḥôreph*, 'frost,' are shown by the evidence of proper names to have been objects of worship in all branches of the Semitic race (Grunwald, *Eigennamen*, p. 28 f.). These phenomena are worshipped directly. *Ramman*, *Regem*, *Baraḳ*, and *Resheph* are the gods' own names, and we never meet *Ba'al-Ramman* or *Ba'al-Regem* as the name of a god, although such formations are common in names of men (see below, 9). In this respect Semitic and Indo-European nature-worship were strictly parallel (see ARABS, I. 1).

9. **Adopted ba'als.**—Celestial and atmospheric phenomena that could not be reached in their proper abodes like terrestrial *bᵉ'ālîm* often had sanctuaries built for them on earth, and thus by a sort of adoption became the *bᵉ'ālîm* of these places. Thus *Dhû-Samâwî*, 'he of the sky,' appears in the Sabæan inscriptions also as *ba'al* of Baqîr; and in like manner *Ba'al-shāmēm*, 'owner of the sky,' is *ba'al* of Tyre (*KAT*[2] 357), of the Phœnician colonies (Baethgen, *Beitr.* p. 25), and of Palmyra (de Vogüé, *op. cit.* 50). *Ba'al-ṣāphôn*, 'owner of the north,' as we have seen above, is also a *ba'al* of Egypt and of Phœnicia. *Shams*, 'the sun,' is in the Sabæan inscriptions also *ba'alat* of Ǧuhfat (*CIS* iv. 11. 1) and *ba'alat* of Gabbaran (*CIS* iv. 43. 3). The sun was the *ba'al* of Ba'al-bek (Heliopolis), and Marduk, the spring sun, was the *bêl* of Babylon. Sin, the moon-god, was the *bêl* of Ur and of Ḥarran (Lidzbarski, *Nordsem. Epig.* p. 444, pl. xxiv.), and in Palmyra a god bore the name *Yarchi-bôl* (ירחבול), 'the moon is *ba'al*.' On a Syrian seal (Lidzbarski, *Ephemeris*, i. 12) the name *Ba'al-Regem* appears, which shows that in some districts *Regem*, 'the storm,' had become the local *ba'al*. Similarly, various *'ădhônîm*, *mᵉlākhîm*, *'ashtārôth*, and other tribal gods, that had originally no connexion with physical phenomena, might become the *bᵉ'ālîm* of certain places, through the circumstance that their worshippers settled in these places. Thus Jahweh became for the ancient Hebrews the *ba'al* of Canaan, Melḳart for the Phœnicians the *ba'al* of Tyre, and Ashtart for the Gebalites the *ba'alat* of Gebal. Certain local *bᵉ'ālîm* also became so important that their cults migrated to other cities, so that they became the *bᵉ'ālîm* of these new places. Under the name of *Zeus Atabyrios* the cult of *Ba'al-Tabor* spread to Rhodes and Sicily (Baudissin, *Studien*, ii. 247). *Zeus Kasios* (=*Ba'al-Ḳaṣiw*) was also the *ba'al* of Pelusium (Strabo, xvi. 2. 33; Philo Bybl. in Müller, *FHG* p. 568). Melḳart, the *ba'al* of Tyre, was also worshipped at Carthage and the other Phœn. colonies. *Ba'al-Ḥarran* was also one of the gods of Sam'al (Lidzbarski, *Nordsem. Epig.* 444, pl. xxiv.). In such cases as these, where *bᵉ'ālîm* were not originally connected with sanctuaries, but became their proprietors by adoption, they might have individual personal names; ordinarily they were nameless, and were known merely by the locality in which they had their abode.

10. **Departmental ba'als.**—The *ba'als* studied thus far all derived their titles from the fact that they were the 'proprietors' of certain physical objects or places. This usage of the divine name corresponds to the meaning 'owner' or 'citizen' of the common noun *ba'al*. The question now arises whether the divine name is also used like the common noun in the sense of 'possessor of an activity. Numina, which preside over abstract qualities or activities, are very common in the Indo-European religions, and by Usener (*Götternamen*) have been entitled 'departmental deities.' Of the existence of such *bᵉ'ālîm* in the Semitic religions there is no clear evidence. At the temple of Deir el-Qal'a, near Beirut, inscriptions have been found in honour of Βαλμαρκώδης, Βαλμαρκώθ. This name is translated κοίρανος κώμων, 'leader of dances' (le Bas, 1855=Kaibel, *Epig. Gr.* 835), which indicates that the Phœn. original is **Ba'al-Marqôd**. *Marqôd* is evidently a derivative of *raqad*, 'dance,' and may express the abstract idea of 'dancing.' This interpretation seems to be favoured by the Greek translation. In this case we have a *ba'al* who presided over a human activity, like the Indo-European departmental deities. *Marqôd*, however, also denotes 'dancing-place,' and may have been the name of the locality where the temple was situated. 'Owner of the dancing-place' could easily have been paraphrased in Greek as 'leader of dances.' In this case we have simply a *ba'al* who takes his name from the locality where he is worshipped, like all the other *ba'als* we have studied thus far.

In an inscription from Cyprus (*CIS* 41) we meet בעל מרפא. This is commonly read **Ba'al-marpē**, 'possessor of healing,' or *Ba'al-mᵉrappē*, 'Baal the healer,' in which case we have another departmental *ba'al*; but *marpē*, 'healing-place,' or *mᵉrappē*, 'healer,' may equally well have been the name of a medicinal spring of which this *ba'al* was the owner. This will then be a local *ba'al* of the familiar type.

In Jg 8[33] 9[4] mention is made of **Ba'al-berîth** (cf. 9[46] *El-berîth*). This is commonly interpreted '*Ba'al* of the covenant.' The 'covenant' is then understood of the relation between the deity and his worshippers (Baethgen, Sayce), or of an alliance between Israelites and Canaanites (Bertheau, Kittel), or of an alliance between Shechem and neighbouring Canaanite towns (Ewald, Kuenen, Wellhausen, Cheyne), or of agreements in general, as Ζεὺς Ὅρκιος (Nöldeke, *ZDMG* xlii., 1888, p. 478). On any of these interpretations the name stands without confirmation elsewhere in the OT, and without analogy in the whole field of Semitic religion. Under these circumstances it is reasonable to suspect textual corruption in the passage in Judges. Instead of ברית, *bᵉrîth*, we should perhaps read ברות, *bᵉrûth*, 'cypress' (Ca 1[17]). The worship of a Phœn. goddess, *Bērouth*, is attested by Philo Bybl. (Müller, *FHG* p. 567, fr. 2, 12). There was a famous holy tree at Shechem (see above, ii. 2). Or perhaps we should read בארות, *bᵉ'ērôth*, 'wells.' *Ba'al-bᵉ'ērôth* would then be the counterpart of *Ba'alath-bᵉ'ēr* (Jos 19[8]). Less likely is the suggestion of Bochart and Creuzer, that we should read *Ba'al-Bērôth*, Ba'al of Beirut (Berytus).

Ba'al-Gad (Jos 11[17] 12[7] 13[5]) is commonly rendered 'lord of fortune,' and is supposed to be a deity whose function it was to bring good luck; but *Gad* is also the name of a god in Is 65[11], probably also in the proper names *Migdal-Gad* (Jos 15[37]) and *Gaddi-El* (Nu 13[10]), *Gaddi* (Nu 13[11]), and the tribal name *Gad*. The name *Gad-melek*, 'Gad is king,' occurs on a

Heb. seal; *Gudu-bal* = *Gad-ba'al* (Hoffmann, *Phœn. Inscr.* 27) and such names as *Gadi-ya, Gadi-ilu*, in Assyrian business documents (Johns, *Deeds*, No. 275, 5; 443, etc.). For the cult of this god in Syria see Baethgen (*Beitr.* p. 76), and in Arabia, Wellhausen (*Reste*², p. 146); see 'Gad' in *HDB* and *EBi*. If *Gad* be regarded as the name of a deity in *Ba'al-Gad*, the difficulty arises that this is an abnormal formation for names of places. Such compounds as *Ba'al-Gad*, 'the owner is Gad,' and *Gudu-ba'l*, 'Gad is the owner,' are common as names of persons, but not as names of places (Gray, *Heb. Pr. Names*, p. 134). *Ba'al-Ẓāphôn* furnishes no real analogy, since *Ẓāphôn* is not only the name of a god, but also the name of a place, 'the north.' If we might suppose that *Ba'al-Gad* was originally the name of a man, and that the place was named after him, the difficulty would be solved; but there are no trustworthy analogies for such a procedure. Baethgen (*Beitr.* pp. 79, 254) regards this as a case of the synthesis of two deities, like *'Ashtar-Chemosh*, *'Atar-'Ate, Jahweh-Elohim*; but this implies that *ba'al* had become a proper name, and of this there is no evidence among the Hebrews or among any of the other West Semites until a late period. Accordingly, it is best to follow with Stade (*Gesch. Isr.* i. 272 n.) the analogy of the other *ba'als*, and to regard *Gad* as the name of the district occupied by the tribe of Gad. The name of *Ba'al-Gad* will then be parallel to *Ba'al-Judah*. Even if *Ba'al-Gad* were not situated in the tribe of Gad, this would make no difference, for, as we have just seen, *be'ālîm* frequently migrated.

The name בעל ימם (*CIS* 86*b*. 4) is commonly regarded as the equivalent of Heb. Ba'al-yāmîm, 'owner of days,' and is supposed to be a sort of Sem. Kronos; but the reading is very uncertain, and the name may be the equivalent of *Ba'al-yammim*, 'owner of the seas.'

These are all the cases that can be cited of apparent departmental *ba'als*. All are capable of an interpretation which makes them local *ba'als* of the familiar type. Accordingly we are probably justified in concluding that *ba'als* who presided over human activities or abstract qualities were unknown to Semitic thought. Such functions belonged rather to *'ădhônîm, mᵉlākhîm*, and other tribal deities. Thus Eshmun, the great god of the Phœnicians, was the god of healing, and Ishtar of Babylon was known as *Mu'allidtu, Mylitta*, the goddess of childbirth. From our investigation, we reach the conclusion that the *be'ālîm* were originally all numina of physical objects or localities, and that the only sense in which *ba'al* was used as a divine name was that of 'owner' or 'proprietor.'

iii. *HISTORY OF THE BA'AL-CULT.* — 1. **In Arabia.**—In South Arabian inscriptions *ba'al* is constantly used to describe the great gods as 'proprietors' of particular shrines established in their honour. Thus, Ta'lab Riyam, *ba'al* of Tur'at, or *ba'al* of Ḳaduman; Ḥagar, *ba'al* of Maryab; Ilmaḳḳâh, *ba'al* of 'Awwam, or *ba'al* of Bar'ān; 'Athtar, *ba'al* of 'Alam; Shams, *ba'alat* of Guḥfat, or *ba'alat* of Gabbaran (*CIS* iv. 2. 3, 11. 1, 19. 2 f., 28. 1 f., 41. 2 f., 43. 2 f., 46. 5, 67. 3, 74. 3 f., 80. 2 f., 99. 2 ff., 100. 1). These names all belong to the ninth class noted above, 'adopted *ba'als*.' To express the primary relation of a god to the physical objects that he inhabits, or the sanctuary where he is originally at home, the Minæan and Sabæan inscriptions use *dhû* (fem. *dhât*), 'he of,' 'she of.' Thus instead of *Ba'al-Shāmēm* we meet *Dhû-Samâwi*, 'he of the sky,' who is also *ba'al* of Baqîr; and similarly *Dhât Ḥimay, Dhât-Ba'dân, Dhât-Gadrân*, who also become the *ba'als* of various shrines (*CIS* iv. 145, 155).

In Ethiopic *ba'al* occurs as a loan-word in the version of the OT as a name of the Canaanitish deity, but is not used elsewhere. A trace of the old religious meaning of the word survives, however, in *ba'āl*, 'feast.' In the Sinaitic inscriptions *ba'al* occurs as a designation of the god of the mountain. Thus קדם אלבעלו, 'in the presence of the *ba'al*' (Euting, *Sin. Inschr.* 327); also in proper names, e.g. *Ausalba'lī, Garmalba'lī, 'Abdalba'lī* (see Euting). In Nabatæan the name occurs in *Bᵉ'ēl-Shāmîn* (*CIS* 163, cf. 176) and in the personal names *Aiti-bêl* (*CIS* 196) and *Ba'al-Adhôn* (? *CIS* 192). This *ba'al* apparently has been borrowed from Syria. In classical Arabic *ba'al* is not used as a title of divinities. From this W. R. Smith (109 ff.) infers that the *be'ālîm* were deities of watered land and of agriculture, who were unknown to the desert Semites, and were first worshipped in the fruitful lands of Syria and Mesopotamia. This conclusion is unwarranted, (1) because, as noted above, the *be'ālîm* cannot be limited to watered land, and *be'ālîm* of trees, stones, mountains, celestial bodies, etc., can be worshipped in the desert as well as anywhere else; (2) because there is no evidence that the phrase *ba'l*, or what the *ba'l* waters (='Athtar-land) or a *ba'l*-palm, is borrowed from the Aramaic; (3) because the word can be used in such expressions as 'the (Christian) Igal have the cross as their *ba'l*,' and the verb *ba'ila*, 'be *ba'l*-struck, frightened'; (4) because the sacred mountain *Serbal* is probably a compound of *sarw* and *ba'l*. These are sufficient indications that *ba'l* was once a designation of deities in Arabic, although in the classical literature it has dropped out of use (so Nöldeke, *ZDMG* xl., 1886, p. 174; Wellhausen, *Reste*², p. 146; art. ARABS, I. 9). Instead of *ba'l, dhû*, which has already begun to displace it in Sabæan and Minæan, is commonly used in Arabic in forming titles of gods, e.g. *Dhû-l-Ḫalaṣa, Dhû-l-Rigl, Dhû-l-Kaffain, Dhû-'Anama, Dhât-Anwât, Dhû-l-Labba, Dhât-Ḥima, Dhû-sh-Sharâ*. These all describe the divinity in question as belonging to a particular object or locality, and are thus the exact equivalent of *ba'al* names. On *Dhû-sh-Sharâ*, Wellhausen (p. 51) remarks that three Sharâs are known, all wooded thickets with water. This god was widely worshipped in Arabia (Wellhausen, *op. cit.* pp. 48–51), and was the chief god of the Nabatæans (Baethgen, *Beitr.* pp. 92, 108). The primitive religion of Arabia was evidently the worship of a multitude of local numina. Subsequently, through trade and shifting of population, cults migrated, and gods became *ba'als* of regions far removed from their original homes. Thus at Mecca, in the time of the Prophet, there were 360 different gods. Under Islām these old *be'ālîm* still survive as the *jinn* (W. R. Smith, 119 ff.) and the *ulia* (Zwemer, *Arabia*, p. 47 ff.).

2. **In Canaan.**—The earliest evidence of the *ba'al*-cult in Canaan is found in the Egyptian inscriptions, where *b-'-r* (=*ba'al*) is mentioned as a god of the Canaanites and of the Hyksos invaders (see E. Meyer, *Set-Typhon*, p. 47; *ZDMG* xxxi., 1877, p. 725; W. M. Müller, *Asien*, p. 309). In the Tell-el-Amarna letters the *ba'alat* of Gebal is frequently mentioned (*KIB* v., Nos. 18. 25, 55 ff.; 61. 54). *Ba'al* does not occur. In the personal names *Bêl-garib* and *Bêl-ram*, the god may be the Babylonian *Bêl*. It is probable that the ideogram *IM* in these letters should often be read *Ba'al* instead of *Adad* (Hommel, *Altisr. Ueberlief.* p. 220; Knudtzon, *Beitr. Ass.* iv. 320 f.; Zimmern, *KAT*² 357). The OT says that the *be'ālîm* were the gods of the Canaanites, and that they were adopted by Israel after the conquest of the land (Jg 2^{11-13} 10^{6}, Hos 2^{2-13}); consequently it is possible to learn a good deal about them from survivals in Israel. With the exception of *Ba'al-Judah* (2 S 6^{2}), and possibly *Ba'al-Gad* (Jos 11^{17}), all the place names

in the OT compounded with *ba'al* were probably derived from the earlier inhabitants. The original form of such names was like *Beth-ba'al-Ma'on*, 'house of the owner of Ma'on' (Jos 13^{17}), which might then be abbreviated into *Ba'al-Ma'on* (Nu 32^{38}) or *Beth-Ma'on* (Jer 48^{23}). The following names occur: *Ba'alath-be'ēr* or *Ba'al* (Jos 19^{8}, 1 Ch 4^{33}), *Ba'alah* (Jos 15^{29}), *Ba'alath* (Jos 19^{44}), *Be'aloth* (Jos 15^{24}), *Ba'al-berîth* (Jg 9^{4}), *Ba'al-Ḥāmôn* (Ca 8^{11}), *Ba'al-Ḥazor* (2 S 13^{23}), *Ba'al-Ḥermon* (Jg 3^{3}), *Ba'al-p'rāẓîm* (2 S 5^{20}), *Ba'al-Shalishah* (2 K 4^{42}), *Ba'al-tamar* (Jg 20^{33}), *Har-ḥab-ba'ălah* (Jos 15^{11}), *Kiryath-ba'al* (Jos 15^{60}). These names are found in Benjamin, Gad, Judah, Simeon, Reuben, Dan, so that they witness to a general diffusion of the *ba'al*-cult throughout Canaan. There must have been innumerable other *be'ālîm* whose names have not come down to us, since, according to Jer 2^{28} 11^{13} 2^{30}, they were as numerous as the towns, and were worshipped on every high hill and under every green tree. The existence of *ba'al*-worship in Philistia is attested by the name *Ba'al-zebub* (*Ba'al-zebul*) at Ekron (2 K $1^{2f.}$); in Edom by the personal name *Ba'al-ḥanan* (Gn $36^{38ff.}$); in Moab, by the names *Ba'al-Peor* (Nu 25^{3}), *Bamoth-ba'al* (Nu 22^{41}), *Beth-ba'al-Ma'on* (Jos 13^{17}, *Mesha Inscr.* lines 9, 30); in Ammon perhaps by the personal name *Ba'alis* (Jer 40^{14}; see AMMONITES).

The *be'ālîm* who were worshipped in the fertile region of Israel where Hosea lived were regarded as the givers of wool and flax, oil and wine, grain, vines, and fig-trees (Hos $2^{5.\ 9.\ 12}$); but it is unsafe to infer from this that all the *be'ālîm* of Canaan had an agricultural character. As the names just enumerated show, there were also *be'ālîm* of springs, trees, mountains, and cities that did not necessarily have such a character. The Old Testament often combines the *be'ālîm* with the *'ashtārôth* in such a way as to suggest that the *'ashtārôth* were regarded as the consorts of the local *be'ālîm* (*e.g.* Jg 2^{13} 10^{6}, 1 S 7^{4} 12^{10}). Perhaps we may suppose that, under the influence of the meaning 'husband,' which the common noun *ba'al* had, every *ba'al* was regarded as the 'husband' of an *'ashtart*. It was the introduction of this sexual element into the *ba'al*-cult of Canaan that made it peculiarly obnoxious to the prophets, and led them to stigmatize it as adultery (Am 2^{7}, Hos 4^{11-14} 7^{4}). The places where the *be'ālîm* were worshipped were known as *bāmôth*, 'high places' (see HIGH PLACE; cf. the place-names *Bamoth-ba'al* [Nu 22^{41}] and *Bambula* at Citium in Cyprus [?]). The rock-hewn high places that have lately been discovered at Petra give a good idea of the arrangement of such sanctuaries (see Robinson, *Bibl. World*, 1908, pp. 8–21). Such high places contained altars, *'ăshērîm*, *maṣṣēbhôth*, and *ḥammānîm* (Jg 6^{25}, 2 Ch 14^{3-5} 34^{4-7}). Idols are not mentioned in connexion with the *be'ālîm*, and were probably not found in most of the high places. They belonged rather to the temples of the great gods. The existence of altars implies sacrifice. The offerings were doubtless similar to those which Israel brought Jahweh in the developed Hebrew cult, and to the offerings of the Phœnicians. Hos 2^{8} indicates that grain, new wine, oil, silver and gold were presented to the *be'ālîm*. Hos 2^{13} speaks of 'the days of the *be'ālîm* unto which she (Israel) burned incense, when she decked herself with her ear-rings and her jewels, and went after her lovers' (see CANAANITES).

3. **In Israel.**—The conquest of Canaan by Israel was a process extending over several centuries. The Hebrews did not exterminate the aborigines, but certain clans forced their way into the land, and occupied the rural districts, while the cities remained in the hands of the Canaanites. For some time there was constant warfare between the two races, but gradually hostilities ceased and they began to mingle. Little by little Israel acquired agriculture, industries, and all the other forms of Canaanitish civilization. With this came inevitably the adoption of the worship of the local gods of Canaan. Agriculture could not be carried on without observing the ceremonies that accompanied the planting of the grain and the reaping of the harvest. Altars, shrines, sacred trees, and holy stones in all parts of the land could not be appropriated without taking with them the divinities that belonged to them. As the Book of Judges and the early prophets repeatedly inform us, 'Israel served the *be'ālîm*'; that is, alongside of Jahweh the national God it also worshipped the local numina of the land that it had conquered. Through this process it was in danger of losing the measure of national unity that had been achieved by Moses, and of splitting up into a number of small communities that rallied about the local *ba'al*. Consciousness of this peril was awakened through the rapid development of the Philistine power. About B.C. 1050 the Philistines conquered Israel, taking captive the ark and burning its sanctuary at Shiloh (1 S 4, Jer 26^{6}). Hebrew nationality was now in danger of extinction, and the only thing that could save it was a union of all the clans in a supreme effort to shake off the Philistine yoke. No one of the *be'ālîm* of Canaan was important enough to form a centre for such a union; but Jahweh, the God of Sinai, who had brought Israel out of Egypt, and who had united the clans in a common cult in the desert, was able once more to rally them for the common defence. The leaders of Hebrew thought perceived that the only way to save Israel was to forsake the *be'ālîm* and to return to Jahweh. Some extremists, such as the Kenites and the Nazirites, wished also to reject agriculture, life in towns, and the other elements of Canaanitish civilization that were associated with the *be'ālîm*; but the wisest men saw that it was impossible to return to the life of the desert. If the *be'ālîm* were to be conquered, it could only be by appropriating to the service of Jahweh all that had hitherto belonged to them. Through the efforts of the Levites, the so-called 'Judges' or Vindicators, the Seers, and other enthusiasts for Jahweh, He finally triumphed over the *be'ālîm*, not by avoiding them, or by destroying them, but by absorbing them. The name *ba'al* became a synonym of Jahweh, and the *be'ālîm* were regarded as local manifestations of Jahweh. He ceased to be the God of Sinai and became the God of Canaan, the patron of agriculture and civilization. The ancient shrines of the land became His shrines, and the legends connected with them were retold as stories of His dealings with the patriarchs. The agricultural ritual and the harvest festivals of the *be'ālîm* were re-consecrated to His service. By the time of David the process was complete. Jahweh had appropriated everything that belonged to the *be'ālîm* that was worth saving. Observe how in 2 S 5^{20} David interprets the name *Ba'al-p'rāẓîm* as meaning 'Jahweh hath broken mine enemies before me like the breach of waters.'

This process of syncretism has left an interesting monument in some personal names of the period of the early monarchy. These are as follows: *Jerub-ba'al*, 'the *ba'al* contends' (Jg 8^{35}); *Ish-ba'al*, 'man of the *ba'al*,' a son of Saul (1 Ch 8^{33}), also one of David's heroes (1 Ch 11^{11}); *Merib-ba'al*, a son of Jonathan (1 Ch 9^{40} 8^{34}); *Ba'al-yāda'*, 'the *ba'al* knows,' a son of David (1 Ch 14^{7}); *Ba'al-ḥanan*, 'the *ba'al* is gracious,' a Gederite (1 Ch 27^{28}). No names of this type are found after the time of David. In most of these cases it is certain that *ba'al* is not a foreign god, but a title of

Jahweh, who has become the *ba'al* of Canaan, since Jerub-ba'al, Saul and David, were all loyal adherents of Jahweh. In *Ba'al-Yah*, 'the *ba'al* is Jahweh,' the name of one of David's helpers (1 Ch 12^5), the identity of the *ba'al* with Jahweh is asserted; so also in *Yo-ba'al* (Jg 9^{26}), if Kuenen's emendation be correct. These names accordingly belong to a period when worshippers of Jahweh were conquering the *be'ālîm* by identifying them with Jahweh. In popular conception in the time of Hosea the *be'ālîm* were not foreign gods, but local Jahwehs. Hos 2^{16} says that Israel has called Jahweh *ba'al*, and $2^{11.13}$ identify the feasts of Jahweh with the days of the *be'ālîm*. As a result of this process the *be'ālîm* lost their power, and Jahweh became the God of Canaan; but the victory was purchased at the cost of a mixture of the religion of Jahweh with all sorts of alien elements. The early prophets faced the problem how to maintain the supremacy of Jahweh; the later prophets from Amos onward faced the problem how to purge the religion of Jahweh from the heathen innovations that had entered it. Their efforts were only partially successful, and Judaism, as seen in its chief literary monument, the Law, is properly regarded as a compromise between Prophetism and Ba'alism.

A totally different sort of *ba'al*-cult was the worship of Melḳart, ba'al of Tyre (see below, 4), which was introduced into Israel in the time of Ahab. Pressed by repeated attacks of Damascus, Ahab was constrained to seek the help of Phœnicia, and formed an alliance by marrying Jezebel, the daughter of Ethba'al, king of Tyre (1 K 16^{31}). Such a relation of dependence usually involved the worship of the chief god of the protecting State (cf. 2 K 16^{7-16}); consequently Ahab was compelled to establish the cult of Melḳart in Samaria (1 K $16^{31f.}$). Against this religious innovation Elijah and Elisha warred (1 K 18. 19^{16-18}, 2 K 9. 10). There is no record that either of these prophets opposed the old native *be'ālîm* that were identified with Jahweh. The golden bullock at Bethel, for instance, they never attacked as Hosea did subsequently; but the *ba'al* of Tyre was a foreign god, and to worship him was to repudiate Jahweh (1 K 18^{21}), hence the intensity of the opposition of these prophets. According to 1 K 18, Elijah was successful, and in agreement with this we learn from the annals of Shalmaneser II. that in B.C. 856 Ahab was no longer in alliance with Phœnicia, but was fighting with Damascus against Assyria. Probably Damascus was so hard pushed that it was willing to grant an alliance without the condition of the adoption of its god Rimmon by Israel, and public sentiment was sufficiently strong in Israel to compel Ahab to give up the Phœnicians and their god and seek this new ally. Subsequently Ahab must have repudiated the Syrian alliance and have re-established relations with Phœnicia, for he died fighting against the Syrians (1 K 22^{35}). After his death, under the influence of the queen-mother, Jezebel, the cult of the Tyrian *ba'al* was introduced once more in full force (1 K 22^{53}). This cost the dynasty of Omri the throne. Instigated by Elisha, Jehu slew Jezebel and her son Jehoram, and exterminated the worship of Melḳart with fire and sword (2 K 9. 10). Immediately after this, in B.C. 842, we find him paying tribute to Assyria instead of Phœnicia, apparently on terms that did not demand the worship of Ashur. Melḳart never again gained a foothold in the northern kingdom. The problem which confronted Amos and Hosea was not the expulsion of this foreign deity, but the purification of the religion of Jahweh from admixture with rites of the ancient *be'ālîm* of Canaan.

The worship of the Tyrian *ba'al* was introduced into Judah by Athaliah, the daughter of Jezebel (1 K 22^{44} (53), 2 K 8^{18}), doubtless as the price of a Phœnician alliance that maintained her on the throne. In the subsequent revolution that was incited by the priests Athaliah perished, 'and all the people of the land went into the house of the *ba'al* and brake it down; his altars and his images brake they in pieces thoroughly, and slew Mattan the priest of the *ba'al* before the altars' (2 K 11^{18}). In the recrudescence of all sorts of heathenism under Manasseh, the Tyrian *ba'al* was once more worshipped (2 K 21^3). To this Jeremiah and Ezekiel allude whenever they speak of 'the *ba'al*' in contrast to 'the *be'ālîm*.' Under Josiah this cult was stamped out (2 K $23^{4.5ff.}$), and did not again gain a foothold in Judah. It was a foreign religion that never appealed strongly to the mass of the people.

With the old *be'ālîm* of Canaan it was very different. They were so thoroughly identified with Jahweh in the conception of the nation that it was unconscious of apostasy in worshipping them. All the efforts of the pre-exilic prophets to banish them were unsuccessful. Under the reign of every good king, and after every attempted reformation, the editor of Kings records: 'Nevertheless the high places were not taken away, the people still sacrificed and burned incense in the high places.' The Book of Deuteronomy and the reformation of Josiah had for their central aim the destruction of the *be'ālîm* by the centralization of worship at Jerusalem; but both Jeremiah and Ezekiel confess that the effort was unsuccessful. It was the Exile, which removed Israel from the old holy places and old religious associations of Canaan, that finally eradicated this cult. Orthodox Judaism detested this inveterate habit of the forefathers, and, interpreting literally the words of Hos 2^{19} (17) 'I will take away the names of the *be'ālîm* out of her mouth,' substituted *bôsheth*, 'shameful thing,' in the place of *ba'al* in the reading of the Scriptures. In Jer 3^{24} and elsewhere *bôsheth* has actually taken the place of *ba'al* in the Heb. text. The Greek version often has ἡ Βάαλ to indicate that the reader is to substitute αἰσχύνη for *ba'al*, and in 1 K 18^{19-25} this alternates with *ba'al* in the text. Particularly in the Books of Samuel *ba'al* has been eliminated from names of persons, although it has been allowed to stand in the parallels in Chronicles. Thus *Ish-ba'al* (1 Ch 8^{33}) = *Ish-bosheth* throughout Samuel (*Ish-vi*, 1 S 14^{49}); *Ish-ba'al* (1 Ch 11^{11}) = *Josheb-bashshebeth* (2 S 23^8); *Meri-ba'al* (1 Ch 9^{40b}), or *Merib-ba'al* (1 Ch 9^{40a}, 1 Ch 8^{34}) = *Mephi-bosheth* (2 S 4^4, cf. the other *Mephi-bosheth*, 2 S 21^8); *Ba'al-yāda'* (1 Ch 14^7) = *El-yāda'* (2 S 5^{16}). *Abi-albon* (2 S 23^{31}) is perhaps a perversion of *Abi-ba'al*, and *'Ebed*, 'slave' (Jg 9^{26}), of some *ba'al* compound (see Geiger, *ZDMG* xvi., 1862, pp. 728–732; Nestle, *Die isr. Eigennamen*, pp. 108–132; Dillmann, *SBAW*, phil.-hist. Kl., 1881, p. 609 ff.; Wellhausen, *B. Samuelis*, pp. xii ff., 30 f.; Driver, *Samuel*, pp. 186, 195 f., 279; Gray, *Heb. Proper Names*, pp. 121–136). In spite of these efforts, however, *ba'al* remained in Mishnic Heb. as a designation of naturally irrigated land (see above, ii. 1), and under modified forms the *ba'al* cult lingered in the rural districts. In modern Palestine, the Jews unite with the Christians and Muslims in reverencing numerous local saints that are only the thinly-disguised *be'ālîm* of earlier days. In spite of all the efforts of Judaism, Christianity, and Muhammadanism, one may still say with the author of Kings, 'Nevertheless the high places are not taken away, the people still sacrifice and burn incense in the high places' (see Curtiss, *Ursem. Rel.* p. 81 ff.).

4. **In Phœnicia and the Phœnician colonies.**—In Phœnicia the name seems to have been pronounced *ba'l*, to judge from such proper names as

Hannibal, *Asdrubal* (Schröder, *Die Phön. Sprache*, p. 84). The most important of all the Phœn. *bᵉʿālîm* was 'our lord Melḳart, the ba'al of Tyre' (*CIS* 121). He is mentioned in the treaty of Esarhaddon with Ba'al, king of Tyre (*KAT*³ 357), as (*ilu*) *Mi-il-ḳar-ti*, one of the great gods of Tyre. His name Melḳart (= *Melek-ḳiryath*, 'king of the city') shows that he was originally a tribal god who was identified with the local *ba'al*, just as Jahweh was identified with the *bᵉʿālîm* of Canaan. In all the names of the kings of Tyre the element *ba'al* refers to Melḳart: thus, *Abi-ba'al*, the father of Hiram; *Ba'al-'azar I.*, the contemporary of Rehoboam; *Eth-ba'al* (Assyr. *Tu-ba-'-lu*), the contemporary of Ahab (1 K 16³¹); *Ba'al-'azar II.*, the successor of Eth-ba'al; *Ba'al I.*, the contemporary of Sennacherib; *Eth-ba'al II.*, the contemporary of Nebuchadrezzar; *Ba'al II.* (B.C. 573–564), and somewhat later *Mer-ba'al*. He is also the *ba'al* meant in the numerous Tyrian proper names compounded with this name (see Lidzbarski, *Nordsem. Epig.* 239 ff.). Under the name of Herakles his temple at Tyre is mentioned by Menander in Josephus (*Ant.* VIII. v. 3, *cont. Ap.* i. 18) and by Herodotus (ii. 44). In regard to his cult little is known from native sources. Our fullest information is derived from the OT accounts of his worship in Israel. He had a temple, an altar, and an *'ăshērāh* (1 K 16³³, 2 K 10²¹ 11¹⁸), also a *maṣṣēbāh*, or standing stone (2 K 3³ 10²⁶). An image is mentioned (2 K 11¹⁸), and is implied in 1 K 19¹⁸, Hos 2¹⁰ (⁸). There were prophets of the *ba'al* and of the associated *'ăshērāh* (1 K 18¹⁹), also *Chemarim*, or priests of the *ba'al* (2 K 23⁵, Zeph 1⁴). The bullock was sacrificed to him (1 K 18²⁶). Like other *mᵉlākhîm*, Melḳart received human sacrifice (see under art. AMMONITES, vol. i. p. 391; and cf. Jer 19⁵ 32³⁵), but this was in his capacity as *melek* and not as *ba'al*. From this the inference cannot be drawn that such sacrifices were customary in the service of other *bᵉʿālîm*. Kissing his image is mentioned as a rite in 1 K 19¹⁸; dancing round the altar, and cutting the body with knives and shouting the name of the god, in 1 K 18²⁶⁻²⁸.

Distinguished from *Ba'al-Melḳart* in the treaty of Esarhaddon, in spite of its identical etymology, is *Ba'al-ma-la-gi-e* (*KAT*³ 357). This is apparently Ba'al-Malki, 'Ba'al my king,' and is the same as *Milk-ba'al* of the Phœnician colonies (*CIS* 123*a*, 147, 194, 380). What his character was, and how he was differentiated from Melḳart is unknown. *Ba-al-sa-me-me* = Ba'al-shāmēm, 'owner of the sky' (see above, ii. 8), is also mentioned as one of the great gods of Tyre in the treaty of Esarhaddon (*KAT*³ 357). In an inscription from Um-el-'Awamid, near Tyre (*CIS* 7), a certain Abdelim states that he has dedicated to *Ba'al-shāmēm* a doorway and its doors, that it may serve as a memorial of him and a good name under the feet of his lord *Ba'al-shāmēm*. Philo Byblius also records the worship of Βεελσάμην in Phœnicia (Müller, *FHG* p. 566). Menander and Dius in Josephus (*Ant.* VIII. v. 3; *cont. Ap.* i. 17 f.) speak of the golden pillar in the temple of *Zeus Olympios* (*Ba'al-shāmēm*), which they distinguish from the temple of Herakles (Melḳart). Herodotus (ii. 44) also distinguishes the temple of the Thasian Herakles from that of Melḳart. As a different deity from *Ba'al-shāmēm* the treaty of Esarhaddon mentions *Ba-al-ṣa-pu-nu* = Ba'al-ṣāphôn, 'owner of the north' (see above, ii. 8). *Ba'al-ḥammān* (see above, ii. 5) is apparently mentioned in the Ma'sub inscription, line 3 (*RA*, 1885, p. 380 ff.), and in the second inscription from Um-el-'Awamid (*CIS* i. 8). Besides these *bᵉʿālîm* which had risen to the rank of great gods, there were numerous local *bᵉʿālîm* of a more primitive character. *Ba'al-Lebanon* is mentioned in *CIS* 5 (see above, ii. 4). The worship of *Zeus Atabyrios* (= *Ba'al-Tabor*) in the Phœnician colonies makes it certain that he must also have been worshipped in the mother-country (see above, ii. 4). The river *Belus*, near Acre, proves the existence of a local *ba'al* of the stream (see above, ii. 1). *Ba'al-Ṣidon* is mentioned in *CIS* 3. With him was associated *'Ashtart shem-ba'al*, "'Ashtart name of the *ba'al*.' He still survives in *Neby Ṣaida*, the Muslim patron saint of modern Ṣidon. At Deir el-Qal'a, near Beirut, there was *Ba'al-Marqôd* (see above, ii. 10), and *Ba'al-rosh*, 'owner of the promontory,' at the mouth of the Nahr el-Kelb just north of Beirut (*KAT*³ 43). At Gebal 'Ashtart was worshipped as the local *ba'alat* in connexion with her spouse Adonis (*CIS* 1; *KIB* v., No. 55; Philo Bybl., ed. Müller, p. 569; Lucian, *Dea Syr.* 6; see ASHTART).

In the Phœnician colonies all the great *bᵉʿālîm* of the mother-country were worshipped, and in addition a number of new local *bᵉʿālîm*. Ba'al-Ẓāphôn is found in Egypt (Ex 14²·⁹, Nu 33⁷), and in the proper name *Bod-Ẓāphôn* at Abydos (*CIS* 108); also *Ba'alti-ṣapunā* at Memphis (Müller, *Asien*, p. 315). *Zeus Kasios* (= Ba'al-Ḳaṣiw) was transplanted from his mountain near Antioch to Pelusium (see above, ii. 9). In Cyprus we find Melḳart the *ba'al* of Tyre (*CIS* 88. 3–7) and the proper name *Abd-Melḳart* (*CIS* 14. 7); *Zeus Keraunios* (Waddington, 2739), who in a Palmyrene bilingual is equated with Ba'al-shāmēm (de Vogüé, 50 = le Bas, iii. 2631); Ba'al-Lebanon (*CIS* 5); Ba'al-Mrp' (*CIS* 41) and Ba'al-ymm (*CIS* 84*b*. 4; see above, ii. 10). In Rhodes there is *Zeus Atabyrios* (= Ba'al-Tabor) (see Baudissin, *Studien*, ii. 247); in Corcyra, *Zeus Kasios* (Baudissin, ii. 243); in Thasos, *Melḳart* (Paus. v. 25; Herod. ii. 44). At Carthage, Melḳart the *ba'al* of Tyre appears frequently in proper names, *e.g.* *'Abd-Melḳart* (*CIS* 179, 234, and often). *'Abd-Melḳar* (Euting, *Karth. Inschr.* 18 = *Ammicar*, *CIL* viii. 68), *Ammat-Melḳart* or *Mat-Melḳart* (Euting, 153, 320), *Bod-Melḳart* (Euting, 28, 261) = *Bodmilcar* (*CIL* 9618), *Ḥat-Melḳart* (Euting, 213), *Ba'm-Melḳart* for *Ba'l-Melḳart* (Euting, 15), *Melḳart-mashal* (Euting, 130), *Melḳart-ḥalaz* (*CIS* 234; Euting, 48), *Ḥan-Melḳart* (Euting, 165), and many others. The compound deity Milk-Ba'al is also found, as in Phœnicia (*CIS* 123*a*, 147, 194). Ba'al-Adon (*CIS* i. p. 155) is a combination of the *ba'al* of Tyre with the *Adonis* of Gebal. Ba'al-shāmēm also appears (*CIS* 379). In Plautus (*Pœnulus*, 1027), Hanno swears *guneb Balsamem* (= גנאי בעלשמם). Augustine also knows him as a Punic deity (*PL* iii. 797). The worship of Ba'al-Ẓāphôn at Carthage is attested by the proper names *Ẓāphôn-ba'al* (*CIS* 207, 857) and *'Abd-Ẓāphôn* (*CIS* 265). Ba'al-ḥammān (see above, ii. 5) attained at Carthage the rank of a patron deity. More inscriptions have been found in honour of him than of any other Punic god. In Carthage itself he is always associated with the goddess Tanit, whose name stands first, showing that she was considered the more important deity. In the Carthaginian dependencies Ba'al-ḥammān is named alone. The god is represented with rays surrounding his head, and holds a tree in his hand. Above him stands the sun. On another stele he grasps a grape-vine with his right hand and a pomegranate with his left. Still other stelæ bear representations of palms, flowers, and fishes. The god is thus seen to have been a patron of fertility, like the *bᵉʿālîm* of Canaan (see Gesenius, *Phœn. Monumenta*, 'Numid.' i. ii. iv.). Balcaranensis (= *Ba'al-Ḳarnaim*, 'owner of the two horns'), was a local divinity who was worshipped on a two-peaked mountain near Carthage (see above, ii. 4). Ba'alatha-hdrt and Bal-addiris are also local Numidian deities (see above, ii. 6). In Malta, Melḳart *ba'a'*

of Tyre is named in inscriptions on two votive pillars (*CIS* 121). Another pillar from Malta bears the inscription, 'Pillar of Milk-Ba'al, which Nahum has placed for Ba'al Ḥamman the lord, because he has heard the voice of his words' (*CIS* 123*a*). This shows syncretism of the already compound deity *Milk-Ba'al* with *Ba'al-ḥammān*. In Sicily we find a *Rosh-Melḳart* (Renan, *Mission*, p. 145) and *Zeus Atabyrios* (= *Ba'al-Tabor*, see Baudissin, *Studien*, ii. 247); in Sardinia, the proper names *'Abd-Melḳart* (*CIS* 152) and *Bod-Melḳart* (*CIS* 138), *Milk-Ba'al* and *Ba'al-ḥammān* (*CIS* 147), *Ba'al-shāmēm* (*CIS* 139). The sacrificial tablet of Marseilles belonged perhaps to a temple of *Ba'al-ṣāphôn* (*CIS* i. 227). At Tartessus in Spain the Tyrian Hercules (Melḳart) was worshipped (Arrian, *Alex.* ii. 16. 5); also at Gades (Scholz, *Götzendienst*, p. 201 ff.), and at Lixus on the West Coast of Africa (Pliny, *HN* v. 1, 19–22).

5. In Syria, Asia Minor, and Mesopotamia.—In the Aramaic dialects the name assumes the form בְּעֵל *bᵉ'ēl* (cf. LXX *Beelphegor* [Nu 25³·⁵], *Beelzebul* [Mt 10²⁵]). The name *Ba'albek* is evidently a compound with *ba'al*, but what the second element of the name means is uncertain. Hoffmann (*ZA* xi. 246 f.) thinks that it is a broken-down form of *melek* (cf. *Milk-Ba'al* in Tyre and *Malak-bel* in Palmyra). *Balanios* (=*ba'alan*, 'our *ba'al*') is given as a title of Jupiter Heliopolitanus (*Chron. Pasch.* i. 561). The Greek name of this place, Heliopolis, shows that the sun was the local *ba'al*. In Damascus, *Juppiter Damascenus* (= בעל דמשק) was worshipped with *'Athtar* (='*Ashtart*) as his consort (Justin, xxxvi. 2; *Etym. Mag. s.v.* Δαμασκός). Inscriptions from Damascus show that his temple was richly endowed (le Bas-Waddington, 1879; cf. 2549 f.). His cult was important enough to spread to Italy (*CIL* vi. 405, x. 1576).

The recently discovered inscription of Zakir, king of Hamath and La'ash, which probably comes from a place lying between Hamath and Damascus, states that *Beelshamayin* (written as one word) has given Zakir his sovereignty, and has helped him against Bar-Hadad, son of Hazael, king of Aram, and his allies. Seven kings have besieged his city, but Zakir has raised his hands to *Beelshamayin*, and he through his seers has spoken to him a message of cheer. This inscription by its mention of the Benhadad of the OT is shown to belong to 8th cent. B.C.; and, like the inscription of Esarhaddon mentioned above, witnesses to the antiquity of the cult of *Ba'al-shamayim* (see Pognon, *Inscriptions sémitiques*, 1908, pp. 156–178).

In Palmyra, *Ba'al-shāmēm*, 'owner of the sky,' whom we have met already among the Nabatæans, the Phœnicians, and in the Phœnician colonies, appears as the chief god under the form Bᵉ'ēl-shāmîn, בעל שמן (de Vogüé, *Inscr. Sem.* 19, No. 16; 50, note 1; 53, No. 73; Euting, *Berichte Akad. Berlin*, 1885, 669, 4). His full Sem. title בעל שמן מרא עלמא, 'owner of the sky, lord of the world,' is in the Gr. parallel translated, Διὶ μεγίστῳ κεραυνίῳ. Most of the altars dedicated to him do not bear his name, but have the inscription, 'To Him whose name is for ever blessed, the good and compassionate' (de Vogüé, *Palm.* 74–105 *al.*); that he is meant, however, seems to be clear from the Greek parallels which read, Διὶ ὑψίστῳ καὶ ἐπηκόῳ. One inscription (de Vogüé, 16) is so restored by de Vogüé as to identify him with Ἥλιος; but this is very doubtful. The form *bᵉ'ēl* in his name shows that he is of foreign origin. בעל does not appear in Palmyrene proper names, and is not used except in the sense of 'husband.' Instead of this the native form of the word as a title of gods and in proper names is *bôl*. *Ba'al-shāmēm* was probably originally a Phœnician deity. Thence, as *Bᵉ'ēl-shāmîn*, his cult migrated to Syria, Palmyra, and the Nabatæans. In the Palmyrene inscriptions the god has a lofty ethical character beyond that of most of the *bᵉ'ālim* of the Sem. world.

Associated with him are the subordinate deities *'Agli-bôl* and *Malak-bêl* (de Vogüé, 93). Apart from *Be'ēl-shāmîn*, these two deities are also frequently mentioned in the inscriptions (*ZDMG* xviii. 99 f.; *CIG* 6015; de Vogüé, 140, 153). 'Agli-bôl (עגלבול, Ἀγλίβωλος) was evidently a moon-god, since he is depicted as a young warrior with a crescent on his shoulders. The etymology of his name is obscure. De Vogüé connects *'Agli* with עגל, 'bullock,' as a symbol of the new moon. He was probably the original *ba'al* of Palmyra, and he is meant in proper names compounded with *bôl*; *e.g.* *'Abdi-bôl*, Ἀβδίβωλος (Vog. 6), *Zebad-bôl* (frequently), *Repha-bôl*, Ῥεφάβωλος (Vog. 66), Δαυίβωλος (*CIG* 4665), Μαθθαβωλίων (Waddington, 2579), *Bôl-barak*, *Bôl-laḥa*, *Bôl-'azor*, etc. (On the use of *bôl* over against *bᵉ'ēl* and *bēl* in Palm. see Nöldeke, *ZDMG* xlii., 1888, p. 474; Baudissin, *PRE*³ 324; on the proper names, Ledrain, *Dictionnaire des noms propres palmyréniens.*) Malak-bêl (מלכבל, Μαλάχβηλος), like *Milk-ba'al* (see above, i., iii. 4), is a compound of *Malak* (= *Melek*, *Molech*, *Milcom*), 'king,' with *bēl* (=*ba'al*). The form *bēl* suggests that the deity is of Bab. origin (on *Malik* as a Babylonian god see Zimmern, *KAT*³ 469; Jastrow, *Die Rel. Bab. u. Ass.* p. 162). The rays with which this god is represented on the monuments (Lajard, *Cyprès*, pl. I., II.) suggest that he was a sun-god like the Babylonian *Bēl-Marduk* (see below, 6). In the Lat. version of the Palmyrene inscription of the Capitol (*ZDMG* xviii. 101 f.) the god is called 'sol sanctissimus.'

Another pair of Palmyrene deities that appear together in the inscriptions are *Bēl* and *Yarḥi-bôl* (de Vogüé, p. 64). Bêl, as the form of his name and his conjunction with *Belti* show, is imported from Babylonia. He is *Marduk*, the great *bēl* of Babylon (see below, 6). His name occurs with special frequency on seals (Mordtmann, 50, 51; de Vogüé, *op. cit.* 132, 133, 134). Many proper names are compounded with *bēl* as with *bôl*, *e.g.* *Ela-bēl* (Ἐλάβηλος), *Bēl-'aqab* (Βηλάκαβος), *Bēl-barak*, *Bēl-suri* (Βηλσούρου), *Nûr-bēl* (Νουρβήλου), *'Abdi-bēl* (see Ledrain, *Dictionnaire*). As in Babylon, so in Palmyra *Bēl* is a solar deity. Seals bearing his name show also the disc of the sun (Mordtmann, 77, 78), and one seal (Mordtmann, 77) bears the two names *Bēl*, *Shemesh*. As in Babylonia, *Bēl* has his consort Bêltî, 'my lady' (de Vogüé, 52, 155). Bêl's *paredros* Yarḥi-bôl ('Ιαρίβωλος) has the masculine predicates אלה and *θεός*. The name is compounded of ירח, 'the moon,' and בול=*ba'al* (de Vogüé, 93; Waddington, 2571*c*). *Yarḥi* alone occurs as a personal name (de Vogüé, 16). To *Yarḥi-bôl* a medicinal spring called Ἔφκα (=אפקא) was dedicated (de Vogüé, 99; Waddington, 2571*c*). Like *'Agli-bôl*, *Yarḥi-bôl* is to be regarded as a genuine Palmyrene deity. How these two moon-*ba'als* came to be worshipped side by side, or how they were differentiated from one another, is unknown. Still another Palmyrene *ba'al* seems to be found in Βωλάθη, known to Damascius (in Photius, cod. 242). This is a compound of the two gods *Bôl* and *'Ate* (see 'Ate). On the *ba'al*-cult at Palmyra see de Vogüé, *Palmyra*; and Baethgen, *Beiträge*, pp. 81–88.

A Ba'al of Apamea, 'fortunæ rector mentisque magister,' is mentioned in a Gallic inscription (*CIL* xii. 1277). From him Caracalla received an oracle, according to Dio Cass. (lxxviii. 8). He is perhaps to be identified with *Zeus Baitokaikeus*, the *ba'al* of the village of Baitokaike, near Apamea (*CIG* 4474=Le Bas, 2720*a*; *CIL* iii. 184 and p. 972). Specially famous was *Zeus Kasios* (=Ba'al-Ḳaṣiw), whose cult we have found al

ready in Egypt. Among the Nabatæans he appears as *Ḳaśiw* or *Ela Ḳaśiw* (de Vogüé, *Syr. Cent. Nabat.* iv. 2, vi. 2, vii. 1, 2; *Hauran.* v.). Baudissin conjectures that he is the same as *Koze*, the chief god of the Edomites (see EDOMITES). He was worshipped on a lofty mountain on the sea-coast near Antioch. His name, which is evidently derived from the root כזב, 'cut off,' de Vogüé refers to the 'precipice' on which his temple stood. Baudissin thinks that it rather means 'decider, judge.' The former interpretation is more in accordance with the local character of most *ba'al* names. At his sanctuary a feast was celebrated by the people of Antioch (Strabo, xvi. 2. 5). Seleucus Nicator obtained an oracle from him concerning the building of Seleucia (Malalas, ed. Dindorf, p. 199). The emperor Julian also consulted him (*Misopog.*, ed. Spanheim, p. 361; Ammianus Marcellinus, xx. 14. 4). Trajan dedicated gifts to his temple, and an epigram of Hadrian was preserved there (Suidas, *s.v.* Κάσιον ὄρος). Euhemerus (in Euseb. *Præp. Evang.* ii. 2) and Philo Byblius (*FHG*, p. 566) say that Kasios was formerly a ruler of this part of the country. Coins of Northern Syria bear the name *Zeus Kasios*, and show the sacred stone of the god standing in his temple (Mionnet, *Description des médailles*, iv. 276–280). It is evident that *Ba'al-Ḳaśiw* was one of the chief divinities of Northern Syria (on his cult see de Vogüé, *Syr. Cent. Inscriptions*, pp. 103–105; Scholz, *Götzendienst*, p. 144; Baudissin, *Studien*, ii. 238–242). The famous **Ba'alat of Mabbog** (Bambyce, Hierapolis), on the road between Antioch and the Euphrates, was Atargatis (see ATARGATIS). At Śam'al (Zenjirli), at the foot of Mt. Amanus, *Ba'al-Ḥarran*, *i.e.* Sin, the moon-god of Ḥarran, was worshipped (Lidzbarski, *Nordsem. Epig.* p. 444, pl. xxiv.). At Tarsus there was a *Zeus Tarsios*=בעל תרז (Scholz, *Götzendienst*, p. 149). In Cappadocia the name **Ba'al-Gazur** appears on coins of Ariarathes I. († B.C. 322) that were probably minted in the old capital Gaziura. The god is represented seated on a throne with a sceptre and an eagle, holding an ear of grain and a dove (Head, *Hist. Num.* 631; Reinach, *Trois royaumes d'Asie Mineure*, p. 28 f.).

The **Ba'al of Ḥarran** in Mesopotamia is mentioned in the inscription from Zenjirli referred to above, and occurs in numerous Assyrian proper names of the time of Sennacherib, Esarhaddon, and Ashurbanipal. This was Sin, the ancient Babylonian moon-god. His cult seems to have been indigenous in Ur in Southern Babylonia, and to have migrated to Ḥarran at a very early period (cf. Abram's journey from Ur of the Chaldees to Ḥarran in Gn 11^{31}). From the earliest to the latest times he received the homage of the Babylonians and Assyrians along with their domestic deities. Sargon, king of Assyria (B.C. 722–706), confirmed the exemption from taxes that Ḥarran enjoyed as the city of Sin (*Annals*, ed. Winckler, xiv. 5). Nabonidus, the last king of Babylon (B.C. 555–539), rebuilt the temple of Sin at Ḥarran (Rawlinson, v. 64, col. i. 8–ii. 46). At a later date we find the cult of **Be'ēl-shāmîn**, 'the owner of the sky,' at Ḥarran, perhaps through syncretism of the Syrian god with the ancient moon-god (Jacob of Sarug, in *ZDMG* xxix. p. 131). *Be'ēl-shāmîn* is also found in Nisibis (Isaac of Antioch, i. 209, v. 78 ff.; Bickel, *Be'ēl-Shamin princeps deorum Nisibis*, etc.). From Mesopotamia the worship of this god spread even into Armenia. Βαρσαμήνης (*Barshimnia*, *Parshamin*, *Parsham*), who had a famous temple in the town of Thoran in Armenia, was none other than *Be'ēl-shāmîn* (Agathang. 131, and Lagarde's note). According to Moses of Chorene, Tigranes brought back his image of gold, silver, and crystal from Mesopotamia (Langlois, *Historiens de l'Arménie*, i. 24, 40, 166; ii. 66, 88). It is clear that during the Greek period the cult of Be'ēl-shāmîn was generally diffused throughout Syria and Mesopotamia, and that he attained the rank of *summus deus*. This was doubtless due to his identification with *Zeus Olympios* in Phœnicia, Palmyra, and elsewhere. Zeus was the chief god of the Greek pantheon, and, therefore, wherever the Greeks went, his supposed Syrian counterpart enjoyed his pre-eminence (cf. his titles 'lord of the world,' μέγιστος, ὕψιστος, at Palmyra). Identification with Anu, the Lord of Heaven, in the Bab. religion may also have assisted in the process. In Syriac writers his name appears as a translation of Zeus (2 Mac 6^2; Isocrates in Lagarde, *Analecta Syriaca*, 176, line 24). In Dn 12^{11} *Ba'al-shāmēm*, as a translation of *Zeus Olympios*, whose cult Antiochus Epiphanes established in the Temple at Jerusalem, has been perverted by the Jewish scribes into *shiḳḳûṣ-shômēm*, 'the appalling abomination.'

6. **In Babylonia.** — Babylonia was originally occupied by the non-Semitic race now commonly known as Sumerian. The religion of these people was a polydæmonism that differed in no essential respect from the polydæmonism of the Semites. There was a multitude of divinities presiding over all sorts of natural objects and localities. A male numen was known as *en*, 'owner, lord,' and a female one as *nin*, 'proprietrix, mistress'; thus, *En-ki*, 'master of the sea'; *En-zu*, 'master of wisdom'; *Nin-ki*, 'mistress of the sea'; *Nin-ḫarsag*, 'mistress of the great mountain'; *Nin-sun*, 'mistress of destruction'; *Nin-e-gal*, 'mistress of the great house (temple)'; *Nin-Mar*, 'mistress of Mar'; *Nin-a*, 'mistress of water' (?). By a process common among the Semites (cf. 'ASHTART, 2) many originally feminine divinities were transformed into masculine ones (cf. Barton, *Sem. Origins*, p. 192), so that *nin* eventually became an element in names of gods in the same sense as *en*; thus, *Nin-Girsu*, 'master of Girsu'; *Nin-a-gal*, 'master of great strength,' the patron of blacksmiths; *Nin-shaḫ*, 'master of the wild boar'; *Nin-gish-zida*, 'master of the tree of life.' Celestial phenomena were objects of special reverence, and gave the religion of Babylonia an astral character which it retained down to the latest times. Here may be mentioned *Anu*, 'the sky'; *En-lil*, 'master of the wind,' not 'master of the spirits,' as many have rendered his name, since Gudea (*Cylinder*, A 23. 14, 19=*VAB* [*Vorderasiatische Bibliothek*], I. i. 114) calls him 'king of the storm, king of the whirlwind'; *Utu*, 'the sun'; *Ur* or *En-zu*, 'the moon'; and all the planets. As among the Semites, these celestial powers became in one way or another the 'proprietors' of certain cities that were specially devoted to their worship. Thus Erech became 'the residence of Anu' (*KIB* vi. 63) and Der 'the city of Anu' (*KIB* iii. 165); Nippur, the residence of *En-lil*; Sippar and Larsa of *Utu*; and Ur, of *Ur*. Through the growth and the conquests of certain cities their local divinities became great gods whose worship spread throughout all Babylonia. If, subsequently, these centres declined in political importance, their patrons still retained much of their old dignity, though they might be subordinated in the theological systems to the god of the conquering city.

At the earliest period disclosed to us by the Babylonian inscriptions, En-lil, the god of Nippur, had become the most important of all the Sumerian deities. He was the *en*, or 'lord,' *par excellence*, and was worshipped in all parts of Babylonia as well as at his proper residence. He bore the titles 'king of heaven and earth' (*VAB* p. 15), 'king of the lands, father of the gods' (*VAB* p. 37). As chief of the gods, who had his seat upon the

mountain of the north where the gods assembled, he was called 'great mountain.' His tower-temple at Nippur was known as *E-kur*, 'the mountain house.' All this indicates that Nippur must once have been the political as well as the religious centre of Babylonia; but this was in pre-historic times. In the period represented by the earliest inscriptions (*c.* 4000 B.C.), Nippur had lost the political hegemony, although its god still retained his ancient pre-eminence.

Alongside of *En-lil* stood his consort Nin-lil, who shared the high rank of her husband. She was known as 'the lady of the lower world, the mistress of heaven and earth.' One of her common titles was *Nin-ḫar-sag*, 'lady of the great mountain,' with reference to her supremacy on the mountain of the gods. Associated with *En-lil* as the greatest gods of the Sumerian pantheon were *Anu*, 'the sky,' and *En-ki*, 'lord of the sea.' Anu is mentioned in the earliest inscriptions, and, like *En-lil*, had temples in all parts of Babylonia. En-ki, otherwise known as *E-a*, 'house of water,' was the patron-god of Eridu. In pre-historic times this city lay at the head of the Persian Gulf, and must have been politically one of the most important cities of Babylonia. In the inscriptions of Lugalzaggizi (perhaps as early as B.C. 4000) the triad *En-lil*, *Anu*, and *En-ki* is already known (*VAB* i. 155), and it is frequently mentioned in the oldest inscriptions. Thus the visible universe was portioned out between *Anu*, lord of the sky; *En-lil*, lord of the earth; and *En-ki* or *E-a*, lord of the sea. There is reference perhaps to this triad in the words of the second commandment, 'the heavens above, and the earth beneath, and the waters under the earth' (Jastrow, *Die Rel. Bab.* p. 140). A second triad of inferior dignity consisted of Ur, the moon-god of Ur; Utu, the sun-god of Sippar; and Nana, the goddess of Erech. The superior rank of the moon-god in this triad was due to the greater political importance of his city, Ur.

The Semites who entered Babylonia used the word *bêl* (=*ba'al*, cf. Aram. בַּעַל) in all the senses in which it was used by the other Semites, and, in addition, developed the meaning 'master' or 'lord,' which is not found in the other dialects. They spoke of their gods as *bêl*, both with reference to their ownership of physical objects and places, and with reference to their authority over tribes and individuals. The worshipper addressed his god as *bêli*, 'my lord'—a usage that is not found in the other Semitic languages. When they conquered Babylonia, they found the Sumerian gods on the ground, and adopted them as their own, just as Israel adopted the *bᵉ'ālîm* of Canaan. The *en* of a particular object or locality became for them the *bêl*; the *nin*, the *bêlit*. The old Sumerian moon-god *Ur* became *Sin*, the *bêl* of Ur; the sun-god of Sippar, *Shamash*, the *bêl* of Sippar; *Nana* of Erech, *Ishtar*, the *bêlit* of Erech. The names of other Sumerian gods, such as *Ea* and *Ningirsu*, were retained untranslated, and they were known as the *bêls* or *bêlits* of their respective sanctuaries. *En-lil*, as the chief god of Babylonia, was known as Bêl *par excellence* (there is no article in Bab.), and in course of time this appellative drove the old name out of use and became the common designation of the god, so that, when *Bêl* was mentioned without any qualifying word, *En-lil* was understood to be meant. Thus in Babylonia *Bêl* became the name of an individual god in a way that was never true of *Ba'al* among the West Semites. In like manner, *Nin-ḫar-sag*, the consort of *En-lil*, was known as *Bêlit*, 'the lady.' For many centuries after the conquest of Babylonia by the Semites their language was not reduced to writing, and the ancient Sumerian was employed as a sacred tongue for all the inscriptions in the temples. The result is that before the time of Ḫammurabi the name of the god of Nippur is always written *En-lil*, although it is certain that the Semites habitually called him *Bêl*. From the time of Ḫammurabi onward Semitic inscriptions begin to be common, and then the name of the god appears written phonetically *Bêl* or *Bêlu*. The old name *En-lil* continued, however, to be used as an ideogram for *Bêl* down to the latest times. The Sem. kings of all parts of Babylonia have left inscriptions in honour of this god. Eannatum, king of Lagash (*c.* 3000 B.C.), calls him 'the lord of heaven and earth,' and speaks of Sin, the moon-god of Ur, as 'the strong calf of *En-lil*.' When he conquers the people of Gishḫu, it is in the name of *En-lil* (*VAB* i. 14). He speaks of himself as 'endued with strength by *En-lil*, nourished with holy milk by *Nin-ḫar-sag*' (*VAB* i. 19). He owes his position as king to the fact that 'his name has been spoken by *En-lil*' (*VAB* i. 19). Entemena of Lagash undertook restorations of the temple at Nippur, and constructed there a laver for the god (*VAB* i. 34). Gudea also ascribes his appointment as king of Lagash to *En-lil* (*VAB* i. 114), and wages his wars in the name of *En-lil* (*VAB* i. 128, 130). *Ningirsu*, the patron-god of Lagash, is called the son of *En-lil* (*VAB* i. 123). The temple of *En-lil* at Shirpurla, the capital of Lagash, was called *E-adda*, 'house of the father,' which shows the superior position that he held over against the local god. Ur-engur, king of Ur, rebuilt *E-kur*, the temple of *En-lil* at Nippur (*VAB* i. 189). By the dynasty of Ur *En-lil* was honoured to an extraordinary degree (cf. *VAB* 196*b–c*, 198, 200*b–d*). Aradsin of Larsa calls *En-lil* his god, who has given him the throne (*VAB* i. 212). Votive inscriptions in his honour from kings in all parts of Babylonia have been found by the expedition of the University of Pennsylvania at Nippur. His worship spread even as far as Elam (*VAB* i. 181).

The primitive character of *Bêl* of Nippur is difficult to determine, on account of the confusion of this god with Marduk in all the later religious texts. From the oldest inscriptions we gather that he was conceived as a mighty warrior, armed with a net, who marched forth for the destruction of the enemies of his worshippers (*VAB* i. 14, 19, 128, 130). The Creation-epic shows that in its original form he was regarded as the creator of heaven and earth. He determined the fates of men (*VAB* i. 21, 122). Oaths were administered in his name, and he punished those who violated them (*VAB* i. 14). On his temple at Nippur and the remains there found see Peters, *Nippur*; Hilprecht, *Babylonian Expedition of the University of Pennsylvania*, and *Explorations in Bible Lands*.

The high position that *Bêl* of Nippur maintained for centuries he finally lost through the rise of the city of Babylon to political supremacy. Before the time of Ḫammurabi (*c.* 2200 B.C.), Babylon was a relatively obscure place, and its chief god, Marduk, enjoyed only a local celebrity. He is never mentioned in the inscriptions of kings who reigned before the first dynasty of Babylon. He was originally the god of the morning and the spring sun, who had become the *bêl* of Babylon by a process similar to that by which Sin, the moon-god, had become the *bêl* of Ur. When Ḫammurabi expelled the Elamites and united all Babylonia beneath his rule, Babylon became the chief city of the empire, and Marduk, its god, was suddenly exalted to the chief place in the pantheon. He now became Bêl, or 'lord,' *par excellence*; and this title presently became a proper name that was used even more frequently than his real name, Marduk. There were now two *Bêls* in Babylonia —the old *Bêl* of Nippur, who, in spite of the fallen state of his city, was still reverenced through force

of religious conservatism, and the new *Bêl* of Babylon, who had proved himself to be the *de facto* lord through the strength of Ḫammurabi's arms. What was more natural than to attempt to prevent conflict between the two potentates by affirming their identity? This step was taken by the priests of Babylon as early as the reign of Ḫammurabi. All the attributes of the old *Bêl* of Nippur, 'lord of lords,' 'lord of heaven and earth,' 'lord of the lands,' 'creator,' etc., were transferred directly to the new *Bêl* of Babylon. All the ancient hymns and prayers to *Bêl* of Nippur were appropriated to the use of his rival. When Ḫammurabi and his successors of the first dynasty speak of *Bêl*, and use the language of the ancient inscriptions, they mean Marduk. In spite of this attempted syncretism, however, the priests were unable to banish the old *Bêl* entirely even from Babylon. As a member of the supreme triad—*Anu*, *Bêl*, *Ea*—*Bêl* held his own, and was constantly invoked in the inscriptions along with *Bel-Marduk*; but this was more a religious formula inherited from the past than an active belief. For all practical purposes of worship, *Enlil-Bêl* was absorbed by *Marduk-Bêl*. Outside of the city of Babylon the claim of *Marduk* to be the same as the older *Bêl* was not received without opposition, and there are evidences of a long struggle before it became a dogma acknowledged throughout Babylonia. The priests of Nippur naturally never accepted it, and throughout the entire period of the Kassite third dynasty Nippur retained its place as a sanctuary, to which pilgrims flocked from all parts of Babylonia. The Kassite kings had no special fondness for the patron-god of the dynasty of Ḫammurabi, and they bestowed special honour upon the old *Bêl* of Nippur (Hilprecht, *Old Bab. Inscr.* I. i. Nos. 28–32). With the fall of the Kassites and the establishment of a native Babylonian dynasty, *Marduk* regained the place that Ḫammurabi had given him, and *Bêl* of Nippur waned until little remained but the memory of his former glory. Curiously enough, *Bêlit* of Nippur did not share the fate of her husband and become the wife of *Marduk* when he was identified with *Bêl*. *Marduk* had already a consort, *Sarpanitum*, a relatively unimportant goddess, who was in no way comparable with the old *Bêlit* of Nippur. The two were never identified, as logical consistency would have demanded, but *Bêlit* held her own as an independent great goddess.

In the inscriptions of the Assyrian kings, *Bêl* usually means *Marduk*. He occupies the second place in the pantheon (after *Ashur*), and is usually named in connexion with his 'son' *Nabu*, the patron-god of Borsippa. The Assyrian kings showed him the highest reverence; and even when they conquered Babylonia, they claimed to do it in the service of *Bêl*, and took the throne by the formal ceremony of grasping the hands of *Bêl* at Babylon. Along with this there existed also the cult of the older *Bêl* of Nippur. The old triad, *Anu*, *Bêl*, *Ea*, still stands at the head of lists of gods in which *Marduk* appears as a separate deity; and when the Assyrian kings speak of *Bêl*, the lord of the lands, who dwells on the holy mountain, they mean the *Bêl* of Nippur. Tiglath-Pileser I. states expressly that he restored a temple of 'the old *Bêl*' at Ashur (Rawlinson, i. pl. 14, col. vi. 87). This double use of *Bêl* as a proper name lasted through the entire Assyrian period, and, besides this, *bêl* retained its generic meaning as a title of all the gods. The standing formula for the gods in general is *ilâni rabûti bêlêya*, 'the great gods my lords.' *Bêlit* was worshipped in Assyria partly as the ancient goddess of Nippur, partly as the consort of *Anu* or *Ashur*. Her name is also used as a title of the Assyrian *Ishtar*. This confusion is due to the fact that the common noun *bêlit* never lost its appellative meaning of 'mistress.' Many goddesses might be called 'mistress,' and then through this similarity of title be confused with one another. When Ashurbanipal wishes to distinguish the older *Bêlit*, he calls her *Bêlit* of Nippur (Rawlinson, v. 8, col. viii. 98, 99).

In the New Bab. period *Bêl-Marduk* regained the supremacy that in the Assyr. period he temporarily surrendered to Ashur. His cult was revived with great glory by Nabopolassar, Nebuchadrezzar, and Nabonidus, and all the attributes of supreme divinity were heaped upon him. Throughout Babylonia he was acknowledged without question as the *Bêl*, and his cult spread widely in the provinces of the empire. We have found it already at Palmyra (see above, iii. 5). Its presence at Edessa is attested by Jacob of Sarug (*ZDMG* xxix., 1875, p. 131). When *Bêl* is mentioned in the OT and Apoc. it is always *Marduk* that is meant. The old *Bêl* is unknown, except in so far as his character survives in his successor. In Jer 51^{44} he is called '*Bêl* of Babylon.' In Is 46^{1} he is named in connexion with *Nebo*, the god of Borsippa, the suburb of Babylon. In Jer 50^{2} *Merodach* (=*Marduk*) stands in poetic parallelism with *Bêl*. Cf. also *Bel and the Dragon* (=Dn 14 in LXX), Baruch 6^{41} (cf. 6^{12}). *Bêl* also occurs in a few late Heb. proper names.

7. **Among the Greeks and Romans.**—Through Phœn. colonies in all parts of the coast of the Mediterranean, and through Greek colonies in Syria, the worship of the old Sem. *bᵉ'ālîm* was widely disseminated throughout the Græco-Roman world, and exerted a deep influence upon Occidental thought. The local divinity was either called by his original Sem. name, *e.g.* **Balanios** at Heliopolis, **Balsamem** at Tyre, Palmyra, and the Phœnician colonies, **Balmarcodes** at Deir el-Qal'a, **Beelmaris** at Tyre, **Balcaranensis** at Carthage, **Baladdiris** at Sigus, **Aglibolos** and **Iaribolos** at Palmyra; or else his name was translated into its supposed Gr. or Lat. equivalent. The local *ba'al* was everywhere regarded as the supreme god, hence he was frequently identified with Zeus or Juppiter, the name of his city being appended to distinguish him from other similar divinities, *e.g.* **Zeus Kasios**, **Zeus Damascenos**, **Zeus Karmelos**, **Zeus Atabyrios**, **Zeus Tarsios**, **Juppiter Heliopolitanus** (see above under the corresponding Semitic names). Other *ba'als* had peculiarities which led to their identification with *Kronos-Saturn*. *Balcaranensis* of Carthage, for instance, is regularly called *Saturnus* in the inscriptions (cf. Alex. Polyh., frag. 3 in *FHG* iii. 212; Servius, *Aen.* i. 642, 729; Damascius, *Vit. Isid.* § 115; Joh. Chrys. on Ps. 105, § 3; Theodoret on Ps 105^{28} in *PG* liii. 1730). The *ba'al* of Heliopolis, who was the sun, was, of course, identified with *Helios* and *Sol*. *Malak-Bel* at Palmyra is in the Latin parallel called 'Sol sanctissimus' (cf. Servius, *Aen.* i. 642, 729; Nonn. *Dionys.* xl. 392 ff.; Macrobius, *Saturn.* i. 23). Hesychius (*s.v.* Βῆλος), the *Etym. Mag.* (*s.v.* Βῆλ), and Parmenius (in Becker, *Anecd.* 225), connect *ba'al* with *Ouranos*. *Ba'al-Melḳart* of Tyre is almost uniformly identified by classical writers with *Herakles* (cf. Baethgen, *Beiträge*, 20 f.). Late writers assert that in Persian *Ba'al* is the same as *Ares* (Malalas, p. 19; John of Antioch, frag. 5, in *FHG* iv. 542; *Chron. Pasch.* i. 18). This variety in the identification bears witness to the multiplicity of the *bᵉ'ālîm* with which Greeks and Romans came into contact (see Scholz, *Götzendienst*, p. 148 ff.; Baethgen, *Beiträge*, p. 19 ff.).

The Bab. *Bêl* is also known to the classical writers. In Servius (*Aen.* i. 612) a dim memory survives of a distinction between the older and the younger *Bêl*, but in general only *Marduk-Bêl* is known, and all the attributes of *Enlil-Bêl* are

ascribed to him, as in the later Bab. theology. Eudemos (in Damascius, *de Princip.* 125) knows that he is the son of *Aos* (*Ea*) and *Dauke* (*Damkina*). Berossus (in *FHG* ii. 497, 4 ff.) and Castor (in Euseb. *Chron.*, ed. Schoene, p. 53) narrate, in direct dependence upon the Bab. Creation-story, how *Bêl* slew the dragon of the deep, and out of her body created heaven and earth. Of him Arrian (*Anab.* iii. 16. 4) says that the Babylonians honour him most of all the gods (cf. Minucius Felix, vi. 1). The building of his temple at Babylon is ascribed to Semiramis (Diod. ii. 9; Dionysius Periegetes, 1007). Berossus (in Euseb. *Chron.* ed. Schoene, p. 48) and Josephus (*Ant.* x. xi. 1) tell how it was beautified by Nebuchadrezzar; Arrian (*Anab.* iii. 16. 4), how it was destroyed by Xerxes and rebuilt by Alexander. It is often mentioned by the classical writers (Herod. i. 181; Paus. i. 16. 3, viii. 33. 3; Pliny, vi. 121; Mart. Capell. vi. 701; Solin. lx. 3). A grave of *Bêl* at Babylon was known to Ctesias (frag. 29, 216; cf. Aelian, xii. 3; Strabo, xvi. 738; Diod. xvii. 102). The cult of the Bab. *Bêl* was never directly adopted by the Greeks or the Romans, as were the cults of the Phœn. and Syr. *bᵉ'ālîm*; but indirectly many elements of Bab. theological speculation concerning his character and his creation of the world drifted into the Occident, and re-appear in the worship of Mithra (see MITHRA). Through the Bab. use of *Bêl* as a proper name, and through the exalted Bab. conception of his character as creator and supreme god, the Greeks were led to the idea that there was a single god *Bêl*, of whom the numerous Syr. and Phœn. *bᵉ'ālîm* were only the local manifestations. Strabo speaks of *Bêlos* as a great god, worshipped throughout Africa and in Asia as far as Persia (xvi. 744; cf. *Excerpta Barbari* in Frick, *Chron. Min.* 281, 27; Curtius, iii. 3, 16). The form *Bêlos* as a proper name without additional determinative is evidently derived from the Bab. *Bêl* rather than from the Phœn. *ba'al*, and shows that the idea of a single god *Ba'al* is ultimately of Babylonian origin. On the Bab. *Bêl* in Greek writers see Scholz, *Götzendienst* (p. 365 ff.).

LEWIS BAYLES PATON.

BAALZEBUB and BEELZEBOUL.—These two names probably refer to the same supernatural being; or, at any rate, the second of them is derived from the first. Baalzebub (בעל זבוב) is the OT form (2 K 1[2. 3. 6. 16]), and Beelzeboul * (*βεελζεβούλ*, WH *βεεζεβούλ*) the NT form (Mt 10[25] 12[24. 27], Mk 3[22], Lk 11[15. 18. 19]).

Baalzebub is in the OT represented as the god of the Philistine city of Ekron, whose oracle was so famous that Ahaziah, king of Israel, sent to consult it, to the neglect of the oracles of Jahweh. The Hebrew word בעל זבוב would mean 'lord of flies'; זבוב = Assyrian *zumbu*, 'a fly' (cf. Ec 10[1]). The LXX and Josephus so understood it, since they make the name of the god *βάαλ μυῖαν* (cf. LXX, *ad loc.*, and Jos. *Ant.* IX. ii. 1). Aquila supports the same reading by transliterating *βααλζεβούβ*, while Symmachus supports the NT form *βεελζεβούλ*. Bezold found, in an inscription of the Assyrian king Assur-bel-Kala (11th cent.), mention made among the gods of *Ebir-nari* (a name applied in Neh 2[7. 9] to Syria and Palestine) of a god Bel-ze-bubi (or-na). Were the last syllable certain, it would show that *Baalzebub* was found there earlier (see *Catalogue*, K. 3500, and Hommel, *AHT* 195). Movers (*Die Phönizier*, i. 260 ff.) held that the original name was זבול = בעל 'lord of the mansion,' which originally meant a heavenly mansion, but afterwards the god of the nether world. This view is of very doubtful certainty, since זְבֻל in the sense of 'house' (1 K 8[13] and Ps 49[14]) is very uncertain (cf. LXX). In Is 63[15] and Hab 3[11] it is used of a station or abode in the heavens, while in the Talmud (*Chagiga*, 12*b*) זבול is the fourth heaven, in which are the heavenly Jerusalem and the altar. This would hardly be possible, if in Jewish thought the word had ever represented a region the lord of which was the prince of demons. Halévy (*JA* xix. [1892] p. 304 and *CAIBL* xx. [1892] p. 74) thinks Zebub the name of a place, comparing the *Ṣapuna* of the el-Amarna letters (*KB* v. 174. 16)—a theory which Kittel ('Könige,' in Nowack's *Handkommentar, ad loc.*) rightly rejects. The resemblance between Zebub and Ṣapuna is too slight, and the Biblical text states that the deity in question was the god of Ekron. In all probability Baalzebub means 'lord of flies,' which are very numerous in the neighbourhood of Ekron (see Barton, *A Year's Wandering in Bible Lands*, 1904, p. 216 ff.). This title was given as an epithet to the god, whether by the Ekronites or the Hebrews we do not know, though Baethgen (*Beit. z. sem. Religionsgesch.* 1888, p. 25) holds that he represented a process of divination by flies. In the NT, as already noted, the name is *βεελζεβούλ* and is applied to the lord of the devils, and made a synonym of Satan (cf. Mk 3[22. 23], Lk 11[15. 18]). Cf. above, p. 287[a].

These facts have given rise to various conjectures. (1) The theory of Movers already referred to, that the name was בעל זבול, is thought by some to receive confirmation from the fact that in Mt 10[25] *οἰκοδεσπότης* (='master of the house' †) may be considered a translation of it. There is no real reason, however, to consider one of these words a translation of the other. If זבול (='house') was an original element of the name, a punning Jew would easily have זיבול (=Syr. זִבְלָא='dung') suggested to him, and might so understand the

* Beelzebub of AV has no authority in Greek MSS. It owes its currency to the Vulgate.

† Cheyne (*EBi*, col. 514) holds that *οἰκοδεσπότης* suggests the reading בעל זביר, ו= Aram. 'of,' and זביר changed from בית='house.'

name (so Gould, 'Mark,' in *Inter. Crit. Com.* p. 62). (2) It is supposed that the name is a variation of *Baalzebub*, and that both the form and the significance have undergone change. As to the form, it is supposed (*a*) that the final *b* was changed to *l* by conscious perversion, so as to make it mean 'dung,' as *ba'al* (='lord') is sometimes changed to *bôsheth* ('shame') (cf. *Esh-baal*, 1 Ch 9^{39}, with *Ish-bosheth*, 2 S 2^{10}); this perversion transformed 'fly' to 'dung,' or 'filth.' (*b*) Baudissin (*PRE*^{3}) holds that *b* was changed to *l* in popular pronunciation, without intent to change the meaning, as *Bab-el-Mandeb* is sometimes changed to Bab-el-Mandel; and (*c*) Riehm (*HWB*^{2}) held that in the time of Christ *Baal-zebub* was Aramaized to בעל דבבא (='lord of enmity'), and so was the exact equivalent of Διάβολος, or Satan.

As to the significance of Beel-zeboul in the NT period different theories have been proposed to account for his evolution from the OT god. Geiger (*Urschrift*, p. 53) thought that the god of the hated Philistines became the representative of heathen power, and so the arch-enemy of Israel. He found confirmation of his view in the fact that, in Aramaic, זבוב would be phonetically transformed into דבב ('hostility'). This theory, though plausible, lacks historical confirmation. The Philistines were not a formidable enemy after the early days of the kingdom. Syrians, Assyrians, Babylonians, Persians, Greeks, and Romans took successively the place of principal enemy, and it is hardly probable that the god of Ekron, who is mentioned in but one narrative of the OT, could have continued to hold this place. Had he done so, he could not have escaped mention.

Another view is expressed in the Talmud, which regards the fly as the representative of evil. In *B^{e}rākhōth*, 61*a*, it is said: 'The evil spirit lies like a fly at the door of the human heart.' Again, in *B^{e}rākhōth*, 10*b*, it is said that the Shunammite woman (2 K 4^8 ff.) perceived that Elisha was a man of God, because no fly crossed his table. This estimate of the fly goes back to the *Mishna*, for in *Aboth*, 5^8, we read: 'A fly, being an impure thing, was never seen in the slaughter-house of the temple.' In reality the revival of interest in Baal-zebub in the NT was due to literary causes. Cheyne has pointed out that Lk 9^{54} shows that in the time of Christ the narrative of 2 K 1 possessed a strange fascination for people. Probably both the hostility to Baal-zebub expressed in that narrative and the perversion of his name into the Aramaic בעל דבבא (='lord of hostility') helped this literary interest to make Beel-zebub a synonym of Satan. As the name meant 'lord of flies,' this would be sufficient to call into existence the Talmudic conception that the fly is a kind of imp, especially as Lv 11 and Dt 14 imply that it was to be reckoned among unclean flying things.

The change of *zebub* to *zebul* in the NT was, no doubt, due to conscious perversion. In addition to the analogy of *bôsheth*, cited above, the Talmud (*'Abōdā zārā*, 18*b*, cf. Dalman, *Aram. Gram.* p. 137) shows that זבח as applied to the sacrifices of the heathen was changed to זבל ('dung').

GEORGE A. BARTON.

BĀB, BĀBIS.—*Bāb* (باب='Gate' in Arabic) was the title first assumed by Mīrzā 'Alī Muḥammad, a young Sayyid of Shīrāz, who in A.H. 1260 (=A.D. 1844) began to preach a new religion, which spread through Persia with extraordinary rapidity, and, in spite of violent persecutions, culminating in the execution of the founder on July 9, 1850, and of some twenty-eight of his principal disciples on September 15, 1852, has continued to gain strength until the present day. Both the history and the doctrines of this religion present so many remarkable features, that the subject has, almost from the first, attracted a great deal of attention, not only in the East but in Europe, and latterly in America; and the literature dealing with it, even in European languages, is very extensive; while the Arabic and Persian writings, manuscript, lithographed and printed, connected with it are so numerous and, in some cases, so voluminous, that it would hardly be possible for the most industrious student to read in their entirety even those which are accessible in half a dozen of the best-known collections in Europe. An exhaustive treatment of the subject is therefore impossible, and we must content ourselves with a sketch of the most important outlines of the history, doctrines, and literature of the religion in question.

1. **Antecedents.**—In order to understand properly the origins and developments of Bābī doctrine, it is, of course, essential to have a fair knowledge of Islām, and especially of that form of Islām (the doctrine of the *Ithnā 'ashariyya* division of the Shī'a, or 'Sect of the Twelve' Imāms), of which Persia has from the earliest Muhammadan times been the stronghold, and which, since the 16th cent. of our era, has been the State religion of that kingdom. Information on this subject must be sought elsewhere in this Encyclopædia under the appropriate headings; but, even for the most elementary comprehension of the early Bābī doctrine, it is essential to grasp the Shī'ite doctrine of the Imāmate, and especially the Messianic teaching concerning the Twelfth Imām, or Imām Mahdī.

According to the Shī'ite view, the prophet Muḥammad appointed to succeed him, as the spiritual head of Islām, his cousin 'Alī ibn Abī Ṭālib, who, being married to Fāṭima, was also his son-in-law. 'Alī's rights were, however, usurped in turn by Abū Bakr, 'Umar, and 'Uthmān; and though he was elected Khalīfa after 'Uthmān's death, he was assassinated after a brief and troubled reign of five years (A.D. 656–661). His eldest son, al-Ḥasan, the second Imām, abdicated five or six months after his father's death in favour of the Umayyad Mu'āwiya. His younger son, al-Ḥusayn, the third Imām, attempted to regain his temporal rights by a rash revolt against the Umayyads, but perished on the fatal field of Karbalā (Kerbelā) on Muḥarram 10, A.H. 61 (Oct. 10, A.D. 680), a day still celebrated with wailing and mourning in all Shī'ite communities, especially in Persia. The nine remaining Imāms all lived in more or less dread of the Umayyad, and afterwards of the 'Abbāsid khalīfas, and many of them died by poison or other violent means. They were all descended from al-Ḥusayn, and, according to the popular belief, from a daughter of Yazdigird III., the last Sāsānian king, who was taken captive by the Arabs after the battle of Qādisiyya, and given in marriage to al-Ḥusayn. This belief, which was prevalent at least as early as the 3rd cent. of the Hijra, since it is mentioned by the historian al-Ya'qūbī (ed. Houtsma, ii. 293, 363), undoubtedly explains, as remarked by Gobineau,* the affection in which the Imāms are held in Persia, since they are regarded as the direct descendants not only of the prophet Muḥammad, but also of the old royal house of Sāsān. The Divine Right of the Imāms to the temporal supremacy of which they had been unjustly deprived, and the absolute dependence

* *Rel. et Philos. dans l'Asie Centrale* (ed. 1866), p. 275.

of the faithful on the spiritual guidance of the 'Imām of the Age,' thus became the two most characteristic and essential dogmas of all the various Shī'ite sects. 'Whosoever dies,' says a well-known Shī'ite tradition, 'without recognizing the Imām of his time, dies the death of a pagan.'

Now, according to the 'Sect of the Twelve,' the Twelfth Imām, or Imām Mahdī, was the last of the series. But since, according to their belief, the world cannot do without an Imām, and since this last Imām, who succeeded his father in A.H. 260 (=A.D. 873–4), disappeared from mortal ken in A.H. 329 (=A.D. 940–1), it is held that he never died, but is still living in the mysterious city of Jābulqā, or Jābulsā, surrounded by a band of faithful disciples, and that at the end of time he will issue forth and 'fill the earth with justice after it has been filled with iniquity.' This Messianic Advent is ever present in the mind of the Persian Shī'ite, who, when he has occasion to mention the Twelfth Imām, or Imām Mahdī (also entitled *Ḥujjatu'llāh*, 'the Proof of God,' *Baqiyyatu'llāh*, 'the Remnant of God,' *Ṣāḥibu'z-Zamān*, 'the Lord of the Age,' and *Qā'imu Āli Muḥammad*, 'He who shall arise out of the house of Muḥammad'), always adds the formula عجّل الله فرجه ('May God hasten his glad Advent!').

Now, in connexion with Bābī doctrine, it is to be noticed first of all that the 'Manifestation' (ظهور) of Mīrzā 'Alī Muḥammad the Bāb took place, as already said, in A.H. 1260, exactly a thousand years after the succession of the Imām Mahdī to the Imāmate, or, in other words, at the completion of a millennium of 'Occultation' (غیبت). For the Imām Mahdī, according to the Shī'ite belief, appeared in public once only, on his accession, when he performed the funeral service over his father, after which he became invisible to the bulk of his followers. During the first 69 years of the millennium of 'Occultation,' however, his instructions and directions were communicated to his followers, the Shī'a, through four successive intermediaries, each of whom bore the title of *Bāb*, or 'Gate.'* This period is known as 'the Minor Occultation' (غیبت صغری). In A.H. 329, however, this series of 'Gates,' or channels of communication between the Imām and his followers, came to an end, and such communication became impossible. This later and longer period (which, according to the Bābī view, lasted from A.H. 329 to A.H. 1260) is known as 'the Major Occultation' (غیبت کبری).

It was in this sense, then, that Mīrzā 'Alī Muḥammad, at the beginning of his career, declared himself to be the *Bāb*, or 'Gate,' viz., the gate whereby communication, closed since the end of the 'Minor Occultation,' was re-opened between the Hidden Imām and his faithful followers. He did not invent this term, nor was he even the first to revive it, for it was used in the same sense by ash-Shalmaghānī, a Messiah of the 10th cent. of our era, and by others.† So far as recent times are concerned, however, it was the Shaykhī school, founded by Shaykh Aḥmad al-Aḥsā'ī (b. A.D. 1733, d. A.D. 1826) which revived the idea that amongst the faithful followers of the Twelfth Imām there must always exist one, whom they entitled *Shī'a-i-Kāmil* (شیعهٔ کامل), 'the Perfect Shī'ite,' who was in direct spiritual communication with him. Neither Shaykh Aḥmad nor his successor Sayyid Kāẓim of Rasht (d. A.D. 1843–1844) made use of the title 'Bāb,' but their conception of 'the Perfect Shī'ite' was practically identical with the idea connoted by that title. To this Shaykhī school, or sect, belonged not only Mīrzā 'Alī Muḥammad himself, but Mullā Ḥusayn of Bushrawayh, Qurratu'l-'Ayn, and many others of his first and most zealous disciples. On the death of Sayyid Kāẓim his followers were naturally impelled by their doctrine concerning 'the Perfect Shī'ite' to seek his successor. There were two claimants, Mīrzā 'Alī Muḥammad, who on May 23, 1844,* within a short time of Sayyid Kāẓim's death, announced himself to be the 'Bāb,' and whose followers were consequently called 'Bābīs'; and Ḥājjī Muḥammad Karīm Khān, a scion of the Qājār Royal Family, who was recognized, and whose descendants are still recognized, by the conservative or stationary Shaykhīs as their spiritual head. It is in the teachings of the Shaykhī school, therefore, that the immediate origins of early Bābī doctrine must be sought; but no European scholar has yet made a critical study of the works and doctrines of Shaykh Aḥmad and Sayyid Kāẓim. Those who desire somewhat fuller information on this subject may be referred to the *Traveller's Narrative*, ii. 234–244. A full and critical study of the Shaykhī doctrines would, however, form an indispensable preliminary to such a philosophical history of the Bābīs as must some day be written.

2. **History of the movement during the life of the founder.** — The first period of Bābī history begins with the 'Manifestation' on May 23, 1844, and ends with the martyrdom of the Bāb at Tabrīz on July 9, 1850. The detailed history of these six years will be found in the translations of the *Traveller's Narrative* (Camb. 1891) and the *New History of . . . the Báb* (Camb. 1893), while a fairly complete bibliography of earlier works on the subject, both European and Oriental, is given in the former work (ii. 173–211). In the *JRAS* for 1889 (vol. xxi. new ser. pp. 485–526 and 881–1009) are also discussed critically various matters connected with both the history and the doctrines of the sect. Of the three chief histories composed in Persian by members of the sect, the earliest and most instructive is that written between 1850 and 1852 by Ḥājjī Mīrzā Jānī of Kāshān, who must have finished it only a little while before he was put to death among the twenty-eight Bābīs who suffered martyrdom at Ṭihrān (Teheran) on September 15, 1852. Of this work the only complete manuscript, so far as the present writer can ascertain, which existed (until he caused it to be transcribed for himself) was *Suppl. Pers.* 1071 in the Bibliothèque Nationale at Paris, one of the MSS brought from Persia by M. le Comte de Gobineau, the talented author of *Les Religions et les philosophies dans l'Asie Centrale*. Another MS in the same collection (*Suppl. Pers.* 1070) contains the first third of it, while the *New History* (تاریخ جدید) is a recension made (about A.D. 1875–1880) by Mīrzā Ḥusayn of Hamadān, containing many additions, but also remarkable for some extremely important omissions and alterations. There is thus sufficient material for an edition of this most important document, which the present writer is now (1908) printing. The *Traveller's Narrative*, the third of the three principal systematic accounts compiled by the

* For their names, and a fuller account of the whole matter, see the present writer's tr. of the *Traveller's Narrative*, ii. 296 ff.

† For a full discussion of this matter, see the note on the meaning of the title 'Báb' in the tr. of the *Traveller's Narrative*, ii. 226–234.

* This date, and even the exact hour of his 'Manifestation,' is given by the Báb in two passages of the Persian *Bayán* (Wáḥid ii. 7, and vi. 13). See *Trav. Narr.* ii. 218–226.

Bábís of their history, is not only later, but deals less with the early history of the movement than with the biography and writings of Bahá'u'lláh, to whose son 'Abbás Efendi (also called 'Abdu'l-Bahá) its authorship is ascribed. The accounts of Bábí history given by Muḥammadan writers (notably by the Lisánu'l-Mulk in the *Násikhu't-Tawárikh* and by Riżá-qulí-Khán in his supplement to the *Rawżatu'ṣ-Ṣafá*) must, as a rule, be used with great caution, but exception must be made in favour of the late Sayyid Jamálu'd-Dín al-Afghání's article on the Bábís in Buṭrusu'l-Bustání's Arabic encyclopædia the *Dá'iratu'l-Ma'árif* (Beirut, 1881), and of a more recent history compiled in Arabic by a Persian doctor named Za'ímu'd-Dawla, and published at Cairo in A.H. 1321 (A.D. 1903–4),* from both of which, in spite of the prejudice against the Bábís which they display, important facts may be gleaned.

A very brief summary of the events of this first period (A.D. 1844–1850) is all that can be given here. The Báb himself, who was only twenty-four years old at the time of his 'Manifestation,'† and not thirty when he suffered martyrdom, was a captive in the hands of his enemies during the greater portion of his brief career, first at Shíráz (August–September 1845—March 1846), then at Iṣfahán (March 1846—March 1847), then at Mákú near Urumiyya, and, for the last six months of his life, at the neighbouring castle of Chihríq. He enjoyed the greatest freedom at Iṣfahán, where the governor, Minúchihr Khán, a Georgian eunuch, treated him with consideration and even favour; but he was able to continue his writings and to correspond with, and even receive, his followers during the greater part of his captivity, save, perhaps, the last portion. He himself, however, took no part in the bloody battles which presently broke out between his followers and their Muslim antagonists. Of these armed risings of the Bábís the chief were in Mázandarán, at Shaykh Ṭabarsí near Bárfurúsh, under the leadership of Mullá Ḥusayn of Bushrawayh and Ḥájjí Mullá Muḥammad 'Alí of Bárfurúsh (autumn of 1848 to summer of 1849); at Zanján, under Mullá Muḥammad 'Alí Zanjání (May–December 1850); and at Yazd and Níríz, under Ághá Sayyid Yaḥyá (summer of 1850), while a second rising at Níríz seems to have occurred in 1852.‡ Amongst other events of this period to which the Bábís attach special importance, and of which they have preserved detailed accounts, is the martyrdom of 'the Seven Martyrs' at Ṭihrán, which also took place in the summer of 1850.§ During the later period of his career Mírzá 'Alí Muḥammad discarded the title of 'Báb' (which he conferred on one of his disciples) and announced that he was the *Qá'im*, or expected Imám, and even more than this, the *Nuqṭa* (نقطة), or 'Point.' It is by this title (*Ḥaẓrat-i-Nuqṭa-i-Úlá*, 'His Holiness the First Point'), or by that of *Ḥaẓrat-i-Rabbiyu'l-A'lá*, 'His Holiness my Lord Most High,' that he is generally spoken of by his followers, though latterly the Bahá'ís, desiring to represent him as a mere forerunner of Bahá'u'lláh—a sort of John the Baptist—seem to have abandoned the use of these later and higher titles. But from the Báb's own later writings, such as the Persian *Bayán*, as well as from what is said by Mírzá Jání and other contemporary writers, it is clear that he was regarded as a divine being, and that in a very full sense, as will be shown when the doctrines of the Bábís are discussed, when the term 'Point' (*Nuqṭa*) will also be explained. The circumstances attending the execution of the Báb at Tabríz on July 9, 1850, and especially his strange escape from the first volley fired at him,* are fully recorded in the histories already mentioned, and need not be recapitulated here. His body, after being exposed for several days, was recovered by his disciples, together with that of his fellow-martyr Mírzá Muḥammad 'Alí of Tabríz, wrapped in white silk, placed in a coffin, and concealed for some seventeen years in a little shrine called Imám-záda-i-Ma'ṣúm between Ṭihrán and Ribáṭ-Karím. At a later date it was transferred to 'Akká (St. Jean d'Acre) by order of Bahá'u'lláh, where it was placed in a shrine specially built for that purpose.†

3. Period of Ṣubḥ-i-Ezel's supremacy (A.D. 1850–1868).—Before his death the Báb had nominated as his successor a lad named Mírzá Yaḥyá, son of Mírzá Buzurg of Núr, and half-brother of the afterwards more famous Mírzá Ḥusayn 'Alí, better known as Bahá'u'lláh. Mírzá Yaḥyá was, according to Mírzá Jání, only 14 years old at the time of the Báb's 'Manifestation,' so that he must have been born about A.H. 1246 (=A.D. 1830–1831). His mother died when he was a child, and he was brought up by his step-mother, the mother of his elder half-brother Bahá'u'lláh, who was about 13 years his senior.‡ Mírzá Jání, our oldest, best, and most unprejudiced authority (since he was killed in 1852, long before the schism between the Ezelís and Bahá'ís took place) reports Bahá'u'lláh as saying that he did not then know how high a position Mírzá Yaḥyá was destined to occupy. At the early age of 15, about a year after the 'Manifestation,' he was so attracted by what he heard of the Báb and read of his writings, that he set off for Khurásán and Mázandarán, met Janáb-i-Quddús (*i.e.* Mullá Muḥammad 'Alí of Bárfurúsh) and Qurratu'l-'Ayn, and, with Bahá-'u'lláh, attempted to join the Bábís who were besieged at Shaykh Ṭabarsí, but was prevented by the governor of Amul. In the fifth year of the 'Manifestation' (A.H. 1265=A.D. 1849), shortly after the fall of Shaykh Ṭabarsí, the Báb, having heard of Mírzá Yaḥyá's youth, zeal, and devotion, declared that in him was fulfilled the sign of the Fifth Year given in the tradition of Kumayl, 'A Light shining from the Dawn of Eternity,' conferred on him the title *Ṣubḥ-i-Ezel* ('the Dawn of Eternity'), sent him his own rings and other personal possessions, authorized him, at such time as he should see fit, to add 8 *wáḥids* (or 'Unities' of 19 chapters each) to the *Bayán*, and appointed him his successor. On the Báb's death, therefore, Ṣubḥ-i-Ezel, as we shall now continue to call him, was recognized with practical unanimity by the Bábís as their spiritual head; but, owing to his youth and the secluded life which he adopted, the practical conduct of the affairs of the Bábí community devolved chiefly on his elder half-brother Bahá'u'lláh, or Janáb-i-Bahá, as he is called by Mírzá Jání. There seem to have been some rival claimants, notably Mírzá Asadu'lláh of Tabríz, entitled 'Dayyán,' who was, according to Gobineau (p. 277 f.), drowned in the Shaṭṭu'l-'Arab by some of the Bábís who wished to put an end to his pretensions; and, according to Mírzá Jání, certain other persons, such as 'the Indian believer' Sayyid Baṣír, Ághá Muḥammad Karáwí, and a young confectioner entitled 'Dhabíḥ' (ذبيح)

* This work is entitled *Miftáḥu Báb'il-Abwáb* ('the Key of the Gate of Gates').

† The most reliable evidence points to October 9, 1820, as the date of his birth. Mírzá Ḥusayn 'Alí, afterwards known as *Bahá'u'lláh* was a year or two older (see *Trav. Narr.* ii. 218 ff.).

‡ See *Trav. Narr.* ii. 253–261. § *Ib.* ii. 211–218.

* See, however, the *New History*, p. 301, n. 1 *ad calc.*, which contains a correction of a detail given by Gobineau.

† See the *Traveller's Narrative*, ii. 46, and n. 1 *ad calc.*

‡ The date of Bahá'u'lláh's birth is given in Nabíl's rhymed chronicle as 2 Muḥarram, A.H. 1233 (=November 12, 1817). See *JRAS*, 1889, p. 521.

(قنّاد), claimed to be theophanies or Divine Manifestations.* Mírzá Jání actually exulted in this state of things, declaring that just as the tree which bears most fruit is the most perfect, so the religion which produces most divine or *quasi*-Divine Manifestations thereby shows its superiority to other creeds. But none of these persons appears to have had any considerable following, and for some time Ṣubḥ-i-Ezel enjoyed, nominally at least, an uncontested supremacy.

For two years (July 1850–August 1852) little was heard of the Bábís; but on August 15, 1852, three or four adherents of the sect made an attempt on the life of Náṣiru'd-Dín Sháh as he was leaving his palace at Niyávarán to go out hunting. The attempt, which appears to have had no countenance from the leaders of the Bábís, failed, but led to the fierce persecution of the sect, of whom some twenty-eight prominent members, including the beautiful poetess Qurratu'l-'Ayn, Mullá Shaykh 'Alí, called 'Janáb-i-Aʿẓím,' Ághá Sayyid Ḥusayn of Yazd the Báb's secretary Sulaymán Khán, and our historian Ḥájji Mírzá Jání, were among the most conspicuous victims. The object being to make all classes participators in their blood, the doomed Bábís were divided among the different classes and gilds, beginning with the *'ulamá*, the princes of the Royal House, and the different Government offices, and ending with the royal pages and students of the *Dáru'l-Funún*, one victim being assigned to each, and a rivalry in cruelty was thus produced which made that day, Wednesday, September 15, 1852, equally memorable and horrible to all who witnessed it. The fortitude of the Bábí martyrs, and especially the death-ecstasy of Sulaymán Khán, produced a profound impression, and, as Gobineau says, probably did more to win converts to the new faith than all the previous propaganda.†

Bahá'u'lláh and Ṣubḥ-i-Ezel both escaped death on this occasion, though the former was arrested,‡ and a price was set on the apprehension of the latter.§ Both ultimately escaped to Baghdad, where they arrived about the end of 1852, Bahá'u'lláh, who was imprisoned in Ṭihrán for four months, arriving soon after his half-brother.‖ For the next eleven or twelve years (1853–1864) Baghdad was the headquarters of the sect, of which Ṣubḥ-i-Ezel continued to be the ostensible head, and is even implicitly acknowledged as such by Bahá'u'lláh in the *Íqán*, composed by him in 1861–1862. In the *Traveller's Narrative* (ii. 54 ff., especially pp. 55 and 62–63 of the translation), which contains the official Bahá'í version of these transactions, it is implied that the nomination of Ṣubḥ-i-Ezel was a mere blind, that Bahá'u'lláh was from the first intended, and that his 'Manifestation' took place in A.H. 1269 (=A.D. 1853), which the Bábís call the year of 'after a while' (سنة بعد حين, for حين, 'while,' = 8 + 10 + 50 = 68, and the year 'after' is '69). Ostensibly, however, his claim to be 'He whom God shall manifest' dates from A.H. 1283 (A.D. 1866–1867), the end of the Adrianople period, which agrees with Nabíl's statement ¶ that he was fifty years old when he thus manifested his true nature, for he was born in A.H. 1233 (=A.D. 1817).

* Another such claimant, according to Ṣubḥ-i-Ezel, was Ḥusayn of Mílán, who perished in the persecution of 1852 (see the *Traveller's Narrative*, ii. 330 f.), while two other claimants, Sayyid Ḥusayn of Hindiyán and Shaykh Ismá'íl, are mentioned (see also p. 357 f. of the same, where other pretenders are named).

† For further details see the *Traveller's Narrative*, ii. 323–334.

‡ *Ib.* pp. 51–53 and 327. § *Ib.* p. 374 f.

‖ See *JRAS*, 1889, pp. 945–948.

¶ *JRAS*, 1889, pp. 984 and 988, verse 10.

The records of the Baghdad period are comparatively scanty, but the propaganda went steadily on, though conducted with a caution and prudence foreign to the early days of the sect. About a year after his arrival at Baghdad, Bahá'u'lláh retired alone for two years into the highlands of Turkish Kurdistán, living chiefly at a place called Sarkalú, and occasionally visiting Sulaymániyya.* By the Bahá'ís this retirement is regarded as a kind of preparation and purification; by the Ezelís, as due to annoyance at the opposition which he encountered in his plans from several prominent Bábís of the old school. Ṣubḥ-i-Ezel, a man of modest and retiring disposition, seems to have lived in great seclusion both before and after this event, and the disputes which appear to have occurred at this period seem to have been chiefly between Bahá'u'lláh and his adherents on the one hand, and Mullá Muḥammad Ja'far of Niráq, Mullá Rajab 'Alí *Qahír*, Sayyid Muḥammad of Isfahán, Sayyid Jawád of Kerbelá and the like on the other. Ultimately, owing to the hostility of the Persian Consul at Baghdad, Mírzá Buzurg Khán of Qazwín, and Mírzá Ḥusayn Khán *Mushíru'd-Dawla*, the Persian Ambassador at Constantinople, the Turkish government was induced to expel the Bábís from Baghdad, where their proximity to the Persian frontier, and to the Shí'ite shrines of Kerbelá and Najaf, afforded them great opportunities of proselytizing among their countrymen. This took place in the spring or early summer of 1864. They were first taken to Constantinople, where they remained for four months, and thence banished to Adrianople, where they arrived about the end of the year above mentioned. There they remained for nearly four years (Dec. 1864–August 1868), and there it was that in A.H. 1283 (A.D. 1866–67) Bahá'u'lláh publicly announced that he was 'He whom God shall manifest,' foretold by the Báb, and called on all the Bábís to recognize him as such, and to pay their allegiance to him, not merely as the Báb's successor, but as him of whose Advent the Báb was a mere herald and forerunner.

This announcement, which naturally convulsed the whole Bábí community, was gradually accepted by the majority, but was strenuously opposed not only by Ṣubḥ-i-Ezel but by a considerable number of prominent Bábís, including more than one of the original 18 disciples of the Báb known as the 'Letters of the Living' (حروف حي). The strife waxed fierce; several persons were killed;† charges of attempted poisoning were hurled backwards and forwards between the two half-brothers;‡ and at length the Turkish government again intervened and divided the two rival factions, sending Ṣubḥ-i-Ezel with his family to Famagusta in Cyprus, and Bahá'u'lláh with his family and a number of his followers to 'Akká in Syria, which places they respectively reached about the end of August 1868. To check their activities, however, and provide the government with the services of a band of unpaid informers, they caused four Bahá'ís with their families and dependents to accompany Ṣubḥ-i-Ezel, and four of the Ezelís to accompany Bahá'u'lláh. All of the latter were killed, one before they left Adrianople, and the other three soon after their arrival at 'Akká. Of the Bahá'ís at Famagusta, one died in 1871 and one in 1872, while the third escaped to Syria in 1870. The fourth, Mushkín Qalam, a celebrated calligraphist, remained in Cyprus for some time after the British occupation, but finally left on

* *Traveller's Narr.* ii. 64 f., 356 f. Nabíl says that he was 38 years of age when he withdrew, and 40 when he returned.

† See *Traveller's Narrative*, ii. 362–364.

‡ *Ib.* pp. 359 f. and 365–369.

Sept. 14, 1886, for 'Akkā, where the present writer met him in April 1890. The Famagusta exiles numbered in all thirty persons, of whom full particulars are preserved, in consequence of the allowances to which they are entitled, in the State Papers of the Island government, which are epitomized in the *Traveller's Narrative* (ii. 376–389). Ṣubḥ-i-Ezel and some of his family are still (1908) residing at Famagusta, while descendants of some of the other exiles are also living in the island in various capacities. Concerning those banished to 'Akkā the same detailed information is not available, but their number appears to have considerably exceeded that of the Ezelīs.

4. Period of Bahā'u'llāh's supremacy (A.D. 1868–1892).—The schism which divided the Bābīs into the two sects of Bahā'īs and Ezelīs, though its beginnings go back to the earlier period of which we have just spoken, now became formal and final, and henceforth we have to consider two opposed centres of Bābī doctrine, 'Akkā in Syria, and Famagusta in Cyprus. Although there is much to be urged in favour of Ṣubḥ-i-Ezel's position, it cannot be denied that practically his influence is very slight and his followers very few. When the present writer visited him in 1890, apart from his own family only one of his adherents, an old man named 'Abdu'l-Aḥad, whose father was among the Bābīs who perished at Zanjān in 1850,* was resident at Famagusta. In Persia very few Ezelīs were met, and those chiefly at Kirmān. One of Ṣubḥ-i-Ezel's sons-in-law, Shaykh Aḥmad of Kirmān, was a man of considerable talent and learning, but he was put to death at Tabrīz in 1896 on a charge of complicity in the assassination of Nāṣiru'd-Dīn Shāh in May of that year. He was the author of the *Hasht Bihisht*, a lengthy treatise on the philosophy, doctrine, and history of the Bābī religion, from the polemical portions of which, directed against Bahā'u'llāh, extracts are cited in the *Traveller's Narrative* (ii. 351–373). Ṣubḥ-i-Ezel is still (July 1908) alive and well; but, interesting as he is historically and personally, he can no longer be reckoned a force in the world, though as a source of information about the early history and doctrines of the Bābīs he is without a rival, and speaks with a freedom and frankness not to be found at 'Akkā, where policy and 'the expediency of the time' necessarily play a much larger part. Ṣubḥ-i-Ezel may, in short, in his island seclusion, be compared to Napoleon I. in St. Helena—a man who has played a great rôle in stirring events and times, but whose active life and power to mould men's thoughts and deeds have passed away. His writings are numerous, but little known or read outside his immediate circle, and no one has yet devoted himself to the study of the large collection of those acquired by the British Museum in recent years, through the instrumentality of Mr. C. Delaval Cobham, lately Commissioner at Larnaca in Cyprus. Of Bābīism as a living force, affecting both East and West, 'Akkā has been the centre for the last forty years, and seems likely so to remain; and thither we must now divert our attention.

The claim of Bahā'u'llāh to be a new and transcendent 'Manifestation' of God steadily and rapidly gained ground among the Bābīs, and involved a complete re-construction of the earlier Bābī conceptions. For if, as Bahā'u'llāh declared, the Bāb was a mere precursor and harbinger of his advent, then, in the blaze of light of the New Day, the candle lit by Mīrzā 'Alī Muḥammad ceased to merit attention, and, indeed, became invisible. The Bahā'īs, as a rule, show a marked disinclination to talk about the Bāb or his early disciples, or to discuss his life or doctrines, or to place his writings in the hands of the inquirer, while latterly they have avoided calling themselves Bābīs, preferring to be known simply as Bahā'īs. The Bāb's doctrines were, in their eyes, only preparatory, and his ordinances only provisional, and Bahā'u'llāh was entitled to modify or abrogate them as seemed good to him. The real question at issue between Ezel and Bahā was admirably described by Sir Cecil Spring-Rice, lately British Minister at Tihrān, as entirely similar to that which divided the respective followers of St. Peter and St. Paul in the early days of the Christian Church—the question, namely, whether Christianity was to be a Jewish sect or a new World-religion. The old Bābī doctrine, continued unchanged by the Ezelīs, was in its essence Shī'ite; for, though the Bābīs put themselves outside the pale of Islām by rejecting the finality of the Qur'ān and the mission of Muḥammad, as well as by many other innovations both in doctrine and practice, their whole thought is deeply tinged with Shī'ite conceptions, shown, for example, even by their heterodox views as to the 'return to the life of the world' of the Prophet Muḥammad, his daughter Fāṭima, and the Twelve Imāms, and their identification of their own protagonists with one or other of these holy personages.

A wholly different spirit pervades the teachings of Bahā. His religion is more practical, his teaching more ethical and less mystical and metaphysical, and his appeal is to all men, not especially to Shī'ite Muḥammadans. His attitude towards the Shāh and the Persian government is, moreover, much more conciliatory, as is well seen in the celebrated Epistle to the King of Persia (*Lawḥ-i-Sulṭān*) which he addressed to Nāṣiru'd-Dīn Shāh soon after his arrival at 'Akkā.* This letter, of which a translation will be found in the *Traveller's Narrative* (ii. 108–151 and 390–400), was sent by the hand of a young Bahā'ī called Mīrzā Badī', who succeeded in carrying out his instructions and delivered it in person to the Shāh, for which boldness he was tortured and put to death.† At the same time Bahā'u'llāh addressed other letters (called by the Bahā'īs *Alwāḥ-i-Salāṭīn*, 'Epistles to the Kings') to several other rulers, including Queen Victoria, the Tsar of Russia, Napoleon III., and the Pope.‡

For a complete history of the sect during this period full materials are not available, but generally speaking it may be said to consist, so far as 'Akkā itself is concerned, of alternations of greater and less strict supervision of the exiles by the Ottoman government, gradual development of organization and propaganda, and the arrival and departure of innumerable pilgrims, mostly Persians, but, since the successful propaganda in the United States, including a good many Americans. In Persia, where the religion naturally counts most of its adherents, there have been sporadic persecutions, to which the Bahā'īs, in accordance with Bahā's command, 'It is better that you should be killed than that you should kill,' have patiently submitted. Among these persecutions may be especially mentioned, since the execution of Mīrzā Badī' in July 1869, the following. About 1880 two Sayyids of Iṣfahān, now known to their co-religionists as *Sulṭānu'sh-Shuhadā* ('the King of Martyrs'), and *Maḥbūbu'sh-Shuhadā* ('the Beloved of Martyrs'), were put to death by the clergy of that city.§ In October 1888, Āghā Mīrzā Ashraf of Ābāda was put to death in the same

* In *JRAS*, 1897, pp. 761–827, the present writer published a tr. of a memoir on the insurrection at Zanjān, written for him by this old man.

* Probably in the summer of 1869 (see *Trav. Narr.* ii. 392).

† See *Trav. Narr.* ii. 102–106.

‡ Extracts from these, translated into English, will be found in *JRAS*, 1889, pp. 953–972.

§ See *JRAS*, 1889, pp. 489–492; *Trav. Narr.* ii. 166–169.

place, and his body mutilated and burned.* In the summer of the following year, seven or eight Bābīs were put to death with great cruelty, at the instigation of Āghā-yi-Najafī, in the villages of Si-dih and Najaf-ābād near Iṣfahān.† On Sept. 8, 1889, a prominent Bahā'ī named Ḥājji Muḥammad Riẓā of Iṣfahān was stabbed to death in broad daylight in one of the chief thoroughfares of 'Ishqābād (Askabad) by two Shī'ite *fidā'īs* sent from Mashhad for that purpose. The assassins were sentenced to death by the Russian military tribunal before which they were tried, but this sentence was commuted to one of hard labour for life. This was the first time in the fifty years during which the sect had existed that condign punishment had been inflicted on any of their persecutors; their rejoicings were proportionately great, and Bahā'u'llāh made the event the occasion of two revelations in which Russian justice was highly extolled,‡ and Bahā's followers were enjoined not to forget it. In May 1891 there was a persecution of Bābīs at Yazd, in which seven of them were brutally killed (on May 18), while another, an old man, was secretly put to death a few days later. In the summer of 1903 there was another fierce persecution in the same town, of the horrors of which some account is given by Napier Malcolm in his *Five Years in a Persian Town* (Lond. 1905).

One of the most interesting phenomena in the recent history of the Bahā'īs has been the propaganda carried on with considerable success in America. This appears to have been begun by a Syrian convert to Bahāism named Ibrāhīm George Khayru'llāh, who is the author of many English works on the subject, and is married to an English wife. He seems first to have lectured on the subject at Chicago about 1892, for in the Preface to his book, *Behā'u'llāh* (Chicago, 1900), he says (p. vii.) that he 'began to preach the fulfilment of the truth which Christ and the Prophets foretold over seven years ago.'§ Born in Mount Lebanon, he lived twenty-one years in Cairo, and was then converted to the Bahā'ī doctrine by a certain 'Abdu'l-Karīm of Ṭihrān. Afterwards he settled in America and became naturalized as a citizen of the United States. The propaganda which he inaugurated seems to have been at its height in 1897 and 1898, and there is now a community of several thousand American Bahā'īs, a considerable American literature on the subject, and a certain amount of actual intercourse between America and the headquarters of the religion at 'Akkā. More will be said on this subject presently.

5. From the death of Bahā'u'llāh until the present day (A.D. 1892–1908).—Bahā'u'llāh died on May 16, 1892, leaving four sons and three daughters. Differences as to the succession arose between the two elder sons, 'Abbās Efendi (also called *'Abdu'l-Bahā*, 'the Servant of Bahā,' and *Ghuṣn-i-A'ẓam*, 'the Most Mighty Branch') and Mīrzā Muḥammad 'Alī (called *Ghuṣn-i-Akbar*, 'the Most Great Branch'). Bahā'u'llāh left a testament, entitled *Kitābu 'Ahdī*, which was published, with some introductory remarks and a Russian tr., by Lieut. Tumanski in the *Zapiski* of the Oriental Section of the Imperial Russian Archæological Society, viii. (1892). In this important document he says:

'God's injunction is that the Branches (*Aghṣān*), and Twigs (*Afnān*),* and Kinsfolk† (*Muntasabīn*) should all look to the Most Mighty Branch (*Ghuṣn-i-A'ẓam*, i.e. 'Abbās Efendi). Look at what We have revealed in my (*sic*) Most Holy Book (*Kitāb-i-Aqdas*): "When the Ocean of Union ebbs, and the Book of the Beginning and the Conclusion is finished, then turn to Him whom God intendeth (*man arādahu'llāh*), who is derived from this Ancient Stock." He who is meant by this blessed verse is the Most Mighty Branch: thus have we made clear the command as an act of grace on our part. Verily, I am the Bountiful, the Gracious. God hath determined the position of the Most Great Branch (*Ghuṣn-i-Akbar*, i.e. Mīrzā Muḥammad 'Alī)‡ after his position. Verily, He is the Commanding, the Wise. Verily, we have chosen the Most Great after the Most Mighty, a command on the part of One All-knowing and Wise. . . . Say, O Servants! Do not make the means of order a means of disorder, nor an instrument for [producing] union into an instrument for [producing] discord . . .'

Thus far, then, it would appear that, in face of so clear a pronouncement, no room for dissension was left to Bahā'u'llāh's followers. But almost immediately, it would seem (for the history of this fresh schism has not yet been dispassionately investigated, though much has been written on either side, not only in Persian but in English), the old struggle between what may be described as the 'stationary' and the 'progressive' elements broke out. 'Abbās Efendi apparently claimed that the Revelation was not ended, and that henceforth he was to be its channel. This claim was strenuously resisted by his brother Mīrzā Muḥammad 'Alī and those who followed him, among whom were included his two younger brothers, Mīrzā Badī'u'llāh and Mīrzā Ẓiyā'u'llāh,§ Bahā'u'llāh's amanuensis, entitled *Janāb-i-Khādimu'llāh* ('the servant of God,' Mīrzā Āghā Jān of Kāshān), and many other prominent Bahā'īs, who held that, so far as this manifestation was concerned, the book of Revelation was closed, in proof of which view they adduced the following verse from the *Kitāb-i-Aqdas*, or 'Most Holy Book': 'Whosoever lays claim to any authority‖ before the completion of a millennium is assuredly a liar and a calumniator.' The dispute has been darkened by a mass of words, but in essence it is a conflict between these two sayings, viewed in the light of the supernatural claim—whatever its exact nature—which 'Abbās Efendi did and does advance. On the one hand, Bahā'u'llāh's *Testament* explicitly puts him first in the succession; on the other, being so preferred, he did 'lay claim to an authority' regarded by the partisans of his brother as bringing him under the condemnation equally explicitly enunciated by Bahā'u'llāh in the *Kitāb-i-Aqdas*. As in the case of the previous schism between Bahā'u'llāh and Ṣubḥ-i-Ezel, so here also the conflict was between those who held that every day of Theophany must be succeeded by a night of Occultation, and those who felt that the Light by which they had walked could not be extinguished, but must rather increase in brightness. And, as before, the conservative or stationary party was worsted. For a time a certain equilibrium seems to have been maintained, but steadily and surely the power and authority of 'Abbās Efendi waxed, while that of his brother waned. Very bitter feeling was again aroused, and this time over a large area; for not only Persia, but Egypt, Syria, and America were involved. Ibrāhīm Khayru'llāh, the protagonist of the Bahā'ī faith in America, finally espoused the cause of Muḥammad 'Alī;¶

* See *Trav. Narr.* ii. 169 and 400–406.

† *Ib.* i. 406–410.

§ It was at the 'Parliament of Religions,' held at Chicago in 1893, that the Bahā'ī doctrines first began to arouse considerable attention in America.

* 'The Branches' (*Ghuṣn*, pl. *Aghṣān*) are Bahā'u'llāh's descendants; the 'Twigs' (*Afnān*) are the Bāb's kinsfolk.

† Or perhaps 'adherents' is meant by *Muntasabīn*.

‡ *i.e.* We have placed 'Abbās Efendi first, then Mīrzā Muḥammad 'Alī.

§ One of these brothers subsequently died, and in 1903 the other joined 'Abbās Efendi and renounced his previous allegiance.

‖ *i.e.* authority to promulgate fresh revelations, and enact new or repeal old ordinances.

¶ According to his own statement (*The Three Questions*, p. 23), he visited 'Akkā and was well received by 'Abbās Efendi, but was not allowed to hold intercourse with the other brothers. Only seven months after his return to America did he denounce 'Abbās Efendi and declare his allegiance to Muḥammad 'Alī.

but missionaries, including the aged and learned Mírzá Abu'l-Faẓl of Gulpáyagán, were sent out in the beginning of 1902 to the United States to oppose him,* and at one time he professed to be in fear of his life.

6. Doctrine.—A full discussion of Bábí and Bahá'í doctrine, even were the time ripe for it, would far exceed the limits of an encyclopædia article. Before proceeding to set forth such a sketch of its most salient features as is possible within these limits, we must call the reader's attention to one or two general considerations.

(1) The Báb's own doctrine underwent considerable development and change during the six years (A.D. 1844–1850) which elapsed between his 'Manifestation' and his death, and to trace this development it would be necessary to examine all his voluminous writings in a much more careful, detailed, and systematic manner than has yet been done. To mention only a few of the chief substantive works which issued from his pen, there is the *Ziyárat-náma* (of which Gobineau quite misunderstood the nature when he described it as the *Journal du Pèlerinage*, for it is a devotional work designed for the use of pilgrims to the shrines of the Imáms) and the *Ṣaḥífatu Bayna'l-Ḥaramayn*, both composed in the year of the 'Manifestation.' Then there is the *Dalá'il-i-sab'a* ('Seven Proofs'), and a number of Commentaries (*Tafásír*) on different *súras* of the Qur'án, notably the *Commentary on the Chapter of Joseph* (also called *Qayyúmu'l-Asmá*), and the Commentaries on the *súras* entitled respectively *al-Baqara*, *al-Kawthar*, *al-'Aṣr*, etc., all of which belong to the earlier period before the Báb announced that he was not merely the 'Gate' leading to the hidden Imám, but the Imám himself, nay the 'Point' (*Nuqṭa*) of a new Revelation. Of his later writings, to all of which, as we shall see, the name *Bayán* ('explanation,' 'utterance') is applied, the Persian *Bayán* is, perhaps, the most systematic, but there are also several Arabic *Bayáns*, a *Kitábu'l-Aḥkám*, or 'Book of Laws' (tr. by Gobineau at the end of his *Religions et Philosophies dans l'Asie Centrale*), and one or two 'Books of Names' (*Kitábu'l-Asmá*). Few of these books are easy reading, and he who has read even one or two of them will be inclined to agree with Gobineau's judgment, 'le style de Mírza Alí Mohammed est terne, raide et sans éclat'; while some are so confused, so full of repetitions, extraordinary words, and fantastic derivatives of Arabic roots, that they defy the most industrious and indefatigable reader. The works of Ṣubḥ-i-Ezel closely resemble those of the Báb, but the Bahá'í writings, especially in the later period, are much clearer and easier of comprehension, besides which the tendency of Bahá'í thought was to avoid abstruse metaphysics and unintelligible rhapsodies, and to treat chiefly of ethical subjects.

(2) As there has never been anything corresponding to a 'Church Council' among the Bábis, the greatest divergence of opinion will be found among them even on questions so important as the Future Life. All agree in denying the Resurrection of the Body as held by the Muḥammadans; but while certain passages in the Persian *Bayán* seem to indicate that the spirit of the deceased continues to take an interest in his earthly affairs, and while certain sayings of the older Bábis lend colour to the assertion of their enemies that they inclined to the doctrine of Metempsychosis (*Tanásukh-i-Arwáḥ*), generally held in abhorrence by the Musalmáns, other Bábis understand the 'Return (*Ríj'at*) to the life of this World' in a less material and more symbolic sense, while some disbelieve in personal immortality, or limit it to those holy beings who are endowed with a spirit of a higher grade than is vouchsafed to ordinary mortals.

(3) It must be clearly understood that Bábíism is in no sense latitudinarian or eclectic, and stands, therefore, in the sharpest antagonism to Ṣúfiism. However vague Bábí doctrine may be on certain points, it is essentially dogmatic, and every utterance or command uttered by the 'Manifestation' of the period (*i.e.* by the Báb, Ṣubḥ-i-Ezel, Bahá'u'lláh, 'Abbás Efendi, and Muḥammad 'Alí respectively) must be accepted without reserve. Tolerance is, indeed, inculcated by Bahá'u'lláh: 'Associate with [those of other] religions with amity and harmony' is one of the commands given in the *Kitáb-i-Aqdas*. But the same book begins as follows: 'The first thing which God has prescribed unto His servants is Knowledge of the Day-spring of His Revelation and the Dawning-place of His Command, which is the Station of His Spirit in the World of Creation and Command. Whosoever attaineth unto this hath attained unto all good, and whosoever is debarred therefrom is of the people of error, even though he produce all [manner of good] deeds.' In other words, works without faith are dead. The Báb himself, and his immediate followers, were still less inclined to tolerance; according to the *Bayán*, no unbelievers were to be suffered to dwell in the five principal provinces of Persia, and everywhere they were, as far as possible, to be subjected to restrictions, and kept in a position of inferiority. The Bábis are strongly antagonistic alike to the Ṣúfis and to the Muḥammadans, but for quite different reasons. In the case of the Ṣúfis they object to their latitudinarianism, their pantheism, their individualism, and their doctrine of the 'Inner Light.' With the Muḥammadan outlook they have really more in common; but, apart from the natural resentment which they feel on account of the persecutions which they have suffered at the hands of the *'ulamá* of Islám, they condemn the refusal of the Muslims to see in this new 'Manifestation' the fulfilment of Islám, and, in short, regard them much as the Christians regard the Jews. For similar reasons the Bahá'ís detest the Ezelís, whilst among the former the followers of 'Abbás Efendi dislike and despise the followers of his brother Muḥammad 'Alí.

According to the Bábí conception, the Essence of God, the Primal Divine Unity, is unknowable, and entirely transcends human comprehension, and all that we can know is its Manifestations, that succession of theophanies which constitutes the series of Prophets. In essence all the Prophets are one; that is to say, one Universal Reason or Intelligence speaks to mankind successively, always according to their actual capacities and the exigencies of the age, through Abraham, Moses, David, Christ, Muḥammad, and now through this last Manifestation, by which the old Bábís and the present Ezelís understand the Báb (whom they commonly speak of as *Ḥaẓrat-i-Nuqṭa*, 'His Holiness the Point'; *Ḥaẓrat-i-Rabbiyu'l-A'lá*, 'His Holiness my Lord the Supreme,' etc.), while the Bahá'ís, who reduce the Báb's position to that of a mere forerunner, or herald (*mubashshir*), comparing him to John the Baptist, understand Bahá-u'lláh. In essence all the Prophets are one, and their teaching is one; but (to use one of the favourite illustrations of the Bábís) just as the same teacher, expounding the same science, will speak in different, even in apparently contradictory, terms, according to whether he is addressing small children, young boys and girls, or persons of mature age and ripe understanding, so will the Prophet regulate his utterances and adjust his ordinances according to the degree of development attained by the community to which he is sent. Thus the material Paradise and Hell preached by Muḥammad do not really exist, but no more accurate conception of the realities which they symbolize could be conveyed to the rough Arabs to whom he was sent. When the world has outgrown the teaching of one 'Manifestation,' a new 'Manifestation' appears; and as the world and the human race are, according to the Bábí view, eternal, and progress is a universal law, there can be no final Revelation, and no 'last of the Prophets and seal of the Prophets,' as the Muḥammadans suppose. No point of the Báb's doctrine is more strongly emphasized than this. Every Prophet has foretold his successor, and in every case that successor, when he finally came, has been rejected by the majority of that Prophet's followers. The Jews rejected their Messiah, whose advent they professed to be awaiting with such eagerness; the Christians rejected the Paraclete or Comforter whom Christ foretold in prophecies supposed by the Muḥammadans to have been fulfilled by the coming of Muḥammad; the Shí'ite Muḥammadans never mention the Twelfth Imám, or Mahdí, without adding the formula عجل الله فرجه ('May God hasten his glad Advent!'), yet when at last after a thousand years the expected Imám returned (in the shape of the Báb), they rejected, reviled, imprisoned, and finally slew him. The Báb was determined that, so far as it lay in his power to prevent it, his followers should not fall into this error, and he again and again speaks of the succeeding Revelation which 'He whom God shall manifest' (من يظهره الله) shall bring, and of other later Revelations which in turn shall succeed that *ad infinitum*. Indeed, he goes so far as to

* Several American papers describing this mission are in the present writer's possession. One (*The North American*, Feb. 16, 1902) gives portraits of Mírzá Abu'l-Faẓl, his companion Ḥájji Niyáz of Kirmán, and of 'Abbás Efendi himself, and heads its leading article 'Astonishing Spread of Babism.'

say that if any one shall appear claiming to be 'He whom God shall manifest,' it is the duty of every believer to put aside all other business and hasten to investigate the proofs adduced in support of this claim, and that, even if he cannot convince himself of its truth, he must refrain from repudiating it, or denouncing him who advances it as an impostor. It is these provisions, no doubt, which have always given so great an advantage to every fresh claimant in the history of Bābīism, and have placed what may be called the 'Stationary Party' (*e.g.* the followers of Ṣubḥ-i-Ezel and, later, of Muḥammad 'Alī) at so great a disadvantage.

From what has been said above, the Western reader may be tempted to think of the Bābī doctrine as embodying, to a certain extent, the modern Western rationalistic spirit. No mistake could be greater. The belief in the fulfilment of prophecies; the love of apocalyptic sayings culled from the Jewish, Christian, and Muḥammadan Scriptures and traditions; the value attached to talismans (especially among the early Bābīs); the theory of correspondences, as illustrated by the mystical doctrine of the Unity and its manifestation in the number 19, and the whole elaborate system of equivalences between names, based on the numerical values of letters, point to a totally different order of ideas, and are, moreover, ingrained in the true Bābī doctrine, as distinguished from the same doctrine as presented to and understood by most American and European believers. Even the practical reforms enjoined or suggested by the Báb are generally based on some quite non-utilitarian ground. Thus the severe chastisement of children is forbidden, and consideration for their feelings enjoined; but the reason for this is that when 'He whom God shall manifest' comes, he will come first as a child, and it would be a fearful thing for any one to have to reproach himself afterwards for having harshly treated the august infant. This and other similar social reforms, such as the amelioration of the position of women, are not, as some Europeans have supposed, the motive power of a heroism which has astonished the world, but rather the mystical ideas connected with the 'Manifestations,' 'Unities,' numbers, letters, and fulfilment of prophecies, which to European rationalists appear so fantastic and fanciful. But, above all, the essence of being a Bābī or a Bahā'ī is a boundless devotion to the 'Person of the Manifestation,' and a profound belief that he is divine and of a different order from all other beings. The Báb, as we have seen, was called by his followers 'His Holiness my Lord the Supreme,' and Bahā'u'llāh is called not only 'the Blessed Perfection' (*Jamāl-i-Mubārak*), but, especially in Persia, 'God Almighty' (*Ḥaqq ta'ālā*). Then also there are differences of opinion as to the degree of divinity possessed by the 'Person of the Manifestation,' and not all the faithful go so far as the poet who exclaims: 'Men call thee "God," and I am filled with angry wonder as to how long thou wilt endure the shame of Godhead!'

Something more must now be said as to the 'Point,' the 'Unity,' and its manifestation in the number 19, and other kindred matters. The idea of the 'Point' (نقطة) seems to rest chiefly on two (probably spurious) Shī'ite traditions. 'Knowledge,' says one of these, 'is a point which the ignorant made multiple.' It was this 'point of knowledge'—not detailed knowledge of subsidiary matters, but vivid, essential, 'compendious' knowledge of the eternal realities of things—to which the Báb laid claim. The second tradition is ascribed to 'Alī, the first Imām, who is alleged to have declared that all that was in the Qur'ān was contained implicitly in the *Sūratu'l-Fātiḥa*, or opening chapter of the Qur'ān, and that this in turn was contained in the *Bismi'llāh* which stands over it, this in turn in the initial B (ب) of the *Bismi'llāh*, and this in turn 'in the Point which stands under the ب'; 'and,' 'Alī is said to have added, 'I am the Point which stands under the ب.'

Now the formula بسم الله الرّحمن الرّحيم ('In the Name of God the Merciful, the Forgiving') comprises 19 letters, which, therefore, are the 'Manifestation' of the 'Point under the ب,' just as the whole Qur'ān is the further 'Manifestation,' on a plane of greater plurality, of the *Bismi'llāh*. Moreover, the Arabic word for 'One' is *Wāḥid* (واحد), and the letters composing the word *Wāḥid* (و=6; ا=1; ح=8; د=4) give the sum-total of 19. This 'first Unity' of 19 in turn manifests itself as 19 × 19 (19^2) or 361, which the Bābīs call 'the Number of All Things' (عدد كلّ شئ), and the words *Kullu shay* ('All Things') are numerically equivalent to (ك=20 + ل=30 + ش =300 + ى=10) 360, to which, by adding 'the one which underlies all plurality,' 361, 'the Number of All Things,' or 19^2, is obtained.

To the number 19 great importance is attached by the Bābīs, and, so far as possible, it is made the basis of all divisions of time, money, and the like. Thus the Bābī year comprises 19 months of 19 days each, to which intercalary days 'according to the number of the H (ه),' *i.e.* 5, are added to bring the solar year (which they proposed to restore in place of the Muḥammadan lunar year) up to the requisite length. The same names (*Bahā, Jalāl, Jamāl*, etc.) serve for the months and the days, so that once in each month the day and the month (as in the Zoroastrian calendar) correspond, and such days are observed as festivals. The year begins with the old Persian *Naw-rūz*, or New Year's Day, corresponding with the Vernal Equinox, and conventionally observed on March 21. The month of fasting, which replaces the Ramaḍān of Islām, is the last month of the year, *i.e.* the 19 days preceding the *Naw-rūz*. The Báb's idea of a coinage having 19 as its basis has been abandoned, along with many other impracticable ordinances, some of which are explicitly abrogated in the *Kitāb-i-Aqdas* or others of Bahā'u'llāh's writings. The 'Unity' is also manifested in the divine attribute *Ḥayy* (حى), 'the Living,' which equals 8+10=18, or, with the 'one which underlies all plurality,' 19. The Báb accordingly chose 18 disciples, who, with himself, constituted the 'Letters of the Living' (حروف الحىّ) or 'First Unity.' The choice of Mīrzā Yaḥyā, 'Ṣubḥ-i-Ezel' ('the Dawn of Eternity'), by the Báb as his successor, was probably also determined by the fact that the name *Yaḥyā* (يحيى = 36) was a multiple of 18, on which account Ṣubḥ-i-Ezel was also called *Wāḥid* (وحيد), which is numerically equivalent to 28 (the number of the letters constituting the Arabic alphabet), and signifies 'unique,' *i.e.* manifesting the Unity.

The importance attached by the Bābīs to the numerical equivalents of words is seen elsewhere,

and especially in their habit of referring cryptically to towns connected with their history by names of an equivalent value. Thus Adrianople, called in Turkish *Edirné* (ادرنه), is named *Arḍu's-Sirr* (ارض السّر), 'the Land of the Mystery,' both words, *Edirné* and *Sirr*, being numerically equivalent to 260. So Zanjān (زنجان=111) is called *Arḍu'l-A'lā* (اعلی=111), and so on. Other strange expressions with which the Bābī writings (especially the earlier writings) abound constantly puzzle the uninitiated reader, who will have to discover for himself that, for example, the expression 'the Person of the Seven Letters' (ذات الحروف السبعة) is one of the titles of the Báb, whose name, 'Alī Muḥammad, consists of seven letters. Even in Bahā'u'llāh's works such obscure terms occur as *al-Buq'atu'l-Ḥamrā*, 'the Red Place,' which means 'Akkā, and the like.

The Báb laid down a number of laws, dictated in many cases by his personal tastes and feelings, which have practically fallen into abeyance. Such are his prohibition of smoking and the eating of onions (though these are still observed by the Ezelīs), his regulations as to clothing, forms of salutation, the use of rings and perfumes, the names by which children might be named 'in the *Bayān*,' the burial of the dead, and the like. The laws enacted by Bahā'u'llāh in the *Kitāb-i-Aqdas*, with the exception of the law of Inheritance, are simpler and more practical, and the whole tone of the Bahā'ī scriptures (which, of course, according to the Bahā'ī view, entirely abrogate the Báb's writings) is more simple, more practical, and more concerned with ethical than metaphysical questions. Historically, there is much to be said in favour of Ṣubḥ-i-Ezel's claim, since he was certainly nominated by the Báb as his immediate successor, and was equally certainly so recognized for a good many years by the whole Bābī community; while, assuming the Báb to have been divinely inspired (and this assumption must be made not only by every Bābī but by every Bahā'ī), it is difficult to suppose that he should choose to succeed himself one who was destined to be the chief opponent of 'Him whom God shall manifest.' Yet practically it cannot be doubted that the survival and extension of the religion formed by the Báb were secured by the modifications effected in it by Bahā'u'llāh, for in its original form it could never have been intelligible, much less attractive, outside Persia; and even there, when once the ferment attending its introduction had subsided, it would probably have sunk into the insignificance shared by so many Muslim sects which once played an important rôle in history.

At the present day there are a few Bābīs of the old school who call themselves 'Kullu-shay'īs,' and decline to enter into the Ezelī and Bahā'ī quarrel at all; there is a small, and probably diminishing, number of Ezelīs; and a large, but indeterminable number of Bahā'īs, of whom the great majority follow 'Abbās Efendi ('Abdu'l-Bahā), and the minority his brother Muḥammad 'Alī. Latterly the followers of Bahā'u'llāh have shown a strong disposition to drop the name of Bābī altogether, and call themselves Bahā'ī, and to ignore or suppress the earlier history and literature of their religion. Alike in intelligence and in morals the Bābīs (or Bahā'īs) stand high; but it is not certain to the present writer that their triumph over Islām in Persia would ultimately conduce to the welfare of that distracted land, or that the tolerance they now advocate would stand the test of success and supremacy.

LITERATURE.—An exhaustive treatment of the literature of this subject would have to deal with the following divisions:

i. *BĀBĪ SCRIPTURES*, all in Arabic or Persian, regarded by all or by certain sections of the Bābīs as revelations, and including:

(*a*) *Writings of* Mīrzā 'Alī Muḥammad the Báb (A.D. 1844–1850).—These were divided by the Báb himself into 'five grades' (*Shu'ūn-i-Khamse*, شؤون خمسه), viz. verses (*āyāt*, آيات), supplications (*munājāt*, مناجات), commentaries (*tafāsīr*, تفاسير), scientific treatises (*Shu'ūn-i-'Ilmiyya*, شؤون علميه, or *ṣuwar-i-'Ilmiyya*, صور علميه), and Persian writings (*Kalimāt-i-Fārsiyya*). The term *Bayān* applies especially to the writings of the 'first grade,' and includes all the *āyāt*, or verses in the style of the Qur'ān, produced by the Báb during his whole career. To special collections of such verses the term *Bayān* is also applied, and in this sense there are several Arabic *Bayāns* and one Persian *Bayān*, which last is, on the whole, the most systematic and intelligible of the Báb's writings.*

(*b*) *Writings of* Mīrzā Yaḥyā, 'Ṣubḥ-i-Ezel.'—Of these one of the earliest (composed before 1865, since it is mentioned by Gobineau, whose book was published in that year) is the *Kitāb-i-Nūr*, or 'Book of Light.' A list of some of Ṣubḥ-i-Ezel's writings, drawn up by himself, will be found in *Traveller's Narrative*, ii. 340 ff. Others are described in the 'Catalogue and Description of 27 Bābī Manuscripts' by the present writer, published in *JRAS*, 1892 (xxiv. 483–493, 600–662, etc.). In the last few years the British Museum Library has, through the good offices of Mr. Claude Delaval Cobham, lately Commissioner at Larnaca in Cyprus, been enriched by an extensive collection of manuscript works by Ṣubḥ-i-Ezel.

(*c*) *Writings of* Mīrzā Ḥusayn 'Alī 'Bahā'u'llāh.'—One at least of these—a polemical work in Persian named *Iqān*, 'the Assurance'—was composed about A.D. 1858–1859, during the Baghdad period, that is to say, previously to Bahā'u'llāh's 'Manifestation.' The remainder belong chiefly to the period intervening between that event and Bahā'u'llāh's death (A.D. 1866–1892). Since every letter (*lawḥ*, لوح='tablet') written at Bahā'u'llāh's dictation—and many were written every day—is regarded by his followers as a revelation, it would be manifestly impossible for any human being (except, possibly, his amanuensis) to enumerate them. The most important of his books, besides the earlier *Iqān*, the *Sūra-i-Haykal*, the *Alwāḥ-i-Salāṭīn*, or 'Letters to the Kings' (including the letter sent to Nāṣiru'd-Dīn Shāh, as above described, in A.D. 1869), are the *Kitāb-i-Aqdas* (which contains the most systematic and compendious statement of the doctrines, laws, and ordinances promulgated by Bahā'u'llah), the *Lawḥ-i-Bashārāt*, the *Kalimāt-i-Maknūna*, and, lastly, the final Testament (*Kitābu 'Ahdī*) already mentioned. Several 'authorized' collections of these and other Bahā'ī scriptures have been lithographed in the East. The *Kitāb-i-Aqdas* has been printed at St. Petersburg, in 1899, with a Russ. tr., by Captain Tumanski, who also published the *Kitābu 'Ahdī* in 1892. In the same year Baron Victor Rosen published the *Lawḥ-i-Bashārāt*. The whole of the Epistle to Nāṣiru'd-Dīn Shāh and portions of the other Epistles to the Kings have been translated by the present writer in the *JRAS*, 1889, and in *Traveller's Narrative*, ii.; and a French translation of the *Iqān* ('Livre de la Certitude') was published by M. Hippolyte Dreyfus and Mīrzā Ḥabību'llāh Shīrāzī in 190-.

(*d*) *Writings of* 'Abbās Efendi (now called 'Abdu'l-Bahā).—Of these mention may be made of the *Mufāwaḍāt* (مفاوضات), or 'Outpourings,' recently published in the original Persian, and in Fr. and Eng. translations, by Miss Laura Barney and M. Hippolyte Dreyfus.

(*e*) *Writings of* Mīrzā Muḥammad 'Alī, the brother and rival of 'Abbās Efendi.

ii. *DEVOTIONAL, DOCTRINAL, AND APOLOGETIC WORKS* by companions and disciples of the Báb, Ṣubḥ-i-Ezel, Bahā'u'llāh, 'Abbās Efendi, and Mīrzā Muḥammad 'Alī, of which in recent times a considerable number have been composed in English by American believers and a smaller number in French. Many of the early Bābīs, such as Mullā Muḥammad 'Alī of Bārfurūsh (*Janāb-i-Quddūs*), left writings which have been preserved in manuscript.† Mīrzā Abu'l-Faḍl of Gulpāyagān, a devoted fol-

* See the *Traveller's Narrative*, ii. 335–347, especially the definitions from the Persian *Bayān* given on p. 344 f. concerning the 'five grades'; see also *JRAS* xxiv. (1892) 452 f.

† For description of such a collection of the writings of *Janāb-i-Quddūs*, see *JRAS*, 1892, 483–487.

lower of Bahā'u'llāh, composed, about A.D. 1887, a Persian tract called *Istidlāliyya*,* in which he endeavoured to prove to the Jews that the advent of their expected Messiah was fulfilled by the 'Manifestation' of Bahā'u'llāh; and he also wrote and published in Cairo a Persian work of 731 pages entitled *Kitābu'l-Farā'id*, in which he replied to attacks made on the Bahā'is by Shaykh 'Abdu's-Salām. In defence of Ṣubḥ-i-Ezel's position and in elucidation of the primitive Bābī doctrine and the philosophical ideas underlying it, there is the very rare and instructive *Hasht Bihisht*† of Shaykh Aḥmad of Kirmān (called Rūḥī), who was put to death at Tabriz about 1896. There is also a considerable literature, manuscript and lithographed, connected with the controversy which arose after the death of Bahā'u'llāh between his sons,‡ and this controversy is reflected in numerous English printed works produced in America by the respective partisans of the two brothers.

iii. *HISTORICAL WORKS* written by believers (such as the *History of Mirzā Jānī of Kāshān*, the *New History*, the *Traveller's Narrative*, and part of the *Hasht Bihisht*), or by opponents (such as the account given by the official historians of the Persian Court, Riżā-quli-Khān and the Lisānu'l-Mulk, in the supplement to the *Rawżatu's-Ṣafā* and the *Nāsikhu't-Tawārikh* respectively), or by more or less impartial observers, Asiatic or European. Among the most valuable of those written in the East from a hostile, or at least a critical and not very friendly, point of view, mention should especially be made of Sayyid Jamālu'd-Dīn's art. in the *Dā'iratu'l-Ma'ārif*, or Arabic Encyclopædia, of Buṭrusu'l-Bustānī, and of Mīrzā Muḥammad Mahdī-Khān Za'imu'd-Dawla's *Miftāḥu Bābi'l-Abwāb*, also in Arabic, published at Cairo in A.H. 1321 (A.D. 1903–1904). This last, though written in the form of a history, is rather polemical than historical, but it contains important information obtained from original oral sources, and a certain number of *pièces justificatives*. Another more purely polemical work, composed in Persian by a Christian convert to Islām, named Ḥusayn-quli, dedicated to some of the *mujtahids* of Kerbelā and Najaf, entitled *Minhāju't-Ṭālibīn fi raddi'l-Bābiyya*, and lithographed at Bombay in A.H. 1320 (A.D. 1902), also deserves mention.

iv. *BĀBĪ POEMS.*—From the time of Qurratu'l-'Ayn, the Bābī heroine who suffered martyrdom in A.D. 1852, until the present day, poetry of a religious and often of a rhapsodical character has been produced, though not in very great abundance, by Bābī writers. The most celebrated Bābī poets since the time of Qurratu'l-'Ayn are Nabīl, 'Andalīb, Na'īm of Ābāda, and Mirzā Yaḥyā *Sar-Khush*; but their poems are sporadic, and there does not seem to be any considerable collection of Bābī poems, either from one or from diverse pens.

v. *POLEMICAL WORKS.*—Some of these have been incidentally mentioned above under classes ii. and iii., but there exist others, such as the *Rajmu'sh-Shaytān fi raza'ili'l-Bayān* ('Stoning of the Devil, on the vices of the *Bayān*'), by Ḥājjī 'Abdu'r-Raḥīm, lithographed (without date or place of issue) about A.D. 1892. This tract professes to be written in refutation of a Bābī apology entitled *Kitābu'l-Imān fi idhhāri-Nuqtati'l-Bayān* ('the Book of Belief, setting forth the Point of Revelation,' *i.e.* the Báb), which apology is incorporated in the refutation. There are, however, reasons for believing that, under the guise of a weak and unconvincing refutation, the writer's object was to argue in favour of the Bābī doctrine, as held by the elder Bābīs and the Ezelīs, since he speaks respectfully of the Báb 'on account of his holy lineage,' makes the refutation of Ṣubḥ-i-Ezel depend on that of the Báb (whom he does not effectively refute), and practically confines his attacks to Bahā'u'llāh.

vi. *THE ENGLISH AND FRENCH WRITINGS* of American and French believers in Bahā'ism (for only in the latter days of Bahā'u'llah did the doctrines of which the Báb was the originator spread beyond Asia) may conveniently be placed in a separate class. The chief of those which have come into the present writer's hands (and there are, no doubt, many others with which he is unacquainted, for Bahā'ism is now active in America, and has its centres, associations, schools, and endowments) are, in chronological order, as follows:

Ibrāhīm George Kheiralla (*i.e.* Khayru'llāh) assisted by Howard MacNutt, *Behā'u'llāh* ('The Glory of God'), 2 vols., Chicago, 1900; *Facts for Behaists*, tr. and ed. by I. G. Kheiralla (this pamphlet deals with the dispute between 'Abbās Efendi and his brother Muḥammad 'Alī, and supports the claims of the latter), Chicago, 1901; Ibrāhīm George Kheiralla, *The Three Questions*, 26 pp. of English and 15 pp. of Arabic *pièces justificatives* (n.d.); Stoyan Krstoff Vatralsky, *Mohammedan Gnosticism in America: the origin, history, character, and esoteric doctrines of the Truth-knowers* (from *AJTh*, Jan. 1902, pp. 57–78), Boston, 1902; Gabriel Sacy, *Le Règne de Dieu et de l'Agneau, connu sous le nom de Babysme*, Cairo, 1902; *Le Livre des Sept Preuves* (a tr. of the Báb's *Dalā'il-i-Sab'a*), tr. by A. L. M. Nicolas, Paris, 1902; *The Revelation of Bahā'u'llāh*, compiled by Isabella D. Brittingham, U.S.A., 1902; Myron H. Phelps, *The Life and Teachings of Abbās Effendi*, with Introduction by Edward G. Browne, London and New York, 1903; *Le Livre de la Certitude* (a tr. of the *Īqān*), tr. by Hippolyte Dreyfus and Mīrzā Ḥabību'llāh Shīrāzī, Paris, 1904; *Le Béyân Arabe, le livre sacré du Babysme de Séyyèd Alī Mohammed dit le Bab*, tr. from the Arabic by A. L. M. Nicolas, Paris, 1905; Arthur Pilsbury Dodge, *Whence? Why? Whither? Man: Things: Other things*, Westwood, Mass., 1907. One Ezelī manifesto, consisting chiefly of extracts from the *New History*, the *Traveller's Narrative*, and other works by the writer of this article, has also appeared in America under the title of *A Call of Attention to the Behaists or Babists of America*, by August J. Stenstrand, and is dated from Naperville, Ill., Feb. 13, 1907; Miss Laura Clifford Barney, who at different periods spent a considerable time at 'Akkā, and has also travelled in Persia, collected orally the answers of 'Abbās Efendi to a number of questions which she put to him on all sorts of subjects, and to which he replied from time to time. These replies have been published in the original Persian, in English, and in French almost simultaneously. The Persian text is entitled *An-Nūru'l-abhā fi Mufāwaḍāti 'Abdi'l Bahā*, and on the English title-page *Table Talks, collected by Laura Clifford Barney*, London, 1908. The English version is entitled *Some Questions answered . . . from the Persian of 'Abdul-Bahā*, translated by Miss L. C. Barney. The French version, translated from the Persian by Hippolyte Dreyfus, is entitled *Les Leçons de St. Jean d'Acre . . recueillies par Laura Clifford Barney*, Paris, 1908.

EDWARD G. BROWNE.

BĀBĀ LĀLĪS.—The name of a modern Indian monotheistic sect founded by one Bābā Lāl in the first half of the 17th cent. A.D. The sect is apparently now extinct. Bābā Lāl was a Khattrī by caste, born in Mālwā in Rājputāna. He became the pupil of a *Bhakti* apostle (see BHAKTI-MĀRGA) named Chetan Swāmi, whom he followed to Lahore. He finally settled at Dehanpur, near Sarhind (Sirhind) in the Panjāb, where he founded the sect which bears his name.

Bābā Lāl was one of those Indian reformers of the 16th and 17th cents. who, like Kabīr, Dādū, and the Emperor Akbar, endeavoured to found a purely monotheistic religion, combining elements derived partly from the beliefs of the Musalmān Sūfīs and partly from those of the followers of the Hindū Bhakti-mārga. Like Kabīr, he followed the Bhakti-mārga in the name by which he referred to the Supreme, viz. Rāma; but also, as in Kabīr's teaching, this Rāma was not to him the Deity incarnate as the earthly prince of Oudh, but was God the Father Himself, or, in other words, Rāma after he had returned to heaven from his incarnate sojourn upon earth. The doctrine of incarnation, which is an important part of the teaching of the Bhakti-mārga, had no place in his system. On the other hand, as in the Bhakti-mārga and as in Sūfīism, the keynote of his system was an all-absorbing love directed to a gracious personal God. As he himself says, 'The feelings of a perfect disciple have not been, and cannot be, described; as it is said: "A person asked me, What are the sensations of a lover?" I replied: "When you are a lover, you will know."'

Bābā Lāl's doctrine attracted the attention of the liberal-minded prince Dārā Shukoh, the eldest and favourite son of the Emperor Shāh Jahān, who sent for him and had several interviews with him in the year A.D. 1649. A report of these interviews is preserved in a Persian work entitled the *Nādiru'n-nikāt*, our only authority on Bābā Lāl's teaching. From this we gather that, besides the devoted love which was the essence and foundation of his religion, he taught that the human soul is a particle of the Supreme Soul, just as water contained in a flask is a part of the water of, say, the river Ganges. The flask which separates it from its source is the body, and blessed is the moment when the flask ceases to exist, and the water once contained in it can be reunited with the parent stream. The difference between the water in the flask and that in the Ganges is that a drop of wine added to the former would impart to

‡ Of works belonging to this class the two following (published in A.H. 1318 and 1319 [= A.D. 1900–1901 respectively]), of which the present writer happens to possess copies, are in defence of Mīrzā Muḥammad 'Alī and against the claims of 'Abbās Efendi. The first is entitled *Ityānu'd-Dalīl li-man yurīdu'l-Iqbāla ila siwā'i's-sabīl*, and the second appears to be from the pen of Mīrzā Āqā Jān of Kāshān, called *Khādimu'llāh* ('the Servant of God'), who was for many years Bahā'u'llāh's amanuensis, and was afterwards among the most prominent of the supporters of Mīrzā Muḥammad 'Alī and the opponents of 'Abbās Efendi.

it its flavour, but would be lost in the river. Similarly the Supreme Soul, or in other words the Deity, is beyond accident, while the human soul is afflicted by sense and passion.

Withdrawal from worldly life is prudent, but not necessary. The real 'world' from which the disciple must withdraw is forgetfulness of God, not clothes, or wealth, or wife, or offspring. All created things are derived from one material source, or Nature, as the tree is derived from the seed, but the evolution of the former from the latter requires the interference of an evolving Cause, or the interposition of the Creator.

LITERATURE.—A fuller account of the sect will be found in Wilson, *Religious Sects of the Hindus* (vol. i. of 'Works'), London, 1862, p. 347 ff., from which most of the above has been drawn.

GEORGE A. GRIERSON.

BABYLONIANS AND ASSYRIANS.

[H. ZIMMERN.]

Introduction.—At the present moment it is an exceedingly difficult task to give a short comprehensive account of the Babylonian religion. In the first place, in spite of much diligent research, particularly in the course of the last two decades, the copious materials derived from the cuneiform inscriptions, which are ever increasing through new discoveries and publications, are far from being thoroughly investigated or arranged in a systematic form. The difficulty of acquiring a clear knowledge of the fundamental principles and the historical development of the Bab. religion is increased by its complex character, due to an intermingling, not only of Sumerian and Semitic, but of other foreign elements which find expression in it. Then, finally, it must be noted that among students of the subject great differences of opinion exist as to the essential character and historical evolution of this religion. In an objective account, such as is here demanded, these differences must necessarily be referred to. We have to deal, in the first place, with the following question: Are we to hold, with Winckler especially, that the religion of the Babylonians and their theory of the universe in general are to be regarded, at the time when our sources begin, *i.e.* about B.C. 3000, as essentially complete—a fixed system, based on astronomical principles, which arose in a period which, for us, is entirely pre-historic? Or, are the undoubted traces of the systematizing of the religion, which are found in our sources, and its close connexion with an astral scheme, only the product of a comparatively late period? Was it only in the post-Babylonian, the Hellenistic, period that the system was perfectly completed, instead of having taken place, as Winckler supposes, in the earliest known historical period? The present writer feels compelled, from his study and interpretation of the sources, to adopt an intermediate theory between the two extremes just mentioned. It seems to him undeniable that there was among the Babylonians, even at an early date, a tendency to reduce the world of the gods to a single system, and to carry out the law of correspondence between great and small, heavenly and earthly, time and space, the macrocosm and the microcosm. At the same time, he does not feel inclined to exclude the element of historical evolution from the actually known period of Assyro-Babylonian history to the same extent as Winckler does. In particular, it seems to him that the close connexion between almost all the chief deities and heavenly bodies and the proportionate distribution of the cosmos among them rest on a secondary element in our sources, which it is still possible to trace, at least partially, in the history. The present writer further feels inclined to ascribe a more individual character to the several Babylonian divinities than is done by Winckler, and to harbour a strong suspicion of the theory that even in ancient times the several divine forms were regarded in Babylonia as only partial manifestations of a single deity, so that they could at will be substituted for each other. Moreover, to a far larger extent than Winckler is disposed to admit, we seem to have to deal in the Babylonian religion with unreconciled differences, due partly to widely deviating local cults which once existed, and partly to the combination of Sumerian and Semitic elements already mentioned, as well as to the varied survivals from older stages of the Babylonian religion. We cannot, then, speak of a finished scheme as present in the Bab. *Weltanschauung* and consequently in its religion. At the same time, it must be conceded that Winckler's construction of a Bab. *Weltanschauung* has in many ways, in spite of its one-sidedness and evident exaggeration, made possible a better understanding of the religion of the Babylonians.

1. **History: The principal places of worship and the character of the Babylonian religion in general.**—At the very commencement of the cuneiform sources, about the year B.C. 3000, we find in the original documents—royal inscriptions and documents pertaining to civil law—a perfectly confusing multitude of divine figures and names of temples. On closer inspection, these distribute themselves among various local cults, which possess greater or less importance, according to the political or religious eminence of the respective seats of worship. Now, seeing that in Babylonia, in the earliest times, the seat of the supreme political power often changed, it is clear that the city-gods of different and successive capitals might, in turn, have supreme significance for the whole land—a significance which, as a rule, continued to influence the cult long after the city in question had lost its political supremacy. In connexion with this change of the seat of political power, it must early have been felt necessary to harmonize the local cults, which originally differed widely, and to bring the gods of the different places of worship into some definite relation to each other. In this way would be formed a divine State and divine families—preferably in the triad of father, mother, son—after the model of the earthly State and the human family. Along with this went the division of the different parts of the cosmos among the several gods. The matter is still further complicated by the fact that in most cases, particularly in towns of South and Middle Babylonia, the cult of an earlier Sumerian population was taken over by their Semitic successors. Here there must naturally have taken place new combinations of the original Sumerian and the imported Semitic religious ideas.

The most important seats of worship and their local deities which have to be considered are, proceeding from south to north, as follows: *Eridu* with the cult of Ea, *Uru* (Ur) with Sin (the moon-god), *Larsa* with Shamash (the sun-god), *Uruk* (Erech) with Anu and Ishtar-Nanâ, *Lagash* with Ningirsu, *Nippur* with Enlil, *Isin* with Bêlit-Isin, *Kish* with Zamama (Ninib), *Kutû* (Cuthah) with Nergal, *Babilu* (Babylon) with Marduk (Merodach), *Barsip* (Borsippa) with Nabû (Nebo), *Sippar* with Shamash, *Akkad* with Ishtar-Anunîtu. In addition to these, we have in the Assyrian domain: *Ashshur* with the god Ashshur, *Ninua* (Nineveh) with Ishtar, *Arbail* (Arbela) with Ishtar, and in Mesopotamia *Harrân* with Sin.

Among these cities or seats of worship, Uruk, Nippur, and Eridu must in the earliest times have been very specially prominent, since their gods, Anu, Enlil, and Ea, occupy from ancient days the chief place in the Babylonian pantheon—a position which they retained (even if this was often a mere

form) down to the latest times. But Uru and Larsa must also at one time have held a chief place (as can be partially traced in the actual history), for their local deities, Sin and Shamash, play quite a pre-eminent part in the whole scheme of the Babylonian religion. We cannot say with equal certainty whether the important rôle assigned to Ishtar is due to her position as city-goddess of Uruk or as that of Akkad. Undoubtedly in the case of the cults of Shamash and Sin we have from the very beginning to do with worship of the sun and the moon; but it is not so certain that, in the later systematic scheme of the pantheon, the connexion of heaven with Anu, the earth with Enlil, and the water with Ea, corresponds entirely with the original nature of these three gods. Rather may it have been that, under the influence of the systematizing process which had set in, particular features connecting one of these gods with heaven, a second with earth, a third with water, were so utilized as afterwards to distinguish them sharply in these three directions, and to distribute the cosmos among them correspondingly. Again, in the case of Ishtar it is a question whether her cult had originally to do with the worship of the morning (and the evening) star, the planet Venus, or whether here once more the astral character of Ishtar is not a secondary phenomenon, so that we have originally in this deity a personification of fertility in human, animal, and plant life. It is still less certain that the gods Marduk, Nabû, Ninib, Nergal, who in later times were associated on the one hand with phases of the sun, and on the other with the four remaining planets known to the ancients, had, to begin with, any solar or astral significance. There is much, on the other hand, to indicate that the connexion of these gods with the heavenly bodies did not belong to their original cult and nature, but that other features connecting them with nature and human life are the real key to their original character.

Accordingly, we are of opinion that it is impossible to postulate a purely astral basis for the Babylonian religion, either in its Sumerian or its Semitic elements. On the other hand, it must certainly be granted that at a relatively very early date, *i.e.* partially at least, in the period represented by our oldest sources, all the chief gods, and not merely those who, like Shamash and Sin, had their origin in the worship of the heavenly bodies, had been connected with the stars and the cosmos, and that the Babylonian religion had assumed an astral stamp. This comes to light in all the outward forms of the religion, and finds particularly clear expression in the cults and the mythology. This wide-spread astral vein must undoubtedly be regarded as an inheritance from the Sumerians. In its origin it is connected with the remarkable conception of the world as a unity—another undoubted heirloom received from the Sumerians, which Winckler has set before us so clearly. According to this view of the universe, all phenomena in the macrocosm and in the microcosm, in heaven and on earth, are in a relation of mutual correspondence.

2. The chief figures of the pantheon.—Some of these have been already mentioned, but we must now proceed to notice and characterize them more fully.

Anu (Anum) stands at the head of the supreme divine triad—Anu, Enlil, Ea. Whatever may have been the original signification of the name, it was interpreted as meaning 'heaven,' corresponding to the Sumerian *ana*, 'heaven,' and thus the deity was regarded as the heaven-god, over-against Enlil (the earth-god) and Ea (the water-god). He was thought of as enthroned in heaven, especially on the northern pole, which is eternally at rest. Here he reigned as king and father of the gods, who, for their part, had their homes in the stars which circle round the pole. Even the evil demons are in the last resort subject to him. The chief seat of the worship of Anu was Uruk; but in later times he had also a temple at Ashshur, in common with the storm-god Adad. But, at least in the period known to us from our sources, his cult retired strangely into the background. On the other hand, he continues to play a certain part in the mythology, where he is regarded as the supreme disposer of all events. The high esteem which, notwithstanding, Anu at all periods continued to enjoy as the chief of the gods, can only be explained as the after effect of a wide-spread Anu-worship belonging to a pre-historic time. We find *Antu*, or *Anatu*, mentioned as the wife of Anu. She appears sometimes as the goddess of the earth, in contrast with her husband, the god of the heavens.

Enlil (Ellil)—a name which used to be generally misread *Bel*—is the second god of the highest triad. Here he is regarded as the lord of lands, as contrasted with Anu, the lord of the heavens. From the mythical (cosmic) great mountain of the world (earth-mountain), where he had his dwelling-place, he bears the frequent epithet of the 'great mountain.' His wife is called *Ninlil*, also *Bêlit-mâtâte*, the 'lady of lands,' as well as *Bêlit-ile*, the 'lady of the gods,' the mother-goddess *κατ' ἐξοχήν*. Enlil's seat of worship was the city Nippur, with the temple E-kur, whose remains have been excavated by an American expedition. The worship of this deity must have held a specially important place in the earlier Babylonian period. This can be gathered, not only from the direct evidence of the excavations at Nippur, but also from the rôle which, down to the latest times, Enlil plays in the Bab. mythology (cf. the story of the Flood) and hymns. For, although in later days much which had been ascribed to Enlil was transferred to other gods, particularly to Marduk of Babylon, this very fact proves that at a certain period Enlil must have occupied the chief place.

Ea is the third god of the highest triad, and, as such, ruler of the water-depths. The pronunciation of the name as *Ea* has not yet been quite fully established. Perhaps, judging from the *Aós* in Damascius, the name ought rather to be read *Ae* or something similar. His seat of worship was Eridu in the south of Babylonia, lying near the sea and the embouchure of the Euphrates and the Tigris. The cult of Ea must also once have enjoyed the highest reputation, as is indicated by the after-effects in the myths (cf., again, the story of the Flood) and the literature of exorcism. Owing to the fact that at a later date the cult of Eridu came, in a way that is not yet quite clear, to be combined with the cult of Babylon, Ea as the father of Marduk remained an object of living worship to the latest period of the Babylonian religion. He is regarded as the one of the great gods who stands nearest to mankind, and is thus most ready to help in difficult situations, and who, as the wise god, the lord of wisdom, has always the necessary means of assistance at hand. In particular, he helps by means of his own element, the healing water of the streams and the underground springs, which play an exceedingly important part in exorcism—the peculiar domain of the Ea-cult. Here he is assisted by his son Marduk, who in this connexion is to be regarded not as the city-god of Babylon, but rather as a deity of Eridu, whose identification with the god of Babylon was only secondary. Ea's wife is *Damkina*.

Sin, the moon-god, the first of the second triad of gods consisting of Sin, Shamash, and Ishtar (or also Sin, Shamash, and Adad), is the city-god of

Uru (OT *Ur*) in South Babylonia, where his temple, *E-kishshirgal* ('house of light'), stood. But the Sin-cult had a strong hold at an early date also at Harrān in Mesopotamia. For even as early as the sources derived from Boghazköi (middle of the 2nd mill. B.C.), Sin of Harrān is mentioned. Here also a name readily applied to him is *Bēl-Ḫarrān*, 'lord of Harrān.' His wife is always called *Ningal*, 'the great lady,' 'the queen.' His son is Shamash, the sun-god (in Harrān, Nusku specially appears as the son of Sin). According to the one view at least, Ishtar is regarded as his daughter. The figure of Sin was undoubtedly connected from the very first with the worship of the moon, for the name *Sin* was actually used by the Babylonians as an appellative for the moon. Moreover, in the hymns addressed to Sin his character as moon-god is quite clear; and it may be noted in this connexion that the moon-god is regarded as a pre-eminently benignant and well-disposed deity. Also connected with the moon is Sin's rôle as the god of oracles, although in this respect he is somewhat overshadowed by Shamash, the oracle-god *κατ' ἐξοχήν*.

Shamash, the sun-god, comes next to Sin in the series of deities, and is regarded as his son—a circumstance to be explained perhaps by a later sun-cult having displaced an earlier cult of the moon. In the case of Shamash also the name of the god is identical with the Babylonian and the common Semitic name for the sun, so that here also the connexion of this deity with the great star of day is at all events original. The sun-god, moreover, of Babylonian religion is always of the male sex; whereas in South Arabia, *e.g.*, the sun was worshipped as a goddess. The seats of worship peculiar to Shamash are: in Southern Babylonia, Larsa; in Northern, Sippar. In both of these places his temple was called *E-babbar*, 'clear shining house,' that which 'is as the dwelling of heaven.' His wife or mistress is *Aja*, 'the bride.' As son of Sin he is also regarded as the brother of Ishtar. As children of his we find mentioned Kettu, 'justice,' and Mēsharu, 'rectitude'—personifications of qualities which belong to Shamash pre-eminently as the supreme divine judge. There is further associated with him his charioteer, Bunene. In many hymns Shamash is celebrated as the sun-god, who every morning favours mankind with his light, who is the champion of all good and the enemy and avenger of all evil. Thus he is specially regarded, as is noted above, as the supreme judge in heaven and on the earth, to whom all legislation is ascribed (cf. the introduction to the laws of Ḫammurabi and the relief figure of Shamash on the stele containing this code). As sun-god he was at the same time the supreme oracle-god, in whose name all soothsaying was carried on, and who was the patron-god of the gild of soothsaying priests which held so important a place in Babylonia.

Ishtar, often placed third in the triad of divinities along with Sin and Shamash, is the most prominent female deity in the Babylonian pantheon. Starting with local cults in which, as a female deity, she occupied the chief place, Ishtar came in the end practically to absorb all other goddesses of the Assyro-Babylonian pantheon, so that her name became, even at an early date, a Bab. appellative for 'goddess.' Whether her cult, like that of Sin and Shamash, was from the beginning connected with star-worship—especially that of Venus—cannot be decided with certainty, although this connexion of Ishtar with the planet Venus and her character as 'queen of heaven' may go back to remote antiquity. The name *Ishtar*, whose origin and etymology are still matter of dispute, does not enable us to come to any definite conclusion on this point. As little can we gather any certain information from the Astarte figures of the other Semitic religions, which are in name and character closely related to the Babylonian Ishtar. Possibly we ought rather to assume a greater antiquity for her character as the goddess of fertility. Her principal seats of worship were Uruk (where she was also worshipped as Nanā), Akkad (here worshipped as Anunītu), Nineveh, and Arbela. Here too, as is indicated by the very names Nanā and Anunītu, we have undoubtedly to do with what were originally independent local deities, who came only in the course of time to be connected and identified. This no doubt also accounts for the way in which, in the later Assyro-Babylonian religion, quite heterogeneous elements are combined in the figure of Ishtar. Her many-sided origin is again reflected in the varying genealogical relation in which she is placed to the other gods. Thus she appears at one time as the daughter of Anu, at another as the daughter of Sin. The following are the most prominent of the varied qualities of Ishtar. She is the goddess of love and of the life of Nature in general, the goddess in whose cult, particularly at Uruk, temple-prostitution was a feature. In the mythological literature, especially in 'Ishtar's descent to Hades,' this characteristic of Ishtar as the goddess of the sexual impulse occupies a prominent place. On the other hand, she is expressly the goddess of war and of the chase. In this aspect she is hailed with predilection by the Assyrian kings who were lovers of war and the chase. The character of a mother-goddess appears to have been attached to the person of Ishtar only after the figures of other mother-goddesses, particularly Ninlil (Bēlit-ile) and Damkina, had been assimilated by her. In respect of astral connexion, we find Ishtar associated not only with the planet Venus, but also with the brightest fixed star Sirius. Her sacred animal is the lion, but perhaps the dove also belongs to her. In the countless hymns addressed to her Ishtar is hailed as goddess in all the aspects mentioned above. But these Ishtar-hymns sometimes reach also a relatively high ethical level, glorifying her as the mightiest and most merciful helper of mankind, who frees from curse and sickness, and forgives sin and guilt. A unique feature in Bab. mythology is the relation between Ishtar and Tammūz (see below, under 'Tammūz').

Marduk (OT *Merodach*), the city-god of Babylon, is, from the point of view of his significance in the Bab. mythology, most closely connected with the fate of the city of Babylon. Just as Babylon came to the front politically at a late date as compared with the other cities of Babylonia, but thereafter always overshadowed the whole in importance and power, so also Marduk is a younger figure in the Babylonian system of deities, and yet he finally comes near to absorbing all the other gods. The meaning of the name *Marduk* has not yet been satisfactorily explained. His temple in Babylon was called *E-sagila* ('lofty house'), with the temple-tower *E-temenanki* ('house of the foundation of heaven and earth'). Mention is found of his wife *Sarpanitu* ('the silver-gleaming one'), of his father Ea, and of his son Nabū. But this connecting of Marduk with Ea and Nabū is undoubtedly accounted for by an assimilation of the local cults of Eridu and Borsippa and their gods Ea and Nabū with those of Babylon. On the other hand, an original feature of the Marduk-cult at Babylon appears to be present in the fact that his chief feast, the later general New Year festival of Babylonia, fell at the time of the spring equinox. This fact, along with many other phenomena,

leads us to conclude that Marduk was essentially a deity who, as far as the year is concerned, was conceived as embodied in the spring sun bringing new life and light, and similarly embodied in the morning sun by day. At a still earlier date, perhaps, he was regarded as only a god of vegetation, who had his chief form of manifestation in the reviving vegetation of spring-time. On the other hand, the rôle of arbiter of destiny, which Marduk assumes at this New Year festival, seems to have been first taken over from Nabû. The same holds good with regard to further features, which came later to be regarded as essential characteristics of Marduk, although certain original traits in his character may have facilitated this assimilation. Thus the quality of Marduk as the god of healing and the helper in all sickness and need—the rôle which he accordingly plays in the literature of exorcism—is derived, as we saw in the case of Ea, from the cult of Eridu. The same source, in all likelihood, is responsible for the emphasis laid on Marduk as the wise and prudent among the gods. In like manner, the rôle of creator, ascribed to Marduk in the Bab. mythology, was only secondary and transferred to him from other gods, like Enlil of Nippur and Ea of Eridu—a conclusion clearly indicated by the respective myths themselves. The connecting of Marduk with one of the planets—during the supremacy of the city of Babylon, with the clear shining Juppiter—is certainly not original, but merely a product of priestly astral speculation. We have still to mention that the proper name *Marduk* was, in the later period, more and more displaced by the appellative *bēlu*, 'the lord,' so that finally Marduk was almost exclusively designated as *Bēl*. In like manner, his spouse came to be called by preference *Bēlit*, 'lady.' In the extant hymns to Marduk naturally all the features are reflected which were finally ascribed to him as the supreme being, the king of all the gods. Like the hymns addressed to Ishtar and Shamash, the Marduk-hymns belong to the noblest and relatively highest ethical products of the Babylonian literature.

Nabû (OT *Nebo*), the city-god of Barsip (Borsippa), occupied, it would seem, in the more ancient period before the rise of Babylon as the recognized capital, a more important position than later, when in the system of the Babylonian priesthood he is regarded merely as 'son' of Marduk and as 'recorder' of destiny at the New Year festival. The name *Nabû* is Semitic, and signifies 'announcer.' What kind of 'announcement'—possibly that of destiny—is in view is uncertain. His later function, already mentioned as recorder, writer of destiny, at all events favours the notion that the determining of destiny belonged originally to him, and was perhaps transferred from him to Marduk. Nabû is regarded not only as the writer of destiny, but in general as the god of the art of writing and of science. Among other essential qualities of Nabû we have to note that he often appears as a god of vegetation—probably one of the most original traits in his nature. On the other hand, Nabû probably owes his connexion with a planet—latterly Mercury, in the pre-Babylonian period possibly Juppiter—to priestly speculation, which drew all the deities into its astro-mythological system. The same reason will account also for sporadic references associating him with the darker half of the year, in opposition to Marduk, the god of the bright half. The temple of Nabû in Borsippa bore the name *E-zida* ('perpetual house'), with the tower *E-uriminanki* ('house of the seven rulers of heaven and earth'). Nabû's wife is called *Tashmētu*, a personification of an abstract idea, 'audience,' without much living content. Nanâ, too, frequently appears as the wife of Nabû, and so does Nisaba the goddess of corn.

Ninib is merely the conventional pronunciation of the name of a chief god of the Babylonians and Assyrians. Unfortunately we are still in ignorance as to the real phonetic reading of the name. Lately, indeed, we have got nearer the goal by the discovery that the Aramaic reproduction of the name of this god was composed of the consonants *'-n-w-š-t*; but opinion is still divided as to the Bab. prototype of this Aram. equivalent. Ninib originally belonged to the cult which had its seat at Nippur. Here he was regarded as the first-born son of Enlil, and the third of a triad composed of father, mother, and son (Enlil, Ninlil and Ninib), which we encounter in a similar fashion in most of the old Bab. seats of worship. His essential character is that of a mighty hero, who victoriously casts down all opposing powers—the aspect under which he was afterwards taken over by the Assyrians as specially the god of war and the chase. In this aspect Zamama of Kish closely resembles Ninib, and is occasionally directly identified with him. At the same time, Ninib is a god of healing—a quality which is specially ascribed also to his wife *Gula*, the great physician, the guardian patroness of the healing art. He is further regarded as a god of the fields—a trait which brings him into close contact with Ningirsu, the city-god of Lagash, a deity who in later times was very often directly identified with Ninib. Here again, perhaps, as in the similar case of Nabû, it is possible that this relation to vegetation is one of the oldest features in the character of Ninib. On the other hand, the solar and astral traits in Ninib may again be due to his introduction into the priestly astro-mythological system. As far as his solar character is concerned, it is still doubtful whether he is to be regarded as connected with the morning and spring sun, or rather to be thought of as associated with the sun of noon and summer. The planet associated with him is called Kaimānu (Kēwān)—the name in the Babylonian period at least for Saturn, but perhaps in the earlier period for Mars. In the heaven of fixed stars he was localized in Orion, and it is very likely that the conception of the constellation of Orion as a warrior goes back to the elevation of the warlike Ninib to the skies.

Nergal is properly the city-god of Kutû (OT *Cuthah*), where his temple bore the name of *E-shitlam*. The (Sumerian) name *Nergal* is unfortunately of uncertain significance, although the pronunciation is fixed by its reproduction in the OT and on other grounds. Nergal has quite a peculiar position in the Babylonian pantheon and mythology, being expressly the god of the under world, ruler of the realm of the dead, and as such the husband of *Eresh-kigal*, the sovereign lady of the under world (although goddesses with other names—Laṣ (Laz) and Mamītu—are associated with him as city-goddesses of Cuthah). It is very questionable, however, whether this relation of Nergal to the realm of the dead is original, and not a later development due to some other trait in his character, or some peculiarity of the city of Cuthah. Thus Nergal is also a god of plague and fever, and as such stands very close to Ira, the plague-god proper, and is often identified with him. Like Ninib, he also appears as the god of war and of the chase. Again, in the same way as Ninib, he also appears as a benevolent god of the fields, granting fertility. It is possible, as was suggested in the case of Ninib, that in this relation to vegetation is to be found the original feature of his character. On the other hand, the solar and astral associations may in his case also be secondary. For the connexion of Nergal with

the sun, the destructive influence of the noonday and midsummer sun would be the determining factor. As far as connexion with the planets is concerned, he was, at least in the Babylonian period, associated with Mars, but possibly at an earlier date with Saturn. In the firmament of fixed stars he was probably represented in the constellation of Leo (which was known in the Babylonian age), as we meet elsewhere with the lion as the symbol of Nergal.

Nusku (or Nushku), the meaning of whose name is still uncertain, belongs to the cult-group of Nippur, where he appears as the great plenipotentiary of Enlil. Besides, he is met with in the sphere of Sin of Harrān, and is here occasionally introduced directly as the son of Sin. As to his nature, we are at least certain that he is a god of light. Frequently his name even alternates with that of the fire-god Girru (Gibil). Hence, like the latter, Nusku is ethically regarded as the enemy and conqueror of all evil and the promoter of all good. As thus connected with the moon-god Sin, Nusku is specially associated with the sickle of the crescent moon.

Girru (the Sem. form of the Sumer. *Gibil*) is the personification of fire, the fire-god proper of the Bab. pantheon. As such, he is, for instance, the god of smith-craft; he is also the god of the holy sacrificial fire. But, above all, he readily assumes an ethical aspect, as the terrible god, who destroys evil by his purifying fire.

Ramman (also called **Adad**) is the special storm- and thunder-god of the Babylonians. Both forms of his name, Ramman and Adad, of which the latter is the more common in Assyria, are of Semitic origin, and may refer to the roar of the thunderstorm. It is likely that the designation Adad is not native to Assyro-Babylonia, but goes back to the Western Semitic *Hadad*. But in any case the figure of a storm-god as such is of very old standing in the Babylonian pantheon, being found even in the Sumerian period, when he seems to have borne the name *Ishkur*. The great importance assigned to the storm-god in the Babylonian pantheon is evident not only from the rôle which he plays in the myths (*e.g.* the story of the Flood), but also, *e.g.*, from the fact that, in the official lists of the gods, he often occupies the third place in the second divine triad, namely, Sin, Shamash, and Adad, instead of the usual Sin, Shamash, and Ishtar. As storm-god he was naturally hailed as the giver of the beneficent rains; while, on the other hand, by withholding rain he could bring drought and famine on the land. In his aspect as thunder-god he is readily viewed as one who by his thunder and lightning destroys the host of the enemy. His symbol is the thunderbolt, his sacred animal the ox. In Babylonia, among other seats of Ramman-worship, there is mention of Karkara and Khallab; in Assyria, at the ancient capital Ashshur, a temple was consecrated to him in common with Anu, who is represented as his father. Ramman also appears with Shamash as the god of oracles. The name of his wife is given as *Shala*.

Tammūz is a deity who occupies an altogether unique position in the Bab. pantheon. He does not belong to the number of the great principal gods. His cult must, notwithstanding, have enjoyed great prestige. This is indicated by the fact that the Tammūz-cult survived in the lands adjoining Babylonia on the west, and in the post-Babylonian period. The name *Tammūz* is derived from the Sumer. *Dumuzi*, and signifies literally 'real child'; the older form is *Dumuzi-zuab* = 'real child of the water-depths.' He is described as the god of the green plant-growth, which is produced and nourished by fresh water. For Tammūz is essentially the god of vegetation, whose reviving in spring and withering in midsummer this deity personifies. Our sources do not, so far at least, enable us to decide whether (as in the Egyptian Osiris-cult and probably in the later Tammūz-Adonis-cult outside Babylonia) the native Bab. Tammūz-cult saw in that deity a figure of human life with its growth and decay, and even included the hope of a continuance of life for man after death. One of the main features of this cult is the mourning for the premature death of the youthful Tammūz, which found expression in the weeping for him by male and female professional mourners—a custom witnessed to by a number of hymns referring to it. There are also traces of a joyous festival in honour of the revivification of Tammūz. The myth of Tammūz brings him into close connexion with Ishtar, making him her husband, or rather her lover. True, it is Ishtar also at whose door, according to the Gilgamesh epic, lies the responsibility for the yearly mourning for Tammūz. But side by side with this appears another conception, for instance in several Tammūz-hymns and in the so-called 'Descent of Ishtar to Hades,' according to which it is Ishtar that follows Tammūz to the depths of the under world and seeks to bring him up again. The sister of Tammūz, Geshtinanna, is also found playing this part.

Ashshur, the national god of the Assyrians, also deserves special mention. Originally the local god of the city bearing the same name, the old capital of Assyria, Ashshur thus gained the position of supreme god of Assyria. As such he appears at the time of the Assyrian supremacy especially as a god of war, who during campaigns gives the Assyrian kings victory over their enemies, and calls them to hold sway over all nations. It is easy to understand how all that was attributed originally to the supreme gods of Babylon—such as Anu, Enlil, and Marduk—came to be transferred, not only in the mythology but elsewhere, to Ashshur, as the chief god of Assyria. Thus, *e.g.*, he undertakes the conflict with the sea-monster Tiāmat, which plays so large a part in the Bab. Creation epic.

Finally, mention must be made of the names *Igigi* and *Anunnaki*—designations for the Bab. deities as a whole, in their arrangement as gods of heaven and gods of the earth (under world). In the astral sense, in particular, we have to understand by the *Igigi* the gods who were thought of as embodied in the stars above the horizon; while the star-gods, who had sunk below the horizon, were regarded as *Anunnaki*.

Alongside of the great gods, properly speaking, whose chief representatives have been described above, the Babylonians included in their religious system a great number of lesser divine beings. These again were divided into those who manifested a character positively good and well-disposed to mankind, and those who showed a disposition positively hostile to man, and a desire to injure him. To the *good spirits* belong, among others, the guardian deities (god and goddess), one of whom was supposed to be assigned to every man. The *evil demons* by a favourite conception make their appearance in groups of seven. They play a very important part in the literature of exorcism, as all misfortune and sickness against which the exorcisms were directed were traced back to their evil influence. In the same category with these evil demons were placed the spirits of the dead, the ghosts, to whom all kinds of hostile action towards the living were ascribed.

3. The myths and epics.—In the study of the Babylonian religion we have at our command a considerable treasure of myths and epics. The following is a list of those which are most important for our purpose, and thus far best known from the excavations: the Creation and cognate

myths, the Adapa myth, the story of the Flood with the other Atrakhasīs myths and the myth of the primeval kings, the Ira myth, the Labbu myth, the Zū myth, the Etana myth, Nergal and Eresh-kigal, Ishtar's descent to Hades, the Gilgamesh epic. Most of these literary remains are derived, in the form in which we now have them, for the greater part, from the library of Ashurbanipal. But internal and external evidence shows that their composition belongs to a much earlier period. In the case of some of them we have even actual copies of an earlier date (*c.* 2000–1500 B.C.).

(*a*) *The Creation.*—This part of the Babylonian mythology—partially known to us, even before the re-discovery of ancient Babylonia, from the Greek tradition of Berossus—receives fullest treatment in the cuneiform mythological literature in the seven-tablet epic *Enuma elish*, so called from its opening words. The contents are briefly as follows: Before the heavens and the earth were made, the primeval father Apsū and the primeval mother Tiāmat (both personifications of the primeval ocean) along with their son Mummu were in existence. From these in a succession of generations sprang the gods. Apsū and Tiāmat, disturbed in the peace they had up to this time enjoyed, and accordingly discontented with the new condition of affairs, devise a plan against the new world of gods. Apsū perishes at this stage. But Tiāmat vigorously prosecutes the scheme, and chooses for herself a new husband and assistant in the person of Kingu, to whom she gives the tablets of destiny. She attracts a section of gods to her side, and creates a number of monsters—the eleven—to help her in the battle against the gods. The contest at once begins. After several other gods have attempted in vain to overcome Tiāmat, Marduk at last offers to enter the lists against her. But he stipulates that, if he is victorious, the highest place among the gods shall in future belong to him. In a solemn conclave of the gods this condition is accepted, and homage is done to him as the future king of the gods. Then comes a detailed and most vivid picture of the preparations for the battle of Marduk with Tiāmat and of the battle itself. Marduk proves victor, and puts an end to Tiāmat. He then turns his attention to the gods in her train, overcomes these also, and makes them prisoners. In the same way he renders harmless the monsters she has created to assist her, and finally her husband Kingu suffers the same fate. Marduk then returns to the corpse of Tiāmat and cuts it in two parts, from which he fashions the heavens and the earth. Then follow the several acts of creation. Accounts have been discovered of the formation of the heavenly bodies, and, after a large gap, the beginning of an account of the creation of man. The whole concludes with a hymn to Marduk as the creator-god. It is worthy of note that this version of the Creation myth is clearly adapted to the position of Marduk as city-god of Babylon, the rôle of creator being ascribed to him, although in other versions and at other centres of worship it was filled by such gods as Anu, Enlil, or Ea. The creation of the world by Marduk forms at the same time the festal legend of the Babylonian New Year festival, the creation of the world being evidently paralleled with the annual reviving of nature in the spring. Alongside of this highly detailed version of the Creation myth we possess a shorter one, which, apart from a number of other marked variations, differs from the other particularly in this, that it knows nothing of the battle of Marduk with Tiāmat, but describes the world as arising—here also out of the ocean—without conflict, in quite a peaceful manner.

(*b*) While, as yet at least, we cannot prove the existence in Babylon of a so-called Paradise legend proper, we have in the myth of *Adapa* a story which seems intended to explain the mortality of man as opposed to the immortality of the gods. Adapa, a son of Ea, has received from his father a high degree of wisdom—hence his designation 'the superlatively prudent' (*Atrakhasīs*)—but not the gift of eternal life. On account of an act of violence committed by him, he is cited to appear before the throne of Anu, the god of heaven. Adapa here had the opportunity, by partaking of the food and water of life which Anu offered him, of acquiring immortality for himself. But, acting on a prior counsel of Ea, he rejected the offered gifts, and thus forfeited eternal life.

(*c*) Between the Creation and the Flood the Bab. mythical chronology, at least as we know it from Berossus,—the cuneiform originals supply as yet only sporadic traces,—interposes a list of *ten primeval kings*, of whom the hero of the Flood, Utnapishtim-Atrakhasīs (in Berossus, *Xisuthros*), is the last. The inscriptions hitherto have yielded no details concerning any of these kings except the seventh in Berossus' list, Evedoranchos. According to them, Enmeduranki—the native form of the name—was king in Sippar, the city of the sun-god Shamash. The latter adopted him as his associate, and taught him all the secrets of the soothsayer's art. Hence Enmeduranki was regarded by the Babylonians as the ancestor of the highly esteemed soothsaying priests.

(*d*) It is most likely the same *Atrakhasīs* as the hero of the legend of the Flood that meets us in another mythical story. This myth tells how all kinds of plague, blight, pestilence, famine, and sickness were sent upon men by Enlil, the lord of gods, on account of their constantly repeated transgressions. But Atrakhasīs, who also appears in this myth as a confidant of Ea, always succeeds by his intercession in securing the cessation of the judgment. The connexion of this with the Flood myth is probably that the Flood was thought of as the last great judgment of Enlil on men because of their continual relapses into sin—a judgment from which there was no escape except for Atrakhasīs himself.

(*e*) It is not so certain whether the myth of the destroying god *Ira* should be placed in the same category, *i.e.* among the judgments preceding the Flood. In this myth Ira's plenipotentiary, Ishum, at his command traverses all lands, and works a frightful carnage among men.

(*f*) The Bab. *Flood narrative*, like that of the Creation, was long known from the pages of Berossus. In the original recovered by the excavations, the story forms part of the Gilgamesh epic, although there are clear indications that it once existed independently. The chief features of the story are briefly as follows. The gods in solemn assembly determine to send a flood in order to punish men for their sins (this is plainly stated, at least at the close of the narrative). The god Ea, who had been present at the council, reveals this design to a protégé of his, Utnapishtim—also called *Atrakhasīs*, 'the superlatively prudent'—of the city of Shurippak, and commands him to build a ship for his safety, and to take living creatures of every kind with him into it. Utnapishtim carries out the command, builds his ship according to a scale supplied by the god, and introduces his family and relatives, as well as all kinds of animals, into it. Shortly before the beginning of the flood, whose advent had been previously indicated to him by a divine sign, he enters the ship himself and closes the door, entrusting the steersman with the guidance of the vessel. Early next morning the flood breaks forth, accompanied by violent storms and thick darkness. The gods themselves are afraid of the

flood, and ascend to heaven. The mother of the gods laments over the destruction of her human offspring, and repents having given her assent to the flood in the conclave of the gods. Six days and six nights the flood rages. But on the seventh day the sea is calm and the storm ceases. Utnapishtim opens an air-hole, and the light falls on his cheeks. Then land begins to appear, and the ship grounds on the mountain Niṣir. After seven days, Utnapishtim lets a dove fly from the ship. But she comes back because she finds no resting-place. The same happens with a swallow, which Utnapishtim next sets free. At last a raven, which was the third bird liberated, does not return, having settled down to feed. Then Utnapishtim brings out all that are in the ship, and offers a sacrifice, whose sweet smell the gods perceive with pleasure. Then follows a scene in which the mother of the gods and Ea wrangle with Enlil for having caused the flood. Enlil himself, however, is enraged that all men did not perish, and that one, Utnapishtim, with his family, has been saved. In the end, however, he changes his mind, and even endows Utnapishtim and his wife with the divine nature, and removes them to the realm far distant, to the 'estuary of the streams.'

We do not purpose here to discuss the real meaning of the Babylonian Flood myth—a subject on which the opinions of students are very much divided. We may say, however, that in all probability no actual historical occurrence is even reflected in it; it is more likely that we have to do with a nature myth whose background is formed by events in the daily and yearly course of the sun.

(*g*) The subject of the *Labbu myth* is the raging of a fabulous lion-like monster, allied with a mythical water-serpent, against men on the earth. After vain attempts on the part of other gods, one god finally succeeds in overcoming this lion (*labbu*), and thereby procures for himself divine supremacy, as Marduk did after his victory over Tiâmat.

(*h*) The *Zû myth* relates how the tablets of destiny, whose possession ensures the supreme power, were once stolen from Enlil by the storm-god Zû. Here, again, the supremacy is promised to whoever recovers the tablets from Zû. And, as in the case of Tiâmat and of Labbu, it happens that various gods make vain attempts till at last—for so we may complete the defective text—one of them is successful.

(*i*) The *Etana myth* has for its principal figure Etana, a primeval hero, who seems to be regarded as the founder of the kingship on earth. In order to bring about the happy birth of his son, who is to be the first king on earth, he applies, by the advice of Shamash, to the eagle for help to bring from heaven the medicinal herb which shall secure a safe delivery. Etana, seated upon the eagle, undertakes a journey, described with epic fulness of detail, to the highest heaven, to the throne of the queen of heaven, Ishtar, where the wonder-working plant is kept. But when he has almost reached his goal, Etana is overcome with fear, and drags the eagle down with him till both fall on the earth. Unfortunately, the conclusion is wanting, but presumably it was to the effect that the child, in spite of the deadly fall of Etana, came happily into the world and became the ruler of the land. The same myth further tells how this eagle, as an enemy of the serpent, once devoured its brood, in return for which the serpent plucked his wings and left him in a pitiable condition in a ditch. This event seems to have taken place before the flight to heaven with Etana; hence we may assume that, after his misfortune with the serpent, the eagle regained his lost powers.

(*j*) The myth of *Nergal and Eresh-kigal* tells how Nergal effected a violent entrance into the under world and threatened its goddess, Eresh-kigal, but afterwards became her husband and king of that realm. The visit of Nergal to the lower world was occasioned by a dispute, caused by Nergal, between Eresh-kigal and the gods of the upper world. In his passage he is accompanied by twice seven fever-demons.

(*k*) The following are the principal points in the so-called *Descent of Ishtar to Hades*. Ishtar, the daughter of Sin, directs her steps to the realm of the dead, which, so far as its appearance and inhabitants are concerned, is painted in the darkest colours. On arriving at the door of the realm of death, she imperiously demands entrance from the doorkeeper, and, on the command of Eresh-kigal, this is granted. At every one of the seven doors, however, an article of clothing is taken from her by the doorkeepers, so that finally she has to enter the kingdom of the dead perfectly naked. Here she is imprisoned by Namtaru, at the command of his mistress Eresh-kigal. Coincident with Ishtar's descent to the lower world, all sexual intercourse ceases on earth among both men and animals. In this extremity Ea interposes. He creates a messenger, Ṣitushunamir, and sends him to the under world, with the result that Eresh-kigal, although against her will, commands Namtaru to sprinkle Ishtar with 'water of life' and to lead her out through the seven doors of the under world, restoring her garments as she goes. The conclusion of the mythical narrative then refers, in a way as yet not very clearly understood, to Tammûz, the youthful husband of Ishtar, and his worship, which seems to be connected with the cult of the dead.

(*l*) The *Gilgamesh epic* is, so far as we can now judge, the most extensive epic poem of the Babylonians. It is specially rich in mythological matter, and hence, in spite of its being for the most part a heroic epic, its main contents deserve to be indicated here. The story is as follows. Gilgamesh is the ruler of the city of Uruk. His yoke rests heavily on the citizens. In answer to the prayer of the people of Uruk, the goddess Aruru creates Eabani in order that he may go on adventures with Gilgamesh. Eabani, a creature possessed of great strength of body and violent sensual desires, dwells at first in the steppes with the wild beasts. It is only by means of a variety of treacherous devices, among which the seductive arts of a prostitute play the chief rôle, that he can be prevailed upon to enter Uruk and become the companion of Gilgamesh. Together, the two make an expedition to the cedar mountain in the East, where dwells the goddess Ishtar—probably the city-goddess of Uruk, who had been carried off by the Elamites—guarded by the watchman Ḫumbaba. Their aim is to kill the watchman and obtain possession of Ishtar. After a fierce conflict, Gilgamesh and Eabani succeed in slaying Ḫumbaba. Ishtar then offers her love to the victorious Gilgamesh, who, however, repels her advances, because she has had many lovers and has always destroyed them. Highly incensed at this affront, Ishtar gets her father Anu to create the ox of heaven, and sends him against Gilgamesh to destroy him. But Gilgamesh and Eabani succeed in slaying the ox, and thereby rouse afresh the wrath of Ishtar, who is besides cruelly taunted by Eabani. It may be as a consequence of this conduct that we find Eabani attacked by severe sickness which ends in his death. Gilgamesh, deeply affected by the death of his comrade, hurries unresting over the steppes. His object is to seek in the far distance, at 'the estuary of the streams,' his deified ancestor, Utnapishtim—

also called Khasīsatra (Atrakhasīs), 'the superlatively wise'—the hero of the Flood. But the way is exceedingly difficult. First it leads through the uncultivated steppe, where lions have their dens; then it goes through the dark mountain Mashu, whose entrance is guarded by two terrible scorpion-like men, who only with difficulty allow him to pass. When he emerges on the other side of the mountain Mashu, Gilgamesh comes to a wonderful park of the gods, lying on the seashore, where the goddess Ṣabītu, covered with a veil, sits on the 'throne of the sea.' From her Gilgamesh receives directions as to the way to Utnapishtim, and is advised to apply to his boatman in the neighbourhood that he may ferry him over the sea and the 'water of death' to his great ancestor. Gilgamesh follows this counsel, finds the boatman, and after all kinds of adventures, especially in crossing the 'water of death,' he reaches Utnapishtim. That hero imparts to the new arrival instruction regarding the meaning of human life, and, at his request, gives him a detailed account of the Flood and of his own translation to his present dwelling-place at the close of the Flood. It is, in fact, the Babylonian account of the Deluge, shortly sketched above, which is here interwoven as an episode into the Gilgamesh epic. At the close of this narrative, Utnapishtim and his wife have recourse to all kinds of magic manipulations, in order to assist their guest to 'life,' but only with very imperfect success. By direction of Utnapishtim, the boatman then causes Gilgamesh to bathe at the place of purification, and thereafter embarks with him to restore him to his home. Gilgamesh luckily finds in the deep waters a wonder-working plant mentioned by Utnapishtim, to which he gives the name 'when grey-haired, the man becomes young again.' This he intends to take with him to Uruk, to eat it, and to return to the condition of youth. But on the way the wondrous plant is snatched from him by a serpent. Great lamentation follows. Finally, along with the boatman, he reaches Uruk, but without the plant. The conclusion of the epic then relates how Gilgamesh, by means of necromancy, enters into communication with the spirit of his dead friend Eabani, and obtains information from him regarding the nature of the realm of the dead.

4. The realm of the dead and belief in a future life.—The ideas of the Babylonians regarding a life after death are to be discovered from various passages in the mythological literature containing descriptions of the realm of the dead: *e.g.* the Descent of Ishtar to Hades, the IInd, Xth, and XIIth tablets of the Gilgamesh epic, the myth of Nergal and Eresh-kigal, and a variety of sporadic passages. On the other hand, certain pictorial representations, the so-called Hades reliefs, which were formerly regarded as pictures of funeral rites and of the Babylonian hell, cannot, according to later investigation, be viewed in this light. The Bab. realm of the dead is depicted in the above passages as a dark place under the surface of the earth, full of dust, wherein the dead, clothed in winged raiment, spend a shadowy existence, having the dust of the earth as their food. The approach to this home of the dead appears to be situated in the western region of the earth, and is effected through seven gates, and therefore seven walls. The entrance is guarded by sentinels. The fate of the dead in the lower world seems to vary according to the way in which they passed from life—those, for instance, who fell in battle obtain a relatively endurable lot (drinking pure water)—or according to the degree in which they are provided with offerings by surviving relatives. The worst fate, according to Bab. notions, that could befall a dead person was to remain unburied. The judgment, too, which the *Anunnaki* pronounced at the entrance of a dead man into the under world no doubt determined largely the conditions of his sojourn there. The ruler of the realm of the dead is the goddess Eresh-kigal, also called Allatu, who is enthroned in a palace as queen. Her husband appears sometimes as Nergal and again as Ninazu. To her retinue belong also Bēlit-ṣēri, the great recorderess of the under world, and Namtaru, the attendant of Eresh-kigal, who carries out her commands. In this place of the departed there is also to be found a spring of 'the water of life,' which seems to be under the control of the *Anunnaki*. The fate of the dead in the under world seems, according to Bab. conceptions, to have been unalterable and permanent. Thus far, at all events, no certain traces have been found in the Bab. literature of any belief in a general resurrection or in the transmigration of souls. The deification of the kings in the old Bab. period—partially during their lifetime and especially after their death—is to be otherwise interpreted, and proves nothing regarding a belief in a general resurrection.

The cult of the dead had an important place in Babylonia and Assyria, although not nearly to the same extent as in Egypt. Among its rites were the arranging of the obsequies, coupled with the appropriate funeral dirge and the usual mourning ceremonies, as well as the regular provision of food and drink as offerings to the departed. The method of disposing of the corpse was always, at least in the historic period (as we learn from the inscriptions and the excavations), that of burial; and all kinds of ornaments and utensils accompanied the body into the grave.

5. Soothsaying and exorcism. — Soothsaying and exorcism in their various forms play a very large rôle in the Bab. religion. Both of these arts were not merely practised unofficially, but formed an important part of the official State religion. Thus in all the inscriptions of the Bab. and Assyr. kings, from the earliest to the latest date, we read of their having recourse to the soothsayer and exorcist at every critical moment of their undertakings as well as in connexion with all important religious ceremonies. This accounts for the high esteem which was always enjoyed by the priestly soothsayer and the priestly exorcist in Babylonia and Assyria. For the same reason the texts relating to soothsaying and exorcism are so exceedingly numerous as to form the chief component of the whole Bab. religious literature.

The principal spheres from which the soothsayer drew his omens were the heavens—particularly solar, lunar, and planetary phenomena—and entrails—particularly the liver of sheep offered in sacrifice. Thus, astrology on the one hand and examination of livers on the other could almost be described as the characteristic features of Bab. soothsaying. There were, however, numerous other phenomena from which omens were obtained. Thus, even as early as the Ḥammurabi period, we have texts relating to hydromancy. There are also numerous instances of soothsaying from dreams, from the action of animals of all kinds, especially from the flight of birds, from unnatural phenomena such as monstrous births — human or animal, — from atmospheric changes, and so on. The copious Bab. literature on the subject consists of exhaustive catechism-like text-books for the soothsaying priests. All possible occurrences are casuistically stated, and their various interpretations given, according to a scheme such as the following: 'If such and such is the condition of the liver of the sheep, then the king (or the land) will have such and such an experience (happy or otherwise).' Inscribed clay models of sheep livers, of which only two specimens have as yet been discovered, were

even used to educate in this kind of soothsaying. There have also come down to us very minute instructions regarding the ritual to be observed in practising the art in question. The patron of the soothsaying priests was Shamash, although Adad's name is frequently coupled with his as occupying a secondary place.

From a religious point of view a much higher stage than this act of soothsaying in the narrower sense exhibits is to be found in oracular responses of a comforting and encouraging character, which were given by priests and especially by priestesses, in the name of the deity. But the extant literature belonging to this department cannot with certainty be dated earlier than the 7th cent., the time of Esarhaddon and Ashurbanipal.

The art of exorcism occupies a similarly important place in the Assyro-Babylonian religion. The priest-exorcist found his sphere of work especially in cases of sickness, where the function of the physician was only gradually evolved from that of the exorcist. It was the duty of the latter to remove the ban which was supposed to lie on the sick person, and to drive out the hostile demons who had presumably caused the trouble. But in addition to cases of actual sickness, the exorcist was called in whenever there was any suspicion of enchantment by evil demons or human beings—witches and wizards—who were conceived to act as the instruments of demons. In the same way it fell to the exorcist to assist at all kinds of ceremonial actions, such as the consecration of temples, the erection of pictures of the gods, etc., and also at the worship of the dead—in short, on every occasion on which men believed they had to fear the interposition of hostile divine powers, and where accordingly the exorcist by means of his charms would be able to counteract the activity of evil spirits. The means used by the exorcist in the ritual consisted, in the first place, in the repetition of incantations, a huge mass of which have been handed down to us in the Babylonian and Assyrian literatures. In addition, there were a great many ritual actions, such as sprinkling with water, smearing the body of the patient, the practice of symbolic ceremonies such as the burning of all kinds of objects, and the like. An important rôle was played also by the penitent who was the subject of exorcism. He had to take a multiform part in the whole proceeding, by recitation and various other actions, such as casting himself on the ground, kneeling, etc. As in the case of soothsaying so in the service of exorcism, an extremely complicated ritual was in use, of which we possess extensive fragments in the form of texts relating to liturgical arrangements. Ea and Marduk appear as the chief gods of the exorcist cult. Eridu, the seat of Ea's worship, is regarded as the home of the rites of exorcism.

6. **Hymns and prayers.**—The Bab. hymns and prayers to the gods reach a much higher religious level than the extensive literature of soothsaying and exorcism. Here again a large literature is at our disposal, although much of it is unfortunately as yet in a very fragmentary condition. This hymn-literature, as we are now able to prove from identical copies belonging to the old Bab. period, emanated preponderatingly from this very early date. From that time they were handed down with little variation, through thousands of years, to the latest times of the cuneiform inscriptions. We obtain from these hymns valuable insight into the religious ideas of the earliest Babylonian period. On the other hand, they can hardly be used as sources for the knowledge of the Assyro-Babylonian religion of the later epochs. For this we have rather to take account of the prayers and hymn-like invocations which are frequently introduced in the royal inscriptions of Bab. and Assyr. rulers, and whose date can thus be exactly fixed. It must also be noted that the Babylonian hymnology, so far as yet known, is almost exclusively of a liturgical character. Further, by far the greater number of the hymns in question belong to the ritual of exorcism, although the connexion of a hymn with this cult must often have been only secondary. As to form, the Bab. hymns are, as was to be expected, characterized by a strongly marked rhythm. This strikes the eye at once from the fact that the verses each occupy a separate line, and often half-verses are indicated by the writing being in columns. The same impression is made on the eye by the frequent combination of two verses into a double verse. Similar phenomena are found in the other poetical literature of the Babylonians, in the myths, epics, incantations, etc.

Most of the liturgical pieces, so far as they are not formulæ for exorcism, consist of festal hymns in honour of a god or goddess. These were sung by the priests or priestesses on the particular feast days, and were intended for the glorification of a particular deity—often through the description of his exploits as portrayed in the myths. Thus we possess a series of New Year hymns, which were intended to be sung at the New Year festival, Marduk's festival in the spring. So there are a number of hymns to Tammūz, which no doubt were used especially on the occasions of the weeping for Tammūz and the rejoicing for his return. In the case of many other hymns, such, for instance, as those to Sin, Shamash, or Ishtar, there is little doubt that these also were intended mainly for festivals in honour of these deities. On the other hand, the numerous incantation hymns, as is at once indicated through their frequent introduction into the exorcistic liturgies, were destined for the mouth either of the priest or of the penitent, to be employed for purposes of exorcism. These incantation formulæ, like the act of exorcism itself, exhibit a fixed type, the different successive acts of the ritual finding expression in the hymn, now in a shorter and now in a longer form. In the case of the priest we have the recitation of his credentials, the description of the action of the demon, the praise of the god who overcomes the hostile demon, and finally the act of exorcism proper. In the case of the penitent, there is the confession of sin, the singing of a lament, the repetition of a penitential litany, and, finally, the offering of a prayer of thanksgiving, and the singing of a hymn of praise for the divine help received. So far as their contents are concerned, we constantly encounter, alike in the festal hymns and the incantation formulæ, the most elevated religious and ethical conceptions to be met with in the whole Babylonian literature.

7. **Temples, priests, sacrifices, rites, festivals.**—The inscriptions, from the earliest to the latest period, all go to show how numerous were the *temples* which the Babylonians and Assyrians erected for the worship of their gods. Not only had every city-god his chief sanctuary at his special seat of worship, but also all the gods belonging to the same group with him, as well as a multitude of gods outside it, had temples erected for their worship, at least in all the larger cities. The structural plan of the Babylonian temple can to a certain extent be gathered from the numerous inscriptions of Bab. and Assyr. kings relating to temples built by them. Lately our information has been extended by the discoveries in Nippur, Babylon, and Ashshur, where a number of ground-plans have been unearthed. Allowing for all kinds of variations in detail, the general type of building seems to have been as follows. A large rectangular

court, approached through a smaller fore-court, occupied the principal space. At the end farthest from the entrance there was a small sanctuary, the most holy place of the temple, where the image of the god was set up. At the sides of the great hall there were to be found a variety of side-chambers, used for keeping the temple-vessels, and as apartments for the priests. The temple proper had attached to it a storeyed tower (*ziqqurat*) rising from a square foundation. This tower was regarded as specially sacred, and bore a special name. Like the temple as a whole, the tower in particular was looked on as an earthly copy of the world-structure, which was also conceived as of storeyed form. The tower seems also to have been frequently looked on as the 'grave' of the god to whom the temple belonged. The names of the temples and temple-towers belong almost exclusively to the old sacred Sumerian language —an indication of the influence which ideas originally Sumerian continued to exert on the Bab. cult. We must note also a very important part that was played by the temples in the great cities such as Babylon, Nippur, and Sippar, altogether apart from the religious sphere. Owing to their possession of extensive lands and their wealth derived from other sources, they were a determining factor in the economic life of Babylon, becoming to a large extent centres of trade. Proof of this is found in the numerous commercial contracts, belonging to the earliest as well as the latest period, which have been discovered in the temple archives.

In view of the important place which religion occupied in the life of the Babylonians and Assyrians, the prestige and power of the *priests* were at all periods naturally very great. Whenever any of the kings, as, *e.g.*, Sennacherib, attempted to free himself from the tyranny of the priesthood, his action simply recoiled upon himself, and a reaction always set in which only intensified the power of the priests. The subdivisions of the priesthood were many, as is sufficiently evidenced by the great variety of designations applied to them. A specially important place was held by the priestly soothsayers and the exorcists or propitiatory priests, whose functions have been dealt with in the foregoing section on 'Soothsaying and exorcism.' A peculiar position was occupied also by the priestly musicians, whose duty it was to sing the hymns in the performance of the cult. For each of these separate classes of priests there were special ritual instructions, which are still partially extant. These give most minute directions regarding the separate functions of the priests in the various acts of worship. The different classes of priests also formed among themselves exclusive bodies with their own traditions. In this connexion the gild of soothsayers was specially exclusive, the office descending from father to son, and very strict rules being laid down as to physical condition as a qualification for priestly service. Similar, though presumably not quite so stringent, regulations would apply to other priestly gilds. The fact that the arts of reading and writing, and indeed every branch of knowledge, were in the hands of the priests, readily explains why in the Bab. literature almost every subject is looked at from the point of view of religion and priestly wisdom. This knowledge as well as acquaintance with writing and literature—in Babylonia no easy attainment—were communicated esoterically in the priestly schools, where successive generations of priests underwent long years of instruction. Of this we have abundant evidence through our possession of the actual tablets used in this training. Priestesses are also repeatedly to be met with in Babylonia, especially in connexion with the cult of Ishtar; but women make their appearance in the cult more especially as discharging the function of *hierodouloi* or temple-prostitutes.

At all periods of the Assyro-Babylonian religion the *sacrificial system* was extensive and multiform. Much can be gathered about Bab. sacrificial customs not only from numerous notices in the inscriptions, but also from pictorial representations of sacrificial scenes. Very frequently the sacrifice is regarded, quite in accordance with its original idea, as a gift, supplying the god with food or drink, or (in the case of the 'incense'-offering) causing him to smell a sweet odour. But in other passages the idea clearly emerges that the animal sacrifice is a substitute for a human sacrifice that would otherwise have to be offered to the gods. At the same time, there is not any certain trace of actual human sacrifice either in the literature or in the pictorial representations. The offerings came to be regarded to a large extent as simply a temple-due, and as means of support for the numerous priests. The materials of the bloodless offerings were chiefly bread, wine, water, mead, honey, butter, milk, oil, grain, and fruit. The animal sacrifices usually consisted of oxen and sheep, but other domestic animals were also offered, as well as fowls and fish, and even wild animals. For the 'incense'-offering cedar and cypress wood, and flour, cane, and myrtle were used. In the case of the animal sacrifices, definite parts were reserved for the god, while other parts became the portion of the priests. Strangely enough, the blood of the sacrificial victim does not seem to have played any conspicuous part in the Bab. ritual. In addition to the offerings proper, it was customary at all periods of Bab. antiquity to bring the most varied gifts to the temple as votive offerings.

Side by side with sacrifices and votive offerings, there was a great variety of other *rites* in the Bab. religion. Among these an important place is held by the propitiatory rites practised by the exorcizing priests, who have been referred to in the section on 'Soothsaying and exorcism.' Then we have also the mourning customs connected with the cult of the dead. These included such practices as the beating of the thigh and the breast, the plucking out of the beard, and the mutilation of the body by means of knives. The supreme occasions of the cult were naturally *the festivals*. Of these by far the most prominent was the Babylonian New Year festival. This feast was in earlier times held in honour of other gods. But when the Marduk-cult of the capital, Babylon, came to the forefront, the New Year feast became at once the chief festival of Marduk and the greatest and most important festival in the Bab. calendar. It was celebrated on the first days of the month Nisan, at the time of the spring equinox. One feature of it was a procession, in which the image of Marduk was taken in a gorgeously equipped ship-car along the festal street from his temple, E-sagilā, to the house of the New Year festival, and thence back to his temple. Neighbouring towns also brought the images of their gods to Babylon to join in this procession. At the time of the festival the gods were supposed to sit in solemn conclave, under the presidency of Marduk, in the chamber of destiny, in order to determine the fates for the coming year. Among other festivals mentioned in the Bab. literature, a special place belongs to the lament for Tammūz in midsummer, in the month called after him. Prominent also is the feast of Ishtar in the following month, Ab. Among the days of each month the 7th, 14th, 21st, 28th, and also the 19th were supposed to be specially unlucky, and therefore there was a general suspension of business on these days.

GENERAL REMARKS ON THE CHARACTER OF THE BABYLONIAN RELIGION.—It is very difficult to form a just estimate of the value and relative standing of Babylonian religious thought. This is due to the fact that we are for the most part dependent on official documents, such as royal inscriptions, liturgical collections, etc.; we have very few documents of a private and individual nature which would give us actual insight into the religious ideas which the people connected with the external and traditional ritual forms and doctrines. But we may regard it as practically certain that in course of time, even when external religious forms were retained unaltered, the mental attitude towards them underwent important changes. This may be assumed, in particular, for the later Assyrian and the New Bab. period, and it finds support in isolated expressions in the inscriptions. Again, it is difficult to judge whether, and to what extent, there existed a simple unquestioning piety among the people, alongside of the learning and partially conscious deception of the priestly speculations. The presence among the Babylonians of this simple piety, a child-like trust in the divine help in all situations of life, is proved—and that even in the earliest period—by many deeply religious passages in the hymns and prayers, as well as by other indications, *e.g.* the religious ideas which find expression in the formation of Bab. proper names. The religious sense of the Babylonians admittedly never rose beyond a certain limit. They never attained to a stage at all corresponding to the ethical monotheism of the Hebrew prophets, or even the ethically elevated Ahura Mazda religion of the Persians. A purer development of the nobler germs present in the Babylonian religion was hampered by the strong predominance of the magical and superstitious element, which at all periods played so great a part in it. At the same time, the Babylonian religion is a historical factor whose importance in its own genus must be fully recognized. Even the strong emphasis laid on the astral element led, in movements historically connected with it, to many pure and elevated ideas, if also to much that was abstruse and superstitious.

LITERATURE.—I. *GENERAL.*—The fullest treatment is by M. Jastrow, *The Rel. of Babylonia and Assyria*, Boston, 1898, also *Die Rel. Babyloniens u. Assyriens*, Giessen, 1902 ff.; cf., further, H. Zimmern, 'Religion,' in *KAT*[3], Berlin, 1903, pp. 845–643; F. Jeremias, 'Die Babylonier und Assyrer,' in de la Saussaye[3], i. 257–348; A. H. Sayce, *The Rel. of the Ancient Babylonians* (Hibbert Lectures), London, 1887, also *The Rel. of Ancient Egypt and Babylonia* (Gifford Lectures), Edinburgh, 1902; C. P. Tiele, *Gesch. der Rel. im Altertum*, Gotha, 1896, vol. i. pp. 127–216, also *Bab.-assyr. Gesch.*, Gotha, 1886, pp. 515–557; M. Jastrow, 'Religion of Babylonia,' etc., in *HDB*, extra vol. pp. 531–584; L. W. King, *Bab. Rel. and Mythology*, London, 1899; D. Bassi, *Mitol. Bab.-Assir.*, Milan, 1899; R. W. Rogers, *The Rel. of Babylonia and Assyria*, New York, 1908. Cf., further, for many points regarding Bab. religion, and in particular for its conception of the world, etc., the following works: P. H. ZIMMERN.

BACKSLIDING.—A falling from grace after identification with religion, a reversion to sin and worldly ways after conversion, or a return to old habits after reformation. The term historically has several times shifted the centre of weight of meaning. One can distinguish perhaps four different qualities of interpretation, although the various meanings will much overlap. (1) The first is that before it acquired any special technical significance. This applies, for example, to the use of 'backsliding' (מְשׁוּבָה) in the OT, although the more special sense is recognized in the numerous Scripture precepts to constancy, and in such examples as Saul, Judas, and Demas. Our Lord predicts times of falling away in times of trial (Mt 24[10. 12]) and the First Epistle of John and the Epistle to the Hebrews are full of warnings against the same danger. During early Christian centuries the fact of backsliding was also fully appreciated, but the content of the term had its discussion chiefly under the heading of 'apostasy' (*q.v.*), or of 'perseverance' (*q.v.*).

(2) The second stage in its use was that in which it assumed a theological meaning. It was at the time of and following the Calvinist and Arminian controversy that the distinctly practical human interest in the idea was drafted off in the direction of speculative theology. If the salvation of the elect is foreordained, how can it be otherwise than that the chosen of the Lord shall persevere to the end? The Arminians said, however, that if the will of man is in any sense free, if the unction of the gospel has any significance, and if the efforts of the righteous have any value, there must be not only the possibility, but the danger of falling away. The Arminians busied themselves in explaining away such passages as Ro 8[28-30], which formulate a doctrine of predestination and election, and in softening the 'impossibility of repentance' on the part of those who 'fall away,' as presented in He 6[4-6] (cf., *e.g.*, Tillotson, *Works* [London, 1820], vi. 65 ff.). It is an interesting fact that Calvinists have been almost as diligent in preaching the need

of perseverance as have the Arminians. Jonathan Edwards, for example, writes:

'As persons are commanded and counselled to repent and be converted, though it is already determined whether they shall be converted or no; after the same manner, and with the same propriety, persons are commanded and counselled to persevere, although by their being already converted, it is certain that they shall persevere. By their resolutely and steadfastly persevering through all difficulties, opposition, and trials, they obtain an evidence of the truth and soundness of their conversion; and by their unstableness and backsliding, they procure an evidence of their unsoundness and hypocrisy' (*Works*, N.Y. 1880, vol. vii. p. 483).

(3) Another change in meaning was that in which the idea assumed an evangelistic flavour. After pronounced conversions came to receive a high degree of emphasis among Protestants as the desirable, if not the only, method of regeneration, the danger of backsliding came to be accepted as a matter of course, and was made the subject of the most zealous admonitions and sermons (cf. Baxter, *Works* [London, 1830], iv. 351–371). The need of a 'renewal' after backsliding was a common experience, and the frequency of such an occurrence may be regarded as the occasion of the formulation of the notion of the 'second experience' or 'sanctification' (*q.v.*).

(4) Later there has arisen the psychological interpretation of the term. Even at the height of the evangelical interest in the question, say during the first half of the nineteenth century, the groundwork was being laid for an explanation of the lapses from the lively experiences at the inception of the religious life. Among the causes of backsliding usually specified in treatises and theological dictionaries were: 'the cares of the world, improper connexions, inattention to secret and closet duties, self-conceit and dependence, indolence and listening to and parleying with temptations.' As early as 1835 there was published a novel in Boston, entitled *The Backslider*, the chief point of which seems to have been to show the differences in the temperamental and other characteristics of the hero and heroine of the tale, which would account for the constancy of the one and the backsliding of the other; and a reviewer in the *Christian Register* [1836], vol. ii. pp. 198–206) expresses the conviction that we shall 'succeed in the attempt to arrange the present multifarious mass of mental phenomena, and evolve the first principles to which they must all be referable,' as is being done in the material sciences; and he appeals by analogy to the success of Mr. Louis in the investigation of the causes and conditions of diseases. Recently, something of a study has been made, of a statistical and psychological character, upon backsliding (see Starbuck, *Psychology of Religion*, 1899, pp. 354–391).

It appears that nearly all persons who experience conversion are sooner or later beset with difficulties. When the character of these difficulties is catalogued, they are clearly the same in kind, essentially, as those which ordinarily belong to adolescent development when not attended with conversion. It is worthy of note that the frequency of troubles is slightly greater among those who have undergone conversion than among the others. One may look for the cause of this difference in several directions. In the first place, those who experience conversion are more open to suggestion and more impressionable, and accordingly more liable to have mental crises. Their emotional difficulties predominate, while intellectual doubts and questionings are more common among those whose growth is not attended by conversion. The difference seems to be due in part, likewise, to the fact that at conversion the ideal life and the past life are brought into definite conflict. There is a sharper cleavage between the higher and lower selves; an ideal is established which is more difficult to attain because of its great incongruity with the old life. The person is suddenly expected to identify himself with the conventional ways of the Churches, which are at variance with his usual habits of life. It seems natural, if these causes obtain, that the conflict and friction in the adjustment of life to the new standard should be greater in the case of the conversion type.

Still another cause of backsliding is the persistence of old habits which for the time have lost their force, and are hidden from view in the presence of new lines of activity. When, after a time, the newly-acquired enthusiasm has partially spent itself, the old habits re-assert themselves. The difficulties usually continue until there is formed a new set of neural habits which correspond to the conduct of life on the spiritual plane, and have become so deeply ingrained that life expresses itself naturally and easily through them.

A very central condition underlying backsliding seems to be found in the natural tendency of human interests to ebb and flow. Nervous energy, when directed vigorously in a certain way, completely expends itself, and must then have a period of recuperation. Rhythms in the supply of available energy are fully recognized, as is shown in experiments upon continuous muscular activity, in the rise and fall of the wave of attention when focused upon a continuous object, in the successive presence and absence of a stimulus on the threshold of sensation, and in many like phenomena. It is observable in the spells of depression that follow an exceptionally busy day, and in subnormal temperatures following fever. Persons very active in religious matters are apt to have ups and downs in their degree of religious enthusiasm. Those have been found who have experienced wave-like fluctuations of religious interest at pretty regular intervals. If a rhythmical flow of energy is a law of life, it should be expected that, following the great enthusiasm attendant upon conversion, there should be a decline.

The rise and fall of religious feelings may sometimes be the attendant of other natural rhythms. One person reports that during five successive years he was awakened to a religious enthusiasm during the winter, which declined during the summer; and many other similar, though less striking, instances are on record. It has been ascertained by Malling-Hausen that physical growth is accelerated during the autumn months and retarded from April to July. The rise and fall of religious feeling may be conditioned somewhat by the rate of the metabolisms going on in the organism at different times of the year. It is an interesting coincidence that religious revivals are held most commonly during the winter.

There is a distinction between backsliding in so far as it affects the will-attitudes and that which centres in a fluctuation of warmth of feeling. While there are many instances of the former, due, perhaps, to the re-assertion of old habitual modes of reaction, the analysis of religious confessions shows another type, in whom the changed attitude towards life brought about through conversion is fairly constant, in spite of the fact that the intensity of their religious ardour suffers a decline. Their real religious status seems not to be affected even while they are inactive in the direction of the new life. These would seem to require a different spiritual regimen from those who backslide in the former sense.

The point of greatest practical significance, perhaps, in respect of the post-conversion experience, is that the new insight or mode of conduct, however genuine it may be, must, in order to be permanent, become so incorporated into a new set of neural habits that the new life may be as natural and spontaneous as the old. The former

type of life which is still structurally a part of consciousness, must either be refined and co-ordinated with the new, or the newly acquired spiritual selfhood become so persistent and constant as to draft off the available energy and so cast out the evil with the good.

EDWIN D. STARBUCK.

BACON, FRANCIS. — **1. Life.** — The second greatest of the stars that shed their brilliance upon Elizabethan England,—great both in power and achievement within his chosen field of speculation,—Francis Bacon has left a name that is a byword among popular moralists. Conscious of failure in his own time, he trusted his name and memory 'to men's charitable speeches, to foreign nations, and the next ages,' but the stain of his deeds, or of his omissions, has not yet allowed the splendour of his intellect to be clearly seen and understood.

He was born in London on the 22nd of January 1561, his father, Sir Nicholas Bacon, being then Lord Keeper to Queen Elizabeth. His mother, second wife of Sir Nicholas, was a sister of the wife of Sir William Cecil, afterwards Lord Burghley, the Queen's chief minister. His father had the gifts of humour, audacity, and duplicity essential to success at Elizabeth's court; his mother possessed a classical training and resultant taste, which were grafted upon a rigid Calvinism in religion. Some trace of all of these influences may be found in the character and attainments of the son. At the age of twelve, Francis Bacon entered Trinity College, Cambridge, of which Whitgift, the future 'moderate' Archbishop, was the head. He remained till he was almost fifteen (Christmas 1575), forming at the time a boyish disapproval of Aristotle's philosophy, which was afterwards gravely recorded. In 1576 he became a member of the Society of Gray's Inn, being destined no doubt for political office, to be secured through the profession of the Law. From 1576 to 1579 he was in the retinue of Sir Amyas Paulet, Ambassador of the Queen to France, but was summoned home on the sudden death of his father in the latter year. Dean Church dates from this event, and the immediate downfall of his reasonable hopes which it occasioned, the deterioration of Bacon's character. At any rate he began soon afterwards the series of canvassing, importuning, obsequious, and servile letters to his relatives and others, asking for promotion or help, which are so pitiful to read, as coming from one so nobly endowed. He entered into residence at Gray's Inn, became an 'Utter Barrister' in 1582, and a 'Bencher' (which gave him the right to practise) in 1586. Meantime he had entered Parliament as member for Melcombe Regis in 1584, and in subsequent Parliaments he sat successively for Taunton, Liverpool, and Middlesex. He became one of the foremost speakers of the day, and one of the most eloquent, according to the well-known description of Ben Jonson: 'There happened in my time one noble speaker who was full of gravity in his speaking. His language, when he could spare or pass by a jest, was nobly censorious. No man ever spoke more neatly, more pressly, more weightily, or suffered less emptiness, less idleness, in what he uttered. No member of his speech but consisted of his own graces. . . . The fear of every man that heard him was lest he should make an end' (Ben Jonson, *Timber or Discoveries*, ed. Schelling, p. 30).

In politics, both in the reign of Elizabeth and in that of her successor, he supported the supremacy of the *personal* authority of the sovereign, but urged, wherever possible, toleration and moderate reform. In 1591 he made the acquaintance of the Earl of Essex, a young favourite of the Queen, between whom and Bacon a strong friendship speedily grew up. In 1593, Bacon's action in the House of Commons upon the Subsidy Bill, which he opposed for good reasons, brought him into disfavour with the Queen. Although he did not recant his opinion, Bacon prostrated himself at the feet of the Queen and her Minister, but beyond his recognition as one of the Counsel to the Crown, he did not either then or during the Queen's lifetime receive any public appointment. His uncle seems to have looked with distrust upon his brilliant abilities, and may have feared him as a rival to his own son (and successor), Sir Robert Cecil. Queen Elizabeth herself, it is recorded, said of him that he had 'a great wit, and an excellent gift of speech, and much other good learning, but in law thought he could rather show to the uttermost of his knowledge, than that he was deep' (Spedding, *Letters and Life of Bacon*, vol. i. p. 297). His share in the trial and condemnation of Essex will always remain a blot upon his character, however many the extenuating circumstances that may be urged. To strengthen his waning authority with the Queen, Essex obtained the appointment of Commander-in-Chief in Ireland for himself. He failed lamentably and utterly, and returned to face his 'enemies' at Court, after being expressly forbidden to leave his post. Placed under arrest, but afterwards released, he entered into a plot to seize the Queen's person, control the appointment of her ministers, and, above all, force the nomination of her successor. The rash attempt, foolishly conceived and recklessly begun, might have had the gravest consequences. Essex was (along with the conspirators) arrested, arraigned for high treason, condemned and executed (1601). Bacon, as Counsel to the Crown, was one of those selected to carry out the preliminary examination, and he took active part in the trial—to the prejudice of the prisoner's chances. Essex being a popular hero, it was necessary to justify his execution, and Bacon was entrusted with the task of blackening the memory of his friend and benefactor. It is true that Bacon was bound, and had always professed, to place the service of his Queen and country above that of his friend; and, as it has been pointed out, it is difficult to see at what stage he could either honourably, or even safely, have withheld his services. One can only regret that he showed himself so zealous. Perhaps he could not, and should not, have saved the life of Essex, but he need not have lent a hand in vilifying his name.

After the death of the Queen and the accession of James in 1603, Bacon rapidly rose in honour and position. He married the daughter of an alderman, with a good dowry, in 1606, became Solicitor-General in 1607, Attorney-General in 1613, and Lord Keeper (a title which was soon exchanged for the higher one of Lord Chancellor) in March 1616–17. When he was Attorney-General there occurred the famous Peacham case, of which Macaulay has made unscrupulous use against Bacon. The discovery of a sermon, evidently intended for publication, and containing treasonable language, suggested a conspiracy, and it was decided to apply torture to Peacham in order to elicit the names of his fellow-conspirators. The warrant was signed by the Archbishop of Canterbury and by leading members of the Lords and of the Commons. Bacon, as Attorney-General, attended the examination, but cannot by any stretch of the imagination be held responsible for it. It was one of the last occasions on which torture was applied in England; Bacon, however, was not, in this matter, in advance of his time. Another of the unpopular cases in which Bacon, owing to his position, was involved, was that of the trial and execution of Sir Walter Raleigh (1618) after his worse than foolish expedition to South America.

The real evil of his life, however, now as ever, was his subservience, sometimes immoral, and always mean, to the great men of the day, who under King James were invariably selfish, grasping, regardless of popular rights and even of the common virtues of life. Buckingham, whom Bacon allowed to intervene in the Courts and to influence the judges, is the most conspicuous instance. Bacon, who had been knighted in 1603, was in 1618 made Baron Verulam, and in January 1620–21 Viscount St. Albans.

But at the very moment when fortune seemed to smile most sweetly upon him, she was preparing a *volte-face* unparalleled in history. James, who for many years had been governing without a Parliament, but who was in urgent need of subsidies, called a Parliament at last, which began to sit in 1621. From the first the members showed that money would not be voted for nothing: they began an investigation into certain abuses, the infamous monopoly-system and other matters. But it was soon clear that the Lord Chancellor himself was the principal quarry they hunted. Certain evidence was brought forward of his having taken presents of money from suitors after, and even during, the hearing of their cases. It was not proved that Bacon had ever actually given a wrongous decision on account of the bribes; the practice was common at the time, along with much worse practices. But the fact remains that Bacon, from the moment he discovered that he himself was in danger, showed the white feather. He was in ill health and unable to attend the House of Lords when his case was being tried; he confessed to every item of a long series of charges, and was condemned to be imprisoned in the Tower, to pay a fine of £40,000, to be deprived of all his offices, and to forfeit the right to sit in Parliament. The imprisonment lasted only a few days, and the fine appears never to have been enforced, but Bacon was irretrievably ruined in character and in fortune. He had never been wise in money matters, or indeed in any of the practical affairs of life, and he now found himself hard pressed. He showed courage, however, in his misfortune, declaring, 'I was the justest judge that was in England these fifty years: but it was the justest censure in Parliament that was these two hundred years.' Melodramatic as the statement sounds, it was probably correct. He had certainly been one of the most expeditious judges of his time. Although in 1624 Bacon's punishment was finally remitted and he was even summoned to sit in Parliament, he did not return to public life. The remainder of his life he spent in retirement, working at his great project of the renovation of the sciences. His death was directly caused by an experiment entered upon to determine whether animal bodies can be preserved by cold. He caught a sudden chill in the process, and was carried to the house of Lord Arundel, where he died on 9th April 1626. To his host he had written, shortly before his death,—in expectation of a speedy recovery—'As for the experiment itself, it succeeded excellently well' (printed in Sir Tobie Matthew's *Collection of Letters*, 1660, p. 57).

2. Works.—Bacon's earliest printed work, and the most famous of all, was the *Essays*. It was published first in 1597, and consisted of ten essays, along with which were printed the *Meditationes Sacræ* and the *Colours of Good and Evil*. This edition was reprinted several times, but in 1612 it

was expanded into forty essays, and in 1625 into fifty-eight, the final number. Within its own field, it is undoubtedly one of the great books of the world. The terseness and brilliancy of its phrases, the delicacy and point of its criticisms upon life's various phases, the depth and yet the lightness of its observations, have made it a 'classic' almost from the date of its publication. It was followed in 1605 by the *Two Books on the Advancement of Learning*. This work was afterwards regarded by Bacon as a part of the 'Great Renovation' (*Instauratio Magna*), was translated into Latin (the second book being expanded into eight new books), and published in 1623 as the *de Dignitate et Augmentis Scientiarum, Libri IX*. It is a review of the whole state of knowledge as it was in Bacon's time, and as Bacon desired it should be. It pointed out the defects of man's present knowledge, the *lacunæ* or *desiderata*, and suggested a detailed classification and systematization of the various branches of knowledge. The *de Sapientia Veterum*, 1609, is a fanciful attempt to show that in the Myths of the Ancients lies concealed a body of physical and moral knowledge which dates from an earlier, greater, golden age of man. The work on which Bacon's fame as a philosopher chiefly rests is the *Novum Organum*, published, although incomplete, in 1620. It contains his logical method, his criticism of earlier methods of scientific study, his warnings as to the dangers of fallacy which lie in wait for human thought—the famous doctrine of the *Idola*, etc. The treatise had been written and re-written by Bacon no fewer than twelve times. 'Severe as it is,' says Church, 'it is instinct with enthusiasm, sometimes with passion. The Latin in which it is written answers to it; it has the conciseness, the breadth, the lordliness of a great piece of philosophical legislation' (*Bacon*, p. 225). Few other works (*Historia Ventorum*, *Historia Vitæ et Mortis*, *History of Henry the Seventh*) were published during Bacon's lifetime, but a great number of works and fragments appeared at different dates after his death. The *Sylva Sylvarum*—a collection of facts, fables, and problems in various branches of Natural History—and the *New Atlantis*—Bacon's scientific Utopia—were edited by Rawley in 1627. Others followed in 1629 (*Certaine Miscellany Works*), 1638 (*Opera Moralia et Civilia*), 1648 (*Remains of Francis, Lord Verulam*), 1653 (*Scripta in Nat. et Univ. Philosophia*: Gruter), 1657 (*Resuscitatio*), 1658 (*Opuscula Varia Posthuma*), 1679 (*Baconiana*: Tenison). The majority of these were edited by Rawley, who was Bacon's secretary in the last years of his life, and who remained his profound admirer. The complete works are to be found in Ellis, Spedding, and Heath's edition, referred to below. The works include many occasional pieces of historical and legal interest, as well as a number of sketches and appendixes to Bacon's *Instauratio Magna* of the Sciences. The majority of these are in Latin, but the more important pieces, along with the *de Augmentis*, and the *Novum Organum*, are translated by Spedding in the 4th and 5th volumes of the Complete Edition.

3. Philosophy.—Bacon, said Macaulay, 'moved the intellects which have moved the world': he did not himself produce anything original in Science, in Philosophy, or in his own chosen region of the latter, Logic. But he inspired others with his enthusiasm for Natural Science, his hopes of the great issues for man which depended on its study, his ideal of the methods by which it was to be approached. It is largely through his inspiration that what is vaguely described as the Scientific Method, the Positive or Empirical Method, is universally applied to-day to the investigation not merely of natural, but of psychological, ethical, social, and religious phenomena. When Bacon wrote, thought had already awakened from the sleep of the Middle Ages; here and there observers had arisen who looked to nature itself rather than to human authority for information, and who had recourse to experiment to compel nature to answer their questions. Such were Roger Bacon, Nicolaus of Cusa, Leonardo da Vinci, Copernicus, Vesalius, Telesio, Severinus, Tycho Brahe, Bruno, Gilbert, Galileo, Kepler, and Harvey. The mental horizon had been widened equally with the physical horizon: the discovery of America and the invention of printing were still novelties to the world into which Bacon was born. There seemed no limit to the possibilities of wealth, of happiness, of knowledge, within man's reach. In Bacon's view it was the last of these, knowledge, that was to be the means of gaining the other two: and from the beginning of his maturer life he set himself the task of showing men how the knowledge, which was also power, was to be attained. At 25 he wrote an essay on the subject which he called the 'Greatest Birth of Time' (*Temporis Partus Maximus*), and, six years later, sent to Burghley the letter in which occur the famous words, 'I confess I have as vast contemplative ends as I have moderate civil ends: for I have taken all knowledge to be my province' (*Letters and Life*, i. 108 f.). In the fragment called *de Interpretatione Naturæ Proœmium* (complete ed. iii. 518), he describes his qualifications for the task:

> 'For myself, I found that I was fitted for nothing so well as for the study of Truth; as having a mind nimble and versatile enough to catch the resemblances of things (which is the chief point), and at the same time steady enough to fix and distinguish their subtler differences; as being gifted by nature with desire to seek, patience to doubt, fondness to meditate, slowness to assert, readiness to reconsider, carefulness to dispose and set in order; and as being a man that neither affects what is new nor admires what is old, and that hates every kind of imposture. So I thought my nature had a kind of familiarity and relationship with Truth' (Spedding's tr., *Letters and Life*, iii. 85).

This is no mere bombast, for these were strictly the real qualities of Bacon's mind when face to face with the facts of nature. Truth became the passion of his life—or rather the discovery of truth, for truth itself he regarded rather as a means to man's advancement than as an end in itself. From the first he set before him as his goal the Kingdom or Empire of Man—*Regnum Hominis*—the dominion of man over nature, and, *through* this power, the increase of his happiness and his dignity. In this sense, no doubt, he was the true forerunner of the Utilitarians in England. Of Salomon's House—the college which was the 'eye' of the kingdom of *New Atlantis*—it is said: 'The end of our foundation is the knowledge of causes and secret motions of things; and the *enlarging of the bounds of human empire, to the effecting of all things possible.*'

In Bacon's design the *Instauratio Magna* was to consist of six parts, only one of which, the first, was completed by him. The parts are as follows: (1) *Partitiones Scientiarum*: classification of the sciences, and the distribution of inquiries among them, a map of the conquests already made, and a survey of the unoccupied lands. (2) *Novum Organum, sive Indicia de Interpretatione Naturæ*: the new method of discovery, or suggestions on the interpretation of nature, by which the old and futile method of 'anticipating' nature was to be displaced. (3) *Phænomena Universi*: tables of facts, the results of observation and experiment, on which philosophy (or science) was to be built up. (4) *Scala Intellectus sive Filum Labyrinthi*: 'the ladder of the intellect,' or 'clue of the labyrinth,' was to consist in examples, types, or models of the method in actual working, concrete applications of Bacon's inductive scheme. (5) *Prodromi, sive Anticipationes Philosophiæ Secundæ*: anticipations of the new philosophy, before the latter should have been completed, a kind of foretaste, or, as

Bacon suggests, a kind of interest before the principal is produced. The last part (6), *Philosophia Secunda*, or *Scientia Activa*, was to be the final completion and crowning of the whole structure. Bacon himself was merely laying the foundations, it was to be left to others to finish; indeed, it could only be the work of many hands and brains. Bacon long hoped for royal support for his cause; he constantly writes as if he desired wealth and position only that he might have more influence and authority in promulgating his ideas. He was to be the bell-ringer, who is 'first up, to call others to church,' the man who sounds the clarion, but enters not into the battle. His hope was in a Society such as he describes in *New Atlantis*, and such as the Royal Society became soon after his day—a body of workers directing their powers of observation and inference upon limited fields of inquiry, after the first great collection of facts has been made. In one passage he anticipates that the future judgment passed upon himself would be that he did no great things, but simply made less account of the things that were accounted great (*Nov. Org.* i. Aph. 97).

(1) It is unnecessary here to give Bacon's classification of the Sciences in full, although it is important in the history of scientific method. It appears in the *Advancement of Learning*, the *de Augmentis*, and the *Descriptio Globi Intellectualis*, with certain variations. The ground of division is the radically false one of the human mental faculties—*Memory*, *Imagination*, *Reason*. Thus the branches of knowledge are classified under three heads: History (corresponding to Memory, and dealing with Individuals), Poetry (corresponding to Imagination, and also dealing with Individuals), and Philosophy (corresponding to Reason, dealing with General Notions or Universals). Poetry is merely feigned history. 'As all knowledge is the exercise and *work* of the mind, so poesy may be regarded as its *sport*. In philosophy the mind is bound to things, in poesy it is released from that bond, and wanders forth, and feigns what it pleases' (complete ed. v. 503). The term 'Philosophy' with Bacon covers all Arts and Sciences, as well as Philosophy in the narrow sense. Parallel to the three divisions of Rational or Acquired Knowledge are those of Theology, or Revealed Knowledge. Like Locke, Bacon regarded the senses as the ultimate and only source of natural knowledge; the *notions* of science are abstracted from sense-impressions by composition and division according to the Laws of Nature and evidence of the things themselves (*ib.* i. 494). Bacon anticipates modern methods in his insistence on keeping close to nature, and in his suggestion that Natural History should take special account of aberrations and monsters, *i.e.* pathological or morbid phenomena, and also of the products of human art, as well as of the normal and unmodified phenomena of Nature. In other words, he insisted both on the unity of Nature, on the identity in substance of the natural and the artificial, and on the value to science of a knowledge of limiting cases and borderland phenomena (cf. also *Nov. Org.* ii. 28, 30). Philosophy or Science, with its three subdivisions—Divine Philosophy or Natural Theology, Philosophy of Nature, and Philosophy of Man—was to be preceded by a *Prima Philosophia*, a form of Metaphysics; the Sciences were to be 'like branches of a tree that meet in one stem, which stem grows for some distance entire and continuous before it divides itself into arms and boughs' (complete ed. i. 540). It was intended by Bacon to deal with two sets of subjects: (*a*) the most general principles, those which are common to several of the sciences, and (*b*) the 'adventitious conditions of essences,' such as Much-Little, Like-Unlike, Possible-Impossible. The second part was to be a kind of Teleology; it was to give the reasons or grounds of the distribution of Much-Little, etc.—why there is much of one thing, little of another. In other words, *Prima Philosophia* was to take the parts which are played now by the Theory of Knowledge on the one hand, and the Doctrine of Evolution on the other. Metaphysics was also to form one of the divisions (Physics being the other) of the Speculative part of Natural Philosophy, or that which was to inquire into the *causes* of things. Physics was to deal with the Efficient and Material Causes, Metaphysics with the Formal and Final Causes. The latter Bacon therefore excluded from Physics, but not from Natural Philosophy itself. 'The inquisition of Final Causes is barren, and, like a virgin consecrated to God, produces nothing,' he said in the *de Aug.* (iii. ch. 5). According to Fowler, Bacon meant not that the knowledge of them is useless, but that knowing the purpose or end an object serves does not help us to produce the object, which is the true aim of Science.

The Classification, with its wealth of subdivisions, details, appendixes, should be studied, as showing the remarkable comprehensiveness, fertility, and penetration of Bacon's mind. It has, of course, been superseded by the actual advance of the Sciences themselves, in many instances along different lines from those anticipated by Bacon, but it is still fruitful of suggestion in this age of specialists.

(2) The second part of the *Instauratio*, to which the *Novum Organum* belongs, and which remains incomplete, was to reveal the New Logic of Discovery. It was to differ from the ordinary Logic in three things—its end, its methods of proof, its principles of inquiry. Its end was to be, not arguments, but arts; its method, not syllogism, but induction; its principles, not the first notions of the mind, or the immediate data of the senses, but notions duly abstracted by the mind purified of its errors and prejudices, according to the evidence of things themselves (complete ed. i. 135 ff.).

Bacon's influence on scientific method has lain chiefly in the fact that he showed so clearly and incisively the errors and the psychological sources of the errors to which inquirers are liable, and to which they had before his day so conspicuously fallen victims. The mind must become as far as possible a *tabula abrasa*, if it is to be a true mirror of Nature; to this end it must first be cleared of its prejudices or preconceptions. The famous doctrine of the *Idola* (or 'phantoms') of the mind (see *Nov. Org.* i. Aph. 38–70, and the *Distrib. Operis*) classifies these as: (1) *Idola Tribus*, Phantoms of the Tribe, or those common to all men; (2) *Idola Specus*, Phantoms of the Cave, those which depend on the nature, character, or training of the individual; (3) *Idola Fori*, Phantoms of the Market-place, those that spring from words, the counters which men exchange so carelessly in society, but which so often are false coins, suggesting a value which does not exist; (4) *Idola Theatri*, Phantoms of the Theatre, which include the false philosophies, the Sophistical, the Empirical, and the Superstitious (see also the *Redargutio Philosophiarum* and the *Cogitata et Visa*), which had held the stage of thought until Bacon's time, and which, it was necessary to show, were mere vain imaginations, fantastic shows, neither realities nor copies of reality; this is the idea underlying the term 'Theatre.' But the mind, once cleared, would only grow another crop of weeds if left to itself (*intellectus sibi permissus*). How the Tree of Knowledge is to spring, to branch and to blossom in the mind, it is the purpose of the Method to show. It was to be purely mechanical: 'My way of discovering sciences goes far to level men's wits, and leaves but

little to their individual excellence, because it performs everything by the surest rules and demonstrations' (*Nov. Org.* i. Aph. 122). The steps are (*a*) the collection of facts in the Natural and Experimental History, (*b*) the arrangement of these facts according to Topics or Natures. Bacon thought Nature was like a printed book, containing many and varied combinations of a few simple natures or elementary qualities or forces. Given the knowledge of these, the book might be read by any one. Further, he seems to have thought that each *nature* is a limitation or 'mode' of some more general nature, irrespective of the supposed simplicity of the former nature. This more general nature is the *Form*. At other times, however, the 'form' seems to mean the nature itself which is being inquired into, *i.e.* its essence, or simple state, when apart from the many other natures with which it is combined in things. Thus the 'form' of heat is something which is common to all instances of heat, diverse as these may be in other respects, and which is absent from all instances from which heat is absent. According to Fowler (*Nov. Org.*[2] Introd.), Bacon's 'Form' sometimes means *Essence* or *Definition*, at other times *Cause* or *Law* of Production ('veræ rerum differentiæ,' 'res ipsissima,' 'natura alia quæ sit cum natura data convertibilis et tamen sit limitatio naturæ notioris,' 'fons emanationis,' 'lex actus puri,' etc., *Nov. Org.* i. 75, ii. 1, 2, 4). Both of these conceptions are contained in the modern idea of Cause. Thus, in his own remarkable example of the working of his method, he shows that heat is a kind of motion, a motion of restrained or checked expansion, in the smaller particles of a body (*Nov. Org.* ii. 20); this motion would be the 'form' of heat, *i.e.* its statement would give the definition of heat, and its production would mean the production of heat. Needless to say, it was the latter result, *operation*, that Bacon aimed at, although he held that Light-bringing experiments should be tried rather than Fruit-bringing, in the first instance.

(3) The third step in the Method is the arrangement of the Material, for a given nature or quality, into certain Tables as a basis for Induction—*Tables* of *Essence* or *Presence*, i.e. of instances which agree in the presence of the given quality, *e.g.* all cases and kinds of heat; *Tables* of *Deviation*, or of *Absence*, i.e. negative instances, or instances, *analogous to the affirmative instances*, in which the nature is absent; and *Tables* of *Degrees* or *Comparison*, instances in which the nature occurs in varying degrees.

(4) The fourth step was to be the *Exclusion* of all those natures which are either absent when the given nature is present (by the first Table), present when the latter is absent (by the second Table), or which increase when the given nature decreases, or *vice versa* (by the third Table). And it is on the application of Exclusion that Bacon places the main stress of his Induction. He expected that within a few years after the Experimental History had been formed, everything would be known about Nature! As a matter of fact, the Exclusion itself, for a single quality, would have been an endless process.

The two chief flaws in Bacon's Method are his erroneous conception of the simplicity of Nature, and his disregard of hypothesis, of the scientific imagination, as a source of 'probable' knowledge. Bacon looked for certainty, not probability. Yet he recognizes the value of hypothesis, first, in his own *Vindemiatio Prima*, or First Vintage—the example he gives of an anticipatory induction (*Nov. Org.* ii. 20, on the Form of Heat); and secondly, in the aids to Induction, of which only one class were dealt with by him, viz. the *Prerogativæ Instantiarum*, or Prerogative Instances (*ib.* ii. 21–51). These are instances such as throw light more readily or effectively than others upon the true nature of a quality; they include such well-known terms as 'Solitary,' 'Striking' or 'Glaring,' 'Parallel,' 'Limiting' or 'Borderland,' and 'Crucial' or 'Finger-post' Instances. It is possible to say that his statement of these Prerogative Instances, and the illustrations he gives, have had more influence upon scientific procedure than his Method itself has had. For the rest, the laws expressing the Forms were to give the lowest principles of Induction, from which men were to rise, first, to Middle Principles, and thence to the Highest Principles; from these, and from these only, the *Deduction* of new particulars and operations was to take place; they were to express the very heart or marrow of Nature. Such axioms, so derived and abstracted, would, Bacon believed, bring whole 'flocks of works' in their train.

Of the remaining parts of the intended *Instauratio*, Bacon wrote only some chapters of a description of the Universe—the Natural and Experimental History—in the History of the Winds, of Life and Death, of the Dense and the Rare, the *Sylva Sylvarum*, etc.; but it was not a work for which he felt himself fitted, and much that he has collected is absurd, superstitious, or unverified report from unknown or untested authorities. Active science was not his part in life. But he undertook the work only because it was a necessary preliminary, and he could get no others to do it for him. It remains true of his Method as a whole, that it was neither so novel as he believed nor so effective as he hoped. No discoveries were made by its use, and the great scientific masters that followed him employed the imagination much more than his doctrine allowed. Nor can it be otherwise; science is further than ever from Bacon's ideal, viz. that of a method which any one whatever may learn and apply. At the same time, Bacon stands, along with Aristotle, as one of the 'masters of those who know'; he stimulated, if he did not awaken, the passionate devotion to Nature and to the pursuit of truth which has been a characteristic of European science since his day. Directly or indirectly, he initiated the study of mental, moral, and social phenomena by scientific and experimental methods. He laid the foundation-stone of English Empiricism, and of the French Enlightenment. A more specific claim is made by Fowler (*Francis Bacon*, p. 91): 'Inductive Logic, that is, the systematic analysis and arrangement of inductive evidence, as distinct from the natural induction which all men practise, is almost as much the creation of Bacon as Deductive Logic is that of Aristotle.' And of both Dean Church says: 'The combination of patient and careful industry, with the courage and divination of genius, in doing what none had done before, makes it equally stupid and idle to impeach their greatness' (*Bacon*, p. 204). While ignorant or unappreciative of many of the great discoveries of his predecessors and contemporaries, Bacon's remarkable catholicity of interest and impartial judgment enabled him to anticipate, or at least to foreshadow, many of the most recent generalizations of science.

Moral Philosophy Bacon still regarded as the Handmaid of Theology; and neither in his division of its parts (*de Augmentis*, bk. 7) nor in the practical rules and wisdom of the *Essays* is he ahead of his time. In Theology he was whole-heartedly with the Moderate party in his Church; he defended toleration both by his voice and by his pen, but he preferred Atheism to Superstition (*i.e.* Romanism). Theoretically, he insisted on the complete separation between Theology and Philosophy or Science, between Faith and Reason, Revelation and Natural Experience, just as in Psychology also

he recognized in the soul of man two principles or parts, the one divine, inspired, immortal, the other animal, created, perishing—a doctrine adopted from Telesio, but ultimately Aristotle's. For the deeper questions of Metaphysics or of Theology he had, however, no taste, and it is only in his criticism of his predecessors and in his inspired proclamation of the New Method of Discovery that he has influenced the thought of the world.

LITERATURE.—I. *WORKS.*—The most complete and accurate edition is that of Ellis, Spedding, and Heath (with valuable introductions), 7 vols., 1857–59 (reprinted 1879–90). Annotated editions of separate works are: *Advancement of Learning*[4], by Aldis Wright, 1891; *Novum Organum*[2], by Fowler, 1889; *Essays*, by Whately (1864), Aldis Wright (1862), Abbott (1889), and Reynolds (1890).

II. *LIFE.*—James Spedding, *Letters and Life of Francis Bacon*, 7 vols., Lond. 1861–74, *Life and Times of Francis Bacon*, 2 vols., Lond. 1878, and *Evenings with a Reviewer; or, Macaulay and Bacon*, 2 vols., Lond. 1881; Macaulay, 'Essay on Bacon' (*Edin. Rev.* 1837); E. A. Abbott, *Bacon and Essex*, Lond. 1877, and *Francis Bacon, an Account of his Life and Works*, 1885; R. W. Church, 'Bacon' (*Eng. Men of Letters*), Lond. 1884; T. Fowler, 'Francis Bacon' (*Eng. Philosophers*), Edin. 1881; John Nichol, *Francis Bacon, His Life and Philosophy*, 2 vols., Edin. 1888, 1889 (reprinted 1901); Charles de Rémusat, *Bacon, sa vie, son temps, sa philosophie*[2], etc., Paris, 1877; Sidney Lee, *Great Englishmen of the Sixteenth Century*, 1904.

Bacon*, Paris, 1890; Kuno Fischer, *Francis Bacon von Verulam, die Real-philosophie und ihre Zeitalter*, 1856 [2nd ed. 1875; Eng. tr. by John Oxenford, 1857]; Efraim Liljequist, *Om Francis Bacon's filosofi*, Upsala, 1894 (with special reference to Bacon's Moral Philosophy); Hans Natge, *Ueber Francis Bacons Formenlehre*, Leipzig, 1891.

J. L. M'INTYRE.

BĀDARĀYAṆA.—The name of the supposed author of the *Vedānta-* or *Brahma-sūtras*. In Indian tradition he also bears the name of *Vyāsa, Vedavyāsa*, or *Kṛṣṇa Dvaipāyana*; but nothing is known of his person or life. Cf. F. Max Müller, *Six Systems of Indian Philosophy*, London, 1899, p. 153 ff., and art. VEDĀNTA.

R. GARBE.

BAD(A)RĪNĀTH.—A famous temple and place of pilgrimage situated on the banks of the Vishṇugangā, a tributary of the Alaknandā (wh. see), in British Gaṛhwāl, on the lower slopes of the Himālaya, lat. 30° 44′ 15″ N.; long. 79° 30′ 40″ E. The place takes its name from the worship of Vishṇu in his manifestation as Badarīnātha or Badarīnārāyaṇa, 'Lord of the *badarī* or jujube tree' (*Zizyphus jujuba*), which, however, does not now grow there. Probably an ancient tree-cult is here associated with the thermal spring close by, which suggested the sanctity of the place; and it has been from time immemorial a resort of pilgrims, the merit of the pilgrimage being enhanced by the difficulties of the journey to the spot. The temple is said to owe its foundation to the great teacher Śankarāchārya, a Malabar Brāhman, who lived about the beginning of the 8th cent. A.D., and was the leading Brāhmanical missionary to Northern India. But the building has been repeatedly devastated by earthquakes and avalanches, and the present temple has no appearance of great antiquity.

'The idol in the principal temple,' writes Atkinson (*Himalayan Gazetteer*, iii. 24 f.), 'is formed of black stone or marble about three feet high. It is usually clothed with rich gold brocade, and above its head is a small mirror which reflects the objects from the outside. In front are several lamps always burning, and a table also covered with brocade. To the right are images of Nar and Nārāyaṇa, and on the left those of Kuvera and Nārada. The idol is adorned with one jewel, a diamond of moderate size, in the middle of its forehead, whilst the whole of the properties, including dresses, eating vessels, and other paraphernalia are not worth more than Rs. 5000 (£333).'

'A good deal of ostentatious attention is paid to the personal comfort of the idol at Badarī. It is daily provided with meals, which are placed before it; the doors of the sanctuary are then closed, and the idol is left to consume its meals in quietness. The doors are not opened again till after sunset; and at a late hour, its bed being prepared by the attendants, the doors are again closed until morning. The vessels in which the idol is served are of gold and silver, and a large establishment of servants is kept up, both male and female, the latter as dancing-girls and mistresses of the celibate priests. The only persons who have access to the inner apartments are the servants, and no one but the Rāwal himself is allowed to touch the idol' (*ib.*).

The temple is closed in November, and the treasure and valuable utensils are shut up in a vault beneath the shrine, after which all the establishment retires to a lower valley in the hills. As a rule, from November until the end of May the temple is covered with snow. The idol itself is said to have been miraculously discovered in the bed of the river, and, as it bears scarcely any resemblance to the human form and exhibits obvious traces of having been worn by water action, this seems probable. As an illustration of the miraculous powers attributed to the image, it is said that a Sonār, or goldsmith, visited the shrine, and, finding that his iron ring on touching the image became gold, cut off one of the god's fingers for his private use. But the stump began to ooze with unmistakable blood, and from that day to this no Sonār dares to approach the shrine and risk incurring the judgment which befell the sinner, who was immediately struck blind (Crooke, *Tribes and Castes of the North-Western Provinces and Oudh*, iv. 340).

The close connexion of the temple and its ritual with Southern India is shown by the fact that the principal priests are Nambūri or Nambūtiri Brāhmans from Malabar, the head man of whom is called Rāval (Skr. *rāja-kula*, 'king's family'). In order to provide for the succession in the event of the illness or death of the Rāval, a disciple (*chelā*) is always in attendance to take his place. Formerly the priests were supposed to be celibate, but they excuse their failure to maintain this rule by the fact that they have almost altogether broken off their connexion with Southern India. The chief pilgrims to the shrine, which can be reached only after a dangerous and difficult journey, are Yogin (*q.v.*) and Bairāgin (*q.v.*) ascetics. Every twelfth year, when the sun is in the sign of Aquarius, is held the Kumbha fair, and the Ādhkumbha, or 'half Kumbha,' every sixth year. On these occasions the shrine is visited by large numbers of pilgrims.

LITERATURE.—Atkinson, *Himalayan Gazetteer*, iii. 23 ff.; Traill, *Statistical Account of Kumaun*, ed. Batten, p. 57; *Punjab Notes and Queries*, iv. 196. For a full account of the Nambūtiri Brāhmans of the Malabar Coast, see Fawcett, *Bulletin of the Madras Museum*, iii. pt. i. 33 ff.

W. CROOKE.

BADGES.—**1. Totem marks and tribal badges.**—The earliest and most wide-spread use of badges was their employment on the persons of men; among savage peoples every man bore on his body his *totemic mark*, in addition to his *tribal badge*. These two are quite distinct; the totem mark, which is by far the more ancient, was intended to indicate the totem from which the bearer believed himself to be descended, so that all the members of the same stock were recognized by their totem mark. It was a later stage in civilization when a number of stocks, or clans, joined together, and thus brought about the formation of tribes; the communities which were so formed were differentiated from each other by their tribal badge. The religious significance of these badges must at one time have been very great; for, though the totem mark was not originally religious in character, yet with the development of the religious instinct it became so in process of time.

'A totem tribe—which is not necessarily a local unity . . . is one in which the belief that all members of the tribe are of one blood is associated with a conviction, more or less religious in character, that the life of the tribe is in some mysterious way derived from an animal, a plant, or more rarely some other natural object.'

'Totem tribesmen in savage countries often affect a resemblance to their sacred animal, even at the cost of slight mutilations and other self-inflicted deformities. In other cases stocks are distinguished by the patterns of their tattooing, which there is reason to believe were in many cases originally meant as rude pictorial representations of the totem.'*

* Robertson Smith, *Kinship*[2] (1903), pp. 217 f., 247.

Some examples of these totemic badges are as follows. Among the Omahas, a North American tribe, the Buffalo clan wear two locks of hair in imitation of horns; the members of another Buffalo clan 'wear a crest of hair about two inches long, standing erect and extending from ear to ear; this is in imitation of the back of a buffalo.' A bird clan among the same people 'leave a little hair in front, over the forehead, for a bill, and some at the back of the head, for the bird's tail, with much over each ear for the wings.' The Bakotas, in Africa, knock out the upper front teeth in order, as they say, to be like oxen; the Mangangas chip their teeth in order to make them resemble those of a cat or a crocodile.* Tatuings, cicatrices, and the like are now often of a merely ornamental character, but it seems certain that originally they always denoted something more specific; the fact that they are very frequently made at initiation ceremonies is significant.† The tribal badge, as indicating kinship with a god, was probably a religious emblem from the beginning.

2. Totem dress.—A badge of a different kind, but lineally descended from the totem badge, is that which indicates being under the special protection of a totem-god; this is the totem dress. It is represented in a great variety of forms, but the principle underlying each is the same, namely, that of effecting a resemblance as close as possible to the totem-god, and thus ensuring his protection. Association of ideas, not reason, is what guides men in the stage of undeveloped civilization in these things. It is at the great crises of life, such as initiation, marriage, and death, that these badges are assumed; for example, among many savage peoples, when a youth is definitely made a member of his tribe by being initiated into the tribal mysteries, he is dressed or painted or otherwise made to resemble the totem—or god, as the case may be—by some means or other; that is to say, he is brought into closer contact than usual with it. The custom of which Lucian gives an example is probably connected with this:

'When a man intends to go on a pilgrimage to Hierapolis, he offers up a sheep and eats some of its flesh. He then kneels down and draws its head over his own head, and prays at the same time to his god.'‡

3. Secret Society badge.—Of an entirely different character are the badges worn among certain savage peoples to indicate membership of a secret society. Among the most striking examples of this category are the leaf or flower badges of the various *tamate* associations which exist in the Banks Islands and the neighbouring Torres group. Here the badge is usually worn on the head, the distinctive flower or leaf being stuck in the hair.§ To assume the badge without being a member of the *tamate* is an offence against the society, and is punished according to the power and position of the society offended.‖

4. Analogous customs among Semites.—What has been said may be paralleled by analogous customs among races within the Semitic area. While direct evidence for the existence of the totem badge among the Semites is wanting, there are a good number of data to be gathered from various sources which suggest that examples of this must at one time have existed among them. Thus among the Arabs every tribe has its *wasm* ('tribal mark'), which is branded on its cattle;* this is paralleled by the custom of the Bechuanas, who mark the ears of their cattle with an incision which resembles the open jaws of a crocodile, one of their totems.† The Indian hook-cross, or *swastika*—whatever its origin—was likewise a badge of ownership, which was branded on the ears of the cattle.‡ The same custom, though the badge was different, was practised by the ancient Icelanders, by the Madagascans, Somalis, etc.;§ as regards the Romans, Columella gives the following testimony: 'His etiam diebus maturi agni, et reliqui fœtus pecudum, nec minus majora quadrupedia charactere signari debent.'‖ These, and many other examples that might be given, doubtless all descend from similar origins.

Such analogous instances among peoples, some of whom still use totem badges on their persons, suggest the probability that originally the *wasm* among the Arabs was branded on the tribesmen as well as on their cattle;¶ this is confirmed by the fact that, according to Lucian, all the Syrians bore *stigmata* of religious significance on their wrist or neck.** Just as the cattle were marked with the badge of ownership, so, one may reasonably surmise, in earlier days men were marked with the badge of their god to denote that they belonged to him and were under his protection. Herodotus tells us that fugitive slaves who fled for sanctuary to the Heracleum at the fish-curing station near the Canopic mouth of the Nile, were dedicated by being tatued with sacred marks, and were thus made over to the god, so that they could not be reclaimed by their master.†† Among the Semites generally it may be said that all marks upon the body, within the categories referred to, were badges of relationship either to a god or to a fellow-creature. The nature of these relationships differed, of course. In a large number of cases, as we have seen, it denoted ownership; but it is probable that both types of relationship go back to a common original, viz. the totemic badge.‡‡ Perhaps one may conceive the sequence of ideas and practice to have been, roughly speaking, something of this kind. The totem formed the background; from this arose the totem mark, or badge of kinship with the totem; the next step would be the development of totem gods, necessarily conceived of as tribal ancestors, to whom worshippers would dedicate themselves by stigmatization; closely related to the latter would be the mourning custom known as 'cuttings for the dead,' which was a remnant of part of the ritual connected with ancestor-worship. Thus the badge of kinship became the god's mark of ownership. Regarding the relationship between the god and his worshippers there were always reciprocal duties; in return for worship, and all that this implied, the god was bound to look after his people. It was always, therefore, a question of *covenant*, and the stigmatization became thus the *badge of the covenant* between the god and his worshippers. This is brought out by the fact that the ultimate Semitic root is the same for 'mark' and 'covenant' (cf. the

Arabic *sharaṭ*, 'a mark,' and *sharṭ*, 'a covenant'; cf. Gn 9^{12} 31^{48}).* On the analogy of this badge of covenant between a god and his people arose that of a covenant between man and man. Among the Arabs, when two men made a covenant, they inflicted a wound in their flesh, either in the hand or arm, and drank each other's blood.† It is true that the reciprocal blood-drinking constituted the central act, but the mark left on the person of each party to the covenant was the visible badge of the covenant.‡

What has been said may be illustrated by some Old Testament data. We shall not expect to find here any reference to marks which could be considered as directly totemic, for it is only remnants of the later stages, referred to above, that we come across in the OT; at the same time, the existence of animal names of clans and men§ suggests the probability that totemism existed among the early ancestors of the Israelites. Circumcision was the badge of the covenant between Jahweh and His worshippers (cf. Gn 17^{14}). Originally it must have denoted something else. This is proved by the very wide observance of the custom by a great variety of peoples,‖ and more especially by the fact that there are strong reasons for the belief that the rite came to the Israelites through Egypt;¶ but to the Israelites it became the distinguishing mark of Jahweh's ownership. Belonging to the same category was the *prophet's badge*. The story preserved in 1 K 20^{35-43} is sufficient evidence of the existence of such a badge. As the prophets were dedicated to the service of Jahweh in a special manner, a badge peculiar to their order in early times would be appropriate enough. Of the character of this badge nothing is known beyond the fact that it was made on the forehead or on the top of the head (cf. the tonsure of later days). An interesting parallel is the Buddhist badge of priesthood. After having served his novitiate, the candidate goes through the ceremony of admission to the priesthood; he kneels before the idol, and 'three small heaps of incense are laid upon his forehead, and these are set fire to. The man must kneel till the incense heaps burn down, and thus burn an indelible mark on the head. This ordeal is repeated, as the man rises in the priesthood, till he bears nine scars upon his scalp.'** The distinctive dress of the Israelite prophet, which may be regarded as a badge of office, is paralleled by the yellow robe of the Buddhist priest. The Taoist priest also wears a distinctive dress, which differs from that of the Buddhist priest.

'Cuttings for the dead' (cf. above) are mentioned in Lv 19^{28} (cf. 21^{5}, Dt 14^{1}). In the last passage it says: 'Ye shall not cut yourselves, nor make any baldness [the cognate Arabic root means 'wound'] between your eyes for the dead.' The custom is prohibited on account of its being a heathen rite. From this it is permissible to assume that it was both ancient and widely prevalent. Cuttings in the body such as those mentioned in 1 K 18^{27-29} may perhaps be a remnant of a practice whereby a god was, in times of great emergency, reminded of the badge denoting his ownership, and thereby called upon to fulfil his part of the covenant.

Badges which may also have at one time pro-

claimed Jahweh's ownership were the 'sign' on the hand and the 'memorial' between the eyes mentioned in Ex $13^{9.\ 16}$ (cf. Rev 20^{4}). These must originally have been marks cut into the hands and forehead, and were preserved perhaps in their original form only by the prophetical order; later on the 'phylacteries' took their place (see Dt 6^{8} 11^{18} etc.).* Lineally descended from these, too, is perhaps the badge referred to in Job 31^{35} ('Lo, here is my mark, let the Almighty answer me'). The word used here for 'mark' comes from the root meaning 'to wound,' and it is the same as that used in Ezk 9^{4-6}, the reference being to those who are true to God, and therefore belong to Him.

A mark of an entirely different character is the badge of the manslayer, mentioned only once in the OT, in reference to Cain.†

5. **Jewish Badge.**—One of the most extraordinary uses of badges is exemplified in the various forms of the 'Jewish badge' worn by the Jews during the Middle Ages. This first originated among the Muhammadans; by the 'Pact of Omar' (640) all Jews living in Muhammadan countries were ordered to wear a yellow seam on their upper garments.‡ In later times Jews in Egypt were compelled to wear bells on their garments, and a little calf carved of wood; the latter, according to Lane-Poole, was to remind them of the Golden Calf. In the 14th cent. the badge took the form of a yellow turban§ among Jews in Egypt; in other parts, *e.g.* in Tripoli, a particoloured turban marked the Jew.‖ It was, in the first instance, the Muhammadan precedent which was followed when in Christian lands the Jewish badge was introduced. It appears that this badge was already in use in some lands before the central authority in Rome put forth an ordinance on the subject applying to all Christendom; thus in France the badge was in use in 1208;¶ but its use was made universal by a decree, prompted by Innocent III., of the fourth Lateran Council (1215), and it applied to Muhammadans as well as to Jews. The reason given for the decree was the need of preventing inter-marriage and concubinage between Christians and non-Christians.

'Contingit interdum quod per errorem Christiani Judæorum seu Saracenorum et Judæi seu Saraceni Christianorum mulieribus commisceantur. Ne igitur tam damnatæ commixtionis excessus per velamentum erroris hujusmodi excusationis ulterius possint habere diffugium, statuimus ut tales utriusque sexus in omni Christianorum provincia et omni tempore qualitate habitus publici ab aliis populis distinguantur.'**

In accordance with this the badge was everywhere enforced; but it differed in size, shape, and colour in different countries. In France it was a circular piece of cloth, usually yellow in colour, sewn on to the outer garment. The alternative of a yellow head-dress was permitted, while Jewesses wore a distinctive veil. The age at which Jews had to begin to wear the badge varied in different parts of France, at some places seven years, at others not until fourteen. The badge could be worn on the breast, or left shoulder, or on the girdle, or even on the hat. In France, Spain, and Italy the customs were similar; in these countries, too, exemptions from wearing the badge were often permitted, usually in consideration of a money payment. In Germany the badge took the form of a special hat, the 'Judenhut.' It was pointed

* At the present day all orthodox Jews wear the 'head-tefillah' and the 'hand-tefillah' when at their prayers; see Oesterley and Box, *The Religion and Worship of the Synagogue* (1907), p. 418 ff.

at the top, and the brim was often twisted into the shape of a pair of horns. Red was the usual colour, in later times green. But the wheel-badge, of yellow or saffron and of various sizes, was also worn in Germany in the 15th cent. by the men, while Jewesses were obliged to wear two blue stripes on their veils or cloaks. Sometimes the letter S (=*signum*) appeared in the yellow circle. In Switzerland the badge took the form of a piece of red cloth shaped like a pointed hat; later on it became a wheel fixed on the back.* In Crete the circle was worn; this was also marked upon the houses of Jews, a custom which is in vogue even at the present day.† In England it would almost seem as though the badge was at first introduced as a safeguard for the Jews. The Earl of Pembroke, who was regent during the early years of the minority of Henry III., sought to encourage the settlement of the Jews again in England after their cruel experiences during the reign of John. It was to ensure their security, so that no one could plead that he had assaulted a Jew in ignorance of his race, that the badge was, so far as is known, first introduced into England, and worn by Jews whenever they appeared in public. The ordinance containing this provision was put forth in 1218. The badge consisted of two strips of white linen or parchment, imitative of the Two Tables of stone, which were fastened to the dress in a prominent manner. Originally these were white in colour, but later yellow was ordered. By the statute of Edward I., *de Judaismo* (3 Edw. I. 1274–1275),‡ which dealt exhaustively with the Jewish Question, Jewesses as well as Jews were forced to wear a badge, and its object now was to mark out Jews, who by this statute were prohibited from mixing with Christians. Thus it became, as in other countries, a badge of shame.§

LITERATURE.—There do not seem to be any works definitely occupied with the subject of badges. Data have to be gathered from a great variety of sources. See the references in the footnotes above, which represent only a selection.

BĀGDĪ.—A Dravidian, cultivating, fishing, and menial caste of Central and Western Bengal, which at the Census of 1901 numbered 1,042,550. Their religion is a compound of orthodox Hinduism with survivals of animism and nature-worship. In the former stage, the regular Hindu deities are worshipped in a more or less intelligent fashion. But besides these they venerate Guṣain Erā, the goddess of the Santāls, and Bar Pahār or Marang Buru, the mountain-god of the hill races (see ORĀON). According to their own statement, their favourite deity is the snake-goddess, Manasā, whose image, represented with four arms, crowned by a tiara of snakes, and grasping a cobra in each hand, is paraded through their villages, and finally flung into a tank—apparently a rite of mimetic magic intended to remove her dangerous influence. They also parade the effigy of a female saint named Bhādū, who is said to have been daughter of the Rājā of Pachet, and who died a virgin for the good of the people. Her worship consists of songs and wild dances, in which men, women, and children take part. The legend supplies one more instance of the development of local gods in India from actual historical personages, as illustrated by Lyall (*Asiatic Studies*[2], i. 39 ff.).

BAGHDAD.—1. Sketch of history.—Baghdad is the capital of the Eastern Khalifate, founded in A.D. 754 (A.H. 136) by al-Manṣûr, second Khalîf of the 'Abbâsid dynasty, whose metropolis it remained, except for the period 836–862, when the court was transferred to Samarra, until the overthrow of the dynasty by the Mongol Hûlâgû in 1258 (A.H. 656), after which the seat of the Khalîfate was removed to Cairo. Baghdad remained in the hands of the Ilchans, or Persian Mongols, till 1507, when it was taken by Shah Ismâ'îl, founder of the Safawid dynasty, from whom it was taken in 1534 by the Ottomans, in whose hands it has ever since continued, except for the brief period of occupation by the Persians.

The name Baghdad (*bâgha-dâta*, 'given by Bagha *or* God') is one of the many cases in which the older name of a locality outlasts newer appellations. The name which Manṣûr gave his city was either his own, or *Madînat al-Salâm*, 'City of Peace.' Another appellation was *al-Zaurâ*, 'the Crooked,' on the analogy of similar names given to the chief cities of Islâm. Of the older name there are several dialectic forms. Jews and Christians often called it Babel.

An account of the secular history of this city should be sought in historical works dealing with the Khalîfate, or in the monograph of Guy le Strange, *Baghdad under the Abbasid Caliphate*, Oxford, 1900. We shall confine ourselves to its importance for the history of Religion and Ethics.

The accession of the 'Abbâsid dynasty marked the recognition in Islâm of a principle which at the first had been vehemently repudiated—the hereditary right of the Prophet's family to the sovereignty (*imâma*). The rise of this is clearly due to the hereditary principle having been adopted by the usurper Mu'âwiyah, founder of the Umayyad dynasty; when it was once recognized that the sovereignty belonged to one family, the majority of Muslims would be disposed to agree that that family should be the Prophet's. Only, since the Prophet's line was continued through a daughter, there was room for difference of opinion as to which of two families had the right to his inheritance. The law of the Qur'ân seemed to favour the doctrine that, where there was no male issue, the father's brother succeeded, and on this theory the claim of the 'Abbâsids was based. But to those who held that there could be succession through the female line the Prophet's heirs were the descendants of his daughter Fâṭima and her husband 'Alî—the 'Alids, 'Alawids, or Fâṭimids.

So long as the problem was to dispossess the Umayyads, these two families worked together, leaving the question between themselves to be decided later; but when the organizing genius of Abû Muslim had won the throne for the 'Abbâsids, they fell out, and, the latter being in possession, the 'Alids were perpetually rising, but never produced in the Eastern provinces a leader capable of securing success; they were decimated by massacres, and were intimidated by torture and imprisonment. Nevertheless they formed a potent factor in Baghdad politics till the coming of the Mongols, and in the *fatwâ* which decided the assassination of the last of the Khalîfs of Baghdad the influence of 'Alid sentiment is noticeable. The Mongol general asked whether it was true that the execution of the Khalîf would cause a general convulsion of nature. The jurists whom he consulted replied that, if such an act could cause a natural convulsion, nature would have been convulsed by the death of 'Alî and that of his son Ḥusain.

The site of the 'Abbâsid capital was selected with a view to avoid Syria, where the Umayyads were popular, and Arabia, where the 'Alid cause was strong, and to be near Persia, especially Khorasan, where the 'Abbâsids had their chief adherents. And, indeed, the triumph of the 'Abbâ-

sids is sometimes regarded as the re-conquest by Persia of its ancient hegemony. Persian influence speedily grew strong at the Khalîf's court, and the institution of a foreign bodyguard soon took all power out of the Khalîf's hands, and placed it in those of a Dailemite or a Turkish Sultan.

2. Literary importance of the foundation of Baghdad.—The rise of the new dynasty synchronized with the popularization of *paper*, an invention nearly as momentous for the diffusion of knowledge as that of printing. It also broke with the illiterate tradition of the earlier periods of Islâm, which indeed some of the Umayyads had shown a tendency to discard. The production of literary works proceeded apace, and the 3rd cent. of Islâm produced polygraphs such as Isḥâḳ of Mauṣil and Jâḥiẓ of Baṣra. Translation from foreign languages was encouraged, especially Greek, Syriac, and Pahlavi; a royal library was founded by Ma'mûn (ob. A.D. 833), and his example was followed by other men of eminence, such as the vizier of Mutawakkil, al-Fatḥ b. Khâḳân (ob. 861). The respect which the creations of the Greek genius have universally won was accorded to them at Baghdad, where indeed the dogma of the infallibility of the Greeks in all scientific questions had its adherents. Debates, in which religious questions were not absolutely avoided, were encouraged by literary viziers, and fanaticism on such occasions was at times unfashionable (cf. Yâḳût, ed. D. S. Margoliouth, ii. 46 and the Pahlavi *Gujastak-Abâlish*, ed. Barthélemy, Paris, 1887). A public library with endowments for the assistance of students was founded in the 4th cent. A.H. by the vizier Sâbûr b. Ardashîr; and the building of colleges on a large scale characterized Seljûḳ rule in the 5th.

3. Islâmic religious buildings in Baghdad.—The founder of the city, Manṣûr, built a mosque, known subsequently as *al-Ṣaḥn al-'Atîḳ*, 'the Old Court,' side by side with his Palace of the Golden Gate. This was subsequently enlarged by succeeding Khalîfs, and appears to have survived the sack of the city by Hûlâgû, though no trace remains of it now (le Strange, *op. cit.* 32-37). Since the building of mosques counted as a meritorious act, apart from the needs of worshippers, they continued to be erected so long as the Khalîfate lasted; and the quarter called 'the Baṣra Gate' was said to contain 30,000 of these edifices (Ṣafadî, *Com. on Lâmiyyat al-'Ajam*, i. 64). Round the tombs of famous men several notable sanctuaries arose; such were the *mashhads* of Abû Ḥanîfa and Mûsâ b. Ja'far, the tomb of Ma'rûf of Karkh, etc. Preachers and teachers built or had built for themselves hermitages, called *ribâṭ*, of which the number must have been very great; perhaps the most celebrated of these was the *ribâṭ* of the Shaikh al-Shuyûkh, built by order of 'Amîd al-'Irâḳ for the Ṣûfî Abû Sa'd of Nisabur (ob. 1086: Ibn al-Athir, *annis* 450 and 479 A.H.). Another of some note was the *ribâṭ* of al-Zauzanî, opposite the mosque of Manṣûr, built for 'Alî b. Maḥmûd al-Zauzanî (ob. 1060). The preacher 'Abd al-Ḳâdir al-Jîlânî (*q.v.*) had a *ribâṭ* as well as a school. The works hitherto made accessible on the topography of Baghdad do not offer the same variety of names for mosques as is exhibited by the topographies of Cairo, but this is likely to be accidental. The doors of the mosques were used for placarding government notices (Ibn al-Athir, A.H. 533), and the inside of the buildings served for many uses not directly connected with religion, *e.g.* the recitation of verses, and the narrating of stories (Jâḥiẓ, *Ḥayawân*, iii. 8: 'Mosque of 'Attâb'), or the publication of political intelligence (Ṭabarî, iii. 2216: 'in the two public mosques of Baghdad'; 2224, 13: 2249, 3, etc.).

4. Religious history of Baghdad.—Shortly after the founding of the city an inquisition was started by Manṣûr with the view of suppressing the *zindîḳs* (see art. ATHEISM [Muhammadan]), and this was continued by his successors Mahdî and Hâdî (*Aghanî*, xii. 100, xiii. 74; Ṭabarî, iii. 517, 548); on the accession of Hârûn al-Rashîd all criminals except those under this charge were released. After the taking of the city by Ma'mûn's forces (A.D. 813) the dogma of the createdness of the Qur'ân was adopted by the new Khalîf, who instituted an inquisition into the tenets of his subjects, and violently persecuted those who rejected this doctrine: the inquisition was maintained by the two succeeding Khalîfs, and was finally stopped in the second year of Mutawakkil (A.D. 848–849, W. M. Patton, *Aḥmed Ibn Ḥanbal and the Miḥna*, Leyden, 1897). The followers of the most distinguished martyr in these persecutions, Aḥmad Ibn Ḥanbal, presently became a power in the city, and riots between them and the Shâfi'ites took place at many periods; they are first mentioned in the year 934, when the Ḥanbalites endeavoured to enforce their ascetic rules on the population by a variety of violent proceedings. A furious manifesto was fulminated against them by the Khalîf Râḍî, charging them with anthropomorphism, and threatening them with the extreme penalty of the law unless they abandoned their system. Similar troubles are mentioned as late as 1082. The Khalîf Râḍî, immediately after his accession (A.H. 322, A.D. 934), had started an inquisition, having for its purpose the suppression of the sect which believed the deity to be incarnate in one Ibn Abî' l-'Azâḳir al-Shalmaghânî. His published letter on this subject is in part preserved (see Yâḳût, *op. cit.* i. 298). One of this person's followers refused to retract his opinion even when the alleged possessor of deity was publicly scourged. The sect was not extinguished by this persecution, as in the year 952 a fresh inquisition was instituted by the vizier Muhallabî.

The chief cause for religious riots, however, was the ceaseless dispute between Sunnites and Shî'ites, whose differences, in spite of the centuries that have intervened, are still a cause of trouble in India and elsewhere. The dispute was in origin, as has been seen, more political than religious; and although the founder of Baghdad massacred the Alids, some of the later 'Abbâsids were inclined to favour their cause, and it is asserted that Ma'mûn had the intention of willing away the sovereignty to a member of their family. This was frustrated; and the perpetual risings of the 'Alids led Mutawakkil in the year 850 to destroy the grave of al-Ḥusain, and penalize visits to it, an act which was regarded by his son as justifying parricide. The process by which Shî'ism was transformed from a political movement into a religion is not quite easy to trace; but it seems likely that the fantastic beliefs which gathered round the person of 'Alî and his descendants were due to the infusion of Indian and Persian ideas into Islâm. It is probable that the separation of Shî'ism from Sunnism, as a system with a code and a liturgy of its own, was due to the rise of the Fâṭimid dynasty of N. Africa, whose rulers after their conquest of Egypt proceeded to the work of codification, their practice having doubtless existed some time before. In the disputes between Turks and Dailemites which marked the 4th and 5th cents. of Islâm, the former theoretically favoured Sunnism, the latter Shî'ism; and the Buyid (Dailemite) conqueror of Baghdad, Mu'izz al-Daula, in 962 ordered certain Shî'ite execrations to be affixed to the mosque doors. These were erased by the populace; and on the advice of his vizier Muhallabî he had a harmless formula substituted. The next

year, however (963), he insisted on the observance of the fast of Muḥarram 10 in Shî'ite fashion; and this practice continued some time after his death, as in 968 it is spoken of as 'celebrated as usual.' His successors appear to have been far less keenly attached to Shî'ite doctrine; and it is asserted by a good authority (*Rasâ'il* of Hamadhânî, p. 424) that 'Aḍud al-Daula went so far as to impose a poll-tax on the Shî'ites, as being members of a tolerated religion. The practice of the fast appears to have become gradually restricted to the Shî'ite quarter of the city, which in 971 (perhaps for the first time) appears as Karkh, also at that time 'the quarter of the merchants.' In the first riot (of that year) many sects and parties are involved, but on subsequent occasions the Sunnites and Shî'ites appear to have been the chief combatants. In 973, when the dispute between Bakhtiyar and Subuktakin gave the Turkish party the upper hand for the time in Baghdad, the Sunnites, who were in possession of 'the Food Market,' mounted a woman on a camel, and called her 'Â'isha, and made two of their number represent Ṭalḥa and Zubair respectively; they then made an onslaught on the Shî'ites, thus reproducing the Battle of the Camel, in which 'Â'isha and her allies had attacked the forces of 'Alî. In 1015 there was a riot between the two parties, resulting in the Shî'ites being forbidden to celebrate the Fast by order of Fakhr al-Mulk; we find the Shî'ites still in occupation of the quarter called Karkh, whereas the Ḳallâ'în and Barley-gate were in possession of the Sunnites: in 1048 the **Bâb al-Âzaj** (Eastern side) and the 'Cobblers' are further specified as Sunnite abodes. The following year, owing to an armed force having attempted to prevent the Shî'ites from celebrating the Muḥarram lamentations, the latter began to fortify their quarter (Karkh) with a wall; and the Sunnites proceeded to do the same with their Ḳallâ'în quarter, which immediately adjoined the other. After considerable fighting the parties agreed to a truce, with the view of preventing government intervention; they proceeded, however, with their fortifications, and a fresh outbreak was caused by the Shî'ites building towers on which they inscribed the words 'Muḥammad and 'Alî are the best of mankind; whoso assents shows gratitude, but whoso denies is an unbeliever' —a formula which charged the Sunnites (with whom Abû Bakr is the *second best* of mankind) with unbelief. The Sunnites were headed by the Ḥanbalites. The *mashhad* Bâb al-Tibn (according to le Strange's maps, at a long distance from the disturbed quarter), apparently a Shî'ite sanctuary, was in the course of these riots violated, plundered, and burned by the Sunnites, to avenge the death of one of their number. The Shî'ites in revenge burned the Ḥanafite institutions. The disturbance soon spread to the eastern city, where the dwellings of the sects were also divided. At the beginning of 1053 the Turkish mercenaries mixed themselves up with the dispute, and killed a member of the 'Alid family; in the riots which followed, a large part of the Karkh quarter was burned down, and the inhabitants moved to other parts of Baghdad. Karkh, however, remained the headquarters of the Shî'ites, and in 1086 we hear of a riot between them and their Sunnite neighbours on the west, in the Baṣra Gate Quarter. Something like a final reconciliation between the two parties was effected in 1108, when the people of Karkh, fearing a fresh persecution, gave the Sunnites free passage through their quarter on a visit to the tomb of Muṣ'ab b. Zubair, a practice which had been forbidden for fear of giving offence to the Shî'ites; and the Sunnites in their turn granted some corresponding concessions. Karkh, however, remained the Shî'ite quarter after this settlement of the dispute (Sibṭ Ibn al-Ta'âwîdhî, ed. Margoliouth, p. 215).

Besides the disputes which led to riots, there were frequent bickerings between members of rival sects, and it would appear that all which were started had some representation at the capital. Attempts were at times made to suppress the discussions between them, but without permanent success.

The history of Muslim ritual was doubtless largely influenced by Baghdad practice, which itself was at times dictated by political motives. So we are told (Ibn al-Athir, *anno* 494 A.H.) that the practice of crying aloud the formula called *basmala* had been abandoned for years in the mosques of Baghdad, because it had been adopted in the rival Khalîfate of Cairo; the Khalîf who re-introduced this practice adopted another which was also against the principles of the Shî'a. Islâm in these matters is extraordinarily conservative, and innovations found little favour.

5. **Standard of morality.**—The Islâmic principles of the relations between the sexes, embodied in the practices of polygamy, concubinage, and the veiling and seclusion of women, render the morality of a Muslim community too different from that of a Christian or Aryan community to admit of comparison. Thus we find a leading theologian at Baghdad having 148 concubines (Ibn Khallikan, i. 386) without offending public opinion. Such pictures as have come down to us of Baghdad society, as in the *Arabian Nights*, imply a state of affairs on which it would be painful to dwell; of the most elaborate of these descriptions (Abu' l-Ḳâsim, *Ein Bagdâder Sittenbild*, of the 4th century; ed. A. Mez) few pages could be rendered into a modern language without infamy. The dignity of the highest offices of state, the Khalîfate and the Vizierate, did not appear inconsistent with the bandying of the grossest jests (see, *e.g.*, Ibn Khallikan, tr. de Slane, i. 29). Allusions to immoralities not sanctioned by the Muslim law are also so common in the literature of the period, that we can only suppose the practices to have been widespread. Towards drunkenness popular opinion was more decidedly unfavourable; yet this vice seems to have been prevalent in fashionable circles, and scenes in which the leading men and their associates are all under the influence of liquor are common during the whole period. An example may be taken from the middle of the fourth century, which is recorded by **Yâḳût** (*op. cit.* i. 342): a letter comes from the Sultan Mu'izz al-Daula to the vizier al-Muhallabî, who has all his secretaries and under-secretaries with him. The letter is urgent, but every man in the room has drunk deep. Ibrâhîm the Ṣabian has drunk no less than the others, but, having a stronger head than they, is able to write the necessary reply. We have another contemporary description of the wine-parties of this vizier (*Yatîmat al-dahr*, ii. 106), which took place twice a week; the chief judge of Baghdad with other judges took part on these occasions, when each 'received a gold cup weighing 1000 *mithḳâls* or less, into which he would plunge his beard; after exhausting most of the contents, they would sprinkle the remains on each other and then dance.' In the 6th cent. the poet Ibn al-Ta'âwîdhî introduces descriptions of wine-drinking into his encomiums on Khalîfs (p. 162) and other distinguished persons (p. 86). From the 4th cent. onwards the history of Baghdad is frequently occupied with the *'ayyârûn*, or robbers; and the *Maḳâmahs* of Hamadhânî (late 4th cent.) furnish us with a list of thieves' tricks showing that their trade was highly specialized; the contemporary anecdotes of Tanûkhî indicate, however, that the metropolis was fairly well policed. The same

tales indicate that the practice of banking was fairly developed, implying the existence of a well-established code of rectitude in monetary transactions; they also show that there was a considerable amount of sympathy and mutual kindness between the poorer members of the community, but great disregard for the sanctity of human life, and an insufficient sense of responsibility in the domestic relations. Public opinion seems to have been ordinarily in favour of the kindly treatment of slaves (Jâḥiẓ, *Misers*, p. 38), and against severe punishments.

6. Agencies for reform.—For dealing with the criminal classes the rulers of Baghdad employed spies, whose business it was to report at headquarters whatever seemed to them worthy of notice; certain rulers occupied themselves particularly with public morality: so the Khalîf Mu'tamid (A.D. 892) issued an edict forbidding story-tellers, astrologers, or fortune-tellers to sit in the street or in the great Mosque; while booksellers had to take an oath that they would sell no metaphysical or theological works. Similarly the Khalîf Muḳtadir (ob. A.D. 1094) banished from the capital all singing-women and *filles de joie*, forbade the entry to the public baths except in decent attire, and ordered the demolition of various galleries in which games were played, and which permitted the players to look down into people's houses. Probably the efficacy of these and similar edicts was of no long duration. In the year 816 we read (Ṭabarî, iii. 1008) of an interesting case of a voluntary organization of the peaceful citizens of Baghdad to repress crime and outrages; one of the leaders in this movement 'hung a Qur'ân on his neck, and began by exhorting the inhabitants of his locality; and when he had obtained a hearing, proceeded to admonish all the inhabitants of Baghdad, high and low, beginning with the noblest family of all, the Banû Hâshim; he established a register in which he inscribed the names of all those who undertook to observe his regulations and coerce those who disobeyed them. With the followers thus acquired he patrolled the streets of Baghdad, and put a stop to robbery and blackmailing.' His proceedings were at first disapproved by the government, but afterwards they acquiesced and bade him continue. A less drastic method of dealing with the vicious propensities of the citizens was furnished by the efforts of the preachers, of whom we have notices for all periods of the Khalîfate; the satirists Ḥamadhânî and Ḥarîrî endeavour to represent them as shameless hypocrites, whose interest lay only in the collection, but there is no reason for believing this account to have been ordinarily correct. The earliest of these preachers whose sermons have come down to us is al-Ḥârith b. 'Abdallah al-Muḥâsibî (ob. 857); they are practical in character, but are said to have attracted vast audiences, and to have produced ecstatic phenomena among their hearers. It is chiefly in and after the 5th cent. of Islâm that the historians call attention to the performances of the Baghdad preachers, for whom colleges (or, as we should say, chapels) were often erected. In 1093 the capital was visited by a preacher from Merv, Ardashîr b. Manṣûr; he met with such signal success that, when the ground occupied by his hearers was measured, it was found to cover 157 by 120 cubits. The Khalîf himself at times condescended to attend these discourses, which were occasionally used for political or seditious purposes. The aim of the preachers was not only to ameliorate the morals of their co-religionists, but to convert members of other communities to Islâm; and fabulous accounts are given in their biographies of their success in both endeavours. The preacher about whom we possess the largest amount of information is 'Abd al-Qâdir al-Jîlânî (ob. A.D. 1165). He appears to have carried on an agency in which the temporal as well as the spiritual wants of his converts were served. Money for the purpose was provided partly by four wealthy wives of the preacher, and partly by gifts taking the form of thank-offerings which came in from the many regions whither his fame had spread; and others who followed this calling were financed in the same way.

7. Christian communities in Baghdad.—Religious toleration, as understood by the Muslim community, was practised by the 'Abbâsid Khalîfs, and a Christian community began to gather in Baghdad almost immediately after its foundation. Perhaps the earliest scene which introduces Christians in this city is one recorded in the *Chronicle* of Dionysius of Tell-Mahré, when the Jacobites in the year A.D. 767 refer to the Khalîf Manṣûr the question of appointing a Patriarch for their sect. The Khalîf, ordinarily terrible, treats them with courtesy, and tells them to make the choice themselves; they select one David of Dara, and the Khalîf gives him a deed of investiture, authorizing him to punish with the extreme penalty of the law any Jacobite who fails to acknowledge his authority. The Nestorian sect, however, was of greater importance than that of the Jacobites at the 'Abbâsid capital. In the reign of Mahdî (A.D. 775–785) the great Nestorian monastery, called Dair al-Rûm, was founded in the Shammasiya Quarter, where the chief Christian settlement, called Dar al-Rum, was located. It was followed by the erection of many more churches and monasteries, several of which were destroyed when Baghdad was taken by Hûlâgû; their names are collected by le Strange (*op. cit.* 208–212). The different sects had different churches, and kept apart in religious matters; only at some time the Nestorian Patriarch, whose residence was in Baghdad, came to be regarded as the official head of the whole Christian community, and as such he is described in the deed of investiture of the year A.D. 1138 (H. F. Amedroz, in *JRAS*, 1908, p. 448). The sects there enumerated are four: the two already mentioned, the Melchites, or Greek orthodox, and the Rûm, whom there is some reason for identifying with the Franks, or Roman Catholics. Owing, probably, to the superiority of Christian morality and education, the members of these communities had a tendency to monopolize all the professions, trades, and situations in which skill and trustworthiness were required. The humiliating and intolerant edicts of Omar I. had repeatedly to be proclaimed, owing to outbreaks of Muslim jealousy (A.D. 849, 853, 1091, etc.), but fell quickly into abeyance; Mutawakkil, who in the year A.D. 849 tried to enforce them, ten years later put into the charge of a Christian scribe the money for the building of his contemplated city, Jafariyyah. Normally it would appear that the Christian doctors (in all senses of the word) enjoyed high favour at the Khalîfs' and Sultans' courts. The *History of the Nestorian Patriarchs* (ed. Gismondi, Rome, 1896) tells of the familiar intercourse enjoyed by the Patriarch Timotheus with the Khalîfs Hâdî (A.D. 785–786) and his son the famous Hârûn al-Rashîd. A specimen of their conversation is there given (p. 65): 'O father of the Christians,' said Hârûn to the Patriarch, 'tell me briefly which religion is the true one in God's eyes.' Without hesitation Timotheus answered: 'That religion of which the rules and precepts correspond with the works of God.' The reply was regarded as felicitous, because the Khalîf's request contained a dangerous trap; and the mere rumour that a Christian had spoken disrespectfully of Islâm or its Prophet would have been sufficient

to cause a riot (Ṭabarî, iii. 2162). The sanguinary rule that punished apostasy from Islâm with death remained unaltered (*ib.* 1434, A.D. 856); but, owing to the mild spirit of Abû Ḥanîfa's legislation, there was a tendency to mitigate the more barbarous regulations of 'the Pious Khalîfs,' and the tone of the code drawn up by his pupil Abû Yûsuf for the Khalîf Hârûn is decidedly humane. The magnificence with which the Christian feasts were celebrated attracted many Muslims to take part in these occasions, and even attend services in the churches; if the poet Sibṭ Ibn al-Ta'âwîdhî may be believed (ed. D. S. Margoliouth, p. 400), he went so far as to fast fifty days in order to gratify his Christian friends. The monasteries were also visited by Muslims anxious to purchase wine, the sale of which in shops was, nominally at least, forbidden (*ib.* 240, 14–18); while the beauty of the youthful deacons attracted other visitors for a still less reputable reason (*ib.* 52). The form of immorality alluded to appears at times to have led to shameful persecution (Yâḳût, *op. cit.* ii. 26, where the scene is at Edessa).

8. Other religious communities.—The Jews enjoyed the same rights as Christians in Baghdad, and had a special quarter, with a bridge called after them. Numerous synagogues were founded, of which the largest was called Bar-Nashala (?) (Grätz, *Geschichte der Juden*, v. [1895] 198). References to the Jews are not very common in the historical and anecdotic literature concerned with the city; they appear, however, to have had their share of the State appointments, and, indeed, in A.D. 1091 we read of one holding the very high posts of Vice-Sultan (*wakîl al-Sulṭân*) and Manager of the Empire (*Niẓâm al-Mulk*). They practised the medical profession, and probably various trades, including that of scribe; as early as the time of Ma'mûn (813–833) we read of one who made his living by executing copies of the Old and New Testaments and the Qur'ân (Amedroz, in *JRAS*, 1907, p. 38). At times they were in possession of great wealth, and were notorious for the display of finery (Ghazâlî, *Revival of the Religious Sciences*, iii. 182). It was thought meritorious to refuse to teach them Arabic grammar even for large sums, as the proof-passages came from the Qur'ân; and insulting language about them is used by poets (Sibṭ Ibn al-Ta'âwîdhî, 75, 246). Nevertheless the foundation of Baghdad and the improvement in their condition, due to the greater toleration of the 'Abbâsids, seem to have been epoch-making for the Jewish community. Jewish literature from this time follows Muslim literature almost slavishly, the various departments of grammar, codification, philosophy, poetry, elegant prose, homiletics, collections of anecdotes, all taking their rise from Arabic models; and since no Jewish non-Biblical MS earlier than the 'Abbâsid period has hitherto been discovered, it has been argued by the present writer that the remaining departments of Jewish literature (notably the collections of Tradition) are based on Islâmic models also (cf. *JE* ii. 435–8).

A community which produced some men of eminence in the scientific and literary world of Baghdad, chiefly in the 4th cent. of Islâm, were the *Ṣabians*, who arbitrarily took a Qur'ânic appellation, properly belonging to a very different sect. The most distinguished member of it, the state-secretary Ibrâhîm, appears to have found in his religion no obstacle in the way of promotion, and to have enjoyed the friendship of even such ecclesiastical dignitaries as the Registrar of the 'Alids, who honoured him with a memorial poem; while the familiar acquaintance with the Qur'ân which his profession demanded was regarded as a merit. His grandson, however, found it desirable to embrace Islâm. The *Magian*, or Mazdayân, system enjoyed fewer privileges than the above-named sects, as intermarriage with them and the use of meat slaughtered by them were forbidden the Muslims; nor were they allowed to have acknowledged places of worship. Nevertheless it would appear that some of them were settled in Baghdad, and even enjoyed wealth. They were to be found (according to Jâḥiẓ, *Misers*, p. 111) all over Baghdad and the other cities of Irâḳ, distinguished by their bare feet or their laceless shoes. Of other sects, usually offshoots of those which have been mentioned, there are occasional notices.

LITERATURE.—To the references given throughout the article there may be added the historical romance (Arabic), *Ḥaḍârat al-Islâm fî Dâr al-Salâm*, by a modern writer, Jamîl Nakhlah al-Mudawwar (Cairo, 1905). D. S. MARGOLIOUTH.

BAHAISM.—See BĀB, BĀBĪS.

BAHELIA (Skr. *vyâdha*, 'one who wounds').—A tribe of hunters and fowlers in Northern India, which at the Census of 1901 numbered 53,554, the majority of whom are found in the United Provinces and Bengal. They are probably survivors of a non-Aryan race, who still practise their primitive occupation of hunting, trapping birds, and collecting jungle produce. They are, in name at least, all Hindus, but are never initiated into any of the orthodox sects. They worship a pantheon of deified ghosts, such as Kālū Bīr, Parihār, Hardeo or Hardaur Lālā, the cholera godling, Kālē Deo, and Miyān, probably the Musalmān saint of Amrohā in the Morādābād district. To these, sacrifices of fowls, goats, or pigs are made, with offerings of cakes, fruits, and grain. Parched grain and milk are offered to the household snake at his festival, the Nāgpañchamī, or Dragon's Fifth. Besides these they observe the ordinary Hindu feasts, and their religious rites are superintended by a low class of village Brāhmans.

LITERATURE.—Crooke, *Tribes and Castes of the North-Western Provinces and Oudh*, 1896, i. 109. W. CROOKE.

BAIDYĀ (Skr. *vaidya*, 'one learned in the Veda,' esp. in the Āyur Veda, on which the Hindu system of medicine is based).—The Bengal caste of physicians, which at the Census of 1901 numbered 90,036, found under this name only in Bengal and Assam. They are a highly respected caste, claiming descent from a Brāhman father and Vaiśya mother. Their religion is that of the orthodox high-caste Hindu. The older families worship the Śaktis, or Mother-goddesses. Some among the poorer classes follow the rule of Viṣṇu. Many have in recent years joined the Brahmo Samāj. They were closely associated with the Neo-Vaiṣṇavism preached by Chaitanya (*q.v.*) in Bengal (*q.v.*), and several of the best known Guṣains, or spiritual guides, of that sect are drawn from the ranks of the Baidyās. The business of a physician is naturally confined to men of high caste, because taking medicine from the hands of a Baidyā is a sort of sacramental act, so that some orthodox Hindus in Bengal, when at the point of death, call in a Baidyā to prescribe for them, in the belief that by swallowing the drugs he orders they obtain absolution from their sins. In the Deccan the Vaidūs, who have adopted a name derived from the same Skr. root, are wandering Telugu beggars, who gather healing drugs and simples and hawk them from door to door, or beg for alms. Their religion is of the vaguest type, their family-god being Vyānkoba of Girī or Tirupati (*q.v.*), in North Arcot. But when they are on their begging tours they seldom carry his image with them. They never go on pilgrimages or keep any fast or feast, except the Dasahrā in September, when they offer

boiled mutton to their god, and after laying it on his altar eat it themselves.

BAIGĀ.—A term of Dravidian origin, applied to designate the non-Brāhmanic priests of the Gonds and kindred races along the hills of the Cent. Prov. and Bengal. It has been specially applied to a cultivating tribe, which at the Census of 1901 numbered 33,914, found in the Cent. Prov. and in Cent. India. The best account of them is that by Ward, who found them in the Mandlā district of the Cent. Provinces. He describes them as the acknowledged superiors of the Gond races, being their priests and authorities in all points of religious observance. The decision of a Baigā in a boundary dispute is almost always accepted as final, and, from this right as children of the soil and arbiters of the land belonging to each village, they are said to have derived their title of Bhūmiyā (Skr. *bhūmi*, 'the land').

These Baigās, who are found in the eastern districts of the Cent. Prov., are reported to be quite different from the Gonds, their vocabulary consisting almost entirely of Hindi words. Those who occupy the Maikal range of hills do not show the flat head and nose and receding forehead characteristic of the Gonds, but have longer heads, more aquiline features, and particularly small hands. It is thus possible that they may represent an intruding race from the Gangetic valley, who introduced the northern culture among the Gonds and gained the position of priests among that people, with whom they afterwards intermingled. Their religion much resembles that of the Gonds (*q.v.*), and they reverence the same gods, adding to the Gond pantheon Māī Dharitrī, or Mother Earth. The god in charge of the village is Ṭhākur Deo, the 'Divine Lord,' and he is honoured accordingly. But they fully believe also in the spirits which haunt the forests—the primary basis of the religion of the Dravidians of Northern India—and in the places which are regarded as more especially the haunts of these spirits, shrines (*pāt*) are erected, each under the charge of a special member of the tribe. There is no special rule regulating the erection of these shrines, except that they are built at places where it is believed there has been a spirit manifestation. Sometimes it is a place where a man has been killed by a tiger or a snake, or has met his death in a sudden or tragical manner; and a special rite is performed to lay the ghosts of those who have died in an unexpected way. Some members of the tribe are supposed to be gifted with special powers of magic or witchcraft, and it is common for the Baigā medicine-man to be called in to bewitch the tigers and prevent them from carrying off the village cattle. The Gonds thoroughly believe that they are possessed of powers such as these.

The religious rites of the Baigās are of the same type as those of the Gonds; at marriages, births, and deaths the customs of the two tribes are identical. In the Chhattīsgarh District the Baigā worship centres round Dūlhā Deo, the deified bridegroom god, and Devī, the Mother-goddess, in her manifestation as Bhavānī. They have a peculiarly brutal mode of sacrificing a pig in honour of Nārāyan Deo, who is identified with the Sun, and is regarded as their household god. The wretched animal is crushed to death under a beam, after having been cruelly tortured—this rendering the sacrifice more acceptable to the deity.

Further east, in the hill country of the United Provinces and Bengal, the Baigās do not form a special tribe, but are the exorcists, medicine-men, and priests of the hill races. They are generally drawn from the wilder and more secluded tribes who are supposed to have maintained the race traditions in the most perfect way. They discharge all the religious duties of these peoples, the functions of the priest being as yet differentiated from those of the exorcist or sorcerer only in the most imperfect way, if at all.

W. CROOKE.

BAIN.—I. **Life and personality.**—(1) Born in the part of Aberdeen known as Gilcomston, on the 11th of June 1818, Alexander Bain died at Ferryhill Lodge, in his native city, on the th18 of September 1903, in the eighty-sixth year of his age. Although he reached this long term of years, he was never a man of very robust constitution: on the contrary, from the time, in early days, when a serious breakdown in health occurred, he had to husband his strength, and to make the most of favouring circumstances. This he did by careful habits and a well-planned system of simple living, subjecting everything to rule and method. He was specially attentive to diet and to physical exercise; and walking in particular (his chief recreation) was timed and regulated with almost mathematical precision. As a boy, and during his student days at Aberdeen, he worked as a handloom weaver—his father's occupation. When he was a pupil at Gilcomston Church School, his ability was recognized; and as he was emerging into youth he had the good fortune to attract the attention of the Rev. John Murray, minister of the North Parish of Aberdeen, who introduced him as a promising youth to Dr. John Cruickshank, then Professor of Mathematics at Marischal College, and a patron of talented and aspiring young men. This was in 1835. From that moment, Dr. Cruickshank took young Bain by the hand; and his interest in him was fully rewarded by the high position that the pupil achieved in most of the University classes. In 1841, Bain (having just passed from studentdom) received an appointment in the University as Assistant to Dr. Glennie, Professor of Moral Philosophy, who had fallen into ill health. In this capacity he had to conduct the class on the Professor's approved methods, and to read the Professor's lectures, being responsible for the order of the class. In the interests of discipline, he made innovations little by little in the teaching, bringing the subject more up to date, and giving expression (in more or less guarded fashion) to his own views. This, when discovered by the Professor, was resented, and led, after three sessions, to Bain's losing the post of Assistant. Thereafter he made his way to London, the goal of all ambitious Scotsmen, where, in 1848, he was appointed to an office in the Board of Health under Edwin Chadwick. In London he soon came into contact with great literary and political leaders—more especially with George Grote and J. S. Mill, who became his fast friends, and with whom he was closely associated in philosophical and other work. From London he returned to Scotland, where he wrote many literary productions for Messrs. Chambers of Edinburgh; then went again to London, where he married and settled down for a time, producing there his two great philosophical works, *The Senses and the Intellect* in 1855, and *The Emotions and the Will* in 1859.

These works raised him at once to the front rank of psychologists. Consequently, when the two Universities of Aberdeen (King's and Marischal) were united (or, as the local term is, 'fused') in 1860, Bain was presented by the Crown, on the

recommendation of Sir G. Cornewall Lewis, then Home Secretary, to the Chair of Logic and English in the united University. For twenty years from this date—down, that is, to the year 1880—he occupied this Chair with great distinction, teaching the two subjects of English and Logic (including in the latter Psychology) and making his influence felt. These were years of enormous intellectual activity and literary productiveness, when there issued from his pen in unceasing flow works on English Grammar, on Rhetoric, on Logic, on Psychology, on Ethics, and on Education; when also he originated the philosophical journal *Mind*, which he owned and financially carried on for sixteen years at considerable pecuniary loss; and when, in the Senatus and the Council of his University, he pushed forward with untiring energy, and in the face of strenuous opposition, projects of University reform. Nor did his activity diminish when he resigned the Chair in 1880. There ceased only, at that time, his class-teaching. His writing of books went on, as well as his active interest in local affairs; and it was while he was Emeritus Professor that the students of the University, appreciating his genius and his faculty for practical work, and proud of his fame, elected him their Lord Rector for two separate terms of three years each. This entailed his constant attendance at, and presiding over, the meetings of the University Court, and his indefatigable piloting of University schemes to successful issue at a most important and electrically charged moment of the University's existence.

His professorial labours were in part rewarded when former pupils, in 1884, had his portrait painted by Sir George Reid, and presented as a lasting memorial to the University. Reward for services done to the community came also about the same time, or somewhat later—in particular, the presentation of his bust in marble to the Free Public Library, in 1892, in recognition of his long-continued and whole-hearted interest in the education of the masses, dating from his student days, and his early connexion, as lecturer and as secretary, with the Mechanics' Institute of the city. All the while, his pen continued active. New works appeared, old works were revised (often in large part re-written); and, though the energy slackened by degrees as the years advanced, it could hardly be said ever to have actually ceased, for, as late as 1903 (the year of his death), appeared his *Dissertations on Leading Philosophical Topics*, and to the end he retained a keen interest in the progress of Psychology and the movement of Philosophy. Passing by minor productions, his chief works are these:—*The Senses and the Intellect* (1855), *The Emotions and the Will* (1859), *On the Study of Character, including an Estimate of Phrenology* (1861), *An English Grammar* (1863), *English Composition and Rhetoric* (1866, enlarged ed. 1887–8), *Mental and Moral Science* (1868), *Logic* (1870), *Mind and Body* (1872), *A Higher English Grammar* (1873), *Education as a Science* (1879), *James Mill—a Biography* (1882), *John Stuart Mill—a Criticism, with Personal Recollections*, (1882), *Practical Essays* (1884), *On Teaching English* (1887), *Dissertations on Leading Philosophical Topics* (1903), *Autobiography* (1904).

(2) His personality was striking; and a stranger seeing him for the first time could not but ask who he was. A dapper figure, somewhat under medium height, he had a well-knit frame, with expansive chest and broad shoulders; a finely formed head, with a brow marked by notable prominences at the temples; keen, piercing hazel eyes, with unusually long eyelids; a strong curved nose; thin lips, which gave the mouth the character of determination, and readily expressive either of satisfaction or of contempt; a face covered by a copious beard—all save the upper part of the chin, which, till his later years, was clean shaved; hands with long fingers, and particularly expressive thumbs, which bent back in a significant fashion as he gesticulated. His gait was peculiar. While walking, he bent his body forward and placed a hand behind his back, as if steadying the movement, and forthwith accelerated his pace till it became a moderated run—indicative of mental activity, exhilaration, and the utter absence of self-consciousness and regard for outward appearance. Keen as a needle intellectually, he never spoke in public or wrote for publication without showing the logician's subtle power; and, in private talk, one could not help feeling that one was in the presence of a supremely observant and analytic mind—a modern Aristotle, noting and dissecting everything. Yet he was a man of very wide interests and of warm heart. He took an active part in many public duties—School Board, Mechanics' Institute, Free Library, etc. His feelings were always under control, and those who met him casually (and to whom he would be dry and reserved) pronounced him to be hard and unsympathetic (as, indeed, he not infrequently was, if he met conventional and commonplace people). But let genius or sterling character appear, no matter where (it might be in the humblest ranks of life), and he was immediately attracted. It was genuine worth alone that counted with him.

Readers of his works have often complained that his writings are devoid of emotion. They have ground for their complaint. Bain did himself an injustice here. Whenever he took up the pen, his feelings seemed to forsake him. But with a special friend—say, a favourite student (these were not many, but they were choice)—looking to him for help or counsel, his real nature came forth. All his resources—his advice, his ideas, his MSS, his library, his patronage—were put at his disposal; and he spared no effort to further his interests and aspirations. Underlying all was true generosity of disposition. In like manner, in the small circle of his intimates, his gentler and more attractive qualities came out. He had wit and humour; and he possessed a fund of anecdotes, which he told well. He was a kind host, and a staunch friend. On the other hand, he had his dislikes and his animosities. Like all true-hearted people, he was sensitive to insult and determined in his opposition. It was no light matter to arouse his enmity. He was a man of strong convictions and loved a controversy; and in debate he hit hard, but never took a mean advantage of an opponent. Meanness raised his indignation and contempt, and he had none of it himself. He was dominated by a sense of justice and of truthfulness (few men more so), and his judgment was ever balanced—a fact that comes clearly out in his published writings, as it did in his daily life. He had the power of judging apart from personal feeling, to a degree that is very unusual. Hence his criticisms were pre-eminently impartial. And it mattered not whether he were criticizing himself or others. As he looked back upon it, his own work was viewed with a clear unprejudiced eye, and commented on and appraised accordingly—as may be seen in some striking instances in the *Autobiography*. In like manner, his criticisms of others' work were frank and honest, and they frequently gave offence to friends. He had not learned the art of saying what he did not mean, and such an art he heartily despised. He had many fine qualities, which those who knew him best could best appreciate; and his defects not infrequently arose from these.

2. Position in Literature and in Philosophy.—In estimating Bain's position in Literature and in Philosophy, we must keep his offices apart.

(1) First of all, let us take him as *grammarian*. This need not detain us long. His works show his merit to be that of a subtle analyst and a clear expositor—scientific and methodical, and not afraid to express his views, even when they might be unacceptable; and when we remember the backward condition of the North of Scotland in grammatical attainments at the time when Bain came as Professor to Aberdeen, we can see the magnitude of the task that lay before him as he set forth to instruct in grammar. But the task was successfully accomplished, although not without difficulty. He had to get hold of the teachers, and these were apathetic, when not actively hostile. He solved the difficulty by indoctrinating his students, a large proportion of whom were to be teachers, with newer and progressive views, and thus by degrees revolutionized the teaching of English in Scotland, and made his name one to conjure with throughout the North.

(2) But his work as *rhetorician* is even more remarkable. Campbell and Blair had ruled supreme in this realm; but now a new impulse was given to the study and the practice of composition, and the effect for good was soon visible on all hands. It has sometimes been objected to Bain's teaching that he did not produce stylists. It may very well be doubted whether the stylist is not a man 'born and not made.' But, be that as it may, the objection is superficial. For style is wherever clearness of exposition is, and wherever there is a writer who has an intelligent appreciation of the shades of meaning in words and can give utterance to his thoughts in definite logical form and with exact precision. Such writers Bain produced in abundance. Rhetoric was to him, first and foremost, an intellectual discipline, designed to secure clearness of expression; and for this end he was supremely critical. Not even Shakespeare, still less the minor poets, neither Bacon nor De Quincey nor Macaulay nor Carlyle among our master prose writers, escaped his scalpel: all were subjected to analysis and dissection, so that the student might be warned against their faults, while encouraged to imitate their virtues. This cold, critical, dissecting process has been greatly objected to in the teaching of style; and perhaps it may be admitted that Bain made too drastic a use of it. But if it be the safeguard against that florid vacuous writing which so frequently passes for style, a little excess in the use of it may be tolerated with equanimity, if not actually excused.

(3) As an *educationist*, Bain holds a very high position. He held advanced views on University reform, and advocated the due recognition of the modern languages (as against the traditional monopoly of Classics), and the right of Natural Science to have an equal place in the University training with the older established subjects. But besides, he went outside University requirements and took a wide view of Education, raising the question of Education in general and the grading of subjects at the various stages of instruction. In this connexion he gave expression to very definite notions about the proper order of studies, and about how teaching should be conducted so as to be best suited to the harmonious development of the individual mind. His contributions to this highly important subject are to be found chiefly in his book on *Education as a Science*.

(4) As *logician*, Bain holds a place with J. S. Mill. He never pretended to start afresh here, but simply to amend and carry forward Mill. This he succeeded in doing. His amendments and additions are noteworthy, both in Deductive and in Inductive Logic; but specially valuable is his carrying of logical principles to their practical issues and his splendid application of them to the sciences in detail (see bk. v. of his *Logic*). This stands by itself in Logic manuals.

(5) But Bain's greatest fame must ever rest on his *psychology*. He was a reformer here in a supreme and lasting sense. One of the earliest in modern times to recognize the importance of bringing psychology into close relation with physiology, he devoted much attention to the elaboration of this position, and presented it in a striking fashion. From the standpoint of the cerebro-psychologist, he handled mind in all its processes—emotive, intellectual, and volitional. This led to his discarding the old 'faculty' psychology, which looked upon the mind far too much as if made up of self-contained compartments, where the processes worked in independence of each other, and in which the connexion with the body was slurred over or ignored; and it led also to his devising a natural-history plan for the description of mental phenomena—a plan where the physical embodiment of mental states was recognized as rigorously as the specifically psychical aspect of them. It is obvious that we have here the precursor of what has come to play so prominent a part in more recent psychology, viz. psychophysics and the experimental determination (determination by experiments systematically carried out in the laboratory) of the workings of mind. Next, Bain was supreme among his fellow-psychologists in the persistent application of Association and its laws to the interpretation of mind, and in the thorough treatment that these laws received at his hands (see also art. ASSOCIATION). He is first and chiefly an Associationist, and his whole strength is devoted to showing that the great problems of psychology—especially the problem of the Perception of an External (Material) World—are to be solved on Associationist principles. This stupendous task he accomplished in a way that, whether we be fully satisfied with the result or not, gives him a foremost place in the history of psychology. No one can know what modern Associationism is at its best who does not go to *The Senses and the Intellect* for information; but this must be supplemented by Bain's most recent utterances in other productions. For example, the objection had frequently been made that his Associationist explanation is too mechanical, and neglects to take account of the activity of the mind. Here is his reply, given in *Mind*, in criticism of Wundt, and reprinted in *Dissertations on Leading Philosophical Topics* (pp. 50, 51):

'I propose to remark upon the bearing of Wundt's speculation upon the laws of Association, properly so called. Notwithstanding the stress put upon the action of the will, he still allows that will is not everything: he does not shunt the associating links, and lay the whole stress of the exposition on the apperceptive volition. What he says as to the essential concurrence of emotion and will with the workings of association we fully admit. No associating link can be forged, in the first instance, except in the fire of consciousness; and the rapidity of the operation depends on the intensity of the glow. In like manner, the links thus forged are dormant and inactive, until some stimulus of consciousness is present, whether feeling or will. . . . The subsequent rise or resuscitation of ideas consequent on association is a fresh field of study. . . . Over and above the original adhesion, there are circumstances that assist in the reproduction, and make it a success or a failure. Chief among these is the power of the will, but not to the exclusion of other influences. Even the addition of emotional excitement, which of itself counts for a great deal—that is, apart from moving the will—is not all. 'The purely intellectual conditions, under which I include the number and nature of the associating connexions at work in a given case, bear a large part in the process of resuscitation. More particularly, as to the influence of the will in apperception, everything that Wundt advances is supported by our experience. The will may make up, in some small degree, for the feebleness of a contiguous linking, partly by a more strenuous attention, but far more by the search for collateral links in aid. It may likewise favour the recall of a resembling image. But neither of

these two cases represents its habitual and all-powerful efficacy: in both, the limits of its reproductive force are still narrow. The operation that represents Wundt's Apperception in its full sweep is that crowning example of voluntary power—the command of the thoughts, by detaining some and dismissing others, as they arise, and are found suitable, or the contrary. Too much cannot be said as to the importance of voluntary attention in this lofty sphere. All thinking for an end—whether it be practical or speculative, scientific or æsthetic—consists in availing ourselves of the materials afforded by association, and choosing or rejecting according to the perceived fitness or unfitness for an end. When, therefore, Wundt says that Association alone does not explain the higher intellectual functions, he only says what we all admit, namely, that Association needs the control of will and feelings, in order to bring forth our more important thinking products. In the absence of some degree of conscious intensity, Association can no more unite ideas, or restore the past by virtue of such unions, than a complete set of water-pipes can distribute water without a full reservoir to draw from. The scheme of Wundt does not lead to the slighting of Association as a great intellectual factor. His Apperception would be nothing without it.'

Next, Bain excels in his analysis of mental states and processes and his fullness of telling illustrations. We have only to look at his handling of the Sensations, or at his treatment of the Emotions, to see that he has subtlety and insight of a very exceptional kind. Even when dissenting from him, we must confess that he is penetrative and suggestive to a degree. He is too analytic at times—this we may frankly allow; but his keen dissection is a helpful preliminary to a better understanding of the phenomenon dissected. Where his psychology stands him in least stead is when the distinction between psychology and epistemology comes in and needs to be specially attended to. Though he was quite aware of this distinction, it never assumed in his thoughts its rightful place; and his exposition sometimes suffers accordingly. He is also, in his general handling of mind, too individualistic. Although in his later years he explicitly recognized that the growth of the human mind cannot be thoroughly explained without taking into consideration the fact of Heredity (see, for example, the *latest* edition of *The Senses and the Intellect*), he had originally shaped his theory on the supposition that each individual had to learn for himself what he comes ultimately to attain, and this prevented his ever giving to the wider conception the due scope in psychology that it merits. In like manner, he never laid sufficient stress on what the fact of his being born into a formed language does for the individual, enabling him to appropriate with comparative ease, at an early age and in a comparatively short time, knowledge which, if he had to acquire it for himself from the beginning without such aid, would take him an indefinitely long time, and perhaps might not be achieved at all within the three score years and ten of his life.

(6) It was in line with Bain's psychological principles and with his democratic nature that, in *Ethics*, he should be a thoroughgoing *Utilitarian*. The same analytic spirit that he had shown in his handling of intellectual and emotional phenomena he shows in his treatment of the will. His analysis of conscience and his review of moral principles in his *Moral Science* show what Associationism can do in explanation of our ethical nature. They are certainly subtle and practical, and put the matter with calm scientific precision. Ethics is to him a *science* or nothing at all. He, therefore, has no trust in high ideality: principles tested by concrete facts of experience are what he requires. Yet, the whole of the facts must be attended to. Hence, he was emphatic in acknowledging the altruistic and disinterested, as well as the egoistic, side of our ethical constitution. Consequently, if we take morality as simply concerned with our relations as members of society, having our own and other men's interests in view, then Bain's teaching commands attention and no small measure of approval. It is essentially a doctrine of justice as between man and man, and between the individual and the community, and of the right of the State, having regard to the interests of the social units, to legislate with authority. It would, if accepted and consistently acted on, produce good citizens and promote the general welfare. Where it is defective is in not recognizing the value of the *ideal* side of morality and in not making adequate allowance for the strength and potency of the emotions in moral conduct. Appeals to ideality and the dignity of man appeared to him 'gross pandering to human vanity'; and he did not think that much practical good could come from that. Man, as we actually find him, is too frail and erring, and, what is worse, too malevolent by nature (for Bain was insistent on the native malignity of human nature) to permit our catering with impunity to his self-conceit. We must view him as he is, not blinking the disagreeable facts, and legislate accordingly; and, doing so, our Ethics must be sober and reasonable. Hence, his teaching lacks the glow which the Ethics that recognizes the Ideal as supreme unquestionably possesses.

(7) Bain was not, in the strict sense of the term, a *metaphysician*. Indeed, it was his claim to have purged psychology of metaphysics, and he had an inveterate distrust of unbridled speculation. Speculation, indeed, was not absolutely forbidden; but it must be speculation based on experiential data, and verifiable by appeal to experience again. Here he was the prototype of modern Pragmatism. In both, we have the same inductive spirit, the same determination to trust experience alone, the same regard to utility or the practical needs of man—experience the test, practicality the end. True, he could not avoid occasionally being himself, at least, half metaphysical; as, for example, when, at the end of his chapter on the 'History of the Theories of the Soul' in *Mind and Body*, he says:

'The arguments for the two substances have, we believe, now entirely lost their validity. . . . The one substance, with two sets of properties, two sides, the physical and the mental—a *double-faced unity*—would appear to comply with all the exigencies of the case. We are to deal with this as, in the language of the Athanasian Creed, not confounding the persons nor dividing the substance.'

Nevertheless he regarded the higher philosophical thinking, as we find it, *e.g.*, in Spinoza or in Hegel or in Kant, with great suspicion. Such metaphysical terms as 'personality,' 'self-consciousness,' 'the Absolute,' he would, if he could, have banished from the language. He constantly protested his inability to read any meaning into them. He also refused, because of the ambiguity of the term 'self,' to accept 'self-realization' as adequate to express the ultimate ethical end. Moreover, the great metaphysical problems—those of the External World and of the Freedom of the Will—seemed to him to be in great measure mere word-puzzles: they arose from our inability to find a formula or a linguistic setting fully adequate to express what we are conscious of in our experience.

Such, then, was Professor Bain as a thinker and a writer. His attitude towards Metaphysics being discounted, he made a name in Logic and in Ethics, as well as in the spheres of Grammar and Rhetoric. But in the realm of Psychology he occupies a position all his own. It is here that his influence has been greatest, and it will continue. Not only has the professed psychologist learned from him, but his principles have been effective in their practical application to many sciences (such as Education), and they cannot be ignored by any teaching that has respect to experience and the nature of man as we actually find it. What is best in his

system has been assimilated by philosophy, and is being carried forward to greater issues. That, perhaps, is the highest compliment that can be paid to a thinker.

LITERATURE.—A. Bain, his works as enumerated in this article; Th. Ribot, *La Psychologie anglaise contemporaine* (1870); W. L. Davidson, art. in *Mind*, xiii. (new series) 151–155 and 161–179, also art. 'Bain, Alexander,' in *EBr*[10] xxvi. 77–79.

BAIRĀGĪ (Skr. *Vairāgin* [*vi-rāga*, 'one who has subdued all earthly desires']).—A sect of Hindu ascetics, which at the Census of 1901 numbered 765,253, of whom the vast majority are found in Bengal and Rājputāna. The term is usually restricted to those who follow the cult of Vishṇu, or of one of his incarnations, especially those of Rāma and Kṛishṇa. There is some evidence to prove that this worship, which is specially popular in Northern India, arose on the spread of the Rājput power which followed the overthrow of the Buddhist dynasties. The Bairāgīs

'probably represent a very old element in Indian religion, for those of the sect who wear a leopard's skin doubtless do so as personating Narasiṁha, the leopard incarnation of Vishṇu, just as the Bhagauti faqīr imitates the dress, dance, etc., of Kṛishṇa. The priest who personates the god whom he worships is found in "almost every rude religion, while in later cults the old rite survives, at least in the use of animal masks," a practice still to be found in Tibet' (Rose, *Panjāb Census Report*, 1901, i. 131, quoting Trumpp, *Ādi-Granth*, 98; Robertson Smith, *Religion of the Semites*[2], 437; see also Frazer, *Adonis, Attis, Osiris*, 64 ff.).

Though the particular cult followed by this sect is most influential in the Gangetic valley and in Rājputāna, it arose in Southern India from the teaching of Rāmānujāchārya, who was born about A.D. 1017 at Śrīperumbūdūr, near Madras. He taught the existence of a triad of principles (*padārtha-tritayam*), viz.: (1) the Supreme Spirit (*Para-Brahman* or *Īśvara*); (2) the separate spirits (*Chit*) of men; and (3) non-spirit (*A-chit*). Vishṇu is identified with the Supreme Spirit; individual beings are separate spirits; the visible world (*dṛśyam*) is non-spirit. All these have eternal existence and are inseparable; yet Chit and A-chit are different from, and at the same time dependent upon, Īśvara (Monier Williams, *Brāhmanism and Hinduism*[4], 119 f.). But the sect did not attain much prominence in Northern India until the time of Rāmānanda, who was born at the close of the 13th, and preached in Northern India at the beginning of the 14th, century. Indeed, it is only to the followers of Rāmānanda and his contemporaries that the title Bairāgī is properly applied. His teaching marked the progressive popularization of Hinduism; and in particular the ascetic Orders, which had been previously monopolized by Brāhmans and Kshatriyas, were now opened to men of lower rank. In addition to this, the religious books published by the adherents of Rāmānanda were now written in Hindī, not in Skr., and thus Northern India was provided with a new national religion of a very clear and vigorous type.

Though this liberal movement marked a decided advance, the Bairāgīs since the time of Rāmānanda have been outdone by the still more liberal teaching for which he provided the impulse, and at the present day Bairāgīs may be regarded as representing the more conservative, orthodox school of Hindu theology. As a rule, they are followers of Vishṇu in one or other of his incarnations, and they are all agreed in the veneration of both Kṛishṇa and Rāma; but some sections pay more reverence to one, and some prefer the other. In the Panjāb this divergence is represented by the Rāmānandī and Nimānandī sections, the former specially addicted to the worship of Rāma, the latter to that of Kṛishṇa. Each has different sectarian marks, and each visits the sacred places, and studies the literature, connected with the deities which are special objects of their veneration. In the Central Provinces the old rule that admission to the Order was gained only by a rite of initiation is now generally neglected, and many are married and have families. Thus the Order is gradually tending to become a caste (Russell, *Census Report*, 1901, i. 162). In the United Provinces there are four sections, of which the two most important are the Rāmānuja or Śrī Vaishṇava, and the Nīmāvat or Nīmbārak. The former, the most ancient and respectable of the reformed Vaishṇava communities, is based on the teaching of Rāmānuja, and its special tenet is that Vishṇu, the one Supreme God, though invisible as a cause, is visible as effect in a secondary form in material creation. They refuse to follow the example of other Mathura sectaries in worshipping Rādhā, the spouse of Kṛishṇa, whom they either completely ignore or regard as merely the mistress of the deity. This branch is also divided into the Tengalai or Southerners, and the Vadagalai or Northerners, who differ in some points of doctrine, which, however, they consider to be of less importance than the manner in which the frontal sectarian mark is to be made. Of the other sect, the Nīmbārak, the doctrines, so far as they are known, are of a very enlightened character. As Growse (*Mathura*, 181 f.) writes:

'Thus their doctrine of salvation by faith is thought by many scholars to have been directly derived from the Gospel; while another article in their creed, which is less known, but is equally striking in its divergence from ordinary Hindu sentiment, is the continuance of conscious individual existence in a future world, when the highest reward of the good will be, not extinction, but the enjoyment of the visible presence of the divinity whom they have served on earth; a state, therefore, absolutely identical with heaven, as our theologists define it. The one infinite and invisible God, who is the only real existence, is, they affirm, the only proper object of man's devout contemplation. But, as the incomprehensible is utterly beyond the reach of human faculties, He is partially manifested for our behoof in the book of Creation, in which natural objects are the letters of the universal alphabet, and express the sentiments of the Divine Author. A printed page, however, conveys no meaning to any one but a scholar, and is liable to be misunderstood even by him; so, too, with the book of the world. Thus it matters little whether Rādhā and Kṛishṇa were ever real personages; the mysteries of Divine love which they symbolize remain though the symbols disappear.'

Though the Bairāgī, a follower of the mild-natured Vishṇu, does not as a rule practise the austerities characteristic of Śaiva ascetics, like the Yogī or Paramahaṁsa, we find him occasionally lying on the nailed couch, the Śaraśayyā, or 'arrowy bed' of Bhīshma, as described in the Mahābhārata (*Bhīshma parva*, 119 ff., tr. M. N. Dutt, vi. 208 ff., tr. Kisari Mohan Ganguli, iv. 444). Monier Williams (*op. cit.* 560 f.) describes an ascetic of this kind whom he met at the Lake Pushkar. But even he, with the catholic feeling of Hinduism, included in his worship not only the Śālagrāma, or ammonite of Vishṇu, but the Bāṇa-linga, or white stone of Śiva, and the red stone of Gaṇeśa.

W. CROOKE.

BAITARANĪ.—A river of North India in the Keonjhar State of Orissa, which, after joining the Brāhmanī, flows, under the name of Dhāmra, into the Bay of Bengal. The name represents Skr. *Vaitaraṇī* (*vi-taraṇa*, in the sense of 'crossing' or 'giving'), liberality to Brāhmans being supposed to assist the soul in crossing this, the Hindu Styx or River of Death. The term *Vaitaraṇī* is also applied to one of the many Hindu hells, which, according to the Vishṇu Purāṇa (tr. Wilson, 209), is reserved for the man who destroys a beehive or pillages a hamlet. An important part of the Hindu death-rites is devoted to assisting the soul to cross this terrible river, the current of which is supposed to run with great impetuosity, hot, fetid

in odour, and filled with blood, hair, and all manner of foulness. After the lustration, done at an early period of the mourning, it is customary to present the funeral priest with a vessel full of black sesamum (*tila*), and a cow to whose tail the ghost may cling in crossing the hated waters—a belief, as Ward (*Hindoos*[2], ii. 62) suggests, based upon the common habit of cowherds in Bengal, who cross rivers in this way. He doubts whether the Hindus ever imagined the existence of a Charon to escort the dead over the stream. But Risley (*Tribes and Castes of Bengal*, i. 359) says that the Jugis place with the dead four cowries with which 'the spirit pays the Chāran (see BHĀṬ) who ferries it across the Vaitaranī.' This is an example of the world-wide belief that the departing soul on its way to the land of the dead must cross a river, which is sometimes spanned by a bridge (Tylor, *Primitive Culture*[3], ii. 94, *Researches into the Early History of Mankind*, 349 ff.). The legend of the Juāngs, that remarkable tribe which down to quite recent times, and perhaps still in some places, wears only aprons of leaves, tells that when the river-goddess, Baitaranī, emerged for the first time from a rock, she 'came suddenly on a rollicking party of Juāngs dancing naked, and, ordering them to adopt leaves on the moment as a covering, laid on them the curse that they must adhere to that costume for ever or die' (Dalton, *Descriptive Ethnology of Bengal*, 156).

LITERATURE.—To the literature mentioned throughout the art. add *Imperial Gazetteer*, new ed., 1908, vi. 218 f.

W. CROOKE.

BALI.—The term *bali*, a Kanarese word corresponding to *bari* in Tamil and *bedagu* in Telugu, means an exogamous totemistic section, that is to say, a section of a caste or tribe worshipping a totem and strictly prohibiting marriage between those who have the same totem. The term is derived from an old Kanarese word meaning (1) way, road, (2) place, spot, (3) vicinity, nearness, company, (4) way, order, (5) race or lineage.* It also means the navel. It is in use among the cultivating, fishing, and forest tribes and castes of the Kanarese tracts of the Bombay and Madras Presidencies, and of the Mysore State. A *bali* is thus the name of an exogamous section. It may be named after some well-known animal, fish, bird, tree, fruit, or flower. The following are common names of *balis* in the districts referred to: the elephant, elk, spotted deer, hog deer, mouse deer, wolf, pig, monkey, goat, porcupine, tortoise, scorpion, the nágchampa (*mesua ferrea*), turmeric, the screw pine (*pandanus odoratissimus*), the honne tree (*pterocarpus marsupium*), the neral (*eugenia jambolana*), the soapnut (*acacia concinna*), and many other local trees and shrubs.

It is noteworthy that the section named after one of these *balis* not only worships the animal or object after which it is named, but obeys strict rules framed to protect the animal or object from injury. Thus, a member of the elephant section may not wear ornaments of ivory, a woman of the *nágchampa* section must never wear the flowers of the *mesua ferrea*, and turmeric must not be used in the marriage ceremonies of the turmeric section, though commonly applied to the bride and bridegroom in the weddings of many Indian castes. The mouse deer section will not kill the mouse deer, and the screw pine section will not cut the branches, pluck the leaves, or even sit in the shade of the screw pine. The *bali*, or totem, of these primitive people, or an image of the same in stone or wood, is usually to be found installed in a rude temple near the village site. Ordinarily the temple is a mere thatched shed of mud walls, surrounded by a small mud-wall enclosure. Here will be found the image of an elk, or a branch of the tree representing the object from which the *bali* takes its name. To this coco-nuts and other suitable offerings are constantly brought, with the object of securing its favours and protection. At certain seasons the members of the section assemble from the surrounding villages, and make special offerings under the guidance of the caste priest. Contact with more advanced castes and tribes, who are organized by family stocks, or *kuls*, is tending rapidly to supplant the *balis* of the Kanarese country, which are forgotten or ignored as something to be ashamed of, by a system of family stocks named after an ancestor. It is not easy to induce these primitive people to describe their *balis* in reply to inquiries. The offspring of parents who, under the system above described, must be members of different *balis*, is sometimes allotted to the *bali* of the father, in other cases, of the mother. The practice varies with different tribes. It is probable that the earliest practice was to trace the *bali* through the mother, and that this system is gradually being supplanted by the Aryan custom of tracing descent through the father.

The *bali*, or totem, organization is a primitive system of which traces are to be found in India in many castes that stand high in the social scale. A remarkable instance of this is the Marathas and the allied castes of undoubted Maratha origin, which have crystallized into separate castes, such as washerman, carpenter, blacksmith, or grain parcher, owing to the influence of occupation. Among these, in varying degree, is to be found a system of *devaks*, or marriage guardians, closely resembling the *balis* of the Kanarese country, though the *devak*, by the progress of events, has in many cases ceased to regulate marriage, and no longer forms a bar to the union of two worshippers of one *devak*. The *devak* is usually some common tree such as the bel (*ægle marmelos*), fig (*ficus religiosa*), banyan, or the sami (*prosopis spicigera*). In its commonest form it is the leaves of five trees, of which one, as the original *devak* of the section, is held specially sacred. It is worshipped chiefly at the time of marriage, which suggests its former close connexion with marriages. It is also worshipped at the time of entering a new house. The installation of the *devak* is still an important part of the marriage ceremony in many castes in the Maratha country.

The existence of the *bali* in Southern India as an obsolescent system of totem-worship, and the survival of traces of a similar system farther north, seem to point to a time previous to the Aryan penetration into the central portion of the Indian continent, when a wide-spread system of totemism prevailed among the Dravidian population.

LITERATURE.—See literature under TOTEMISM.

R. E. ENTHOVEN.

BALLABHPUR (Skr. *Vallabhapura*, 'city of the beloved').—A suburb of Serampore in the Hooghly District of Bengal (lat. 22° 45′ 26″ N.; long. 88° 23′ 10″ E.), famous for the ceremonies performed in honour of Vishnu in the form of Jagannātha, 'Lord of the World.' Ward (*Hindoos*, ii. 164 ff.) describes the rites of the Snāna-yātra, or ceremonial bathing of the god, and the Ratha-yātra, or car procession. In the first, held in the month Jyeshṭha (May–June), Brāhmans, in the midst of an immense concourse of spectators, bathe the god by pouring water on his head, while incantations are recited. The worshippers prostrate themselves before the image, and depart after being assured by the priests that they shall not be subject to re-birth, but be admitted to heaven after the death of the body. About seventeen days after this rite the Ratha-yātra is performed. The idol, after

* Kittel, *Kanarese Dictionary*, s.v.

being worshipped, is placed in an enormous car. Jagannātha (see JAGANNĀTH) is here accompanied by his brother, Balarāma, and his sister, Subhadrā. This triad of deities is believed to be an adaptation of the Triratna of the Buddhists, or of the Triśūla, or trident. The former, the Three Jewels, symbolizes Buddha, Dharma, or Law, and Saṅgha, or the Congregation. It is, however, doubtful whether this symbolism is found in India (Waddell, *Buddhism of Tibet*, 346). The modern triple image is probably due to a modification of the familiar Triśūla, or trident symbol (D'Alviella, *Migration of Symbols*, 254 ff.). As these idols are moved, an attendant fans them with a tail of the holy Tibetan cow. The object of the procession is that the triple deity should visit the temple of the god Rādhāvallabha, 'lover of Rādhā,' one of the forms of the erotic cult of Kṛishṇa. The visit lasts eight days, and the gods then return to their own temple. The rite is said to commemorate the sports of Kṛishṇa with the Gopīs, or milkmaids. It really marks the association of Jagannāth, a survival of Buddhism, with the cultus of Kṛishṇa and its adoption by Vaishnavism. The pilgrimage, the Rath-yātra, everything in fact connected with the worship of Jagannāth, as Fergusson says (*Hist. of Indian and Eastern Architecture*, 429), 'is redolent of Buddhism, but of Buddhism so degraded as hardly to be recognizable by those who know that faith only in its older and purer form.' The idol car is found still in the Buddhism of Tibet (Waddell, *op. cit.* 313).

BALUCHISTĀN. — The country of Baluchistān, in the widest sense of the word, comprises all the territory occupied by the Baluch and Brāhūī races and some minor tribes subordinate to or mixed up with them, and must be understood as including not only the Baluchistān Agency under the Government of India (that is, the Khanat of Kalāt, Makrān, and Las Bela), but also the southern part of the Province of British Baluchistān, parts of the Districts of Dera Ghāzi Khān in the Panjāb, Jacobābād in Sind, and the Province of Persian Baluchistān.

The two main races, the Baluch and Brāhūī, although differing from one another in origin, appearance, and language, are yet bound together as members of one social organization. The tribes of both races live in close contact, and their religious beliefs and practices cannot easily be discriminated. The universal religion among them is Muhammadanism. The few Hindu traders found scattered through the country are either themselves immigrants from India or the descendants of recent settlers. The Baluches and Brāhūīs all profess to be Sunnīs, or followers of the orthodox creed; but in practice they show great laxity, and follow many customs rather resembling those of the Shī'ahs and others, which no doubt go back to the days of paganism. They show the greatest respect to 'Alī, Ḥasan and Ḥusain, and observe the full ten days of the Muharram fast, like the Shī'ahs, and not only the last day, as among the strict Sunnīs. The observance of the five times of prayer prescribed for all Musalmāns has till lately not been at all prevalent among the hill-tribes. It was considered sufficient for the chief of a tribe to say prayers for the whole body of tribesmen.

The Baluches all wear their hair long, and cut neither hair nor beard, except to clip the ends of their moustache in the Sunnī fashion, to show that they are not Shī'ahs. Many of their more civilized or orthodox neighbours say that Baluch orthodoxy consists of little else, and indeed deny them the possession of any religion except one of a negative kind. They are fond of repeating a Persian verse to the effect that a Baluch earns heaven for seven generations of his ancestors by committing robbery and murder. This is unjust; for although the tribesmen are addicted to raiding and the blood-feud, yet many of them have a keen sense of right and wrong, and their defects are those common to all races in the same stage of civilization. Their laxity has its good side, for it is accompanied by a tolerant spirit and an absence of the fanaticism so prevalent among their Afghan neighbours. As Sir D. Ibbetson has well observed of the Baluch, if 'he has less of God in his creed he has less of the devil in his nature.'* His faithfulness to his code of honour, and the respect shown to women and children (who are never injured in Baluch raids), are points in his favour which should not be forgotten. There are few Mullahs and Sayyids among the Baluches, nor have they great influence; on the other hand, great respect is shown to the shrines of saints, as will be described below. Mosques are not common, and, where found, often consist only of a pattern of stones roughly marked out on the hillside, sufficient to indicate the *qibla*, or direction of Mecca.

The conversion of the Baluches and Brāhūīs to the Muhammadan faith had taken place before their settlement in the country now known as Baluchistān, and may be assigned to the period following the first Arab conquest of south-east Persia. The Baluches occupied the mountains and deserts of Kirmān, and were associated with another race known to the Arabs as Qufs and to the Persians as Koch, who may possibly be identical with the Brāhūīs; but the origin of this race is obscure. In any case, there is no historical information regarding their presence in Baluchistān until after the Baluch settlement there. The conversion of these races is ascribed by the historian Istakhrī, who wrote in the 10th cent., to the period of the Abbāsid Khalīfs. Yāqūt, on the authority of er-Rohini, speaks of the Qufs as savages without religion of any sort; but er-Rohini added that they did show some respect for 'Alī out of imitation of their neighbours. The hatred of a Sunnī writer for Shī'ahs is clearly perceptible here, and his language is very like that used to-day regarding the Baluch and Brāhūī mountaineers.

The settlement of the Baluches in the country they now occupy took place during a period extending from the 13th to the 16th century. They gradually spread over Makrān, and in the beginning of the 16th cent. a great migration took place in the Indus valley, the Brāhūīs taking the place of the Baluches on the plateau of Kalāt. The invasion of India was led by Mīr Chākur and his son Shahzād. It is probable that the Shī'ah sect was still prevalent among the Baluches, for Ferishta relates that Shahzād was the first person to bring the Shī'ah creed into vogue at Multān. Baluch legend represents Shahzād as of mysterious origin. A shadow (that of 'Alī) fell upon his mother while she was bathing, during Mīr Chākur's absence at the siege of Delhi with the emperor Humāyūn. She conceived and gave birth to a son shortly before her husband's return. When he returned, the child, who was then three months old, addressed him and told him to fear nothing, as he had been begotten by the influence of the saint. A mystical poem, half in Baluchi and half in corrupt Persian, which is attributed to Shahzād has been verbally handed down to the present day. The following extract will give an idea of its nature:

'I gaze upon the brightness of the King; he created the golden throne of Heaven; his speech was sweet and heart-entrancing; he was like unto the Lord of Light. Day and night he created, day and night are of small account to him.

* D. Ibbetson, *Outlines of Panjāb Ethnography*, 1883.

The dry earth he created, and the smoke that went upwards. There was neither sky nor firmanent: there was neither existence nor speech; there was neither Grandmother Eve nor Grandfather Adam. There was no Ibrāhīm the Friend of God, nor was there the ark of Noah, nor Isā the Spirit of God, nor the throne of Sulaimān. He himself was "He is," Hamīd 'Alī.'

After this period the Baluches seem gradually to have adopted the Sunnī faith, in name at least, although the change has made little practical difference.

'Alī figures largely in Baluch legend, and in some of the stories about him it is impossible not to suspect a Buddhist origin. Such is the legend of the hawk and the pigeon. A pigeon was struck down by a hawk at 'Alī's feet and appealed to him for protection. The hawk, on the other hand, represented that he had left his young ones starving, and could find no other food for them but the pigeon. 'Alī in order to satisfy the hawk cut off a piece of his own flesh. Whereupon both the pigeon and hawk revealed themselves as angels sent by God to try him.

On another occasion 'Alī had himself sold as a slave in order to pay the marriage portion of the daughter of a petitioner. Again he is said to have given a whole caravan of money to a blind beggar by the roadside, who afterwards developed into the celebrated saint Sakhī Sarwar, whose shrine at Nigāhā, near Dera Ghāzi Khān, is one of the chief places of pilgrimage, not only for Baluches but equally for Hindus and Musalmāns from all parts of the Panjāb.

The shrines of saints, or *pīrs*, are centres of worship and pilgrimage throughout the country, and form the most important feature in the actual religion of the people. In many cases there can be no doubt that these shrines have been in existence from times preceding the introduction of Islām, and that most of them were found already established by the Baluches and Brāhūīs when they settled in the country. Some are of great importance, and attract visitors from far and wide, while others are known only locally. Pieces of cloth, bells, horns, fossils, and other objects are left at the shrines by pilgrims in fulfilment of their vows.* Among the most frequented shrines are those of Sakhī Sarwar (already mentioned); Sulaimān Shāh of Tauńsa Sharīf, a modern orthodox Muhammadan shrine; Hazrat Ghaus on Mt. Chihl-tan, or Forty Saints, so called from the saint's forty children who were exposed on the mountain;† Pīr Sohrī at Sohrī Kushtagh in the Bughti country, a truly Baluch shrine;‡ Chetan Shah near Kalāt; Pīr 'Umar near Khozdār, where the ordeal by water is applied; Sultan Shāh in Zehri, visited by sufferers from fever;§ and Jīve Lāl (otherwise called Lāl Shāhbāz) at Sehwān in Sind.‖

A strict adhesion to the tribal code of honour is regarded by all Baluches as of supreme importance, and this code has greater influence than the tenets of their nominal religion. Liberality to all petitioners and hospitality to all comers stand first, and all people are judged by this standard, which plays a large part in the legends of the saints. The legendary hero most admired is Nodhbandagh, who gave away all his possessions; and his verses in praise of giving are often quoted:

'Whatsoever comes to me from the Creator, a hundred treasures without blemish, I will seize with my right hand, I will cut with my knife, I will deal out with my heart, I will let nothing be kept back.'

Next comes the duty of supporting and protecting refugees, and refusing to surrender them to their enemies or to the law. The maintenance of family honour by the punishment of infidelity in wives is considered also of the greatest importance, and death is the penalty both for the woman and for her paramour, although in modern times under British influence compensation is accepted. This is fixed in money, but in practice the debt is generally discharged by the marriage or betrothal of a woman belonging to the family of the aggressor to a man of the family of the injured husband. These are the principal articles of the tribal code, and in addition to these customs there are others of a superstitious nature. Signs and omens are observed, and augury is carried out by examining the blood-vessels on the surface of the shoulder-blade of a newly killed sheep. To see a shrike on the left hand when starting on a journey is an inauspicious omen, and is sufficient to make a whole band of horsemen turn back. The flesh of swine is, of course, forbidden, as to all Musalmāns, but the Baluches add certain national or tribal prohibitions. Fish is universally avoided by them, the reason assigned being that they cannot be killed in the orthodox fashion by cutting the throat; and eggs also are often considered carrion or unclean. The Sardār Khels among the Rinds of Kachhi will not eat camels' flesh, and the Lashari clan of the same tract avoid the *ālro* or *lauńsh*, a small milky-juiced plant much eaten by the hillmen generally. It is possible that some of these prohibitions have a totemistic origin. A few tribal or clan names are derived from the names of plants or animals—which gives some countenance to this idea. There is, however, no instance of an actual survival of totemistic practice among either Baluches or Brāhūīs. The wearing of the hair and beard long is a national custom almost possessing the force of a religious precept, as among the Sikhs. It is considered most disgraceful for a Baluch to cut either hair or beard, although the moustache is trimmed in the Sunnī fashion.

The ordeal by fire and water is still occasionally met with. A case of the ordeal by fire occurred among the Bozdars in the present writer's own experience in 1889,* and Mr. Hughes-Buller describes a slightly differing form, as also the ordeal by water.

There are certain tribes or sections of tribes which have special Levitical functions, and whose members are believed to have the power of curing the sick by breathing on them. Such are the Nothani clan among the Bughtis, the Kahiri tribe, and the Kalmati tribe. The last named are probably not Baluch by origin, although now assimilated. There seems to be a probability that they are the descendants of the Karmatī or Karmathian heretics who were expelled from Multān by Mahmūd of Ghaznī at the commencement of the 11th century.

The only heretical sect which now has any influence in Baluchistān is that known as the Zikrī, which is powerful in Makrān and Las Bela. Its members appear not to be Baluches but Jats and other tribes of Indian or indigenous origin, and some Brāhūīs, especially the Bizanjo tribe. The Zikrīs believe that their founder, Dost Muhammad, was the twelfth Mahdī, and his abode, Koh-i-Murād, near Turbat, takes the place of Mecca as the object of their pilgrimages. Their Mullahs have great power.†

The Baluches are much given to poetry, both ancient and modern; and, in addition to their ballads of war and love, poems on religious subjects are by no means uncommon. To illustrate their feelings and ideas on these subjects, we append translations of some extracts from religious poems taken down from verbal recitation among the Baluches, in the case of the first poem from the author himself:

1. *By Brahīm Shambānī:*

'I remember 'Alī the King, who has poured a torrent into my heart, and the pure Prophet who sits upon his throne to do judgment and justice.

'The true God is merciful, with him is neither greed nor avarice; nor is he father of any fair son; nor is there mother

† A full account of this sect is given by Mr. Hughes-Buller in the *Baluchistan Census Report*, 1902.

or sister with him. I cannot tell who has begotten him, nor can I fathom his might. Five angels stand close to him in his service to do his bidding. The first is Wahī (Jibrā'īl or Gabriel), then 'Azrā'īl, the third is Khwaja Khidr (instead of Mīkā'īl or Michael), and the fourth is the trumpet-blower (Isrāfīl), who sends forth the winds that blow upon the earth. Lastly, there is Shaitān, who rebelled on account of the creation of mankind.

He sits alone, and adds up the full reckoning of every man, and then he gives his command to 'Azrā'īl to take his breath at once. He looks not at good or evil, he heeds not prayer or supplication, he carries away sons from parents, nor does he take their money or sheep or goats with them. He carries a man away by the hair; there is no pity in his stony heart, and he is no man's enemy.

The poet Brahīm has spoken. Listen to my words, to the story of God. I have heard with my ears that there was no heaven and earth, neither Mother Eve nor Adam. In a moment he made the firmament; by his might he made the water; from the foam he created the dry land; he spread forth the mountains and trees and placed them on the earth, and the smoke he made to go upwards. He built up the seven heavens, and the Garden of Paradise, and hell.

And these are the tokens of heaven. A tree stands by the gate to shade the city. The fruit of the garden ripens at all seasons; by his might there are figs and olives, grapes, pomegranates, and mangoes, and the scent of musk and attar. There the Peris may not enter. There is the place of the great assembly where he himself sits with the martyrs, the king Kāsim sits by him, and royal Husain with his followers. Beds and couches are spread, hūris are their attendants standing in their service. There dwell the men of Paradise and eat of the fruit of the garden.

Listen, oh young men! I have seen the greatness of God, of the Lord the breaker-down of strongholds. I have seen, and am terrified, how hundreds of thousands are born, and if he does not give them breath their bodies are dust and their souls go to meet their fate. Some are lords of the land, some are poor and hungry. I am not a great man, I fear how I shall speak, I ask of the Mullahs. . . .

Save me from Doomsday, from the fiery flames of hell; make my passage over Sirāt like the crossing of a bridge. May I pass over at once by the order of God the Creator, and enter into Paradise!'

2. *By Lashkarān Sumelānī:*

'. . . No one is free from sin. I am in dread of thy wrath. When Munkar and Nakīr examine me, and the clouds come rolling up, and the turbaned heads are laid low, with both hands they heave up a weighty fiery club. God preserve my body in the heat of that fiery wrath! Having gone through that narrow pass, clouds again gather beyond. Have mercy at that time! . . .

When the earth heats like copper, the son will not love his father, brother will be separated from brother, the babe torn from the mother. Each must bear his burden on his own head, each pour forth his own sweat. Eve and Adam are departed, they have gathered what their hands sowed. . . . Have mercy through the Prophet's intercession; let me pass over Sirāt behind him. Those who are misers, cowards, and usurers lose their souls in their accounts, the Kārūns (Corahs) are the world's carrion; the cowardly wretches groan in their grief; they are cut off from the scent of Paradise. Their eyes are fixed on the sun so that their heads boil in hell. My brethren and friends, hear the words of a Rind. This is the song of the hospitable. Their sins are forgotten, they sit on an equality with martyrs and pluck the fruit of the Tūba-tree by the golden dwellings of Paradise and the noble fountains of Kaunsar.'

3. *Another by the same author:*

'Mighty is the Lord without companion; by his power he created the world. God is King, Muhammad his minister, 'Alī the helper and attendant of the Imāmat. There are four angels at the holy gate; one (*Jibrā'īl*) is the ambassador to the prophet, the second (*Mīkā'īl*) rides upon the storm-clouds, the third (*Azrā'īl*) wanders about at deaths, the fourth (*Isrāfīl*) has the trumpet in his mouth, his loins girt up, his eyes on his Lord: the north wind blows from his mouth, and when the Lord gives the order he sweeps all things away.

The pure spirit looks upon his creation; one half he colours like a skilful craftsman, the other half is left plain, with a life of distress. My soul! Do not possess your heart in grief, the place of all is one, in the dust and clay. The prophet is responsible for all creation, men of the faith carry their own provisions for the journey, the five times of prayer and fasting for their sins. Debts are due to God by his slaves, for all are mad and out of their minds; the Almighty will demand his debts, and our hope of paying is in our Surety. With my hands I cling to thy skirt, my eyes are open, my trust is in thee.

When he attacks the infidels and beats the gong of the faith against the ranks of the heathen, men and horses fall in the midst as a tree sheds its leaves. The King breaks the rear of the infidels and they flee at the sight of the Lord Jesus. Then by God's mercy the clouds come, rain pours down with a rainbow, and the earth becomes cool. The prophet will return and proclaim his message to the four quarters, the gardens will bloom for those firm in the faith.'

4. *A Story of Moses the prophet and Sultān Zumzum:*

'Moses the prince was given to wandering, and one day while out hunting he saw a skull lying in a desert place. Seven times did he address the skull, and at the eighth it spoke to him and said:

"I was a king, my name was Sultān Zumzum. I was a king, but I was blind in my rule, a tyrant, and harsh to the poor. I had wealth beyond that of Kārūn. Your herd of camels is three thousand all told (*i.e.* including females and young), but I had three thousand strong male camels of burden, and three thousand youths rode with me, all with golden rings in their ears. As many as your friends are, so many drank of my cup, and when they raced their steeds they spread mattresses on the ground lest the dust which arose from the hard hoofs of the chestnuts should settle on the turban of Zumzum.

One day I took the fancy to go a-hunting; I saw a wild goat in the wilderness and spurred after it, but it disappeared into the air, and I thereupon fell sick of a fever. I became insensible, delirium seized me, and my tongue wandered. Men came to give medicine to Zumzum, but with the Angel of Death medicine is worthless. One hundred and thirty remedies were in my red pouch, but when *he* swoops down he comes on a man suddenly. With a thousand insults he dragged out my breath; they carried out my body to bury it, and when they had buried it, and the funeral procession turned back, I was brought to the Lords of the Club (Munkar and Nakīr), who raised their clubs and struck me in the face, and made my body earth and ashes and fine dust. Ants and snakes feed under my ears, and black wasps make their nests in the hollow of my nostrils. My shrunken eyes are filled with earth and dry sand, and my dried-up teeth are like shrunken betel-nut. . . .

For a while I stayed in that place, and there I saw women with their locks all matted, women who had killed their little children; they were ground under rocky millstones, and their loud lamentations came over the blue water.

For a while I stayed in that place, and there I saw men with their faces and beards all withered up. These are those men who followed unlawful lusts, and cast their eyes on their fathers' and brothers' wives, and trod their brethren under foot.

Pass on now, and tell all the youths who follow after to stay their passions, and to give freely to all who come, without dissimulation. Leave me now and do good to the poor." '

LITERATURE.—Little information is to be found in the works of most travellers in Baluchistān, with the exception of Pottinger (1815) and Masson (1844). Some information may be obtained from Burton's *Sind Revisited* (1877), and from Douie's translation of Hetū-Rām's *Bilūchi-nāma* (Calcutta, 1885). The chapter on Religions by Hughes-Buller in the *Baluchistan Census Report*, 1902, is most valuable. The present writer's monograph, 'The Baluch Race' (*Royal Asiatic Society*, 1904) and an article on 'Balochi Folklore' (*Folklore*, 1902) may also be referred to.

M. LONGWORTH DAMES.

BAMBINO.—'Bambino' is the Italian word for a male infant, especially applied to artistic representations of the Infant Christ, but particularly to certain images or doll-like figures exhibited in churches about the time of the Christmas and Epiphany festivals.

1. Early representations of the Christ Child.—Christian art only by degrees ventured to depict the Saviour. Yet as early as the 2nd cent. a fresco in the catacomb of S. Priscilla at Rome has for its subject the Virgin (represented as a woman of classical type) holding on her knee the Child, naked, his hand on her breast, his face turned round towards the spectator, as in the best artistic types of much later times. To the left stands a male figure, the prophet Isaiah, pointing to a star (Michel, *Histoire de l'Art*, Paris, 1906, i. 134; Liell, *Die Darstellungen der allerseligsten Jungfrau und Gottesgebärerin Maria*, Freiburg, 1887, 316). A similar fresco with the same figures is found in the catacomb of Domitilla, and dates from the 3rd century. The Virgin and Child is the subject of several other frescoes on the walls of the catacombs, and doubtless many more have perished. In certain cases the adoration of the Magi before the Child is represented, the Magi being two (catacomb of SS. Peter and Marcellin, 3rd cent.), three, or four (catacomb of Domitilla) in number. Here the infant is naked, in swaddling-clothes, or clad in a tunic and seated on his mother's knee (Michel, i. 34; Leclercq, *Manuel d'Archéol. chrétienne*, Paris, 1907, i. 194). The prototype of all these Magi representations occurs in the catacomb of Priscilla, where the Child is in swaddling-clothes (Liell, 225). From the time of Constantine onwards, if not before, the scenes of the Infancy were depicted in fresco on the walls of churches—the Nativity, the crib with the Child, the ox and ass looking on, the shepherds, the adoration of the Magi, etc. (S. John Damascene, *Epist. ad Theophilum*, c. 3; Michel, i. 171; Leclercq, ii. 186). To the period after the peace of the Church belongs a

new method of representing these scenes of the Infancy, viz. in mosaic, an art already in use in the catacombs. An early example is found in the decorations of S. Maria Maggiore in the 5th cent. by Sixtus III., where among other subjects is that of the Adoration, the Magi presenting gifts to the Child, who is seated on a throne and makes a gesture of benediction (Michel, i. 49). The arts of bas-relief and sculpture also depicted the scenes of the Infancy. The earliest known examples of these are found on sarcophagi from the catacombs, which give the first representation of the crib. The Child lies in a basket crib; the ox and ass, Joseph and the Virgin, the Magi, and the shepherds are also represented. To the year A.D. 343 belongs the first example which has been preserved (Michel, i. 66; Leclercq, ii. 317). Similar scenes were represented in statuesque decorations of churches. Figures of the Magi seeking and adoring the Infant Christ seated on his mother's knee were sculptured on the ambon of a church at Salonica, dating from the 5th cent. (Michel, i. 261); while a fragment of a statue of the Virgin and Child, probably from another 4th cent. church, exists in a museum at Constantinople (Reinach, *Catalogue du musée d'antiquités*, Constantinople, 1882, 62). The Virgin and Child are also represented on early gems, one in the Cabinet de France being dated before A.D. 340 (Babelon, *Guide Illustré*, Paris, 1900, 1400*b*), and on a variety of works in metal, glass, etc. The themes of the Nativity, and the Madonna and Child, were favourite subjects for art treatment in every department, but especially in painting, which down to the present time has produced innumerable examples, some attaining the highest degree of artistic skill, of the Mother and her Divine Child.

It has sometimes been claimed that the representations of the Madonna and Child are founded on those of the Egyptian Isis suckling Horus (cf. Budge, ii. 220–221). But whatever the stories of the Apocryphal Gospels and the later cult of the Virgin may owe to the myth and cult of Isis, the earliest examples in which the Madonna and Child are represented are purely classical in form, and there is no reason to doubt their originality. Certain Coptic representations may continue the pagan Egyptian types, since there is a close resemblance between the two; while later Byzantine images or paintings probably borrow certain accessories from pagan sources, perhaps through Gnostic influences, especially after the cult of the Virgin developed. But the simplicity of the composition—a mother suckling or holding her child, would tend to make all representations, whether pagan (a goddess and child) or Christian (the Madonna and the Infant Christ), similar in character and type; and there is no reason to suppose that the early Christian artists had to borrow the *motif* from existing pagan models. Thus certain Buddhist examples closely resemble the Christian representations, while an Egyptian stele, which almost certainly depicts Isis and Horus and a worshipper, had been adapted to Christian uses, and has frequently been regarded as depicting the Virgin and Child (Leclercq, ii. 325). The same *motif* is found in Græco-Roman, Assyro-Babylonian, and Hindu religious art. The council of Ephesus (A.D. 431) defined the manner in which the Virgin and Child were to be represented.

2. Liturgical drama.—The Bambino as an image is connected with the liturgical and symbolic elements of the Christmas festival. The dramatic aspect of Christian beliefs, culminating in the Mystery-plays, was already present in germ both in liturgy and ceremonial. First, the custom of antiphonal singing and the use of antiphons suggested dialogue, while the symbolical actions in various parts of the service suggested dramatic action. But more particularly the tropes sung at festivals in the form of dialogue were a point of departure for the Mystery-play. Thus a 9th cent. MS at S. Gall already has a dialogued trope for Easter (Gautier, *Hist. de la poésie liturgique*, Paris, 1887, i. 216). This seems to have given rise to others of the same character for Christmas. One of these is found in an 11th cent. MS, in which two *cantores* represent the shepherds, and are addressed by two deacons in the words: 'Quem quæritis in præsepe, pastores, dicite?' They answer: 'Salvatorem Christum Dominum, infantem pannis involutum, secundum sermonem angelicum.' To this the deacons reply: 'Adest hic parvulus cum Maria,' etc. (Gautier, 215). These tropes at first had their place before mass, but were sometimes separated from it. In the 10th cent. the Easter tropes are connected with the mimetic action and exhibition of the empty sepulchre, which probably had a separate origin as a symbolic act (see the *Concordia Regularis* of S. Ethelwold, Dugdale, *Monasticon*, I. xxvii.). Similarly the Christmas tropes gave rise to a liturgical drama, in which a *præsepe* ('manger' or 'crib') with an image of the Virgin and Child was the central feature. Clergy as shepherds approached the choir, and heard a boy as the angel singing 'Gloria in excelsis.' They were met by priests *quasi obstetrices* singing 'Quem quæritis,' etc., and the dialogue of the trope and adoration by the shepherds followed. This is from an *Officium Pastorum* used in the 14th cent., and probably earlier, at Rouen (Davidson, *English Mystery Plays*, 1892, 173). A similar office occurs in the *Ordinarium* of Amiens, 1291; and here the figure of a child was placed in the *præsepe*, and it is supposed that the office originated not later than the 11th century. But here, as in the Easter drama, the *præsepe* probably had a separate existence before it was connected with the dialogued trope. This *Officium Pastorum* was early connected with a similar dramatic representation of the Three Kings, which originally had also a central symbolic action, that of the movement of a star across the church. In a Rouen *Officium Stellæ* (Davidson, 176) the kings point to a star and sing. The office included the showing of the Virgin and Child to the kings, while they worshipped and offered their gifts. Elsewhere the two offices followed each other, and occasionally they were combined into one drama. In 1336, at Milan, an elaborate representation took place, the kings, with their attendants, walking in procession to a church, on one side of the high altar of which was a *præsepe* with the ox and ass, and the Madonna and Child (Chambers, *Book of Days*, 1863, i. 62). To such early dramatic forms the rise of the Mystery-play must be traced. But the exhibition of the *præsepe* was probably not at first connected with the liturgical office, and it still exists as a mere spectacle, without accompanying dramatic action (see Chambers, *Mediæval Stage*, 1903, ii. chs. 18, 19).

3. The præsepe.—Later tradition ascribed the origin of the *præsepe* to S. Francis of Assisi in the year 1223. Having obtained the Pope's permission, he caused a scenic representation to be prepared in the church at Greccio on Christmas Eve. In it an ox and ass figured, and all was prepared in accordance with the narrative of the Nativity in realistic detail. The whole population flocked to see the sight, the saint stood rapt by the manger, and mass was said (Mrs. Oliphant, *Francis of Assisi*, 1871, 223). But such *præsepia* were certainly in existence long before. The earliest form of such representations is probably not now discoverable, but Origen says: 'There is shown at Bethlehem the cave where Christ was born, and the manger in the cave where He was wrapped in swaddling-clothes. And this sight is greatly talked of in surrounding places' (*adv. Celsum*, bk. i. cap. 1). S. Jerome complains that pagans celebrated the rites of Adonis in the cave (*Ep. ad Paulinum*, 58), but after S. Helena built the basilica over the cave in A.D. 335 it became a regular place of pilgrimage, and was luxuriously adorned. A homily ascribed to S. Gregory Thaumaturgus, and dating at latest about the beginning of the 5th cent., and certain sermons of S. Proclus, bp. of Constantinople (A.D. 432–446), both use language which suggests actual representations in churches of the Virgin and Child and Joseph in a Nativity scene (Pitra, *Anal.*

Sacra, iv. 394; *PG* lxv. 711). Such figured representations may first have been introduced in connexion with the manger-cave of the basilica at Bethlehem, and, if so, would rapidly be imitated elsewhere. In the West the earliest notices of a *præsepe* are connected with the Church of S. Maria Maggiore at Rome. This church, originally built in the 4th cent. by Pope Liberius, was re-constructed and dedicated to the Virgin by Sixtus III. (432–440). In the 7th cent., if not earlier, it was known as *S. Maria ad præsepe*; and this points to a 'crib' in the church, which may even have existed in the basilica as built by Liberius (Usener, *Religionsgesch. Untersuchungen*, Bonn, 1889, i. 288, 290). This 'crib' was in a chapel in the right aisle, described in the time of Gregory III. (731–741) as an 'oratory,' and in that of Sergius II. (843–847) as a 'chamber' (*Lib. pontif.*, *ap.* Usener, i. 280). Here the Pope celebrated mass on Christmas Eve, the crib serving as an altar. Probably the 'manger' was at first only a copy of that in the cave at Bethlehem, but figures may have been associated with it at an early date. Gregory III. furnished it with a statue of the Madonna and Child in gold. This crib-chapel became the model for others. Gregory IV. (827–843) erected a similar one in the Church of S. Maria in Trastevere, which he provided with 'imaginem auream habentem historiam dominæ nostræ cum diversis et pretiosis gemmis.' This probably refers to actual figures in a Nativity scene (Usener, i. 291). To such crib-chapels may be traced all others, whether permanent or temporary, in mediæval and later church usage.

4. **The Santissimo Bambino.**—Of all examples of the *præsepe* with figures of the Child, that of the Church of S. Maria in Ara-Cœli at Rome is the most famous. It is arranged with many accessories—side-scenes, vistas, and lights in the Chapel of the Presepio—and exhibited from Christmas to Epiphany. In a grotto are the Virgin, with the Bambino on her knee, and S. Joseph. Behind are the ox and ass, and grouped around are the shepherds and kings. Arranged in perspective in the background is a pastoral landscape, with small figures of shepherds and flocks, giving the idea of distance. Women are represented bringing presents of fruit. The whole scene is beautifully arranged to give the illusory effect of reality, while above is represented the Father, with angels and cherubs. Formerly Augustus and the Sibyl pointed to the Child, the legend being that the Emperor raised an altar on the site of the church to the Son of God, whose advent was made known to him from the Sibylline books. During the festival season the Presepio is visited by crowds of people. On Epiphany, mass being concluded, a procession of clergy moves towards the chapel, and, arrived there, the bishop removes the Bambino from the arms of the Madonna with much solemnity. To the strains of triumphal music, the image is borne through the church to the great outer steps. There it is elevated by the bishop before the kneeling crowd, while the music thunders and censers are swung. This done, it is carried back to the chapel. The more important figures are of life-size, painted and appropriately dressed. The Bambino is of olive wood, rudely carved and painted. It is magnificently dressed, and covered with great numbers of costly jewels, while during the period of its exhibition it wears a crown encrusted with rich gems. During the festal season the stairway of the church is thronged with pedlars selling sacred objects, among others prints of the Bambino, and wax dolls clad in cotton wool representing the Child. During the rest of the year the Bambino is kept in the inner sacristy, where it is shown to pilgrims and visitors. An inscription in the sacristy relates that a devout Minorite carved the image in Jerusalem out of wood from the Mount of Olives, that it might be used at this festival. But, as paint was lacking to make it more lifelike, prayer was offered that fresh colours might be bestowed upon it by Divine interposition. The vessel which carried it to Rome was wrecked, but the image was floated ashore in its case, and, being recognized by the brethren there (for its fame had spread from Jerusalem to Italy), it was brought to its destination in safety. According to popular belief, the painting was miraculously done by St. Luke or by an angel.

To the Bambino are ascribed miraculous powers of healing, and it is taken with great ceremony to patients in cases of severe illness. A special carriage is provided for the image, which is accompanied by two *frati*; and, as it passes through the streets, the people show it great devotion, kneeling or crossing themselves, while some implore its assistance for their needs, spiritual or temporal. At one time the Bambino was left on the bed of the patient, but now it is never out of sight of its attendants; because on one occasion a woman, feigning illness, exchanged another image for the Bambino, sending the fraud back in its place. During the night the *frati* were disturbed by knocking at the door of the church. Hastening thither and opening it, they found the Bambino waiting to be admitted, having returned of its own accord. In a variant of this tale, the Bambino was stolen from the church and returned at night, the thief being thus discomfited. The story is referred to in the inscription. It is obvious that the Bambino is regarded as a species of fetish; and this appears further in the popular belief that, when carried to the sick-bed of a child, it reddens if the child is to recover, and turns pale if it is to die (Story, *Roba di Roma*, 1875, 74 ff.; Rouse, *FL*, 1894, v. 7; Hare, *Walks in Rome*, 1903, i. 102; Tuker and Malleson, *Handbook to Christian and Eccl. Rome*, 1900, ii. 212). Similar exhibitions of the *præsepe*, some of them equally elaborate, are seen in other Italian churches (see Rouse, *loc. cit.*), and they are a usual feature in most Roman Catholic and in some Anglican churches, the equivalent name being *crèche* or 'crib.'

Other images of the Infant Christ, though not used in the representation of a *præsepe*, have acquired great fame. Some of these are black, as in the parish church of Mont-Saint-Michel in Brittany, and some are well known as being equally miraculous with the Santissimo Bambino, *e.g.* the famous miraculous image, dating from the 17th cent., in the church of the Carmelite Fathers at Prague.

LITERATURE.—The literature has been given in full in the course of the article.

J. A. MacCULLOCH.

BAN.—See CURSING AND BLESSING.

BANERJEA, KRISHNA MOHAN.—Krishna Mohan Banerjea was one of the early converts of the North India Protestant Missions, and one of the most learned Indians of his time. He was born at Calcutta in 1813, and spent his life in that city. A Brāhman by caste, even among Brāhmans he belonged to the *kulins*, or recognized aristocracy, his family claiming descent from one of the *ṛṣis* or ancient sages. The distinguished Indians of the 19th cent. were the product of the new life inspired by India's contact with the West through British rule. Dr. K. M. Banerjea was no exception, and in the capital of India, where he was brought up, the new influences were naturally most direct and concentrated. In 1828 the Brāhmo Samāj, or Indian Theistic Church, had been founded at Calcutta by Rammohun Roy and others. In

1830, Dr. Duff, first missionary of the Church of Scotland, had landed in Calcutta. But the influence that confessedly formed young Banerjea in his teens was that of a Eurasian, Derozio, a master in the Calcutta Hindu College, which Banerjea had entered in 1824. Derozio's openness of manner, his enthusiasm, and his thoroughgoing rationalism and radicalism quite carried away his youthful disciples, and indeed affected the minds of a whole generation in Calcutta. In that atmosphere of negation and destruction, in 1830, we find K. M. Banerjea leader of a youthful band publicly repudiating Hinduism and all religious belief, and demanding the abolition of caste and the education of Hindu women. On one occasion, in 1831, the leaders went to the extreme of throwing pieces of beef into Hindu houses, wantonly and grossly outraging the feelings of Hindus. The insult was naturally followed by the excommunication of young Banerjea from his family and caste; but a few European, Eurasian, and Hindu friends still gave him countenance, and the reformer thus contrived to continue what he felt to be a holy war on behalf of religion and his countrymen. Gradually he came under the influence of Dr. Duff, in whom he found an equally ardent temperament, but also convictions as definite and positive as his own had been merely negative and critical. October 1832 finally saw Krishna Mohan Banerjea received into the Christian Church by Dr. Duff.

The great native reformer, Rammohun Roy, was still living in 1832 at the time of Banerjea's conversion. Both men possessed an acute and powerful intellect, and manifested an independence of character which would have been noteworthy even in a European. But the younger possessed an intensity of temperament lacking in his great contemporary. Rammohun Roy's campaign had been that of reason against unreason, and his progress was from Hinduism to Hindu Theism [as he conceived it to be], and thence to non-militant Unitarian Christianity, of an orthodox type. The progress of K. M. Banerjea, on the other hand, was from Hinduism to repudiation of religious belief; out of which, again, he passed, as decidedly, to strong personal Christian faith and strenuous advocacy of what he believed.

Taking orders in the Church of England in 1839, K. M. Banerjea thus became the first ordained native clergyman of that Church in North India, the first in all probability of any non-Roman Church. In the Anglican community in Calcutta he soon became the leading figure, taking a large share in the work of the Anglican Mission College [Bishop's College] and in the translation of theological and religious literature for the young Christian community. He has justly been called the Father of Bengali Christian Literature. But his activity was by no means limited to the Indian Christian community. In journalism and in every public movement connected with education or the general welfare, he was in the forefront. Two of his articles in the early numbers of the *Calcutta Review*, founded in 1844, on 'The Kulin Brāhman of Bengal' and 'Hindu Caste,' are of special value to the historical student as first-hand and reliable evidence of former socio-religious conditions now considerably modified. With these may be conjoined a later paper on 'Human Sacrifice' in the *JRAS*, written in 1876. In 1846 he began the publication of a work of great importance in its day, the *Encyclopædia Bengalensis*, a series of thirteen volumes in English and Bengali. In it, for the first time, Euclid was presented to the people of India in one of their vernaculars. In later years we find his attention devoted more particularly to Sanskrit and Hindu Philosophy. For the Asiatic Society of Bengal he edited two Sanskrit texts, the *Mārkaṇḍeya Purāṇa* and the *Nārada Pañcharātra*, both published in the Society's *Bibliotheca Indica*; subsequently also, for the same Society, an English translation of the *Brahma Sūtras* with Śaṅkara's Commentary, and of the *Mahimnastava*, a hymn to Śiva. An edition of a portion of the *Rigveda* with notes and an introductory essay appeared in 1875.

The work by which Dr. K. M. Banerjea is best known to students of India is his *Dialogues on the Hindu Philosophy*, an English work, published in 1861 both at Calcutta and London, and afterwards translated into Bengali. In the dialogues, Satyakāma [Desire of Truth], representing the modern spirit of impartial philosophic inquiry, discusses with representatives of traditional orthodoxy the relationship of the Vedas, Buddhism, the six philosophical systems, and Brāhmanism. Satyakāma proceeds by the historical method, setting forth as foundation the chronological relationship of the various systems to one another and to Buddhism. The six systems he regards as rationalizing efforts on the part of the Brāhmanical order, partly the outcome of the rationalistic spirit that had already called forth Buddhism, and partly designed to controvert Buddhism. Of the philosophical systems, all of which Dr. Banerjea thus dates later than Buddhism, he puts the Nyāya earliest, then the Vaiśeṣika and the Sāṅkhya. The application of the historical method to a subject so involved and obscure constitutes the chief merit and originality of the *Dialogues*. As a critic in the *Westminster Review* in 1862, believed to be Professor Goldstücker of London University, observes, no writer before Dr. Banerjea 'had ever attempted to give so continuous and graphic a sketch of the origin and sequence of the various portions of Hindu Philosophy.' It was, of course, almost inevitable, where so much is mere inference, that the historical conclusions of the pioneer should not go unchallenged. Dr. Goldstücker himself regarded the Mīmāṁsa system as the oldest. Professor Macdonell (*Sanskrit Literature*) and others regard the Sāṅkhya as the oldest among the Hindu rationalizing and systematizing schemes, and as forming the basis of the two heterodox systems of Buddhism and Jainism. Apart from the chronological order, however, Dr. Banerjea's exposition of the systems is justified by the latest writers as against his early critic. His declaration regarding the Sāṅkhya denial of a Supreme Soul is now accepted without question by modern students. The atheism of the Sāṅkhya system and the fundamental ignoring of deity in other systems Dr. Banerjea associates with the conception of the eternity of souls implied in the doctrine of transmigration common to all the systems alike. That again is virtually the position of Professor Macdonell, viz. that the doctrine of transmigration scarcely leaves room for the idea of deity. Dr. Banerjea's position in regard to Vedāntic pantheism, repudiated by his critic in the *Westminster Review*, is similarly not far from the position of modern Sanskritists. Vedāntic pantheism, according to the *Dialogues*, is essentially as much a denial of deity as it is professedly a denial of man, and fails to supply the dualism implied and inherent in the idea of duty.

The author's erudition we find more directly enlisted in the cause of Christianity and his countrymen in *The Arian* [Aryan] *Witness to Christianity*, published in 1875. It belongs to the period of Indian missionary work in the 19th cent., in which stress was laid upon the discovering in Hinduism of a preparation or call for Christianity, if not also of the rudiments of Christian doctrines. Dr. Banerjea's main point, for example, is that in

the sacrifice of Puruṣa, the primeval male,* elsewhere put as the self-sacrifice of Prajāpati himself, the Lord of Creation, we have ideas closely akin to those of the voluntary atoning death of Christ, the Eternal Son of God, who was both God and Man. Such reasoning, however, has no longer the same prominence. Experience has shown that such parallels, while confirmatory and helpful to men already convinced, bring Christianity no nearer to Hindus than it brings Christianity to Hinduism.

Dr. Banerjea was all his life a standing refutation of the libel on Indian Christians that they are unpatriotic. He was one of the first *elected* representatives to the Calcutta Municipality in 1876; and in his old age, in 1883, he identified himself with a movement for constitutional political agitation both in India and Britain, of which the National Congress may be called the fruit. Native education likewise had no warmer advocate, as his earlier publications and his evidence before the Education Commission of 1883 testify. Without fear of either native or English opinion, he was a man of public spirit in the truest sense. The University of Calcutta recognized his position as a scholar by electing him President of the Faculty of Arts, 1867–1869, and further, in 1876, by the bestowal of the honorary degree of D.L., which has been given to only two other Indians during the fifty years' existence of the University. His public services were recognized by the conferring upon him of the 'Companionship of the Indian Empire' in 1885, the year of his death.

JOHN MORRISON.

BANIĀ, BANYĀ (Skr. *vaṇijya, baṇijya*, 'trade, traffic').—A generic name for the great merchant caste of Northern and Western India. Under the titles of Baniā, Banyā, or Vānī, persons numbering 2,898,126 recorded themselves at the Census of 1901. But this does not include numerous practically identical castes, like the Agarwālā, numbering 557,596; the Oswāl, 382,712; the Māṛwāṛī, 49,108, and many others. These may be taken as examples of the religion of this caste in general.

The Agarwālā, who are found in greatest numbers in the United Provinces and Rājputāna, are mostly orthodox Hindus, the Jaina element being quite inconsiderable. Like all classes of the population who, under the protection of British rule, obtain promotion to a higher social rank than they ever acquired under the native governments, they are precise and liberal in the observances of their religion; and at domestic ceremonies, such as birth, marriage, and death, are notorious for their lavish expenditure on Brāhmans. Most of them follow the humanitarian cult of Vishṇu; and though a small minority observe the rule of Śiva and of the Śakti, or Mother-goddesses, in deference to tribal feeling they abstain from sacrificing animals and consuming meat and spirituous liquor. The small Jaina section observe the same social rules, and are even more careful of animal life than those who are orthodox Hindus. Hence, owing, perhaps, to the uniformity in matters of diet and other social observances, there is no bar to intermarriage between the followers of the two creeds. When husband and wife differ in religion, the wife is usually admitted formally into the religion of her husband, and, accordingly, when she visits the home of her parents, she must have her food separately cooked. The usual tribal deity of the Agarwālā sub-caste is Lakshmī, goddess of fortune and beauty, who in the later mythology is frequently identified with Śrī, and is regarded as the consort of Vishṇu. They are careful to perform the *Śrāddha*, or mind-rite, for the repose of the souls of their deceased ancestors. Their tribal legends connect them closely with a primitive snake-cult, and the women worship the snake as an important part of the domestic rites. Among trees they pay special reverence to the *pīpal*, or sacred fig.

The other side of Baniā religion appears among the Oswāl, who, except an insignificant minority, belong to the Jaina faith. They take their name from the old town of Osī in Mārwār, and all their associations connect them with Rājputāna. They employ for their domestic rites a class of Brāhmans, who, when their clients adopted the new Jaina rule, fell from their high estate, and became known by the significant name of Bhojak, 'eaters.' They preside over and receive the offerings dedicated to the footprints of the saints who have passed into a state of beatitude. But the real priests of the Oswāl are the Jaina Jatīs, who are bound by the strictest rules of ceremonial purity, and in particular must avoid any possibility of destroying animal life. The Oswāl make pilgrimage to the chief holy places of Jainism—Mount Ābū, Palitānā, Parasnāth (see artt.); Sametā Sikharā, in Western Bengal, where twenty of the Jinas are said to have attained beatitude; Satrañjāyā and Girnār in Kāthiāwār, sacred respectively to the Jinas Ṛishabhanātha and Neminātha; Charidrapuri, where Vāsupūjya died; and Pāwā in Bengal, the scene of the death of Vardhamāna. The worship thus largely concentrates itself on the cult of the Tīrthakaras, 'the finders of the ford' through the ocean of *saṁsāra*, the revolution of birth and death. They also visit the sacred places of the Hindus, like Benares and Ajudhyā. Of course, no animal sacrifice of any kind is permitted in their temples, and the sordid ostentation of the worshippers is shown by the rule which prevails in some of the Western Indian temples, under which the right to make the daily offerings is set up to auction and sold to the highest bidder. Their chief solemnity is that held in the rainy season, which resembles the retreat (*vārśika*) of the Buddhists, when the wandering monks rested during the inclemency of the monsoon (Kern, *Manual of Indian Buddhism*, 80).

Another important sub-caste of the Baniās is the Māṛwāṛī, who take their name from the State of Māṛwāṛ in Rājputāna. According to the Census of 1901, they number 49,108, the vast majority being Hindus. They are most numerous in Hyderābād, but settle in all parts of the Peninsula in search of trade. They are the most active, niggardly money-lenders and small traders in the country. They generally worship the local gods of their native land. Thus in Kanara they worship as their family deities Ambū, Jaypāl, and Hilājī, whose shrines are at Sirohī in Māṛwāṛ; but those of Ahmadnagar worship Bālājī of Tirupati in North Arcot, and in Poona, Kshetrapāla, the guardian deity of Mount Ābū.

Many Baniās, again, are members of the sect of the Vallabhāchārya or Gokulaṣṭha Guṣains. This sect, or rather its pontiffs, known as Mahārājā, or 'great king,' acquired rather disgraceful notoriety in connexion with the celebrated Mahārājā libel case which was tried in Bombay in 1862.

They are thus described by Growse at Mathura:

'They are the Epicureans of the East, and are not ashamed to avow their belief that the ideal life consists rather in social enjoyment than in solitude and mortification. Such a creed is naturally destructive of all self-restraint, even in matters where indulgence is by common consent held criminal; and the profligacy to which it has given rise is so notorious, that the Mahārājā of Jaipur was moved to expel from his capital the ancient image of Gokul Chandrama, for which the sect entertained special veneration, and has further conceived such a prejudice against Vaishṇavas in general, that all his subjects

* *Ṛigveda*, Maṇḍala, x. 90.

are compelled, before they appear in his presence, to mark their foreheads with the three horizontal lines that indicate a votary of Śiva.'

W. CROOKE.

BANISHMENT.—1. Banishment (putting under 'ban' or proclamation as an outlaw) is the punishment of expelling an offender from his native land. By analogy with the most primitive surviving social systems, we can infer that in very early stages of civilization the family was the unit of society, and that any member of a family who disputed the rule of its head was cast out. As civilization advanced, and families and tribes united to form States, the easiest way, short of summary execution, to rid the State of an evil-doer was to expel him from its boundaries. We find evidence of this in the records of all ancient nations.

2. In ancient Israel, banishment invariably occurs as a Divine, not a human, punishment. Such was the banishment of Adam from the Garden of Eden (Gn 3^{24}), and of Cain from the presence of the Lord (Gn 4^{16}). This penalty was inflicted not only on individuals, but on the whole nation. The Captivities befell the idolatrous people, but the assurance, 'the Lord will gather thee, and will bring thee into the land which thy fathers possessed' (Dt $30^{4ff.}$), lent to banishment the character of a temporary punishment, of a trial of faith. In Rabbinical Law, banishment (*gālūth*) is the name given to the fleeing of the manslayer, in cases of unintentional murder, to one of the Cities of Refuge (*Sifrê Num.* 60; *Mak.* ii. 6). The banishment spoken of by Abtalion (*Aboth.* i. 12, ed. Taylor) as befalling 'the wise' refers to political events. The Pharisees, during the reign of Queen Salome Alexandra, exerted 'the power and authority of banishing and bringing back whomsoever they chose' (Jos. *BJ* I. v. 2; cf. also *JE* ii. 490 f.).

3. In India, banishment was a recognized form of punishment as early as the Vedic period, for *Rigveda* X. lxi. 8 clearly alludes to the 'exile' (*parāvṛj*) as fleeing to the south; while the later codes prescribe banishment for those who express hostile sentiments concerning the king, or for false witnesses; and crimes punished by death in the case of the lower castes, were visited with banishment in the case of Brāhmans (Jolly, *Recht und Sitte*, Strassburg, 1896, pp. 127, 129, 142). Among the Teutonic peoples, banishment was equally well known, as is shown by Old High German *reccho*, Old Norse *rekr*, Old Saxon *wrekkio*, and Anglo-Saxon *wrecca*, 'exile,' 'outcast,' 'wretch' (cf. Schrader, *Reallexikon der indogerm. Altertumskunde*, Strassburg, 1901, p. 835); while among the Gauls, at least in some cases, murder of a compatriot was punished by banishment, at all events from the territory of the city (Dottin, *Manuel pour servir à l'étude de l'antiquité celtique*, Paris, 1906, p. 191 f.).

4. In Greece, banishment seldom appears as a punishment appointed by law for particular offences. The general term *φυγή*, in heroic times, was applied, for the most part, to those who, to escape some punishment or danger, fled from their own State to another. This was the rule in cases of homicide. Even in historical times, exile was usually voluntary, to escape the death-sentence for murder. The accused was permitted to leave the country after the first day of trial; but in that case he was condemned to perpetual banishment and confiscation of property. When appointed by law as the punishment for certain offences, banishment might be for a specified period, as in cases of accidental homicide; or, if the crime was sacrilege, the murder of a non-citizen, or wounding with intent to kill, the penalty was exile for life. Ostracism (*q.v.*), a form of banishment peculiar to Athens, was designed to guard against any citizen becoming a tyrant. After passing a decree that an ostracism should take place, on a fixed day the citizens voted by tribes in the agora, each writing on an *ὄστρακον* the name of the man he considered a danger to the State. He who obtained the majority of votes, provided there was a minimum of 6000, was banished for ten years, though he might be recalled earlier by a special vote.

5. In Rome, during the Republic, *exsilium* meant banishment inflicted by the State as a punishment, accompanied by loss of *civitas*; if the person banished did not cease to be a *civis*, it was not properly *exsilium* but *relegatio*. Since the Romans shrank from depriving a man of his citizenship, *exsilium* was very rare. The accused, however, might voluntarily go into exile to escape capital punishment; and in the earlier times of the Republic, a Roman citizen had the right of going into *exsilium* to another State, by virtue of the isopolitical relations between that State and Rome. The voluntary withdrawal of the criminal being regarded as an admission of his guilt, the Romans confirmed it by a *plebiscitum*, which gave it a legal character; and, to prevent his return, forbade the citizens to afford him shelter, fire and water (*aquæ ignis tecti interdictio*). In later times it became usual to inflict this punishment as an ordinary penalty, independent of any voluntary withdrawal on the part of the criminal. The Emperors introduced a new form of banishment—*deportatio in insulam*—by which the criminal was confined for life, or for an indefinite time, to an island or other prescribed space, within which he had personal liberty though he suffered loss of *civitas*. This gradually supplanted the old *interdictio*.

6. During the Middle Ages banishment was a common punishment, and indeed still occurs among many nations. In England the punishment of banishment was prohibited by Magna Charta, but was still practised, as a criminal was permitted to go into voluntary exile to escape death. The punishment was again made legal by the Vagrancy Act of Queen Elizabeth, which, by giving Justices power 'to banish offenders and remove them to such parts beyond the seas as should be assigned by H.M. Privy Council,' contained the germ of transportation. This Act was given full effect in the reign of James I., 1619 ('100 dissolute persons to be sent to Virginia'), though the name 'transportation' does not occur till the reign of Charles II. In 1718 the system of transportation became more fully developed; political offenders and others who had escaped the death-penalty were handed over to contractors for transportation to the American Colonies, and these contractors farmed out the convicts to the planters as labourers. The War of Independence, however, ended this system. After 1787, Penal Colonies were founded in Australia, in New South Wales. At first the convicts were employed on Government works, but as their numbers increased they were hired out to private employers. Supervision was necessarily lax, and the convicts terrorized the country, so that the worst offenders were returned to the care of the Government and confined in the penal settlements. The Australians began to protest in 1835, and transportation gradually diminished, till in 1867 the penal settlements in Australia and Tasmania were abolished in favour of convict prisons at home. France and Russia still maintain the system of transportation. The French penal settlements founded in French

Guiana in 1853 were disastrous, owing to the unhealthy climate and the harsh regulations, so they were abandoned in 1864 except for Negro and Arab convicts. The Settlements in New Caledonia, however, are still continued. Russia transports criminals and political offenders to Siberia, where, after a term of imprisonment, they are employed in mining and agriculture.

Transportation has not been found to act as a deterrent from crime. It does not possess the reformatory qualities which are an essential part of an effective system of punishment. See OSTRACISM, OUTLAWRY, PUNISHMENT.

W. D. MORRISON and I. LOW.

BANJĀRA (Skr. *vanij*, 'a merchant,' *kāraka*, 'doing').—The tribe of wandering grain-carriers in India, which at the Census of 1901 numbered 765,861, most numerous in Hyderābād, but found in all the Indian provinces. As a result of their wandering habits, which have now much decreased since the carrying trade has fallen into the hands of the railway authorities, they are a very mixed race. Their origin is probably Dravidian, but they now all trace their descent from the Brāhman or Rājput tribes of Northern India. It is in the Deccan and in the State of Hyderābād that they still retain more of their primitive beliefs and customs than in the scattered colonies in the more northern parts of the country, where they have largely fallen under Hindu or Muhammadan influence. Of the Deccan branch an excellent account has been given by Cumberlege from the Wūn district of the province of Berār. There they seem to be descendants of the emigrant sutlers who followed the Muhammadan armies into Southern India. Though some vague references to them have been traced in the earlier Sanskrit literature, the first mention of them in Musalmān history is in the account of Sikandar's attack on Dholpur in A.D. 1504 (Elliot, *History of India*, v. 100; Briggs, *Ferishta*, i. 579).

1. *Religion of the Deccan Banjāras: witchcraft.*—In the legends of the Deccan branch of the tribe, Guru Nānak, the founder of the Sikh faith, figures as a worker of miracles and as their spiritual adviser. They have a priest or medicine-man, known as a *bhagat*, or devotee (Skr. *bhakti*, 'faith,' 'devotion'). He is called in to cure all manner of disease, which they believe to be the result of the attacks of evil spirits, sorcery, or witchcraft. In fact, there are few Indian tribes more witch-ridden than the Banjāra. They are, says Lyall (*Asiatic Studies*[2], 1st series, 117 f.),

'terribly vexed by witchcraft, to which their wandering and precarious existence especially exposes them, in the shape of fever, rheumatism, and dysentery. Solemn inquiries are still held in the wild jungles where these people camp out like gypsies, and many an unlucky hag has been strangled by sentence of their secret tribunals. In difficult cases they consult the most eminent of their spiritual advisers or holy men who may be within reach; but it is usual, as a proper precaution against mistakes which even learned divines may commit, to buy some trifling article on the road to the consultation, and to try the diviner's faculty by making him guess what it may be, before proceeding to matters of life or death. The saint works himself into a state of demoniac possession, and gasps out some woman's name. She is killed by her nearest relative or allowed to commit suicide, unless indeed her family are able to make it worth the diviner's while to have another fit, and to detect some one else.'

2. *Gods of the Deccan branch.*—These Deccan Banjāras have a large pantheon of deities. First comes Mariyāī or Mahākālī, the great Mother-goddess in her most terrible form. It is she who is supposed to enter the *bhagat* medicine-man and inspire him to utter oracles. The Chāran branch are deists, with special proclivities towards Sikhism, which they brought with them from their original home in the Panjāb. With them Guru Nānak, the founder of Sikhism, is supreme. They also worship Bālājī, or Kṛishṇa in his infant form; Tuljā Devī, the famous South Indian Mother of Tuljāpur in the State of Hyderābād; a number of deified men, such as Śiva Bhaiyyā, a holy man of Pohorā in the Wūn district in the Berār province; Satī, the ghost of some noted woman who perished on the funeral pyre of her husband; and Miṭṭhū Bhūkiyā, a famous freebooter of olden days. For the last a hut is set apart in every camp, and, when a white flag is raised before it, this is a sign that the people are engaged in the worship of Miṭṭhū Bhūkiyā, who is always invoked to give his aid when any plundering expedition or other crime is being planned. In such cases an appeal is also made to the deified Satī. Clarified butter is placed in a saucer, and in this a wick is lighted. Appeal is then made to Satī for an omen, the worshippers mentioning in a low tone the object of the contemplated expedition. The wick is watched, and, should it drop, the omen is regarded as auspicious.

3. *Ox-worship in Central India.*—In Central India the Banjāras have a peculiar form of ox-worship. This animal is known as Hatādiyā (Skr. *hatya-ādhya*, 'he whom it is an exceeding sin to slay'), and he is devoted to the service of the god Bālājī, or Kṛishṇa in his infant form. No burden is ever laid upon the animal, and he is decorated with streamers of red silk and tinkling bells, with many brass chains and rings on his neck and feet, and strings of cowry shells and tassels. He moves steadily at the head of the convoy, and wherever he lies down there they make their halting-place during the heat of the day. At his feet they make vows whenever trouble befalls them, and in illness, whether of themselves or among their cattle, they trust to the worship of him for a cure.

4. *Forms of worship in Kāṭhiāwār.*—In Kāṭhiāwār their worship is paid to the dread Mother-goddess, Kālikā Mātā. In Khāndesh they mostly worship Bālājī and Khaṇḍobā, and in honour of the latter a dance known as the Gondhal is often performed in discharge of a vow or on the completion of a marriage. On the day after the Holī, or spring fire-festival, the Lād branch of the tribe have what is known as the Vīra, or hero procession, when one of the descendants of an ancient warrior who died in battle is led in triumph round the camp. At marriages, two married couples, one representing the bride and the other the bridegroom, fast all day, and at night cook a mess of rice, grain, molasses, and butter. While cooking this they cover their faces with a cloth, as the touch of the steam rising from the pot bodes evil to the couple. This food, when cooked, is eaten by the men of the party, and anything that remains must be given to a cow or thrown into a river. To allow a stranger, or the son of a slave, to partake of this holy food is considered a grievous sin, which will bring a fatal curse upon the family. This is known as the worship of Vādhī Devatā, the god of increase. If this rite, which seems to be an elaborate form of *confarreatio*, be not performed at a wedding, the married pair are looked down on by the community. All the sections of the tribe in Khāndesh wear the sacred Brāhmanical thread, worship Bālājī, and celebrate the Gokul-ashṭamī feast, or birthday of Kṛishṇa, with rejoicings and public entertainments. In Nāsik the Lād section worship Khaṇḍobā, Bhairobā, Devī, and Gaṇapati or Gaṇeśa, and keep in their houses images representing their ancestors. When they arrive at a village where there is a temple of Māruti or Hanumān, the monkey god, they worship him daily. In Ahmadnagar their family deities are Vyānkobā of Tirupatī in North Arcot, and Mariyāī, the Mother-goddess, whom they worship in conjunction with the other Hindu gods. Their special pilgrimages are made to Jejurī in Poona, Pandharpur in Sholāpur, and

Tuljāpur in Hyderābād. In Kanara they are specially devoted to the Kṛishṇa cultus.

5. *Religion of the North India Banjāras.* — Passing to Northern India—in Chhattīsgaṛh of the Cent. Prov. they have a special tribal goddess, Banjārī, the impersonated female energy of the tribe, who is represented by a piece of stone daubed with vermilion at the Divālī, or feast of lamps. Farther north those who are Hindus worship the local gods of the places where their camps or settlements are situated. This pantheon is of a very heterogeneous description, including Musalmān saints, like Zāhir Pīr and the Miyān of Amrohā in the Moradābād District, and deified ghosts like Hardaur Lālā, the cholera-god, and Kālū Deo. To these, sacrifices of goats are offered; but sometimes there is not a complete sacrifice, the ear of the animal being only pierced, and a drop or two of blood sprinkled on the altar. In some places, as in the Kherī District of Oudh, they incline towards monotheism, and worship a single Creator under the name of Bhagvān or Parameśvara.

LITERATURE.—The best account of the Banjāras of the Deccan is to be found in a pamphlet by N. R. Cumberlege, printed in abstract in *Berar Gazetteer*, 195 ff., and in full with additions in *North Indian Notes and Queries*, iv. 163 ff. For the United Provinces, see Crooke, *Tribes and Castes of the North-Western Provinces and Oudh*, 1896, i. 149 ff., where references to the literature will be found. W. CROOKE.

BANNERS.—1. In considering the use of banners from very early times, and onwards, we must employ the word in a wide sense, for both in form and significance banners have passed through a long and varied history. In their origin, and throughout their history—until down to, comparatively speaking, recent times—banners served primarily a 'religious' purpose, and their object was, in the first instance, to *indicate* something rather than to gather people together. The including of banners, standards, flags, and ensigns within one comprehensive category, while justifiable perhaps in view of modern usage, tends to obscure the originally clear distinction between what corresponded to the staff and the flag respectively. There seems to be no doubt that each of these was represented in very early times; nevertheless, the 'staff'—whether of stone or, later on, of wood—might, and evidently often did, do service for the 'flag' as well. Sometimes what corresponded to the 'flag' was a rude engraving figured *upon* the 'staff,' while at other times the 'flag' was a separate object which was attached to the 'staff'; for as banners always had the primary purpose of indicating something, or of drawing attention to something, the thing indicated could be represented upon the upper part of the 'staff' itself, or else it might be a separate object attached to the 'staff.' The Phœnician *cippi*, for example, dedicated to Tanith and Baal Ḥamman, which often have a hand figured on them, must be objects which have a long history behind them, and represent, as one may reasonably suppose, an early form of 'sign-post.' That primitive pillars of this kind were the originals from which in later times monuments on the one hand, and banners on the other, developed and diverged, seems fairly obvious when all the facts are taken into consideration. An instructive example of a very early kind may be seen, for instance, in the 'banner-stones' of the American Indians. In form these vary greatly, but there are certain fundamental features of their shape which are practically constant, and which are of such a nature as to suggest the justifiable use of this term 'banner-stone.' These features are the 'axial perforations and the extension of the body or midrib into two wing-like projections.' They are strongly reminiscent of the 'double axe' which played such an important part in Minoan worship.* The presence of the perforations makes it probable that these 'banner-stones' were mounted for use on a staff, or on a handle as a ceremonial weapon, or on the stem of a calumet.

'These objects are usually made of varieties of stone selected for their fine grain and pleasing colour, and are carefully shaped and finished. In Florida, and perhaps elsewhere, examples made of shell are found. The perforation is cylindrical, and is bored with great precision longitudinally through the thick portion or midrib, which may symbolically represent the body of a bird. . . . They are found in burial mounds and on formerly inhabited sites generally, and were probably as a class the outgrowth of the remarkable culture development which accompanied and resulted in the construction of the great earthworks of the Mississippi valley.' †

2. Banners of a different character were the poles carried in battle by the *North American Indians*, to the top of which eagles' feathers were attached. A similar custom prevailed among many other savage tribes. These were probably the predecessors of the types of banners in vogue among the nations of ancient civilization. Thus the banners of the *Egyptians* consisted of representations of various kinds—holy animals, the sacred boat, and other emblems, sometimes also the name of a king,‡ fans and feather-shaped symbols—which were raised on the end of a staff, and carried by the standard-bearers of each company when an army was marching out to battle.

'Being raised on a spear or staff, which an officer bore aloft, each standard served to point out to the men their respective regiments, enabled them more effectually to keep their ranks, encouraged them to the charge, and offered a conspicuous rallying point in the confusion of battle.' §

Besides these ordinary banners, there were also the royal banners and those borne by the principal persons of the household near the king himself. Only royal princes or sons of the nobility could carry these.‖ The earliest known representations of Egyptian banners are those found on the votive tablet of Nar-Mer (B.C. 4000–5000) at Hierakonpolis; on this are represented four bearers carrying poles with various emblems on the top of them. Something similar, though the pole is not so long, is found on a relief of Rameses I.; the banner-bearer precedes a company of archers. Banners seem also to have been placed on fortresses; on the Heta-fortress of Dapuru, for example, a standard is fixed; it consists of a shield pierced with arrows upon a pole. This is shown in the representation of a siege.¶ Mention should also be made of the masts which stood in front of the *pylons* and *propylons* of Egyptian temples. These masts were decorated with small flags.** The *Assyrian* banners usually took the form of the representation of a deity placed within a disc fixed to the top of a pole. Immediately beneath the disc there was sometimes a species of ornamentation in the shape of flag-like streamers. Judging from the inscriptions, they were fixed to the chariots. It is noteworthy that in none of the battle scenes given in Layard's magnificent series

do banners figure in connexion with foot-soldiers, though in several cases chariots are furnished with them.* The device usually represented is that of a deity.† In the few *Phœnician* battle-scenes and the like which are extant no sign of any banners appears.‡ The *Persians*, like the Assyrians, fixed their banners on chariots. One of their banner-designs consisted of a golden eagle upon a lance. They also appear to have had masts, similar to those which stood in front of the entrances to Egyptian temples. These, too, were probably decorated with flags.§ The earliest form of banner among the *Greeks* consisted of a piece of armour fixed to the top of a spear; in later times different cities carried sacred emblems, *e.g.* the Athenians the owl and the olive, the Thebans a sphinx, and so on. The Dacians carried on their standard the representation of a serpent, also a dragon; this latter was the military ensign of the Parthians, and is that of the Chinese at the present day. Among the *Romans* there was, firstly, the *vexillum*. This appears to have been the oldest form of banner in the Roman army.‖ It corresponds to the modern flag, its main feature being a piece of cloth with a fringe which hung down from a transverse beam; the name of the legion was embroidered on this. The *vexilla* were the 'standards of those divisions of infantry which were separated from the main division for some special duty, or of the troops of discharged veterans called out for further service.'¶ Secondly, in the Roman army each *maniple* had its own *signum*. When the army was on the march the *signa* were borne in front, but during the battle the *signiferi* stood behind the hindmost rank. The pole of the *signum* was a lance pointed at the lower end so that it might the more easily be fixed into the ground. It had a transverse bar near the top from which ribands hung down. Below this bar there were several discs, varying in number from two to seven. These were usually of silver; below them was the crescent moon, above them either a small shield, or a *corona aurea*, or a symbol of some other kind. These discs could be removed from the pole; this was done at military funerals. The *signum* was also carried on war-galleys.** The standards of the prætorians differed from those of the legions in that crowns took the place of the *phaleræ*; a medallion containing a picture of the Emperor was placed in the middle of the pole. These *imagines*, 'effigies' (*προτομαί*), represented the reigning and earlier Emperors. Another of the Roman standards was the *aquila*, i.e. an eagle with outstretched wings, placed on the top of a long pole; this was usually of silver, but sometimes of gold. The eagle was sometimes represented with an oak-leaf in its beak, perhaps as a presage of victory.††

Among the Indo-Germanic peoples, indeed, the use of banners goes back to very early times. The *Atharva Veda* (v. xxi. 12) speaks of the armies of the gods as *sūryaketu* ('sun-bannered'), and the *Mahābhārata* (XIV. lxxxii. 23) of the hero Meghasandhi as *vānaraketana* ('monkey-bannered'), while *vṛṣabhadhvaja* ('bull-bannered') and *makaraketana* ('dolphin-bannered') are conventional epithets of Śiva and Kāma (the god of love) respectively. In the Avesta (*Yasna* x. 14) there is mention of the 'kine banner' (*gāuš drafšō*), which, in view of the sanctity attached to kine by the Indo-Iranians, may not be without an ultimate totemistic significance. In Rome, besides the instances already noted, previous to the second consulate of Caius Marius, wolves, minotaurs, horses, and boars had figured on the standards of the army in addition to the eagle (Pliny, *HN* x. 16). A similar state of things is implied for the ancient Teutons by Tacitus (*Germania*, vii.), and this is borne out by the fact that the Old High German *chumbirra*, 'tribe,' is cognate etymologically with the Anglo-Saxon *cumbor*, *cumbol*, 'sign' (especially 'military standard'). The Gauls, in like manner, possessed banners with images of theriomorphic deities which were carried into battle, 'car ces enseignes à représentations animales ont une sorte de vie magique; elles menacent véritablement ceux vers qui on les tourne; . . . il se dégageait d'elles des effluves magiques, salutaires à leurs défenseurs, funestes à leurs ennemis, et les dieux se mêlaient ainsi aux guerres des hommes' (Renel, *Religions de la Gaule avant le christianisme*, p. 185). The Arch of Orange represents a number of the Gallic banners, chiefly of boars, though the horse also occurs. It should also be noted that the figure of the theriomorphic deity was often affixed to the helmet among the Gauls as among the Anglo-Saxons (cf. Anglo-Saxon *eoforcumbol*, 'boar-sign,' 'helmet'). The use of banners in war was equally common among the ancient Irish, their word for 'banner' being *meirge*, cognate with the English *mark*, 'sign.'*

All these were originally, without doubt, carried in the belief that they would ensure victory,† a fact which further emphasizes their religious character. The employment of banners as rallying-centres, though very ancient, was a secondary idea; this, however, appears to have been their main use among the *Israelites*. An ensign was set up upon a hill for the purpose of gathering the people together (Is 13^2, cf. 11^{10} 18^3).‡ This was called a נֵס (*nēs*), a word which is used in connexion with the setting up of the brazen serpent in the wilderness (Nu 21^9). Another word used in the OT is דֶּגֶל (*degel*); this would perhaps correspond more with banner in the stricter sense, though the character of both types is conjectural, since no hints as to this are given in the OT.§ According to Nu $2^{2ff.}$ each tribe had its own standard. In *Midrashic literature*‖ it is said that the various emblems and colours of these standards corresponded to the twelve precious stones set in the breast-plate of the high priest. The emblems comprised a lion, a mandrake, the sun and moon, a ship, a snake, etc.¶ On the analogy of the character of other ancient banners, it is possible that a substratum of historical truth may underlie this statement. According to a legend preserved in the *Targum Jerushalmi*, the banner of the Hasmonæans had inscribed upon it the letters מכבי, an abbreviation for מי כמוך באלים יי ('Who is like thee among the mighty, Jahweh!').

3. As an example of another and altogether different use of banners, reference may be made to what

are called 'Trees of the Law' among the *Tibetans*. These are lofty flagstaffs, with silk flags upon them emblazoned with that mystic charm of wonder-working power, the sacred words: *Om Mani padme hūm* ('Ah, the jewel is in the lotus,' *i.e.* [?] the Self-creative force is in the Kosmos).

'Whenever the flags are blown open by the wind, and "the holy six syllables" are turned towards heaven, it counts as if a prayer were uttered—a prayer which brings down blessings, not only upon the pious devotee at whose expense it was put up, but also upon the whole country-side. Everywhere in Tibet these flagstaffs meet the eye.' *

4. Ecclesiastical banners, which were adapted from military usage, have always played a great part in Church ceremonial. The idea underlying the use of these is that of the Christian emblem, figured on the banner, going before the army of Christian soldiers. They are thus intended for processional use. Banners of this kind are, as a rule, attached to a transverse bar which is fixed by means of a cord to the staff; in this way the representation of a cross is made. The banner itself is made of silk, linen, or other material, on which is embroidered or painted the picture of a saint, or a sacred symbol expressive of some Christian truth, or else mottoes, either Biblical or based on some Scripture passage, are inscribed upon it. The use of banners in the Christian Church dates from a very early period, namely, from the time of the Emperor Constantine, at the beginning of the 4th century. According to the well-known story, Constantine saw in a vision the Cross upon a banner which bore the inscription, *τουτῳ νίκα*. On awaking, he caused a banner to be made after the pattern of this, and henceforward the *labarum*, as it was called, was carried before his troops. Upon it was figured the Cross in combination with the initial letters of the name of Christ. The *labarum* was the ordinary cavalry standard (*vexillum*) adapted to a specifically Christian use by having Christian symbols upon it. The eagle of victory surmounting the pole gave place to the sacred monogram placed within a chaplet; other Christian emblems were embroidered upon the banner itself.† Banners used in procession must have come into vogue soon after this. The bearers were called *draconii* or *vexilliferi*. Bede, in describing the approach of St. Augustine and his followers to King Ethelbert, says that they came 'bearing a silver cross for a standard, and the image of the Lord and Saviour painted on a panel.'‡ Gregory of Tours, also, in referring to a procession to a basilica, uses the words 'post crucem præcedentibus signis.'§ A later custom was that of carrying a banner of sackcloth in processions of the reconciliation of penitents. This is prescribed, for example, in the Sarum Use.

LITERATURE.—The literature has been given fully throughout the article.

W. O. E. OESTERLEY.

BĀṄSPHOR (Hindī *bāṅs*, 'a bamboo,' *phoṛna*, 'to split').—A branch of the Ḍom tribe (wh. see), with whom in the Census returns of 1901 the Basor and Basuhā are included, the whole numbering 95,979, of whom a large majority are found in the United and Central Provinces. The chief occupation of Bāṅsphors is, as their name implies, working in bamboo, out of which they make fans, baskets, and boxes. But they also occasionally take service as sweepers, and are therefore subject to the tabu which all orthodox Hindus impose on those who practise a trade of this kind. Their religion is of the animistic type found among all branches of the Ḍom tribe, their chief deities being in Upper India the Vindhyabāsinī Devī, the mountain-goddess of the Vindhyan hills, whose temple is at Bindhāchal in the Mirzāpur District. They also worship local village gods who are venerated in the places where they settle, such as Kālikā and Samai. To the former, at household celebrations, such as marriage and childbirth, a young pig, spirituous liquor, flowers, and ground rice boiled in treacle and milk are offered, all the food after dedication being consumed by the worshippers. The offering to Samai is a yearling pig. The ordinary Hindu feasts are observed, among which in particular the Holī, or fire feast, in spring is celebrated with drinking and coarse revelry, and the Kajarī in the rainy season, when drunkenness prevails and all rules of sexual morality are disregarded. They have a great respect for the snake, and, at the Guṛiyā feast, girls make dolls of rags, which are supposed to represent snakes and are beaten with rods by boys and flung into a tank—the real origin of the celebration probably being the expulsion of the powers of evil impersonated in the snake. They fear the spirits of the dead, and propitiate them by laying out food for them, which is afterwards eaten by the children and by crows. The ancestors, especially, rejoice in the savour of roast pork, and if not honoured by the sacrifice of a pig, which is cooked and eaten by the worshippers, may bring trouble upon the household. At a birth the Bāṅsphor worship the spirit of the well from which they draw water, and they hold the Pīpal tree (*Ficus indica*) in great respect, and will not cut or injure it. The same reverence is felt with regard to the Gūlar (*Ficus glomerata*) and the Semal (*Bombax heptaphyllum*). No Brāhman officiates at any of their rites, all of which are performed by a member of the tribe or household.

W. CROOKE.

BANTU AND S. AFRICA.

[E. SIDNEY HARTLAND.]

1. Race and geographical distribution of the Bantu.
2. Culture and organization.
3. Totemism.
4. Worship of the dead and other spirits. Burial rites.
5. Idols.
6. Priests, medicine-men, diviners, and sorcerers.
7. Supreme Being, Nature-spirits.

1. Race and geographical distribution of the Bantu.—The term *Bantu* (pl. of *Muntu*, a native word meaning 'man') is applied to that variety of the Negro race which, prior to the coming of Europeans, was politically, and still is numerically, predominant in South Africa. The Bantu are distinct alike from the West African or true Negroes, and from the Nilotic Negroes of the Sudan and adjacent lands. They were differentiated at some remote period, probably by intermixture with a Hamitic stock. They seem to have originated as a distinct variety somewhere in the neighbourhood of the Great Lakes, and thence to have spread southward and westward over the greater part of the continent. North of the equator they are found from the northern shores of Lake Victoria Nyanza right across to the Gulf of Guinea, thus embracing the entire valley of the Congo. Still further to the north they have thrown out numerous colonies, as far as the northern Cameroon, among the true Negroes. On the other hand, the latter are traceable down the eastern side of the Gulf of Guinea until they finally disappear in French Congo, giving place to the Bantu not very far south of the Equator. The Bantu never penetrated

into that part of Cape Colony which lies west of the Great Fish River, or into the southern portion of German South-west Africa.

The Bantu are usually divided into three main groups, distinguished by the manner in which the plural name is formed, viz. :—

1. The South-eastern tribes (Ama-Zulu, Ama-Xosa, etc.).
2. The Central tribes (Be-Chuana, Ba-Suto, Ma-Shuna, etc.).
3. The South-western tribes (Ova-Mbo, Ova-Herero, etc.).

To these, however, we may conveniently add as distinct groups—

4. The Northern tribes still living in the region of the Great Lakes, such as the Baganda, Warundi, Awemba, and others.
5. The Western or Forest tribes, occupying the Congo valley and a large tract of country north and south of that region, such as the Ovimbundu, Bavili, etc.

This distribution, though geographical, corresponds in the main to the ethnical peculiarities of the different groups, due doubtless to the streams of emigration and the various influences, human and climatic, which met the immigrant tribes on their way to the regions where they finally settled. It would occupy too great a space to discuss the details here. The causes of difference are largely conjectural, and the questions raised are greatly complicated by the incessant wars which have resulted in the intermingling or extermination of many distinct tribes, or in wholesale emigrations of hordes which have broken away from the parent stock after it had settled in its present *habitat*.

2. Culture and organization. — The primary application of the term *Bantu* is linguistic. The Bantu languages are formed on common principles, and are related to one another in the same way as the Aryan languages of Europe and Asia are related to one another. But, since the peoples speaking those languages belong, with few exceptions, to a well-marked anthropological type, it is usually and conveniently applied to that type. The Bantu peoples are in a fairly uniform stage of culture, and may be generally described as both pastoral and agricultural. As the climate of the continent varies from desert to forest, from table-land intersected by broad but often intermittent rivers to mountain regions embracing deep fertile valleys and vast inland seas, so necessarily do the occupations of the people differ. On the western side the extremes are found—that of the Hereros, who, living in a waste and well-nigh waterless country, practise no agriculture at all, and that of the tribes of the Congo, among whom the rearing of domestic animals is reduced to a minimum. All the Negroid peoples of Africa are acquainted with the use of iron; some of them are capable and ingenious smiths. Excellent spears, or assagais, knives, and hoes are produced by their simple forges. Small implements are carved from horn or bone; and among many tribes basket-work is much developed. The typical Bantu house is a circular hut, beehive-shaped among some tribes such as the Zulus, or with a true roof. These huts are built in groups, or villages, enclosed with a palisade, a hedge, or a wall of mud or stones. Every village is ruled by a chief, who in some tribes may be a woman, and whose authority varies, according to the tribe, from absolute rule to a rule exercised with the concurrence of the heads of the houses composing the village. In the more highly organized and military tribes the village chiefs are subject to a very real control by the supreme chief or king, who is surrounded by a number of ministers, and often keeps up a large measure of barbaric state. His power is in such cases exercised ruthlessly, and, however limited in theory, is in practice checked only by the dread of assassination, or (at all events in the southern portions of the continent) by the knowledge that his people may gradually desert him and go to augment the following of a more popular rival. The continuance, therefore, of a Bantu realm depends upon the political genius of its king. Within a couple of generations the mightiest kingdom is apt to fall to pieces, and another will arise on its ruins. This instability could be illustrated again and again from South African history; it has been a serious barrier to the progress of the arts of peace, has frequently depopulated large tracts of country, and has caused endless confusion and misery in every direction.

In addition to their political divisions, all the Bantu peoples are divided into stocks or clans. The members of each of these clans are united by a real or imputed community of blood, symbolized by a common name, usually derived from some animal or plant. Two opposite methods of reckoning the kinship are in use. It is probable that mankind originally reckoned kinship only through females. This mode of reckoning is called mother-right. The Western, or Forest, and some of the Northern tribes are still in this stage. Consequently the husband and father, though the head of the household, has a very limited power over the children, who in many cases are liable to be sold into slavery by their mother's brother, or pawned for his debts. Their mother's brother is their nearest male relative, and they inherit his property and liabilities. When a Bantu marries, he is required to pay what is usually, but inaccurately, called a 'bride-price.' Where kinship is reckoned through women only, this is often paid to the bride's maternal uncle. On the other hand, the Eastern and Central tribes have advanced to the stage of father-right, or the reckoning of kinship through males only. The husband and father owns the children of his wife, by whomsoever they are begotten. He has extensive powers over them, though these powers are often, as among the Basuto, limited by the rights of the wife's eldest brother. The *malume*, as the wife's brother is called, is the special protector of the child. The Basuto perform the rite of circumcision about the age of puberty. On this occasion the *malume* makes his nephew a present of a javelin and a heifer. He subsequently furnishes a part of the bride-price on the youth's marriage; and, if surviving, he presides at his funeral. He is entitled to a share of the spoil taken by his sisters' sons in war, and of the cattle which form the bride-price of his sisters' daughters. These rights and duties are best explained as a survival from the stage of mother-right.

If we turn to the South-western tribes, we find among the Ovaherero a peculiar organization intermediate between mother-right and father-right. The Ovaherero are the predominant Bantu people of German territory. According to the older organization, they were divided into clans called *eanda* (pl. *omaanda*), in which kinship was reckoned exclusively through females. These are now being superseded by clans called *oruzo* (pl. *otuzo*), in which kinship is reckoned exclusively through males. The consequence is that every Herero belongs to two distinct stocks—to an *eanda* through his mother, and to an *oruzo* through his father. Kinship is thus reckoned through both lines. The *patria potestas* is, as might be surmised, greatly limited. The husband and father is responsible to his wife's kin for the death of wife or child in consequence of his acts. The wife is capable of owning property apart from her husband, to which on her death he does not as a rule succeed. It is taken by her kin reckoned through the *eanda*. On the death of a man his property does not necessarily fall to his son as in strict father-right; but the claims of the son as *oruzo*-heir and of his sisters' sons or other *eanda*-heirs are the subject of adjustment (Dannert, 32, 47, 58).

3. Totemism.—The object from which a Bantu clan or *gens* derives its name is, as already stated, usually a species of animal or plant, generally the former. More rarely, such an object as the sun or rain, iron or an artificial product like the hoe, is found as the name and symbol of a clan.

The organization in clans thus distinguished was first observed among the North American Indians; and *totem*, the name scientifically adopted to denote the clan-symbol, is derived from an Ojibwa word. The condition or status of peoples thus organized and possessing totems is known as totemism. Much obscurity still hangs over the origin of totemism. Without discussing the question here, it is sufficient to observe that totemism takes its rise in savagery and among peoples who trace their descent exclusively through the mother. A special bond unites every member of the clan to every individual of the totem-species, all of which are under a ban or tabu. They are sacrosanct. Save in special cases, they may not be killed or eaten or used in any way; if killed or found dead, they are often honoured with funeral rites and mourning, like human members of the clan. At puberty the children of the clan usually undergo initiation into the mysteries and privileges of the clan; not until then are they considered full members. Marriage is contracted exclusively outside the clan, sexual relations being wholly forbidden between members of the same clan. As soon as the stage of pure savagery is passed, totemism begins to decay. No Bantu tribe is in the stage of pure savagery. Consequently totemism, though found among them as the basis of their social organization, is nowhere in its pristine power and development. From many of the tribes, indeed, it has disappeared, leaving only traces of its former presence. Totemism is often regarded as an incipient form of religion; but it should be observed that it lacks some of what we are accustomed to consider distinctive features of religion, such as prayer and sacrifice. See, further, art. TOTEMISM.

(*a*) *Central and South-eastern tribes.*—The **Bechuana** are a congeries of tribes in the centre of South Africa, for the most part of common origin. Livingstone tells us that the different tribes 'are named after certain animals. . . . The term *Bakatla* means "they of the monkey"; *Bakuena*, "they of the alligator"; *Batlapi*, "they of the fish"; each tribe having a superstitious dread of the animal after which it is called. They also use the word *bina*, "to dance," in reference to the custom of thus naming themselves, so that, when you wish to ascertain what tribe they belong to, you say, "What do you dance?" It would seem as if that had been a part of the worship of old. A tribe never eats the animal which is its namesake, using the term *ila*, "hate *or* dread," in reference to killing it. We find traces of many ancient tribes in the country in individual members of those now extinct, as the *Batau*, "they of the lion"; the *Banoga*, "they of the serpent"; though no such tribes now exist' (*Missionary Travels*, 13).

It is right to call attention here to the confusion between *tribe*, the local or political unit, and *clan*, the social unit. This arises partly from the great explorer's loose terminology; but it must be said that the tracing of descent through the father instead of through the mother tends to localize the clans, and the political instability already mentioned from time to time wipes out many of the clans thus localized, or absorbs them among the followers and subjects of one or more of the powerful chiefs. A body of men belonging to different clans localized under the rule of a chief soon learns, in the stage of father-right, to reverence his ancestors and his totem, and to regard their own as of less importance.

In the middle of the 19th cent. the clan of the Bakuena was thus an important tribe living about the sources of the Notuani river. They are reported as calling the crocodile their father, celebrating it in their festivals, swearing by it, and making an incision, resembling the mouth of a crocodile, in the ears of their cattle to distinguish them from others. The chief was called 'Great Man of the Crocodile' (Casalis, *The Basutos*, Lond. 1861, 211). None of the Bakuena would approach a crocodile. If they happened to go near one, they would spit on the ground, and indicate its presence by saying *Boleo ki bo*, 'There is sin.' They imagined the mere sight of it would give inflammation of the eyes (Livingstone, *op. cit.* 255). In the decay of totemism, however, either the wide distribution of the crocodile clan, or the power of chiefs belonging to it, has resulted in an extension of *quasi*-religious practices relating to the crocodile far beyond the bounds of the Bakuena clan. The nation of the Basuto was formed by the genius of its great ruler, Moshesh, of men belonging to many clans and, indeed, of different tribes. But Moshesh belonged to the Bakuena; and he succeeded in transmitting his rule to his descendants, one of whom still wields the power under British protection. Consequently the crocodile has become the sacred animal of the whole nation, and is the subject of various rites. The blood of a young crocodile, caught alive and afterwards returned to the water, is a favourite 'medicine' to make a chief 'strong.' 'Medicine' for a kraal is prepared with the brain of a crocodile mixed with that of a man. Both among the Basuto and the Bechuana a man who is bitten by a crocodile is expelled from his village; for the people say, 'A man who is so bad that the crocodile bites him can come no more into our community,' as if they saw in this bite a Divine judgment. The death of a crocodile causes the children to cough. Its body is handed over to the medicine-men, who slay a black sheep on the spot where it was killed, as a sort of atonement for its death. The crocodile's blood kneaded up with mud, its hide, teeth, and claws, are used as talismans (Merensky, *Beiträge zur Kenntniss Süd-Afrikas*, Berlin, 1875, 92, 132). These usages and others that might be named probably result from a decay of totemism under the social and political influences dominant on the central plateau of South Africa. Among more certain evidences of still existing totemism is the practice of addressing the chief of a clan as the animal itself. The totem of Khama, the famous chief of the Bamangwato, was a duyker antelope. If one were in agreement with something he had just said, it would be highly respectful to reply, 'Yes, Duyker.' Similarly it would be proper to say to the chief of the Bakuena, 'Yes, Crocodile' (W. C. Willoughby, in *JAI* xxxv. 301). No one dares to eat the flesh or clothe himself with the skin of the animal whose name he bears. Even if this animal be hurtful, as a lion for instance, it may not be killed without great apologies being made to it, and its pardon being asked. Purification is necessary after the commission of such sacrilege (Casalis, 211). The great oath of the Baperi 'is that of *ka noku*, "by the porcupine," because the majority of them *sing*, to use the consecrated phrase, intimating that they feast, worship, or revere that animal. . . . When they see any one maltreat that animal, they afflict themselves, grieve, collect with religious care the quills, if it has been killed, spit upon them, and rub their eyebrows with them, saying, "They have slain our brother, our master, one of ours, him whom we sing." They fear that they will die if they eat the flesh of one' (Arbousset, *An Exploratory Tour to the N.E. of the Colony of the Cape of Good Hope*, Lond. 1852, 176).

Most of the central tribes practise *circumcision*. The ceremony is performed upon boys about the age of puberty. It takes place at intervals of time which depend on the number of candidates. The lads who are to be subjected to it are gathered into a hut, where they have to reside for several weeks, and where they are initiated into the traditions of the tribe and the duties of manhood. When they are at length released, they issue with the rights of adult and fully qualified members of the tribe. Among some tribes, such as the Basuto of the Transvaal, the 'schools,' as they are often called, are spread over three periods, held at intervals of three years; but they are more usually completed in one term. The discipline undergone by the candidates is intended to harden them and develop their endurance and self-restraint. In regard to sexual matters, however, it is the reverse of what we should consider moral. The actual performance of circumcision is not an original or necessary part of the initiation ceremonies. Though ancient among many of the tribes, it has only recently been introduced among some, and is still rejected by others. Among the Baronga it fell into

desuetude in the early years of the last century; and Chaka, the great Zulu king, abolished it about the same time among the Zulus (Maclean, 94, 153; Alberti, *De Kaffers*, Amsterdam, 1810, p. 73; *Journ. African Soc.* v. 247; *JAI* xxxv. 251, 267, 372; Junod, 28). The Basuto of Basutoland, the Bechuana, and many other tribes require a similar period of retirement and instruction to be undergone by girls before they are esteemed marriageable.

The Zulus, the Xosas, the Pondos, and other tribes of the south-east, observe the rule of *exogamy*. They are forbidden to marry members of the same clan, though belonging to different tribes. The rule, however, is breaking down (Theal, *Kaffir Folk-Lore*, Lond. 1882, 198; Shooter, *Kafirs of Natal*, Lond. 1857, 45). Among the tribes of the interior it has rarely been recorded. A somewhat similar rule forbidding marriage within the kin has recently, however, been noted by a German traveller as characteristic of the Batauana, an offshoot of the Bamangwato inhabiting the Okawango marshland near Lake Ngami (*ZE* xxxvi. 704); and though it has escaped record, it is possible that it may be observed by others of the central and south-eastern tribes.

(*b*) *Northern tribes.*—Among the northern tribes, such as the Baganda and the Banyoro around the Victoria Nyanza, totemism is still a powerful part of the social organization. Sir Harry Johnston gives a list of twenty-nine clans in Uganda proper and its southern province of Buddu, named after various animals and vegetables. The object which serves as the name of the clan is in some way identified with the original founder, though there is no evidence that the clan is believed to be actually descended from it. It is held so far sacred that the members of the clan do not willingly destroy or eat it. The *mamba*, or lung-fish, though generally appreciated as an article of diet, is not killed or eaten by the Mamba clan; the elephant is not injured by the members of the Elephant clan; members of the Leopard or the Lion clan will endeavour to avoid killing the animal whose name they bear; and so on. The word used for 'totem' is *muziro*, 'something tabued or avoided,' and is, Sir Harry Johnston declares, 'a fair translation' of the word *totem* (Johnston, ii. 587, 588, 691, 692). The same distinguished author was of opinion that there was no prohibition of marriage within the clan. More recent investigations, however, have resulted in a different conclusion; and it seems fairly certain that, whatever was the custom among the Banyoro, the Baganda and probably the Basoga forbade marriage between even the most distant members of the same clan. As elsewhere, the kin is reckoned through the father, and has the consequent tendency to localize itself. Every family has its *kialo*, or place of origin; and the residents in a given village usually belong to the same totem. Circumcision and other initiatory ceremonies appear to be unknown.

Meagre as is our information with regard to the Uganda Protectorate, we know still less of the totemism of the other northern peoples. Father van der Burgt, to whose monograph we are indebted for all that we know of the Warundi of German East Africa, uses the word without any clear notion of its meaning. The goat, the wild boar, and the domestic fowl are not eaten, though the first and last are offered in sacrifice. Mutton is not eaten by every one. Fish is not eaten, save on the shores of Lake Tanganyika. But whether these tabus are totemic we cannot say. The Warundi seem to count kinship through the father. The wife, however, occupies a much better position than among the tribes south of the Zambesi. Indications given here and there by Father van der Burgt point to an organization in clans. How far it is effective, and whether the clans are exogamous, does not appear. Circumcision is not practised. On puberty rites we have no information; but secret societies exist, and serpents and other animals are said to play a part in their ceremonies. Nothing, however, is really known of the facts.

On the Shire Highlands, between Lake Nyasa and the Zambesi, the Wayao and Mang'anja reckon descent through the mother. When a man marries, he settles in his wife's village. He does not, as a rule, take a second wife while the first is living, unless he inherits her from his elder brother or maternal uncle. When he dies, any property he may have which is not buried with him or consumed in the funeral feast and expenses devolves on his next brother, or, failing younger brothers, on his eldest sister's son, and so on (Macdonald, *Africana*, i. 187; Werner, 132). The Wayao are divided into exogamous clans. These clans appear to be totemic, but no list has been made of them. Each of them is said to have a *mwiko*, or tabu, with regard to some animal. The subject, however, still awaits investigation (Werner, 252). Girls and boys undergo initiation about the age of puberty. The retirement and ceremonies for a girl occupy about a month, for a boy about six weeks. A boy's name is changed, and after he has gone through the mysteries it is not permitted to call him by his previous name. Among the Mang'anja only the girls undergo puberty rites. Their names are changed, like those of the Yao boys (Macdonald, *op. cit.* i. 125; Werner, 123). The front teeth of both sexes are chipped into saw-like points; but this does not appear to be done at the puberty rites.

The Awemba inhabiting North-Eastern Rhodesia between Lake Tanganyika and Lake Bangweolo have totems which descend exclusively through women. The crocodile, the hoe, and the mushroom are stated to be totems. 'But no special worship is paid to the crocodile, though the natives believe that the souls of the drowned migrate into the bodies of crocodiles' (*JAI* xxxvi. 154). Our information is at present too meagre to enable us to judge how far totemism is still the basis of society.

(*c*) *South-western tribes.*—Turning to the Hereros in the south-west, we find a curious condition corresponding to the double reckoning of kinship already noted. Each *eanda* has a totem, and nearly all of them a number of sub-totems. Most of the characteristics of totemism have, however, been taken over by the *otuzo*, and are no longer observed by the *omaanda*. Thus the chameleon is sacred to the *oru-esembi* (the *oruzo* of the chameleon). The members of the clan call it 'Our Old Ancestor,' and they will not touch it. The members of the *oruzo* of the sun eat and drink only while the sun is above the horizon. The chief tabus of the *oruzo* have been concentrated on domestic animals. The *oruzo* of the chameleon prefer brown and especially piebald cattle; they neither keep nor eat sheep or oxen into the colour of which grey enters. Another *oruzo* neither keep nor eat yellow or grey cattle; they are forbidden to eat the tongue or other part of the flesh of pack-oxen. The *oruzo* of the Koodoos not only eat no koodoo-flesh; they keep no cattle or sheep without horns or with mutilated horns; nor will they eat of such as have lost their ears. At the death of a member of the clan no sacrifice is offered. Hence the characteristic ornament of Herero graves —that of the ox-horns—is wanting; but koodoo-horns are laid on the grave and by the sacred fire at the *werft* ('village'). These tabus of domestic animals having certain colours and other marks, and of portions of animals, bear the stamp of comparatively recent origin—an attempt to import into the *oruzo* a distinctive series of observances parallel with, and yet different from, those which were pro-

bably characteristic of the *eanda*, but which have now disappeared. The blood-feud, however, still attaches to the *eanda*, and has not been transferred to the *oruzo*. It is to be inferred that the *eanda* was exogamous. At present the Herero prefers to marry within the circle of his relatives; but—significant exception—children of two sisters or of two brothers cannot intermarry. According to the Herero reckoning, they are themselves brother and sister. If children of two sisters, they would belong to the same *eanda*; if children of two brothers, to the same *oruzo*. There appear to be no puberty-mysteries for either boys or girls. Circumcision is practised, but it is an individual rite performed for the most part at a very early age. The hair of a girl, except a tuft on the middle of the head, is shaved in her eighth year. The lower front teeth of both sexes are broken out, and the upper teeth chipped into a pointed form, between their eleventh and fourteenth years. These appear to be relics of puberty-rites; but none of them are said to be performed collectively when the parents can afford the sole expense of the festivities usual on the occasion. Only from motives of economy are these rites now imposed upon the young people in companies.

(*d*) *Western or Forest tribes.*—So far as our information goes, the vestiges of totemism among the Western tribes are few and uncertain—and this in spite of the fact that most of the tribes are still in the stage of mother-right. The prevalent tabus, especially those of food, however, point to a totemic origin. They are generally known under the name of *xina*, *orunda*, or *kazila* (compare the *ila* of the Bechuana), or some dialectic variation of one or another of those words. The Congo tribes inhabiting the lower reaches of the river as far inland as Stanley Pool call a tabu *mpangu*. These tabus are of two kinds.

There is, first, the personal *orunda*, observed by virtue of a vow by the individual concerned or of the directions of a medicine-man, or else promised and vowed, after divination, for an infant at birth, and sometimes expressed in his name. Many of these prohibitions are attributed to the direct commands of a *Nkici* (tutelary god or 'fetish'). Many are self-imposed as a religious observance in honour of a *Nkici*, or as a measure of precaution. Some are connected with a secret society, and are required of all its members. Natives are frequently named after animals; and such of the prohibitions as go with the name of an animal may have been taken over from totemism. The rest are perhaps due to the development of 'fetishism' and idol-worship (see § 5).

The other kind of *orunda* is observed by entire families. In Calabar, as we are told by a missionary, 'certain kinds of food are forbidden by some juju law or custom of their own to families and persons bearing certain names' (Waddell, *Twenty-nine Years in the West Indies and Central Africa*, Lond. 1863, 369). Among the Bavili or Fyât, in French Congo, the pig is forbidden to all royal blood; other families 'will not touch certain animals because their ancestors owe such animals a debt of gratitude.' The buffalo is forbidden 'to the Bakutu, as a punishment to them for not listening to the words of Maloango; the antelope to a family round about Fahi, for refusing to give water to a voice in the bush when asked for it; fish of certain inland waters to certain people, near Cabinda, for not giving water to Nzambi (§ 7) and her child; and so on' (Dennett, *Folkl. of the Fjort*, 10, 149; cf. Bastian, *Loango-Küste*, i. 183 ff.). Du Chaillu's evidence is to the same effect. He tells us that the flesh of the *Bos brachiceros* was an abomination to the king of the Bakalai and all his family, because many generations previously one of their women gave birth to a calf instead of a child; that the crocodile was forbidden food to another family for the same reason; and that further inquiry disclosed the fact that 'scarce a man could be found to whom some article of food' was not *orunda*. Crocodile, hippopotamus, monkey, boa, wild pig are enumerated by the traveller as objects of such prohibition, which is observed even at the risk of starvation, and under the belief of supernatural punishment by miscarriage of women of the family or the birth of monstrosities in the shape of the prohibited animal (du Chaillu, *Equat. Afr.*, Lond. 1861, 308). The word 'family' used by our authorities corresponds with little doubt to a clan tracing its membership through women; and the fact that the name frequently indicates the prohibited food lends countenance to the belief that we have here a survival of a genuine totemic tabu. It seems, however, that by a curious exception, the totem, if totem it be, descends, among the tribes of the Lower Congo, always from father to son, though in other respects the tribes in question are in the stage of mother-right (Bentley, *Pioneering on the Congo*, i. 263). Further investigation is needed on this point.

The Barotse are an outlying Western tribe on the upper waters of the Zambesi. They reckon descent through the father only, though traces linger of the earlier form of organization. Our information as to their food-prohibitions is very meagre. The members of the royal family are forbidden the flesh of the sheep and the goat. The pig seems more generally tabued; and the young women abstain from a certain fish lest it render them sterile (Béguin, *Les Ma-Rotsé*, Lausanne, 1903, p. 124). But whether the latter prohibitions are confined to the Barotse themselves or apply also to any of their subject peoples does not appear.

More uncertain as a trace of totemism are the puberty-rites. Circumcision is very general, except among the Barotse; and though sometimes performed upon boys individually when they arrive at the proper age, and, indeed, among certain of the Upper Congo tribes a few days after birth, it is frequently, as in Angola, a collective rite, at which the boys who are subjected to it live for a month in seclusion under the care of a *nganga* (§ 6). Girls on reaching puberty are required to undergo seclusion in a hut called 'the paint-house,' where they are instructed by an old woman in the duties of adult life, and whence they often do not issue until they are about to be married. But this is an individual rite. Secret Societies flourish all down the West Coast. They have probably been introduced from the Negro tribes, and seem to be connected with the worship of special gods. Boys and often girls about the age of puberty are compelled to be initiated. They are taken away into the bush for a season and there instructed in the cult of the Society. Absolute obedience to its commands is required; and oaths of secrecy are imposed. So well are these kept that even converted natives refuse to speak of the rites. Consequently very little is known of them. As among many of the Australian tribes, it is believed by the uninitiated that the novices are killed and brought to life again. On returning to the village they feign ignorance of their language, and even of their nearest relatives and the most familiar objects of their daily life. 'They appear dazed, and cannot talk. They want whatever they see, seize whatever takes their fancy. No one is allowed to resist, because "they do not know any better." They behave like lunatics, and pretend not to know how to eat; even food has to be masticated for them, so well do they act their part. After a few days the excitement and interest of the deception

wear off, and they gradually resume intelligence' (Bentley, i. 287). The Societies wield enormous political and social power, of which they frequently give public demonstration; and it is one of the main objects of civilized governments to put them down. We may conjecture that here, as elsewhere in the lower culture, they are a development of the puberty-rites arising on the decay of totemism.

Certain of the tribes also, both inland and on the coast, knock out the two middle front teeth in the upper jaw at puberty. The Mushicongos, like the Hereros, chip all their front teeth into points (Decle, *Three Years in Savage Africa*, Lond. 1898, 81; Monteiro, *Angola and the River Congo*, Lond. 1875, i. 262). The one or the other mutilation is common in Africa, as well as in other parts of the world; and although generally connected with puberty cannot be reckoned as necessarily a relic of totemism.

The laws of marriage, so far as relates to prohibited degrees, have scarcely been investigated; but at all events some of the tribes forbid marriage within the clan, however remote the relationship according to our reckoning.

4. Worship of the dead and other spirits. Burial rites.—(*a*) *Central and South-eastern tribes.*—The principal factors in the decay of the totemism of the Central and South-eastern tribes have been their pastoral and warlike habits. These have necessitated a higher social organization with father-right as its basis. As already pointed out, the change from mother-right to father-right tends to localize the clans, and to merge them in the local organization under the recognized head of the clan. The social and religious rites of each household are performed by its head; those of the tribe are performed by its chief. Thus they gradually centre round him while living; nor does his power cease with his death. The very ancient and world-wide belief in the life after death leads to the conviction that the chief is still a chief; the father of a household still exercises his functions of owner, provider, controller, preserver, behind the veil that separates him from his survivors and descendants. No other life can be imagined for him; and the people over whom and for whom he exercises these functions are the same whom he ruled in his lifetime. The chief is the father of his tribe; he is its head, and his tribesmen are in a sense his children. In South Africa the tribe is often called by his name. Many a tribe credits its chief with extraordinary powers: he controls the rain; he gives or withholds plenty; he performs the ceremonies which give success in war. 'The chief,' says Merensky, 'is the focus of witchcraft and superstition; he is the high priest of his people; and faith in his supernatural power is the strongest bond which unites his subjects to himself' (*Beiträge*, 116). Such an one receives in his lifetime a reverence hardly distinguishable from worship. That reverence is exalted and intensified by death. His powers are now released from many of their limitations, and are exercised in more terrible, because more mysterious, ways. He becomes part of the tribal religion, for the moment the most prominent object of worship; and such he remains until his successor in his turn supplants him.

Ancestor-worship thus developed—worship of their ancestors by the members of a family, and of their departed chiefs by a whole tribe—is the religion of the Central and South-eastern Bantu peoples.

It is to the ancestors of the reigning chief, says M. Junod, speaking of the Baronga, 'that prayers and sacrifices are always presented when the interest of the tribe as a whole is concerned—in national calamities, in time of famine, drought, war, or at the opening of a new season when it is desired to obtain from the divinities an abundant harvest. Their names compose the genealogy of the royal family. They are invoked one after another; and it is doubtless this religious practice which has saved from oblivion the names of these revered chiefs, become the protecting genii of the tribe. Moreover, each family possesses also its string of *chikwembo* [ancestral *manes*], longer or shorter, better or worse preserved. If the family pride be well developed, if the ancestors have been men of mark, and if their sons have guarded the family tradition with intelligence, this family religion will be well developed' (*Les Baronga*, 382).

As the ancestors of the chief are worshipped on national occasions, the ancestors of the family are worshipped on occasions of family interest, such as marriage, death, or sickness, or any occasion of rejoicing, prayer, or mourning.

The Central and South-eastern Bantu believe that the ordinary existence of the soul after death is led underground (a conception which is the natural consequence of burial), often in villages like those on earth, and with cattle variously said to be entirely white or (among the Basuto) of a blue colour with red and white spots. But the dead retain the power of appearing in dreams, or of assuming the form of animals. Sometimes they enter into men and inspire them. They retain their human feelings, and desire to be remembered by their descendants and nourished by sacrifice. It would seem as if they were dependent for their continued existence, or at all events for their comfort, on the continuance of their line. If they have no one to remember them and to offer sacrifices to them, they will be reduced to eating grasshoppers, and they will 'die of cold on the mountains.' This expression is perhaps not to be taken literally; but at least it indicates a state of extreme misery (Callaway, *Rel. Syst.* 145, 225; Arbousset, 237). Though worshipped, the dead are feared rather than loved. They are possessed of more than human power and knowledge, and appear sometimes for beneficent purposes, as to warn of danger, or to reveal medicines. Sneezing is caused by the *manes*; it is a sign that the spirit of an ancestor is with the man to help him. More usually, however, the visits of the dead are to demand sacrifice or to call the living. They often harass the living by their presence, and must be laid. The dead husband is jealous of his wife; and, before she marries another, the spirit must be laid, and she must be 'purified.' When the dead reveal themselves to their descendants and tribesmen in dreams, they usually appear in their own proper forms. When they appear otherwise than in dreams, it is as animals. Buffaloes, hippopotami, lizards, and even mice are mentioned among the animals held by the Zulus to be manifestations of their dead. Among the Matabele and the Mashuna the dead may be changed into animals such as elephants, bucks, lions, and so forth. Other tribes hold crocodiles or hyænas to be manifestations of their departed members. In fact, almost any animal may be credited with being an incarnation of the dead. But by far the commonest form assumed is that of a snake. Several kinds of such snakes are distinguished by the Zulus. Some of them are appropriated to deceased chiefs; others are incarnations of the common people; and one kind is shared by chieftainesses with commoners (Callaway, *op. cit.* 196). All animals to which these beliefs attach are, of course, treated with respect; offerings are made to them; and they are never killed or injured.

In addition to the animals referred to in the foregoing paragraph, a sacred character attaches to the ox. The chief wealth of these tribes consists of their domestic cattle. The Zulu cattle-pen, or *kraal*, is placed in the centre of the village, and the human habitations are built round it in a circle. The Pondos build their villages in horse-shoe form, with the kraal between the two ends. Farther to the north the Bavenda huts are scattered irregularly in a palisaded enclosure on a hill-side, the kraal occupying one of the lower corners. Each tribe has its own type of village; but in any case, the kraal

is the most sacred spot. There the chief of the village receives and feasts his visitors and people on great occasions; there he offers his sacrifices to the *manes*; and often, when he dies, he is buried there. All public assemblies are held there, and all solemn rites performed. The burial of the chief in the kraal involves the identification in some sense of the cattle with the deceased. A Bechuana chief is frequently addressed as 'One who came forth from cattle.' Among the Basuto the cattle are called '*melimo* (spirits, *manes*) of the wet noses.' Yet the cattle are not regarded with the reverence and fear which the animals previously mentioned enjoy. As domestic animals they are treated as the property of their owners; they are driven forth to pasture and back to their kraal; they are milked; superfluous bull-calves are castrated; above all, they are killed for sacrifice and for food. Probably, in the first instance, they were never slain except for sacrifice. But a sacrifice to the *manes* results in a feast on the slaughtered animals by the living members of the village or the tribe; and now among tribes like the Baronga the cattle are killed for food, while the goat, a less valuable beast, is the largest sacrifice (Junod, *op. cit.* 200). Among the Bechuana and other tribes a bull or an ox is still offered on all important occasions. In extreme emergencies, when the ordinary prayers for rain have been of no avail, the Bamangwato offer an ox on the grave of a chief. On setting out for war the Bechuana sacrifice a bull with special ceremonies, and the contents of its stomach are carried before the host as a talisman of victory. The same uninviting substance is smeared over warriors in the purification ceremony after returning from a fight; and chiefs who have quarrelled, meeting in a reconciliation ceremony, smear it over one another's arms as they clasp hands. At a Bechuana marriage the fat surrounding the entrails of the slaughtered ox is rubbed with 'medicine' and laid about the shoulders and bosom of the bride. Among the Basuto an ox is sacrificed at a death, the corpse is buried wrapped in the skin with a piece of the meat and some grain, and the contents of the victim's stomach are placed on the grave. The ritual in all these cases indicates the sacredness of the animal; and many other native customs and phrases point in the same direction (*JAI* xxxv. 301 ff.; Martin, *Basutoland*, London, 1903, p. 90 f.; Junod, *op. cit.* 200).

The origin and exact bearing of these practices are still undetermined. They are possibly to be traced to the special care and affection with which cattle are thought to be regarded by the deceased ancestors whose chief possessions they were, and who are held to incarnate themselves in, or to inspire, them from time to time. The Sesuto phrase, for instance, above quoted, is said to be used because it is believed by the Basuto that the spirits of the departed take up their abode for a time in the bodies of the cattle (Mrs. Cartwright, in *FL* xv. 246). It would seem, however, that such possessions are to be distinguished from those previously referred to, being usually no more than temporary.

Some tribes are accustomed to bury their chiefs in a special burial-ground. The royal burial-grounds of the Baronga are described as vast and almost impenetrable thickets. A small path hardly traceable leads into them, trodden only at intervals by the reigning chief, the descendant of the sacred line, for the purpose of sacrificing to his ancestors. To all others entrance is forbidden. Within the thicket the illustrious dead rest beneath barrows, on which are to be seen the dried and decaying remains of offerings, and often calabashes and other household utensils, broken and cast upon the grave at the time of burial. Naturally serpents abound in the underwood, probably deemed to be manifestations of the deceased. These cemeteries are invested with all the terrors of superstition; and awful tales are told of sacrilegious persons who have dared to pluck the fruits of the trees, or even to cut a branch of dried wood for fuel (Junod, *op. cit.* 383 ff.). The kings of the Bavenda are similarly buried with their ancestors in the holy grove. Formerly the body was laid on a low wooden scaffold and left until the flesh had fallen off, when the skeleton alone was buried. Kings are not said to 'die,' but to 'go away for a time.' At their graves sacrifice is offered from time to time. The altar consists of three stones fixed in the ground, in the centre of which a shrub, flower, or rush has been planted. This plant is probably the *modzimo* ('soul' or 'manifestation') of an ancestor; for among the Bavenda the dead return into various objects, such as cattle, goats, sheep, or weapons and tools of the defunct, which are then held sacred (*JAI* xxxv. 376 ff.). In the same way among the Baronga, at a chief's death his nails, hair, and beard are cut, and the cuttings are kneaded up, together with some of the dung of the oxen slain at his death, into a ball, which is carefully surrounded with thongs of hide. When his successor dies, a second ball is made and added to the first, and so on. The sacred object thus formed is called a *mhamba*. It is not an idol, but a sort of national palladium. It is placed in the custody of an officer, who is specially chosen for his calmness and sobriety. He becomes a sort of high priest of the tribe; and on all national occasions he offers the sacrifice and brandishes the *mhamba* before the eyes of the people (Junod, *op. cit.* 398). The Basuto of the Transvaal have sacred trees in which the *manes* dwell (Merensky, 132).

(*b*) *South-western tribes.*—Among the Hereros the worship of the dead is well developed. When a man dies, he is buried near a tree, or, if the chief of a *werft*, or village, in his cattle-kraal; cattle are slain, especially any supposed to be favourites of the deceased, cut to pieces, and cast away as offerings to him, the horns being taken to adorn the tree beside the grave. The *werft* is then abandoned and allowed to fall into decay. Nor do the people return, unless the deceased has himself expressed the wish to hear again after his death the lowing of his cattle about his grave. When they do return to rebuild the *werft*, they lament for the dead at the grave and address the *omukuru* ('deceased'): 'See, father! we are here, we thy children. See, we have done as thou hast ordered us. We have brought the cattle thou gavest us here,' and so on. New fire is kindled on the old hearth, a sheep is slaughtered, of which all the people eat. Every son of the deceased then approaches the fire with a branch or a small tree. These are set up in a row half-way between the fire and the cattle-kraal. An ox or sheep is slaughtered for each of the sons, and its flesh is laid upon the grave. When it is thus consecrated at the grave, it is further consecrated by tasting by the sons of the deceased. Married men who have children are the only persons allowed to eat of this flesh. So long as these ceremonies are proceeding (apparently for some days), all milk must in the same way be consecrated by presentation at the grave, and a little of it is always left standing in a pail on the grave. Another ceremony is also performed, but it does not seem clear whether it is an invariable part of the rites. The eldest son, standing at the grave, personates his father, and pretending to be angry throws stones at the assembled people. At first they are frightened and flee, crying out, 'Our father is angry! Our father fights!' Regaining courage, they return to the grave and throw stones back. After a sham fight of this kind for a little while the *omukuru* is supposed to become quiet; and the son standing at the grave begins to speak in his father's name. He asks first about the cattle individually by name or colour, and then about the people. The people reply suitably to the questions (*S. Afr. F. L. Journ.* i. 55 ff.). Here we have beyond doubt the recognition of a new divinity with whom direct relations of worship on the one side and tutelage on the other are entered into. But he is not taken as a divinity in substitution for another. He is only the most recent of the *ovakuru*, or deceased ancestors, all of whom are regarded as powerful beings.

In the closest connexion with the worship of ancestors is *the sacred fire*. The household fire burns before every hut. The chief's hearth is between his hut and the cattle-kraal. The fire is in charge of his eldest unmarried daughter, who is responsible for keeping it alight. Its extinction is a calamity to be expiated only by solemn offerings of cattle (Andersson, *Lake Ngami*, 223), and it must be re-kindled with the fire-sticks which represent the male and female ancestors. It is thus that the new fire is kindled at the ceremony just described. When, as sometimes happens, a portion of the population swarms off from an old *werft* under the leadership of a son of the chief, a portion of

the old fire is taken with them; and if it go out, it must, if possible, be re-kindled by a brand from the old hearth; if not, then by means of the fire-sticks. Every child is presented a few days after birth at the sacred hearth to the *omukuru*. The father then takes the child into his arms and gives it a name, calling upon his ancestors and presenting the child to them. Birth takes place in a special hut, and until this ceremony has been performed the mother is not re-admitted into her own house. The meat slaughtered at the festival when a youth is circumcised is holy, and must be cooked at the *okuruo* ('sacred fire'). It is solemnly eaten there in the presence of sticks representing the *ovakuru*, which are brought for the purpose from the sacred house where they are kept. The ceremony of breaking-out and chipping the teeth of children (§ 3) is likewise performed at the sacred hearth. Marriage rites, too, are performed before the *okuruo*. The sick are carried round and round the sacred fire with a chant addressed to the *omukuru*, praying for their recovery (*S. Afr. F. L. Journ.* i. 41 ff., ii. 166; Dannert, 23, 48).

(c) *Northern tribes.*—We turn to the Northern tribes, and first to the Protectorate of Uganda. Ancestor-worship is described as 'the foundation of such religious beliefs as are held by the Banyoro.' Every clan has its own *muchwezi* (pl. *bachwezi*), or ancestral spirit, sometimes confused with the totem. The same word is applied to the priest or medicine-man who conducts the worship. It is also given to the individual members of the light-coloured Galla race which is dominant in these lands and, mingled with Bantu blood, now forms the Bahima aristocracy. The fearful thunderstorms common in the Protectorate are looked upon by the Banyoro as caused by the *bachwezi*. When a person is killed by lightning, his death is regarded as the manifestation of anger on the part of the *bachwezi*, either against him or his clan. A great ceremony is performed; the medicine-man is summoned to investigate the cause; and sacrifices are duly offered to appease the *bachwezi* (Johnston, *Uganda Prot.* ii. 588 ff.).

The religion of the Bahima, as we might expect from their Hamitic ancestry, is somewhat more developed. They have small huts, built close to the houses in every village, where offerings are made. Either in addition to the ancestral spirits, or as a specialized form of them, a number of beings are believed in who are looked upon as 'devils' or evil influences, and who therefore require to be constantly propitiated. The Bahima worship deceased chiefs and prominent personages, though they have 'little definite belief in a future life on the part of any individual man or woman.' Nevertheless, they are said to believe in a land of the departed, called *mitoma*, away to the east, whither all Bahima go (Johnston, *op. cit.* ii. 631; Cunningham, 22).

The Baganda, now nominally either Christians or Muhammadans, formerly worshipped a number of ancestral and other spirits. Their religion appears to have been somewhat nearer to a genuine polytheism than that of their Western neighbours the Banyoro and Bahima. The most influential of their gods was Mukasa, who is believed by Sir Harry Johnston to have been originally 'an ancestral spirit, and whose place of origin and principal temple was on the biggest of the Sese Islands.' He became in time the god of Lake Victoria Nyanza. He was propitiated by those making a long voyage. He and some of the other gods were provided with earthly wives in the persons of virgins, who were required to live chaste, though it is a question how far they complied with the requirement. Mukasa is, however, of uncertain sex, being often referred to as female. The highest god was the sky-god *Kazoba*, whose name is derived from a word signifying 'sun.' There were other departmental gods.

On the east of Uganda proper and immediately to the north of the lake lies a district called Busoga. The people, called Basoga, closely related to the Baganda, are said to worship a number of spirits (*balubare*), each of which has its priests. Here, as among the Baganda, the worship is frequently localized. Certain rivers are reputed to be the homes of special *lubare*. Thus the river Ntakwe is the home of the *lubare* Takwe, who 'personifies that stream.' If a virgin had been seduced and become pregnant, she and the man, with stones tied to their ankles and legs, and with a sacrificial sheep, were thrown into the river to be drowned. Human sacrifices with revolting details were offered to the river Nagua on the occasion of a chief's death. Certain trees also were associated with spirits. Johnston relates the performance of a ceremony at the native town of Luba at a time when the famine was threatened. In this ceremony all the details of sacrifice of a young girl at the foot of a sacred tree were performed in mimicry, but in fact her life was spared to be devoted to perpetual virginity (Johnston, *op. cit.* ii. 718 ff.).

Little need be said of the burial rites of these tribes as indicative of their religion. The Bahima are a purely pastoral people. At each cattle-kraal there is a huge heap of manure, which is of course daily added to. In this heap the dead are buried. Peasants, who do not belong to the Bahima, or ruling aristocracy, are buried at the hut-door. The Banyoro kings were put into a circular pit about twelve feet deep, along with nine living men. The pit was then covered with a cowhide tightly pegged down all round, and a temple built over it. A headman was placed as watcher; and many of the personal servants of the deceased were appointed to live in the temple. They and their descendants (who continued their duty) were supplied with food by the surrounding country. Bahima chiefs are buried beneath their huts; other persons are exposed to be eaten by hyænas. The kings of Uganda were buried at a place called Emerera. A great house was built to receive the royal corpse. Wrapped round with many layers of native bark-cloth, the body was laid on a low wooden scaffold in the middle of the house. The door was then closed and securely fastened, not to be opened again. The deceased king's cook, his headman of the beer-pots, and his chief herdsman were seized, together with three women of corresponding rank; they were dragged in front of the house and there slaughtered, their bodies being left to the vultures. The king's under-jaw had been cut off previously to his entombment. It was ornamented with cowries and kept in a house in an adjacent enclosure. Hard by in the same enclosure lived a chief who was appointed guardian of the jaw, another chief who was guardian of the tomb, and the wives of the deceased and their successors, who were supposed to keep watch over the tomb for ever. The late king, Mutesa, abolished this custom; but his wives, so long as they lived, were to be, and they remain, the official guardians, dwelling in the great house which has been erected over his grave (Cunningham, 10, 29, 224). A chief of the Basoga is buried beneath his own house, which is then suffered to fall into decay. An ordinary peasant is buried in front of his dwelling. If a man die at a distance from home, a reed or stick, over which the deceased has been called to come for burial, is wrapped up in bark-cloth and buried as the dead man.

Passing by a number of tribes about which we are even more imperfectly informed than about those of the Uganda Protectorate, we turn to the Mang'anja and the Wa-yao in the Shire Highlands. These two tribes believe themselves to be of common origin. The latter are an intrusive people, whose original seat was probably the Unango mountains between Lake Nyasa and the Mozambique coast, whence they were driven by pressure of other tribes from the north in the earlier half of last

century. They conquered the Mang'anja, ultimately settling side by side with them and intermarrying. In all probability at no distant date they will fuse into one people. To that fusion their religion will offer no difficulties, for it is in all essentials the same. It is primarily a worship of the dead. The soul or spirit is called *lisoka* (pl. *masoka*). As usual in the lower culture, it is believed to depart from the body during sleep, and its adventures are the cause of dreams. At death it departs to return to the body no more. One of the words for 'spirit' is *msimu*, obviously related to the Sechuana *morimo* (p. 364[a]). Just as a lunatic, moreover, is called by the Bechuana *barimo*, so among the Yaos sufferers from madness, idiocy, or delirium are *wa masoka* ('they of the spirits'). After death the *lisoka* is said to have 'gone to *Mulungu*': it is even called *mulungu*. This word is used by the missionaries to translate 'God,' for which it is no more the equivalent than is the Sechuana *morimo*. But the fuller discussion of *mulungu* must be reserved for a subsequent section (see p. 365[a]).

Besides the *manes*, the Yaos recognize other personal beings who receive worship. Of these the chief is Mtanga, often identified with *Mulungu*. Mtanga is said to have pinched up the earth into mountains, dug channels for the rivers, and brought down the rain to fill them. He is associated with Mangochi, the great hill in the country to the north-east of their present *habitat*, which the Yaos occupied until the middle of last century. He does not appear to be identified with Mangochi, but there is some evidence that tribes at no great distance worshipped remarkable hills. Some of these divinities seem to have been originally spirits of the departed. It is possible that some or all of them may have been local objects of worship, and in consequence of the removal of the tribe from its earlier seats they may have become more or less generalized in character and attributes. In any case a tendency is discernible on the part of the Yaos, as of other Northern tribes, to develop from ancestor-worship to polytheism (Macdonald, *Africana*, i. 58 ff.; *JAI* xxxii. 89).

The spirits are approached with offerings of native flour or beer, or of fowls or goats. These are presented at the shrine and left for the spirit's consumption. In the case of a goat, however, only one leg is usually presented, the remainder being eaten by the villagers themselves. Sometimes the spirit asks for some other offering. If for tobacco, a quantity is put on a plate and set on fire; if for a house, a new hut is built for him. Offerings are made not only at the grave or shrine of a dead man. The first-fruits of the crops are placed in a rough shed outside the village or near the hut of the chief or head-man. Occasional small offerings of flour or beer are placed at the foot of the tree in the village courtyard where men sit and talk or work. On sitting down to a meal the native throws a piece of the food at the root of the nearest tree. On a journey a little flour is often laid at the foot of a wayside tree or at an angle where two roads meet. All these offerings are made to *Mulungu*, and the act is *kulomba Mulungu*, 'to worship *Mulungu*.'

The reigning chief is the priest of his deceased ancestors, and the head of a family is the priest of the departed of his family. When a man dies, he is buried in his own house, or in the forest. If he owned slaves, some of them are put to death or buried alive with him; his body rests on theirs in the grave. Valuables such as ivory and beads are ground to powder and put into the grave with him; food and drink are left upon the surface. If he is buried in his house, the house becomes a shrine or temple for his worship; otherwise it is broken down, but still considered sacred to him, and offerings are presented on the site. At a chief's death the village is abandoned—at all events, for the time. Prayer is made to the deceased before hunting, for rain, for crops, and on other occasions. He manifests himself in dreams or in animal-form. A great hunter takes the form of a lion or a leopard; witches appear as hyænas; other spirits often appear as serpents. The chief's principal wife or some other woman is set apart as prophetess or oracle of the spirit. He inspires her at night; she becomes frenzied, and her ravings are heard all over the village. Sometimes she announces the demand for a human sacrifice. If the divinity be resident on a mountain, the victim is bound and left to be eaten by wild beasts or to die of hunger. If, on the other hand, the divinity's abode be near a lake or river, the victim is tied to a stone and thrown into the water.

In almost every Yao village is found a shrine, consisting of a hut within a strong fence of cactus enclosing the grave of some chief. Such a shrine is regarded with awe. If the village be removed the old shrine is not forgotten; periodical visits are made to it. On the occasion of a long journey or a warlike expedition, or in case of drought, prayers are offered to the deceased, and a feast is held, his successor or some other near relative officiating as priest. Slaves and common people are regarded as of no account. Their graves are in the thick bush, and no offerings are made to them, for they can have no influence in the spirit-world.

The Mang'anja bury in groves or thickets, called *nkalango*, which often form landmarks; but important men may be buried in their own houses. Miss Werner describes one such grove visited by her. Pots of all sorts and sizes, each with a hole broken in the bottom, were scattered over the graves, and broken sifting-baskets, and handles of hoes or axes were laid upon them. Among the other graves was a body wrapped in a red mat slung from a pole supported between two trees—a case of what is called sub-aerial burial (Werner, 155).

Upwards of 800 miles to the north-north-west, in German territory, the Warundi hold beliefs in all essentials similar to those of the Yaos. The foundation of their religion is the worship of the dead. Father van der Burgt gives a list of thirty names of spirits distinct from the ordinary *manes*. Many of these turn out on examination to be collective appellations. One of them, Umugassa, little regarded by the Warundi, is, as the good Father points out, Mukasa, the god of Lake Victoria Nyanza venerated by the Baganda. Another, Rugaba, is said to be the name of the most ancient king of the Wahinda, the parent tribe of the Warundi. Others seem to be departmental spirits; but the natives are vague about the matter, and there is reason to think that some of them at least are local divinities on their way to a more general acceptance. Several are declared to be identical with Imana, who is spoken of in the same way as is Mulungu among the Wa-yao. The name Mulungu is found among the Warundi, but is not employed as that of an object of worship: Imana seems to take its place. Imana is vaguely said to make all, see all, and be able to do all; to give life, health, death, the fruits of the earth, and so forth. But there is no idea of creation, properly so called; at most Imana or one of the other spirits is an arranger, a transformer. The name *Imana* is, however, a collective name, like *Mulungu* (p. 365[a]). Another spirit, Kiranga, often identified with Imana, receives most of the practical worship. As the name *Imana* is applied to the sacred grove or ancestral kraal of the king,

and to the king himself as invested with a religious character, so the priests and hierophants of Kiranga are called by his name and he is believed to inspire them.

The great national rite is the adoration of the sacred spear of Kiranga. It is performed at the birth of twins, in case of grave sickness, at a marriage, or on some other important occasion. The chief priest, wearing a cap of tiger-cat skin with the tail hanging down his back, and with the sacred spear grasped in his hand, sits between his assistants. When the priest is a man, his assistants are women. But the priest may be a woman, in which case her assistants are men. Carrying gourd-rattles, the people gravely dance to a solemn chant. Then each, taking a little quantity of straw, bows before the spear, offering the straw with a short prayer. When all the participants have performed this rite, they quit the hut and go to the *ikitabo*, or place of assembly, found in every village. This consists of a bed of fine white grass strewn round a sycamore tree, bordered by a circle of branches or stalks of manioc. Hither sick persons are brought to sleep and recover; dying persons are carried hither, and over them is recited a formula ascribing their condition to the *manes*, or to witchcraft or other suspected cause. The *ikitabo* is in fact sacred to the *manes*. At the adoration of the spear the opportunity is often taken to consecrate a new *ikitabo* by the solemn planting of a young tree as its centre. After a certain time of silent rest at the *ikitabo* from the fatigues of the rite, the hut is re-entered, one of the priests takes a winnowing basket, and, turning it upside down, pours water over it. He then asperses the assembly by striking it with his hand, so that drops of water are scattered round. This is perhaps a rain-charm, for the upturned bottom of the basket is said to represent the vault of heaven, whence the priest causes the blessing to descend on the expectant people, who are meanwhile murmuring prayers. A pot of sacrificial beer is brought in, and each one drinks of it in turn. The assembly is then dismissed, and the chief priest is paid for his services with beads and a mat.

The Warundi also possess small huts or votive shrines dedicated specially to the *mizimu* (pl. of *umuzimu*, the Kirundi form of the Sechuana *morimo*), or *manes*. Such huts are also dedicated with the adoration of the spear. The men eat beside the hut ritual food by way of communion with the *manes*, and what is left is put into the hut. A little beer is put into a pot, and the pot placed in the hut. Every time afterwards that the adoration of the spear takes place, a little food and beer are deposited in the hut. This is also done on other occasions; and it is believed that the *manes* often visit these huts, if they do not reside there. Heaps of stones are also to be found by the roadside, to which every passer-by adds. These are said to be dedicated to the *mizimu*. They may perhaps now be connected in the people's minds with the *manes*; but this must be considered doubtful, unless the statement be limited to the *manes* of the Watwa, a subject pygmy tribe, who, though having many customs in common with the Warundi, bury in the bush, raise a heap of stones over the grave, and plant a hedge of thorns around it. Such heaps are found practically all over the world, and are usually raised to more or less vaguely conceived local spirits.

The Warundi bury not by the roadside, but in the village. A father's grave is dug in the midst of his courtyard, opposite the door of the principal hut. A heap of stones is made over the grave, and on it are flung the door of the hut and the basket used to remove the earth from the grave. Before the body is put into the grave, the wife of the deceased anoints the head with butter, praying to the departed to be propitious to those who are left behind, to herself and to the children. The tumulus in the courtyard becomes a shrine, at which rites similar to those just described are performed: prayers and sacrifices are offered, and the sick are laid upon it. When the king dies, his remains are wrapped in the skin of a black ox and desiccated at a fire. The body is then laid on a low scaffold in the middle of his courtyard. The people come from all parts to pay homage to the deceased, to adore his *manes*, and to pray for favours. The body remains until the ants have eaten away the feet of the scaffold. It is then buried on the spot. Many of the chiefs and of the royal widows are sacrificed to the *manes*. The burial ceremony is accompanied by that of the adoration of the sacred spear; a sycamore is planted over the grave; and the royal kraal then abandoned becomes a sacred grove, haunted, mysterious, which no one enters but the official guardian whose duty it is from time to time to bring food and beer for the spirits. These groves are numerous, though the country is in general bare of trees. Tree-worship proper, however, can hardly be said to exist.

Elsewhere Father van der Burgt tells us that, when the king or a member of the royal family dies, one of the worms generated in the process of putrefaction is said to be chosen and fed with milk. Hence we should infer that desiccation is not invariably practised. The worm is subsequently transformed into a lion, or in the case of one of the king's wives into a python, or in the case of a prince of the blood royal into a leopard. The spirit of the deceased is thought to reside in the animal. It is regarded as sacred; sacrifices are offered to it, and it must not be injured.

Sacrifices usually consist of beer and sorghum-meal. Goats, cocks, and oxen are, however, also offered. A special kind of pipe with two bowls is smoked on certain occasions by the father or mother of the family as chief priest of the *manes*. This ceremony is a sort of offering.

At the head of the pantheon of the Awemba stands Leza, the consideration of whose character and position is reserved for § 7. Inferior to him are the *milungu* (a word obviously the same as *mulungu* of the Wa-yao). The *milungu* reside in hills, mountains, and rivers, and their chief function is to send rain and to fertilize the crops, for which they are worshipped with prayers and sacrifice. Another being with a similar name is Mulenga, the 'god' of the rinderpest, who is said to come periodically to wreak vengeance on chiefs who have not worshipped him with offerings of cattle. He is reputed to be the father of all albino children. The spirits of dead ancestors are called *mipashi*. They appear to be distinct from the *milungu*, who, it is conjectured, are either the nature-spirits worshipped by the aborigines of the country before the Awemba conquest and subsequently taken over by the conquerors, or *mipashi* of very ancient chiefs of the Awemba exalted to something like deity. At any rate, they now bear the characteristics of nature-spirits, haunting prominent natural objects rather than the groves and burial-places which are the resort of the *mipashi*. The spirit of the head of each family is worshipped inside the hut, at the hearth. The *mipashi* of chiefs are worshipped at the thickets or groves which are the royal burial places. Occasionally they take the form of a python. More usually they communicate with the living by appearing in dreams, or by 'possession.' There is another class of spirits called *vibanda*, which are regarded as malicious. They appear to be spirits of deceased wizards and other criminals. They are said to be worshipped by the *waloshi* (wizards), of whom more hereafter (p. 363[b]).

Burial takes place in a thicket or grove near the village where the deceased lived. The corpse is rolled in a mat in the crouching position common in the lower culture. Flour is sprinkled over the body on the way to the grave. After the body has been lowered into the grave, the nearest relative is let down and cuts a hole in the mat, over the ear of the deceased, that 'he may hear when God [presumably Leza] calls him.' One of the relatives then makes a speech (probably to the deceased), promising that they will take care of his wife and children, and expressing the hope that he will become a good spirit in the next world (see § 7). Food, calico, and his pipe are buried with the corpse.

If he was an iron- or ivory-worker, his implements are broken over the tomb. When the late king died, two of his wives were instantly sacrificed. The body was then shut up in his principal hut until the funeral, which could not take place before his successor was appointed and had given permission for it. By that time the corpse was reduced to a skeleton. It was buried wrapped in a bull's hide, and all the servants, councillors, and wives were paraded before the tomb, smitten between the eyes with a club, and left for dead. Those who survived were not afterwards troubled, as they were declared to be unacceptable to the dead chief's spirit. When a chief of the Wabisa (one of the tribes subject to the Awemba) was buried, only his head wife was killed. Her body was split in two, the bones of the chief were put inside, and so buried. The successor offered libations and sacrifices to his predecessor's *mupashi*.

(*d*) *Western tribes.*—One of the chief elements in the religion of the Western tribes is the fear of the spirits of the dead; but seeing that mother-right still prevails, it has not become so highly organized a worship of ancestors as among the Central and South-eastern tribes. Dr. Nassau distinguishes five kinds or classes of spirits:—(1) *Inina* (Mpongwe; pl. *anina*) or *Ilina* (Benga; pl. *malina*), a human embodied soul. This appears to be divided by some native philosophers into two, three, or even four. Of these the first is the body-soul or animal-soul, which dies with the body; the second is the personal soul, which survives death; the third is the dream-soul, which leaves the body during sleep and whose adventures are the dreams; the fourth is 'vaguely spoken of by some as a component part of the human personality, by others as separate but closely associated from birth to death, and called the life-spirit.' Worship is paid to the last by its possessor, and it seems to be looked upon much in the light of a genius or guardian-angel.—(2) *Ibambo* (Mpongwe; pl. *abambo*), the spirits of ancestors, as distinguished from the spirits of strangers. The *ibambo* is regarded with superstitious dread, like a European ghost.—(3) *Ombwiri* (Mpongwe; pl. *awiri*), a localized spirit, but spoken of by Dr. Nassau with the *nkinda* and *olaga* mentioned below as all coming from the spirits of the dead. The *ombwiri* has its seat on a rock, tree, or mountain-top, or in a cavern or some such place. It resents trespass there, and passers-by must go reverently and with an offering, even if it be only a pebble or a leaf. It is also regarded as a tutelary spirit; and almost every man has his own *ombwiri*, for which he provides a small house or shrine. 'Ombwiri is also regarded as the author of everything in the world which is marvellous or mysterious. Any remarkable feature in the physical aspect of the country, any notable phenomenon in the heavens, or extraordinary event in the affairs of men [is] ascribed to Ombwiri.' He has no priest, 'his intercourse with men being direct and immediate.' Souls of great chiefs and other important persons become *awiri*. White men are themselves *awiri*. *Awiri* are in general well-disposed, especially to their human kindred. They are gratified by these with worship; and among the special boons they grant is the gift of children. They continue to dwell in the district of their own people even if the latter remove, when they remain on the old site and enter into relations with any new-comers who may occupy it. A curious belief about them is that they become small and inert during the cold dry season.—(4) *Nkinda* (pl. *sinkinda*), a class partly consisting of spirits of common people deceased, partly of uncertain origin. *Sinkinda* are usually evil-disposed. They enter the bodies of living persons, causing disease, or, if many of them enter, raving or delirium.—(5) *Mondi* (Benga; pl. *myondi*), a class resembling *sinkinda*, but more evil-disposed, powerful, and independent. They require to be exorcized. *Ilâgâ* (the spirits of deceased strangers), *sinkinda*, and *awiri* are invoked for their expulsion from a patient of whom they have taken possession. They are worshipped, especially at new moon, almost always in a deprecatory way (Nassau, *Fetichism in W. Africa*, 64 ff.).

The classes of spirits thus recognized by the Mpongwe and their neighbouring tribes are not always enumerated in the same way. But we have in Dr. Nassau's analysis a fair illustration of the beliefs of the Western Bantu with regard to the soul. They are intimately related to those of the true Negroes (*q.v.*). Excepting the first class, which is rather an earlier condition of some of the others than a separate class of spirits, they are by no means distinctly defined. As Dr. Nassau observes, their 'powers and functions shade into each other, or may be assumed by members of almost any class.' Individual spirits differ in kind and degree of power; none is omnipotent. All 'can be influenced and made subservient to human wishes by a variety of incantations'; in other words, they are objects of worship. However, therefore, we are to regard these class distinctions, it is clear that the essential fact is that the worship is to a large extent the worship of the dead. That it is not entirely so appears from the fact that spirits are very often localized in particularly prominent natural objects. Localities are spoken of as having good or bad (that is, favourable or malignant) spirits. Such objects and localities are found all over West Africa. It is very improbable that all the spirits haunting them are spirits of the dead. Rather they would seem to be vague nature-spirits, the product of awe, wonder, fear, and the sense of mystery. As we shall see in a subsequent section (§ 7), an idea of sacredness and mystery attaches to various objects of the external world; and though many of them are not objects of worship, still they are something apart, they contain a germ, or it may be a vestige, of nature-worship. One means by which the localization of spirits, especially the spirits of the dead, is effected is by images. Contrary to the general practice of the Bantu tribes previously discussed, images are in frequent use among the Western Bantu. Even more than images the skulls and other bones of distinguished men and ancestors are venerated. Among the Benga on Corisco Bay, the family fetish, called by the name of *yâkâ*, consists of a bundle of finger- and toe-joints, nail and hair clippings, eyes, and other portions of the anatomy of deceased members of the family. The spirits of these deceased members are associated in the native belief with their relics. Their efficiency is called into action by prayer and the medicine-man's incantations. Among the Bavili, the *nkulu*, or spirit of the deceased, is secured by picking up at the funeral a portion of the earth from the grave and mixing it with some 'medicine,' to be afterwards put by the *nganga* (priest, or medicine-man) into an antelope's horn or other receptacle. Having thus been secured, the spirit is ultimately transferred by means of a special ceremony to an abiding-place in the head of a relative. Those spirits which are not fortunate enough to obtain such a habitation continue to haunt unseen the abodes of their kindred, and to mourn with them in trouble, though without the power to help them. Like the *Ombwiri* mentioned above, they tend to become local spirits, for it is believed 'that, if every one of the Bavili were destroyed to-morrow, these *bakulu* would hover about in the grass around their towns for ever and ever' (Dennett, *Black Man's Mind*, 82).

In accordance with these beliefs, the dead are buried in the forest, or in low-lying lands and tangled thickets along the sea-beach or the river-bank away from the villages, or occasionally in the plantain-ground behind the houses. Some of the Coast tribes, however, bury such of their dead as they specially desire to honour under the floor of the hut. This is more common among certain of the inland tribes. A considerable part of the dead man's property is laid upon his grave—if a rich man, in a little hut built upon the grave. The body itself is often wrapped in a large amount of cloths and habiliments; food, drink, and tobacco are placed in the coffin. Slaves and wives are buried with a man of importance, that he may not enter the spirit-world unattended. The usual purification by bathing, to rid them of the contact of the spirit, is undergone immediately after the burial by those who have dug the grave or taken part in the ceremony. The next day the medicine-man sprinkles the survivors, their property, and the entrances to the village with a decoction of balondo-bark for the same purpose, while the people ejaculate prayers to the spirit for wealth or food. The mourners remove to another house and remain there during the period of mourning, lest the spirit return and eat with them, thus causing

sickness. For any important person, dances are held from time to time as a gratification to his spirit during the mourning. Improvised songs are sung in praise of the deceased. Wailing, rending of garments, and other signs of woe are practised in abundance. When anything untoward happens of which the cause is unknown, it is put down to the spirit, and prayers are made with offerings of food and drink at the grave, that the spirit may cease from disturbing the survivors, and bless them instead. The usual inquiry is held as to the cause of death, and the person accused is compelled to disprove the charge of witchcraft by the poison-ordeal, to which he generally succumbs.

Whether it is held definitely and dogmatically that spirits never die may be doubted. But they are unquestionably believed by many of the tribes to be capable of re-incarnation. Some of them, at all events, are born again, either in their own family or another, or even as beasts. This, it seems, may happen repeatedly.

The Barotse are firm believers in the transmigration of the soul after death into an animal. A chief re-appears as a hippopotamus; others come back as snakes, hyænas, crocodiles, and so forth (Decle, 74; Bertrand, *The Kingdom of the Barotsi*, London, 1899, 278). The deceased monarchs are the principal divinities. They are called *ditino*. The town where a king has lived has a sacred grove adjacent to it, surrounded by a palisade covered with mats; and in that grove is his tomb. It is kept scrupulously clean and tidy. At every new moon the women piously sweep both the tomb and its approaches, as well as the village itself. The custodian of the tomb is a kind of priest; he may enter the immediate presence of the divinity; he is an intermediary between the latter and those who come to pray. No others are allowed to enter the grove. Even the reigning king, when he comes to consult the ancestor who reposes there, must remain without; he must make known his request to the custodian, deposit his offering, and await the result of his petition. The *ditino* are consulted in case of sickness, drought, and public calamity of various kinds. In 1896, when the cattle-plague swept through the continent, the Barotse had recourse to their *ditino*; and it is curious that their cattle escaped the pestilence, thereby greatly adding to the prestige of the *ditino*. No one thinks of passing by the shrine of one of these divinities without leaving an offering, however trifling, to show respect and pray for a prosperous journey, or to render thanks on a safe return (Béguin, 120). An ordinary chief is usually buried, as among the Zulus, in his cattle-kraal. A father's grave, we are told, is respected and visited by his offspring on certain occasions (Bertrand, 278), probably for purposes of worship.

5. Idols.—Among the Central, South-eastern, and South-western tribes idols are unknown. The objects which have sometimes been described as idols are merely dolls. Most of these dolls are no more than playthings, though some are carried by women as amulets to produce children. A sort of amulet or fetish is made, as already mentioned (p. 356[a]), by the Baronga at a chief's death, of portions of his *exuviæ*. Among the Northern tribes idols are of the rarest occurrence. The sacred spear of the Warundi is hardly an idol. The Achewa of North-eastern Rhodesia are said to conjure the spirit of the dead into a doll or image composed of small pieces of wood enclosing a tiny box made of the handle of a gourd-cup; the whole is bound round with calico and bark-rope, and afterwards receives the prayers of the survivors. Elsewhere in the neighbourhood of Lake Tanganyika, the habitation of the disembodied soul is a carved human image. It is set up in or near a village, and prayers and sacrifices are addressed to it (*FL* xiv. 61). An image of a god is reported on apparently good authority to have existed at Mwaruli, tended by priestesses, who were called the wives of the god. This seems to require further investigation. Among the Western tribes the case is different. As has been already (§ 4) noted, images are used in the worship of the dead, as well as family fetishes comparable with those of the Baronga chiefs. On the West Coast the objects most usually associated in the mind of Europeans with the religion of the natives are called 'fetishes.' Properly speaking, the word fetish (from the Portuguese *feitiço*) means 'sorcery' or 'amulet.' Fetishes are of two kinds, protective and imprecatory. The protective class consists of wooden human (frequently ithyphallic) figures and objects of various other substances and shapes. Some of them are regarded as personal beings, or, at least, as possessed of an indwelling spirit; others are mere amulets. When one of the former is made, a man (or, according to the kind of fetish, a woman) who is a member of the family for which it is made is chosen as its custodian and spokesman. A ceremony of consecration is performed by the *nganga*, by which the spirit, or voice, is supposed to enter the spokesman's head. The spirits of such fetishes are said to be brought by one or other of the winds. The imprecatory fetishes consist entirely of wooden figures, generally human, into which nails are driven from time to time, and which are therefore known as nail-fetishes. Into every one of these fetishes the spirit of some known person is conjured when it is made. It is first decided whose spirit is to be secured. The *nganga* then goes with a party into the bush and calls out the name of the doomed man. Having done that, he proceeds to cut down a tree, from which it is believed that blood gushes forth. A fowl is killed, and its blood is mingled with that of the tree. The fetish is shaped from the tree, and the person named dies, certainly within ten days; his spirit, in fact, is thenceforth united with the fetish. The nail-fetish is used for two purposes. Oaths are sworn by it: the person swearing calls upon it to kill him if he do or have done such and such a thing, and he thereupon drives a nail into it. At a 'big palaver' (dispute or lawsuit) the fetish is brought out, and each of the parties strikes it, thus imprecating death upon himself if he do not speak the truth. The other purpose for which nail-fetishes are used is to call down evil upon another person. The client goes to the fetish, makes his demand, and drives a nail into it. The palaver is then settled, so far as he is concerned. 'The *kulu* (spirit) of the man whose life was sacrificed upon the cutting of the tree sees to the rest' (Dennett, *Black Man's Mind*, 85 ff.). Numerous examples of the nail-fetish are to be seen in European museums, of which the finest, perhaps, is one called 'Mavungu,' left by Miss Kingsley to the Pitt-Rivers Museum at Oxford. The nail-fetishes, however, because used for purely imprecatory purposes, are regarded quite differently from all other objects of prayer or supernatural beings. They are connected in the minds of the people with hostile magic rather than with religion. Their priests form a class apart.

6. Priests, medicine-men, diviners, and sorcerers.—(*a*) *Central and South-eastern tribes.*—Among the Central and South-eastern tribes sacrifice is usually offered by the living head of the family or tribe to his ancestors. But there is an order of men some of whom among certain tribes are charged with this duty. These men, who are now suppressed as far as possible by the law of the white man, are commonly called witch-doctors or medicine-men. Among the Bavenda they are divided by a recent observer into nine

distinct classes, viz. (1) rain-makers; (2) witch-finders; (3) medicine-doctors; (4) a class whose duty it is to consecrate weapons and make the warriors invulnerable; (5) women who, armed with a calabash-rattle, foretell fortune or misfortune; (6) another kind of medical practitioners who cure illness by sucking the evil out of the patient's body; (7) a third kind of medical practitioners whose duty it is to cure insanity; (8) a further kind who undertake the cure of the sick by dancing during the night; (9) family or clan priests, called *chefi* (sing.). The head of each clan or family chooses his *chefi*, whose duty it is to sacrifice once a year at the beginning of harvest; who speaks with the divine ancestors, and brings their answers to mankind. The *chefi* of the Bavenda king is a woman, his eldest sister or nearest female relative. In all other cases it is a man. The generic name of all these classes is *dzi-ñanga* (sing. *ñanga*) (*JAI* xxxv. 379). The word *ñanga* is common to many of the Bantu tongues, and means in strictness a man who is skilled in any particular matter (Callaway, *op. cit.* 131). The Zulus have a class of *ñanga* who are diviners, another class of rain-makers, whose business it is to make rain and drive away lightning and hail, a third who practise medical magic, and so forth. To become a diviner a man must be entered by the *amatongo* (*manes*). They are said to 'walk in his body.' He complains of pain, conceives a distaste for food, and habitually avoids certain kinds. He becomes 'a house of dreams.' After some time he manifests possession by repeated yawning and sneezing. Then he has convulsions. He sleeps merely by snatches; he begins to sing. Sacrifices are offered for him. Finally, he takes an emetic which 'makes the Itongo white,' and after being subjected to various tests he is recognized as a diviner. Candidates for the class of rain-makers, on the other hand, are chosen by other *iziñanga*, who put them through a course of fasting (Callaway, *op. cit.* 259 ff., 388). Further to the south the Xosa tribes enumerate five kinds of doctors: (1) witch-doctors, including diviners and prophets; (2) surgeons or bone-setters; (3) herb-doctors; (4) rain-doctors; and (5) war-doctors. Except the last, who are always men, they may be of either sex. The word used for 'doctor' among these tribes is *iggira*, perhaps of Hottentot derivation (Hewat, *Bantu Folklore*, 1905, p. 27 ff.).

Sickness is caused by the *manes*, or by fabulous monsters, or by the magical practices of some evil-disposed person, or else it is 'only sickness and nothing more.' The first thing when attacked with disease is to ascertain to which of these kinds of sickness it belongs. This is done by divination; and the diviner often knows or can divine the remedy. In cases of sickness declared to be due to witchcraft, the next step is to divine, or 'smell out,' the sorcerer, and to counteract his magic. 'The one subject that all Kafirs are agreed upon,' we are told (and the statement is true of the whole Bantu race, and indeed of all peoples in their stage of civilization), 'is the reality of magic. No Kafir in his senses dreams of doubting the tremendous power of magic' (Kidd, *The Essential Kafir*, 1904, p. 139). Magic is inextricably mixed up with religion. It is applied to everything. In worship, in war, at birth, at marriage, it is part of all ceremonies. It protects the cattle, the cultivated grain and roots, the lives and health of the people. It is performed at puberty, in sickness, on a journey. By magic, rain is made to bring forth the fruits of the earth, or thunderstorms, hail, and blighting droughts are averted. All these are beneficent applications of magic, approved by public opinion. But there is another aspect of magic. The power that can work good can work evil. Some of the ceremonies on the occasion of a war are intended to terrify or to injure the enemy. In like manner an evil-disposed individual can cause misfortune, sickness, or death to any one of whom he may be envious, or against whom he may have a grudge or an injury to avenge. It is the business of the *ñanga* on any such occasion to discover the witch. On every death (at any rate, on the death of every wealthy or important person) an inquest is held to ascertain the cause, and, if determined to be witchcraft, then to divine the criminal. A favourite method of divining is by means of small bones, stones, and shells, which are used as dice. According as they fall when thrown by the diviner, they indicate the answer to the questions he puts. The diviner is generally a shrewd, experienced man, who knows how to attune his discoveries to the expectations and the prejudices of his clients. The penalty of witchcraft exercised against individuals is death and confiscation to the chief of all the offender's goods. The practice of 'smelling out,' or discovering, witches is therefore profitable to the ruler, and is, besides, a means of keeping his subjects in continual fear and subjection. Its result has very often been so disastrous, and has spread so much misery, devastation, and death among the tribes, that it has been prohibited in all the British colonies.

(*b*) *South-western tribes.*—The Herero medicine-men are divided into three classes, viz. (1) witch-doctors proper (*onganga*, pl. *ozonganga*), who combine the professions of physician and poisoner; (2) soothsayers (*ombuhe*, pl. *ozombuhe*), who foretell the outcome of political action by the inspection of the entrails of slaughtered cattle; (3) diviners (*ombetere*, pl. *ozombetere*). These last are called in to ascertain the person who has caused misfortune, disease, or evil of any kind. The *modus operandi* is to take three iron beads or small round stones in the left hand, and slowly move the hand up and down. From the way in which the beads arrange themselves, on the lines of the hand and the fingers, as this is done, the diviner arrives at his conclusions. The medicine-man's art descends from father to son, or if there be no son, to the practitioner's younger brothers, to whom it is secretly taught. Ordeals are not in use. There is no order of priests strictly so called. The father of a household is the priest of his ancestors; he offers the sacrifices and prayers (see § 4).

(*c*) *Northern tribes.*—It has already been mentioned (§ 4 (*c*)) that the priests of the Banyoro in the Uganda Protectorate are called, equally with the ancestral spirits whose worship they conduct, *bachwezi*. They combine the functions of priest, sorcerer, and witch-doctor, and each clan seems to rejoice in one such accredited official. But there are, besides these, private practitioners in black or white magic. The Bahima aristocracy have a profound belief in witchcraft. The country of Ankole used to be continually agitated by the 'smelling-out' of witches and wizards, and their execution. The Hima medicine-men collect a certain grass, of which they make hay. This hay is put into a jar of mead, banana-wine, or sorghum-beer, and left for twenty-four hours in one of the small huts or shrines already (§ 4) described. The liquor is afterwards removed, and drunk as a medicine. The medicine-men also make little oval-shaped or cubical pieces of wood, over which they mutter incantations, and then sell them for amulets, especially to persons who are troubled with sickness or bad dreams (Johnston, *Uganda*, ii. 588, 632).

Among the Baganda the priests of gods and ancestral spirits were termed *bamandwa*. They wore aprons consisting of little white goat-skins, and were adorned with amulets. They were also diviners. If a man was travelling, and wished for news of his parents and his wife, he went to the *mandwa*, who, furnished with his nine cowry shells sewn on a strip of leather, would with this strip make the sign of the cross and fling it before him, and then, as if inspired, would reply to the questions. The cross was employed as a symbol by the priests before the introduction of Christianity. Besides the priests there were three classes of 'doctors' in Uganda, viz. (1) *musawo*, a physician, skilled in herbs and the treatment of ulcers, wounds, and skin-diseases; (2) *mulogo*, a sorcerer; (3) *mwabutwa*, a poisoner. The *mulogo* is reputed to travel about at night stark naked, a disembodied spirit at all events in some respects, and in his own belief as well as in that of others. If in this condition he dance at midnight before a banana plantation, the trees will wither and the fruit shrivel. He is said to exercise mesmeric influence over weak-minded people, 'He is used as a detective of criminals' (presumably a 'smeller-out'), and for casting love-charms or secretly injuring an

enemy. He is often confounded with the priest, and carries on the worship of spirits (Johnston, *op. cit.* ii. 678, 676).

The Wa-yao and Mang'anja seem to possess no priests as a special order in whom are vested the right and duty of approaching the higher powers. As already mentioned (§ 4), the head of every family offers the prayers and sacrifices to his ancestors, and a woman is often set apart as prophetess or diviner. The *msinganga* practises as a physician, using simples and charms, and performing rough surgical operations. The diviner or sorcerer (*mchisango*) determines the cause of disease, 'smells-out' the witch who has produced sickness or misfortune, and generally advises (for a substantial consideration) any clients who may seek his aid. This he does ostensibly by inspecting the contents of a gourd filled with sticks, bones, claws, pieces of pottery, and so forth, much in the way previously described, and by shaking a gourd-rattle filled with pebbles. After a death and on other occasions an inquiry is held. The diviner is usually a woman. On the day appointed for the ceremony she proceeds, accompanied by a strong guard of armed men, to the place, and goes through a dance, wherein she is gradually wrought up into a more or less delirious condition, and is then supposed to be under the influence of the *masoka*. Witches are believed not only to have supernatural knowledge, but also to be addicted to cannibalism. They kill, as Hamlet's father was killed, by instilling a powerful poison into the ear as the victim sleeps. When he is dead, they are believed to hold midnight orgies and eat the body. The person accused of witchcraft is required to undergo the poison-ordeal, which is rarely refused, everybody, of course, being confident of innocence. Sometimes it is administered by proxy, the recipient being a dog or a fowl, which is tied to the accused. In case of refusal to undergo the test, the alleged witch used to be burnt. One who dies under the poison-ordeal is denied the ordinary rites of sepulture (Macdonald, chs. ii. iii. iv. v. xv.). Rain-making is practised, but there is no professional class of rain-makers. There is some evidence that the ceremonial clearing-out of wells by women, as among the Baronga, is a rain-charm. Mpambe is supplicated for rain. In an account given by a missionary of one such ceremony, which may probably be taken as representative, the leading part was taken by the chief's sister, who occupies an important position in the tribe. After prayer and dancing, 'a large jar of water was brought and placed before the chief; first Mbudzi (his sister) washed her hands, arms, and face; then water was poured over her by another woman; then all the women rushed forward with calabashes in their hands, and, dipping them into the jar, threw the water into the air, with loud cries and wild gesticulations.' Amulets and 'medicine' of different kinds are used for various purposes, offensive and defensive—for protection against thieves, against crocodiles and other fierce animals, to assist hunters, warriors, thieves, and so forth; and objects are buried to bewitch, or at least they are discovered by diviners in the process of 'smelling-out.' These practices, however, offer no striking peculiarity (Werner, 56, 76, 80).

Among the Warundi the father or mother of the family acts as priest of the *manes*. Other objects of worship are served by special priests. The chief of these is Kiranga. As we have seen (p. 359[a]), his priest may be either a man or a woman, who is called by the same name as the divinity, and is held to be inspired by him. A *kiranga* is made in one or other of three ways: (1) by inheritance; (2) by being struck by lightning; or (3) by inspiration or possession during the adoration of the sacred spear. Divination is practised by professors of the art similar to those among other Bantu tribes. The belief in witchcraft presents no special features. When sickness occurs, a medicine-man is called in to counteract the sorcery, though various vegetable remedies are known, as well as bleeding and cautery. Ordeals (red-hot iron or boiling water) are resorted to in order to discover the witch. The dead bodies of such as are convicted of sorcery are left unburied.

The Awemba king was the chief priest of the *milungu* and of his ancestors, though the management of the ritual was generally left to the *basing'anga* (pl. of *sing'anga*), who formed the regular priesthood. 'Their main function was to interpret the will of the *milungu* and the *mipashi* (p. 359[b]), and to combat the evil enchantments of the sorcerers. They named children at birth, superintended the sacrifices, tended the sick, and charmed away diseases by divination and their amulets' (*JAI* xxxvi. 155). Their office was not hereditary. Most of the old people claimed to be *basing'anga*, by virtue of their position as the oldest members of the family. There is a class of women who assert that they are possessed by some dead chief. They hold what may be described as *séances* at times, and are regarded with great veneration. It need hardly be said that sorcery is an article of belief. The *waloshi* (wizards or sorcerers) are reputed to compass, by means of black arts and powerful 'medicines,' the death of anybody who comes under their ban. They and they alone worship the *vibanda* (p. 359[b]), who impart to them instructions, 'medicines,' and power to change into predatory wild beasts. Wizards are sometimes possessed by *vibanda* (*JAI*, *loc. cit.*).

(*d*) *Western tribes.* — Turning to the Western tribes, we have already mentioned the *nganga* in treating of the nail-fetishes (p. 361[b]). The other *zinganga* (pl. of *nganga*)—at any rate, among the Bavili—form a hierarchy, at the head of which is the king. Some of them are attached to special divinities or sacred groves. As might be expected, many of them officiate not merely as priests, but also as physicians; for disease and misfortunes of all sorts are held here, as elsewhere, to be due to more than what we call natural causes. The *nganga*, therefore, treats the sick, and, like his brethren among other branches of the Bantu race, provides preventive 'medicines' intended to avert danger from witchcraft, weapons, wild beasts, and other possible fatalities. He also divines the origin and remedy for sickness, the wizard who has caused it, and many other matters connected with the hopes and fears of his clients. On the death of the king, the *nganga mpuku*, or chief diviner, decides by the aid of a magical mirror, in case of doubt, which of the eligible children of the royal princesses is to be the new king. Certain of the *zinganga* officiate in the administration of ordeals. In so far as these ordeals are distinguishable from other methods of divination, they may be described as the taking of powdered bark of the Ukasa (tree) or the Bundu (herb), or passing of hot knives across the palms and calves of the accused. Some of the Upper Congo tribes are said to be happy enough to be destitute of any ordeal for witchcraft, and indeed of any *nganga*.

7. Supreme Being. Nature-spirits.—(*a*) *Central and S.E. tribes.*—The most obscure and difficult question connected with the religion of the Bantu is whether they have any belief in a Supreme God, a Creator, an overruling Providence. Confining our attention for the moment to the Central and South-eastern tribes, we may say without fear of contradiction that the notion of creation is foreign to their minds. As they dwelt on a great continent, the question of the origin of heaven and earth never entered their thoughts. Concerning the origin of men and of animals, they were not wholly devoid

of speculation. The Zulus speak of Unkulunkulu as the first of men, the man who in some way brought men into existence. But they are by no means agreed as to how he did so. He himself is said to have sprung out of a bed of reeds. It is not clear, however, that this expression is to be taken literally. Some were of opinion that he begat men, or that he made them out of a reed. Others thought he had dug them up or split them out of a stone. The word *Unkulunkulu* simply means the most remote ancestor known to a tribe or a clan. Every clan has its own *Unkulunkulu*, and the word is ordinarily used as equivalent indifferently to our 'great-great-grandfather' and 'great-great-grandmother' (compare the *nkulu* of the Bavili, pp. 360[b], 361[b]). *Uthlanga* is another name frequently cited as that of a Zulu creator. The word means a reed, and is metaphorically used for a source of being. Thus a father is described as the *Uthlanga* of his children, from which they stooled or broke off as the offsets from a reed. Unkulunkulu, in the sense of First Man, is sometimes said to have begotten men by Uthlanga; in such a case Uthlanga is regarded as his wife. *Umdabuko* (from *ukudabuka*, 'to be broken off') is a third expression, sometimes used in a personal sense as 'the lord or chief who gives life,' and identified with Uthlanga.

Nor have the Zulus any belief in a personal, supreme, overruling Providence. There are traditions of a lord, or chief, in heaven. Bishop Callaway, however, after a most patient inquiry, came to the conclusion that in the native mind there is hardly any notion of Deity, if any at all, wrapt up in their sayings about a heavenly chief. 'When [this expression] is applied to God, it is simply the result of [Christian] teaching. Among themselves he is not regarded as the Creator, nor as the Preserver of Men, but as a power' (Callaway, *op. cit.* 124). The result of M. Junod's inquiries among the allied tribe of the Baronga is to the same effect. The problem of creation does not trouble the Ronga mind. But the word *Tilo*, 'Heaven,' ordinarily applied to the sky, embraces a much vaguer, vaster, but quite embryonic notion. As such it means a place, and more than a place, a power which manifests itself in thunder or in portents such as twins. It is called 'Lord,' but is regarded for the most part as essentially impersonal.

(*b*) *Central tribes.*—The religious beliefs of the inland tribes have never been the subject of inquiry so systematic and minute as that to which Callaway subjected the beliefs of the Zulus. But the evidence, so far as it goes, concerning the Basuto and the Bechuana is to the same effect. There is a word common to these and other tribes of the interior which has been adopted by the missionaries to translate 'God.' It was adopted many years ago before the native ideas were fully understood; and it is now too late to displace it, although, as it turns out, it was an unfortunate choice. That word is, in its Sechuana form, *Morimo*. It means a ghost or disembodied spirit, and it has a strong flavour of malevolence.

'Morimo,' says Moffat, 'to those who knew anything about it, had been represented as a malevolent *selo* or thing.' Arbousset declares: 'All the blacks whom I have known are atheists, but it would not be difficult to find amongst them some theists.' This seems contradictory. What he probably means is that individuals might be found, though he had not met them, who had a vague speculative notion of a Supreme Being. He goes on: 'Their atheism, however, does not prevent their being extremely superstitious, or from rendering a kind of worship to their ancestors, whom they call *Barimo*, or in the singular *Morimo*' (Arbousset, 39). *Barimo* beyond doubt means the ancestral *manes*. A phrase for dying is 'going to Barimo.' A lunatic, or one delirious or talking foolishly, is called *Barimo*, that is, one possessed by one or more of the *manes*. There is another plural of *Morimo*, namely, *Merimo*, which is often translated 'gods,' and which is the word used in the Sesuto phrase above cited (§ 4) for cattle. In the tongue of the Bavenda the word *Modzimo*, which is a dialectic form of *Morimo*, means 'nothing else but the totality of the good souls of their ancestors, who have not been *valoi* [maleficent sorcerers], with the founder of their tribe as head, and the ruling chief as living representative. Besides this *Modzimo*, of which the plural is *Vadzimo* [corresponding to *Barimo*], meaning the single souls of their ancestors, they also have *Medzimo* [corresponding to *Merimo*], another plural of *Modzimo*, which denotes the many objects on earth which have been made the visible representative of the ancestors of each clan and family.' Among these *Medzimo* are enumerated 'cattle, goats, sheep, or weapons and tools of old dead ancestors.' 'Even shrubs, flowers, or rushes,' we are told, 'may be created *Medzimo*' (*JAI* xxxv. 378 f.).

Besides the *Modzimo*, the Bavenda are said to have a dim idea of a Creator, whom they call Kosana, and who no longer interferes with the affairs of the world. He has left the business in the hands of another divinity named Ralowimba, who is the rewarder of good and the punisher of evil. Ralowimba is much feared, and in everyday life the people pray to him, though the two annual sacrifices at ploughing and at harvest, and sacrifices ordered by the witch-doctors on account of illness or calamities, are offered exclusively to Modzimo. There is a third deity named Thovela, the protector of pregnant women and unborn children, and of the stranger and visitor travelling through the country. The Bavenda have a tradition that they are immigrants into the Transvaal from another country. Their language points to their affinity with the peoples of the Great Lakes, though it has been thought that they came from the Lower Congo (*ib.* 378, 365). The belief in the gods just mentioned is quite different from that of the more southerly tribes, and it seems to need more extended inquiry. All attributions, for example, to savage and barbarous peoples of belief in a god who dispenses rewards and punishments after death are to be received with great caution. Such statements are generally foreign to their religious ideas, and on close examination are discovered to be founded on a misapprehension.

(*c*) *South-western tribes.*—The Herero word used by the missionaries to translate 'God' is *Mukuru*—a choice as unfortunate as the others we have noted, since it is the same word as that used for a deceased father or person of importance who has attained *quasi*-divine honours. When the Hereros entered what is now German territory, they found in possession of the country, besides the Bushmen, a people called the Ovambo, or Hill Damaras. Concerning the Ovambo little is known. They are, unlike the Hereros, a peaceful and retiring people, and are probably earlier Bantu immigrants considerably mingled with Hottentot blood. In common with the Ovambo, the Hereros have a word, *Kalunga* or *Karunga*, which seems to be etymologically related to the Zulu word *Unkulunkulu*. Kalunga is said to be the name among the Ovambo of a mythical being who gives fertility to the fields, and kills only very bad people. He has, according to Ovambo tradition, a wife named Musisi, and two children, a girl and a boy. He lives in the ground near the chief village. In one tale it is related how he came up from the earth and 'created' from *ouna* ('little things') which he set up three couples, the ancestors of the Ovambo, the Bushmen, and the Hereros. His residence in the ground, and the fact that the word *musisi* is the singular of *aasisi*, the spirits of the dead, point to his being a deified ancestor. This identification is the more probable if it be the fact, as reported by one of the missionaries, that the Hereros hold Mukuru, Musisi, and Karunga to be one and the same. Yet, according to another missionary, Karunga is to be distinguished from the *ovakuru*, and never was a human being. On the whole, the same vagueness and uncertainty on these subjects as in the case of the Central and South-eastern tribes is characteristic of the Ovambo and Hereros. Their practical interest is centred in

the *ovakuru*, to whom alone they offer sacrifice, though the Hereros sometimes cry to Karunga for help in danger, and on the occasion of a violent thunderstorm they pray to Karunga and Musisi to go away and flash into the animals of the field and into the trees. According to their legend of origin, the human race is to be traced to a tree called Omumborombonga, near Ondonga, out of which a man and woman came in the beginning (*S. Afr. F. L. Journ.* i. 67, ii. 88 ff.).

(*d*) *Northern tribes.*—Dr. Bleek, whose etymology has been generally accepted, connects with Kalunga and Unkulunkulu a word we have already found in use among several of the Northern tribes, and translated by the missionaries as 'God.' That word, *Mulungu*, is applied by the Wa-yao 'to the human *lisoka* (p. 358[a]) when regarded as an object of worship or as an inhabitant of the spirit-world. But it is also used to denote that spirit-world in general or, more properly speaking, the aggregate of the spirits of all the dead. The plural form of the word is rarely heard, unless when the allusion is made to the souls in their individualities. . . . The untaught Yao refuses to assign to it any idea of being or personality. It is to him more a quality or faculty of the human nature whose signification he has extended so as to embrace the whole spirit-world. . . . Yet the Yao approaches closely to the idea of personality and a personal being when he speaks of what *Mulungu* has done and is doing. It is *Mulungu* who made the world and man and animals. . . . *Mulungu* is also regarded as the agent in anything mysterious. "It's *Mulungu*" is the Yao exclamation on being shown anything that is beyond the range of his understanding.' When it thunders Mulungu is speaking; and the rainbow is Mulungu's bow. Mulungu is sometimes represented as assigning to the spirits their various places in the spirit-world. He arranges them in rows or tiers. If, however, we consider the various applications of the name and the usages connected with it, and compare it with the Zulu *Unkulunkulu* and the Ronga *Tilo*, we are compelled to the inference that there is a very small element of personality in it. It is vague, and essentially impersonal. When a missionary endeavoured by means of it to convey to a Yao the idea of a personal God, such as Christians entertain, the heathen beginning to grasp the idea spoke of *Che Mulungu* (Mr. God!), as if without the personal prefix it meant something quite different to him (*JAI* xxxii. 94; Macdonald, i. 67).

The Mang'anja are acquainted with the word *Mulungu*, which in their dialect is *Morungo*. But the word they generally use for the same conception is *Mpambe*. Mpambe is invoked for rain. In some parts the word is reported as meaning thunder, and sometimes lightning. Among the tribes of the coast *Muungu* or *Mulungu* seems to mean 'Heaven,' and thus to correspond with the Ronga *Tilo* (Krapf, *Suahili Dict.*, Lond. 1882, *s.v.*). Molonka, which appears to be the same word, is the name given by the Batonga on the banks of the Zambesi to that river (Thomas, *Eleven Years in Central S. Africa*, 377).

The use of the word *Mulungu* by the Warundi and Awemba has been explained in § 4. The latter people acknowledge but do not worship a vague being, in some sense supreme, called Leza. He is said to be the judge of the dead, dividing them into *vibanda*, or evil spirits, and *mipashi*, or good spirits. This recalls the Yao representation of Mulungu as arranging the dead in tiers. Probably neither statement is indigenous to the Bantu mind. The name of Leza is invoked only in blessing or in cursing; but the ordeal which a man accused of witchcraft or other serious crime is required to undergo is said to be regarded as an appeal to Leza. In any case he is not anthropomorphic, and receives no direct worship; he is little if anything more than a name.

Further still to the north the Bahima have no clear idea of an overruling God. It is said indeed that they have a name for God; but such name is apparently associated only with the sky, the rain, and the thunderstorm. Whether the Baganda recognized any Supreme Being is at least doubtful.

It appears from the foregoing account of the beliefs of the Northern tribes that, while among none of them, so far as we know, is there, any more than among the Central and Southern tribes, a definite idea of a Supreme Being, there is a tendency towards polytheism. Many, indeed, of the tribes recognize and have entered into relations of worship with beings so much above mankind, either living in the flesh or in the state of disembodied spirits, that they may fairly be described as gods (see § 4). Whether these gods have been developed, as Sir Harry Johnston and others think, from ancestral *manes*, or owe their origin to local spirits, or to vaster, more vaguely conceived nature-spirits, is a very difficult question.

(*e*) *Western tribes.*—Nature-spirits at all events seem to play their part in the religion of the Western tribes. We have seen (§ 4) that localized spirits are commonly known.

According to the belief of the Bavili (if we may trust Mr. Dennett's exposition in his book, *At the Back of the Black Man's Mind*), the world as conceived by them is filled with *Bakici Baci* (pl. of *Nkici Ci*). This phrase he translates as 'speaking powers on earth.' To these Bakici Baci a number of sacred groves, which are known by their various names, are dedicated. Various kinds of trees and animals are also held sacred, or Bakici Baci. All the provinces of the kingdom and the rivers are in addition reckoned sacred, and the representatives of all the different families owning sacred ground within the kingdom are Bakici Baci. One of the titles of the king is Nkici Ci; and he is said to be regarded as the product and final effect of the Bakici Baci. Certain of the Bakici Baci, such as Xikamaci, the north wind, and others, besides the king, are regarded as living beings and are propitiated. But, speaking generally, they are not objects of worship—still less actual gods. They may be vaguely recognized as 'powers'; they are rather, it would seem, sacred categories, in which practically everything (including many things that to us are mere abstractions) is included.

They are said to be the personal attributes or manifestations of Nzambi. Over the concept of Nzambi, however, no little obscurity hangs. The name is found under various forms among all the Western Bantu, and perhaps even among the true Negroes to the north of the Gulf of Guinea. Its meaning is quite unknown. A wider knowledge of Bantu philology is required to interpret it than is possessed by anybody who has hitherto guessed at it. Among the South-western tribe of the Hereros, Ndyambi is said to be identical with Karunga, already discussed. By the Barotse, Nyambe is sometimes identified with the sun, sometimes regarded more vaguely as a kind of Supreme Being, and the progenitor by a female being of the animals and man. Concerning the Mpongwe our information is contradictory. Dr. Nassau represents the people as speaking of Njambi as their father, and attributing to him the making of things in general. They suppose him to exist from an indefinite time past, and to have made some spirits, but not necessarily all. Those whom he has made live with him in Njambi's Town. Dr. Nassau, however, quotes an earlier missionary who refers to Onyambe as hateful and wicked, and as only one of two spirits associated under 'God' in

the government of the world, but apparently with very little influence. The Fans, near neighbours of the Mpongwe, are reported to believe in a number of gods at the head of whom stands Nzame, or Anyambi, the Father who made or begat all things. But the accounts given by the missionaries vary so much that it is impossible, in the present state of our information, to be sure of the exact status of the 'god' in question. In any case he has long ago deserted the world, and is indifferent to human wants and sufferings. On the Upper Congo, Njambe figures as only one of four seemingly equal beings. He is the author of death, sickness, and evils of all kinds; Libanza, another of the four, being called 'Creator.' On the Lower Congo two beings are spoken of: Nzambi and Nzambi Mpungu. The latter is generally represented as superior to the former, who is sometimes called his daughter, sometimes his wife, and sometimes is a male undergod. Nzambi, as a female being, is the subject of many legends. She is always 'spoken of as the "mother," generally of a beautiful daughter, or as a great princess calling all the animals about her to some great meeting, or palaver; or as a poor woman carrying a thirsty or hungry infant on her back, begging for food, who then reveals herself and punishes those who refused her drink or food by drowning them, or by rewarding with great and rich presents those who have given her child drink. Animals and people refer their palavers to her as judge' (Dennett, *Fjort*, 2). Mr. Dennett has, however, in a more recent work given a different version of Nzambi. According to this, Nzambi is the abstract idea, the cause. 'From the abstract Nzambi proceed Nzambi Mpungu, Nzambi Ci, and Kici.' Nzambi Mpungu is 'God Almighty, the father God who dwells in the heavens and is the guardian of the fire'; Nzambi Ci is 'God the essence, the God on earth, the great princess, the mother of all the animals, the one who promises her daughter to the animal who shall bring her the fire from heaven,' the Nzambi, in short, of his earlier account; Kici is 'the mysterious inherent quality in things that causes the Bavili to fear and respect.' Mr. Dennett proceeds to say that 'it is not unnatural that, one of the personalities of Zambi being Kici, his powers (or perhaps attributes) are called Bakici Baci, the speaking powers on earth, and that their product or final effect is Nkici'ci (Kici on earth), one of the tribes of the king Maluango' (*Black Man's Mind*, 105, 166). Elsewhere, however, he makes Nyambi (to which he attaches the same meaning as to Nzambi) the nephew of Bunzi, the South Wind, and one of the Bakici Baci, while admitting that 'some people call God Nyambi instead of Nzambi' (*ib.* 116). This agrees more nearly with Bastian's account. He represents Nzambi as a family fetish, originally descended from Bunzi, the Father and Mother of All, a local fetish or divinity of Moanda. It is, however, a fetish of high rank, since special powers for the consecration of other fetishes are assigned to it. It seems, in fact, to be the royal fetish; for pork is the *orunda* of all its worshippers, and pork, as we know, is forbidden to the royal family. When a woman becomes pregnant she is required to appear before Nzambi, in order that the *nganga* inspired by the fetish may formally declare her condition, paint her, and put a girdle round her as an amulet for easy delivery. Not until then is she permitted to mention the fact of her pregnancy (Bastian, *Loango-Küste*, i. 175, 173).

On the whole, we may probably conclude that the Western tribes have developed the belief in 'a relatively Supreme Being,' to use Mr. Andrew Lang's phrase, to a point at which, though still vague, it does embrace the idea of the author of the present condition of the world as they know it, and that of a far-away, somnolent and indifferent overlord, whose government is exercised by inferior and practically independent chiefs, comparable with the subordinate chiefs of a Bantu realm. These, the real powers with which mankind comes into contact, are not arranged in any system intelligible to us from our present information. They comprise all the personal beings imagined to infest the native's environment, whether unseen or attached to a 'fetish,' or to superintend the affairs of the world, including a vast variety of more or less vaguely conceived nature-spirits. Unless secured to a protective fetish, or unless ancestral spirits, their activity is dreaded as at all events primarily hostile. Even their favour is of a very precarious description, easily lost by the neglect, voluntary or involuntary, of offerings or of some *orunda*.

Conclusion.—Bantu religion thus divides into two great branches. The religion of the roving and warlike tribes of the centre and south of the continent is pure, or nearly pure, worship of ancestors. That of the more settled and agricultural tribes of the Great Lakes and the west of the continent is a mingled worship of nature-spirits and ancestors. Partly corresponding with this division is the distribution of the names Unkulunkulu and Nzambi. Neither of these names has been reported from the north-eastern region, which was the centre of distribution of the Bantu peoples. The one has been developed on the eastern side of the continent among the ancestor-worshipping tribes; the other on the western side among the tribes acknowledging nature-spirits and paying worship to them as well as to the *manes*. But, whereas the former do not, so far as we can discover, attach a definite personal concept to Unkulunkulu or its etymological variants, Nzambi, on the other hand, among the Western tribes, does seem to convey a personal meaning, and is the subject of many mythological stories. It has been suggested with probability that these two names, with the two different types of mental and religious evolution which they mark, indicate separate streams of emigration by distinct branches of the Bantu race. But whether the distinction had arisen before these two branches parted company, or how far the evolution was helped or hindered by the climate, the nature of the country, the habits consequently acquired by the people, and the influence of other races, has yet to be determined.

Literature.—Our information with regard to nearly all the Bantu peoples is of a fragmentary description. Those best known to us are the tribes inhabiting the southern part of the central plateau of South Africa and the coast-fringe from Delagoa Bay southwards. In the following list no attempt is made to enumerate more than the principal works to which we are indebted for our knowledge of the customs and religion of the Bantu. Incidental contributions of value are often to be found in other writings by missionaries, travellers, and administrators.

I. *South-eastern tribes*: John Maclean, *A Compendium of Kafir Laws and Customs*, Cape Town, 1866 [intended for use in the courts of British Kaffraria]; H. Callaway, *Nursery Tales, Traditions and Histories of the Zulus*, London, 1868, also *Religious System of the Amazulu*, London, 1870 [both fragments, but of the highest value]; Henri Junod, *Les Baronga*, Neuchatel, 1898 [the only systematic monograph on any of the tribes hitherto published]; Report of the Cape Government Commission on *Native Laws and Customs*, Cape Town, 1883.

II. *Central tribes*: General reference may be made to the writings of the missionaries: Moffat, *Missionary Labours in S. Africa*, London, 1842; Campbell, *Travels in South Africa*, 3 vols., Lond. 1815–22; Casalis, *Les Bassoutos*, Paris, 1859 (Eng. tr. London, 1861); Merensky, *Beiträge zur Kenntniss Süd-Afrikas*, Berlin, 1875; Mackenzie, *Ten Years North of the Orange River*, Edinburgh, 1871, *Day-Dawn in Dark Places*, London, 1884, *Austral Africa*, 2 vols., *ib.* 1887; Thomas, *Eleven Years in Central S. Africa*, London, 1872; Arbousset and Daumas, *Exploratory Tour*, Cape Town, 1846, and others, and of numerous explorers.

III. *South-western tribes*: Andersson, *Lake Ngami: Explorations and Discoveries during four Years' Wanderings in the Wilds of South-western Africa*, London, 1856; Edward

Dannert, *Zum Rechte der Herero*, Berlin, 1906 [a juridical treatise by a German official]; articles on the Herero and Ovambo by German missionaries in the *South African Folk-Lore Journal*, Cape Town, 1879–1880.

IV. *Northern tribes*: Sir Harry H. Johnston, *The Uganda Protectorate*, 2 vols., London, 1902, also *British Central Africa*, London, 1897; J. F. Cunningham, *Uganda and its Peoples*, London, 1905; J. M. M. van der Burgt, *Un Grand Peuple de l'Afrique Equatoriale*, Bois-le-Duc, 1904 [a work by a Roman Catholic missionary on the Warundi]; Duff Macdonald, *Africana; or, the Heart of Heathen Africa*, 2 vols., London, 1882 [a valuable work by a Scottish missionary to the Wa-yao and Mang'anja of the Shire Highlands]; A. Werner, *The Natives of British Central Africa*, London, 1906 [dealing chiefly with the same two tribes]. The Swahili and other tribes of the east coast have been to a large extent Arabized. For the most part they profess Muhammadanism, which is, however, greatly debased by native superstitions. They need no special treatment. The Masai, and neighbouring peoples of mingled Hamitic and Negro or Bantu blood, do not come within the limits of this article.

V. *Western or Forest tribes.*—For the coastal tribes, A. Bastian, *Ein Besuch in San Salvador*, Bremen, 1859, also *Die Deutsche Expedition an der Loango-Küste*, 2 vols., Jena, 1874; Heli Chatelain, *Folk-tales of Angola*, Boston, 1894; M. H. Kingsley, *Travels in West Africa*, London, 1897, also *West African Studies*, 1899; R. E. Dennett, *Notes on the Folklore of the Fjort*, London, 1898, also *At the Back of the Black Man's Mind*, 1906. To these must be added the old writers Proyart, *Histoire de Loango, Kakongo, et autres royaumes d'Afrique*, Paris, 1776, and Merolla, 'A Voyage to Congo, and several other Countries in the South Africk . . . in the Year 1682,' in Churchill, *Collection of Voyages and Travels*, i., Lond. 1732, as first-hand authorities, all the more important because they describe (though often without understanding it) the condition of native society before it became so largely contaminated by foreign intercourse. For the more inland tribes, see Du Chaillu, *Explorations and Adventures in South Africa*, London, 1861, also *A Journey to Ashangoland*, 1867; Sir H. H. Johnston, *The River Congo*, London, 1884. Bentley, *Pioneering on the Congo*, 2 vols., London, 1900, the works of other members of the Baptist mission to the Congo, and Coillard, *On the Threshold of Central Africa*, Lond. 1897, and the works of other French Protestant missionaries to the Barotse, should also be mentioned. E. Sidney Hartland.

BAPTISM (Ethnic).—Among many peoples a rite is found, performed either at infancy or later in life, which has considerable likeness to the ceremony of Christian baptism. Sometimes that likeness is only on the surface; in other cases it extends deeper, and the pagan rite has also a religious and ethical purpose. The use of water in such a ceremony is connected with its more general ceremonial use among heathen races as a means of ritual purification. This subject will be considered by itself (see Purification); we confine ourselves here to such rites as may be described as baptismal, and to an inquiry into the rationale of these, as well as into the causes which have led to water being used for this purpose.

1. *Origin of ethnic baptismal rites.*—First, let it be clearly understood that the ceremonial use of water in rites which are sometimes exceedingly simple, but at other times are profoundly symbolic and complex, though now inextricably connected with other opinions regarding its nature and power, has proceeded by a regular process of evolution from the simple use of water as a cleansing and purifying medium. Water obviously purifies the body from dirt; then, as its powers become enhanced in the primitive mind, it can cleanse from evil considered as a material or spiritual pollution, or can ward it off by a species of magical virtue; until, finally, it comes to be thought that it can also cleanse from the stain of moral guilt. This comes into view when it is considered that the ceremonial use of water occurs frequently at precisely those times which require its ordinary purifying powers, *e.g.* childbirth, or after contact of the person with disease or death. We shall now refer to some of the causes which have extended the idea of simple purification by water, or have transformed it into a special ceremonial purificatory rite, more or less symbolic, and connected with the giving of a name.

2. *Mother and child tabu at birth.*—As a result of the general theory of sexual tabu, by which, through the mystery which surrounds certain periodic or occasional functions of woman's life, she is considered more or less dangerous, and must therefore be avoided, it is usual among savage races for the woman, during and after childbirth, to be set apart from her fellows. She is frequently isolated in a special hut prepared for her, as in certain parts of Australia, in North America, and in New Zealand (*JAI* ii. 268; Petitot, *Traditions indiennes du Canada nord-ouest*, Paris, 1886, p. 257; Shortland, *Traditions and Superstitions of the New Zealanders*, London, 1854, p. 143); elsewhere she is set apart for some days after the birth to undergo rites of purification. Childbirth is one of those crises in human life, occasional or periodic, in which the persons passing through them are regarded as centres of danger either to themselves or to others. It is as a result of this primitive belief that the period of maternity is a period of ceremonial 'uncleanness'; the woman is then tabu. But equally the child, which is part of herself, and has been in such close contact with the mother, is also unclean—another centre of danger. As a rule, therefore, whatever ceremonies have to be undergone by the mother to remove the tabu have also to be participated in by the child. Thus, with the Koragars of West India, mother and child are ceremonially unclean for five days, and both are restored to purity by a tepid bath (Walhouse, *JAI* iv. 375).

Among the Polynesians the child is *tapu*, and can be touched by none but sacred persons. He becomes *noa* (free from *tapu*) by the father touching him with roast fern root, which he then eats. Next morning the eldest relative in the female line does the same (Shortland, *op. cit.* 143). Lustration of the woman and newborn child is practised among the American Indians, Negroes, and Hottentots, who purify both mother and child by smearing them 'after the uncleanly native fashion' (Tylor, *Prim. Cult.*[3] ii. 432). Among the Karens 'children are supposed to come into the world defiled, and, unless that defilement is removed, they will be unfortunate and unsuccessful in their undertakings.' This defilement is therefore fanned away by one of the elders with appropriate words, after which he binds thread round the child's wrist and gives it a name (*JRASBe* xxxvii. pt. 2, 131). So with the Malays, infants are purified by fumigation, and women after childbirth are half-roasted over the purificatory fire (Skeat, *Malay Magic*, London, 1900, 77).

3. *Mother and child at the mercy of evil spirits.*—In addition to mother and child being regarded

as unclean or tabu, they are also, according to a widely distributed opinion, especially subject to the attack of evil spirits. Their very helplessness probably suggested this idea among peoples who believed themselves surrounded at all times by hosts of spirits ready to snatch them away or to do them an ill turn. The child is thought by the people of East Central Africa to be most open to attack until seven days old. Here the spirits are propitiated by sacrifice (Macdonald, *Africana*, London, 1882, i. 224). The Kalmuks drive off the evil spirits from mother and child by rushing about, shouting and brandishing cudgels (Pallas, *Reisen*, St. Petersburg, 1771–76, i. 360), while the tribes of the Malay Peninsula scare them away with bonfires (*Jour. Ind. Arch.* i. 270). A similar precaution is prescribed by the Parsi sacred books—a fire or a lamp is kept lit for three days to keep away the Devs and Drujs, wizards and witches, who use their utmost efforts to kill mother and child (West, *Pahlavi Texts*, i. 316, 343–344, iii. 277). Such beliefs have survived among the European peasantry, but with them it is now mostly either witches or fairies who are feared. In some districts witches were believed to carry off children to devour them in a ritual orgy at the Sabbat; while fairies stole the child in order to bring it up among themselves, leaving a puny changeling in its place. Hence the recent Scandinavian custom of never letting the fire out till the child is baptized —a custom identical with one followed by the ancient Romans; and the Celtic practice of protecting mother and child from fairies, spirits, and the like by carrying fire round them sunwise.

4. *Removal of tabu.*—In order to remove the dangerous influences which were supposed to emanate from the child and to neutralize the evils to which it was in turn exposed, various methods were and are resorted to. Among these are purification by water, or by blood, or by fire, while analogous rites at birth or puberty, frequently in connexion with the name-giving ceremony, are tatuing, circumcision, and other bodily mutilations, or initiation, with the simulation of death and re-birth. Where such efforts had for their end the removal of tabu, they were mainly of a purificatory nature. The tabu, in savage opinion, resembles both a contagious and an infectious disease. It is a kind of invisible essence, surrounding the tabued person or thing, and easily passing over to other things and persons. All rites for removal of tabu are, therefore, largely purificatory. Much the same may be said of the evil influences to which mother or child is exposed. But their removal is effected not only by purificatory rites, but by magical ceremonies, by sacrifices, or by terrorizing them. Examples of various methods of removing tabu or external evil influences may be referred to. The subject is frequently placed by the fire, or fumigated with smoke or incense. Or the tabu or the evil is wiped or scraped off with the hands, which are then washed, or with a scraper, which is afterwards buried or destroyed. Or, again, the evil is transferred bodily to some other person or thing, according to a wide-spread series of rites of which that of the scapegoat is an instance, and that of 'carrying out death' another. But the most natural method of all is that of washing or lustration with water. 'The tabu essence, as if exuding from the pores and clinging to the skin, like a contagious disease, is wiped off with water, the universal cleanser' (Crawley, *Mystic Rose*, London, 1902, 228). With the Jews, washing with water was one of the necessary ceremonial methods of removing uncleanness or tabu; so among the Navahos the man who has touched a dead body must remove his clothes and wash himself before he mingles with his fellows (*BE*, First Report, p. 123); and Skeat tells us that among the Malays purification of mother and child is usually accomplished by means of fire or a mixture of rice-flour and water (*op. cit.* 77), the process not only removing tabu, but 'destroying the active potentialities of evil spirits.' This ceremonial use of water is further illustrated by its use among the Kafirs, who, as Lichtenstein says (*Travels in Southern Africa*, London, 1812–15, i. 257), remove the contagion of the guilt of murder, of death, or of magic, by washing. So Basuto warriors bathe after battle to wash off the ghosts of their victims, 'medicines' being put in the water by a sorcerer farther up the stream (Casalis, *Basutos*, London, 1861, p. 258). The washing with lustral water is thus necessary to remove the contagion of 'uncleanness'; it is also a safeguard against impending evil, and acts as a kind of magic armour which turns aside the attacks of a visible or invisible foe. We go on now to ask why water should have this efficacy, as a preliminary to showing its actual use in ethnic baptismal rites.

5. *Water as a safeguard.*—The animistic theory of the universe which underlies all primitive religion and philosophy suggested that water was a living being, which, in so far as it assisted the processes of growth and aided men in other ways, might be presumed to be beneficent. But even apart from the animistic theory, water, more than any other thing in the universe, seemed to be alive. Its motion, its sound, its power, hinted at life; hence the vivid Hebrew phrase (occurring with other peoples also) of 'living water.' It may be presumed also that man soon discovered the purifying effects of water for himself; its power of quenching thirst he already knew; that of invigorating the body by a plunge in its cool waves he must soon have found out, for he did not confine this invigorating process to himself, but even bathed the images of his gods on stated occasions, in order to renew their powers. The further idea arose, aided by the belief in a spirit or divinity of the waters, that certain waters, more usually springs, lakes, or wells, had miraculous healing properties —a belief which has survived centuries of Christianity. We find these various beliefs about the Water of Life conferring immortality, strength, or beauty, or about the Fountain of Youth, idealized in folk-lore in the many European folk-tales, with parallels from all stages of barbaric and savage culture (cf. MacCulloch, *CF*, London, 1905, ch. 3). Another concrete survival of such primitive ideas is the belief that no spirit or power of evil can cross running water. It was thus by a logical process that water, considered as having all these various powers and as being itself the vehicle or abode of spirits favourable to man, should have been used as one method of removing the contagion of tabu or the influence of evil spirits, or at a higher stage should have been held to possess the power of removing the guilt of sin. This last function may be conveniently illustrated by the Hindu belief in sacred rivers, *e.g.* the Ganges, in which the sins of a lifetime may be removed by a plunge—a process known also to the superstitious Roman whom Juvenal (vi. 520–23) satirizes for washing away his sins by dipping his head three times in the waters of the Tiber. Water, which removed dirt from the body, could therefore remove the contagion of tabu; and if it could do this, it was presumed that it had the further power of removing the stain of moral evil. It is on such a basis that what are justly to be called ethnic baptismal rites are founded. Primarily, they are simple purifications to remove tabu, or to ward off spirits who are intent on doing the child an injury. Then they are con-

nected with the process of name-giving. Lastly, with some correspondence to Christian adult baptism, they are used at initiations or before the celebration of Mysteries, and have then a certain ethical content; they remove sin. But all alike arose out of the necessary washing of the child after birth, which is itself sometimes a religious rite, connected also with name-giving, and from those primitive ideas about water just referred to. Each of these stages will now be considered separately.

6. *Ceremonial lustration without name-giving.*—Among the people of Sarac, E. Africa, it is customary to wash the child, when it is three days old, with water which has been specially blessed for this purpose (Munzinger, *Ostafr. Stud.*, Gotha, 1865, p. 387). The act has even greater significance among the Basutos, with whom the Naka, when he comes to consecrate the child, makes a foam out of water and various 'medicines,' with which he lathers the child's head. He then binds a medicine bag round his thighs (Tylor, *Prim. Cult.*[2] ii. 435). Among many S. African tribes—Giacas, Gcalekas, Tembus, Pondos, Pondomisi, Fingoes, etc.—the mother is secluded for a month after the birth. The father slaughters an ox to obtain the favour of the ancestral spirits, and during the month wise women sprinkle the child daily with a decoction of herbs, and repeat meaningless hymns to ensure its development and health. It is also passed through the smoke of aromatic wood to bring it wisdom, vigour, and valour. Later the father gives the child a name, usually from some passing event. Similar customs prevail among the Yaos, Makololo, Machuas, Angoni, and other East African peoples (Macdonald, *JAI* xix. 267, xxii. 100). A combined use of water and fire is found among the Jakun tribes of the Malay Peninsula, who wash the newborn child in a stream, and then, bringing it back to the hut, pass it frequently over a newly-kindled fire on which pieces of sweet-smelling wood have been thrown (*Jour. Ind. Arch.* ii. 264); while in Java the ceremony consists in shaving the child's head forty days after birth, before an assembled throng, after which he is dipped in a brook. In Fiji the child's first bath is made the occasion of a feast; in Uvea, at the feast held after the birth of a child, his head is ceremonially sprinkled with water; while in Rotuma the head, face, gums and lips of the newly-born are rubbed with salt water and coco-nut oil (Ploss, *Das Kind*, i. 258). With these ceremonies may be compared the custom of the Chinese, who, when the child is washed at three days old, hold a religious rite in connexion with this act of purification (Doolittle, *Social Life of the Chinese*, New York, 1867, i. 120). The intended effect of such ceremonies is seen in the custom, common in Upper Egypt, of bathing the child at its fortieth day and then pronouncing it 'clean.' All the examples cited show that the first washing of the child is itself made a religious and social rite, or that such a rite, more or less symbolic, occurs soon after birth.

7. *Lustration with name-giving.*—The custom of name-giving may occur at birth, or again at puberty, when the boy is initiated into the totem-clan, the tribe, or the tribal mysteries, at which time, as entering upon a newer or fuller life, he usually receives a new name. Among the Zuñis the initiation and first name-giving occur any time after the child, till then called 'baby,' is four years old. Although there is no use of water, the rite is so like that of Christian baptism in other respects that it may be described. A 'sponsor' breathes on a wand which he extends towards the child's mouth as he receives his name. The initiation is 'mainly done by sponsors, and the boy must personally take the vows as soon as he is old enough' (*BE*, Fifth Report, p. 553). Among most races the name-giving is usually a religio-social ceremony of great importance, since the name is considered among primitive folk to be a part of one's personality (see NAME), and since the ceremony admits the child to the privileges of the clan or tribe. We are here concerned with the ceremony only as it is accompanied with a ritual use of water. First it should be observed that the custom of giving a name at a ceremonial washing which has become 'baptismal' has probably arisen accidentally. We have seen that the newly-born child is washed as a protection against evil, or to make him ceremonially pure. But an equally important part of the child's dawning life was the conferring of a name upon him—the name, as a part of the personality, being a thing of magic or sacred import. What more natural, then, than the combination of two rites, which must frequently have been performed successively, into one which included both? But as a further stage in the evolution of the rite, the purificatory act becomes then more and more symbolic, and, in certain aspects, subsidiary to the name-giving ceremony. Actual washing and name-giving immediately after birth occur among the Kichtak Islanders (Billings, *N. Russia*, 1802, p. 175).

(1) Africa.—The more ceremonial act is well marked among several African tribes. Among the Yoruba Negroes a priest is sent for at a birth, and it is his duty to discover from the deities which ancestor means to dwell in the child, so that he may be called by his name. At the actual name-giving ceremony the child's face is sprinkled with water from a vessel which stands under a sacred tree (Bastian, *Geog. und Eth. Bilder*, Jena, 1873, p. 182). Such ceremonies are general in West Africa. Further south, among the Mfiote people of Loanga, when the child is three or four months old he is sprinkled with water in presence of all the dwellers in the village, and is called by the name of an illustrious ancestor (Ploss, *Das Kind*, i. 259). The same social significance of the religious rite—the reception of the child into the corporate community—is well marked among the tribes of the Gabun. When a birth has taken place, the fact is announced by a public crier, who claims for the child a name and place among the living. Some member of the community then promises for the people that the child will be received, and will have a right to all their privileges and immunities. The people then assemble, and the child is brought out before them. The headman of the family or village sprinkles water upon it, gives it a name, and blesses it—the blessing usually referring to its future material welfare (Nassau, *Fetichism in W. Africa*, N. Y. 1904, p. 212). This social significance of the rite will be met with in other cases. With the Baganda of Central Africa the ceremony forms part of another which tests the legitimacy of the child. Several children of two years old are usually brought together. Each mother throws the fragment of the umbilical cord which she has preserved into a bowl containing a mixture of water, palm-wine, and milk. If it floats, the child is declared legitimate. A name is conferred, and part of the fluid is then poured upon the child's head (J. Roscoe, in *JAI* xxxii. 25). Among the Ova-Herero the rite is most elaborate. The child is carried by the mother from the lying-in house to a sacred fire which is constantly tended by the headman's eldest daughter, who sprinkles child and mother with water as they proceed. Arrived at the place, mother and child are again sprinkled with water by the headman, who then addresses the child's ancestors, and, after various acts, touches its forehead with his own and gives it a name. Each man present does the same, repeat-

ing this name or conferring a new one; thus a child may have several names. After this ceremony the child's forehead is touched with that of a cow, which now becomes his property. He is then considered an Ova-Herero (*Globus*, xxxviii. 364).

(2) Malay Archipelago.—Similar rites are found all over the Malay Archipelago, as the following instances will show. In Sumatra, at the name-giving ceremony, the child is carried to the nearest running water by the men; there the father dips it, and gives it a name (Ploss, *op. cit.* i. 258). Among the Papuans the name-giving takes place as soon as the child can run; at the same time it is taken to a spring and there solemnly bathed several times (*ZE*, 1876, p. 185). The rite is made the occasion of a feast among the relatives. With the Negritoes of the Philippines the mouth of the newborn child is filled with salt; after this women hasten with it to the nearest brook, in which they bathe it. The name-giving occurs at the same time (Ploss, *op. cit.* i. 258). The use of salt occurs among several peoples as a ritual act, and is part of the baptismal ceremony of the Roman Church.

(3) Among various Polynesian tribes the rite was usually connected with the removal of tabu from the child. The priest asperged the head with a green twig dipped in water, or else immersed the child bodily in the water, accompanying the act with prayers and conjurations in dialogue form, and in an archaic language. With the Maoris, the priest repeated a number of names borne by ancestors till the child sneezed, and the name spoken at that moment was bestowed upon him, along with the act of asperging or dipping him in water. The child was, at the same time, dedicated to the war-god Tu (Tregear, *JAI* xix. 98; Ellis, *Polynesian Researches*, 4 vols., London, 1832–34, i. 259; Taylor, *New Zealand*, London, 1868, p. 184). Sir George Grey, in his *Polynesian Mythology* (p. 32), cites a myth which shows the importance attached to the exact observance of the ritual. When Maui's father baptized him, he hurried over or omitted some of the *karakias*—prayers offered to make him sacred and free from impurities—and for this he afterwards feared that the gods would be angry. This, of course, is akin to the fear shown by savages everywhere regarding the non-observance of tabu rites. At a later period, when the child had grown up to be a youth, he was again sprinkled with water, in order to be admitted to the rank of warrior.

(4) Similar observances are found among the American Indian tribes. The Cherokees performed the rite when the child was three days old, and firmly believed that, if it were omitted, the child would certainly die (Whipple, *Report on Indian Tribes*, Washington, 1855, p. 35). The Mayas believed that the ceremonial ablution washed away evil, hindered the influence of evil demons, and gave the child inclinations to good. The priest having appointed a lucky day, a feast was prepared, and the father fasted for three days. Among the customs observed at the rite were cleansing the house to drive out evil, throwing maize and incense on a fire by each child who was to be baptized, striking the child to drive away unclean thoughts. The priest then signed the child and sprinkled him with sacred water; this act was repeated by the father, and the rite concluded with the cutting of a lock of the child's hair by means of a stone knife (Bancroft, *NR*, San Francisco, 1883, i. 664). This most elaborate ceremony had an evidently ethical as well as a religious import; the same is true of the Mexican and Peruvian rites, though we should be careful to observe that the ethical standard of these races was far from being that of our own. Dr. Brinton has pointed out that the purification of the child by water was, with several of the native races of America, styled by a word signifying 'to be born again' (*Myths of the New World*, N. Y. 1868, p. 148). Astonishing as this may appear, it is on a level with the psychology of other savage religious rites, *e.g.* those of initiation to the mysteries, or at the making of sorcerers, when the youth is believed to die and come to life again, receiving a new name, and acting in all respects as if all life was new to him. It is well known that both Aztecs and Peruvians used some kind of baptism; and while the facts may have been exaggerated by contemporary reporters, the Christian priests who witnessed the rites believed firmly that the devil, for his own evil ends, had mimicked the Christian sacrament. We may therefore assume that the description of the rite among these peoples is, on the whole, correct. Sahagun says that the order of baptism among the Aztecs began, 'O child, receive the water of the Lord of the world, which is our life; it is to wash and purify; may these drops remove the sin which was given thee before the creation of the world, since all of us are under its power'; and concluded, 'Now he liveth anew and is born anew, now is he purified and cleansed, now our Mother the Water again bringeth him into the world.' The ceremonial washing was repeated twice, at birth and four days later, and at the later ceremony the child received its name, usually that of some ancestor, who, it was hoped, would watch over it until the time of the second name-giving and baptism in later life (*Hist. de la Nueva España*, lib. vi. cap. 37). The expressions used here concerning the water show that the rite was based on those primitive ideas of the power of water which have already been referred to. The Peruvian rite had much the same purpose. A priest immersed the child in water, at the same time exorcizing evil spirits from it, and bidding them enter the water, which was then buried in the ground. A first name was at the same time conferred upon the child (Réville, *Religions of Mexico and of Peru*, London, 1884, p. 234). Both Aztecs and Peruvians had a considerable sense of moral evil. This is especially noticeable in the Mexican rite, where also it was sought to free the child from evil spirits as well as from inherited sin. With both peoples, it should also be noted, as with the Hindus, ritual ablutions were used to remove the guilt of sins when these were confessed to the priests. Similar rites were common among the wild tribes of Mexico, after the name had been selected at the moment of birth (Bancroft, *op. cit.* i. 661); and they are known to exist among various tribes of S. America, *e.g.* the Yumanas of Brazil, with whom the child is, as it were, made one of the family by receiving an ancestral name, while it is sprinkled at the same time with a decoction of herbs (Martius, *Beiträge zur Ethnographie und Sprachenkunde Amerikas*, 2 vols., Leipz. 1867, i. 485). The Eskimos of North America, who believe that the name is a living thing, call the child after a dead ancestor. Its mouth is damped with water, the name is repeated, and it is believed to enter the child at that moment. Until then, the name having left the body of the dead man, both he and it have been restless, but now both are at peace (Nansen, *Eskimo Life*, Lond. 1893, p. 228).

(5) Asiatic races and religions frequently combine name-giving and lustration. Among the Tibetan and Mongolian Buddhists the ceremony takes place from three to ten days after birth. Candles are lit on the house-altars, and over a vessel of water the lama repeats the consecration formulæ. He then immerses the child in the water three times, signs it, and calls it by its

name. He also draws its horoscope by means of certain 'medicines' which he places in the baptismal water, and names the guardian divinity of the child. The ceremony ends with a feast and the offering of a present to the lama (Köppen, *Rel. des Buddha*, Berlin, 1857–59, ii. 320). Frequently, as Smolev relates of the Buriats, the name is changed if it proves unlucky (*L'Anthropologie*, xii. 482). In Japan the name is given to the child when it is a month old, water being at the same time sprinkled upon it (Siebold, *Nippon*, v. 22). The ceremonies, as conducted among the Chinese, are of an elaborate character. On the third day after the birth a Taoist priest comes to the house and sprinkles the rooms with water—a rite known as 'the Purification.' Onions, garlic, celery, and other things with magical virtues are then placed in the water in which the child is to be washed, after which its fortune is told and its mythic guardian tree is ascertained. The next step is for the priest to inquire through 'cup-divination' by what name the child shall be called, and when this has been discovered, he then bestows it on the infant. It should be noted that, to prevent a demon soul taking possession of the child's body in the absence of its own soul, the mother mixes the ash of banana-skin with water, and paints a cross with this mixture on the sleeping child's forehead (*FLJ* v. 222 f.). With the Buddhists of Ceylon and Burma, on the fourteenth day after birth, at an hour fixed by an astrologer, the relatives and friends feast together, the child is named, and its head is washed for the first time. The ceremony is analogous to the Brāhmanic rite of Jātakarman (M. Williams, *Buddhism*, 1889, p. 353).
